A. Terms and Abbreviations used in this Report

Along with standard abbreviations the following is a list of local/uncommon abbreviations and terms for the readers' reference.

PLANT TERMS

U.S.EPA	- United States Environmental Protection Agency.
NPDES	- National Pollutant Discharge Elimination System.
WWTP	- Wastewater Treatment Plant.
WRP	- Water Reclamation Plant.
PLWTP or PLWWTP	- Pt. Loma Wastewater Treatment Plant
PLR	- Point Loma Raw (influent to the plant).
PLE	- Point Loma Effluent (effluent from the plant).
N-1-P	- North Digester Number 1, Primary, Pt. Loma
N-2-P	- North Digester Number 2, Primary, Pt. Loma
C-1-P	- Central Digester Number 1, Primary, Pt. Loma
C-2-P	- Central Digester Number 2, Primary, Pt. Loma
S-1-P	- South Digester Number 1, Primary, Pt. Loma
S-2-P	- South Digester Number 2, Primary, Pt. Loma
Dig 7	- Digester Number 7, Primary, Pt. Loma
Dig 8	- Digester Number 8, Primary, Pt. Loma
DIG COMP	- Digested Biosolids Composite; a composite of grabs taken from each of the in-service digesters.
RAW COMP	- A Composite of Raw Sludge taken over the preceding 24 hrs.
NCWRP	- North City Water Reclamation Plant
N01-PS_INF	- The plant primary Influent from Pump Station 64
N01-PEN	- The plant primary Influent from the Penasquitos pump station.
N30-DFE	- Disinfected Final Effluent
N34-REC WATER	Reclaimed Water.
N10-PSP COMB	- raw sludge
N15-WAS LCP	- Waste Activated Sludge – low capacity pumps
SBOO	- South Bay Ocean Outfall or South Bay Outfall
SB_INF_02	- The plant Influent
SB_OUTFALL_00 -	The plant discharge to ocean effluent
SB_ITP_COMB_EFF – effluents	The plant discharge to ocean and International Waste Treatment Plant combined
SB_PRI_EFF_01 -	The plant primary Influent
SB_SEC_EFF_00 -	The plant secondary Influent
SB_REC_WATER_34 -	Reclaimed Water
SB_RSL_10 -	The plant primary sedimentation tank to raw sludge line
MBC	- Metro Biosolids Center
MBCDEWCN	- Metro Biosolids Center Dewatering Centrifuges; typically the dewatered biosolids from these.
MBC_COMBCN	- MBC Combined Centrate; the centrate from all the dewatering centrifuges. (The return stream from MBC to the sewer system.)
MBC_NC_DSL	- North City to Metropolitan Biosolids Center (MBC) Digested Sludge Line.
Dig 1	- MBC Digester number 1.
Dig 2	- MBC Digester number 2.
Dig 3	- MBC Digester number 3.
Biosolids	- In most cases Biosolids and digested (a processed) Sludge is synonymous.

UNITS

mg/Lmilligrams per liter
 ug/Lmicrograms per liter = 0.001 mg/L
 ng/L nanograms per liter = 0.001 ug/L
 mg/Kg milligrams per kilogram
 ug/Kg micrograms per kilogram
 ng/Kg nanograms per kilogram
 pg/L picograms per liter
 pg/Kgpicograms per kilogram
 pc/L or pCi/L pico curies per liter
 TU..... toxicity units
 ntu..... nephelometric turbidity units
 °Cdegrees Celsius = degrees centigrade
 MGD/mgd..... million gallons per day
 umhos/cm.micromhos per centimeter
 uS.....microsiemens = umhos
 mils/100 mL.....millions per 100 milliliters
 nd.....not detected
 NAnot analyzed (when in a data column)
 NRnot required
 NSnot sampled

CHEMICAL TERMS & ABBREVIATIONS:

