WHEREAS, the 7th update to the Land Development Code (LDC) is part of the code monitoring program directed by the Mayor and City Council as part of the adoption of the LDC effective January 2000; and

WHEREAS, the goal of the code update is to simplify the land development regulations; make the land development regulations more objective; make the code more adaptable; eliminate...
redundancies; and increase predictability in the application of the land development regulations; and

WHEREAS, there are a total of sixty five issues included in the 7th update, that are divided into five issue categories including Permit Process, Measurement, Landscape, Parking, and Minor Corrections; and

WHEREAS, staff has conducted extensive public outreach and analysis involving multiple stakeholder groups, City departments, and other governmental agencies; and

WHEREAS, the code update process is an extensive public process that typically involves input from the Code Monitoring Team, Community Planners Committee, Technical Advisory Committee, Planning Commission, City Council, and California Coastal Commission, and more recently the San Diego County Regional Airport Authority; and

WHEREAS, the update mainly addresses various stages within the permit process (i.e. applications, noticing, findings for approval, appeal, and permit expiration); and proposes to lower the permit process level for various types of development and remove unnecessary processing obstacles for development that complies with specified regulations; NOW, THEREFORE,

BE IT ORDAINED, by the Council of the City of San Diego, as follows:

Section 1. That an amendment is initiated to Chapter 15, Articles 1, 3, 9, 10, 12, 16, and 19; the Planned District General Provisions, and the Carmel Valley, La Jolla, La Jolla Shores, Mid-City, Old Town, and Southeastern San Diego Planned Districts.

§113.0234 Calculating Gross Floor Area

[No change in text.]

(a) [No change in text.]

(1) through (2) [No change in text.]

(3) *Gross floor area* for underground parking *structures* includes the following, except where the parking *structure* design meets the exemptions identified in Section 113.0234(d)(3):

(A) All portions of the *structure* where the vertical distance between adjacent *grade* and the finished *floor* elevation above exceeds 5 feet.

(B) The vertical measurement between adjacent *grade* and the finished *floor* above shall not include subterranean vehicular access openings (up to a maximum of 25 foot width). Instead, the vertical distance measurement shall be measured from the imaginary plane perpendicular to the driveway access that connects the adjacent *grades* to the finished *floor* above.
Diagram 113-02K

Underground Parking Structures

Section

(4) through (5) [No change in text.]

(6) *Gross floor area* includes on- or above-grade parking structures, garages, and carports that are constructed and maintained with less than two elevations of the element that are at least 75 percent completely open, as shown in Diagram 113-02M, except where the parking structure design meets the exemptions identified in Section 113.0234(d)(3).

Diagram 113-02M

*Garages/Carports*

(7) [No change in text.]

(b) through (c) [No change in text.]
(d) Elements Not Included in Gross Floor Area

(1) Interior Courts, as defined in Section 113.0103; and

(2) Interior modifications, including additions of actual floor areas that do not affect the outer limits of the existing structural envelope.

(3) Parking Structures

(A) The intent of this section is to facilitate the development of parking facilities for multiple dwelling unit and commercial development. This exclusion from gross floor area does not apply to garages or carports that serve single dwelling unit or duplex development.

(B) In order to exclude a parking structure from the calculation of gross floor area, a combination of at least two of the following shall be incorporated into project design as follows:

(i) The parking structure includes at least one subterranean floor where the vertical distance between adjacent grade and the finished floor elevation above is 5 feet or less. Elevations that provide vehicular access to a subterranean parking level may still meet this provision where the vertical distance is 5 feet or less as measured in accordance with Section 113.0234(a)(3)(B);
(ii) The parking structure is part of a wrapped design to screen parked vehicles within the structure from the adjacent public right-of-way;

(iii) The parking structure is screened from the adjacent public right-of-way on at least two elevations; or

(iv) The parking structure is at least 40 percent open on at least two elevations.

§113.0246 Determining Property Lines

The property lines define the perimeter of a lot or premises and separate one lot or premises from any other lot or premises or from the public right-of-way. These rules for determining property lines are for purposes of applying and interpreting development regulations only and are not intended to affect ownership rights or responsibilities. These rules apply regardless of ownership of property extending into the public right-of-way.

(a) through (d) [No change in text.]

(e) Property Lines that Abut an Alley. A property line that abuts an alley shall be determined in accordance with Section 113.0246 (a) through (d).

However, the property line that abuts an alley shall not be considered a street property line for the purpose of determining setbacks or street yards as indicated below:

(1) Alley adjacent to front property line. A setback equivalent to a rear yard shall be applied when a lot abuts an alley as a front property line.
(2) *Alley adjacent to side property line.* A setback equivalent to an interior side yard shall be applied when a *lot* abuts an *alley* as a street side *property line*.

(3) *Alley adjacent to rear property line.* A setback equivalent to a rear yard shall be applied when a *lot* abuts an *alley* as a rear *property line*.

**Diagram 113-02CC Alley Setbacks** [No change in text.]

(i) **Resubdivided Corner Lots in Residential Zones.**

In residential zones, *property lines* for resubdivided corner *lots* shall be determined in accordance with Section 113.0246 (a) through (d); however, the *setbacks* along the front *property line* and street side *property line* shall observe the *setback* requirements placed on the original *lot* configuration, as shown in Diagram 113-02DD.
Diagram 113-02DD

Setbacks for Resubdivided Corner Lots

§113.0249 Determining Setback Line

(a) The *setback line* is a line that runs parallel to the nearest *property line* at a distance inward from the *property line* equal to the *setback*. The area between the *setback line* and the parallel *property line* is the required *yard*. A continuous line connecting all *setback lines* defines the boundaries of...
the building envelope at ground level. See also Sections 113.0246 (Determining Property Lines) and 113.0252 (Measuring Setbacks).

