

# BLOOD LEAD TESTING PROVIDERS

## San Diego Region

December 12, 2010

The City of San Diego Lead Hazard Prevention and Control Ordinance requires that a child between the ages of six months and seven years, prior to enrolling in a licensed child care facility, must have the child’s blood lead levels be tested (requirement as of May 9, 2008). Childcare providers must obtain evidence of a blood lead test prior to admission, or no later than thirty days after admission. A parent or legal guardian needs to obtain a statement from a physician or health care provider that the child has been tested in accordance with applicable criteria mandated by the State of California.

The following are various clinics that provide blood lead testing. Parents are encouraged to go to their child’s regular doctor to have the test performed. Large health care providers (i.e., Rady Children’s, Sharp, Kaiser, Scripps, UCSD, etc.) are not included in the list below but may be your best option if that is where you normally go for your child’s medical care. **Contact the Health Center/Clinic to confirm information and to make an appointment before visiting.**

This guide is for information purposes only and may not be current.

Childhood lead poisoning is the greatest preventable environmental disease affecting children today. The highest risk is for children under six as their brains and nervous systems are still developing and are more sensitive to the damaging effects of lead. Medical research in the past five years identifies there is no safe level of lead exposure in children. The highest loss of intelligence quotient, an average of 7.3, occurs below the Center for Disease Control and Preventions level of concern of 10 micrograms of lead per deciliter of blood. Additional research in 2008 shows compelling evidence linking childhood lead poisoning to criminal activity later in life.

Don't hesitate to contact the Lead Safety and Healthy Homes Program for assistance!