AA..... Atomic Absorption Spectroscopy
 BOD Biochemical Oxygen Demand
 CN Cyanide
 COD Chemical Oxygen Demand
 Cr⁶⁺ Hexavalent Chromium
 D.O..... Dissolved Oxygen
 DDD Dichlorodiphenyldichloroethane
 (a.k.a. TDE-tetrachlorodiphenylethane)
 DDE Dichlorodiphenyldichloroethylene
 DDT Dichlorodiphenyltrichloroethane
 FeCl₃ Ferric Chloride
 G&O..... Grease and Oil
 GC..... Gas chromatography.
 GC-ECD.....-Electron Capture Detector.
 GC-FID-Flame Ionization Detector.
 GC-FPD-Flame Photometric Detector.
 GC-MS-Mass Spectroscopy.
 H₂S Hydrogen Sulfide
 Hg..... Mercury
 IC Ion Chromatography
 ICP-AES Inductively Coupled Plasma-Atomic Emission Spectroscopy
 MDL..... Method Detection Limit
 MSD Mass Spectroscopy Detector
 NH₃ Ammonia
 NH₃-N Ammonia Nitrogen
 NH₄⁺ Ammonium ion
 NO₃⁻ Nitrate
 PAD..... Pulsed Amperometric Detector
 PCB Polychlorinated Biphenyls
 PO₄³⁻ Phosphate
 SO₄²⁻ Sulfate
 SS Suspended Solids
 TBT Tributyl tin
 TCH..... Total Chlorinated Hydrocarbons
 (i.e. chlorinated pesticides & PCB's)
 TCLP Toxicity Characteristic Leaching
 Procedure
 TDS Total Dissolved Solids
 TS..... Total Solids
 TVS Total Volatile Solids
 VSS Volatile Suspended Solids

QA Report Summary

(excerpt from our Quality Assurance/Quality Control Report for Calendar Year 2008, March 27, 2008)

Summary and Overview:

The Wastewater Chemistry Services Section, Metropolitan Wastewater Department, City of San Diego performs most of the NPDES and other permit and process control chemical and physical testing for the City of San Diego E.W. Blom, Pt. Loma Wastewater Treatment Plant (PLWWTP), North City Water Reclamation Plant (NCWRP), South Bay Water Reclamation Plant (SBWRP), and the Metro Biosolids Center (MBC). We also performs the chemical/physical testing of ocean sediment and fish tissue samples for the Ocean monitoring program for the City of San Diego (PLWWTP Ocean Outfall and SBWRP Ocean Outfall) and the International Boundary and Water Commission, International Treatment Plant outfall. We also perform environmental testing for various customers, both internal to the City of San Diego and for other agencies.

The QA/QC activities of the Laboratory are comprehensive and extensive. Of the 37,411 samples received in the Laboratory in 2008, approximately 32% were Quality Control (QC) samples, such as blanks, check samples, standard reference materials, etc. 113 different analyses were performed throughout the year resulting in 300,394 analytical determinations. Of the determinations, 118,969 (~40%) were QC determinations (e.g. blanks, lab. replicates, matrix spikes, surrogates, etc.) used to determine the accuracy, precision, and performance of each analysis and batch.

We have 5 separate laboratory facility locations, each with its own California ELAP (Environmental Laboratory Accreditation Program) certification for the fields of testing required under California regulations. This is a rigorous program involving continuing independent blind performance testing, biannual comprehensive audits, and extensive documentation requirements. Each of the 5 laboratory facilities in the Metropolitan Wastewater (Metro) Department are independently certified and copies of those certifications are included at Attachment 1. California ELAP certifies fields of testing (methods/analytes) only for Water, Wastewater, and Hazardous materials for which methods are published in the Federal Register or specifically approved in regulation by U.S.EPA. Additionally, the Laboratory performs analyses using methods for which certification does not exist, such as ocean sediment and sea water determinations. Those methods have been developed in-house, derived from or in collaboration with other scientific laboratories (e.g. Scripps Institute of Oceanography, Southern California Coastal Water Research Project, et. al.) and have been used extensively in multi-agency EPA and State sponsored studies over the past several years. Many methods of analysis developed for matrices and applications not within ELAP jurisdiction have been adapted from ELAP listed methods. In all cases, we apply generally accepted standards of performance and quality control to methods.

Additionally, the operating division and all Metro Department Laboratories maintained International Standards Organization (ISO) 14001 Environmental Management Systems certification.

Contract laboratories are also required to use only approved methods for which they hold certification for, and/or are approved by the appropriate regulatory agency (e.g. SDRWQCB). Copies of their certifications are included as Attachment 2.

