## **Summary and Overview:**

The Wastewater Chemistry Services Section, Metropolitan Wastewater Department, City of San Diego performs most of the NPDES and other permit and process control chemical and physical testing for the City of San Diego E.W. Blom, Pt. Loma Wastewater Treatment Plant (PLWWTP), North City Water Reclamation Plant (NCWRP), South Bay Water Reclamation Plant (SBWRP), and the Metro Biosolids Center (MBC). We also performs the chemical/physical testing of ocean sediment and fish tissue samples for the Ocean monitoring program for the City of San Diego (PLWWTP Ocean Outfall and SBWRP Ocean Outfall) and the International Boundary and Water Commission, International Treatment Plant outfall. We also perform environmental testing for various customers, both internal to the City of San Diego and for other agencies.

The QA/QC activities of the Laboratory are comprehensive and extensive. Of the 37,868 samples received in the Laboratory in 2010, approximately 33% were Quality Control (QC) samples, such as blanks, check samples, standard reference materials, etc. 120 different analyses were performed throughout the year resulting in 259,791 analytical determinations. Of the determinations, 113,292 (~44%) were QC determinations (e.g. blanks, lab. replicates, matrix spikes, surrogates, etc.) used to determine the accuracy, precision, and performance of each analysis and batch.

We have 5 separate laboratory facility locations, each with its own California ELAP (Environmental Laboratory Accreditation Program) certification for the fields of testing required under California regulations. This is a rigorous program involving continuing independent blind performance testing, biannual comprehensive audits, and extensive documentation requirements. Each of the 5 laboratory facilities in the Metropolitan Wastewater (Metro) Department are independently certified. California ELAP certifies fields of testing (methods/analytes) only for Water, Wastewater, and Hazardous materials for which methods are published in the Federal Register or specifically approved in regulation by U.S.EPA. Additionally, the Laboratory performs analyses using methods for which certification does not exist, such as ocean sediment and sea water determinations. Those methods have been developed in-house, derived from or in collaboration with other scientific laboratories (e.g. Scripps Institute of Oceanography, Southern California Coastal Water Research Project, et. al.) and have been used extensively in multi-agency EPA and State sponsored studies over the past several years. Many methods of analysis developed for matrices and applications not within ELAP jurisdiction have been adapted from ELAP listed methods. In all cases, we apply generally accepted standards of performance and quality control to methods.

Additionally, the operating division and all Metro Department Laboratories maintained International Standards Organization (ISO) 14001 Environmental Management Systems certification.

Contract laboratories are also required to use only approved methods for which they hold certification for, and/or are approved by the appropriate regulatory agency (e.g. SDRWQCB).

The following report summarizes the QA/QC activities during 2010 and documents the laboratory information and certifications for those laboratories which provided data used in NPDES and other permit monitoring or environmental testing during the year.

## **Facilities & Scope:**

The Wastewater Chemistry Services Section(WCS) comprises five geographically separated laboratories. The Section's main laboratory facilities and headquarters located at the Alvarado Joint Laboratory building in La Mesa and the four satellite wastewater chemistry laboratories located at MWW treatment plants maintain individual California Department of Health Service, Environmental Laboratory Accreditation Program (ELAP) certification in their respective Fields of Testing (FoT). Each laboratory has its own U.S.EPA Lab Code as shown in the following table.

Laboratory Facility	Laboratory	Address	Phone	EPA Lab. Code	ELAP Cert. No.

The information presented in this report applies to the Wastewater Chemistry Services Section, including all of the laboratories listed above, unless specified otherwise. The main laboratory at Alvarado is the main office for the WCS and contains the most extensive laboratory facilities of the several laboratories. Along with a variety of process control and wet chemistry analyses, this facility also handles all of the trace metals, pesticides/organics determinations, and other analyses. The satellite laboratories are primarily dedicated to process control, wet chemistry, and other analyses directly related to the support of the operations of the co-located wastewater treatment plant.

The Wastewater Chemistry Services Section performs most of the NPDES and other permit and process control chemical and physical testing for the:

- E.W. Blom, Pt. Loma Wastewater Treatment Plant (PLWWTP), NPDES Permit No. CA0107409/ Order No. R9-2009-00001, including the ocean monitoring program.
- North City Water Reclamation Plant (NCWRP), Order No. 97-03.
- Metro Biosolids Center (MBC), no permit, but monitoring requirements contained in Permit No. R9-2002-0025.
- South Bay Water Reclamation Plant (SBWRP), NPDES Permit No. CA0109045/ Order No. 2006-067.
- Ocean monitoring program for the International Boundary and Water Commission, International Treatment Plant.
- Other environmental testing for various customers, both internal to the City of San Diego and other public agencies.

A small portion of the required monitoring testing is sub-contracted out to laboratories certified by ELAP for those analyses, specifically;

- Gross alpha- and Beta radiations are analyzed by Test America Laboratories, Inc.
- Total organic carbon (TOC) in water are analyzed by the Water Quality Laboratory, City of San Diego, Water Department.
- Dioxin and Furans in solids are analyzed by TestAmerica West Sacramento.

The City of San Diego pays for additional QC samples (replicates, blanks, spikes) as a routine quality check on sub-contracted laboratory work. This is beyond the usual and customary practices with contract laboratory work.

