c/o Mr. Bhavesh Parikh
4747 Executive Drive, Suite 410
San Diego, California 92121

Subject: Phase I Environmental Site Assessment (Assessment)

Site: Riverwalk Area 1
Assessor's Parcel Numbers (APNs) 436-611-06 & -29, 436-650-14, and Northern
Portions of 437-240-26 & -28
at 1150 Fashion Valley Road and 5905 Friars Road
San Diego, California

Dear Mr. Parikh:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Agreement for Services 010897216 (herein referred to as Exhibit 01) to the Services and Goods Order Agreement (Contract) between SCS and Hines Interests Limited Partnership. Exhibit 01 was provided a notice to proceed for Exhibit 01 via electronic mail on December 2, 2016.

Because your full understanding of the Assessment is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 12, 20, and 25), and our conclusions and recommendations may be found on page 25. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Tyler Overton

1 BACKGROUND

SCS understands that the site is identified as Assessor's Parcel Numbers [(APNs) 436-611-06 and -29, 436-650-14, and portions of 437-240-26 and -28 and is located at 5905 Friars Road (formerly known as 5900 Friars Road) and 1150 Fashion Valley Road, San Diego, California (herein referred to as the Site, and also referred to as Area 1) (Appendix, Figures 1 and 2A)]. The Site is developed primarily with the Riverwalk Golf Course, as well as associated structures for the Riverwalk Golf Club. Also included within the eastern portion of the Site is a vacant parcel under construction designated for commercial land use. The San Diego Metropolitan Transit System (MTS)/trolley right-of-way is present along the southern portion the Site. It was reported that Hines Interests Limited Partnership (Client) is proposing to purchase and develop the Site into various land uses including residential, mixed use, open space, park, office, and retail.

A review of Client provided information and our in-house ParcelQuest database of information from the County of San Diego Assessor's Office indicated the following in connection with the Site, also known as Area 1:

| APN | Address | Acres | Description | Area |
|------------|----------------------------|--|------------------|---|
| 436-611-06 | Friars Road, San Diego | 10.00 | Recreational use | Area 1 |
| 436-611-29 | Friars Road, San Diego | 9.98 | Recreational use | Area 1 |
| 436-650-14 | Friars Road, San Diego | 4.25 | Recreational use | Area 1 |
| 437-240-26 | N. Hotel Circle, San Diego | A portion of a larger 123.61 acre parcel | Recreational use | Portion of APN 437-240-26 is included in Area 1 |
| 437-240-28 | N. Hotel Circle, San Diego | A portion of a larger 41.54 acre parcel | Recreational use | Portion of APN 437-240-28 is included in Area 1 |

The approximate location of Area 1, as well the other areas of the Riverwalk Golf Course, are depicted on a Client provided land use map (see appendix).

2 STANDARDS BACKGROUND

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 01

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability, interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,¹ controlled recognized environmental condition², or historical recognized environmental condition³, and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed

¹ *Recognized environmental conditions*, as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a recognized environmental condition.

² *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

³ *Historical recognized environmental condition*, as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS's scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant concentrations or likely to migrate.

An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

3 OBJECTIVE

The objective of the scope of services was to assess the likelihood⁴ that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

4 SCOPE OF SERVICES

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

⁴ Statements of *likelihood* are made in this Assessment, based on the professional judgment of SCS. A description of likelihood statements, as made in this Assessment, is included in the "Likelihood Statements" section.

SITE RECONNAISSANCE

On December 7, 2016, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditions¹. The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figures 2a and 2b. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3g.

The interiors of the Site buildings were observed, and the Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. Mr. Brendan Cronin, General Manager of the Riverwalk Golf Club, has been associated with the Site for 12 years. Mr. Cronin accompanied SCS personnel, provided access to the observed features, and answered questions posed by SCS personnel.

General Information

The following table summarizes general information in connection with the Site.

| | |
|-------------------------|--|
| APNs | 436-611-06 & -29, 436-650-14, and Northern Portions of 437-240-26 & -28 at 1150 Fashion Valley Road and 5905 Friars Road |
| Address | 5905 Friars Road and 1150 Fashion Valley Road, San Diego, California |
| Site Land Use | Golf course and associated maintenance buildings, with trolley/light rail right-of-way on the southern portion of the Site |
| Occupant | Riverwalk Golf Course and San Diego MTS (trolley right-of-way) |
| Figure Reference | Figures 3a-1 through 3e-1 |

Site Buildings

The following table summarizes information in connection with the Site buildings.

| | |
|--------------------------------------|--|
| Number of Buildings | Two |
| Interpreted Construction Date | Circa 1950 |
| Number of Stories | 1 |
| Construction Type | Wood frame, concrete slab-on-grade foundations |
| Figure Reference | Figures 3c-1 and 3c-2 |

Two buildings (Figures 2b and 3c-1) were observed at the northwest area of the Site, identified herein as Building 1 (eastern-most building) and Building 2 (western-most building). These buildings were observed to be used primarily for maintenance activities associated with the golf course (e.g., repair of golf carts and mowers). The Site buildings consist of offices, storage areas (Figure 3d-1), a dining area, restrooms and lockers, carts and a mower wash area, and a service bay with one aboveground lift. Hazardous materials/wastes (Figure 3d-2) were observed to be

stored in both buildings, and are further discussed in the ‘Hazardous Materials/Petroleum Products’ section below.

Minor staining on concrete surfaces was observed south of Building 2 where mowers and parts were observed to be stored. Small retail quantities (SRQs) (quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate) of automotive maintenance supplies (e.g., batteries, coolants, cleaners, and lubricants) were observed at various locations in the Site buildings. Hazardous materials appeared to be properly stored with no obvious evidence of leaks or spills. A two-stage clarifier was observed at the northwest area of Building 1 and is discussed below.

In-Ground Wastewater Clarifier

An inground wastewater clarifier was observed at the carts and mowers wash area of the Site (Figure 2B). Based on our experience, inground wastewater clarifier systems have the potential to release (e.g., through cracks or degradation of the concrete from poorly fitting or degraded piping) wastewater containing petroleum products, solvents, and hazardous wastes into the subsurface. This potential is exacerbated with time as the clarifier systems age. In our experience, it becomes increasingly likely that systems more than 10 years old will experience a release. Given the interpreted age of the clarifier at the Site (over 60 years), there is, in our experience, a moderate likelihood that releases have occurred and that an associated recognized environmental condition exists at the Site.

Note that soil sampling activities of the clarifier were previously conducted at the Site by SCS, and are further discussed in the ‘Review of Client-Provided Documents’ section below.

Site Grounds

Two metal storage containers with cart and mower parts were observed northwest of Building 2. One metal container was reported to formerly store hazardous materials (Figure 3c-2) and was observed north of Building 2. One aboveground storage tank (AST), segregated into a 2,000-gallon diesel compartment and 1,000-gallon gasoline compartment (Figure 3e-1), was observed west of Building 2. No evidence of staining was noted in the vicinity of this AST and no reported releases have been documented. An open area used to store fertilizers was observed southeast of Building 1.

A San Diego MTS/trolley right-of-way was observed to parallel the southern edge of the Site perimeter. The remainder of the Site was observed to be covered with golf green areas (Figure 3a-1), concrete-paved drive paths, and restroom facilities. Note that the possible use of pesticides and herbicides at the Site in connection with the golf course at the Site is further discussed in the ‘Historical Site Land Use’ section below.

Hazardous Materials / Petroleum Products

Hazardous materials and petroleum products observed to be used or stored at the Site are summarized in the table below.

| Hazardous Materials / Petroleum Products | Storage Location | Approximate Amount |
|---|---|---------------------------------|
| Diesel | AST to west of Building 2 (Figure 2B) | 2,000 gallons |
| Gasoline | AST to west of Building 2 (Figure 2B) | 1,000 gallons |
| Motor oil | Building 1 | 500 gallons |
| Antifreeze | Building 1 | 75 gallons |
| Fertilizers (e.g., Tragyp, Green King, Turf Topper & Tee Bar, Tee-2-Green, sulfur flakes) | Various locations in the maintenance area | Approximately 300 25-pound bags |
| Fungicides (e.g., Heritage) | Metal container located north of Building 2 | SRQs |
| Maintenance/Janitorial supplies | Buildings 1 and 2 | SRQs |
| Growth regulator (e.g., Primo Maxx, BioGain) | Metal container located north of Building 2 | SRQs |
| Herbicides (e.g., Roundup) | Metal container located north of Building 2 | SRQs |

Notes:

AST = aboveground storage tank

SRQs = Small retail quantities; i.e., quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

The hazardous materials and petroleum products were observed to be stored in their original containers with no obvious evidence of spills or releases.

Hazardous Wastes

Hazardous wastes observed to be generated at the Site are summarized in the table below.

| Hazardous Waste | Location | Approximate Amount |
|------------------|------------------------------|---------------------|
| Waste oil | Hazardous waste storage area | 250 gallons |
| Waste antifreeze | | Two 55-gallon drums |

The hazardous wastes appeared to be properly stored with no obvious evidence of spills or releases.

Indications of Releases of Hazardous Materials/Wastes or Petroleum Products

With the exception of minor surficial staining (interpreted to be from automotive and lawn mower lubricants) observed at various locations on the asphalt-paved parking areas around Buildings 1 and 2 and on concrete surfaces within Building 2, no obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site. The minor surficial releases identified above on paved surfaces are considered likely to be de minimis as defined by ASTM.

On-Site Utilities

| | |
|--------------------------------------|---|
| Gas and Electricity | Reported to be SDG&E |
| High-power Transmission Lines | None observed at or adjacent to the Site |
| Storm Drains | Several storm drains were observed throughout the Site |
| Source of Heating and Cooling | Reported to be SDG&E |
| Potable Water Source | Reported to be supplied by the City of San Diego Public Utilities, Water Department and a water well located at the south area of the golf course (not at the Site) |
| Wastewater Conveyance | Reported to be operated by the City of San Diego Public Utilities, Wastewater Department |

Note:

SDG&E = San Diego Gas & Electric

Several SDG&E transformers were observed to be located at the Site. SDG&E has been contacted regarding the possibility of polychlorinated biphenyls (PCBs) being present in its transformers. SDG&E reported that it has never specified PCBs in their transformers. A copy of a letter from SDG&E explaining this and its PCB testing policy is included in the Appendices. No obvious indications of leaks, such as stained concrete, were noted near the transformers.

SITE RESEARCH

Department of Environmental Health (DEH) File Review

A review of the September 2010 DEH HMMD HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases indicated that records exist for the former Site address of 5900 Friars Road. The DEH was contactedⁱⁱ and provided the following information in connection with the Site.

One 2,000-gallon gasoline underground storage tank (UST) and one 550-gallon waste oil UST were reportedly removed from the Site on February 1, 1988. These USTs were reportedly located 60 feet southeast of Building 1. It was reported that the soil in the vicinity of the removed USTs was impacted with gasoline. A sample of groundwater collected from the open excavation

reportedly contained high levels of hydrocarbon components. The County of San Diego, Department of Health Services (DHS) opened an unauthorized release case in May 1988.

On March 9, 1989, DHS issued a letter indicating that remedial action took place and contaminated soil was removed from the excavation. Information regarding confirmation sampling was not included in the files reviewed. DHS requested that groundwater be monitored for 1 year. No additional information regarding groundwater monitoring was included in the files reviewed. This lack of information is considered a data gap, which could potentially be addressed by additional information or reports. Based on the information reviewed, SCS cannot assess whether a recognized environmental condition exists at the Site as a result of the known release that occurred at the former USTs. In the absence of adequate information, SCS recommends that subsurface assessment activities be conducted (e.g., soil and/or groundwater sampling and analysis). Note that soil sampling activities in the interpreted area of these former USTs were conducted by SCS in 2014, which are further discussed in the 'Review of Client-Provided Documents' section below.

A new 2,000-gallon gasoline UST was installed 45 feet south of Building 1 in May 1988. This UST was reportedly removed from the Site in 1997. Three confirmation soil samples were reportedly collected from the excavation. Laboratory results indicated that concentrations of petroleum hydrocarbons were below the laboratory reporting limits. A closed UST report was not included in the DEH file reviewed.

Review of Client-Provided Documents

Based on historical research conducted of the Site by SCS in 2014, a subsurface investigation scope of work was developed to assess certain potential recognized environmental conditions at the Site (soil and ground water sampling in connection with the former USTs, soil samples in connection with the inground wastewater clarifier, soil samples in connection with potential historical use of organochlorine- and metals-based pesticides, and organophosphorus pesticides at the golf course and former agricultural areas of the property). The results and conclusions of this investigation, titled *Subsurface Assessment Riverwalk Phase 1, Assessor's Parcel Numbers 436-611-06 and -29 and 436-650-14, and Portions of 437-240-26, -27, -28, and -29, Portions of 5905 Friars Road and 1150 Fashion Valley Road, San Diego, California* and dated October 20, 2014 (Subsurface Assessment), are presented below. Note that although SCS attempted to collect groundwater samples from the vicinity of the former USTs, groundwater was reported not encountered in the advanced borings to the depths drilled.

- “No detectable concentrations of TPH [total petroleum hydrocarbons] or VOCs [volatile organic compounds] were reported in the soil samples collected in the vicinity of the former USTs excavation. Therefore, there is a low likelihood that significant residual petroleum hydrocarbons are left in place from the previous release reported at the Site.
- “Chlordane, dieldrin, 4,4'-DDE, and 4,4'-DDT were detected above their respective laboratory reporting limits in 2 (for chlordane), 1 (for dieldrin), 2 (for DDE), 1 (for DDT) out of the 25 samples analyzed for OCPs [organochlorine pesticides], respectively; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].

- “The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic (ranging from less than the laboratory reporting limit to 34.9 mg/kg) exceed the CHHSL and RSL. However, the 95 percent UCL [upper confidence level] of the statistical mean for the total arsenic concentrations is 9.89 mg/kg. This value is within the range of typical natural background concentrations.

“Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development by the Client at the Site.

Fire Department Records Review

The City of San Diego Fire Department (SDFD) was contacted regarding hazardous materials/waste or UST records for Siteⁱⁱⁱ. The following table summarizes the SDFD records provided for the Site. Copies of the records are included in the Appendices.

| Year | Description | Reported Owner |
|---------------------------------|---|----------------|
| 1150 Fashion Valley Road | | |
| 2016 | Inspection report for the Riverwalk Golf Course clubhouse; noted the need for additional occupancy and hazard identification signage. | Not stated |
| 5905 Friars Road | | |

| Year | Description | Reported Owner |
|------|---|----------------|
| 2016 | Inspection report for the of Riverwalk Golf Course maintenance yard; highlighted the need to obtain permits for the allowance of compressed gases and the storage of hazardous materials and a hazardous materials business plan for the Site. The inspection also noted the need for proper labeling and secondary containment in the fertilizer storage area. | Not stated |

The storage of hazardous materials at the Site is further discussed in the ‘Hazardous Materials/Petroleum Products’ section above.

Building Department Records Review

San Diego Building Department (SDBD) records were reviewed for the Site and are summarized in the table below^{iv}. Copies of the SDBD records for the Site are included in the Appendices.

| Year | Description | Reported Applicant/Owner |
|---------------------------------|---|---|
| 1150 Fashion Valley Road | | |
| 1997 | Installation of (4) backflow devices | Paseo Del Rio, Ltd |
| 1997 | Hazardous Materials Questionnaire, states that business does not use a UST | Barbara Harris (authorized agent for the owner) |
| 1997 | Building permit application for foundation of gold course club house and cart storage | Barbara Harris (authorized agent for the owner) |
| 1999 | Building permit application for the addition of nylon netting fence | Michael Monteforte |
| 5905 Friars Road | | |
| 1998 | Hazardous Materials Questionnaire, states that business does not dispose of hazardous substances and does not use a UST | Michael Monteforte |

Note:

UST = underground storage tank

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted^v regarding records for the Site. Ms. Cynthia Gould of the SDAPCD responded that no records are available for the Site. A copy of the SDAPCD correspondence is included in the Appendices.

San Diego Industrial Wastewater Program (IWP) Records Review

The IWP was contacted^{vi} regarding records for the Site. According to the IWP, no records are maintained for the Site. A copy of the IWP correspondence is included in the Appendices.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted^{vii} regarding records for the Site. According to the RWQCB, no records are maintained for the Site. A copy of the RWQCB correspondence is included in the Appendices.

San Diego County Department of Agriculture, Weights, and Measures

The County of San Diego Department of Agriculture, Weights, and Measures was contacted about the possible use of pesticides at the Site. The County of San Diego Department of Agriculture, Weights, and Measures responded that there were no records available for the Site. A copy of the County of San Diego Department of Agriculture, Weights, and Measures correspondence is included in the Appendices.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. As part of this Assessment, the following contacts were either interviewed or attempts were made to conduct interviews.

| Contact | Affiliation to Site | Description | Interview Date |
|--------------------|------------------------------|-----------------|----------------|
| Mr. Brendan Cronin | Current Site General Manager | Discussed below | 12/7/16 |
| Mr. Mark Wilson | Superintendent | Discussed below | 12/7/16 |

Mr. Cronin stated that he has been associated with the Site for approximately 12 years. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which were associated with the use and maintenance of the Site as a golf course. Also, to his knowledge, there have been no releases of hazardous materials, petroleum products, and/or hazardous waste at the Site. Mr. Cronin indicated that golf course activities have been taking place at the Site since early 1950s as The Mission Valley Country Club (which changed its name to Stardust Country Club in the early 1960s). The golf course was reopened in 1997 as Riverwalk Golf Course.

Mr. Cronin stated that he was not aware of environmental cleanup liens or activity and use limitations (e.g., engineering controls, deed restrictions) that have been recorded for the Site. He was not aware of pending or threatened litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. He was not aware of notices from governmental entities regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site.

Mr. Wilson stated that he has been associated with the Site for approximately 7 months. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which are associated with the use and maintenance of the Site as a golf course.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the “Background” section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Bhavesh Parikh, Development Director with Hines, completed the User Questionnaire on November 10, 2016. The following table summarizes the responses by the Client.

| Question | Response |
|---|----------|
| Have environmental cleanup liens been filed or recorded against the Site? | No |
| Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry? | No |
| Does the user have specialized knowledge or experience in connection with the Site? | No |
| Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site? | Yes |
| Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases? | No |
| Are there obvious indications that point to the presence of contamination at the Site? | No |

DATA GAPS IN CONNECTION WITH CURRENT SITE LAND USE

Based on observations and research, and with the possible exceptions discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- Former and current owners or former tenants were not available for interviews. This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

Findings and Opinions—Current Site Land Use

Based on observations and research and with the exceptions below, there is a low likelihood that a recognized environmental condition exists at the Site as a result of the current Site land use.

SCS has identified the following environmental concerns:

- Inground wastewater clarifier.

Findings and Opinions—Current Site Land Use

- Current use of pesticides and herbicides at the Site.
- One 2,000-gallon gasoline underground storage tank (UST) and one 550-gallon waste oil UST were reportedly removed from the Site on February 1, 1988. It was reported that the soil in the vicinity of the removed USTs was impacted with gasoline. A sample of groundwater collected from the open excavation reportedly contained high levels of hydrocarbon components. The County of San Diego, Department of Health Services (DHS) opened an unauthorized release case in May 1988. On March 9, 1989, DHS issued a letter indicating that remedial action took place and contaminated soil was removed from the excavation. Information regarding confirmation sampling was not included in the files reviewed. DHS requested that groundwater be monitored for 1 year. No additional information regarding groundwater monitoring was included in the files reviewed.

A Subsurface Assessment was conducted to assess the above referenced environmental concerns, and provided the following conclusions:

- “No detectable concentrations of TPH [total petroleum hydrocarbons] or VOCs [volatile organic compounds] were reported in the soil samples collected in the vicinity of the former USTs excavation. Therefore, there is a low likelihood that significant residual petroleum hydrocarbons are left in place from the previous release reported at the Site.
- “Chlordane, dieldrin, 4,4’-DDE, and 4,4’-DDT were detected above their respective laboratory reporting limits in 2 (for chlordane), 1 (for dieldrin), 2 (for DDE), 1 (for DDT) out of the 25 samples analyzed for OCPs [organochlorine pesticides], respectively; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].
- “The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic (ranging from less than the laboratory reporting limit to 34.9 mg/kg) exceed the CHHSL and RSL. However, the 95 percent UCL [upper confidence level] of the statistical mean for the total arsenic concentrations is 9.89 mg/kg. This value is within the range of typical natural background concentrations.

The Subsurface Assessment recommended the following:

- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of

Findings and Opinions—Current Site Land Use

3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.

- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development of the Site by the Client.

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 35 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California – San Diego County, 1967, photo-revised 1975 |

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|-----------------------------|---|
| Reported Formation | Young alluvial flood-plain deposits (Qya) |
| Reported Description | Poorly consolidated, poorly sorted, permeable flood-plain deposits of sandy, silty or clay-bearing alluvium |
| Source | Kennedy, Michael P., and Siang S. Tan, Geologic Map of the San Diego 30' × 60' Quadrangle, California, California Geological Survey, 2008 |

Hydrogeology

Based on a review of a DEH Closure Letter in connection to the removal of USTs in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be to southwest. The actual depth to groundwater and flow direction at the Site may be different. Note groundwater was not encountered in previous borings advanced at the northern portion of the Site for the Subsurface Assessment to depths of approximately 19.5 feet below grade.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

| | |
|------------------------------------|---|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |
| Reported Beneficial Use | Agricultural and industrial, and potentially municipal |
| Source | California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |

Note:

RWQCB = Regional Water Quality Control Board

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity^{viii}. For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent⁵ to the Site.

| Direction | Land Use | Comments |
|-----------|--|--|
| North | Office building (5920 Friars Road) Open space (SDG&E) Del Mesa Liquor (6090 Friars Road) Las Cumbres Square Shopping Center (6110 Friars Road) MFRs (6416 Friars Road) MFRs (6466 Friars Road) (Figure 3e-2) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |
| East | MFRs (6747-6855 Friars Road) (Figure 3f-1) Bank (1350 Fashion Valley Road) Fashion Valley Mall (6967 Friars Road) | |
| South | MTS light rail/trolley right-of-way (Figure 3f-2), with the Riverwalk Golf Club green and club house at 1150 Fashion Valley Road further south | |
| West | MFR (5805 Friars Road) MFR (5875 Friars Road) (Figure 3g-1) | |

Notes:

SDG&E = San Diego Gas & Electric

⁵ *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

MFR = Multi-family Residence

MTS = San Diego Metropolitan Transit System

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report^{ix}) was prepared by Environmental Data Resources, Inc. (EDR) for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|--|---------------|-------------------------------|---------|----------------------|
| National Priorities List (NPL) | 1.00 mile | 0 | No | No |
| NPL Delisted | 1.00 mile | 0 | No | No |
| Comprehensive Environmental Response Compensation and Liability System (CERCLIS) | 0.50 mile | 0 | No | No |
| No Further Remedial Action Planned (NFRAP) | 0.50 mile | 0 | No | No |
| Resource Conservation and Recovery Act– Corrective Action (RCRA COR ACT) | 1.00 mile | 0 | No | No |
| RCRA Treatment and Disposal Facilities (RCRA TSD) | 0.50 mile | 0 | No | No |
| RCRA Generators (RCRA GEN) | 0.25 mile | 0 | No | No |
| Federal Engineering and Institutional Controls (IC/EC) | 0.50 mile | 0 | No | No |
| Emergency Response Notification System (ERNS) | 0.12 mile | 0 | No | No |
| State/Tribal- Equivalent NPL | 1.00 mile | 0 | No | No |
| State/Tribal-Equivalent CERCLIS | 1.00 mile | 5 | No | No |
| State/Tribal Solid Waste List (SWL) | 0.50 mile | 1 | No | No |
| State/Tribal Leaking Underground Storage Tanks (LUST) | 0.50 mile | 46 | No | Yes |

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|---|---------------|-------------------------------|---------|----------------------|
| State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs) | 0.25 mile | 4 | No | No |
| State/Tribal Voluntary Cleanup Program (VCP) | 0.50 mile | 0 | No | No |
| Federal Brownfields | 0.50 mile | 0 | No | No |
| Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMMD) | Site only | 0 | No | N/A |
| SWEEPS (UST) | 0.25 mile | 8 | No | Yes |
| Local Land Records (DEED) | 0.50 mile | 0 | No | No |
| Other (Haznet) | 0.12 mile | 1 | No | No |
| EDR Proprietary Records (Historical Auto Stations and Cleaners) | 0.25 mile | 4 | No | No |

N/A = Not applicable

Although current addresses of the Site were not listed on any of the regulatory databases reviewed, the former address of 5900 Friars Road was listed on the Leaking Underground Storage Tank (LUST) and San Diego Site Assessment and Mitigation (SAM) databases. A discussion of these listings can be found in the 'Site Research' section above.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site⁶

⁶ Based on "Technical Justification for Groundwater Media-Specific Criteria," (Groundwater Study) (March 2012) developed to support the State of California "Low Threat Closure Policy" (adopted May 2012), "plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation." The Groundwater Study goes on to cite Shih et al., 2004 that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area is widely accepted as representative of plume lengths at California UST sites. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the “Hydrogeology” section of this Report)

Based on one or more of the factors listed above, and with possible exceptions discussed in the ‘Additional SCS Research’ section below, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR listed three facilities as being “orphans,” which are facilities for which EDR does not have sufficient information to accurately locate them on a map. Based on a review of the orphans, it is interpreted that none of the facilities are within the requisite search radii for their reported database listings.

Additional SCS Research

#H05129-002 and -003, ARCO, 6899 Friars Road, Approximately 500 Feet Northwest of the Site

Based on its listing on the Historical UST, EDR Historical Auto, LUST, SLIC, San Diego Co. HMMD, EMI, SWEEPS UST, and Historical Cortese databases, regulatory files for this facility were reviewed. A County of San Diego DEH case closure letter titled *Underground Storage Tank (UST) Case #H05129-002 & #H05129-003 ARCO Facility 3052 6899 Friars Road, San* was issued for this property on April 15, 2010 and provided the following information. This site has been in operation as a gas station since before 1969 and is currently an AM/PM convenience store and gasoline station with four 10,000 gallon USTs and associated piping and dispensers. “Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon UST's and one 8,000 gallon UST.”

“Site investigations to date identified significant soil and groundwater impacts in the area of the former UST's. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest.

Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The primary contaminants of concern (COCs) were those compounds related to petroleum hydrocarbons.”

A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation with remediation by natural attenuation proposed as the most cost effective remedial alternative, based on the past history of soil vapor extraction and air sparging on this site. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years.

Based on the acceptance and implementation of the CAP by the DEH and on-going monitoring by private consultants, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the Historical UST, EDR Historical Auto, LUST, SLIC, San Diego Co. HMMD, EMI, SWEEPS UST, and Historical Cortese databases.

6110 Friars Road (Adjacent to the North of the Site)

A listing on the EDR Historical Cleaners database indicates that a historical dry cleaners was present at 6110 Friars Road, situated adjacent to the north of the Site, between the approximate years of 1980 and 2012. A search of the State of California’s Geotracker website and a request to the DEH yielded no evidence of regulatory records associated with a dry cleaning facility or a release of hazardous materials or waste at this location. Additionally, based on the information obtained as a part of this Report, SCS cannot verify whether this facility previously performed dry cleaning operations at this facility, or shipped items to be dry cleaned off-site or performed other types of cleaning (e.g., coin laundry or other types of cleaning).

Based on the absence of disposal violations, the absence of regulatory records and the lack of known and reported releases, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the EDR Historical Cleaners database.

6416 Friars Road (Adjacent to the North of the Site)

Additionally, a listing on the EDR Historical Auto Stations database indicates that a historical automobile service station was present at 6416 Friars Road in 2001. A search of the State of California’s Geotracker website and a request to the DEH yielded no evidence of regulatory records or a release of hazardous materials or waste at this location.

Based on the absence of disposal violations, the absence of regulatory records and the lack of known and reported releases, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the EDR Historical Automobile service station database.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site^x. There was one well interpreted to be located within a 1-mile radius of the Site.

Well API: 07300047 is located approximately 0.5 mile to the southeast of the Site, operated by J. A. Smith & F. R. Williams, and is listed with a status as ‘undefined.’

Based on the distance from the Site, this well is not considered to represent a recognized environmental condition to the Site.

DATA GAPS IN CONNECTION WITH OFF-SITE SOURCES

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

Findings and Opinions—Off-Site Source Survey

Based on the off-Site source survey, several facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. However, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This opinion is based on one or more of the following: reported regulatory status (e.g., case closed), media affected (e.g., soil contamination only), distance from the Site, direction from the Site with respect to reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. The following table summarizes the historical resources reviewed as part of this Assessment.

| Resource | Source | Years Available |
|-----------------------------|---|--|
| Aerial Photographs | NETR Online http://www.historicaerials.com/ Google Earth EDR | 1949, 1953, 1964, 1966, 1970, 1979, 1980, 1985, 1989, 1990, 1994, 1996, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012 |
| City Directories | San Diego Central Library | 1996, 2001, 2006, 2011, 2016 |
| Sanborn Fire Insurance Maps | EDR | No coverage |
| Topographic Maps | In-House Collection | 1967, 1975 |

| Resource | Source | Years Available |
|-------------------------------|----------------|--|
| Building Department Records | SDBD | 1997, 1998, 1999 |
| Fire Department Records | SDFD | 2016 |
| Previous Environmental Report | Not applicable | Discussed in the "Review of Client-Provided Documents" section above |
| Interviews | Not applicable | Discussed in the "Interviews" section above |

Notes:

EDR = Environmental Data Resources, Inc.

SDBD = San Diego Building Department

SDFD = San Diego Fire Department

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

| Year | Interpreted Site Tenants | Interpreted Site Use |
|-------------|---|---|
| 1915-1945 | Cushman Family | Agricultural |
| 1948 | Unknown | The Site appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course with associated maintenance buildings. Building 1 was depicted in aerial photographs from 1953 through 2005. A second building was depicted approximately 300 feet east of Building 1. This building was not depicted in aerial photographs after 2003. Building 2 was depicted in aerial photographs from 1972 through 2005. |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

With the exceptions of use of pesticides at the Site, discussed below and in the 'Site Research' section above, and the possible use of other hazardous materials associated with farming activities (e.g., fuel storage, chemicals used in the repair and maintenance of farm equipment), no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical

resources reviewed. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Agricultural Activities and Golf Course

Based on a review of aerial photographs and interviews with the current Site owner, it is interpreted that agricultural activities (row crops) took place at the Site from circa 1915 to the mid-1940s. In addition, the Site has been used as a golf course since early 1950s to the present. These activities are interpreted to have possibly taken place at the time when organochlorine pesticides such as dichlorodiphenyltrichloroethane (DDT), chlordane, and metals-based pesticides, such as arsenic, were in wide general use for pest or weed control.

These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time. It is possible that organochlorine and metals-based pesticides may have been used, stored, and/or mixed at the Site.

While there are currently no regulations that stipulate cleanup levels for pesticides in soil, there is a level at which soil could be classified as a hazardous waste based on, for example, a DDT concentration. However, it has been SCS's experience that in order for pesticide-impacted soil to be classified as hazardous waste, the soil would first need to be classified as "waste" (e.g., to be excavated and transported off Site). In addition, it would need to have concentrations of pesticides and/or metals in excess of regulatory values, such as the total threshold limit or soluble threshold limit concentrations values.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metals-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides and assuming that existing Site use remains the same, this common occurrence is, in our experience, unlikely to lead to a health risk or an enforcement action and is therefore likely to be considered de minimis, as defined by ASTM.

However, we understand that the Client plans to redevelop the Site. While specific redevelopment plans for the Site are not known at this time, the redevelopment of the area will likely consist of mixed uses (commercial, retail, and residential). If redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of constituents of concern (CoCs), if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of CoCs that would cause the soil to be classified as a hazardous or regulated waste.

Note that previous soil sampling activities for pesticides in connection with the agricultural land use of the Site is further discussed in the 'Review of Client-Provided Documents' section above.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

| Years | Interpreted Site Vicinity Tenants/Land Use | Interpreted Site Vicinity Use |
|--|---|---|
| 5920 Friars Road (North) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | CalMat/Vulcan | Mining (crushed stone, sand, and gravel) |
| 1972-2016 | Office Building | Office |
| 6090 and 6110 Friars Road (North) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | CalMat/Vulcan | Mining (crushed stone, sand, and gravel) |
| 1972-1980 | Miscellaneous retail stores | Commercial |
| 1980-2016 | Daisy Cleaners & Laundry, Prestige Tailoring and Dry Cleaning | Dry Cleaners |
| 6416 and 6466 Friars Road (North) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | CalMat/Vulcan | Mining (crushed stone, sand, and gravel) |
| 1980-2016 | Multi-family residences | Residential |
| 6967 Friars Road (East) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | None | Vacant or undeveloped |
| 1980 - 2016 | Retail stores (e.g., JC Penny) | Commercial |

| Years | Interpreted Site Vicinity Tenants/Land Use | Interpreted Site Vicinity Use |
|---|--|---|
| MTS Right-of-Way (South) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1997 | Golf course | Recreational |
| 1998-2016 | MTS Right-of-Way and golf course further south | Transportation |
| 5805 and 5875 Friars Road (West) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | None | Vacant or undeveloped |
| 1972 | None | Graded land |
| 1980 - 2016 | MFRs | Residential |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

With the possible exception of historic auto repair and possible dry cleaning operations discussed in the 'Additional SCS Research' section above, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

DATA GAPS IN CONNECTION WITH THE HISTORICAL SITE LAND USE

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1953 to 1964 and 1970 to 1979. Based on the corroborating data from the historical information reviewed (i.e., the Site was interpreted to have been used for recreational purposes in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Historical information prior to 1915 was not readily available. Thus, SCS is unable to determine the Site usage from the date of first development as recommended by ASTM. Based on SCS's experience and available historical information, the Site was interpreted to have possibly first been developed for agricultural use. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Findings and Opinions—Historical Site and Site Vicinity Land Use

With the exceptions of use of pesticides at the Site (discussed under Agricultural Activities and Golf Course section above), and the possible use of other hazardous materials associated farming activities (e.g. fuel storage, chemicals used in the repair and maintenance of farm equipment, etc.), no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Based on a review of historical resources, with these possible exceptions, there is a low likelihood that a recognized environmental condition exists at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

5 CONCLUSIONS AND RECOMMENDATIONS

SCS has performed an Assessment of 5905 Friars Road and 1150 Fashion Valley Road, San Diego, California (Site), in general conformance with the American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

With the possible exceptions below, this Assessment has revealed no evidence of a recognized environmental condition in connection with the Site.