(b) through (d) [No change in text.]

§113.0252 Measuring Setbacks

(a) The distance of the setback is measured inward from and perpendicular to the nearest property line, as follows, except as otherwise indicated in Section 113.0246(e) and (f):

(1) through (4) [No change in text.]

(b) through (c) [No change in text.]

§113.0255 Calculating Sign Copy Area

(a) For wall signs, the copy area of a sign is the area of the smallest geometric figure that can enclose the actual sign copy. See Diagram 113.02EE.

(b) [No change in text.]

§113.0258 Calculating Sign Face

The sign face, as shown in Diagram 113-02EE, is calculated by multiplying the length of the sign by the width of the sign.

(a) through (d) [No change in text.]

§113.0261 Determining a Story

A story is that portion of a building between finish-floor elevations, between finish-floor and roof elevations, and between grade and finish-floor elevations.

(a) through (c) [No change in text.]
(d) Underground Parking Structures and Basements

Underground parking structures and basements are stories if there is a vertical distance, at any point, of 6 feet or more between existing grade or proposed grade, whichever is lower, and the finish-floor elevation immediately above. See Diagram 113-02FF.

113.0264 Determining Street Wall

(a) The street wall is made up of the outer surfaces of all walls in all planes along that portion of the building that is between the limits of the building facade. The street wall follows all indentations along the building facade, as shown in Diagram 113-02GG.

Diagram 113-02GG

Street Wall

[No change to diagram]

(b) The street wall is determined in accordance with the following:

(1) [No change in text.]

(2) The length of the street wall is the sum of the lengths of all walls along that portion of the building that is between the limits of the building facade, as shown in Diagram 113-02HH.

Diagram 113-02HH

Length of Street Wall

[No change to diagram.]
§113.0267 Determining Street Wall Line

The street wall line is used to delineate the street yard. The street wall line includes the street wall plus a line extending outward from the limits of the street wall, as shown in Diagram 113-02II. The extension lines shall be parallel to the street or single plane used to determine the building facade. Porches more than 3 feet above grade and site walls that are integral in material, design, and placement with the building and which maintain a minimum height of 4 feet may be included in determining the street wall line. For a corner lot, the street wall line includes the street walls for both frontages.

§113.0270 Measuring Structure Height

(a) Structure Height of Buildings and Structures (Excluding Fences, Retaining Walls, or Signs)

(1) The maximum permitted structure height is specified in the applicable zone and defines the upper limits of the building envelope for a premises. It is measured vertically from the existing grade or proposed grade, whichever is lower, to form an imaginary plane that is parallel to grade, below which all buildings and structures must be located, except as otherwise described in 113.0270(a)(4). This is illustrated in Diagram 113-02JJ.
Maximum Permitted Structure Height

(2) A two part calculation is required to measure a structure height including:

(A) Plumb line measurement. The structure height is measured from all points on top of a structure to existing grade or proposed grade, whichever is lower, directly below each point, except as described in Section 113.0270(a)(4). This measurement is taken vertically through the structure at each point where structure height is being measured, as shown in Diagram 113-02KK.

Measurement of Structure Height

(B) Overall Height Measurement. The overall structure height is measured from the lowest point of existing grade or proposed grade within 5 feet of the structure's perimeter (building wall, balcony, bay window, or similar architectural projection) or at the property line, whichever is closer, to the highest point of the structure, projected horizontally to directly above this lowest point of grade. The overall structure height shall not exceed the maximum permitted structure height of the applicable zone plus an
amount equal to either the maximum grade differential within the structure's footprint or 10 feet, whichever is less. The structure height shall not exceed the maximum allowed by the applicable zone at any one point. This is illustrated in Diagram 113-02LL.

Diagram 113-02LL

Overall Structure Height

[No change to diagram.]

(3) [No change in text.]

(4) Special Circumstances

(A) Extreme Topographic Variation. Where there is an extreme natural topographic variation on a premises that covers 10 percent or less of the proposed structure's footprint, as shown in Diagram 113-02MM, overall structure height is measured from an imaginary plane made by connecting the perimeter points of the topographic variation, so that the imaginary plane above and parallel to grade will not reflect the extreme natural topographic variation.

Diagram 113-02MM

Structure Height at Basement

[No change to diagram.]

(B) Measuring Structure Height for Subterranean Areas

(i) Interior Subterranean Areas. Where a basement, underground parking structure, interior court, or
other similar interior subterranean area is proposed, the plumb line measurement to the lower of existing grade or proposed grade shall be measured to an imaginary plane through the building that connects the adjacent grade elevations on both sides of the structure as shown in Diagram 113-02NN.

Diagram 113-02NN

Imaginary Plane and Plumb Line

[No change to diagram.]

(ii) Exterior Subterranean Areas. The overall structure height measurement shall not include subterranean vehicular access, exterior subterranean pedestrian access or ventilation to a basement. Overall structure height shall instead be measured from an imaginary plane connecting to the lowest adjacent grade immediately above the exterior subterranean space, as shown in Diagram 113-0200.

Diagram 113-0200

Access and Ventilation to Basement