#### Ocean monitoring:

While there are no recognized State certifications for laboratory analyses of marine environmental samples (e.g. seawater, sediments, various tissues, etc.), the City of San Diego has been a leader in the development and standardization of analytical methods for determinations in these areas.

Many of the methods are novel approaches developed after extensive research and development from other published work (e.g. organo-tin analyses, sediment grain size, etc.) or adaptations of exiting EPA methods (e.g. SW 846 Method 8082 for PCB congeners in sediments, etc.). In all of these cases we participate in extensive inter-laboratory calibration studies. Some of the most extensive studies have involved the participation of several public, academic/research, and private laboratories under the umbrella of the Southern California Coastal Water Research Project (SCCWRP). These programs are repeated periodically as part of the Southern California Bight Regional Monitoring/Survey Project. This is a massive sampling and monitoring program participated in by all of the major Publicly Owned Treatment Works (POTWs), California Water Resource Control Boards, and research organizations.

Our laboratory is a reference (referee) laboratory for the NRCC (National Research Council of Canada) CARP-2 Certified Reference Material (CRM) for fish tissue. This was adopted as the standard reference material for QC QA for the Southern California Bight Regional Project. This sample is also used world-wide as a standard reference material. We have worked with NIST to develop a West Coast marine sediment and fish tissue standard reference material (SRM).

**QA/QC Activities Summary:  
Report for January 1, 2010 - December 31, 2010.<sup>8</sup>**

The sample distribution for 2010 is not significantly changed from 2009. 259,791 analytical determinations were made on 37,868 samples received by the Laboratory in 2010(see table A.). Of these 12,518 or 33% were Quality Control (QC) samples. 11.6% were blanks and 21.1% check or reference samples.

<b>Total QC Samples:</b>	<b>12,550</b>	<b>33.14%</b>

High levels of QC are used for laboratory determinations. 44% of the 259,791 determinations were QC (e.g. blanks, lab replicates, matrix spikes, surrogates, etc.). If calculated for the 252,527 customer samples only the percentage increases to 45%.

2.83% of total analytical determinations or 0.1% of analytical batches did not meet internal QA review due to a variety of criteria, e.g. unsuccessful calibration, unacceptable QC performance, etc. Samples having analytical determinations that were rejected are reanalyzed, or, if that is not possible, the data is either not reported or reported but flagged as having not met data quality objectives and may not be suitable for compliance determination.

<sup>8</sup> Data counts (metrics) were obtained on February 2, 2010 and do not include analyses that were underway, but incomplete as of that time. All table data is based on samples collected between January 1, 2010 and December 31, 2010. This data summary is comprehensive; includes all laboratory analyses work for all customers, projects, and programs unless otherwise indicated.

NOTE: Analysis, for the purposes of the metrics used in this report generally refer to each analyte determined in each sample in a batch. For example, an analysis(determination) of several metals in a sample (e.g. iron, nickel, lead) would total as 3 analyses in the expression of totals such as those in the Analyses table on the preceding page. This method of calculation has been used for many years and, with batch and method, is useful comparative measure of laboratory performance and is one of the fundamental constants in applying quality control measures.

## **Performance Testing (PT) Studies for 2010:**

The Wastewater Chemistry Laboratories participates in required ELAP and U.S.EPA PT studies throughout the year. We participated in 8 PT studies in 2010. Each of our geographically separated laboratory facilities participated individually (as required by ELAP). All PT studies were purchased from ERA and were successfully completed. When results submitted were determined to be outside of study acceptance limits the laboratory reviewed internal protocols, modified procedures were necessary and participated in a subsequent study for the analytes in question. A PT study was completed with satisfactory results for all analytes by in-house chemistry laboratories. The results of the Laboratory PT studies for 2010 are summarized in the following tables.

## **DMRQA (Discharge Monitoring Report – Quality Assurance)**

We also participate as dischargers in the EPA DMRQA<sup>9</sup> Studies required by the NPDES permit monitoring for the following two WWTP:

- Pt. Loma Wastewater Treatment Plant (PLWWTP), NPDES Permit No. R9-2009-0001
- South Bay Water Reclamation Plant (SBWRP), NPDES Permit No.CA0109045/ Order No. 2006-067.

In both cases, we participated in DMRQA Study 30 as issued by Environmental Resource Associates. All methods and analytes were within acceptance limits with the exception of Test Code 42 (Mysid 48-h acute non-renewal FSW) Toxicity Bioassay. A thorough review of all laboratory practices and records showed that all pertinent procedures were followed by the City's Toxicology Laboratory, and the concurrently tested AQC sample (i.e. remedial sample), which was also supplied by ERA, performed well within the acceptable range. Consequently, a member of the City's supervisory staff contacted ERA's DMRQA WET coordinator and discovered that, unlike the AQC sample which had an *a priori* fixed „assigned value,“ the assigned value and „acceptable range“ for the DMRQA were determined *post hoc* using data from each year's cohort of participating laboratories. Moreover, the historical coefficient of variation (CV) for Test Code 42 among all laboratories averaged around 50%. However, among this year's 27 participating laboratories, the CV was only 10.8%, which significantly reduced the acceptable range for the median lethal concentration (LC<sub>50</sub>) and thereby rendered the City's finding of an LC<sub>50</sub> of 41.4% slightly above the upper acceptance limit of 40.2%. Based on the exceptionally low inter-laboratory variability observed in Test Code 42, the City respectfully submits that the original