SCS has identified the following features of environmental concern

- Inground wastewater clarifier.
- Current use of pesticides and herbicides at the Site.
- One 2,000-gallon gasoline underground storage tank (UST) and one 550-gallon waste oil UST were reportedly removed from the Site on February 1, 1988. It was reported that the soil in the vicinity of the removed USTs was impacted with gasoline. A sample of groundwater collected from the open excavation reportedly contained high levels of hydrocarbon components. The County of San Diego, Department of Health Services (DHS) opened an unauthorized release case in May 1988. On March 9, 1989, DHS issued a letter indicating that remedial action took place and contaminated soil was removed from the excavation. Information regarding confirmation sampling was not included in the files reviewed. DHS requested that groundwater be monitored for 1 year. No additional information regarding groundwater monitoring was included in the files reviewed.

The Subsurface Assessment was conducted in 2014 to assess the above FOPCs, and provided the following conclusions:

- No detectable concentrations of TPH [total petroleum hydrocarbons] or VOCs [volatile organic compounds] were reported in the soil samples collected in the vicinity of the former USTs excavation. Therefore, there is a low likelihood that significant residual petroleum hydrocarbons are left in place from the previous release reported at the Site.
- Chlordane, dieldrin, 4,4'-DDE, and 4,4'-DDT were detected above their respective laboratory reporting limits in 2 (for chlordane), 1 (for dieldrin), 2 (for DDE), 1 (for DDT) out of the 25 samples analyzed for OCPs [organochlorine pesticides], respectively; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].
- The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic (ranging from less than the laboratory reporting limit to 34.9 mg/kg) exceed the CHHSL and RSL. However, the 95 percent UCL [upper confidence level] of the statistical mean for the total arsenic concentrations is 9.89 mg/kg. This value is within the range of typical natural background concentrations.

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.

This Assessment has been conducted by an environmental professional whose qualifications⁷ were made known to the Client. The conclusions and recommendations presented above are based on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS's experience.

6 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS's services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection

⁷ SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

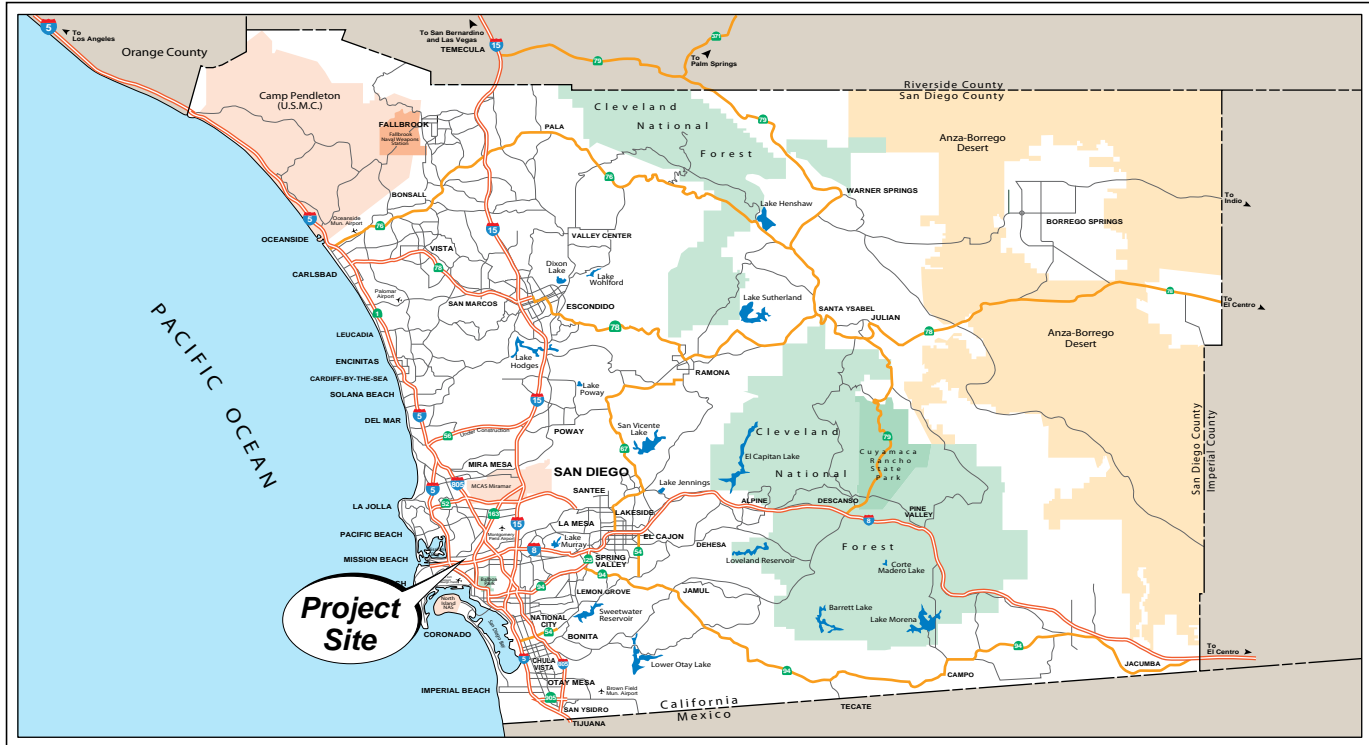

7 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

APPENDICES

GLOSSARY

- adjacent property.** Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.
- aerial photographs.** Photographs taken from an airplane or helicopter of areas encompassing the Site.
- asbestos.** Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.
- asbestos-containing material (ACM).** Any material or product that contains more than 1% asbestos.
- construction debris.** Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.
- Controlled recognized environmental conditions.** A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
- de minimis condition.** A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.
- drum.** A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.
- dry well.** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).
- fill dirt.** Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.
- fire insurance map.** Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.
- hazardous material.** Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.
- hazardous substance.** Pursuant to CERCLA, hazardous substances include the following:

- 1) All toxic pollutants and hazardous substances listed under the Clean Water Act
- 2) Hazardous wastes regulated under RCRA
- 3) Any hazardous air pollutant under the Clean Air Act
- 4) Chemicals designated as “immediately hazardous” under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site*, a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or “Perc”; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

March 7, 2008

Mr. Ralph Vasquez
Environmental Business Solutions
8799 Balboa Avenue #290
San Diego, CA 92123

SAN DIEGO GAS & ELECTRIC (SDG&E) PCB TRANSFORMERS

Dear Mr. Vasquez,

This letter is in response to your inquiry on March 5, 2008 regarding the transformers purchased by San Diego Gas & Electric (SDG&E).

SDG&E has never specified PCB transformers for its distribution system. Although only mineral oil transformers were purchased, some older, pre 1980, mineral oil transformers were inadvertently contaminated with PCBs by the manufacturer.

Based on the SDG&E statistical sampling and testing program, it is unlikely that the SDG&E equipment is PCB contaminated. The only way to know with certainty is by testing.

SDG&E is responsible for ensuring that its transformers comply with EPA regulations governing PCBs. However, EPA regulations do not require the testing of individual mineral oil transformers. Therefore, should you wish for that to be done, there will be a charge associated with the testing and if a service interruption is deemed necessary then there will be additional charges for any high voltage line work and associated labor costs.

Please call me at (858) 547-3069 if you need additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "W. Brull", written in a cursive style.

Willis G. Brull
Principal Environmental Specialist

JACK MILLER
ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton **E-Mail:** toverton@scsengineers.com

Phone: (858) 571-5500 **FAX:** (858) 571-5357

Company Name: SCS Engineers

Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123
(You may attach a business card/overprint with business card if preferred)

Additional information on public records maybe accessed from the DEH website, www.sdcdeh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. **Separate forms are needed for each address or parcel number.**

5905 Friars Road, San Diego, CA

or

Exact Address (Street, City and Zip Code)

Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.):

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

- Contaminated Property Investigation(s) (SAM Cases) SAM Closure Letter/Report
- Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) Other: _____ (specify)

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____ Date: ____/____/____

Files copied for: _____ of _____ Date: ____/____/____

Request cancelled by: _____ Date: ____/____/____

Photocopies _____ Cost _____ Picked up/mailed on _____ By _____

A search for DEH records checked above has been conducted and the following apply:

- SAM files for the permit number(s) below are available. After the files you have requested are retrieved from storage, an appointment will be scheduled so that you may review SAM records in the DEH main office.
- # _____ # _____ # _____ # _____ # _____
- HMD/UST files for the permit number(s) below are available for review at: http://sdcounty.ca.gov/deh/doing_business/hmd_search.html
- # _____ # _____ # _____ # _____ # _____
- Original records were purged. Database-only records are available (at: http://sdcounty.ca.gov/deh/doing_business/hazmat_search.html) for the following permit number(s):
- # _____ # _____ # _____ # _____ # _____
- No SAM/HMD/UST records were found for the address/APN you requested.

Dear Mr. Westberg:

SCS Engineers (SCS) is pleased to present this report (Report) of the subsurface assessment activities (Assessment) of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate a former underground storage tank, a clarifier, and current and former potential usage of pesticides at the Site. The work described in this Report was performed by SCS in general accordance with the Environmental Services Agreement (Contract) and Amendment 1 to the Environmental Services Agreement (Amendment) between SCS and Related California (Client). The Contract is dated August 1, 2014, and the Amendment is dated September 9, 2014.

SCS enjoyed working with you on this project. Providing economical solutions to meet your needs is more than our goal, it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please do not hesitate to call our office at (858) 571-5500.

Sincerely,

Cristobal A. Ramirez, CAC

1 BACKGROUND

SCS Engineers (SCS) understands that the site is currently identified as 5905 Friars Road (formerly known as 5900 Friars Road) and 1150 Fashion Valley Road, San Diego, California with Assessor's Parcel Numbers (APNs) 436-611-06 and -29 and 436-650-14, and portions of 437-240-26, -27, -28, and -29 (Site). The Site (identified by the Client as Phase 1) is developed primarily as a golf course, identified as Riverwalk Golf Club, and encompasses the areas of the golf course located north of the San Diego Metropolitan Transit Development System (MTDS)/trolley right-of-way. It was reported that the Client is proposing to purchase and develop the Site into various land uses including residential and mixed-use. The Client reported that Site soil grading is anticipated to balance, and no soil export is proposed at this time.

SCS recently prepared a draft report for the Site titled "Phase I Environmental Site Assessment," dated September 9, 2014 (Phase I ESA), which provided the following conclusions and/or recommendations in connection with the Site:

- Inground wastewater clarifier. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling and analysis).
- Historical and current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling).
- One 2,000-gallon gasoline underground storage tank (UST) and one 550-gallon waste oil UST were reportedly removed from the Site on February 1, 1988. It was reported that the soil in the vicinity of the removed USTs was impacted with gasoline. A sample of groundwater collected from the open excavation reportedly contained high levels of hydrocarbon components. The County of San Diego, Department of Health Services (DHS) opened an unauthorized release case in May 1988. On March 9, 1989, DHS issued a letter indicating that remedial action took place and contaminated soil was removed from the excavation. Information regarding confirmation sampling was not included in the files reviewed. DHS requested that groundwater be monitored for 1 year. No additional information regarding groundwater monitoring was included in the files reviewed. This lack of information is considered a data gap, which could potentially be addressed by additional information or reports. Based on the information reviewed, SCS cannot assess whether a recognized environmental condition exists at the Site as a result of the known release that occurred at the former USTs. In the absence of adequate information, SCS recommends that subsurface assessment activities be conducted (e.g., soil and/or groundwater sampling and analysis).

Based on conversations with the Client, SCS developed a subsurface investigation scope of work to assess certain potential recognized environmental conditions at the Site (soil and ground water sampling in connection with the former USTs, soil samples in connection with the inground wastewater clarifier, and soil samples in connection with potential historical use of organochlorine- and metals-based pesticides, and chlorinated herbicides at the golf course and former agricultural areas of the property). The objective, scope of work, results and conclusions of this investigation are presented below.

2 OBJECTIVES

The objectives of the proposed scope of services were to:

- Assess the possible presence and concentrations of petroleum products and volatile organic compounds (VOCs) in the soil and groundwater beneath the Site in connection with former USTs located at the northwest area of the Site.
- Assess the possible presence and concentrations of petroleum hydrocarbons and VOCs in the shallow soil beneath the Site in connection with the current inground wastewater clarifier system.
- Assess the possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site.

3 SCOPE OF SERVICES

PREPARATION FOR FIELDWORK

Preparation of Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the “exclusion zone” is required pursuant to the regulations found in 29 Code of Federal Regulations Part 1910.120 and California Code of Regulations (CCR), Title 8, Section 5192. Therefore, a health and safety plan was prepared for the proposed work scope, which outlined the potential chemical and physical hazards that may be encountered during drilling, hand augering, and sampling activities. The appropriate personal protective equipment and emergency response procedures for the anticipated Site-specific chemical and physical hazards were detailed in this plan. SCS personnel involved with the field work were required to read and sign this document in order to encourage proper health and safety practices.

Utility Search and Markout

SCS notified Underground Service Alert as required by state law, and Ticket Number A42580387 was issued. These procedures were designed to minimize the likelihood of drilling into a subsurface utility. In addition, a private utility locator, Accutech Services, was retained to clear boring locations. These procedures were designed to minimize the likelihood of drilling into a subsurface utility.

Boring Permits

As two borings were intended to be advanced to groundwater, boring permits were required. SCS prepared and submitted the necessary boring permit application and the appropriate fees to the

County of San Diego. The County of San Diego issued Boring Construction Permit #LMWP001284 on September 11, 2014 (Appendix A).

FIELD ACTIVITIES

Subsurface Investigation of Clarifier and Former USTs

To assess the former USTs and existing clarifier at the northwest portion of the Site, a total of five borings were advanced at the Site on September 18, 2014, with a limited-access and/or truck-mounted, direct-push drilling rig to depths ranging from 8 feet down to approximately 30 feet below ground surface (bgs) (Figures 2a and 2b). A description of the boring locations, sample depths, and laboratory analyses are presented in the table below:

| Sample Identifier | Location | Soil Sample Depths | Laboratory Analysis | Number of Samples Analyzed |
|-------------------|--|------------------------------------|---|----------------------------|
| B1 | Borings were advanced in close proximity to the former USTs excavation ¹ | 5, 10, 15, and 19.5 feet bgs | The soil samples collected at 5, 15, and 19.5 feet below grade were analyzed for TPH and VOCs | 3 TPH 3 VOCs |
| B2 | | 5, 10, 15, 20, 25, and 30 feet bgs | The soil samples collected at 5, 15, and 25 feet below grade were analyzed for TPH and VOCs | 3 TPH 3 VOCs |
| B3 | | 5, 10, and 15 feet bgs | The soil samples collected at 5, 10, and 15 feet below grade were analyzed for TPH and VOCs | 3 TPH 3 VOCs |
| B4 | | 5, 10, and 15 feet bgs | The soil samples collected at 5, 10, and 15 feet below grade were analyzed for TPH and VOCs | 3 TPH 3 VOCs |
| B5 | The boring was advanced in close proximity to the current inground wastewater clarifier system | 3 and 8 feet bgs | Soil samples were analyzed for TPH and VOCs | 2 TPH 2 VOCs |

Notes:

TPH: Total petroleum hydrocarbons full range analyzed in general accordance with U.S. Environmental Protection Agency (EPA) Method 8015B

VOCs: Volatile organic compounds in general accordance with EPA Method 8260B

An SCS Senior Project Professional, under the supervision of a California state-certified Professional Geologist, was on-Site to observe the drilling activity and log the borings (Appendix B). Soil samples were described in general accordance with the Unified Soil Classification System.

A truck-mounted, direct-push drilling rig was used to advance soil borings B1 to B4 (former USTs) and a limited access drilling rig was used to advance soil boring B5 (clarifier). Soil samples were collected from each boring with a direct-push sampler for analysis and lithologic logging purposes. Between sampling events, the sampler was decontaminated with a

¹ Boring locations were selected based on the Department of Environmental Health records and maps review conducted by SCS on August 11, 2014.

water/Alconox™ solution wash and two tap water rinses. Soil samples were driven into acetate sleeves. The ends of the acetate sleeves were covered with Teflon™ sheeting and tightly closed with end caps for handling and transportation activities. The sample containers were labeled and packed in ice-filled coolers.

Groundwater was not encountered at the maximum proposed depths drilled at the Site, therefore, groundwater samples were not collected.

Upon completion, the borings were backfilled with hydrated bentonite granules and completed at the surface with appropriate patching.

A summary of the laboratory results from the soil samples analyzed is presented (Table 3). A copy of the laboratory report is provided (Appendix C).

Subsurface Investigation for Pesticides

On September 18 and 19, 2014, a total of 18 soil borings (SB1 through SB18) were advanced at the Site with the use of a truck-mounted, direct-push drilling rig to assess possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site (Figures 2a and 2b). Soil sampling was conducted in representative current golf green areas and former agricultural areas in a semi-grid pattern. Soil samples were collected from each boring location at depths of approximately 0.5, 1.5, and 3.0 feet bgs.

Soil samples were collected from each boring with a direct-push sampler for analysis. Between sampling events, the sampler was decontaminated with a water/Alconox™ solution wash and two tap water rinses. Soil samples were driven into acetate sleeves. The ends of the acetate sleeves were covered with Teflon™ sheeting and tightly closed with end caps for handling and transportation activities. The sample containers were labeled and packed in ice-filled coolers.

The soil samples were submitted to American Scientific Laboratories, a state-accredited environmental laboratory, and selected samples were analyzed for the following:

- Fourteen soil samples were analyzed for TPH (in general accordance with EPA Method 8015B)
- Fourteen soil and samples were analyzed for VOCs (in general accordance with EPA Method 8260B).

A summary of the laboratory results from the soil samples analyzed is presented (Tables 1, 2, and 4). A copy of the laboratory report is provided (Appendix C).

4 FINDINGS

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table:

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 20 to 30 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California - San Diego County, 1967, photo-revised 1975 |

Geology

The geology of the Site as observed during sampling activities is summarized below along with the reported Site vicinity formation information derived from the below referenced source:

| | |
|--|---|
| Reported and Observed Formation | 1 to 5 feet thick of compacted fill, underlain by Quaternary Alluvium |
| Reported and Observed Description | Fill soils and Quaternary Alluvium were both observed and reported to generally consist of clayey, silty sand with varying amounts of gravel and cobbles. |
| Source | Geologic Map of the San Diego 30x60 Quadrangle, California, Kennedy, Michael P., and Tan, Siang S, United States Geological Survey, 2005 |

Hydrogeology

Based on a review of a Department of Environmental Health (DEH) Closure Letter in connection to the removal of USTs in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be southwest. The actual depth to groundwater and flow direction at the Site may be different. Groundwater was not encountered during this sampling event to the maximum depth drilled of 30 feet below grade.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity:

| | |
|------------------------------------|--|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |
| Reported Beneficial Use | Agricultural and Industrial, and potentially Municipal |

| | |
|---------------|---|
| Source | California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |
|---------------|---|

LABORATORY ANALYTICAL RESULTS

The reported analytical results for soil samples collected on September 18 and 19, 2014, are depicted (Figures 2a and 2b) and tabulated (Tables 1, 2, 3, and 4).

TPH

No detectable concentrations of TPH were reported in any of the 14 soil samples analyzed.

VOCs

No detectable concentrations of VOCs were reported in any of the 14 soil samples analyzed.

Pesticides

The analytical results for soil samples with reported concentrations of organochlorine pesticides and chlorinated herbicides above the laboratory reporting limits, and arsenic above the laboratory reporting limits are summarized below.

| Sample Identifier | Depth (feet bgs) | Organochlorine Pesticides (EPA Method 8081A) (µg/kg) | | | | | |
|----------------------------------|------------------|--|-----------------|--------------|--------------|--------------|-----------|
| | | Gamma-Chlordane | Alpha-Chlordane | 4,4'-DDD | 4,4'-DDE | 4,4'-DDT | Dieldrin |
| SB1-0.5 | 0.5 | 9.44 | 14.8 | <4 | 16.3 | 23.4 | <4 |
| B2-0.5 | 0.5 | 3.81 | 3.50 | <4 | 12.2 | <4 | 4.23 |
| CHHSL² (µg/kg) | | 430 | 430 | 2,300 | 1,600 | 1,600 | 35 |
| RSL³ (µg/kg) | | 1,800 | 1,800 | 2,200 | 1,600 | 1,900 | 33 |

Notes:

4,4'-DDD= 4,4'-dichlorodiphenyldichloroethane

4,4'-DDE= 4,4'-dichlorodiphenyldichloroethylene

4,4'-DDT= 4,4'-dichlorodiphenyltrichloroethane

Soil samples analyzed for organochlorine pesticides (OCPs) according to EPA Method 8081A

Depth in feet below ground surface (feet bgs)

5 DISCUSSION

FORMER USTS

No detectable concentrations of TPH or VOCs were reported in the soil samples collected in the vicinity of the former USTs excavation. Therefore, there is a low likelihood that significant residual petroleum hydrocarbons are left in place from the previous release reported at the Site.

PESTICIDES

Risk-Based Screening Criteria

A guidance document regarding the use of CHHSLs (*Use of California Human Health Screening Levels [CHHSLs] in Evaluation of Contaminated Properties*) has been developed by the California Environmental Protection Agency. The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, and within the limitations described in this document, the presence of a chemical in soil, soil gas, or indoor air at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) at the Site. The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but suggests that further evaluation of potential human health concerns is warranted.

An additional guidance document titled *Regional Screening Levels (RSL) Summary Table* (May 2014), has been developed by the EPA to “provide default screening tables and a calculator to assist Remedial Project Managers (RPMs), On Scene Coordinators (OSCs), risk assessors, and others involved in decision making concerning CERCLA hazardous waste sites and to determine whether levels of contamination found at the site may warrant further investigation or site cleanup, or whether no further investigation or action may be required.” According to this document, “It should be emphasized that screening levels (SLs) are not cleanup standards . . . Site-specific information may warrant modifying the default parameters in the equations and calculating site-specific SLs, which may differ from the values in these tables.”

For the purposes of this Assessment, the constituents of concern (CoCs) were conservatively compared to their respective residential CHHSL or RSL, whichever was lower and are further discussed below.

Organochlorine Pesticides

Chlordane

Chlordane was detected above the laboratory reporting limit in 2 of the 25 samples analyzed for OCPs, with a maximum reported concentration of 14.8 µg/kg. No sample concentrations were above the RSL of 1,800 µg/kg or the CHHSL of 430 µg/kg.

Dieldrin

Dieldrin was detected above the laboratory reporting limit in 1 of the 25 samples analyzed for OCPs with a concentration of 4.23 µg/kg. No sample concentrations were above the RSL of 33 µg/kg or CHHSL of 30 µg/kg.

4,4'-DDE

DDE was detected above the laboratory reporting limit in 2 of the 25 samples analyzed for OCPs with a maximum reported concentration of 16.3 µg/kg. No sample concentrations were above the RSL of 1,600 µg/kg or CHHSL of 1,600 µg/kg.

4,4'-DDT

DDT was detected above the laboratory reporting limit in 1 of the 25 samples analyzed for OCPs with a maximum reported concentration of 23.4 µg/kg. No sample concentrations were above the RSL of 1,900 µg/kg or CHHSL of 1,600 µg/kg.

Arsenic

The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic exceed the CHHSL and RSL in most of the samples.

While arsenic concentrations exceed the CHHSL and RSL, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions. The residential CHHSL for arsenic is 0.07 mg/kg and the residential RSL for arsenic is 0.67 mg/kg; however, arsenic is known to naturally occur in soil, particularly western United States soils, at concentrations well above the CHHSL and RSL.

Based on a report prepared by the United States Geological Survey (USGS)⁵, the background concentrations of arsenic in the western United States range from 2.8 to 10.9 mg/kg. In another report prepared specifically for California soils⁶, the background concentrations of arsenic in California soil range from 0.6 to 11.0 mg/kg. In an abstract presented by DTSC staff at the 2008 Society of Toxicology Annual Meeting⁷, it was reported that the upper-bound background concentration for arsenic in southern California soil is 12 mg/kg.

⁵ *Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States*, by J. G. Boerngen and H. T. Shacklette, USGS Professional Paper No. 1270, 1984.

⁶ *Background Concentrations of Trace and Major Elements in California Soils*, by G. R. Bradford, et al., Kearny Foundation of Soil Science Division of Agriculture and Natural Resources University of California, March 1996.

⁷ *Determination of a Southern California Regional Background Arsenic Concentration in Soil*, Chernoff, G., Bosan, W., Oudiz, D., and California Department of Toxic Substances Control, 2008 Society of Toxicology Annual Meeting.

The following samples were reported above the DTSC upper-bound background concentration of 12 mg/kg: SB9-1.5, SB17-0.5, and SB17-1.5; however, concentrations were reported to decrease with depth.

The EPA promotes the use of statistical analysis when characterizing soil concentration data. For a given sample population, individual exceedance of a criterion does not, by itself, determine the waste characterization or risk associated with CoCs. For example, the reported concentration of arsenic in sample SB9-1.5 is 14.4 mg/kg. While an average data set may be consistent with background levels, this sample may be indicative of an area of elevated concentrations of arsenic and additional investigation may be recommended. Therefore, SCS used a statistical analysis approach to better understand the data set and significance of the detected concentrations.

The statistical analysis used calculates an upper confidence limit (UCL) of the sample mean and the confidence (expressed as a percentage) in the probability that the actual mean of the concentration in the waste is not higher than the UCL. For human health risk evaluation, the 95 percent UCL is calculated and then compared to the appropriate criterion. For waste characterization, the 80 percent UCL is calculated and then compared to the appropriate criterion.

Twenty-seven samples were evaluated using the EPA ProUCL Version 5.0.00. The 95 percent UCL of the statistical mean for the total arsenic concentrations is 9.89 mg/kg. This value is within the reported range of typical natural background concentrations.

Waste-Based Criteria

It has been SCS' experience that in order for soil to be classified as a regulated or hazardous waste, the soil would need first be considered a waste (e.g., to be excavated and transported off-Site). It is SCS' understanding that the Client does not intend to export soil during redevelopment activities; therefore, waste criteria are not applicable and an evaluation of waste based cleanup criteria was not performed. Should the Client choose to export soil at some later point, additional laboratory analysis would be required for the following waste characterizations.

Hazardous Waste Characterization

For typical dry samples, the total concentration of a CoC in soil (mg/kg) is compared with the Total Threshold Limit Concentration (TTLC) for that CoC. If the concentration exceeds the TTLC, the soil would be characterized as a California-Hazardous waste. The TTLC addresses potential adverse human health concerns from direct exposure to a CoC in waste.

Additionally, to address potential leaching of CoC bearing waste intended for landfill disposal, CoC concentrations are compared to the Soluble Threshold Limit Concentration (STLC). If the total CoC concentration (i.e., OCP or total arsenic concentration) in soil exceeds the STLC by 10 times, the Waste Extraction Test (WET) is performed to create a liquid extract that is analyzed for the CoC. If the concentration of the CoC from the WET exceeds the respective STLC, the soil would be characterized as a California-Hazardous waste.

For federal regulations, if the total concentration of a CoC in the soil equals or exceeds the Maximum Concentration of Contaminants for the Toxicity Characteristic (MCCTC) value by 20 times, a liquid extract of the soil sample is generated by the Toxicity Characteristic Leaching Procedure (TCLP) and the extract is then analyzed for the CoC. The MCCTC/TCLP determination is similar to the STLC/WET, but with a factor of 20. If the result of the analysis of the TCLP extract exceeds the MCCTC, then the soil would be characterized as a Resource Conservation and Recovery Act (RCRA)-Hazardous waste.

Regulated Waste Characterization

The San Diego Regional Water Quality Control Board (RWQCB) has set CoC concentration levels for waste that is below hazardous waste concentrations but above typical background concentrations. Soil that contains CoCs that exceed the RWQCB Tier1 soil screening levels (SSLs) are considered a regulated waste and cannot be transported to an unregulated site as would be done for clean soil. Additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing arsenic at concentrations exceeding the RWQCB Tier1 SSL of 3.5 mg/kg and soil with OCPs reported at any concentration, as this soil would be characterized as a regulated waste and would require special handling and disposal at an appropriately permitted facility if transported off-Site.

6 CONCLUSIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, and current regulatory guidelines, and SCS' experience and professional judgment, SCS concludes:

- No detectable concentrations of TPH or VOCs were reported in the soil samples collected in the vicinity of the former USTs excavation. Therefore, there is a low likelihood that significant residual petroleum hydrocarbons are left in place from the previous release reported at the Site.
- Chlordane, dieldrin, 4,4'-DDE, and 4,4'-DDT were detected above their respective laboratory reporting limits in 2 (for chlordane), 1 (for dieldrin), 2 (for DDE), 1 (for DDT) out of the 25 samples analyzed for OCPs, respectively; however, no samples were above their respective RSLs or CHHSLs.
- The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic (ranging from less than the laboratory reporting limit to 34.9 mg/kg) exceed the CHHSL and RSL. However, the 95 percent UCL of the statistical mean for the total arsenic concentrations is 9.89 mg/kg. This value is within the range of typical natural background concentrations.

7 RECOMMENDATIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.

8 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and the Client's authorized representatives. Use of this Report is subject to the provisions of the fully executed Consulting Agreement (Contract) between the Client and SCS. Any third-party usage of this Report shall be subject to the provisions of the Contract, and any unauthorized misuse of or reliance upon the Report shall be without risk or liability to SCS.

The conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. Future conditions may differ and this Report should not be relied on to represent future Site conditions unless a qualified consultant familiar with the practice of Phase II Environmental Site Assessments in San Diego County is consulted to assess the necessity of updating this Report.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include but are not limited to 1) SCS' reliance on inadequate or inaccurate information rightfully provided to it by third parties, such as public agencies and other outside sources; 2) the limited scope of this Assessment; and 3) the presence of undetected, unknown, or unreported environmental releases.

9 LIKELIHOOD STATEMENTS

Statements of "likelihood" may have been made in this report. Likelihood statements are based on professional judgments of SCS. The term "likelihood," as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a "degree of belief" for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term “low likelihood” is used by SCS to approximate a percentage range of 10 to 20 percent; the term “moderate likelihood” refers to an approximate percentage range of 40 to 60 percent; and the term “high likelihood” refers to an approximate percentage range of 80 to 90 percent.

State License No. 7731 License Class C-36 City Business Tax No. SD74000228

Licensed Contractor's Declaration: I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Signature: Barbara Krueger Title: Service Office Mgr. Date: 6-19-97

7. Workers' Compensation Declaration: I hereby affirm under penalty of perjury one of the following declarations:

- a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.
- b. I have and will maintain workers' compensation, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are: Insurance Company Indemnity of N. America Policy No. C4 22 59 20 2 Expiration Date 12-31-97

(This section need not be completed if the permit is for one hundred dollars (\$100) or less)

c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Signature: Barbara Krueger Date: 6-19-97

Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars (\$100,000), in addition to the cost of compensation, damages as provided for in Section 3700 of the Labor Code, interest, and attorney's fees.

8. Owner-Builder Declaration: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):

- I, as owner of the property, or my employee with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)
- I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law)
- I am exempt under Section: B & P C for this reason

PART III: SAN DIEGO AIR POLLUTION CONTROL DISTRICT

If the answer to any of the questions is yes, applicant must contact the Air Pollution Control District, 9150 Chesapeake Drive, San Diego, CA 92113. Telephone (619) 694-3307 prior to the issuance of a building permit.

- YES NO**
- Will the intended occupant install or use any of the equipment listed on the Listing of Air Pollution Control District Permit Categories, on the reverse side of this form.
 - (ANSWER ONLY IF THE ANSWER TO QUESTION 1 IS YES.) Will the subject facility be located within 1,000 feet of the outer boundary of a school (K thru 12) as listed in the current Directory of School and Community College Districts, published by the San Diego County Office of Education and the current California Private School Directory, compiled in accordance with provisions of Education Code Section 33190.
 - For Demolition Permits Only: Does the building or structure for which this demolition permit is requested contain any friable asbestos?

Briefly Describe Nature of the Intended Business Activity:

Protective Melting for Golf Balls

Name of Owner or Authorized Agent:

Michael Monteforte

Signature of Owner or Authorized Agent: I declare under penalty of perjury that to the best of my knowledge and belief the responses made herein are true and correct.

Michael Monteforte

State License No. **513451** License Class **B** City Business Tax No.

Licensed Contractor's Declaration: I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Signature *Michael Monteforte* Title **owner** Date **11-19-99**

7. Workers' Compensation Declaration: I hereby affirm under penalty of perjury one of the following declarations:

- a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.
- b. I have and will maintain workers' compensation, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
Insurance Company _____ Policy No. _____ Expiration Date _____

(This section need not be completed if the permit is for one hundred dollars (\$100) or less).

c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with these provisions.

Signature *Michael Monteforte* Date **11-17-99**

Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars (\$100,000), in addition to the cost of compensation, damages as provided for in Section 3708 of the Labor Code, interest, and attorney's fees.

8. Owner-Builder Declaration: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec. 7031.5, Business and Professions Code. Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):

I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work (inself or through his own employees, provided that such improvements are not intended or offered for sale); however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code). The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law.

I am exempt under the above B & P for this reason

Signature _____ Date _____

9. Construction Lending Agency I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 30971, Public Law 102-585)

Lender's Name **N/A** Lender's Address _____

10. Applicant's Signature I certify that I have read this application and the above information is correct, and that I am the owner of the property. I agree to comply with all city and state laws relating to the work mentioned herein for inspection purposes. If, after making such inspection, the City of San Diego, through its representatives, determines that the work does not conform to the applicable laws, I shall comply with such laws. I understand that the City of San Diego may require the applicant to provide a bond to secure the performance of the work. I agree to provide such bond if required.