The following report summarizes the QA/QC activities during 2008 and documents the laboratory information and certifications for those laboratories which provided data used in NPDES and other permit monitoring or environmental testing during the year.

Facilities & Scope:

The Wastewater Chemistry Services Section(WCS) comprises five geographically separated laboratories. The Section's main laboratory facilities and headquarters located at the Alvarado Joint Laboratory building in La Mesa and the four satellite wastewater chemistry laboratories located at MWWTD treatment plants maintain individual California Department of Health Service, Environmental Laboratory Accreditation Program (ELAP) certification in their respective Fields of Testing (FoT). Each laboratory has its own U.S.EPA Lab Code as shown in the following table.

Laboratory Facility	Laboratory	Address	Phone	EPA Lab. Code	ELAP Cert. No.

The information presented in this report applies to the Wastewater Chemistry Services Section, including all of the laboratories listed above, unless specified otherwise. The main laboratory at Alvarado is the main office for the WCS and contains the most extensive laboratory facilities of the several laboratories. Along with a variety of process control and wet chemistry analyses, this facility also handles all of the trace metals, pesticides/organics determinations, and other analyses. The satellite laboratories are primarily dedicated to process control, wet chemistry, and other analyses directly related to the support of the operations of the co-located wastewater treatment plant.

The Wastewater Chemistry Services Section performs most of the NPDES and other permit and process control chemical and physical testing for the:

- E.W. Blom, Pt. Loma Wastewater Treatment Plant (PLWWTP), NPDES Permit No. CA0107409/ Order No. R9-2002-0025, including the ocean monitoring program.
- North City Water Reclamation Plant (NCWRP), Order No. 97-03.
- Metro Biosolids Center (MBC), no permit, but monitoring requirements contained in Permit No. R9-2002-0025.
- South Bay Water Reclamation Plant (SBWRP), NPDES Permit No. CA0109045/ Order No. 2006-067.
- Ocean monitoring program for the International Boundary and Water Commission, International Treatment Plant.
- Other environmental testing for various customers, both internal to the City of San Diego and other public agencies.

A small portion of the required monitoring testing is sub-contracted out to laboratories certified by ELAP for those analyses, specifically;

- Gross alpha- and Beta radiations are analyzed by Test America Laboratories, Inc.
- Total organic carbon (TOC) in water are analyzed by the Water Quality Laboratory, City of San Diego, Water Department.
- Dioxin and Furans in solids are analyzed by TestAmerica West Sacramento.

Copies of these laboratories' ELAP certifications are included as attachment 2. The City of San Diego pays for additional QC samples (replicates, blanks, spikes) as a routine quality check on sub-contracted laboratory work. This is beyond the usual and customary practices with contract laboratory work.

Ocean monitoring:

While there are no recognized State certifications for laboratory analyses of marine environmental samples (e.g. seawater, sediments, various tissues, etc.), the City of San Diego has been a leader in the development and standardization of analytical methods for determinations in these areas. Many of the methods are novel approaches developed after extensive research and development from other published work (e.g. organo-tin analyses, sediment grain size, etc.) or adaptations of exiting EPA methods (e.g. SW 846 Method 8082 for PCB congeners in sediments, etc.). In all of these cases we participate in extensive inter-laboratory calibration studies. Some of the most extensive studies have involved the participation of several public, academic/research, and private laboratories under the umbrella of the Southern California Coastal Water Research Project (SCCWRP). These programs are repeated periodically as part of the Southern California Bight Regional Monitoring/Survey Project. This is a massive sampling and monitoring program participated in by all of the major Publicly Owned Treatment Works (POTWs), California Water Resource Control Boards, and research organizations.

Our laboratory is a reference (referee) laboratory for the NRCC (National Research Council of Canada) CARP-2 Certified Reference Material (CRM) for fish tissue. This was adopted as the standard reference material for QC QA for the Southern California Bight Regional Project. This sample is also used world-wide as a standard reference material. We have worked with NIST to develop a West Coast marine sediment and fish tissue standard reference material (SRM).

QA/QC Activities Summary:

Report for January 1, 2008 - December 31, 2008.¹²

The sample distribution for 2008 is not significantly changed from 2007. 300,394 analytical determinations were made on 37,411 samples received by the Laboratory in 2008(see table A.). Of these 12,003 or 32% were Quality Control (QC) samples. Approximately 10.6% were blanks and 21.5% check or reference samples.

