

## THE CITY OF SAN DIEGO

DATE: September 8, 2009  
TO: Grantville Stakeholders Committee and Interested Parties  
FROM: Dan Monroe, Grantville Project Manager  
SUBJECT: Cancellation of September 14<sup>th</sup> Stakeholders Meeting

---

The calibration and modeling for existing traffic conditions and preparation of the traffic model for the year 2030 existing community plan conditions has been completed. Preparation of the traffic model for the Alternative D land use scenario has begun and is anticipated to be complete by mid September. Traffic models for Alternatives E/F Hybrid and G should be completed by mid October.

The economic analysis of the three land use alternatives is still ongoing as well and should be completed by end of September. Because these steps in the master plan process are very time consuming and very important, the September 14<sup>th</sup> GSC Meeting will be cancelled to allow the time that is needed to present more pertinent information regarding traffic and economics at the October 12<sup>th</sup> GSC meeting.

Next steps for the Grantville Master Plan process will include discussion of the traffic models and economic analysis at the October 12<sup>th</sup> GSC meeting and beginning the process for the Environmental Impact Report (EIR). Tentative timeframe for the release of a Notice of Preparation for the EIR is the last week September or first week of October and scheduling of a public Scoping Meeting for end of October. Confirmed dates will be released with the Notice of Preparation.