Signature *Michael Monteforte* Date **11-17-99**

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

EXECUTIVE SUMMARY

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 16 SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 6 SWEEPS UST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR

EXECUTIVE SUMMARY

researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Database: EDR Hist Auto, Date of Government Version: 02/20/2007

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

It is currently an AM/PM convenience store and gasoline station with four 10,000 gallon underground storage tanks (USTs) and associated piping and dispensers. Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon USTs and one 8,000 gallon UST. Site investigation has continued from the time of the initial UST system removals through May 30, 2001, and has included 8 soil borings, the installation of 14 groundwater monitoring wells, and 6 remediation wells/air sparge wells. The site geology consists of silty sand with clayey sand with cobble deposits. The site is located approximately 1,000 feet north of the San Diego River. Site investigations to date identified significant soil and groundwater impacts in the area of the former USTs. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Stantec (formerly SECOR) estimated the total mass of petroleum hydrocarbons in place to be approximately 7,484 pounds prior to the operation of the on site remediation system. A soil vapor extraction/air sparge (SVE/AS) system was installed and operated as part of an Interim Remediation Action Plan (IRAP) at the site from November 1, 1997, through May 30, 2001. The system was shut down due to asymptotic hydrocarbon removal rates. Approximately 2,852 pounds of petroleum hydrocarbons were removed by this system. Approximately 4,632 pounds of petroleum hydrocarbons remain in place after the removal of the SVE/AS system. Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest. Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The greatest petroleum hydrocarbon impacts to soil and groundwater were found in the area of the former tank excavation and |

to the immediate south-west of the area. Free product has been observed historically in monitoring wells MW-2B and MW-8, located to the south-west of the former UST system. The maximum LPH thickness was 1.59 feet, observed in August 1996. SPH removal was conducted on site and approximately 8 gallons of separate-phase hydrocarbons were removed from wells MW-2, MW-2B, and MW-8. LPH has not been measured or observed at this site since July 1999. The primary contaminants of concern (COCs) were those compounds related to petroleum hydrocarbons. The COCs identified are gasoline range organics (GRO), benzene, toluene, ethylbenzene, xylenes, MTBE, TBA, and ethanol. A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation. According to Stantec remediation by natural attenuation is the most cost effective remedial alternative based on the past history of soil vapor extraction and air sparging on this site. A benzene and MTBE trend analysis was conducted by Stantec to estimate the time required for benzene and MTBE concentrations to reach the MCL of 1.0 ug/L and 13.0 ug/L respectively. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years. A health risk assessment was performed on this site utilizing groundwater monitoring data for benzene (59 ug/L) from well MW-8, the nearest well to the building with detectable benzene. Stantec concluded that the residual soil and groundwater impacts remaining on site do not pose a threat to human health or the environment. DEH concurs with Stantecs recommendation for the closure of this case.

Lead Agency: SAN DIEGO COUNTY LOP
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 9UT2722
LOC Case Number: H05129-002
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History:

This site has been an operating gas station since before 1969. It is currently an AM/PM convenience store and gasoline station with four 10,000 gallon underground storage tanks (USTs) and associated piping and dispensers. Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon USTs and one 8,000 gallon UST. Site investigation has continued from the time of the initial UST system removals through May 30, 2001, and has included 8 soil borings, the installation of 14 groundwater monitoring wells, and 6 remediation wells/air sparge wells. The site geology consists of silty sand with clayey sand with cobble deposits. The site is located approximately 1,000 feet north of the San Diego River. Site investigations to date identified significant soil and groundwater impacts in the area of the former USTs. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Stantec (formerly SECOR) estimated the total mass of petroleum hydrocarbons in place to be approximately 7,484 pounds prior to the operation of the on site remediation system. A soil vapor extraction/air sparge (SVE/AS) system was installed and operated as part of an Interim Remediation Action Plan (IRAP) at the site from November 1, 1997, through May 30, 2001. The system was shut down due to asymptotic hydrocarbon removal rates. Approximately 2,852 pounds of petroleum hydrocarbons were removed by this system. Approximately 4,632 pounds of petroleum hydrocarbons remain in place after the removal of the SVE/AS system. Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest. Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The greatest petroleum hydrocarbon impacts to soil and groundwater were found in the area of the former tank excavation and to the immediate south-west of the area. Free product has been observed historically in monitoring wells MW-2B and MW-8, located to the south-west of the former UST system. The maximum LPH thickness was 1.59 feet, observed in August 1996. SPH removal was conducted on site and approximately 8 gallons of separate-phase hydrocarbons were removed from wells MW-2, MW-2B, and MW-8. LPH has not been measured or observed at this site since July 1999. The primary contaminants of

concern (COCs) were those compounds related to petroleum hydrocarbons. The COCs identified are gasoline range organics (GRO), benzene, toluene, ethylbenzene, xylenes, MTBE, TBA, and ethanol. A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation. According to Stantec remediation by natural attenuation is the most cost effective remedial alternative based on the past history of soil vapor extraction and air sparging on this site. A benzene and MTBE trend analysis was conducted by Stantec to estimate the time required for benzene and MTBE concentrations to reach the MCL of 1.0 ug/L and 13.0 ug/L respectively. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years. A health risk assessment was performed on this site utilizing groundwater monitoring data for benzene (59 ug/L) from well MW-8, the nearest well to the building with detectable benzene. Stantec concluded that the residual soil and groundwater impacts remaining on site do not pose a threat to human health or the environment. DEH concurs with Stantec's recommendation for the closure of this case.

 Site History: Comments: The property is located at 350 Camino de la Reina (Site) in San Diego, California. The Site is an irregularly-shaped parcel, totaling approximately 13 acres of land. The site is currently developed with three commercial buildings and surface parking areas historically used by the San Diego Union Tribune. The buildings on Site are a five-story office building with a sub-grade parking level, a three-story building formerly used for production, but currently

identified as an office building, and a single-story vehicle maintenance garage. In 1986, during the removal of four USTs (two 10,000-gallon diesel, one 12,000-gallon gasoline and one 2,000-gallon motor oil), benzene and total petroleum hydrocarbons (TPH) were encountered in soil and groundwater at the Site and Local Oversight Program case H00174-001 was opened. On December 8, 1997, a closure letter (H00174-001) was issued by the DEH for case H00174-001. Benzene was detected in groundwater at a concentration of 19 micrograms per liter ("g/l) at this time. In February 1996, a 550-gallon diesel UST and a 280-gallon waste-oil UST were reportedly removed from the Site. Petroleum hydrocarbon-impacted soil was reportedly detected in the immediate area of the USTs. Following the removal of the UST and export of impacted soil, fourteen confirmation soil samples were collected and analyzed with no detectable levels of petroleum hydrocarbons. On April 18, 2008, the DEH issued a closure level for case H00174-002. In 1997, diesel fuel was reportedly detected in soil during an upgrade to the piping system near the fuel dispensing islands; however, the contamination was determined to be related to the former release from 1986. The DEH issued a closure letter for case H00174-002 on April 9, 2008. On March 18, 2016, the area beneath a previously removed clarifier was sampled. On April 27, 2016, ten additional confirmation soil samples were collected from the areas beneath the previously removed clarifier and wash-out. On April 28, 2016, soil sampling was conducted after the removal of four hydraulic lifts on site. The hydraulic lifts were encased in concrete. Confirmation samples were collected by breaking through the base of the concrete vault and subsampling the soil immediately adjacent to the base of the vault. On May 17, 2016, additional soil samples were collected adjacent to each of the lifts in an effort to identify the lateral and vertical extent of contamination. On July 1, 2016, two Hydropunch groundwater samples were collected from the locations with the highest detected concentrations of diesel in soil (North West Lift and South East Lift). Analysis of the chromatographs from the groundwater samples and the presence of BTEX components in the groundwater indicate that the groundwater contamination consists mainly of gasoline and weathered gasoline. These results do not indicate the presence of a significant amount of hydraulic fluid. It was concluded that the contamination present in the groundwater beneath the Site was predominantly from the prior UST release(s) and did not originate from the hydraulic lifts, clarifier, or wash-out. The TPH and VOC constituents detected in the groundwater are the same contaminants previously reported in the closure summary of case #H00174-001. Therefore, it was concluded that additional assessment is not warranted and that DEH Case #DEH2016-LSAM-00377 should be closed. DEH concurs with this conclusion. If, in the future, the maintenance building is demolished and the subsurface disturbed in the area of the impacted soil, DEH requests that you enter the Voluntary Assistance Program to document that impacted soil is properly characterized and disposed.

File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: This case was opened due to soil contamination discovered during station upgrade activities in December 1999. Soil samples collected near the fill port on the eastern tank contained a maximum concentration of Total petroleum hydrocarbons as gasoline (TPHg) of 9417 mg/kg. A maximum of 1800 mg/kg TPHg were detected in the tank excavation samples. Monitoring wells were installed in 2000. Groundwater monitoring began in January 2001. There are nine wells associated with site. See Environmental Data for additional information.

Potential Media Affect: Aquifer used for drinking water supply

Potential Contaminants of Concern: Gasoline

Site History: The site was historically operated as a gasoline service station and is located on a dissected mesa in the Linda Vista area of metropolitan San Diego. Four underground storage tanks (USTs) were removed from the site by the owner/operator (Exxon) just prior to sale of its property in August 1982. The service station ceased operation following the UST removals, which were performed before the County required UST closure permits. The former USTs included one 280-gallon waste oil tank, two 3,000-gallon gasoline tanks, and one 5,000-gallon gasoline tank that had been installed in 1961. Initial subsurface investigations at the site included a soil gas survey and soil sample collection from three trenches excavated across the former gasoline UST pit and from three additional trenches located near product lines (Note: the product lines were removed under permit in May 1994). Petroleum hydrocarbon detections were associated with soil gas samples collected southwest of the station building, either within the footprint of the former gasoline UST pit or within approximately 5 feet of its perimeter. Analytical results for soil

MAP FINDINGS

6619 LINDA VISTA ROAD (Continued)

S109040306

samples collected in the UST pit area included a maximum total petroleum hydrocarbon (TPH) concentration of 6,240 milligrams per kilogram (mg/kg). Based on the soil sample results, DEH opened an unauthorized release case on July 7, 1993. Site investigations performed from 1995 to 2003 by Environmental Resolutions, Inc. (ERI) included the advancement and sampling of four borings and the installation of four vapor extraction wells (VEW1 through VEW4), of which two were dual-nested; four, dual-nested, groundwater monitoring wells (MW1s/d, MW2s/d, MW3s/d, and MW5s/d); two additional dual-nested vapor extraction wells (SVE5s/d and SVE6s/d); and groundwater monitoring well MW4. Two of the dual-nested groundwater monitoring wells (MW3s/d and MW5s/d) were installed on the adjoining property to the southwest, the site of a 7-11 convenience store. Three pairs of groundwater monitoring wells (MW9s/MW9d, MW10s/MW10d, and MW11s/MW11d) were installed on the adjoining 7-11 property during field activities performed in June 2008 by ETIC Engineering, Inc. Groundwater monitoring well pair MW7s/MW7d was installed in the alley adjoining the site to the northeast in January 2010. Groundwater monitoring well pair MW6s/MW6d was installed onsite near the Linda Vista Road right-of-way in April and August 2010. [Note: Following the advancement of the well boring MW-13 to a total depth of 163 feet in November 2009, the conductor casing broke and it was abandoned in place. The MW-13 well boring, which was located in the UST pit area, was destroyed under permit]. Fill materials were encountered to a depth of approximately 13 feet bgs in trenches excavated during initial site assessment activities in 1991. Subsurface bedrock units underlying the fill materials consisted primarily of well-indurated pebble and cobble conglomerates and thin, interbedded sandstones. A 55-foot thick, massive sandstone unit was logged, underlain by alternating layers of sandy siltstone, mudstone, and sandstone to the maximum depth of exploration (163 feet bgs). Most of the site vapor extraction and groundwater monitoring well borings were advanced using either air rotary or sonic methods. [Note: Neither of these methods was conducive to preservation of petroleum and aromatic hydrocarbons in formation samples]. Two groundwater zones were identified beneath the site in the massive sandstone unit. Groundwater is measured in upper zone wells at a depth of approximately 105 feet bgs. The water level in lower zone wells occurs at approximately 115 feet bgs. According to the consultant (Cardno ERI), The upper and lower zones appear to be consistently separate but may actually be in communication with one another. The movement of groundwater beneath the site is complex due to the variability in material sizes, porosity and permeability of the conglomerate and sandstone. The groundwater flow directions interpreted from water elevation data for the two zones have been variable, but the most recent data (June 2013) suggest a southeasterly flow direction for the upper zone and a northerly flow direction for the lower zone. [DEH notes that the screened interval for each of the upper zone monitoring wells terminates at depths of 107 or 108 feet bgs; the water level in each of these wells had fallen to approximately 107 feet bgs or deeper when monitored in June 2013 (i.e., the wells were dry or nearly so). Two of the wells screened across the lower zone were also dry, indicating water levels had fallen below 125 feet bgs in some areas of the site]. Free product has been detected historically in five wells (MW1s, MW1d, MW4, SVE5s and SVE6d) at maximum apparent thicknesses of 2.75, 6.75, 5.78, 0.25 and 8.73 feet, respectively. Monthly bailing activities

were initiated in July 1997 and suspended in May 2010. Approximately 627 gallons of product had been recovered by bailing. Free product was observed in four wells (MW1s, MW1d, MW4, and SVE6d) during the most recent monitoring round performed on June 12, 2013 (SVE5s was dry). The measured apparent thicknesses of free product were 0.07, 0.13, 3.43, and 0.02 feet, respectively [Note: The free product thickness in MW-4 increased from 0.80 foot to 3.43 feet from June 2012 to June 2013 as the water level fell 3.89 feet. In contrast, water levels in MW1s, MW1d, and SVE6d dropped 0.3 foot, 1.39 feet, and 1.62 feet, respectively, during the same period]. From July 1999 to April 2006, a soil vapor extraction (SVE) system operated at the site. In October 2001, slurping tubes were installed in lower zone wells MW1d and SVE6d, both of which had free product. The SVE system and slurping tubes operated continuously through the first few months of 2002 until free product was no longer detected. In the latter half of 2003, MW-4 was manifolded to the SVE to facilitate removal of free product. Approximately 100,565 pounds of hydrocarbon vapors were extracted during the system operation. The system was shut down in 2006 due to low vapor influent concentration. Evaluation of rebound, including occasional bailing of free product, was performed following cessation of system operation. According to Cardno ERIs site conceptual model, the gasoline release at the site appears to have migrated vertically through the vadose zone to groundwater. DEH notes that the gasoline then spread laterally in the massive sandstone unit as free product and a dissolved contaminant plume. The consultant estimated the areal extent of the free product plume to be 540 square feet and that an estimated 69.38 cubic yards of gasoline-impacted bedrock remains in place. The free product plume is confined to the site. The length of the dissolved contaminant plume was estimated to be less than 100 feet. Although the site source area lies approximately 50 feet inside the boundary of a non-beneficial use area, the upper zone may be tributary to the Mission Hydrologic Area, which has beneficial uses, including municipal supply. The nearest production wells to the site are located in Mission Valley more than one-half mile from the site and are used for golf course irrigation purposes. A human health risk assessment was performed for the site building in November 2009 by ETIC. The calculated carcinogenic risk was less than the threshold value of 1×10^{-6} . Although free product remains in the subsurface at depths greater than 100 feet, thicknesses have generally decreased. A revised Corrective Action Plan (CAP) for the site was submitted to DEH in May 2013 proposed site remediation by natural attenuation. The consultant recommended no further action and case closure. DEH concurs with these recommendations.

MAP FINDINGS

SDCTY-POLICE WESTERN (Continued)

S103987198

LOC Case Number: H01782-001
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The site includes an office building, a fueling station, and a vehicle maintenance garage. In late 1986, gasoline odors were reported in the bathrooms of nearby businesses, and fuel was found in an abandoned sewer line. It was determined that a turbine pressure feed line from a 10,000-gallon gasoline underground storage tank (UST) at the site was leaking, and an estimated 41,000 to 55,000 gallons of gasoline had been released. Between 1987 and 2007, twenty groundwater monitoring wells and six vapor extraction wells were installed. In May 2010 and October 2011, vapor samples were collected from on-site soil vapor probes. A risk assessment found that there was no significant health risk to on-site workers. The cumulative excess carcinogenic risk was less than the threshold of one-in-one-million, and the non-cancer health hazard index was less than 1.0. Remedial actions conducted at the site include free product removal, soil vapor extraction, and soil excavation. Beginning in 1987, product pumps and bailing were used to extract an unknown quantity of free product, and a soil vapor extraction (SVE) system operated at the site from March 1990 to February 1997. The consultant calculated that the SVE system destroyed a total of approximately 27,500 kilograms of petroleum hydrocarbons (equivalent to approximately 9,990 gallons). During the removal of five USTs in 1998, approximately 200 cubic yards (22,000 pounds) of petroleum hydrocarbon-impacted soil was excavated for off-site disposal. In 2014, a Corrective Action Plan (CAP) was approved which recommended remediation by natural attenuation (RNA) as the selected alternative to address residual contamination. The consultant concluded, and DEH concurred, that through RNA, contaminant concentrations should continue to decline over time. Ninyo & Moore estimated that the timeframes for dissolved benzene concentrations to reach its Maximum Contaminant Level (MCL) of one microgram per liter (ug/l) in various wells ranged from approximately 19 years to 233 years. A more in-depth analysis by DEH estimates that the maximum timeframe to reach the benzene MCL is approximately 160 years. The extent of soil and groundwater contamination was delineated, and the dissolved contaminant plume was shown to be stable in areal extent. In the San Diego Regional Water Quality Control Boards Basin Plan, groundwater beneath the site has designated existing beneficial uses for agricultural and industrial supply, and potential beneficial use for municipal supply. According to the City of San Diego, there are no immediate plans to install a municipal well within a 2,000-foot radius of the site. Also, the consultant reports that there were no water supply wells identified that would likely be impacted by the dissolved petroleum hydrocarbons plume. The maximum thickness of free product measured was 1.9 feet in 1995. No measurable free product has been reported in site wells since December 1996. The consultant estimates that there are approximately 4,228 cubic yards of impacted soil remaining at the site with total petroleum hydrocarbons (TPH) concentrations of 100 milligrams per kilogram (mg/kg) or above (a mass of approximately 18,816 kg of petroleum hydrocarbons). DEH accepted public comments on the CAP during a 60-day public review and comment period. Comments were only received from the City of San Diego Public Utilities Department (PUD). Given their right to consider and/or develop groundwater resources in the vicinity of the

S103987198

site, the PUD recommended using a more aggressive remedial method rather than RNA. In a response letter, DEH stated that due to the near-brackish groundwater conditions at the site and the case meeting the States Low-Threat UST Case Closure Policy criteria, RNA is acceptable. Wells and vapor probes associated with the site investigation were destroyed under DEH permit number DEH2016-LMWP-001629.

 Case Type: Cleanup Program Site
 Case Worker: Not reported
 Local Agency: Not reported
 RB Case Number: Not reported
 File Location: Local Agency
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: Soil investigations were performed beneath a former transmission repair facility at 5251 Linda Vista Road, San Diego., in November 1999 and January 2014. The facility was located at the western end of a strip mall near the intersection of Linda Vista Road and Napa Street in Mission Valley. The strip mall is accessed from Linda Vista Road and an alley that adjoins its south side. Two underground storage tanks (USTs) had reportedly been located beneath or adjacent to the former repair facility. Waste oil had been stored in one of the tanks and the other had reportedly contained solvents. No information was available regarding the exact locations of the USTs at the time of the 1999 soil investigation. During the November 1999 investigation, eight angle borings and one vertical boring were advanced adjacent to the former transmission repair facility. The borings were located adjacent to the western and southern walls of the building and along the eastern wall shared with an adjoining unit. Petroleum hydrocarbon odors were noted at distances of 5 to 19 feet from the ground surface during advancement of four of the angle borings. These four borings originated at locations in the alley adjoining the southern wall of the facility. Analytical results indicated the detection of Total Recoverable Petroleum Hydrocarbons (TRPH) at a maximum concentration of 17,000 milligrams per kilogram (mg/kg). Halogenated volatile organic compounds (HVOCs), including solvents, were not detected in the soil samples. Groundwater was not encountered in the borings. Case #H13561-001 was opened under the Voluntary Assistance Program on November 30, 1999, based on the TRPH results for the soil samples. Additional subsurface investigation at the site was performed on January 7, 2014, to assess whether the former USTs were still present in the subsurface, the lateral extent of impacts from the release, the composition of the release, and to determine if groundwater was impacted. The former USTs were not detected in the subsurface by ground-penetrating radar. Seven borings

were advanced within the building interior: one of the interior borings was advanced in the adjoining unit and two were advanced inside the former transmission repair facility. The three interior borings terminated at a depth of 9 feet. Four of the attempted borings encountered a condition of refusal at a depth of less than 3 feet. Four exterior borings were sampled to a depth of 20 feet. Groundwater was encountered at a depth of approximately 13 feet in the exterior borings. Analytical results indicated the highest gasoline and diesel concentrations were detected in soil samples collected from beneath a service bay in the south-central area of the former transmission repair facility. However, soil impacts did not extend beyond the building footprint to the north, east, or west. Gasoline- and diesel- range organics were detected in a soil sample collected near the capillary fringe from a boring located in the alley (i.e., south of the facility). The detected concentrations were 1,500 and 1,300 mg/kg, respectively. Gasoline-range and diesel-range organics were detected in a depth-discrete groundwater sample collected from the boring at concentrations of 1.0 and 0.55 milligrams per liter (mg/l), respectively. VOCs indicative of degraded gasoline (e.g., trimethylbenzenes, n-butylbenzene) and the fuel oxygenate TBA were detected at low concentrations in the groundwater sample. Metals concentrations in the groundwater sample were either not detected or were at low levels. The findings of the soil and groundwater investigations suggest that, prior to 1999, a petroleum hydrocarbon release occurred in the service bay of the former transmission repair facility. The release appears to have included gasoline, which has devolatilized and degraded, and diesel-range compounds. Analytical results for samples collected from two borings (located within the service bay and in the alley, respectively) suggest that the release migrated in a southerly direction but was of limited extent. Aromatic hydrocarbons, including benzene, were not detected in the downgradient groundwater sample. Degradation of volatile gasoline components indicates the lack of a health risk to occupants of the commercial space and limited potential to adversely impact potential water supply. Based on these considerations, the consultant has recommended no further action and case closure. DEH concurs with these recommendations.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Completed Date: 05/02/1995
Comments: SD County Environmental Assessment history indicates that the county overseeing a Preliminary Assessment as of 12/04/91. Tank case, soil contamination only. Local oversight program. NFA for DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/08/1991
Comments: PA report was reviewed by Region 4 staff. The site consists of a 15,000 sf bldg., a paved storage area, & a concrete loading dock. 99% of chemicals handled were detergent, wax and window cleaner. Presently, the bldg is used as an auto parts warehouse by Volks Parts. A driveby in 1983 by SDDHS reported that concrete was eroded outside the bldg. No sampling was done to determine if there is a hazard at the site. Staff recommends PEARM to determine if there is a hazard DTSC should address.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

| South Map: | 5622832 POINT LOMA, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

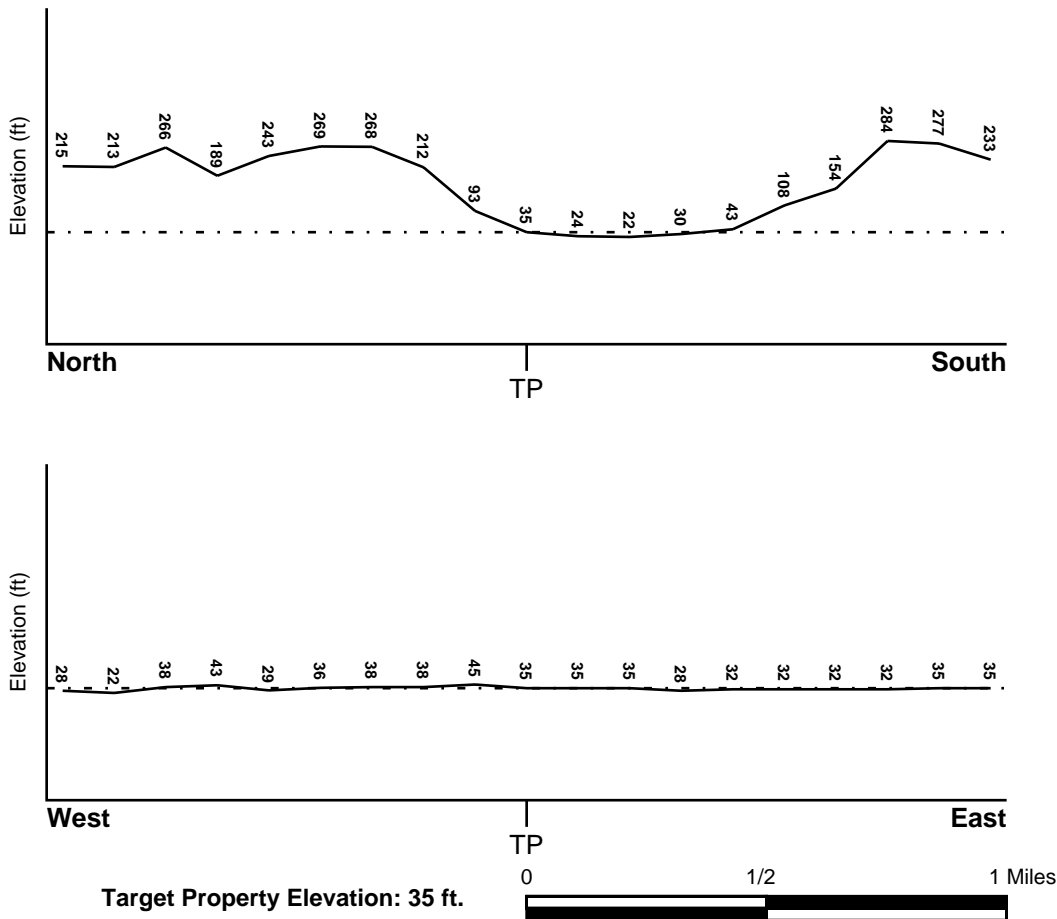

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |
|---|-------------------------|
| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
| 06073C1618G | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |

NATIONAL WETLAND INVENTORY

| | |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
| LA JOLLA | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| 3 | 1/4 - 1/2 Mile West | Not Reported |
| 7 | 1/2 - 1 Mile East | NW |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|---|---|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 14 inches | sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.3 Min: 6.6 |
| 2 | 14 inches | 33 inches | loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |
| 3 | 33 inches | 59 inches | stratified gravelly sand to gravelly loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|-------------------------------|---|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 11 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 14 Min: 4 | Max: 6 Min: 5.1 |
| 2 | 11 inches | 55 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 0.42 Min: 0.01 | Max: 8.4 Min: 7.4 |
| 3 | 55 inches | 72 inches | stratified sand to sandy loam | Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 4 Min: 1.4 | Max: 8.4 Min: 7.4 |

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

April 15, 2010

Mr. Jon Armstrong
BP West Coast Products, LLC
501 Westlake Park Blvd, WL1-28. 160 D
Houston, TX 77079

Dear Mr. Armstrong:

UNDERGROUND STORAGE TANK (UST) CASE #H05129-002 & H05129-003
ARCO FACILITY 3052
6899 FRIARS ROAD, SAN DIEGO, CA

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum releases at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Wesley Rubio, at (619) 338-2371, if you have any questions regarding this matter.

Sincerely,

JACK MILLER, Director
Department of Environmental Health

|--------------------------------------|---------------|-----------------|
| SOIL | | |
| Gasoline | = 3500 mg/kg | = 3,500 mg/kg** |
| Benzene | = 7.5 mg/kg | = 7.5 mg/kg** |
| Toluene | = 44.59 mg/kg | = 44.59 mg/kg** |
| Ethyl benzene | = 48 mg/kg | = 48 mg/kg** |
| Xylene (individual isomers or total) | = 400 mg/kg | = 400 mg/kg** |
| WATER | | |
| Gasoline | = 61000 ug/l | = 11,000 ug/l |
| Benzene | = 29000 ug/l | = 3,100 ug/l |
| Toluene | = 34000 ug/l | = 1,300 ug/l |
| Ethyl benzene | = 2600 ug/l | = 420 ug/l |
| Xylene (individual isomers or total) | = 16000 ug/l | = 1,100 ug/l |
| Methyl-tert-butyl ether (MTBE) | = 32000 ug/l | = 550 ug/l |

**Verification soil samples were not collected after the remediation system was shut down. Groundwater concentrations in the area were used to evaluate effectiveness of the remedial activities following the system shutdown.

Comments:

This site has been an operating gas station since before 1969. It is currently an AM/PM convenience store and gasoline station with four 10,000 gallon underground storage tanks (USTs) and associated piping and dispensers. Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon UST's and one 8,000 gallon UST. Site investigation has continued from the time of the initial UST system removals through May 30, 2001, and has included 8 soil borings, the installation of 14 groundwater monitoring wells, and 6 remediation wells/air sparge wells.

The site geology consists of silty sand with clayey sand with cobble deposits. The site is located approximately 1,000 feet north of the San Diego River.

Site investigations to date identified significant soil and groundwater impacts in the area of the former UST's. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Stantec (formerly SECOR) estimated the total mass of petroleum hydrocarbons in place to be approximately 7,484 pounds prior to the operation of the on site remediation system.

A soil vapor extraction/air sparge (SVE/AS) system was installed and operated as part of an Interim Remediation Action Plan (IRAP) at the site from November 1, 1997, through May 30, 2001. The system was shut down due to asymptotic hydrocarbon removal rates. Approximately 2,852 pounds of petroleum hydrocarbons were removed by this system. Approximately 4,632 pounds of petroleum hydrocarbons remain in place after the removal of the SVE/AS system.

Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest. Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The greatest petroleum hydrocarbon impacts to soil and groundwater were found in the area of the former tank excavation and to the immediate south-west of the area. Free product has been observed historically in monitoring wells MW-2B and MW-8, located to the south-west of the former UST system. The maximum LPH thickness was 1.59 feet, observed in August 1996. SPH removal was conducted on site and approximately 8 gallons of separate-phase hydrocarbons were removed from wells MW-2, MW-2B, and MW-8. LPH has not been measured or observed at this site since July 1999. The primary contaminants of concern (COCs) were those compounds related to petroleum hydrocarbons. The COCs identified are gasoline range organics (GRO), benzene, toluene, ethylbenzene, xylenes, MTBE, TBA, and ethanol.

A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation. According to Stantec remediation by natural attenuation is the most cost effective remedial alternative based on the past history of soil vapor extraction and air sparging on this site.

A benzene and MTBE trend analysis was conducted by Stantec to estimate the time required for benzene and MTBE concentrations to reach the MCL of 1.0 ug/L and 13.0 ug/L respectively. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years.

A health risk assessment was performed on this site utilizing groundwater monitoring data for benzene (59 ug/L) from well MW-8, the nearest well to the building with detectable benzene. Stantec concluded that the residual soil and groundwater impacts remaining on site do not pose a threat to human health or the environment. DEH concurs with Stantec's recommendation for the closure of this case.

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

IV. CLOSURE

| | | |
|--|---------------------------|---------------------|
| Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? NO – Will be reached within a reasonable timeframe. | | |
| Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? NO – Will be reached within a reasonable timeframe. | | |
| Does corrective action protect public health for current land use? YES | | |
| Case oversight completed based upon the following site use: COMMERCIAL – gasoline service station and convenience store. | | |
| Site Management Requirements: ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME. | | |
| Should corrective action be reviewed if land use changes? YES | | |
| Monitoring Wells Decommissioned: 0 (**Permit to be issued) | Number Decommissioned: ** | Number Retained: ** |
| List Actions Taken: NOTICE OF REIMBURSEMENT / LOCAL | | |
| List Enforcement Actions Rescinded: NONE | | |

V. LOCAL AGENCY REPRESENTATIVE DATA

| | |
|--|-----------------------|
| Name: TONY SAWYER, PG 4345, CHg 004 | Title: HYDROGEOLOGIST |
| Signature:  | Date: 4-14-10 |

VI. RWQCB NOTIFICATION

| | | |
|--|-------------------------------------|-------|
| Date Submitted to RB: January 20, 2010 | RB Response: N/A | |
| RWQCB Staff Name: CRAIG CARLISLE | Title: SENIOR ENGINEERING GEOLOGIST | Date: |

VII. ADDITIONAL COMMENTS, DATA, ETC.

| |
|---|
| ** A permit has not been issued for the destruction of the existing monitoring wells on-site. The permit number is <u>LMON 106911</u> . |
|---|

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

JACK MILLER
ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton **E-Mail:** toverton@scsengineers.com

Phone: (858) 571-5500 **FAX:** (858) 571-5357

Company Name: SCS Engineers

Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123
(You may attach a business card/overprint with business card if preferred)

Additional information on public records maybe accessed from the DEH website, www.sdcdelh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. Separate forms are needed for each address or parcel number.

_____ or 436-650-09
Exact Address (Street, City and Zip Code) Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.): _____

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

Contaminated Property Investigation(s) (SAM Cases) SAM Closure Letter/Report
 Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) Other: _____ (specify)

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____ Date: ____/____/____
Files copied for: _____ of _____ Date: ____/____/____
Request cancelled by: _____ Date: ____/____/____
Photocopies _____ Cost _____ Picked up/mailed on _____ By _____

A search for DEH records checked above has been conducted and the following apply:

SAM files for the permit number(s) below are available. After the files you have requested are retrieved from storage, an appointment will be scheduled so that you may review SAM records in the DEH main office.
_____ # _____ # _____ # _____ # _____

HMD/UST files for the permit number(s) below are available for review at: http://sdcounty.ca.gov/deh/doing_business/hmd_search.html
_____ # _____ # _____ # _____ # _____

Original records were purged. Database-only records are available (at: http://sdcounty.ca.gov/deh/doing_business/hazmat_search.html) for the following permit number(s):
_____ # _____ # _____ # _____ # _____

No SAM/HMD/UST records were found for the address/APN you requested.

RÉSUMÉS

TYLER OVERTON

Education

BA – Environmental Studies/Geography, University of Colorado, 2002

Professional Licenses

AHERA 24-Hour Asbestos Building Inspector (No. BI-179052)

Specialty Certifications

OSHA 40-Hour EPA-Approved Hazardous Waste Operations and Emergency Response Training
State of California Site Surveillance Technician (Asbestos)

Professional Experience

Mr. Overton is an environmental professional specializing in the application of due diligence, including Phase I and Phase II Environmental Site Assessments (ESAs). His experience includes subsurface investigations, remediation, soil management, landfill evaluations, health risk assessments (HRAs), ambient air monitoring, groundwater sampling and monitoring, watershed analysis, land use studies, litigation support, and property assessments. In working with developers, investors, lending institutions, and municipalities in performing Phase I ESAs, he has completed site reconnaissance, regulatory agency record reviews, historical record reviews, historical land use interpretations, data collection, data evaluation, and site assessment reports. He can accurately assess sites and provide valuable information for reports that meets regulatory agency requirements.