	<u>2008</u>	
	<u>Number of Samples</u>	<u>Percent of total samples</u>
Table A. Samples		
Customer/Environmental samples	25,408	67.92%
Quality Control (QC) samples	12,003	32.08%
Total Samples	37,411	100.00%

QC Samples:

Blanks:

SRMs (Standard Reference Material)	17	0.05%
Total Check Samples:	8,044	21.50%
Total QC Samples:	12,003	32.08%

High levels of QC are used for laboratory determinations. 40% of the 300,394 determinations were QC (e.g. blanks, lab replicates, matrix spikes, surrogates, etc.). If calculated for the 239,366 customer samples only the percentage increases to 50%.

2.73% of total analytical determinations or 0.2% of analytical batches did not meet internal QA review due to a variety of criteria, e.g. unsuccessful calibration, unacceptable QC performance, etc. Samples having analytical determinations that were rejected are reanalyzed, or, if that is not possible, the data is either not reported or reported but flagged as having not met data quality objectives and may not be suitable for compliance determination.

**Distribution of QC in Analyses

¹² Data counts (metrics) were obtained on March 24, 2008 and do not include analyses that were underway, but incomplete as of that time. All table data is based on samples collected between January 1, 2008 and December 31, 2008. This data summary is comprehensive; includes all laboratory analyses work for all customers, projects, and programs unless otherwise indicated.

NOTE: Analysis, for the purposes of the metrics used in this report generally refer to each analyte determined in each sample in a batch. For example, an analysis(determination) of several metals in a sample (e.g. iron, nickel, lead) would total as 3 analyses in the expression of totals such as those in the Analyses table on the preceding page. This method of calculation has been used for many years and, with batch and method, is useful comparative measure of laboratory performance and is one of the fundamental constants in applying quality control measures.

Outside laboratories

A small number of permit required analyses are sub-contracted out, including gross alpha- & Beta-radiation, and Total Organic Carbon in wastewater as summarized below. Additionally, a special analysis for copper by ICP-MS was done by an outside laboratory with specialized instrumentation. Herbicides analysis previously performed in-house were subcontracted to Cal Science Environmental Laboratories via CRG Marine Labs in November 2008.

QA Plan:

A copy of our Laboratory's current Quality Assurance Plan is included as Attachment 3. The Quality Assurance Plan was updated in July 2008.

Performance Testing (PT) Studies for 2008:

The Wastewater Chemistry Laboratory participates in required ELAP and U.S.EPA PT studies throughout the year. We participated in 15 PT studies in 2008. **Each of our geographically separated laboratory facilities participated individually (as required by ELAP). All PT studies were purchased from ERA and were successfully completed. When results submitted were determined to be outside of study acceptance limits the laboratory reviewed internal protocols, modified procedures were necessary and participated in a subsequent study for the analytes in question. A PT study was completed with satisfactory results for all analytes by in-house chemistry laboratories.**

The results of the Laboratory PT studies for 2008 are summarized in the following tables.

DMRQA (Discharge Monitoring Report – Quality Assurance)

We also participate as dischargers in the EPA DMRQA¹³ Studies required by the NPDES permit monitoring for the following two WWTP:

- **Pt. Loma Wastewater Treatment Plant (PLWWTP), NPDES Permit No. R9-2002-0025**
- **South Bay Water Reclamation Plant (SBWRP), NPDES Permit No.CA0109045/ Order No. 2006-067.**

In both cases, we participated in DMRQA Study 28 as issued by Environmental Resource Associates (See attachment 4 for copy of full report). All methods and analytes were within acceptance limits with the exception of Test Code 42 (Mysid 48-h acute non-renewal FSW) Toxicity Bioassay. A remedial action sample and a new batch of test organisms were ordered, and the remedial action test was initiated on November 06, 2008. The test met the acceptability criterion of >90% control survival, and the sample exhibited a median lethal concentration of 40.2%, which fell within the QC Performance Acceptable Limits of 25.3 to 48.1%.

ERA Study	Number of Analytes	Number of Acceptable results	Success Rate (%)
DMRQA-28, PLWWTP	26	25	96.2%
DMRQA-28, SBWRP	22	21	95.4%
Total analytes:	48	Overall:	95.8%