Mr. Overton's project experience is summarized below.

Lowe's, Excavation Monitoring, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of contaminated soil below the footprint of a new building, including the removal of underground storage tanks (USTs). Work and tank removal were conducted under the oversight of the County of San Diego Department of Environmental Health (DEH), and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Republic Services, Inc., Gas Monitoring Probe Installation for Sycamore Landfill, Santee, CA. Mr. Overton served as the Project Coordinator for the installation of six new perimeter monitoring probes at the Sycamore Landfill. Installation included drilling and construction of probes up to 470 feet deep, which allowed for the detection of migrating landfill gas (LFG).

Pacific Steel, Resource Conservation and Recovery Act (RCRA) Soil Shipping, San Diego, CA. Mr. Overton served as the point of contact for the removal and disposal of a hazardous waste soil stockpile. SCS monitored dust emissions and the loading and shipping of hazardous soil to ensure that safe handling practices were followed.

Excavation Monitoring of Contaminated Soils for SDG-Left Field and Cistera Building, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of lead-, diesel-, and gasoline-contaminated soils removed as a part of the new building's below-ground parking structure. Work was conducted under the oversight of the County of San Diego DEH, and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Community Housing Works, Excavation Monitoring of Contaminated Soils, Vista, CA. Mr. Overton served as a soil technician for the excavation monitoring of gasoline-, diesel-, and motor oil-impacted soils that were removed prior to construction of a new subterranean parking structure. Approximately 2,000 cubic yards of soils were classified as hazardous and removed from the project site as a part of the mitigation.

Phase I and Phase II ESAs for Carlsbad Desalination Project, Carlsbad, CA. Mr. Overton completed several Phase I and Phase II ESAs for easements on many locations, including former agricultural lands. Locations included previous soil sampling conducted to determine the presence of pesticides, which were evaluated using the waste export criteria, based on pesticide concentrations found.

Republic Services, Inc., Stage 3B Cell Development for Sycamore Landfill, Santee, CA. Mr. Overton served as Project Manager for the construction of a new waste disposal cell at Sycamore Landfill. Construction included managing the excavation of soils, grading of the cell, identifying the correct location of the leachate collection system, and installation of a composite liner system. The construction of this disposal cell prolonged the life and increased capacity of the landfill by approximately 1 million cubic yards.

Bank of Hawaii Information Systems and Communications Office (ISCO), Remediation, Chino Hills, CA. Mr. Overton performed remediation activities at a former retail fueling facility with four USTs containing gasoline and diesel. He was directly involved in the implementation of a groundwater remediation system to inject hydrogen peroxide into the subsurface to remediate impacts from petroleum hydrocarbons (PHCs).

Asbestos Sampling. Mr. Overton has completed ESAs, asbestos surveys, and asbestos abatement monitoring activities at various project sites. During demolition and abatement, he has provided abatement monitoring involving air monitoring, visual inspections, and clearance air monitoring.

Storm Water Sampling for Lake San Marcos Study, San Marcos, CA. Mr. Overton was part of the SCS team investigating Lake San Marcos and San Marcos Creek, both listed as EPA Clean Water Act 303(d) Category 5 Impaired Water Bodies. He conducted storm water sampling and provided insight on laboratory analysis.

LUKE MONTAGUE, PG

Education

MS – Environmental Science and Management, University of California Santa Barbara, 2004

BS – Geology, University of California Santa Barbara, 1998

Professional Licenses

Real Estate Entitlement, Development, and Design, University of San Diego, 2010

Real Estate Finance, Investments, and Development, University of San Diego, 2010

Professional Experience

Mr. Montague is a professional geologist (PG) and licensed contractor with 16 years of experience in environmental consulting, general contracting, commercial and residential development, and property and asset management. He has performed and reviewed over 500 Phase I environmental site assessments (ESAs), and has completed subsurface investigations, human health risk assessments, removal action work plans, site remediation activities, geotechnical investigations, asbestos and lead-based paint surveys, and asbestos air monitoring. His development, general contracting, and property and asset management experience includes managing construction through lease-up; lease administration and property operations and maintenance; contract procurement and administration; oversight of subcontractors and staff; and interfacing with clients, owners, tenants, and regulatory agencies.

His project experience is summarized below.

Brixton Capital, Gasoline Service Station Redevelopment with Retail Buildings, Chula Vista, CA. As Project Manager, oversaw assessment, remedial planning, and remediation consisting of oversight, segregation, and on-Site burial of residual petroleum hydrocarbon-impacted soils from a former gasoline service station release property redeveloped with new retail buildings.

RD Brown Company, Leaking Underground Storage Tank (LUST) Case Assessment and Remediation, City of Imperial, CA. As Project Manager, oversaw several on- and off-site soil, soil vapor, and groundwater assessments, and is currently overseeing ongoing remediation and monitoring of a proposed senior living facility at a former gasoline service station.

San Diego County Water Authority (SDCWA), Environmental Consulting Services, San Diego, CA. As Project Manager, completed several ESAs and subsurface assessments to assist the SDCWA in obtaining easements required to complete the Carlsbad Desalination Project.

City of Encinitas, Site Investigation and Planning, Encinitas Community Park, Encinitas, CA.

As Project Geologist, provided oversight for the mitigation and monitoring activities of pesticides in soil from the Hall Property, which consists of 43 acres of coastal bluff that was formerly used as a nursery and was redeveloped into a community park. Under the oversight of the County of San Diego Department of Environmental Health (DEH), work consisted of Phase II ESAs, remedial planning and implementation of on-site reuse/burial of 45,000 cubic yards of pesticide-impacted soil in a Soil Management Zone, and creation of a land-use covenant. SCS received an award for this project with the Industrial Environmental Association.

Los Angeles Unified School District (LAUSD), Assessment and Remediation, Various Locations in Los Angeles County, CA.

Managed and performed the environmental characterization and cleanup of various proposed school redevelopment projects overseen by the California Department of Toxic Substances Control (DTSC) that required Phase I ESAs, preliminary environmental assessments or subsurface investigations, and preparation and implementation of removal action work plans to obtain “no further action” status prior to redevelopment.

City Heights Revitalization Corporation, Brownfields Assessment and Remediation, City Heights, CA.

Managed a subsurface investigation for an entire Brownfields city block planned for redevelopment. The investigation included extensive drilling, trenching, and hand auguring to estimate the volume of lead- and hydrocarbon-impacted soil from residual contamination from a former service station and from lead-based paint. Work also included negotiation of cleanup levels with the local regulatory agency.

Casmalia Steering Committee, Remedial Investigation, Casmalia, CA. Managed and performed soil vapor sampling at the Casmalia Hazardous Waste Management Facility, a Class I hazardous waste site, for a remedial investigation and feasibility study of soil gas impacts submitted to the Environmental Protection Agency (EPA). Soil gas impacts to ecological receptors were assessed considering specific regulatory guidance, including the joint DTSC and Los Angeles Regional Water Quality Control Board (LARWQCB) Advisory on Active Soil Gas Investigations.

The Boeing Company, Underground Storage Tank (UST) Assessment, Long Beach, CA.

Performed subsurface vapor intrusion to indoor air analysis at a former aeronautics manufacturing facility. Soil, soil vapor, and sub-slab soil vapor assessments were conducted to determine appropriate corrective actions associated with former solvent USTs. Work was performed under the corrective action consent agreement with the DTSC.

Trihydro Corporation, Soil Vapor Sampling, Hooven, OH. Performed soil vapor sampling from indoor air probes and outdoor multi-level probes at residences in Hooven, OH. This project focused on helping evaluate the potential for subsurface vapor intrusion to indoor air from volatilization of petroleum hydrocarbons in groundwater or light, non-aqueous phase liquid petroleum product, originating from an adjacent former fuel and asphalt petroleum refinery. The vapor intrusion pathway was evaluated based on a request by the EPA, Region V, and was performed in accordance with the EPA-issued document, *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soil*, 2002.

CSK Auto, Phase I ESAs, Various Sites in the Western US. Conducted Phase I ESAs, subsurface investigations, and geotechnical investigations for the development of auto parts chain stores in the western US. Work included site investigations, drilling operations, and records research.

AT&T/Gianni & Associates, Phase I ESAs and Geotechnical Investigations, San Diego, CA. Completed Phase I ESAs, transaction screen assessments, National Environmental Policy Act (NEPA) reports, asbestos surveys, and geotechnical investigations involving the development of wireless communications sites.

Ford Mance Company, Construction and Property Management, Mixed-Use Building at 111 Chesterfield Drive, Encinitas, CA. Served as project manager during development and construction phases of a 2-story, Type V, 3,874-square-foot mixed-use building with subterranean parking. Responsibilities included managing all phases of construction and shell and tenant improvements, and assisting in construction supervision activities and lease up. Development activities included oversight and collaboration of architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decisions, obtaining various permits, and preparing cost and budgets. After construction, Mr. Montague also served as the property and asset manager.

Ford Mance Company, Construction and Property Management, Del Norte Medical Plaza, Carlsbad, CA. Served as project manager during development and construction of a 2-story, Type II, medical building with subterranean parking. Responsibilities included contracting out all phases of shell construction of 22,000 square feet of rentable area for medical use, collaborative oversight concerning architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decision-making, obtaining various permits, and preparing costs and budgets. After construction, Mr. Montague also served as property and asset manager.

California Department of Fish and Game, Carpinteria Creek Watershed Plan, Carpinteria, CA. Collaborated with local and state government representatives, and various stakeholders, to aid in preparing the Carpinteria Creek Watershed Plan under the Cachuma Resource Conservation District for the California Department of Fish and Game. Work consisted of research, meetings, various field assessments, report writing, and map creation. The Plan served as an amendment to the Water Quality Control Plan for the Central Coast Region.

Subject: Phase I Environmental Site Assessment (Assessment)

Site: Riverwalk Area 2
Assessor's Parcel Number (APN) 436-610-09, -13, -14, and Central Portions of
437-240-26 & -28, 760-950-25, and 436-610-15
1150 Fashion Valley Road
San Diego, California

Dear Mr. Parikh:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Agreement for Services 010897216 (herein referred to as Exhibit 01) to the Services and Goods Order Agreement (Contract) between SCS and Hines Interests Limited Partnership. A notice to proceed was provided for Exhibit 01 via electronic mail on December 2, 2016.

Because your full understanding of the Assessment is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 10, 17, and 22), and our conclusions and recommendations may be found on page 22. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Tyler Overton

1 BACKGROUND

SCS understands that the site is identified as Assessor's Parcel Numbers (APNs) 436-610-09, -13, -14 and portions of APNs 437-240-26, and -28, 760-950-25, and 436-610-15 and is located at 1500 Fashion Valley Road, San Diego, California (herein referred to as the Site, and also referred to as Area 2) (Figures 1 and 2). The Site is developed primarily with the Riverwalk Golf Course, as well as associated structures for the Riverwalk Golf Club, and is transected by the San Diego River. The San Diego Metropolitan Transit System (MTS)/trolley right-of-way is present along the northern portion the Site. It was reported that the Client is proposing to purchase and develop the Site into various land uses including residential, mixed use, open space, park, office, and retail.

A review of Client provided information and our in-house ParcelQuest database of information from the County of San Diego Assessor's Office indicated the following in connection with the Site, also known as Area 2:

| APN | Address | Acres | Description | Area |
|------------|----------------------------|--|------------------|---|
| 436-610-09 | N. Hotel Circle | 5.00 | No Value | Area 2 |
| 436-610-13 | Hotel Circle Place | 5.00 | No Value | Area 2 |
| 436-610-14 | Friars Road, San Diego | 4.25 | Recreational use | Area 2 |
| 437-240-26 | N. Hotel Circle, San Diego | A portion of a larger 123.61 acre parcel | Recreational use | Portion of APN 437-240-26 is included in Area 2 |
| 437-240-28 | N. Hotel Circle, San Diego | A portion of a larger 41.54 acre parcel | Recreational use | Portion of APN 437-240-28 is included in Area 2 |
| 760-950-25 | Stonebridge Estates | NA | Commercial | Area 2 |
| 436-610-15 | N. Hotel Circle | NA | No Value | Area 2 |

The approximate location of Area 2, as well the other areas of the Riverwalk Golf Course, are depicted on a Client provided land use map (see appendix).

2 STANDARDS BACKGROUND

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 01

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response,

Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability, interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,¹ controlled recognized environmental condition², or historical recognized environmental condition³, and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS's scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking

¹ *Recognized environmental conditions*, as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a recognized environmental condition.

² *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

³ *Historical recognized environmental condition*, as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant concentrations or likely to migrate.

An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

3 OBJECTIVE

The objective of the scope of services was to assess the likelihood⁴ that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

4 SCOPE OF SERVICES

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

SITE RECONNAISSANCE

On December 7, 2016, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditions¹. The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figure 2. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3f.

⁴ Statements of *likelihood* are made in this Assessment, based on the professional judgment of SCS. A description of likelihood statements, as made in this Assessment, is included in the “Likelihood Statements” section.

The interiors of the Site building were observed, and the Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. Mr. Brendan Cronin, General Manager of the Riverwalk Golf Club, has been associated with the Site for 12 years. Mr. Cronin accompanied SCS personnel, provided access to the observed features, and answered questions posed by SCS personnel.

General Information

The following table summarizes general information in connection with the Site.

| | |
|-------------------------|---|
| APNs | 436-610-09, -13, -14, and Central Portions of 437-240-26 & -28, 760-950-25, and 436-610-15 |
| Address | 1150 Fashion Valley Road, San Diego, California |
| Site Land Use | Riverwalk Golf Club and associated clubhouse building, with trolley/light rail right-of-way on the northern portion of the Site |
| Occupant | Riverwalk Golf Course and San Diego MTS (trolley right-of-way) |
| Figure Reference | Figures 3a-1 through 3d-2 |

Site Building

The following table summarizes information in connection with the Site clubhouse building.

| | |
|--------------------------------------|---|
| Number of Buildings | One |
| Interpreted Construction Date | Circa 1997 |
| Number of Stories | 2 |
| Construction Type | Wood frame, stucco-covered exterior walls, concrete slab-on-grade foundations |
| Figure Reference | Figure 3b-2 and 3c-1 |

One building (Club House) was observed at the northern portion of the Site and consists of offices, storage areas, a dining area, kitchen (Figure 3c-1), restrooms, a concession area and a pro shop (Figure 3b-2). Hazardous materials/wastes were not observed to be stored or generated at the Site building, and were instead stored in a separate maintenance building located within Riverwalk Area 1 located adjacent to the north of the Site. In addition, SCS observed a portable manufactured building located at the eastern area of the Site. This portable unit was observed to be used as an instructional area. Various wood-framed, slab-on-grade bathroom buildings were observed to be located throughout the Riverwalk golf course.

Site Grounds

A 55-gallon drum containing cooking grease and grease interceptor was observed east of the Site building (Figure 3d-1). It was reported that the contents of the grease drum are transported off Site on a regular basis. The San Diego MTS/trolley right-of-way was observed at the north Site perimeter. The rest of the Site was observed to be covered with golf course green areas and associated golf course sand trap areas and water features, asphalt-paved parking areas, concrete-paved drive paths, and restroom facilities. Note that the possible use of pesticides and herbicides at the Site in connection with the golf course at the Site is further discussed in the 'Historical Site Land Use' and 'Review of Client-Provided Documents' sections below.

In addition, the San Diego River, which generally trends from northeast to southwest and flows down to the southwest, transects the central portion of the Site.

Hazardous Materials / Petroleum Products

No obvious indications of the storage or use of hazardous materials and/or petroleum products were observed at the Site during the Site reconnaissance. Note that hazardous materials/wastes associated with golf course and landscaping equipment maintenance were not observed to be stored or generated at the Site/ Area 2, and were instead stored in a separate maintenance building located within Area 1 located adjacent to the north of the Site.

Hazardous Wastes

No obvious indications of the generation of hazardous wastes were observed at the Site during the Site reconnaissance.

On-Site Utilities

| | |
|--------------------------------------|---|
| Gas and Electricity | Reported to be San Diego Gas and Electric (SDG&E) |
| High-power Transmission Lines | None observed at or adjacent to the Site |
| Storm Drains | Several storm drains were observed throughout the Site |
| Source of Heating and Cooling | Reported to be SDG&E |
| Potable Water Source | Reported to be supplied by the City of San Diego Public Utilities, Water Department and a water well located at the south area of the golf course (within Area 3 and not at the Site) |
| Wastewater Conveyance | Reported to be operated by the City of San Diego Public Utilities, Wastewater Department |

Several SDG&E transformers were observed to be located at the Site. SDG&E has been contacted regarding the possibility of polychlorinated biphenyls (PCBs) being present in its transformers. SDG&E reported that it has never specified PCBs in their transformers. A copy of

a letter from SDG&E explaining this and its PCB testing policy is included in the Appendices. No obvious indications of leaks, such as stained concrete, were noted near the transformers.

SITE RESEARCH

Department of Environmental Health (DEH) File Review

A review of the September 2010 DEH HMMD HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases indicated that there is no regulatory file associated with the Site. In addition, the DEH was contactedⁱⁱ and indicated that there are no files associated with the Site.

Review of Client-Provided Documents

Based on historical research conducted of the Site by SCS in 2014, a subsurface investigation scope of work was developed to assess the potential presence of organochlorine pesticides, organophosphorus pesticides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site. The results and conclusions of this investigation titled *Subsurface Assessment Riverwalk Phase 2 Portions of Assessor's Parcel Numbers 437-240-26, -27, -28, and -29 Portions of 1150 Fashion Valley Road San Diego, California* (Subsurface Assessment), which was prepared by SCS Engineers and dated October 20, 2014, are presented below:

- “Alpha- and gamma-chlordane were detected above their laboratory reporting limits in 4 out of the 13 samples analyzed for OCPs [organochlorine pesticides] with maximum reported concentrations of 3.07 µg/kg [micrograms per kilogram] of gamma-chlordane and 4.54 µg/kg of alpha-chlordane; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].
- “Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

“Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL

[soil screening level] of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.

- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development by the Client at the Site.

Fire Department Records Review

The City of San Diego Fire Department (SDFD) was contacted regarding hazardous materials/waste or underground storage tank (UST) records for Siteⁱⁱⁱ. The following table summarizes the SDFD records provided for the Site. Copies of the records are included in the Appendices.

| Year | Description | Reported Owner |
|------|---|----------------|
| 2016 | Inspection report for the Riverwalk Golf Course clubhouse; noted the need for additional occupancy and hazard identification signage. | Not stated |

Building Department Records Review

San Diego Building Department (SDBD) records were reviewed for the Site and are summarized in the table below^{iv}. Copies of the SDBD records for the Site are included in the Appendices.

| Year | Description | Reported Applicant/Owner |
|------|---|---|
| 1997 | Installation of (4) backflow devices | Paseo Del Rio, Ltd |
| 1997 | Hazardous Materials Questionnaire, states that business does not use a UST | Barbara Harris (authorized agent for the owner) |
| 1997 | Building permit application for foundation of golf course club house and cart storage | Barbara Harris (authorized agent for the owner) |
| 1999 | Building permit application for the addition of nylon netting fence | Michael Monteforte |

Note that current and former underground storage tanks (USTs) associated with refueling of golf course maintenance equipment are located adjacent to the north of the Site within Area 1, and are further discussed in the Phase I Environmental Site Assessment for Area 1.

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted^v regarding records for the Site. Ms. Cynthia Gould of the SDAPCD responded that no records are available for the Site. A copy of the SDAPCD correspondence is included in the Appendices.

San Diego Industrial Wastewater Program (IWP) Records Review

The IWP was contacted^{vi} regarding records for the Site. According to the IWP, no records are maintained for the Site. A copy of the IWP correspondence is included in the Appendices.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted^{vii} regarding records for the Site. According to the RWQCB, no records are maintained for the Site. A copy of the RWQCB correspondence is included in the Appendices.

San Diego County Department of Agriculture, Weights, and Measures

The County of San Diego Department of Agriculture, Weights, and Measures was contacted^{viii} about the possible use of pesticides at the Site. The County of San Diego Department of Agriculture, Weights, and Measures responded that there were no records available for the Site. A copy of the County of San Diego Department of Agriculture, Weights, and Measures correspondence is included in the Appendices.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. As part of this Assessment, the following contacts were either interviewed or attempts were made to conduct interviews.

| Contact | Affiliation to Site | Description | Interview Date |
|--------------------|------------------------------|--------------------|-----------------------|
| Mr. Brendan Cronin | Current Site General Manager | Discussed below | 12/7/16 |
| Mr. Mark Wilson | Superintendent | Discussed below | 12/7/16 |

Mr. Cronin stated that he has been associated with the Site for approximately 12 years. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which were associated with the use and maintenance of the Site as a golf course. Note that hazardous materials/wastes associated with golf course and landscaping equipment maintenance were not observed to be stored or generated at the Site/ Area 2 for purposes of this Assessment, and were instead observed to be stored within Area 1 located adjacent to the north of the Site. Also, to his

knowledge, there have been no releases of hazardous materials, petroleum products, and/or hazardous waste at the Site. Mr. Cronin indicated that golf course activities have been taking place at the Site since early 1950s as The Mission Valley Country Club (which changed its name to Stardust Country Club in the early 1960s). The golf course was reopened in 1997 as Riverwalk Golf Course.

Mr. Cronin stated that he was not aware of environmental cleanup liens or activity and use limitations (e.g., engineering controls, deed restrictions) that have been recorded for the Site. He was not aware of pending or threatened litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. He was not aware of notices from governmental entities regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site.

Mr. Wilson stated that he has been associated with the Site for approximately 7 months. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which are associated with the use and maintenance of the Site as a golf course.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the “Background” section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Bhavesh Parikh, Development Director with Hines, completed the User Questionnaire on November 10, 2016. The following table summarizes the responses by the Client.

| Question | Response |
|---|----------|
| Have environmental cleanup liens been filed or recorded against the Site? | No |
| Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry? | No |
| Does the user have specialized knowledge or experience in connection with the Site? | No |
| Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site? | Yes |
| Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases? | No |
| Are there obvious indications that point to the presence of contamination at the Site? | No |

DATA GAPS IN CONNECTION WITH CURRENT SITE LAND USE

Based on observations and research, and with the possible exceptions discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- Interview gaps (former and current owners, as well as former tenants were not available for interviews). This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

Findings and Opinions—Current Site Land Use

SCS identified within the above-mentioned report the following potential recognized environmental concern:

- “Historical and current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling) to assess the possible presence and concentration of residual pesticides, and any related impediments to redevelopment or reuse of the Site. Note that this sampling may be more productive or focused once the Site uses, soil balance, and development plans are better known.”

The Subsurface Assessment provided the following conclusions:

- “Alpha- and gamma-chlordane were detected above their laboratory reporting limits in 4 out of the 13 samples analyzed for OCPs [organochlorine pesticides] with maximum reported concentrations of 3.07 µg/kg [micrograms per kilogram] of gamma-chlordane and 4.54 µg/kg of alpha-chlordane; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].
- “Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

The Subsurface Assessment recommended the following:

- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL [soil screening level] of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a

Findings and Opinions—Current Site Land Use

regulated or hazardous waste.

- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development by the Client at the Site.

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 22 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California - San Diego County, 1967, photo-revised 1975 |

Note that the topographic map reviewed shows the San Diego River, which generally trends from east to west and flows to the west, transects the central portion of the Site.

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|-----------------------------|---|
| Reported Formation | Young alluvial flood-plain deposits (Qya) |
| Reported Description | Poorly consolidated, poorly sorted, permeable flood-plain deposits of sandy, silty or clay-bearing alluvium |
| Source | Kennedy, Michael P., and Siang S. Tan, Geologic Map of the San Diego 30' × 60' Quadrangle, California, California Geological Survey, 2008 |

Hydrogeology

Based on a review of a DEH Closure Letter in connection to the removal of USTs in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be southwest. The actual depth to groundwater and flow direction at the Site may be different.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

| | |
|------------------------------------|---|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |
| Reported Beneficial Use | Agricultural and industrial, and potentially municipal |
| Source | California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity^{ix}. For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent⁵ to the Site.

| Direction | Land Use | Comments |
|------------------|--|--|
| North | Golf course (Area 1 of the Riverwalk Golf Course) (1150 Fashion Valley Road) | Hazardous materials/wastes were observed to be present as discussed in the Phase I Environmental Site Assessment for Area 1. |
| East | Town and Country Hotel (500 Hotel Circle) Fashion Valley mall (6967 Friars Road) (Figure 3e-2) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |

⁵ *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

| Direction | Land Use | Comments |
|-----------|--|--|
| South | Golf course (Area 2 of the Riverwalk Golf Course) (1150 Fashion Valley Road) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed; however, hazardous materials/wastes are judged likely to be present as discussed in the Site Grounds section above. |
| | Securitas Security Services USA (1550 Hotel Circle) | |
| | Platypus - Media, Advertising, and Design (1660 Hotel Circle) | |
| | Office building (1650 Hotel Circle) (Figure 3f-1) | |
| | Budget Truck Rental (1904 Hotel Circle) | |
| West | Open space (APNs 437-350-05, 436-610-14, -15, -32 and 760-950-25) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |

Notes:

SDG&E = San Diego Gas & Electric

MFR = Multi-family Residence

MTS = San Diego Metropolitan Transit System

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report^x) was prepared by EDR for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|--|---------------|-------------------------------|---------|----------------------|
| National Priorities List (NPL) | 1.00 mile | 0 | No | No |
| NPL Delisted | 1.00 mile | 0 | No | No |
| Comprehensive Environmental Response Compensation and Liability System (CERCLIS) | 0.50 mile | 0 | No | No |

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|---|---------------|-------------------------------|---------|----------------------|
| No Further Remedial Action Planned (NFRAP) | 0.50 mile | 0 | No | No |
| Resource Conservation and Recovery Act– Corrective Action (RCRA COR ACT) | 1.00 mile | 0 | No | No |
| RCRA Treatment and Disposal Facilities (RCRA TSD) | 0.50 mile | 0 | No | No |
| RCRA Generators (RCRA GEN) | 0.25 mile | 1 | No | No |
| Federal Engineering and Institutional Controls (IC/EC) | 0.50 mile | 0 | No | No |
| Emergency Response Notification System (ERNS) | 0.12 mile | 0 | No | No |
| State/Tribal- Equivalent NPL | 1.00 mile | 0 | No | No |
| State/Tribal-Equivalent CERCLIS (Envirostor) | 1.00 mile | 6 | No | No |
| State/Tribal Solid Waste List (SWL) | 0.50 mile | 1 | No | No |
| State/Tribal Leaking Underground Storage Tanks (LUST) (San Diego Site Assessment and Mitigation [SAM]) (State Leaks, Investigation, and Cleanup [SLIC]) | 0.50 mile | 32 | No | Yes |
| State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs) | 0.25 mile | 3 | No | Yes |
| State/Tribal Voluntary Cleanup Program (VCP) | 0.50 mile | 0 | No | No |
| Federal Brownfields | 0.50 mile | 0 | No | No |
| Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMD) | Site only | 0 | No | N/A |
| Local Lists of Registered Storage Tanks | 0.25 mile | 14 | No | Yes |
| Local Land Records (DEED) | 0.50 mile | 0 | No | No |
| Other (Haznet, Cortese) | 0.12 mile | 1 | No | Yes |
| EDR Proprietary Records (Historical Auto Stations and Cleaners) | 0.25 mile | 6 | No | Yes |

N/A = Not applicable

Although current addresses of the Site were not listed on any of the regulatory databases reviewed, the former address of 5900 Friars Road was listed on the Historical UST, Leaking Underground Storage Tank (LUST), SWEEPS UST and San Diego Site Assessment and

Mitigation (SAM) databases. A discussion of these listings can be found in the 'Additional SCS Research' section below.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site⁶
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, "no further action")
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the "Hydrogeology" section of this Report)

Based on one or more of the factors listed above, and with possible exceptions discussed in the Additional SCS Research section below, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR did not list any facilities as being "orphans," which are facilities for which EDR does not have sufficient information to accurately locate them on a map.

⁶ Based on "Technical Justification for Groundwater Media-Specific Criteria," (Groundwater Study) (March 2012) developed to support the State of California "Low Threat Closure Policy" (adopted May 2012), "plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation." The Groundwater Study goes on to cite Shih et al., 2004 that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area is widely accepted as representative of plume lengths at California UST sites. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

Additional SCS Research

Stardust Golf Course/Area 1, 5900 Friars Road, adjacent to the north of the Site

Based on its proximity to the Site and listing on the LUST, SAN DIEGO CO. SAM, and San Diego Co. HMMD databases, the DEH file for this adjacent facility was reviewed.

According DEH files, one 2,000-gallon gasoline UST and one 550-gallon waste oil UST were reportedly removed from the Site on February 1, 1988. It was reported that after the tanks were removed, the gasoline impacted soil in the immediate vicinity of the removed USTs was removed and replaced. The case was closed by the DEH of June 4, 1990.

Based on the depth to groundwater and the closed nature of the case, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the San Diego County HMMD and SWEEPS UST databases.

H12785-00, ARCO, 2085 S Hotel Circle, approximately 450 southwest of the Site

Based on its listing on the EDR Historical Auto, LUST, San Diego SAM, and SWEEPS UST databases, a County of San Diego DEH case closure letter titled *Underground Storage Tank (UST) Case #H12785-001 Former ARCO Service Station 2085 Hotel Circle, San Diego, CA* was reviewed. The case closure letter described that “5 UST's were removed in 1984 prior to regulation by DEH and no inspector was present at the time of the removal. A Phase II assessment for a real estate transition in 1988 identified both soil and groundwater contamination. Follow-up site assessment activities showed the impact to soil was limited to the former UST's and piping systems. The assessment identified In the area of the UST system a total of 933 cubic yards of fuel contaminated soil. This-soil was estimated to contain a total of 2,102 pounds (310 gallons) of total petroleum hydrocarbons (TPH). The total volume of impacted groundwater was estimated to be 31,500 cubic feet containing approximately 2 pounds of dissolved benzene.”

“To remediate the soil and groundwater impacts, ARCO initiated an on-site vapor extraction system (VES) in early 1994. The system was operated till the fall of 1996. It has been estimated that the remediation system removed a total 4,370 pounds of TPH and 110 pounds of benzene from both soil and groundwater.”

“In consideration of the extensive remediation activities completed, ARCO's consultant evaluated the potential for this site to achieve the basin remediation goal for 1 ug/L in groundwater by natural attenuation. Groundwater monitoring from November 1991 through November 1998 has demonstrated the dissolved groundwater contamination plume is stable.”
“ARCO's consultant has evaluated the available data for the site and has estimated that through natural attenuation processes the residual groundwater contamination will exceed the basin water quality standard for approximately 19 years. Based on the limited extent of contamination, the stability of the dissolved plume and the City of San Diego input regarding their potential use of groundwater in this basin no further remedial action is appropriate.”

Based on the directional flow of groundwater (downgradient), there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the EDR Historical Auto, LUST, San Diego SAM, and SWEEPS UST databases.

H12115, Southwest Leasing/Atlas Hotels/Avon Car Rental, 1111 Fashion Valley Road, adjacent to the east of the Site

Based on its listing on the San Diego County HMMD and SWEEPS UST databases and its proximity to the Site, the DEH file for this adjacent facility was reviewed. The DEH file includes an *Underground Storage Tank Removal/Closure* report dated April 12, 1991. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed.

According to the UST closure report, a 10,000-gallon gasoline tank was excavated from approximately 12 feet below grade and removed from the property in good condition, with tar paper intact and no apparent holes. No soil staining or discoloration was observed. Confirmation soil samples taken from within the proximity of the tank had non-detectable concentrations of hydrocarbons.

Based on the absence of disposal violations and the lack of known and reported releases, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this facility on the San Diego County HMMD and SWEEPS UST databases.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site^{xi}. There was one well interpreted to be located within a 1-mile radius of the Site.

Well API: 07300047, located approximately 0.6 mile to the southeast of the Site, operated by J. A. Smith & F. R. Williams, is listed with a status as ‘undefined.’

Based on the distance from the Site, this well is not considered to represent a recognized environmental condition to the Site.

DATA GAPS IN CONNECTION WITH OFF-SITE SOURCES

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

Findings and Opinions—Off-Site Source Survey

Based on the off-Site source survey, several facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. However, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This opinion is based on one or more of the following: reported regulatory status (e.g., case closed), media affected (e.g., soil contamination only), distance from the Site, direction from the Site

Findings and Opinions—Off-Site Source Survey

with respect to reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. The following table summarizes the historical resources reviewed as part of this Assessment.

| Resource | Source | Years Available |
|-------------------------------|--|--|
| Aerial Photographs | NETR Online http://www.historicaerials.com/ Google Earth | 1949, 1953, 1964, 1966, 1970, 1979, 1980, 1985, 1989, 1990, 1994, 1996, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012 |
| City Directories | San Diego Central Library | 1996, 2001, 2006, 2011, 2016 |
| Sanborn Fire Insurance Maps | EDR | No coverage |
| Topographic Maps | In-House Collection | 1967, 1975 |
| Building Department Records | SDBD | 1997, 1998, 1999 |
| Fire Department Records | SDFD | 2016 |
| Previous Environmental Report | Not applicable | Discussed in the “Review of Client-Provided Documents” section above |
| Interviews | Not applicable | Discussed in the “Interviews” section above |

Notes:

EDR = Environmental Data Resources, Inc.

SDBD = San Diego Building Department

SDFD = San Diego Fire Department

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

| Year | Interpreted Site Tenants | Interpreted Site Use |
|-----------|--------------------------|----------------------|
| 1915-1945 | Cushman Family | Agricultural |

| Year | Interpreted Site Tenants | Interpreted Site Use |
|-------------|---|---|
| 1948 | Unknown | The Site appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

With the exceptions of use of pesticides at the Site (discussed in the 'Client Provided Reports' section above and also below), and the possible use of other hazardous materials associated with farming activities (e.g. fuel storage, chemicals used in the repair and maintenance of farm equipment, etc.) no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Agricultural Activities and Golf Course

Based on a review of aerial photographs and interviews with the current Site owner, it is interpreted that agricultural activities took place at the Site and Site vicinity from circa 1915 to the mid-1940s. In addition, the Site has been used as golf course since the early 1950s to the present. These activities are interpreted to have possibly taken place at the time when organochlorine pesticides such as dichlorodiphenyltrichloroethane (DDT), chlordane, and metals-based pesticides, such as arsenic, were in wide general use for pest or weed control.

These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time. It is possible that organochlorine and metals-based pesticides may have been used, stored, and/or mixed at the Site.

While there are currently no regulations that stipulate cleanup levels for pesticides in soil, there is a level at which soil could be classified as hazardous waste based on, for example, a DDT concentration. However, it has been SCS's experience that in order for pesticide-impacted soil to be classified as hazardous waste, the soil would first need to be classified as "waste" (e.g., to be excavated and transported off Site). In addition, it would need to have concentrations of pesticides and/or metals in excess of regulatory values, such as the total threshold limit or soluble threshold limit concentrations values.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metals-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides and assuming existing Site use remains the same, this common occurrence is, in our experience, unlikely to lead to a health

risk or an enforcement action and is therefore likely to be considered *de minimis*, as defined by ASTM.

However, we understand that the Client plans to redevelop the Site. While specific redevelopment plans for the Site are not known at this time, the redevelopment of the area will likely consist of residential, park, and open space. If redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of constituents of concern (CoCs), if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of CoCs that would cause the soil to be classified as hazardous or regulated waste.

Note that previous soil sampling activities for pesticides in connection with the agricultural land use of the Site is further discussed in the 'Review of Client-Provided Documents' section above.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|---|---|---|
| 1150 Fashion Valley Road (North) | | |
| 1915-1945 | Cushman Family | Agricultural |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course with associated maintenance buildings |
| 1111 Fashion Valley Road (East) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | None | Vacant or undeveloped |
| 1980 to present | Town and Country Hotel | Hotel |

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|--|---|---|
| 1550 to 1904 Hotel Circle (South) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 to present | Various businesses | Commercial |
| 1150 Fashion Valley Road (South) | | |
| 1915-1945 | Cushman Family | Agricultural |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course with associated maintenance buildings |
| APNs 437-350-05, 436-610-14, -15, -32 and 760-950-25 (West) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 to Present | None | Vacant or undeveloped |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

With the possible exception of the maintenance area and associated USTs for the adjacent Riverwalk Area 1 to the north of the Site, discussed in the 'Additional SCS Research' section above, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

DATA GAPS IN CONNECTION WITH THE HISTORICAL SITE LAND USE

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1953 to 1964 and 1970 to 1979. Based on the corroborating data from the historical information reviewed (i.e., the Site was

interpreted to have been used for recreational/golf course purposes in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Historical information prior to 1915 was not readily available. Thus, SCS is unable to determine the Site usage from the date of first development as recommended by ASTM. Based on SCS's experience and available historical information, the Site was interpreted to have possibly first been developed for agricultural use. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Findings and Opinions—Historical Site and Site Vicinity Land Use

With the exceptions of use of pesticides and herbicides at the Site (described in the Review of Client-Provided Documents section above), and the possible use of other hazardous materials associated farming activities (e.g. fuel storage, chemicals used in the repair and maintenance of farm equipment, etc.), no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Based on a review of historical resources, with these possible exceptions, there is a low likelihood that a recognized environmental condition exists at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

5 CONCLUSIONS AND RECOMMENDATIONS

SCS has performed an Assessment of Area 2 at the Riverwalk Golf Course at 1150 Fashion Valley Road, San Diego, California (Site), in general conformance with the American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the U.S. Environmental Protection Agency, 40 Code of Federal Regulations 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

With the possible exceptions below, there is a low likelihood that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

SCS has identified the following potential recognized environmental condition:

- Historical and current use of pesticides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling) to assess the possible presence and concentration of residual pesticides, and any related impediments to redevelopment or reuse of the Site. Note that this sampling may be more productive or focused once the Site uses, soil balance, and development plans are better known.

A Subsurface Assessment was previously conducted by SCS at the Site in 2014 to assess the potential presence of organochlorine pesticides, organophosphorus pesticides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site. The results and conclusions of the Subsurface Assessment are presented below:

- Alpha- and gamma-chlordane were detected above their laboratory reporting limits in 4 out of the 13 samples analyzed for OCPs [organochlorine pesticides] with maximum reported concentrations of 3.07 µg/kg of gamma-chlordane and 4.54 µg/kg of alpha-chlordane; however, no samples were above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels].
- Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL [soil screening level] of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

This Assessment has been conducted by an environmental professional whose qualifications⁷ were made known to the Client. The conclusion and recommendation presented above are based

⁷ SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS' experience.

6 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS's services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

7 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

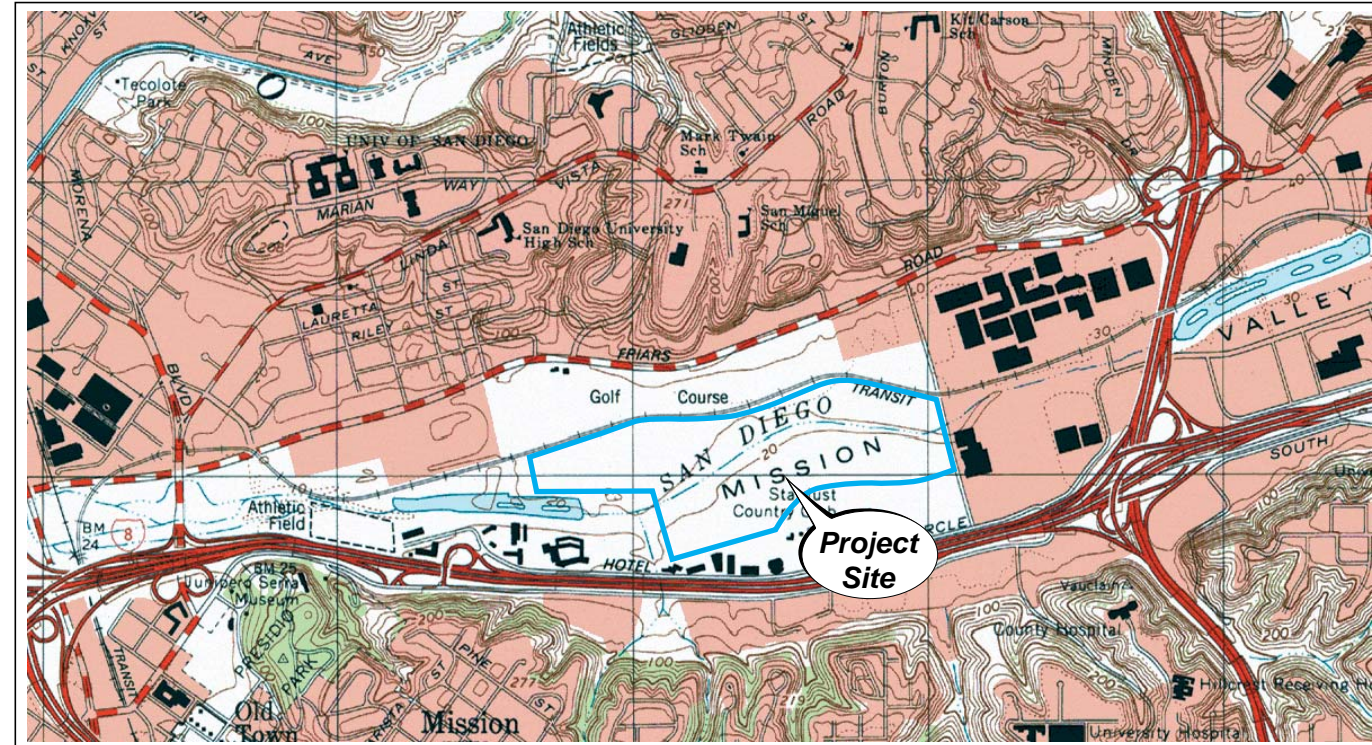

8 ENDNOTES

-

APPENDICES

GLOSSARY

- adjacent property.** Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.
- aerial photographs.** Photographs taken from an airplane or helicopter of areas encompassing the Site.
- asbestos.** Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.
- asbestos-containing material (ACM).** Any material or product that contains more than 1% asbestos.
- construction debris.** Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.
- Controlled recognized environmental conditions.** A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
- de minimis condition.** A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.
- drum.** A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.
- dry well.** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).
- fill dirt.** Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.
- fire insurance map.** Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.
- hazardous material.** Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.
- hazardous substance.** Pursuant to CERCLA, hazardous substances include the following:

- 1) All toxic pollutants and hazardous substances listed under the Clean Water Act
- 2) Hazardous wastes regulated under RCRA
- 3) Any hazardous air pollutant under the Clean Air Act
- 4) Chemicals designated as “immediately hazardous” under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site*, a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or “Perc”; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

San Diego, CA 92123

SAN DIEGO GAS & ELECTRIC (SDG&E) PCB TRANSFORMERS

Dear Mr. Vasquez,

This letter is in response to your inquiry on March 5, 2008 regarding the transformers purchased by San Diego Gas & Electric (SDG&E).

SDG&E has never specified PCB transformers for its distribution system. Although only mineral oil transformers were purchased, some older, pre 1980, mineral oil transformers were inadvertently contaminated with PCBs by the manufacturer.

Based on the SDG&E statistical sampling and testing program, it is unlikely that the SDG&E equipment is PCB contaminated. The only way to know with certainty is by testing.

SDG&E is responsible for ensuring that its transformers comply with EPA regulations governing PCBs. However, EPA regulations do not require the testing of individual mineral oil transformers. Therefore, should you wish for that to be done, there will be a charge associated with the testing and if a service interruption is deemed necessary then there will be additional charges for any high voltage line work and associated labor costs.

Please call me at (858) 547-3069 if you need additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "W. Brull", written in a cursive style.

Portions of 1150 Fashion Valley Road
San Diego, California**

Dear Mr. Westberg:

SCS Engineers (SCS) is pleased to present this report (Report) of the subsurface assessment activities (Assessment) of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the current and former potential usage of pesticides at the Site. The work described in this Report was performed by SCS in general accordance with the Environmental Services Agreement (Contract) and Amendment 1 to Environmental Services Agreement (Amendment) between SCS and Related California (Client). The Contract is dated August 1, 2014, and the Amendment is dated September 9, 2014.

SCS enjoyed working with you on this project. Providing economical solutions to meet your needs is more than our goal, it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please do not hesitate to call our office at (858) 571-5500.

Sincerely,

1 BACKGROUND

SCS Engineers (SCS) understands that the site is currently identified as portions of 1150 Fashion Valley Road, San Diego, California (Site) with portions of Assessor's Parcel Numbers (APNs) 437-240-26, -27, -28, and -29. The Site (identified by the Client as Phase 2) is developed primarily as a golf course, identified as Riverwalk Golf Club, and encompasses the areas of the golf course located south of the San Diego Metropolitan Transit Development System / trolley right-of-way (inclusive) and north of the San Diego River (inclusive). It was reported that the Client is proposing to purchase and develop the Site into various land uses including residential and mixed-use. The Client reported that Site soil grading is anticipated to balance, and no soil export is proposed at this time.

SCS recently prepared a draft report for the Site titled "Phase I Environmental Site Assessment," dated September 9, 2014 (Phase I ESA), which provided the following conclusions and/or recommendations in connection with the Site:

- "Historical and current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling)."

Based on conversations with the Client, we have developed a subsurface investigation scope of work to assess certain potential recognized environmental conditions at the Site (soil samples in connection with potential historical use of organochlorine pesticides (OCPs), metal-based pesticides and chlorinated herbicides at the golf course and former agricultural areas of the property). The objective, scope of work, results and conclusions of this investigation are presented below.

2 OBJECTIVE

The objective of the proposed scope of services was to assess the possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site.

3 SCOPE OF SERVICES

PREPARATION FOR FIELDWORK

Preparation of Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the "exclusion zone" is required pursuant to the regulations found in 29 Code of Federal Regulations Part 1910.120 and California Code of Regulations, Title 8, Section 5192. Therefore, a health and safety plan was prepared for the proposed work scope, which outlined the potential chemical and physical hazards that may be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the anticipated Site-specific chemical and physical hazards were detailed in this plan. SCS personnel involved

with the field work were required to read and sign this document in order to encourage proper health and safety practices.

Utility Search and Markout

SCS notified Underground Service Alert as required by state law, and Ticket Number A42580387 was issued. These procedures were designed to minimize the likelihood of drilling into a subsurface utility. In addition, a private utility locator, Accutech Services, was retained to clear boring locations.

FIELD ACTIVITIES

Subsurface Investigation for Pesticides

On September 18 and 19, 2014, a total of eight soil borings (SB19 through SB26) were advanced at the Site with the use of a truck-mounted, direct-push drilling rig to assess possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site. Soil sampling was conducted in representative current golf green areas and former agricultural areas in a semi-grid pattern. Soil samples were collected from each boring location at depths of approximately 0.5, 1.5, and 3.0 feet below ground surface (bgs).

Soil samples were collected from each boring with a direct-push sampler for analysis. Between sampling events, the sampler was decontaminated with a water/Alconox™ solution wash and two tap water rinses. Soil samples were driven into acetate sleeves. The ends of the acetate sleeves were covered with Teflon™ sheeting and tightly closed with end caps for handling and transportation activities. The sample containers were labeled and packed in ice-filled coolers.

The soil samples were submitted to American Scientific Laboratories, a state-accredited environmental laboratory, and selected samples were analyzed for the following:

- Thirteen soil samples were analyzed for organochlorine pesticides (in general accordance with U.S. Environmental Protection Agency [EPA] Method 8081A)
- Two soil samples were analyzed for chlorinated herbicides (in general accordance with EPA Method 8151A)
- Ten soil and samples were analyzed for arsenic (in general accordance with EPA Method 6010B).

A summary of the laboratory results from the soil samples analyzed is presented (Tables 1, 2, and 3). A copy of the laboratory report is provided in the Appendix.

4 FINDINGS

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table:

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 20 to 30 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California - San Diego County, 1967, photo-revised 1975 |

Geology

The geology of the Site as observed during sampling activities is summarized below along with the reported Site vicinity formation information derived from the below referenced source:

| | |
|--|---|
| Reported and Observed Formation | 1 to 5 feet thick of compacted fill, underlain by Quaternary Alluvium |
| Reported and Observed Description | Fill soils and Quaternary Alluvium were both observed and reported to generally consist of clayey, silty sand with varying amounts of gravel and cobbles. |
| Source | Geologic Map of the San Diego 30x60 Quadrangle, California, Kennedy, Michael P., and Tan, Siang S, United States Geological Survey, 2005 |

Hydrogeology

Based on a review of a Department of Environmental Health (DEH) Closure Letter in connection to the removal of underground storage tanks in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be southwest. The actual depth to groundwater and flow direction at the Site may be different. Groundwater was not encountered during this sampling event.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity:

| | |
|------------------------------------|----------------------------|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |

| | |
|--------------------------------|--|
| Reported Beneficial Use | Agricultural, Industrial, and potentially Municipal |
| Source | California Regional Water Quality Control Board (RWQCB), San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |

LABORATORY ANALYTICAL RESULTS

Soil Samples

The reported analytical results for soil samples collected on September 18 and 19, 2014, are depicted on Figure 2 and tabulated on Tables 1, 2, and 3. The laboratory reports are included (Appendix A).

Pesticides

The analytical results for soil samples with reported concentrations of organochlorine pesticides, chlorinated herbicides, and arsenic above laboratory reporting limits are summarized below.

| Sample Identifier | Depth (feet bgs) | Organochlorine Pesticides (EPA Method 8081A) (µg/kg) | | |
|----------------------------------|------------------|--|-----------------|--------------|
| | | Gamma- Chlordane | Alpha-Chlordane | Chlordane |
| SB21-0.5 | 0.5 | 3.03 | 4.49 | <170 |
| SB22-0.5 | 0.5 | <2 | 2.26 | <170 |
| SB25-0.5 | 0.5 | 3.07 | 4.54 | <170 |
| SB26-0.5 | 0.5 | 2.67 | 4.46 | <170 |
| CHHSL¹ (µg/kg) | | 430 | 430 | 430 |
| RSL² (µg/kg) | | 1,800 | 1,800 | 1,800 |

Notes:

Soil samples analyzed for organochlorine pesticides (OCPs) according to EPA Method 8081A

Depth in feet below ground surface (feet bgs)

OCPs reported in micrograms per kilogram (µg/kg)

<: concentration less than the indicated laboratory reporting limit

| Sample Identifier | Depth (feet bgs) | EPA Method 6010B |
|-------------------|------------------|------------------|
| | | Arsenic (mg/kg) |
| SB19-0.5 | 0.5 | 0.569 |
| SB19-1.5 | 1.5 | 0.475 |
| SB20-0.5 | 0.5 | 7.96 |

¹ California Human Health Screening Levels (CHHSL): California Environmental Protection Agency screening concentrations of 54 hazardous chemicals, established to be protective for humans (lifetime cancer risk of 10⁻⁶ and a noncancer hazard quotient of 1.0) under standard exposure scenarios. Dated January 2005.

² Regional Screening Level (RSL): EPA risk-based concentrations derived from standardized equations combining exposure information assumptions with toxicity data, dated May 2014. RSLs are considered by the EPA to be protective for humans (including sensitive groups) over a lifetime.

| Sample Identifier | Depth (feet bgs) | EPA Method 6010B |

5 DISCUSSION

PESTICIDES

Risk-Based Screening Criteria

A guidance document regarding the use of CHHSLs (*Use of California Human Health Screening Levels [CHHSLs] in Evaluation of Contaminated Properties*) has been developed by the California Environmental Protection Agency. The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, and within the limitations described in this document, the presence of a chemical in soil, soil gas, or indoor air at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) at the Site. The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but suggests that further evaluation of potential human health concerns is warranted.

An additional guidance document titled *Regional Screening Levels (RSL) Summary Table* (May 2014), has been developed by the EPA to “provide default screening tables and a calculator to assist Remedial Project Managers (RPMs), On Scene Coordinators (OSCs), risk assessors, and

³ *Determination of a Southern California Regional Background Arsenic Concentration in Soil, Chernoff, G., Bosan, W., Oudiz, D., and California Department of Toxic Substances Control, 2008 Society of Toxicology Annual Meeting..*

others involved in decision making concerning CERCLA hazardous waste sites and to determine whether levels of contamination found at the site may warrant further investigation or site cleanup, or whether no further investigation or action may be required.” According to this document, “It should be emphasized that screening levels (SLs) are not cleanup standards ... Site-specific information may warrant modifying the default parameters in the equations and calculating site-specific SLs, which may differ from the values in these tables.”

For the purposes of this Assessment, the constituents of concern (CoCs) were conservatively compared to their respective residential CHHSL or RSL, whichever was lower and are further discussed below.

Organochlorine Pesticides

Chlordane

Alpha- and gamma-chlordane were detected above the laboratory reporting limit in 4 of the 13 samples analyzed for OCPs with maximum reported concentrations of 3.07 $\mu\text{g}/\text{kg}$ of gamma-chlordane and 4.54 $\mu\text{g}/\text{kg}$ of alpha-chlordane. No sample concentrations of alpha- or gamma-chlordane were above the RSL of 1,800 $\mu\text{g}/\text{kg}$ or the CHHSL of 430 $\mu\text{g}/\text{kg}$. No other organochlorine pesticides were detected above the laboratory reporting limits at the Site.

Arsenic

The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic exceed the CHHSL and RSL in every sample.

While arsenic concentrations exceed the CHHSL, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions. The residential CHHSL for arsenic is 0.07 milligrams per kilogram (mg/kg) and the residential RSL is 0.67 mg/kg; however, arsenic is known to naturally occur in soil, particularly western United States soils, in concentrations well above the CHHSL. Based on a report prepared by the United States Geological Survey (USGS)⁴, the background concentrations of arsenic in the western United States range from 2.8 to 10.9 mg/kg. In another report prepared specifically for California soils⁵, the background concentrations of arsenic in California soil range from 0.6 to 11.0 mg/kg. In an abstract presented by DTSC staff at the 2008 Society of Toxicology Annual Meeting⁶, it was reported that the upper-bound background concentration for arsenic in southern California soil is 12 mg/kg.

⁴ *Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States*, by J. G. Boerngen and H. T. Shacklette, USGS Professional Paper No. 1270, 1984.

⁵ *Background Concentrations of Trace and Major Elements in California Soils*, by G. R. Bradford, et al., Kearny Foundation of Soil Science Division of Agriculture and Natural Resources University of California, March 1996.

⁶ *Determination of a Southern California Regional Background Arsenic Concentration in Soil*, Chernoff, G., Bosan, W., Oudiz, D., and California Department of Toxic Substances Control, 2008 Society of Toxicology Annual Meeting.

Given that the highest reported arsenic concentration is 7.95 mg/kg, the arsenic concentrations in shallow soil at the Site are within reported background concentrations and do not appear to be indicative of a release of arsenic.

WASTE-BASED CRITERIA

It has been SCS' experience that in order for soil to be classified as a regulated or hazardous waste, the soil would need first be considered a waste (e.g., to be excavated and transported off-Site). It is SCS' understanding that the Client does not intend to export soil during redevelopment activities; therefore, waste criteria are not applicable and an evaluation of waste based cleanup criteria was not performed. Should the Client choose to export soil at some later point, additional laboratory analysis would be required for the following waste characterizations.

Hazardous Waste Characterization

For typical dry samples, the total concentration of a CoC in soil (mg/kg) is compared with the Total Threshold Limit Concentration (TTLC) for that CoC. If the concentration exceeds the TTLC, the soil would be characterized as a California-Hazardous waste. The TTLC addresses potential adverse human health concerns from direct exposure to a CoC in waste.

Additionally, to address potential leaching of CoC-bearing waste intended for landfill disposal, CoC concentrations are compared to the Soluble Threshold Limit Concentration (STLC). If the total CoC concentration (i.e., OCP or total arsenic concentration) in soil exceeds the STLC by 10 times, the Waste Extraction Test (WET) is performed to create a liquid extract that is analyzed for the CoC. If the concentration of the CoC from the WET exceeds the respective STLC, the soil would be characterized as a California-Hazardous waste.

For federal regulations, if the total concentration of a CoC in the soil equals or exceeds the Maximum Concentration of Contaminants for the Toxicity Characteristic (MCCTC) value by 20 times, a liquid extract of the soil sample is generated by the Toxicity Characteristic Leaching Procedure (TCLP) and the extract is then analyzed for the CoC. The MCCTC/TCLP determination is similar to the STLC/WET, but with a factor of 20. If the result of the analysis of the TCLP extract exceeds the MCCTC, then the soil would be characterized as a Resource Conservation and Recovery Act Hazardous waste.

Regulated Waste Characterization

The RWQCB has set CoC concentration levels for waste that is below hazardous waste concentrations but above typical background concentrations. Soil that contains CoCs that exceed the RWQCB Tier1 soil screening levels (SSLs) are considered a regulated waste and cannot be transported to an unregulated site as would be done for clean soil. Additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing arsenic at concentrations exceeding the RWQCB Tier1 SSL of 3.5 mg/kg and soil with OCPs reported at any concentration, as this soil would be characterized as a regulated waste and would require special handling and disposal at an appropriately permitted facility if transported off-Site.

6 CONCLUSIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, and current regulatory guidelines, and SCS' experience and professional judgment, SCS concludes:

- Alpha- and gamma-chlordane were detected above their laboratory reporting limits in 4 out of the 13 samples analyzed for OCPs with maximum reported concentrations of 3.07 $\mu\text{g}/\text{kg}$ of gamma-chlordane and 4.54 $\mu\text{g}/\text{kg}$ of alpha-chlordane; however, no samples were above their respective RSLs or CHHSLs.
- Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

7 RECOMMENDATIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.

8 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and the Client's authorized representatives. Use of this Report is subject to the provisions of the fully executed Consulting Agreement (Contract) between the Client and SCS. Any third-party usage of this Report shall be subject to the provisions of the Contract, and any unauthorized misuse of or reliance upon the Report shall be without risk or liability to SCS.

The conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. Future conditions may differ and this Report should not be relied on to represent future Site conditions unless a qualified consultant familiar with the practice of Phase II Environmental Site Assessments in San Diego County is consulted to assess the necessity of updating this Report.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include but are not limited to 1) SCS' reliance on inadequate or inaccurate information rightfully provided to it by third parties, such as public agencies and other outside sources; 2) the limited scope of this Assessment; and 3) the presence of undetected, unknown, or unreported environmental releases.

9 LIKELIHOOD STATEMENTS

Statements of "likelihood" may have been made in this report. Likelihood statements are based on professional judgments of SCS. The term "likelihood," as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a "degree of belief" for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term "low likelihood" is used by SCS to approximate a percentage range of 10 to 20 percent; the term "moderate likelihood" refers to an approximate percentage range of 40 to 60 percent; and the term "high likelihood" refers to an approximate percentage range of 80 to 90 percent.

Licensed Contractor's Declaration: I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.
 Signature: Barbara Krueger Title: Service Office Mgr. Date: 6-19-97

7. Workers' Compensation Declaration: I hereby affirm under penalty of perjury one of the following declarations:
 a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.
 b. I have and will maintain workers' compensation, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
Insurance Company Indemnity of N. America Policy No. C4 22 59 20 2 Expiration Date 12-31-97

(This section need not be completed if the permit is for one hundred dollars (\$100) or less)
 c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.
 Signature: Barbara Krueger Date: 6-19-97
 Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars (\$100,000), in addition to the cost of compensation, damages as provided for in Section 3700 of the Labor Code, interest, and attorney's fees.

8. Owner-Builder Declaration: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):
 I, as owner of the property, or my employee with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)
 I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law.)
 I am exempt under Section _____ B & P.C. for this reason.
 Signature: N/A Date: _____

9. Construction Lending Agency: I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3067, Ch. 31)
 Lender's Name: N/A Lender's Address: _____

10. Applicant's Signature: I certify that I have read this application and state that the above information is correct, and that I am the owner or the duly authorized agent of the owner. I agree to comply with all city and state laws relating to building construction. I hereby authorize representatives of the City of San Diego to enter upon the above mentioned property for inspection purposes. If, after making the Certificate of Exemption from the Workers' Compensation provisions of the Labor Code, should become subject to such provisions, I will forthwith comply. In the event I do not comply with the Workers' Compensation Law, this permit shall be deemed revoked.

Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars (\$100,000), in addition to the cost of compensation, damages as provided for in Section 3700 of the Labor Code, interest, and attorney's fees.

8. Owner-Builder Declaration: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec. 7031.5, Business and Professions Code. Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):

I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work (a) himself or through his own employees, provided that such improvements are not intended or offered for sale; however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law.)

I am exempt under the provisions of Section 7031.5 for this reason:

Signature _____ Date _____

9. Construction Lending Agency: I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 20971, Public Resources Code).

Lender's Name **N/A** Lender's Address _____

10. Applicant's Signature: I certify that I have read this application and the above information is correct, and that I am the owner of the property for which the above information is provided.

I agree to comply with all city and state laws relating to the construction of the project, and I hereby authorize representatives of the City of San Diego to inspect the project at any time during the construction process. I understand that the City of San Diego may require the applicant to obtain a permit for the project, and that the applicant shall be responsible for obtaining such permit. I understand that the City of San Diego may require the applicant to obtain a permit for the project, and that the applicant shall be responsible for obtaining such permit.

Notice

Notice of Fire and Safety Hazards You are hereby notified that an inspection of your premises has disclosed the following fire safety hazards and/or violations of the provisions of appropriate local or state codes.

Order to Comply As such conditions are contrary to law you are hereby required to correct these conditions immediately upon receipt of this notice. An inspection to determine whether you have complied will be conducted on or before the next inspection date. Failure to comply with the foregoing order before the date of the next inspection may subject you to further enforcement action and penalties as provided by law.

Potential Enforcement Consequences for Failure to Timely Comply with this Notice Misdemeanor criminal prosecution (maximum fine of \$1,000 per day for each violation plus six months in jail), civil injunction, administrative abatement, revocation of permits, recordation of Notice of Violation, civil penalties (maximum of \$2,500 per day for each violation).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1150 FASHION VALLEY ROAD
SAN DIEGO, CA 92108

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 11 SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 16 LUST sites within approximately 0.5 miles of the target property.

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 5 SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 10 SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

 File Location: Local Agency
 Potential Media Affect: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: This site has been an operating gas station since before 1969. It is currently an AM/PM convenience store and gasoline station with four 10,000 gallon underground storage tanks (USTs) and associated piping and dispensers. Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon USTs and one 8,000 gallon UST. Site investigation has continued from the time of the initial UST system removals through May 30, 2001, and has included 8 soil borings, the installation of 14 groundwater monitoring wells, and 6 remediation wells/air sparge wells. The site geology consists of silty sand with clayey sand with cobble deposits. The site is located approximately 1,000 feet north of the San Diego River. Site investigations to date identified significant soil and groundwater impacts in the area of the former USTs. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Stantec (formerly SECOR) estimated the total mass of petroleum hydrocarbons in place to be approximately 7,484 pounds prior to the operation of the on site remediation system. A soil vapor extraction/air sparge (SVE/AS) system was installed and operated as part of an Interim Remediation Action Plan (IRAP) at the site from November 1, 1997, through May 30, 2001. The system was shut down due to asymptotic hydrocarbon removal rates. Approximately 2,852 pounds of petroleum hydrocarbons were removed by this system. Approximately 4,632 pounds of petroleum hydrocarbons remain in place after the removal of the SVE/AS system. Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest. Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The greatest petroleum hydrocarbon impacts to soil and groundwater were found in the area of the former tank excavation and

to the immediate south-west of the area. Free product has been observed historically in monitoring wells MW-2B and MW-8, located to the south-west of the former UST system. The maximum LPH thickness was 1.59 feet, observed in August 1996. SPH removal was conducted on site and approximately 8 gallons of separate-phase hydrocarbons were removed from wells MW-2, MW-2B, and MW-8. LPH has not been measured or observed at this site since July 1999. The primary contaminants of concern (COCs) were those compounds related to petroleum hydrocarbons. The COCs identified are gasoline range organics (GRO), benzene, toluene, ethylbenzene, xylenes, MTBE, TBA, and ethanol. A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation. According to Stantec remediation by natural attenuation is the most cost effective remedial alternative based on the past history of soil vapor extraction and air sparging on this site. A benzene and MTBE trend analysis was conducted by Stantec to estimate the time required for benzene and MTBE concentrations to reach the MCL of 1.0 ug/L and 13.0 ug/L respectively. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years. A health risk assessment was performed on this site utilizing groundwater monitoring data for benzene (59 ug/L) from well MW-8, the nearest well to the building with detectable benzene. Stantec concluded that the residual soil and groundwater impacts remaining on site do not pose a threat to human health or the environment. DEH concurs with Stantecs recommendation for the closure of this case.

RB Case Number: 9UT3944
LOC Case Number: H21151-004
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: This case was opened due to soil contamination discovered during station upgrade activities in December 1999. Soil samples collected near the fill port on the eastern tank contained a maximum concentration of Total petroleum hydrocarbons as gasoline (TPHg) of 9417 mg/kg. A maximum of 1800 mg/kg TPHg were detected in the tank excavation samples. Monitoring wells were installed in 2000. Groundwater monitoring began in January 2001. There are nine wells associated with site. See Environmental Data for additional information.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

 Site History:

Comments: The property is located at 350 Camino de la Reina (Site) in San Diego, California. The Site is an irregularly-shaped parcel, totaling approximately 13 acres of land. The site is currently developed with three commercial buildings and surface parking areas historically used by the San Diego Union Tribune. The buildings on Site are a five-story office building with a sub-grade parking level, a three-story building formerly used for production, but currently identified as an office building, and a single-story vehicle maintenance garage. In 1986, during the removal of four USTs (two 10,000-gallon diesel, one 12,000-gallon gasoline and one 2,000-gallon motor oil), benzene and total petroleum hydrocarbons (TPH) were encountered in soil and groundwater at the Site and Local Oversight Program case H00174-001 was opened. On December 8, 1997, a closure letter (H00174-001) was issued by the DEH for case H00174-001. Benzene was detected in groundwater at a concentration of 19 micrograms per liter ("g/l) at this time. In February 1996, a 550-gallon diesel UST and a 280-gallon waste-oil UST were reportedly removed from the Site. Petroleum hydrocarbon-impacted soil was reportedly detected in the immediate area of the USTs. Following the removal of the UST and export of impacted soil, fourteen confirmation soil samples were collected and analyzed with no detectable levels of petroleum hydrocarbons. On April 18, 2008, the DEH issued a closure level for case H00174-002. In 1997, diesel fuel was reportedly detected in soil during an upgrade to the piping system near the fuel dispensing islands; however, the contamination was determined to be related to the former release from 1986. The DEH issued a closure letter for case H00174-002 on April 9, 2008. On March 18, 2016, the area beneath a previously removed clarifier was sampled. On April 27, 2016, ten additional confirmation soil samples were collected from the areas beneath the previously removed clarifier and wash-out. On April 28, 2016, soil sampling was conducted after the removal of four hydraulic lifts on site. The hydraulic lifts were encased in concrete. Confirmation samples were collected by breaking through the base of the concrete vault and subsampling the soil immediately adjacent to the base of the vault. On May 17, 2016, additional soil samples were collected adjacent to each of the lifts in an effort to identify the lateral and vertical extent of contamination. On July 1,

2016, two Hydropunch groundwater samples were collected from the locations with the highest detected concentrations of diesel in soil (North West Lift and South East Lift). Analysis of the chromatographs from the groundwater samples and the presence of BTEX components in the groundwater indicate that the groundwater contamination consists mainly of gasoline and weathered gasoline. These results do not indicate the presence of a significant amount of hydraulic fluid. It was concluded that the contamination present in the groundwater beneath the Site was predominantly from the prior UST release(s) and did not originate from the hydraulic lifts, clarifier, or wash-out. The TPH and VOC constituents detected in the groundwater are the same contaminants previously reported in the closure summary of case #H00174-001. Therefore, it was concluded that additional assessment is not warranted and that DEH Case #DEH2016-LSAM-00377 should be closed. DEH concurs with this conclusion. If, in the future, the maintenance building is demolished and the subsurface disturbed in the area of the impacted soil, DEH requests that you enter the Voluntary Assistance Program to document that impacted soil is properly characterized and disposed.

File Location: Local Agency
Potential Media Affected: Soil
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: Soil investigations were performed beneath a former transmission repair facility at 5251 Linda Vista Road, San Diego., in November 1999 and January 2014. The facility was located at the western end of a strip mall near the intersection of Linda Vista Road and Napa Street in Mission Valley. The strip mall is accessed from Linda Vista Road and an alley that adjoins its south side. Two underground storage tanks (USTs) had reportedly been located beneath or adjacent to the former repair facility. Waste oil had been stored in one of the tanks and the other had reportedly contained solvents. No information was available regarding the exact locations of the USTs at the time of the 1999 soil investigation. During the November 1999 investigation, eight angle borings and one vertical boring were advanced adjacent to the former transmission repair facility. The borings were located adjacent to the western and southern walls of the building and along the eastern wall shared with an adjoining unit. Petroleum hydrocarbon odors were noted at distances of 5 to 19 feet from the ground surface during advancement of four of the angle borings. These four borings originated at locations in the alley adjoining the southern wall of the facility. Analytical results indicated the detection of Total Recoverable Petroleum Hydrocarbons (TRPH) at a maximum concentration of 17,000 milligrams per kilogram

(mg/kg). Halogenated volatile organic compounds (HVOCs), including solvents, were not detected in the soil samples. Groundwater was not encountered in the borings. Case #H13561-001 was opened under the Voluntary Assistance Program on November 30, 1999, based on the TRPH results for the soil samples. Additional subsurface investigation at the site was performed on January 7, 2014, to assess whether the former USTs were still present in the subsurface, the lateral extent of impacts from the release, the composition of the release, and to determine if groundwater was impacted. The former USTs were not detected in the subsurface by ground-penetrating radar. Seven borings were advanced within the building interior: one of the interior borings was advanced in the adjoining unit and two were advanced inside the former transmission repair facility. The three interior borings terminated at a depth of 9 feet. Four of the attempted borings encountered a condition of refusal at a depth of less than 3 feet. Four exterior borings were sampled to a depth of 20 feet. Groundwater was encountered at a depth of approximately 13 feet in the exterior borings. Analytical results indicated the highest gasoline and diesel concentrations were detected in soil samples collected from beneath a service bay in the south-central area of the former transmission repair facility. However, soil impacts did not extend beyond the building footprint to the north, east, or west. Gasoline- and diesel- range organics were detected in a soil sample collected near the capillary fringe from a boring located in the alley (i.e., south of the facility). The detected concentrations were 1,500 and 1,300 mg/kg, respectively. Gasoline-range and diesel-range organics were detected in a depth-discrete groundwater sample collected from the boring at concentrations of 1.0 and 0.55 milligrams per liter (mg/l), respectively. VOCs indicative of degraded gasoline (e.g., trimethylbenzenes, n-butylbenzene) and the fuel oxygenate TBA were detected at low concentrations in the groundwater sample. Metals concentrations in the groundwater sample were either not detected or were at low levels. The findings of the soil and groundwater investigations suggest that, prior to 1999, a petroleum hydrocarbon release occurred in the service bay of the former transmission repair facility. The release appears to have included gasoline, which has devolatilized and degraded, and diesel-range compounds. Analytical results for samples collected from two borings (located within the service bay and in the alley, respectively) suggest that the release migrated in a southerly direction but was of limited extent. Aromatic hydrocarbons, including benzene, were not detected in the downgradient groundwater sample. Degradation of volatile gasoline components indicates the lack of a health risk to occupants of the commercial space and limited potential to adversely impact potential water supply. Based on these considerations, the consultant has recommended no further action and case closure. DEH concurs with these recommendations.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

USGS TOPOGRAPHIC MAP

| | |
|----------------------|------------------------|
| Target Property Map: | 5622824 LA JOLLA, CA |
| Version Date: | 2012 |
| South Map: | 5622832 POINT LOMA, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---|-------------------------|
| 06073C1618G | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 06073C1614G | FEMA FIRM Flood data |
| 06073C1885G | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
|------------------------------------|--|
| LA JOLLA | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| 6 | 1/2 - 1 Mile East | NW |
| 7 | 1/2 - 1 Mile West | Not Reported |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: RIVERWASH

Soil Surface Texture: gravelly coarse sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

| Soil Layer Information | | | | | | | |
|------------------------|----------|-----------|--|---|---|--|--------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 5 inches | gravelly coarse sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. | Max: 141 Min: 42 | Max: Min: |
| 2 | 5 inches | 59 inches | stratified extremely gravelly coarse sand to gravelly sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Gravels, Clean Gravels, Well-graded gravel. | Max: 141 Min: 42 | Max: Min: |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|---|---|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 14 inches | sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.3 Min: 6.6 |
| 2 | 14 inches | 33 inches | loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |
| 3 | 33 inches | 59 inches | stratified gravelly sand to gravelly loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|-------------------------------|---|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 11 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 14 Min: 4 | Max: 6 Min: 5.1 |
| 2 | 11 inches | 55 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 0.42 Min: 0.01 | Max: 8.4 Min: 7.4 |
| 3 | 55 inches | 72 inches | stratified sand to sandy loam | Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 4 Min: 1.4 | Max: 8.4 Min: 7.4 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: Quarry

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton **E-Mail:** toverton@scsengineers.com

Phone: (858) 571-5500 **FAX:** (858) 571-5357

Company Name: SCS Engineers

Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123
(You may attach a business card/overprint with business card if preferred)

Additional information on public records maybe accessed from the DEH website, www.sdcdeh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. Separate forms are needed for each address or parcel number.

635 S HOTEL CIR, San Diego, CA

or

Exact Address (Street, City and Zip Code)

Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.):

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

- Contaminated Property Investigation(s) (SAM Cases) SAM Closure Letter/Report
- Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) Other: _____ (specify)

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____ Date: ____/____/____

Files copied for: _____ of _____ Date: ____/____/____

Request cancelled by: _____ Date: ____/____/____

Photocopies _____ Cost _____ Picked up/mailed on _____ By _____

A search for DEH records checked above has been conducted and the following apply:

- SAM files for the permit number(s) below are available. After the files you have requested are retrieved from storage, an appointment will be scheduled so that you may review SAM records in the DEH main office.
_____ # _____ # _____ # _____ # _____
- HMD/UST files for the permit number(s) below are available for review at: http://sdcounty.ca.gov/deh/doing_business/hmd_search.html
_____ # _____ # _____ # _____ # _____
- Original records were purged. Database-only records are available (at: http://sdcounty.ca.gov/deh/doing_business/hazmat_search.html) for the following permit number(s):
_____ # _____ # _____ # _____ # _____
- No SAM/HMD/UST records were found for the address/APN you requested.

Professional Experience

Mr. Montague is a professional geologist (PG) and licensed contractor with 16 years of experience in environmental consulting, general contracting, commercial and residential development, and property and asset management. He has performed and reviewed over 500 Phase I environmental site assessments (ESAs), and has completed subsurface investigations, human health risk assessments, removal action work plans, site remediation activities, geotechnical investigations, asbestos and lead-based paint surveys, and asbestos air monitoring. His development, general contracting, and property and asset management experience includes managing construction through lease-up; lease administration and property operations and maintenance; contract procurement and administration; oversight of subcontractors and staff; and interfacing with clients, owners, tenants, and regulatory agencies.

His project experience is summarized below.

Brixton Capital, Gasoline Service Station Redevelopment with Retail Buildings, Chula Vista, CA. As Project Manager, oversaw assessment, remedial planning, and remediation consisting of oversight, segregation, and on-Site burial of residual petroleum hydrocarbon-impacted soils from a former gasoline service station release property redeveloped with new retail buildings.

RD Brown Company, Leaking Underground Storage Tank (LUST) Case Assessment and Remediation, City of Imperial, CA. As Project Manager, oversaw several on- and off-site soil, soil vapor, and groundwater assessments, and is currently overseeing ongoing remediation and monitoring of a proposed senior living facility at a former gasoline service station.

San Diego County Water Authority (SDCWA), Environmental Consulting Services, San Diego, CA. As Project Manager, completed several ESAs and subsurface assessments to assist the SDCWA in obtaining easements required to complete the Carlsbad Desalination Project.

City of Encinitas, Site Investigation and Planning, Encinitas Community Park, Encinitas, CA.

As Project Geologist, provided oversight for the mitigation and monitoring activities of pesticides in soil from the Hall Property, which consists of 43 acres of coastal bluff that was formerly used as a nursery and was redeveloped into a community park. Under the oversight of the County of San Diego Department of Environmental Health (DEH), work consisted of Phase II ESAs, remedial planning and implementation of on-site reuse/burial of 45,000 cubic yards of pesticide-impacted soil in a Soil Management Zone, and creation of a land-use covenant. SCS received an award for this project with the Industrial Environmental Association.

Los Angeles Unified School District (LAUSD), Assessment and Remediation, Various Locations in Los Angeles County, CA.

Managed and performed the environmental characterization and cleanup of various proposed school redevelopment projects overseen by the California Department of Toxic Substances Control (DTSC) that required Phase I ESAs, preliminary environmental assessments or subsurface investigations, and preparation and implementation of removal action work plans to obtain “no further action” status prior to redevelopment.

City Heights Revitalization Corporation, Brownfields Assessment and Remediation, City Heights, CA.

Managed a subsurface investigation for an entire Brownfields city block planned for redevelopment. The investigation included extensive drilling, trenching, and hand auguring to estimate the volume of lead- and hydrocarbon-impacted soil from residual contamination from a former service station and from lead-based paint. Work also included negotiation of cleanup levels with the local regulatory agency.

Casmalia Steering Committee, Remedial Investigation, Casmalia, CA. Managed and performed soil vapor sampling at the Casmalia Hazardous Waste Management Facility, a Class I hazardous waste site, for a remedial investigation and feasibility study of soil gas impacts submitted to the Environmental Protection Agency (EPA). Soil gas impacts to ecological receptors were assessed considering specific regulatory guidance, including the joint DTSC and Los Angeles Regional Water Quality Control Board (LARWQCB) Advisory on Active Soil Gas Investigations.

The Boeing Company, Underground Storage Tank (UST) Assessment, Long Beach, CA.

Performed subsurface vapor intrusion to indoor air analysis at a former aeronautics manufacturing facility. Soil, soil vapor, and sub-slab soil vapor assessments were conducted to determine appropriate corrective actions associated with former solvent USTs. Work was performed under the corrective action consent agreement with the DTSC.

Trihydro Corporation, Soil Vapor Sampling, Hooven, OH. Performed soil vapor sampling from indoor air probes and outdoor multi-level probes at residences in Hooven, OH. This project focused on helping evaluate the potential for subsurface vapor intrusion to indoor air from volatilization of petroleum hydrocarbons in groundwater or light, non-aqueous phase liquid petroleum product, originating from an adjacent former fuel and asphalt petroleum refinery. The vapor intrusion pathway was evaluated based on a request by the EPA, Region V, and was performed in accordance with the EPA-issued document, *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soil*, 2002.

CSK Auto, Phase I ESAs, Various Sites in the Western US. Conducted Phase I ESAs, subsurface investigations, and geotechnical investigations for the development of auto parts chain stores in the western US. Work included site investigations, drilling operations, and records research.

AT&T/Gianni & Associates, Phase I ESAs and Geotechnical Investigations, San Diego, CA. Completed Phase I ESAs, transaction screen assessments, National Environmental Policy Act (NEPA) reports, asbestos surveys, and geotechnical investigations involving the development of wireless communications sites.

Ford Mance Company, Construction and Property Management, Mixed-Use Building at 111 Chesterfield Drive, Encinitas, CA. Served as project manager during development and construction phases of a 2-story, Type V, 3,874-square-foot mixed-use building with subterranean parking. Responsibilities included managing all phases of construction and shell and tenant improvements, and assisting in construction supervision activities and lease up. Development activities included oversight and collaboration of architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decisions, obtaining various permits, and preparing cost and budgets. After construction, Mr. Montague also served as the property and asset manager.

Ford Mance Company, Construction and Property Management, Del Norte Medical Plaza, Carlsbad, CA. Served as project manager during development and construction of a 2-story, Type II, medical building with subterranean parking. Responsibilities included contracting out all phases of shell construction of 22,000 square feet of rentable area for medical use, collaborative oversight concerning architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decision-making, obtaining various permits, and preparing costs and budgets. After construction, Mr. Montague also served as property and asset manager.

California Department of Fish and Game, Carpinteria Creek Watershed Plan, Carpinteria, CA. Collaborated with local and state government representatives, and various stakeholders, to aid in preparing the Carpinteria Creek Watershed Plan under the Cachuma Resource Conservation District for the California Department of Fish and Game. Work consisted of research, meetings, various field assessments, report writing, and map creation. The Plan served as an amendment to the Water Quality Control Plan for the Central Coast Region.

TYLER OVERTON

Education

BA – Environmental Studies/Geography, University of Colorado, 2002

Professional Licenses

AHERA 24-Hour Asbestos Building Inspector (No. BI-179052)

Specialty Certifications

OSHA 40-Hour EPA-Approved Hazardous Waste Operations and Emergency Response Training
State of California Site Surveillance Technician (Asbestos)

Professional Experience

Mr. Overton is an environmental professional specializing in the application of due diligence, including Phase I and Phase II Environmental Site Assessments (ESAs). His experience includes subsurface investigations, remediation, soil management, landfill evaluations, health risk assessments (HRAs), ambient air monitoring, groundwater sampling and monitoring, watershed analysis, land use studies, litigation support, and property assessments. In working with developers, investors, lending institutions, and municipalities in performing Phase I ESAs, he has completed site reconnaissance, regulatory agency record reviews, historical record reviews, historical land use interpretations, data collection, data evaluation, and site assessment reports. He can accurately assess sites and provide valuable information for reports that meets regulatory agency requirements.

Mr. Overton's project experience is summarized below.

Lowe's, Excavation Monitoring, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of contaminated soil below the footprint of a new building, including the removal of underground storage tanks (USTs). Work and tank removal were conducted under the oversight of the County of San Diego Department of Environmental Health (DEH), and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Republic Services, Inc., Gas Monitoring Probe Installation for Sycamore Landfill, Santee, CA. Mr. Overton served as the Project Coordinator for the installation of six new perimeter monitoring probes at the Sycamore Landfill. Installation included drilling and construction of probes up to 470 feet deep, which allowed for the detection of migrating landfill gas (LFG).

Pacific Steel, Resource Conservation and Recovery Act (RCRA) Soil Shipping, San Diego, CA. Mr. Overton served as the point of contact for the removal and disposal of a hazardous waste soil stockpile. SCS monitored dust emissions and the loading and shipping of hazardous soil to ensure that safe handling practices were followed.

Excavation Monitoring of Contaminated Soils for SDG-Left Field and Cisterna Building, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of lead-, diesel-, and gasoline-contaminated soils removed as a part of the new building's below-ground parking structure. Work was conducted under the oversight of the County of San Diego DEH, and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Community Housing Works, Excavation Monitoring of Contaminated Soils, Vista, CA. Mr. Overton served as a soil technician for the excavation monitoring of gasoline-, diesel-, and motor oil-impacted soils that were removed prior to construction of a new subterranean parking structure. Approximately 2,000 cubic yards of soils were classified as hazardous and removed from the project site as a part of the mitigation.

Phase I and Phase II ESAs for Carlsbad Desalination Project, Carlsbad, CA. Mr. Overton completed several Phase I and Phase II ESAs for easements on many locations, including former agricultural lands. Locations included previous soil sampling conducted to determine the presence of pesticides, which were evaluated using the waste export criteria, based on pesticide concentrations found.

Republic Services, Inc., Stage 3B Cell Development for Sycamore Landfill, Santee, CA. Mr. Overton served as Project Manager for the construction of a new waste disposal cell at Sycamore Landfill. Construction included managing the excavation of soils, grading of the cell, identifying the correct location of the leachate collection system, and installation of a composite liner system. The construction of this disposal cell prolonged the life and increased capacity of the landfill by approximately 1 million cubic yards.

Bank of Hawaii Information Systems and Communications Office (ISCO), Remediation, Chino Hills, CA. Mr. Overton performed remediation activities at a former retail fueling facility with four USTs containing gasoline and diesel. He was directly involved in the implementation of a groundwater remediation system to inject hydrogen peroxide into the subsurface to remediate impacts from petroleum hydrocarbons (PHCs).

Asbestos Sampling. Mr. Overton has completed ESAs, asbestos surveys, and asbestos abatement monitoring activities at various project sites. During demolition and abatement, he has provided abatement monitoring involving air monitoring, visual inspections, and clearance air monitoring.

Storm Water Sampling for Lake San Marcos Study, San Marcos, CA. Mr. Overton was part of the SCS team investigating Lake San Marcos and San Marcos Creek, both listed as EPA Clean Water Act 303(d) Category 5 Impaired Water Bodies. He conducted storm water sampling and provided insight on laboratory analysis.

Subject: Phase I Environmental Site Assessment (Assessment)

Site: Riverwalk Area 3
Southern Portions of Assessor's Parcel Numbers (APNs) 437-240-26 & -28
1150 Fashion Valley Road
San Diego, California

Dear Mr. Parikh:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Agreement for Services 010897216 (herein referred to as Exhibit 01) to the Services and Goods Order Agreement (Contract) between SCS and Hines Interests Limited Partnership. A notice to proceed was provided for Exhibit 01 via electronic mail on December 2, 2016.

Because your full understanding of the Assessment is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 10, 17, and 21), and our conclusions and recommendations may be found on page 22. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Tyler Overton

1 BACKGROUND

SCS understands that the site is identified as the southeastern portions of Assessor's Parcel Numbers (APNs) 437-240-26 and -28 and is located at 1150 Fashion Valley Road, San Diego, California (herein referred to as the Site, and also referred to as Area 3) (Figures 1 and 2A)]. The Site is developed primarily with the southern portion of the Riverwalk Golf Course as well as associated structures. It was reported that the Client is proposing to purchase and develop the Site into offices.

A review of Client-provided information and our in-house ParcelQuest database of information from the County of San Diego Assessor's Office indicated the following in connection with the Site, also known as Area 3:

| APN | Address | Acres | Description | Area |
|------------|----------------------------|--|------------------|---|
| 437-240-26 | N. Hotel Circle, San Diego | A portion of a larger 123.61 acre parcel | Recreational use | Portion of APN 437-240-26 is included in Area 3 |
| 437-240-28 | N. Hotel Circle, San Diego | A portion of a larger 41.54 acre parcel | Recreational use | Portion of APN 437-240-28 is included in Area 3 |

The approximate location of Area 3, as well the other areas of the Riverwalk Golf Course, are depicted on a Client provided land use map (see appendix).

2 STANDARDS BACKGROUND

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 01

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability, interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,¹ controlled recognized environmental condition², or historical recognized environmental condition³, and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS's scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

¹ *Recognized environmental conditions*, as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a recognized environmental condition.

² *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

³ *Historical recognized environmental condition*, as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant concentrations or likely to migrate.

An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

3 OBJECTIVE

The objective of the scope of services was to assess the likelihood⁴ that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

4 SCOPE OF SERVICES

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

SITE RECONNAISSANCE

On December 7, 2016, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditionsⁱ. The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figure 2. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3d.

The interiors of the Site structures were observed, and the Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. Mr. Brendan Cronin, General Manager of the Riverwalk Golf Club, has been associated with the Site for 12 years. Mr. Cronin accompanied SCS personnel, provided access to the observed features, and answered questions posed by SCS personnel.

⁴ Statements of *likelihood* are made in this Assessment, based on the professional judgment of SCS. A description of likelihood statements, as made in this Assessment, is included in the “Likelihood Statements” section.

General Information

The following table summarizes general information in connection with the Site.

| | |
|-------------------------|---|
| APNs | Portions of 437-240-26 & -28 |
| Address | 1150 Fashion Valley Road, San Diego, California |
| Site Land Use | Golf Course |
| Occupant | Riverwalk Golf Course |
| Figure Reference | Figures 3a-1 through 3b-2 |

Site Buildings

Two restroom facilities were observed at the Site. These structures were observed to have concrete masonry unit walls constructed over concrete foundations. In addition, an awning was observed to house a water pump station associated with two groundwater monitoring wells in the southeastern portion of the Site (Figures 2 and 3b-1). The groundwater monitoring wells are further discussed in the 'Site Grounds' section below.

Site Grounds

The Site was observed to be covered with golf course green areas and associated golf course sand traps and water features, , concrete-paved drive paths, (Figure 3b-2), and restroom facilities. Note that the possible use of pesticides and herbicides at the Site in connection with the golf course at the Site is further discussed in the 'Historical Site Land Use' section below.

Two water wells were observed at the southeast area of the Site (Figures 2 and 3b-1). The possible environmental concerns with water wells are the direct access by contaminants to groundwater they allow if they are improperly sealed or screened. Groundwater sampling activities for environmental constituents of concern conducted of the water wells at the Site are further discussed in the 'Client-Provided Reports' section below.

Hazardous Materials / Petroleum Products

No obvious indications of the storage or use of hazardous materials and/or petroleum products were observed at the Site during the Site reconnaissance. Note that hazardous materials/wastes associated with golf course and landscaping equipment maintenance were not observed to be stored or generated at the Site/ Area 3, and were instead stored in a separate maintenance building located within Area 1 located to the north of the Site.

Hazardous Wastes

No obvious indications of the generation of hazardous wastes were observed at the Site during the Site reconnaissance.

Indications of Releases of Hazardous Materials/Wastes or Petroleum Products

No obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site.

On-Site Utilities

| | |
|--------------------------------------|---|
| Gas and Electricity | Reported to be San Diego Gas and Electric (SDG&E) |
| High-power Transmission Lines | None observed at or adjacent to the Site |
| Storm Drains | Several storm drains were observed throughout the Site |
| Source of Heating and Cooling | Reported to be SDG&E |
| Potable Water Source | Reported to be supplied by the City of San Diego Public Utilities, Water Department and two water wells |
| Wastewater Conveyance | Reported to be operated by the City of San Diego Public Utilities, Wastewater Department |

Several SDG&E transformers were observed to be located at the Site. SDG&E has been contacted regarding the possibility of polychlorinated biphenyls (PCBs) being present in its transformers. SDG&E reported that it has never specified PCBs in their transformers. A copy of a letter from SDG&E explaining this and its PCB testing policy is included in the Appendices. No obvious indications of leaks, such as stained concrete, were noted near the transformers.

Two water wells were observed at the Site and are discussed in the ‘Site Grounds’ section above and in the ‘Client-Provided Reports’ section below.

SITE RESEARCH

Department of Environmental Health (DEH) File Review

A review of the September 2010 DEH HMMD HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases indicated that there is no regulatory file associated with the Site. In addition, the DEH was contactedⁱⁱ and indicated that there are no files associated with the Site.

Review of Client-Provided Documents

Based on historical research conducted of the Site by SCS in 2014, a subsurface investigation scope of work was developed to assess the potential presence of organochlorine pesticides, organophosphorus pesticides, and arsenic (for arsenical pesticides) in the shallow soil at the Site, as well as sample and analyze groundwater from the on-Site wells at the Site for common constituents of concern, in connection with historical and current use of pesticides at the Site. The results and conclusions of this investigation titled *Subsurface Assessment Riverwalk Phase*

2, Portions of Assessor's Parcel Numbers 437-240-26 and -28, Portion of 1150 Fashion Valley Road San Diego, California (Subsurface Assessment), which was prepared by SCS Engineers and dated September 9, 2014, are presented below:

“Based on the data obtained and reviewed as part of this Assessment, laboratory results, and current regulatory guidelines, and SCS’ experience and professional judgment, SCS concludes:

- “No detectable concentrations of TPH [total petroleum hydrocarbons] or organochlorine pesticides were reported in the groundwater sample collected from the on-Site groundwater production well. With the possible exception of cis-1,2 dichloroethene (1,2-DCE), no other VOCs [volatile organic compounds] were reported in the groundwater sample analyzed from the production well.
- “Chlordane, dieldrin, DDD, DDE, and DDT were detected above their laboratory reporting limit in 1 (for chlordane), 1 (for dieldrin), 2 (for DDD), 1 (for DDE), 2 (for DDT) out of the 15 samples analyzed for OCPs [organochlorine pesticides]. With the exception of one sample, samples were not above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels]. One sample (SB37 -0.5) collected from the western portion of the Site was reported to exceed the CHHSL and RSLs for chlordane and dieldrin, respectively. A soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane or dieldrin above the laboratory reporting limits. Step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.
- “Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

“Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- “1,2-DCE with concentration of 1.22 µg/L was reported in the groundwater sample. 1,2-DCE is a chlorinated solvent used for degreasing and cleaning and is a breakdown product of other solvents. While the reported concentration is low and is less than the MCL [maximum contaminant level], the source of 1,2-DCE is not known. In addition, the details of the well construction are not known (e.g., seal length, well screen, production rates), so it is not clear whether this sample is representative of Site conditions. Additional research of the production well is recommended to better understand what the data are representative of. Once this research is completed, additional groundwater sampling may be appropriate.
- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides

across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.

- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL [soil screening level] of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act (RCRA)-Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development by the Client at the Site.

Fire Department Records Review

The City of San Diego Fire Department (SDFD) was contacted regarding hazardous materials/waste or underground storage tank (UST) records for Siteⁱⁱⁱ. The following table summarizes the SDFD records provided for the Site. Copies of the records are included in the Appendices.

| Year | Description | Reported Owner |
|------|---|----------------|
| 2016 | Inspection report for the Riverwalk Golf Course clubhouse; noted the need for additional occupancy and hazard identification signage. | Not stated |

Building Department Records Review

San Diego Building Department (SDBD) records were reviewed for the Site and are summarized in the table below^{iv}. Copies of the SDBD records for the Site are included in the Appendices.

| Year | Description | Reported Applicant/Owner |
|------|---|---|
| 1997 | Installation of (4) backflow devices | Paseo Del Rio, Ltd |
| 1997 | Hazardous Materials Questionnaire, states that business does not use a UST | Barbara Harris (authorized agent for the owner) |
| 1997 | Building permit application for foundation of gold course club house and cart storage | Barbara Harris (authorized agent for the owner) |

| Year | Description | Reported Applicant/Owner |
|------|---|--------------------------|
| 1999 | Building permit application for the addition of nylon netting fence | Michael Monteforte |

UST = underground storage tank

Note that current and former underground storage tanks (USTs) associated with refueling of golf course maintenance equipment are located to the north of the Site within Riverwalk Area 1, and are further discussed in the Phase I Environmental Site Assessment for Area 1.

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted^v regarding records for the Site. Ms. Cynthia Gould of the SDAPCD responded that no records are available for the Site. A copy of the SDAPCD correspondence is included in the Appendices.

San Diego Industrial Wastewater Program (IWP) Records Review

The IWP was contacted^{vi} regarding records for the Site. According to the IWP, no records are maintained for the Site. A copy of the IWP correspondence is included in the Appendices.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted^{vii} regarding records for the Site. According to the RWQCB, no records are maintained for the Site. A copy of the RWQCB correspondence is included in the Appendices.

San Diego County Department of Agriculture, Weights, and Measures

The County of San Diego Department of Agriculture, Weights, and Measures was contacted^{viii} about the possible use of pesticides at the Site. The County of San Diego Department of Agriculture, Weights, and Measures responded that there were no records available for the Site.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. As part of this Assessment, the following contacts were either interviewed or attempts were made to conduct interviews.

| Contact | Affiliation to Site | Description | Interview Date |
|--------------------|------------------------------|-----------------|----------------|
| Mr. Brendan Cronin | Current Site General Manager | Discussed below | 12/7/16 |
| Mr. Mark Wilson | Superintendent | Discussed below | 12/7/16 |

Mr. Cronin stated that he has been associated with the Site for approximately 12 years. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which were associated with the use and maintenance of the Site as a golf course. Note that hazardous materials/wastes associated with golf course and landscaping equipment maintenance were not observed to be stored or generated at the Site/ Area 2 for purposes of this Assessment, and were instead observed to be stored within Area 1 located adjacent to the north of the Site. Also, to his knowledge, there have been no releases of hazardous materials, petroleum products, and/or hazardous waste at the Site. Mr. Cronin indicated that golf course activities have been taking place at the Site since early 1950s as The Mission Valley Country Club (which changed its name to Stardust Country Club in the early 1960s). The golf course was reopened in 1997 as Riverwalk Golf Course.

Mr. Cronin stated that he was not aware of environmental cleanup liens or activity and use limitations (e.g., engineering controls, deed restrictions) that have been recorded for the Site. He was not aware of pending or threatened litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. He was not aware of notices from governmental entities regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site.

Mr. Wilson stated that he has been associated with the Site for approximately 7 months. To his knowledge, small amounts of hazardous materials and petroleum products were used or stored at the Site and small amounts of hazardous wastes were generated at the Site, which are associated with the use and maintenance of the Site as a golf course.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the “Background” section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Bhavesh Parikh, Development Director with Hines, completed the User Questionnaire on November 10, 2016. The following table summarizes the responses by the Client.

| Question | Response |
|---|----------|
| Have environmental cleanup liens been filed or recorded against the Site? | No |
| Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry? | No |
| Does the user have specialized knowledge or experience in connection with the Site? | No |
| Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site? | Yes |
| Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases? | No |

| | |
|--|----|
| Are there obvious indications that point to the presence of contamination at the Site? | No |
|--|----|

DATA GAPS IN CONNECTION WITH CURRENT SITE LAND USE

Based on observations and research, and with the possible exceptions discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- Former and current owners as well as former tenants were not available for interviews. This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

Findings and Opinions—Current Site Land Use

Based on observations and research and with the exceptions below, there is a low likelihood that a recognized environmental condition exists at the Site as a result of the current Site land use.

SCS has identified the following environmental concerns at the Site. These environmental concerns are based on the data collected, our observations, and our experience and professional judgment:

- Current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling).
- Limited information regarding hazardous materials usage/waste generation associated with historical agricultural operations was available. SCS recommends attempting to correct this gap, to extent possible.
- Two water wells were observed at the southeast area of the Site. The possible environmental concerns with water wells consist of the direct access into groundwater they allow if they are improperly sealed or screened. Based on our experience, it is unlikely that any regulatory agency would require sampling based on the historical agricultural land use. However, because of the interpreted historical Site use for agriculture and the existence of two water wells with ready access to groundwater, SCS believes it may be prudent to collect groundwater samples and analyze them for pesticides and volatile organic compounds (VOCs).

A subsurface investigation titled *Subsurface Assessment Riverwalk Phase 2, Portions of Assessor's Parcel Numbers 437-240-26 and -28, Portion of 1150 Fashion Valley Road San Diego, California* (Subsurface Assessment) presented the following conclusions and recommendations:

- “No detectable concentrations of TPH [total petroleum hydrocarbons] or organochlorine pesticides were reported in the groundwater sample collected from the on-Site groundwater production well. With the possible exception of cis-1,2 dichloroethene (1,2-DCE), no other VOCs [volatile organic compounds] were reported in the groundwater

Findings and Opinions—Current Site Land Use

sample analyzed from the production well.

- “Chlordane, dieldrin, DDD, DDE, and DDT were detected above their laboratory reporting limit in 1 (for chlordane), 1 (for dieldrin), 2 (for DDD), 1 (for DDE), 2 (for DDT) out of the 15 samples analyzed for OCPs [organochlorine pesticides]. With the exception of one sample, samples were not above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels]. One sample (SB37 -0.5) collected from the western portion of the Site was reported to exceed the CHHSL and RSLs for chlordane and dieldrin, respectively. A soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane or dieldrin above the laboratory reporting limits. Step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.
- “Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

The Subsurface Assessment recommended the following:

- “1,2-DCE with concentration of 1.22 µg/L was reported in the groundwater sample. 1,2-DCE is a chlorinated solvent used for degreasing and cleaning and is a breakdown product of other solvents. While the reported concentration is low and is less than the MCL [maximum contaminant level], the source of 1,2-DCE is not known. In addition, the details of the well construction are not known (e.g., seal length, well screen, production rates), so it is not clear whether this sample is representative of Site conditions. Additional research of the production well is recommended to better understand what the data are representative of. Once this research is completed, additional groundwater sampling may be appropriate.
- “Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- “If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL [soil screening level] of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act (RCRA)-Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is

Findings and Opinions—Current Site Land Use

characterized as a regulated or hazardous waste.

- “Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.”

SCS concurs with the recommendations provided in the Subsurface Assessment as they relate to the proposed development by the Client at the Site.

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 20 to 28 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California - San Diego County, 1967, photo-revised 1975 |

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|-----------------------------|---|
| Reported Formation | Young alluvial flood-plain deposits (Qya) |
| Reported Description | Poorly consolidated, poorly sorted, permeable flood-plain deposits of sandy, silty or clay-bearing alluvium |
| Source | Kennedy, Michael P., and Siang S. Tan, Geologic Map of the San Diego 30' × 60' Quadrangle, California, California Geological Survey, 2008 |

Hydrogeology

Based on a review of a DEH Closure Letter in connection to the removal of USTs in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be to southwest. The actual depth to groundwater and flow direction at the Site may be different.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

| | |
|------------------------------------|----------------------------|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
|------------------------------------|----------------------------|

| | |
|---------------------------------|--|
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |
| Reported Beneficial Use | Agricultural and Industrial, and potentially Municipal |
| Source | California Regional Water Quality Control Board, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity^{ix}. For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent⁵ to the Site.

| Direction | Land Use | Comments |
|-----------|---|--|
| North | Golf course (Riverwalk Area 2) (1150 Fashion Valley Road) (Figure 3c-1) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |
| East | Town and Country Hotel (500 Hotel Circle North and 1111 Fashion Valley Road) (Figure 3c-2) | |
| South | Handlery Hotel San Diego (950 Hotel Circle) Presidio View Apartments (1440 Hotel Circle North) | |
| West | Budget Truck Rental (1904 Hotel Circle North) | |

SDG&E = San Diego Gas & Electric

MFR = Multi-family Residence

MTS = San Diego Metropolitan Transit System

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report^x) was prepared by Environmental Data Resources, Inc. (EDR) for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM

⁵ *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|---|---------------|-------------------------------|---------|----------------------|
| National Priorities List (NPL) | 1.00 mile | 0 | No | No |
| NPL Delisted | 1.00 mile | 0 | No | No |
| Comprehensive Environmental Response Compensation and Liability System (CERCLIS) | 0.50 mile | 0 | No | No |
| No Further Remedial Action Planned (NFRAP) | 0.50 mile | 0 | No | No |
| Resource Conservation and Recovery Act– Corrective Action (RCRA COR ACT) | 1.00 mile | 0 | No | No |
| RCRA Treatment and Disposal Facilities (RCRA TSD) | 0.50 mile | 0 | No | No |
| RCRA Generators (RCRA GEN) | 0.25 mile | 1 | No | Yes |
| Federal Engineering and Institutional Controls (IC/EC) | 0.50 mile | 0 | No | No |
| Emergency Response Notification System (ERNS) | 0.12 mile | 0 | No | No |
| State/Tribal- Equivalent NPL | 1.00 mile | 0 | No | No |
| State/Tribal-Equivalent CERCLIS (Envirostor) | 1.00 mile | 3 | No | No |
| State/Tribal Solid Waste List (SWL) | 0.50 mile | 0 | No | No |
| State/Tribal Leaking Underground Storage Tanks (LUST) (San Diego Site Assessment and Mitigation [SAM]) (State Leaks, Investigation, and Cleanup [SLIC]) | 0.50 mile | 24 | No | Yes |
| State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs) | 0.25 mile | 1 | No | Yes |
| State/Tribal Voluntary Cleanup Program (VCP) | 0.50 mile | 0 | No | No |
| Federal Brownfields | 0.50 mile | 0 | No | No |

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|--|---------------|-------------------------------|---------|----------------------|
| Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMD) | Site only | 0 | No | N/A |
| Local Land Records (DEED) | 0.50 mile | 0 | No | No |
| Other (Haznet) | 0.12 mile | 5 | No | Yes |
| EDR Proprietary Records (Historical Auto Stations and Cleaners) | 0.25 mile | 8 | No | No |

N/A = Not applicable

Although current addresses of the Site were not listed on any of the regulatory databases reviewed, the former address of 5900 Friars Road was listed on the Leaking Underground Storage Tank (LUST) and San Diego Site Assessment and Mitigation (SAM) databases. This listing pertains to a documented release from former USTs at Riverwalk Area 1, within the maintenance building area, which is situated approximately 2,800 feet to the northwest of the Site/Area 3. A discussion of these listings can be found in the Phase I Environmental Site Assessment for Riverwalk Area 1.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site⁶
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes

⁶ Based on “Technical Justification for Groundwater Media-Specific Criteria,” (Groundwater Study) (March 2012) developed to support the State of California “Low Threat Closure Policy” (adopted May 2012), “plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation.” The Groundwater Study goes on to cite Shih et al., 2004 that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area is widely accepted as representative of plume lengths at California UST sites. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the “Hydrogeology” section of this Report)

Based on one or more of the factors listed above, and with possible exceptions discussed in the Additional SCS Research section below, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR did not list any facilities as being “orphans,” which are facilities for which EDR does not have sufficient information to accurately locate them on a map.

Additional SCS Research

HAZNET Database

The facilities listed in the table below were identified in the Hazardous Waste Information System (HAZNET) database.

| Facility/location with respect to the Site | Address |
|---|--|
| Handlery Hotel & Country Club (Adjacent to the south) | 950 Hotel Circle North, San Diego, California |
| Douglas All Red Company (Adjacent to the south) | 1660 Hotel Circle North, San Diego, California |
| CT Hotel (Adjacent to the south) | 1550 Hotel Circle North, San Diego, California |
| Essex Realty Management, Inc. (Adjacent to the south) | 1550 Hotel Circle North, San Diego, California |
| Town & Country Resort (Adjacent to the east) | 500 Hotel Circle North, San Diego, California |

Based on their proximity to the Site (adjacent), one or more of the following sources were reviewed for these facilities: DEH files, the September 2010 DEH HE-17 database, State Water Resources Control Board Geotracker database, and EDR FirstSearch report.

Based on the types and quantities of hazardous materials and petroleum products used and stored and hazardous waste generated at these facilities, the absence of disposal violations, and the lack of known and reported releases, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of these facilities on the HAZNET database.

H12786-001 Hotel Circle 76 Station: 504 Hotel Circle North

In 1989, a gasoline leak from a former UST at 504 Hotel Circle North approximately 366 feet to the east/southeast and upgradient from the Site was reported. The DEH provided a no further

action letter dated August 17, 1992, stating that no further action is required based on site characterization and mitigation activities performed.

Based on the distance of this former reported release from the Site, the reported assessment and mitigation activities performed, and the case closed status, there is a low likelihood that this facility represents a recognized environmental condition to the Site.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site^{xi}. There was one well interpreted to be located within a 1-mile radius of the Site.

Well API: 07300047, which is located approximately 0.5 mile to the southeast of the Site and operated by J. A. Smith & F. R. Williams, is listed with a status as ‘undefined.’

Based on the distance from the Site, this well is not considered to represent a recognized environmental condition to the Site.

DATA GAPS IN CONNECTION WITH OFF-SITE SOURCES

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

Findings and Opinions—Off-Site Source Survey

Based on the off-Site source survey, several facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. However, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This opinion is based on one or more of the following: reported regulatory status (e.g., case closed), media affected (e.g., soil contamination only), distance from the Site, direction from the Site with respect to reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. The following table summarizes the historical resources reviewed as part of this Assessment.

| Resource | Source | Years Available |
|-------------------------------|--|--|
| Aerial Photographs | NETR Online http://www.historicaerials.com/ Google Earth | 1949, 1953, 1964, 1966, 1970, 1979, 1980, 1985, 1989, 1990, 1994, 1996, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012 |
| City Directories | San Diego Central Library | 1996, 2001, 2006, 2011, 2016 |
| Sanborn Fire Insurance Maps | EDR | No coverage |
| Topographic Maps | In-House Collection | 1967, 1975 |
| Building Department Records | SDBD | 1997, 1998, 1999 |
| Fire Department Records | SDFD | 2016 |
| Previous Environmental Report | Not applicable | Discussed in the "Review of Client-Provided Documents" section above |
| Interviews | Not applicable | Discussed in the "Interviews" section above |

Notes:

EDR = Environmental Data Resources, Inc.

SDBD = San Diego Building Department

SDFD = San Diego Fire Department

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

| Year | Interpreted Site Tenants | Interpreted Site Use |
|-------------|---|---|
| 1915-1945 | Cushman Family | Agricultural |
| 1948 | Unknown | The Site appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

With the exceptions of use of pesticides and herbicides at the Site (described below and in the 'Client Provided Reports' section above), and the possible use of other hazardous materials

associated with farming activities (e.g. fuel storage, chemicals used in the repair and maintenance of farm equipment, etc.) no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Agricultural Activities and Golf Course

Based on a review of aerial photographs and interviews with the current Site owner, it is interpreted that agricultural activities took place at the Site and Site vicinity from circa 1915 to the mid-1940s. In addition, the Site has been used as golf course since the early 1950s to the present. These activities are interpreted to have possibly taken place at the time when organochlorine pesticides such as dichlorodiphenyltrichloroethane (DDT), chlordane, and metals-based pesticides, such as arsenic, were in wide general use for pest and weed control.

These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time. It is possible that organochlorine and metals-based pesticides may have been used, stored, and/or mixed at the Site.

While there are currently no regulations that stipulate cleanup levels for pesticides in soil, there is a level at which soil could be classified as hazardous waste based on, for example, a DDT concentration. However, it has been SCS's experience that in order for pesticide-impacted soil to be classified as hazardous waste, the soil would first need to be classified as "waste" (e.g., to be excavated and transported off Site). In addition, it would need to have concentrations of pesticides and/or metals in excess of regulatory values, such as the total threshold limit or soluble threshold limit concentrations values.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metals-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides and assuming that existing Site use remains the same, this common occurrence is, in our experience, unlikely to lead to a health risk or an enforcement action and is therefore likely to be considered *de minimis*, as defined by ASTM.

However, we understand that the Client plans to redevelop the Site. While specific redevelopment plans for the Site are not known at this time, the redevelopment of the area will likely consist of offices. If redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of constituents of concern (CoCs), if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of CoCs that would cause the soil to be classified as hazardous or regulated waste.

Note that previous soil sampling activities for pesticides in connection with the agricultural land use of the Site is further discussed in the 'Review of Client-Provided Documents' section above.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|---|---|---|
| 1150 Fashion Valley Road (North) | | |
| 1915-1945 | Cushman Family | Agricultural |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 - 2016 | The Mission Valley Country Club, Stardust Country Club, and Riverwalk Golf Course | Golf course with associated maintenance buildings |
| 500 Hotel Circle North and 1111 Fashion Valley Road (East) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | None | Vacant or undeveloped |
| 1980 to present | Town and Country Hotel | Hotel |
| 950 and 1440 Hotel Circle North (South) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953 to present | Various businesses | Commercial |
| 1904 Hotel Circle North (West) | | |
| 1948 | Unknown | The property appears to be developed as an extension of an urban area; however, specific land use information was not provided on the topographic map reviewed. |
| 1953-1964 | Unknown | Vacant and/or undeveloped land |

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|-----------------|-----------------------------------|-------------------------------|
| 1972 to present | Parking lot/car rental | Commercial |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

No obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

DATA GAPS IN CONNECTION WITH THE HISTORICAL SITE LAND USE

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1953 to 1964 and 1970 to 1979. Based on the corroborating data from the historical information reviewed (i.e., the Site was interpreted to have been used for recreational purposes in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Historical information prior to 1915 was not readily available. Thus, SCS is unable to determine the Site usage from the date of first development as recommended by ASTM. Based on SCS's experience and available historical information, the Site was interpreted to have possibly first been developed for agricultural use. The lack of information regarding possible hazardous materials usage during farming operations at the Site is considered a data gap.

Findings and Opinions—Historical Site and Site Vicinity Land Use

The Site has been used for agricultural purposes from approximately 1915 to 1945, and a golf course from 1953 to present. The historical and current use of pesticides and herbicides at the Site was documented; therefore, a subsurface investigation was conducted. No detectable concentrations of TPH [total petroleum hydrocarbons] or organochlorine pesticides were reported in the groundwater sample collected from the on-Site groundwater production well. With the possible exception of cis-1,2 dichloroethene (1,2-DCE), no other VOCs [volatile organic compounds] were reported in the groundwater sample analyzed from the production well. A further discussion of these activities can be found in the Review of Client Provided Reports section above.

With the exceptions of use of pesticides and herbicides at the Site (described in the Site Grounds section above), and the possible use of other hazardous materials associated farming activities (e.g. fuel storage, chemicals used in the repair and maintenance of farm equipment, etc.) no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed. The lack of information regarding possible hazardous materials usage during

Findings and Opinions—Historical Site and Site Vicinity Land Use

farming operations at the Site is considered a data gap.

Based on a review of historical resources, with these possible exceptions, there is a low likelihood that a recognized environmental condition exists at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

5 CONCLUSIONS AND RECOMMENDATION

SCS has performed an Assessment of Area 3 at the Riverwalk Golf Course at 1150 Fashion Valley Road, San Diego, California (Site), in general conformance with the American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

With the possible exceptions below, this Assessment has revealed no evidence of a recognized environmental condition in connection with the Site.

SCS has identified the following environmental concerns at the Site:

- Historical and current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling).
- Limited information regarding hazardous materials usage/waste generation associated with historical agricultural operations was available. SCS recommends attempting to correct this gap, to extent possible.
- Two water wells were observed at the southeast area of the Site. The possible environmental concerns with water wells are the direct access to groundwater they allow if they are improperly sealed or screened. Based on our experience, it is unlikely that any regulatory agency would require sampling based on the historical agricultural land use. However, because of the interpreted historical Site use for agriculture and the existence of two water wells with its ready access to groundwater, SCS believes it may be prudent to collect groundwater samples and analyze them for pesticides and volatile organic compounds (VOCs).

A Subsurface Assessment was previously conducted at the Site in 2014 to assess the potential presence of organochlorine pesticides, organophosphorus pesticides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site, and a groundwater sample was collected from a Site water well and analyzed for various constituents of concern. The results and conclusions of the Subsurface Assessment are presented below:

- No detectable concentrations of TPH [total petroleum hydrocarbons] or organochlorine pesticides were reported in the groundwater sample collected from the on-Site groundwater production well. With the possible exception of cis-1,2 dichloroethene (1,2-DCE), no other VOCs were reported in the groundwater sample analyzed from the production well.
- Chlordane, dieldrin, DDD, DDE, and DDT were detected above their laboratory reporting limit in 1 (for chlordane), 1 (for dieldrin), 2 (for DDD), 1 (for DDE), 2 (for DDT) out of the 15 samples analyzed for OCPs [organochlorine pesticides]; With the exception of one sample, samples were not above their respective RSLs [Regional Screening Levels] or CHHSLs [California Human Health Screening Levels]. One sample (SB37 -0.5) collected from the western portion of the Site was reported to exceed the CHHSL and RSLs for chlordane and dieldrin, respectively. A soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane or dieldrin above the laboratory reporting limits. Step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.
- Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- 1,2-DCE with concentration of 1.22 $\mu\text{g/L}$ was reported in the groundwater sample. 1,2-DCE is a chlorinated solvent used for degreasing and cleaning and is a breakdown product of other solvents. While the reported concentration is low and is less than the MCL [maximum contaminant level], the source of 1,2-DCE is not known. In addition, the details of the well construction are not known (e.g., seal length, well screen, production rates), so it is not clear whether this sample is representative of Site conditions. Additional research of the production well is recommended to better understand what the data are representative of. Once this research is completed, additional groundwater sampling may be appropriate.
- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and

laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act (RCRA)-Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.

- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.

This Assessment has been conducted by an environmental professional whose qualifications⁷ were made known to the Client. The conclusions and recommendations presented above are based on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS's experience.

6 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

⁷ SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS's services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

7 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

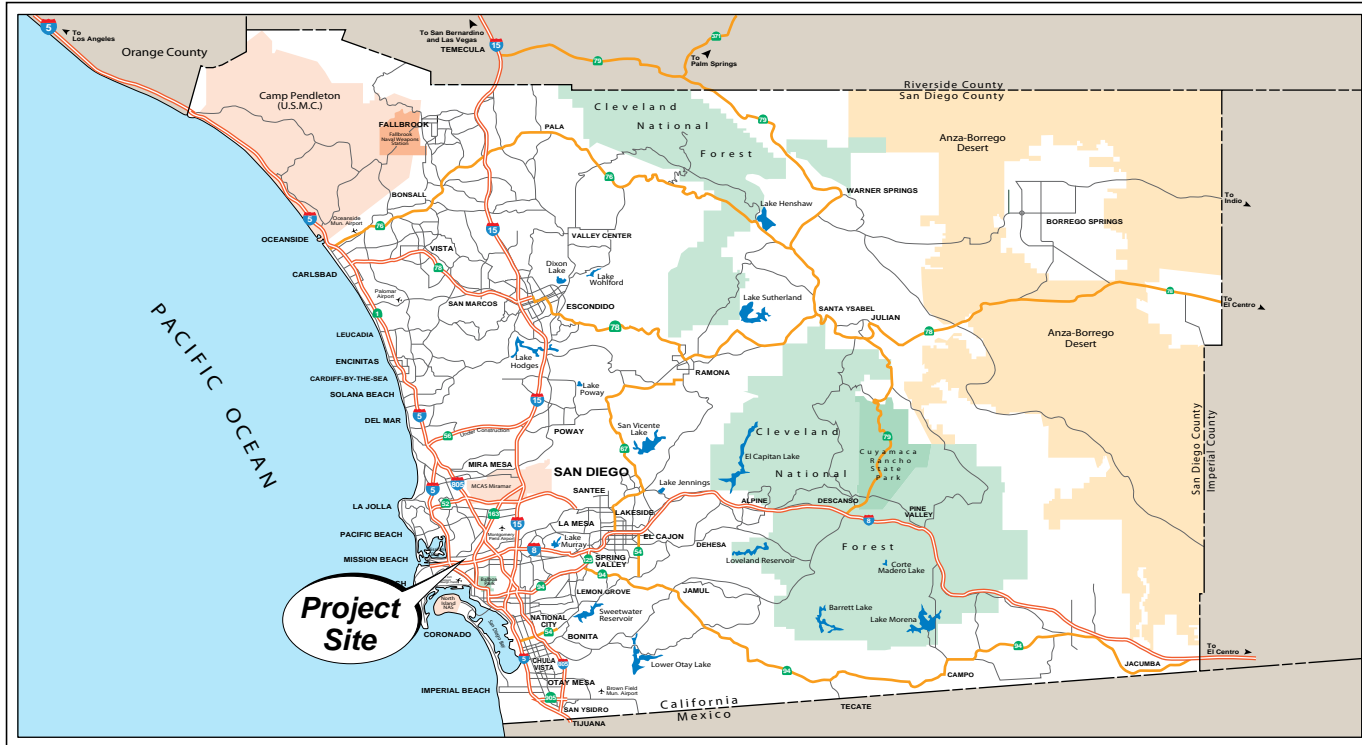

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

8 ENDNOTES

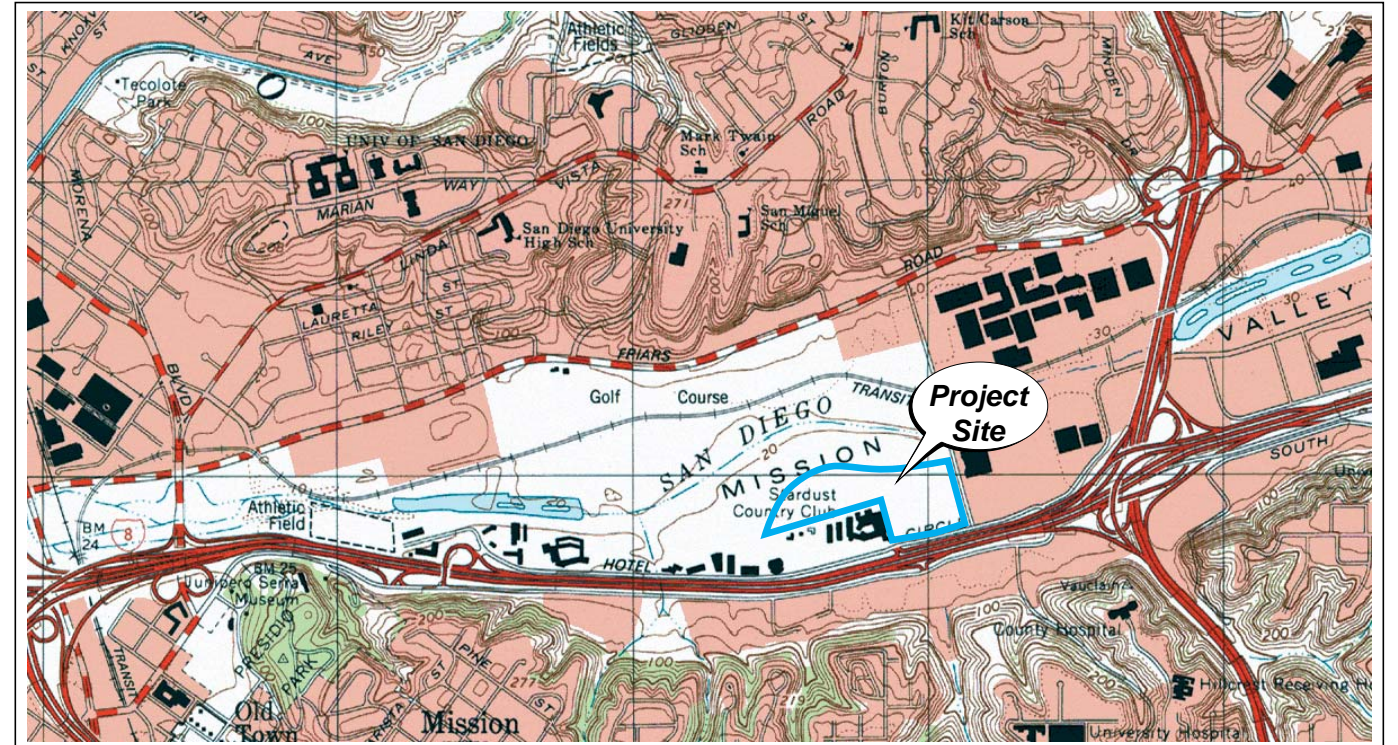

-
- i. Site reconnaissance conducted by Tyler Overton (SCS) on December 7, 2016.
 - ii. Records request—County of San Diego Department of Environmental Health by Tyler Overton (SCS) on December 2 and 6, 2016.
 - iii. Records request—City of San Diego Fire Department by Tyler Overton (SCS) on December 6 and 7, 2016.
 - iv. In-person records request—City of San Diego Building Department by Tyler Overton (SCS) on December 8, 2016.
 - v. Records request—San Diego County Air Pollution Control District (SDAPCD) by Tyler Overton on December 2, 2016.

APPENDICES

GLOSSARY

- adjacent property.** Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.
- aerial photographs.** Photographs taken from an airplane or helicopter of areas encompassing the Site.
- asbestos.** Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.
- asbestos-containing material (ACM).** Any material or product that contains more than 1% asbestos.
- construction debris.** Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.
- Controlled recognized environmental conditions.** A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
- de minimis condition.** A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.
- drum.** A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.
- dry well.** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).
- fill dirt.** Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.
- fire insurance map.** Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.
- hazardous material.** Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.
- hazardous substance.** Pursuant to CERCLA, hazardous substances include the following:

- 1) All toxic pollutants and hazardous substances listed under the Clean Water Act
- 2) Hazardous wastes regulated under RCRA
- 3) Any hazardous air pollutant under the Clean Air Act
- 4) Chemicals designated as “immediately hazardous” under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site*, a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or “Perc”; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

San Diego, CA 92123

SAN DIEGO GAS & ELECTRIC (SDG&E) PCB TRANSFORMERS

Dear Mr. Vasquez,

This letter is in response to your inquiry on March 5, 2008 regarding the transformers purchased by San Diego Gas & Electric (SDG&E).

SDG&E has never specified PCB transformers for its distribution system. Although only mineral oil transformers were purchased, some older, pre 1980, mineral oil transformers were inadvertently contaminated with PCBs by the manufacturer.

Based on the SDG&E statistical sampling and testing program, it is unlikely that the SDG&E equipment is PCB contaminated. The only way to know with certainty is by testing.

SDG&E is responsible for ensuring that its transformers comply with EPA regulations governing PCBs. However, EPA regulations do not require the testing of individual mineral oil transformers. Therefore, should you wish for that to be done, there will be a charge associated with the testing and if a service interruption is deemed necessary then there will be additional charges for any high voltage line work and associated labor costs.

Please call me at (858) 547-3069 if you need additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "W. Brull", written in a cursive style.

Subject: Subsurface Assessment

**Site: River Walk Phase 3
Portions of Assessor's Parcel Numbers (APNs) 437-240-26 and -28
Portion of 1150 Fashion Valley Road
San Diego, California**

Dear Mr. Westberg:

SCS Engineers (SCS) is pleased to present this report (Report) of the subsurface assessment activities (Assessment) of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the current and former potential usage of pesticides at the Site, and to assess for the presence of constituents of concern in an active production water well used at the Site. The work described in this Report was performed by SCS in general accordance with the Environmental Services Agreement (Contract) and Amendment 1 to Environmental Services Agreement (Amendment) between SCS and Related California (Client). The Contract is dated August 1, 2014, and the Amendment is dated September 9, 2014.

SCS enjoyed working with you on this project. Providing economic environmental solutions to meet your needs is more than our goal, it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please do not hesitate to call our office at (858) 571-5500.

Sincerely,

- A Laboratory Analytical Reports and Chain of Custody Documentation

1 BACKGROUND

SCS Engineers (SCS) understands that the site is identified as portions of 1150 Fashion Valley Road, San Diego, California (Site), with portions of Assessor's Parcel Numbers (APNs) 437-240-26, and -28 (Site). The Site (identified by the Client as Phase 3) is developed primarily as a golf course, identified as Riverwalk Golf Club, and encompasses the southern portion of the golf course located south of the San Diego River. It was reported that the Client is proposing to purchase and develop the Site into various land uses including residential and mixed-use. The Client reported that Site soil grading is anticipated to balance, and no soil export is proposed at this time.

SCS recently prepared a draft report for the Site titled "Phase I Environmental Site Assessment," dated September 9, 2014 (Phase I ESA), which provided the following conclusions and recommendations in connection with the Site:

- Historical and current use of pesticides and herbicides at the Site. SCS recommends that subsurface assessment activities be conducted (e.g., soil sampling).
- Two water wells were observed at the southeast area of the Site. The possible environmental concerns with water wells are the direct access to groundwater they allow if they are improperly sealed or screened. Based on our experience, it is unlikely that any regulatory agency would require sampling based on the historical agricultural land use. However, because of the interpreted historical Site use for agriculture and the existence of two water wells with its ready access to groundwater, SCS believes it may be prudent to collect groundwater samples and analyze them for pesticides, volatile organic compounds (VOCs), and organochlorine pesticides (OCPs)

Based on conversations with the Client, we have developed a subsurface investigation scope of work to assess certain potential recognized environmental conditions at the Site (soil and groundwater samples in connection with potential historical use of organochlorine and metal-based pesticides and chlorinated herbicides at the golf course and former agricultural areas of the property, and to assess a groundwater production well since groundwater is discharged onto the Site that may contain constituents of concern [CoC] from the Site or Site vicinity). The objectives, scope of work, results and conclusions of the investigation are presented below.

2 OBJECTIVES

The objectives of the proposed scope of services were to:

- Assess the possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site.
- Assess the possible presence and concentrations of petroleum products, VOCs, and organochlorine pesticides in the groundwater at a groundwater production well at the Site in connection with current and former operations involving the use of pesticides, and to

assess the well since groundwater is discharged onto the Site that may contain CoCs from the Site or Site vicinity.

3 SCOPE OF SERVICES

PREPARATION FOR FIELDWORK

Preparation of Health and Safety Plan

A health and safety plan for work conducted at the Site and workers within the “exclusion zone” is required pursuant to the regulations found in 29 Code of Federal Regulations Part 1910.120 and California Code of Regulations (CCR), Title 8, Section 5192. Therefore, a health and safety plan was prepared for the proposed work scope, which outlined the potential chemical and physical hazards that may be encountered during drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the anticipated Site-specific chemical and physical hazards were detailed in this plan. SCS personnel involved with the field work were required to read and sign this document in order to encourage proper health and safety practices.

Utility Search and Markout

SCS notified Underground Service Alert as required by state law, and Ticket Number A42580387 was issued. These procedures were designed to minimize the likelihood of drilling into a subsurface utility. In addition, a private utility locator, Accutech Services, was retained to clear boring locations. These procedures were designed to minimize the likelihood of drilling into a subsurface utility.

FIELD ACTIVITIES

Subsurface Investigation for Pesticides

On September 19, 2014, a total of 11 soil borings (SB27 through SB37) were advanced at the Site with the use of a truck-mounted, direct-push drilling rig to assess possible presence of organochlorine pesticides, chlorinated herbicides, and arsenic (for arsenical pesticides) in the shallow soil at the Site in connection with historical and current use of pesticides at the Site (Figure 2). Soil sampling was conducted in representative current golf course green areas and former agricultural areas in a semi-grid pattern. Soil samples were collected from each boring location at depths of approximately 0.5, 1.5, and 3.0 feet below ground surface (bgs).

Soil samples were collected from each boring with a direct-push sampler for analysis. Between sampling events, the sampler was decontaminated with a water-Alconox™ solution wash and two tap water rinses. Soil samples were driven into acetate sleeves. The ends of the acetate sleeves were covered with Teflon™ sheeting and tightly closed with end caps for handling and transportation activities. The sample containers were labeled and packed in ice-filled coolers

The soil samples were submitted to American Scientific Laboratories, a state-accredited environmental laboratory, and selected samples were analyzed for the following:

- Fifteen soil samples were analyzed for organochlorine pesticides (in general accordance with U.S. Environmental Protection Agency [EPA] Method 8081A)
- Seventeen soilsamples were analyzed for arsenic (in general accordance with EPA Method 6010B).

A summary of the laboratory results from the soil samples analyzed is presented in Tables 1 and 2.

Groundwater Sampling and Analysis

On September 19, 2014, one water sample was collected from one of the existing groundwater production wells at the Site. The sample was collected from a pipe that runs to the water pond located approximately 275 feet south of the water well. The water sample was collected in laboratory-provided containers, labeled, and packed in ice-filled cooler.

The groundwater sample was submitted to American Scientific Laboratories, a state-accredited environmental laboratory, and analyzed for the following:

- TPH (in general accordance with U.S. Environmental Protection Agency [EPA] Method 8015B);
- VOCs (in general accordance with EPA Method 8260B);
- Organochlorine pesticides (in general accordance with EPA Method 8081A).

A summary of the laboratory results from the soil samples analyzed is presented in Table 3.

4 FINDINGS

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table:

| | |
|---------------------------------|---|
| Reported Elevation | Approximately 20 to 30 feet above mean sea level |
| Reported Slope Direction | Slopes down to the southwest |
| Source | United States Geological Survey 7.5 Minute Topographic Map, La Jolla, California - San Diego County, 1967, photo-revised 1975 |

Geology

The geology of the Site as observed during sampling activities is summarized below along with the reported Site vicinity formation information derived from the below referenced source:

| | |
|--|---|
| Reported and Observed Formation | 1 to 5 feet thick of compacted fill, underlain by Quaternary Alluvium |
| Reported and Observed Description | Fill soils and Quaternary Alluvium were both observed and reported to generally consist of clayey, silty sand with varying amounts of gravel and cobbles. |
| Source | Geologic Map of the San Diego 30x60 Quadrangle, California, Kennedy, Michael P., and Tan, Siang S, United States Geological Survey, 2005 |

Hydrogeology

Based on a review of a DEH Closure Letter in connection to the removal of USTs in the Site vicinity, *Unauthorized Release Case #H05129-002, ARCO Facility 3052, 6899 Friars Road, San Diego, California*, dated April 15, 2010, the depth to groundwater at this facility was reported to range from 20 to 37 feet below grade, and the groundwater flow direction was reported to be southwest. The actual depth to groundwater and flow direction at the Site may be different.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity:

| | |
|------------------------------------|--|
| Reported Hydrologic Subarea | Mission San Diego (907.11) |
| Reported Hydrologic Area | Lower San Diego (907.1) |
| Reported Hydrologic Unit | San Diego (907) |
| Reported Beneficial Use | Agricultural and Industrial, and potentially Municipal |

| | |
|---------------|---|
| Source | California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007. |
|---------------|---|

LABORATORY ANALYTICAL RESULTS

Soil Samples

The reported analytical results for soil samples collected on September 19, 2014, are depicted on Figure 2 and tabulated on Tables 1, 2, and 3. The laboratory reports are included in Appendix A.

Pesticides

The analytical results for soil samples with reported concentrations of organochlorine pesticides and/or arsenic above the laboratory reporting limits are summarized below.

| Sample Identifier | Depth (feet) | Organochlorine Pesticides (EPA Method 8081A) (µg/kg) | | | | | | | |
|----------------------------------|--------------|--|-----------------|--------------|--------------|--------------|-----------|--------------------|--------------|
| | | Gamma-Chlordane | Alpha-Chlordane | 4,4'-DDD | 4,4'-DDE | 4,4'-DDT | Dieldrin | Heptachlor Epoxide | Chlordane |
| SB36-0.5 | 0.5 | <2 | <2 | 9.79 | <4 | 11.6 | <4 | <2 | <850 |
| SB37-0.5 | 0.5 | 334 | 565 | 22.1 | 261 | 11.7 | 49.6 | 20.7 | 1,430 |
| SB37-1.5 | 1.5 | <2 | <2 | <4 | <4 | <4 | <4 | <2 | <170 |
| CHHSL¹ (µg/kg) | | N/A | N/A | 2,300 | 1,600 | 1,600 | 35 | 130 | 430 |
| RSL² (µg/kg) | | 1,800 | 1,800 | 2,200 | 1,600 | 1,900 | 33 | 59 | 1,800 |

Notes:

Groundwater Sample

The analytical result for the groundwater sample is summarized below.

| Sample Identifier | Cis-1,2-Dichloroethene (µg/L) | Other VOCs (µg/L) | Organochlorine Pesticides (µg/L) | Total Petroleum Hydrocarbons (TPH) (µg/L) | | |
|-------------------|-------------------------------|-------------------|----------------------------------|---|----------------|---------------------|
| | | | | TPH-Diesel (mg/L) | TPH-Oil (mg/L) | TPH-Gasoline (µg/L) |
| GW1 | 1.22 | ND | ND | <0.5 | <0.5 | <50 |

Notes:

Groundwater sample collected by SCS Engineers on September 19, 2014 and analyzed for TPH, VOCs, and OCPs by EPA Methods 8015B, 8260B, and 8081A respectively

EPA: U.S. Environmental Protection Agency

Mg/L: milligrams per liter

µg/L: micrograms per liter

Maximum Contaminant Level (MCL) for Cis-1,2-Dichloroethene is 5 µg/L

ND: Not detected above the respective laboratory reporting limit

5 DISCUSSION

GROUNDWATER

No detectable concentrations of TPH or organochlorine pesticides were reported in the sample analyzed. With the possible exception of cis-1,2 dichloroethene (1,2-DCE) with reported concentration of 1.22 µg/L, no other VOCs were reported in the sample analyzed. The Maximum Contaminant Level (MCL) for 1,2-DCE is 5 µg/L. 1,2-DCE is a chlorinated solvent used for degreasing and cleaning and is a breakdown product of other solvents. While the reported concentration is low and less than the MCL, the source of 1,2-DCE is not known. In addition, the details of the well construction are not known (e.g., seal length, well screen, production rates), so it is not clear whether this sample is representative of Site conditions. Additional research of the production well is recommended to better understand what the data are representative of. Once this research is completed, additional groundwater sampling may be appropriate.

SOIL - PESTICIDES

Risk-Based Screening Criteria

A guidance document regarding the use of CHHSLs (*Use of California Human Health Screening Levels [CHHSLs] in Evaluation of Contaminated Properties*) has been developed by the California Environmental Protection Agency. The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, and within the limitations described in this document, the presence of a chemical in soil, soil gas, or indoor air at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) at the Site. The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but suggests that further evaluation of potential human health concerns is warranted.

An additional guidance document titled *Regional Screening Levels (RSL) Summary Table* (May 2014), has been developed by the EPA to “provide default screening tables and a calculator to assist Remedial Project Managers (RPMs), On Scene Coordinators (OSCs), risk assessors, and others involved in decision making concerning CERCLA hazardous waste sites and to determine whether levels of contamination found at the site may warrant further investigation or site cleanup, or whether no further investigation or action may be required.” According to this document, “It should be emphasized that screening levels (SLs) are not cleanup standards . . . Site-specific information may warrant modifying the default parameters in the equations and calculating site-specific SLs, which may differ from the values in these tables.”

For the purposes of this Assessment, the CoCs were conservatively compared to their respective residential CHHSL or RSL, whichever was lower, and are further discussed below.

Organochlorine Pesticides

Chlordane

Chlordane was detected above the laboratory reporting limit in 1 of the 15 samples analyzed for OCPs with a concentration of 565 micrograms per kilogram ($\mu\text{g}/\text{kg}$) in soil sample SB37-0.5, which is above the CHHSL of 430 $\mu\text{g}/\text{kg}$. This chlordane CHHSL exceedance was limited to the shallow (0.5 bgs) at the west area of the Site, and a soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane above the laboratory reporting limits. However, step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.

Dieldrin

Dieldrin was detected above the laboratory reporting limit in 1 of the 15 samples analyzed for OCPs with a concentration of 49.6 $\mu\text{g}/\text{kg}$ in soil sample SB37-1.5, which is above the RSL of 33 $\mu\text{g}/\text{kg}$ and the CHHSL of 35 $\mu\text{g}/\text{kg}$. The dieldrin RSL and CHHSL exceedance was limited to the shallow soil (0.5 bgs) at the west area of the Site, and a soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane above the laboratory reporting limits. However, step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.

4,4'-DDD

DDD was detected above the laboratory reporting limit in 2 of the 15 samples analyzed for OCPs with a maximum reported concentration of 22.1 $\mu\text{g}/\text{kg}$ (sample SB37-0.5). No sample concentrations were above the RSL of 2,200 $\mu\text{g}/\text{kg}$ or the CHHSL of 2,300 $\mu\text{g}/\text{kg}$.

4,4'-DDE

DDE was detected above the laboratory reporting limit in 1 of the 15 samples analyzed for OCPs with a concentration of 261 $\mu\text{g}/\text{kg}$ (sample SB37-0.5). No sample concentrations were above the RSL of 1,600 $\mu\text{g}/\text{kg}$ or the CHHSL of 1,600 $\mu\text{g}/\text{kg}$.

4,4'-DDT

DDT was detected above the laboratory reporting limit in 2 of the 15 samples analyzed for OCPs with a maximum reported concentration of 11.7 $\mu\text{g}/\text{kg}$ (sample SB37-0.5). No sample concentrations were above the RSL of 1,900 $\mu\text{g}/\text{kg}$ or the CHHSL of 1,600 $\mu\text{g}/\text{kg}$.

Arsenic

The results of the arsenic analysis of the shallow soil samples indicate that concentrations of arsenic exceed the CHHSL and RSL in every sample.

While arsenic concentrations exceed the CHHSL and RSL, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions. The residential CHHSL for arsenic is 0.07 milligrams per kilogram (mg/kg) and the residential RSL of 0.67 mg/kg ; however, arsenic is known to naturally occur in soil, particularly western United States soils, in concentrations well above the CHHSL. Based on a report prepared by the

USGS³, the background concentrations of arsenic in the western United States range from 2.8 to 10.9 mg/kg. In another report prepared specifically for California soils⁴, the background concentrations of arsenic in California soil range from 0.6 to 11.0 mg/kg. In an abstract presented by DTSC staff at the 2008 Society of Toxicology Annual Meeting⁵, it was reported that the upper-bound background concentration for arsenic in southern California soil is 12 mg/kg.

Given that the highest reported arsenic concentration is 11.1 mg/kg, the arsenic concentrations in shallow soil at the Site are within background concentrations and do not appear to be indicative of a release of arsenic.

WASTE-BASED CRITERIA

It has been SCS' experience that in order for soil to be classified as a regulated or hazardous waste, the soil would need first be considered a waste (e.g., to be excavated and transported off-Site). It is SCS' understanding that the Client does not intend to export soil during redevelopment activities; therefore, waste criteria are not applicable and an evaluation of waste based cleanup criteria was not performed. Should the Client choose to export soil at some later point, additional laboratory analysis would be required for the following waste characterizations.

Hazardous Waste Characterization

For typical dry samples, the total concentration of a CoC in soil (mg/kg) is compared with the Total Threshold Limit Concentration (TTLC) for that CoC. If the concentration exceeds the TTLC, the soil would be characterized as a California-Hazardous waste. The TTLC addresses potential adverse human health concerns from direct exposure to a CoC in waste.

Additionally, to address potential leaching of CoC bearing waste intended for landfill disposal, CoC concentrations are compared to the Soluble Threshold Limit Concentration (STLC). If the total CoC concentration (i.e., OCP or total arsenic concentration) in soil exceeds the STLC by 10 times, the Waste Extraction Test (WET) is performed to create a liquid extract that is analyzed for the CoC. If the concentration of the CoC from the WET exceeds the respective STLC, the soil would be characterized as a California-Hazardous waste.

For federal regulations, if the total concentration of a CoC in the soil equals or exceeds the Maximum Concentration of Contaminants for the Toxicity Characteristic (MCCTC) value by 20 times, a liquid extract of the soil sample is generated by the Toxicity Characteristic Leaching Procedure (TCLP) and the extract is then analyzed for the CoC. The MCCTC/TCLP determination is similar to the STLC/WET, but with a factor of 20. If the result of the analysis of

³ *Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States*, by J. G. Boerngen and H. T. Shacklette, USGS Professional Paper No. 1270, 1984.

⁴ *Background Concentrations of Trace and Major Elements in California Soils*, by G. R. Bradford, et al., Kearny Foundation of Soil Science Division of Agriculture and Natural Resources University of California, March 1996.

⁵ *Determination of a Southern California Regional Background Arsenic Concentration in Soil*, Chernoff, G., Bosan, W., Oudiz, D., and California Department of Toxic Substances Control, 2008 Society of Toxicology Annual Meeting.

the TCLP extract exceeds the MCCTC, then the soil would be characterized as a Resource Conservation and Recovery Act (RCRA)-Hazardous waste.

Regulated Waste Characterization

The San Diego Regional Water Quality Control Board (RWQCB) has set CoC concentration levels for waste that is below hazardous waste concentrations but above typical background concentrations. Soil that contains CoCs that exceed the RWQCB Tier1 soil screening levels (SSLs) are considered a regulated waste and cannot be transported to an unregulated site as would be done for clean soil. Additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing arsenic at concentrations exceeding the RWQCB Tier1 SSL of 3.5 mg/kg and soil with OCPs reported at any concentration, as this soil would be characterized as a regulated waste and would require special handling and disposal at an appropriately permitted facility if transported off-site.

6 CONCLUSIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, and current regulatory guidelines, and SCS' experience and professional judgment, SCS concludes:

- No detectable concentrations of TPH or organochlorine pesticides were reported in the groundwater sample collected from the on-Site groundwater production well. With the possible exception of cis-1,2 dichloroethene (1,2-DCE), no other VOCs were reported in the groundwater sample analyzed from the production well.
- Chlordane, dieldrin, DDD, DDE, and DDT were detected above their laboratory reporting limit in 1(for chlordane), 1 (for dieldrin), 2 (for DDD), 1 (for DDE), 2 (for DDT) out of the 15 samples analyzed for OCPs; With the exception of one sample, samples were not above their respective RSLs or CHHSLs. One sample (SB37 -0.5) collected from the western portion of the Site was reported to exceed the CHHSL and RSLs for chlordane and dieldrin, respectively. A soil sample collected in this same location at 1.5 feet bgs (SB37-1.5) was not detected with chlordane or dieldrin above the laboratory reporting limits. Step-out sampling would be necessary to further delineate the horizontal extent of the contamination in this area.
- Arsenic concentrations at the Site exceed the residential CHHSL and RSL. However, arsenic is commonly present in California soils in concentrations that exceed risk criteria under naturally occurring conditions, and the arsenic concentrations in shallow soil at the Site are within naturally occurring background concentrations and do not appear to be indicative of a release of arsenic.

7 RECOMMENDATIONS

Based on the data obtained and reviewed as part of this Assessment, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- 1,2-DCE with concentration of 1.22 µg/L was reported in the groundwater sample. 1,2-DCE is a chlorinated solvent used for degreasing and cleaning and a is breakdown product of other solvents. While the reported concentration is low and is less than the MCL, the source of 1,2-DCE is not known. In addition, the details of the well construction are not known (e.g., seal length, well screen, production rates), so it is not clear whether this sample is representative of Site conditions. Additional research of the production well is recommended to better understand what the data are representative of. Once this research is completed, additional groundwater sampling may be appropriate.
- Prior to Site development but subsequent to the completion of Site end use and grading plans, perform additional shallow sampling for arsenic and organochlorine pesticides across the former agricultural and golf courses areas of the Site to increase sample density for adequate Site characterization.
- If soil is ultimately exported from the Site, additional soil sampling and analysis would be required to better delineate the horizontal and lateral limits of soil containing detectable concentrations of organochlorine pesticides and arsenic at concentrations exceeding the San Diego Regional Water Quality Control Board (RWQCB) Tier1 SSL of 3.5 mg/kg that would be considered a regulated waste; and additional screening and laboratory analysis would be required to assess whether soil would be characterized as a California Hazardous Waste or Resource Conservation and Recovery Act (RCRA)-Hazardous waste. Any soil exported from the Site must be properly managed and transported to an appropriately permitted facility if it is characterized as a regulated or hazardous waste.
- Development of a Site-specific soil management plan to account for Site development activities and integrate environmental issues into the Site development process.

8 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and the Client's authorized representatives. Use of this Report is subject to the provisions of the fully executed Consulting Agreement (Contract) between the Client and SCS. Any third-party usage of this Report shall be subject to the provisions of the Contract, and any unauthorized misuse of or reliance upon the Report shall be without risk or liability to SCS.

The conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. Future conditions may differ and this Report should not be relied on to represent future Site conditions unless a qualified consultant familiar with the practice of Phase II Environmental Site Assessments in San Diego County is consulted to assess the necessity of updating this Report.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include but are not limited to 1) SCS's reliance on inadequate or inaccurate information rightfully provided to it by third parties, such as public agencies and other outside

sources; 2) the limited scope of this Assessment; and 3) the presence of undetected, unknown, or unreported environmental releases.

9 LIKELIHOOD STATEMENTS

Statements of “likelihood” may have been made in this report. Likelihood statements are based on professional judgments of SCS. The term “likelihood,” as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a “degree of belief” for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term “low likelihood” is used by SCS to approximate a percentage range of 10 to 20 percent; the term “moderate likelihood” refers to an approximate percentage range of 40 to 60 percent; and the term “high likelihood” refers to an approximate percentage range of 80 to 90 percent.

(This section need not be completed if the permit is for one hundred dollars (\$100) or less.)
 c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.
 Signature: *Barbara Krueger* Date: 6-19-97
 Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars (\$100,000), in addition to the cost of compensation, damages as provided for in Section 3700 of the Labor Code, interest, and attorney's fees.

8. Owner-Builder Declaration: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Sec. 7031.5, Business and Professions Code; Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):
 I, as owner of the property, or my employee with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code; The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)
 I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code; The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law.)
 I am exempt under Section: _____ B & P.C. for this reason.
 Signature: N/A Date: _____

9. Construction Lending Agency: I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3067, Ch. 31)
 Lender's Name: N/A Lender's Address: _____

10. Applicant's Signature: I certify that I have read this application and state that the above information is correct, and that I am the owner or the duly authorized agent of the owner. I agree to comply with all city and state laws relating to building construction. I hereby authorize representatives of the City of San Diego to enter upon the above mentioned property for inspection purposes. If, after making the Certificate of Exemption from the Workers' Compensation provisions of the Labor Code, should become subject to such provisions, I will forthwith comply. In the event I do not comply with the Workers' Compensation Law, this permit shall be deemed revoked.

Notice

Notice of Fire and Safety Hazards You are hereby notified that an inspection of your premises has disclosed the following fire safety hazards and/or violations of the provisions of appropriate local or state codes.

Order to Comply As such conditions are contrary to law you are hereby required to correct these conditions immediately upon receipt of this notice. An inspection to determine whether you have complied will be conducted on or before the next inspection date. Failure to comply with the foregoing order before the date of the next inspection may subject you to further enforcement action and penalties as provided by law.

Potential Enforcement Consequences for Failure to Timely Comply with this Notice Misdemeanor criminal prosecution (maximum fine of \$1,000 per day for each violation plus six months in jail), civil injunction, administrative abatement, revocation of permits, recordation of Notice of Violation, civil penalties (maximum of \$2,500 per day for each violation).

SAN DIEGO AIR POLLUTION
CONTROL DISTRICT
CORRESPONDENCE

Overton, Tyler

From: County of San Diego (imailagent) <iq4prod@sdcounty.ca.gov>
Sent: Wednesday, December 07, 2016 8:59 AM
To: Overton, Tyler
Subject: Public Records Request: 1150 Fashion Valley Road San Diego (Intranet Quorum IMA00137896)
Attachments: IQFormatFile.txt

Good morning: I found no Air Pollution Control permits, etc. for the address above. We only have equipment owner, invoice and permit mailing address with above location. Their equipment is on 5905 Friars Road.

Thanks.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 7 SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 5 SLIC sites within approximately 0.5 miles of the target property.

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 09/10/2015 has revealed that there are 5 Notify 65 sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

LOC Case Number: H21151-004
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: This case was opened due to soil contamination discovered during station upgrade activities in December 1999. Soil samples collected near the fill port on the eastern tank contained a maximum concentration of Total petroleum hydrocarbons as gasoline (TPHg) of 9417 mg/kg. A maximum of 1800 mg/kg TPHg were detected in the tank excavation samples. Monitoring wells were installed in 2000. Groundwater monitoring began in January 2001. There are nine wells associated with site. See Environmental Data for additional information.

developed with three commercial buildings and surface parking areas historically used by the San Diego Union Tribune. The buildings on Site are a five-story office building with a sub-grade parking level, a three-story building formerly used for production, but currently identified as an office building, and a single-story vehicle maintenance garage. In 1986, during the removal of four USTs (two 10,000-gallon diesel, one 12,000-gallon gasoline and one 2,000-gallon motor oil), benzene and total petroleum hydrocarbons (TPH) were encountered in soil and groundwater at the Site and Local Oversight Program case H00174-001 was opened. On December 8, 1997, a closure letter (H00174-001) was issued by the DEH for case H00174-001. Benzene was detected in groundwater at a concentration of 19 micrograms per liter ("g/l) at this time. In February 1996, a 550-gallon diesel UST and a 280-gallon waste-oil UST were reportedly removed from the Site. Petroleum hydrocarbon-impacted soil was reportedly detected in the immediate area of the USTs. Following the removal of the UST and export of impacted soil, fourteen confirmation soil samples were collected and analyzed with no detectable levels of petroleum hydrocarbons. On April 18, 2008, the DEH issued a closure level for case H00174-002. In 1997, diesel fuel was reportedly detected in soil during an upgrade to the piping system near the fuel dispensing islands; however, the contamination was determined to be related to the former release from 1986. The DEH issued a closure letter for case H00174-002 on April 9, 2008. On March 18, 2016, the area beneath a previously removed clarifier was sampled. On April 27, 2016, ten additional confirmation soil samples were collected from the areas beneath the previously removed clarifier and wash-out. On April 28, 2016, soil sampling was conducted after the removal of four hydraulic lifts on site. The hydraulic lifts were encased in concrete. Confirmation samples were collected by breaking through the base of the concrete vault and subsampling the soil immediately adjacent to the base of the vault. On May 17, 2016, additional soil samples were collected adjacent to each of the lifts in an effort to identify the lateral and vertical extent of contamination. On July 1, 2016, two Hydropunch groundwater samples were collected from the locations with the highest detected concentrations of diesel in soil (North West Lift and South East Lift). Analysis of the chromatographs from the groundwater samples and the presence of BTEX components in the groundwater indicate that the groundwater contamination consists mainly of gasoline and weathered gasoline. These results do not indicate the presence of a significant amount of hydraulic fluid. It was concluded that the contamination present in the groundwater beneath the Site was predominantly from the prior UST release(s) and did not originate from the hydraulic lifts, clarifier, or wash-out. The TPH and VOC constituents detected in the groundwater are the same contaminants previously reported in the closure summary of case #H00174-001. Therefore, it was concluded that additional assessment is not warranted and that DEH Case #DEH2016-LSAM-00377 should be closed. DEH concurs with this conclusion. If, in the future, the maintenance building is demolished and the subsurface disturbed in the area of the impacted soil, DEH requests that you enter the Voluntary Assistance Program to document that impacted soil is properly characterized and disposed.

It is currently an AM/PM convenience store and gasoline station with four 10,000 gallon underground storage tanks (USTs) and associated piping and dispensers. Two petroleum hydrocarbon related releases occurred on this site, resulting in two open releases, all case information was managed under case H05129-003. Case H05129-002 was opened in December 1994, following discovery of a fuel release during the removal of one 550 gallon UST. Case H05129-003 was subsequently opened in October 1995, following the detection of additional contamination during the removal of four 6,000 gallon USTs and one 8,000 gallon UST. Site investigation has continued from the time of the initial UST system removals through May 30, 2001, and has included 8 soil borings, the installation of 14 groundwater monitoring wells, and 6 remediation wells/air sparge wells. The site geology consists of silty sand with clayey sand with cobble deposits. The site is located approximately 1,000 feet north of the San Diego River. Site investigations to date identified significant soil and groundwater impacts in the area of the former USTs. Impacted soil extends 50 feet below ground surface (bgs). The volume of petroleum hydrocarbon impacted soil was estimated to be approximately 2,094 cubic yards. Stantec (formerly SECOR) estimated the total mass of petroleum hydrocarbons in place to be approximately 7,484 pounds prior to the operation of the on site remediation system. A soil vapor extraction/air sparge (SVE/AS) system was installed and operated as part of an Interim Remediation Action Plan (IRAP) at the site from November 1, 1997, through May 30, 2001. The system was shut down due to asymptotic hydrocarbon removal rates. Approximately 2,852 pounds of petroleum hydrocarbons were removed by this system. Approximately 4,632 pounds of petroleum hydrocarbons remain in place after the removal of the SVE/AS system. Groundwater was encountered at depths ranging from 20 to 37 feet bgs over the time that this site has been monitored. The groundwater gradient has consistently been to the southwest. Groundwater impacts are primarily occurring beneath the subject property and are currently bounded by monitoring wells on site. The greatest petroleum hydrocarbon impacts to soil and groundwater were found in the area of the former tank excavation and |

to the immediate south-west of the area. Free product has been observed historically in monitoring wells MW-2B and MW-8, located to the south-west of the former UST system. The maximum LPH thickness was 1.59 feet, observed in August 1996. SPH removal was conducted on site and approximately 8 gallons of separate-phase hydrocarbons were removed from wells MW-2, MW-2B, and MW-8. LPH has not been measured or observed at this site since July 1999. The primary contaminants of concern (COCs) were those compounds related to petroleum hydrocarbons. The COCs identified are gasoline range organics (GRO), benzene, toluene, ethylbenzene, xylenes, MTBE, TBA, and ethanol. A Corrective Action Plan (CAP) was submitted April 4, 2008, and accepted by DEH for implementation. According to Stantec remediation by natural attenuation is the most cost effective remedial alternative based on the past history of soil vapor extraction and air sparging on this site. A benzene and MTBE trend analysis was conducted by Stantec to estimate the time required for benzene and MTBE concentrations to reach the MCL of 1.0 ug/L and 13.0 ug/L respectively. Stantec estimates that benzene will reach the MCL of 1.0 ug/L in approximately 12 years, while MTBE is estimated to reach the MCL of 13.0 ug/L in approximately 36 years. A health risk assessment was performed on this site utilizing groundwater monitoring data for benzene (59 ug/L) from well MW-8, the nearest well to the building with detectable benzene. Stantec concluded that the residual soil and groundwater impacts remaining on site do not pose a threat to human health or the environment. DEH concurs with Stantecs recommendation for the closure of this case.

 Status Date: 12/20/1991
 Lead Agency: SAN DIEGO COUNTY LOP
 Case Worker: JC
 Local Agency: SAN DIEGO COUNTY LOP
 RB Case Number: 9UT2814
 LOC Case Number: H14312-003
 File Location: Local Agency
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Diesel
 Site History: A release of approximately 800 to 900 gallons of diesel fuel occurred near two underground storage tanks (USTs) in December of 1991, reportedly the result of overfilling of the tanks during an integrity test. Approximately 630 gallons of fuel was recovered by pumping from the vaults immediately following the release. Subsequently, Unauthorized Release H14312-003 was opened. Between September 17, 1998 and January 28, 1999, seven USTs were removed from the site under the supervision of the DEH. During the UST removal, cracks, and perforations were observed along the bottom of four of the USTs. When tank No. 4 and 5 were removed, approximately 1.5 feet of water and 1-2 inches of free product (believed to be diesel), were observed in the bottom of the excavation. Approximately 1,500 gallons of water and free product were removed from the excavation and transported to the appropriate disposal facility. Site assessment activities have begun in 1994 and have continued through 2009. Please see submitted ESI data for further details.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

| Target Property Map: | 5622824 LA JOLLA, CA |
| Version Date: | 2012 |
| South Map: | 5622832 POINT LOMA, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |
|---|-------------------------|
| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
| 06073C1618G | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 06073C1614G | FEMA FIRM Flood data |
| 06073C1619G | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| | |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
| LA JOLLA | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |

| 6 | 1/4 - 1/2 Mile ENE | NW |
| 8 | 1/2 - 1 Mile ENE | Not Reported |
| 9 | 1/2 - 1 Mile ENE | N |
| 10 | 1/2 - 1 Mile WNW | Not Reported |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|---|---|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 14 inches | sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.3 Min: 6.6 |
| 2 | 14 inches | 33 inches | loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |
| 3 | 33 inches | 59 inches | stratified gravelly sand to gravelly loamy sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 7.8 Min: 6.6 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: TERRACE ESCARPMENTS

Soil Surface Texture: variable

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|----------|-----------|--------------------|----------------|--------------|---|--------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 59 inches | variable | Not reported | Not reported | Max: Min: | Max: Min: |

Soil Map ID: 3

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|---|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 11 inches | fine sandy loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 42 Min: 14 | Max: 8.4 Min: 7.9 |
| 2 | 11 inches | 59 inches | sandy loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 42 Min: 14 | Max: 8.4 Min: 7.9 |

Soil Map ID: 4

Soil Component Name: RIVERWASH

Soil Surface Texture: gravelly coarse sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

| Soil Layer Information | | | | | | | |
|------------------------|----------|----------|----------------------|---|---|--|--------------------|

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

JACK MILLER
ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton **E-Mail:** toverton@scsengineers.com

Phone: (858) 571-5500 **FAX:** (858) 571-5357

Company Name: SCS Engineers

Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123
(You may attach a business card/overprint with business card if preferred)

Additional information on public records maybe accessed from the DEH website, www.sdcdeh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. Separate forms are needed for each address or parcel number.

925 HOTEL CIR, San Diego, CA

or

Exact Address (Street, City and Zip Code)

Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.):

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

- Contaminated Property Investigation(s) (SAM Cases) SAM Closure Letter/Report
- Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) Other: _____ (specify)

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____ Date: ____/____/____

Files copied for: _____ of _____ Date: ____/____/____

Request cancelled by: _____ Date: ____/____/____

Photocopies _____ Cost _____ Picked up/mailed on _____ By _____

A search for DEH records checked above has been conducted and the following apply:

- SAM files for the permit number(s) below are available. After the files you have requested are retrieved from storage, an appointment will be scheduled so that you may review SAM records in the DEH main office.
_____ # _____ # _____ # _____ # _____
- HMD/UST files for the permit number(s) below are available for review at: http://sdcounty.ca.gov/deh/doing_business/hmd_search.html
_____ # _____ # _____ # _____ # _____
- Original records were purged. Database-only records are available (at: http://sdcounty.ca.gov/deh/doing_business/hazmat_search.html) for the following permit number(s):
_____ # _____ # _____ # _____ # _____
- No SAM/HMD/UST records were found for the address/APN you requested.

Professional Experience

Mr. Montague is a professional geologist (PG) and licensed contractor with 16 years of experience in environmental consulting, general contracting, commercial and residential development, and property and asset management. He has performed and reviewed over 500 Phase I environmental site assessments (ESAs), and has completed subsurface investigations, human health risk assessments, removal action work plans, site remediation activities, geotechnical investigations, asbestos and lead-based paint surveys, and asbestos air monitoring. His development, general contracting, and property and asset management experience includes managing construction through lease-up; lease administration and property operations and maintenance; contract procurement and administration; oversight of subcontractors and staff; and interfacing with clients, owners, tenants, and regulatory agencies.

His project experience is summarized below.

Brixton Capital, Gasoline Service Station Redevelopment with Retail Buildings, Chula Vista, CA. As Project Manager, oversaw assessment, remedial planning, and remediation consisting of oversight, segregation, and on-Site burial of residual petroleum hydrocarbon-impacted soils from a former gasoline service station release property redeveloped with new retail buildings.

RD Brown Company, Leaking Underground Storage Tank (LUST) Case Assessment and Remediation, City of Imperial, CA. As Project Manager, oversaw several on- and off-site soil, soil vapor, and groundwater assessments, and is currently overseeing ongoing remediation and monitoring of a proposed senior living facility at a former gasoline service station.

San Diego County Water Authority (SDCWA), Environmental Consulting Services, San Diego, CA. As Project Manager, completed several ESAs and subsurface assessments to assist the SDCWA in obtaining easements required to complete the Carlsbad Desalination Project.

City of Encinitas, Site Investigation and Planning, Encinitas Community Park, Encinitas, CA.

As Project Geologist, provided oversight for the mitigation and monitoring activities of pesticides in soil from the Hall Property, which consists of 43 acres of coastal bluff that was formerly used as a nursery and was redeveloped into a community park. Under the oversight of the County of San Diego Department of Environmental Health (DEH), work consisted of Phase II ESAs, remedial planning and implementation of on-site reuse/burial of 45,000 cubic yards of pesticide-impacted soil in a Soil Management Zone, and creation of a land-use covenant. SCS received an award for this project with the Industrial Environmental Association.

Los Angeles Unified School District (LAUSD), Assessment and Remediation, Various Locations in Los Angeles County, CA.

Managed and performed the environmental characterization and cleanup of various proposed school redevelopment projects overseen by the California Department of Toxic Substances Control (DTSC) that required Phase I ESAs, preliminary environmental assessments or subsurface investigations, and preparation and implementation of removal action work plans to obtain “no further action” status prior to redevelopment.

City Heights Revitalization Corporation, Brownfields Assessment and Remediation, City Heights, CA.

Managed a subsurface investigation for an entire Brownfields city block planned for redevelopment. The investigation included extensive drilling, trenching, and hand auguring to estimate the volume of lead- and hydrocarbon-impacted soil from residual contamination from a former service station and from lead-based paint. Work also included negotiation of cleanup levels with the local regulatory agency.

Casmalia Steering Committee, Remedial Investigation, Casmalia, CA. Managed and performed soil vapor sampling at the Casmalia Hazardous Waste Management Facility, a Class I hazardous waste site, for a remedial investigation and feasibility study of soil gas impacts submitted to the Environmental Protection Agency (EPA). Soil gas impacts to ecological receptors were assessed considering specific regulatory guidance, including the joint DTSC and Los Angeles Regional Water Quality Control Board (LARWQCB) Advisory on Active Soil Gas Investigations.

The Boeing Company, Underground Storage Tank (UST) Assessment, Long Beach, CA.

Performed subsurface vapor intrusion to indoor air analysis at a former aeronautics manufacturing facility. Soil, soil vapor, and sub-slab soil vapor assessments were conducted to determine appropriate corrective actions associated with former solvent USTs. Work was performed under the corrective action consent agreement with the DTSC.

Trihydro Corporation, Soil Vapor Sampling, Hooven, OH. Performed soil vapor sampling from indoor air probes and outdoor multi-level probes at residences in Hooven, OH. This project focused on helping evaluate the potential for subsurface vapor intrusion to indoor air from volatilization of petroleum hydrocarbons in groundwater or light, non-aqueous phase liquid petroleum product, originating from an adjacent former fuel and asphalt petroleum refinery. The vapor intrusion pathway was evaluated based on a request by the EPA, Region V, and was performed in accordance with the EPA-issued document, *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soil*, 2002.

CSK Auto, Phase I ESAs, Various Sites in the Western US. Conducted Phase I ESAs, subsurface investigations, and geotechnical investigations for the development of auto parts chain stores in the western US. Work included site investigations, drilling operations, and records research.

AT&T/Gianni & Associates, Phase I ESAs and Geotechnical Investigations, San Diego, CA. Completed Phase I ESAs, transaction screen assessments, National Environmental Policy Act (NEPA) reports, asbestos surveys, and geotechnical investigations involving the development of wireless communications sites.

Ford Mance Company, Construction and Property Management, Mixed-Use Building at 111 Chesterfield Drive, Encinitas, CA. Served as project manager during development and construction phases of a 2-story, Type V, 3,874-square-foot mixed-use building with subterranean parking. Responsibilities included managing all phases of construction and shell and tenant improvements, and assisting in construction supervision activities and lease up. Development activities included oversight and collaboration of architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decisions, obtaining various permits, and preparing cost and budgets. After construction, Mr. Montague also served as the property and asset manager.

Ford Mance Company, Construction and Property Management, Del Norte Medical Plaza, Carlsbad, CA. Served as project manager during development and construction of a 2-story, Type II, medical building with subterranean parking. Responsibilities included contracting out all phases of shell construction of 22,000 square feet of rentable area for medical use, collaborative oversight concerning architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decision-making, obtaining various permits, and preparing costs and budgets. After construction, Mr. Montague also served as property and asset manager.

California Department of Fish and Game, Carpinteria Creek Watershed Plan, Carpinteria, CA. Collaborated with local and state government representatives, and various stakeholders, to aid in preparing the Carpinteria Creek Watershed Plan under the Cachuma Resource Conservation District for the California Department of Fish and Game. Work consisted of research, meetings, various field assessments, report writing, and map creation. The Plan served as an amendment to the Water Quality Control Plan for the Central Coast Region.

TYLER OVERTON

Education

BA – Environmental Studies/Geography, University of Colorado, 2002

Professional Licenses

AHERA 24-Hour Asbestos Building Inspector (No. BI-179052)

Specialty Certifications

OSHA 40-Hour EPA-Approved Hazardous Waste Operations and Emergency Response Training
State of California Site Surveillance Technician (Asbestos)

Professional Experience

Mr. Overton is an environmental professional specializing in the application of due diligence, including Phase I and Phase II Environmental Site Assessments (ESAs). His experience includes subsurface investigations, remediation, soil management, landfill evaluations, health risk assessments (HRAs), ambient air monitoring, groundwater sampling and monitoring, watershed analysis, land use studies, litigation support, and property assessments. In working with developers, investors, lending institutions, and municipalities in performing Phase I ESAs, he has completed site reconnaissance, regulatory agency record reviews, historical record reviews, historical land use interpretations, data collection, data evaluation, and site assessment reports. He can accurately assess sites and provide valuable information for reports that meets regulatory agency requirements.

Mr. Overton's project experience is summarized below.

Lowe's, Excavation Monitoring, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of contaminated soil below the footprint of a new building, including the removal of underground storage tanks (USTs). Work and tank removal were conducted under the oversight of the County of San Diego Department of Environmental Health (DEH), and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Republic Services, Inc., Gas Monitoring Probe Installation for Sycamore Landfill, Santee, CA. Mr. Overton served as the Project Coordinator for the installation of six new perimeter monitoring probes at the Sycamore Landfill. Installation included drilling and construction of probes up to 470 feet deep, which allowed for the detection of migrating landfill gas (LFG).

Pacific Steel, Resource Conservation and Recovery Act (RCRA) Soil Shipping, San Diego, CA. Mr. Overton served as the point of contact for the removal and disposal of a hazardous waste soil stockpile. SCS monitored dust emissions and the loading and shipping of hazardous soil to ensure that safe handling practices were followed.

Excavation Monitoring of Contaminated Soils for SDG-Left Field and Cisterna Building, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of lead-, diesel-, and gasoline-contaminated soils removed as a part of the new building's below-ground parking structure. Work was conducted under the oversight of the County of San Diego DEH, and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Community Housing Works, Excavation Monitoring of Contaminated Soils, Vista, CA. Mr. Overton served as a soil technician for the excavation monitoring of gasoline-, diesel-, and motor oil-impacted soils that were removed prior to construction of a new subterranean parking structure. Approximately 2,000 cubic yards of soils were classified as hazardous and removed from the project site as a part of the mitigation.

Phase I and Phase II ESAs for Carlsbad Desalination Project, Carlsbad, CA. Mr. Overton completed several Phase I and Phase II ESAs for easements on many locations, including former agricultural lands. Locations included previous soil sampling conducted to determine the presence of pesticides, which were evaluated using the waste export criteria, based on pesticide concentrations found.

Republic Services, Inc., Stage 3B Cell Development for Sycamore Landfill, Santee, CA. Mr. Overton served as Project Manager for the construction of a new waste disposal cell at Sycamore Landfill. Construction included managing the excavation of soils, grading of the cell, identifying the correct location of the leachate collection system, and installation of a composite liner system. The construction of this disposal cell prolonged the life and increased capacity of the landfill by approximately 1 million cubic yards.

Bank of Hawaii Information Systems and Communications Office (ISCO), Remediation, Chino Hills, CA. Mr. Overton performed remediation activities at a former retail fueling facility with four USTs containing gasoline and diesel. He was directly involved in the implementation of a groundwater remediation system to inject hydrogen peroxide into the subsurface to remediate impacts from petroleum hydrocarbons (PHCs).

Asbestos Sampling. Mr. Overton has completed ESAs, asbestos surveys, and asbestos abatement monitoring activities at various project sites. During demolition and abatement, he has provided abatement monitoring involving air monitoring, visual inspections, and clearance air monitoring.

Storm Water Sampling for Lake San Marcos Study, San Marcos, CA. Mr. Overton was part of the SCS team investigating Lake San Marcos and San Marcos Creek, both listed as EPA Clean Water Act 303(d) Category 5 Impaired Water Bodies. He conducted storm water sampling and provided insight on laboratory analysis.
