The City of SAN DIEGO
Public Utilities Department
Environmental Monitoring and Technical Services Division

February 26, 2021

Mr. David W. Gibson, Executive Officer
California Regional Water Quality Control Board
2375 Northside Drive, Suite 100
San Diego, CA 92108

Subject: 2020 Pretreatment Annual Report for the Point Loma POTW
Board Order No. R9-2017-0007

Dear Mr. Gibson:

An amended San Diego Wastewater Pretreatment Program Annual Report is hereby submitted in accordance with the requirements of NPDES Permit No. CA0107409, adopted by the Regional Water Quality Control Board on April 12, 2017 and issued by the U.S. Environmental Protection Agency on October 1, 2017. Because flows from industries tributary to the South Bay Water Reclamation Plant can be diverted to the Point Loma POTW, this Report also includes data for industries tributary to the South Bay Water Reclamation Plant and Ocean Outfall.

The City is committed to protecting public health and the environment through a program of environmental management, which includes source control, wastewater treatment, an improved ocean outfall, and extensive monitoring. One key element of the program is an aggressive pretreatment and pollution prevention program to minimize toxic discharges to the sewerage system. This report includes a summary of Pretreatment Program activities and accomplishments throughout jurisdictions tributary to the Metropolitan Sewerage System, which includes the Point Loma Wastewater Treatment Plant, the North City Water Reclamation Plant, and the South Bay Water Reclamation Plant.

The Industrial Wastewater Control Program (IWCP) was created in 1982 after being formally approved by the U.S. Environmental Protection Agency. Since that time, significant enhancements have been made to the program including: (1) implementation of an Enforcement Response Plan in 1987, (2) implementation of an Annual Local Limits Re-Evaluation in 1998, and (3) establishment of a focused Enhanced Source Control group in 2003. However, with the exception of these enhancements, the program has not changed significantly since its inception.

With the City's Pure Water Program coming on-line, the Public Utilities Department determined that critical evaluation of the IWCP and its effectiveness in protecting human and environmental health was necessary. In June 2018, the City embarked on an evaluation of the IWCP by engaging two external consultants with extensive experience in managing and evaluating large municipal pretreatment programs. The IWCP was evaluated for the following six areas including: (1) Permit processing, (2) Compliance inspection, (3) Compliance enforcement, (4) Industrial discharge monitoring, (5) Records management, and (6) Organization. Multiple areas for improvement were documented and IWCP started the process of implementing all consultant recommendations by increasing the staff and

2392 Kincaid Rd, Mail Station 45A
San Diego, CA 92101
PVroom@sandiego.gov
T (619) 758-2301
sandiego.gov

reorganizing the Program. IWCP expected to have all new staff hired in 2020 but due to the Pandemic the Program is hoping to have all staff hired in 2021. The Program has shifted its focus to have three programmatic components by giving each one its own designated work group: (1) Significant Industrial Users (SIUs); (2) Industries considered part of the Enhanced Source Control Program tributary to Point Loma with its NPDES permit and associated waiver from secondary treatment; and (3) Industries considered part of the Enhanced Source Control Program mandated by the Pure Water NPDES permit.

This report was generated using the current data available in the IWCP's Pretreatment Information Management System (PIMS). The consultants identified issues with how some data are managed within the PIMS, and actions to correct these deficiencies are underway. Until these corrections are made, the state of the data presented here is the most accurate the program is able to provide. However, the program has flagged data on several pages throughout the report to indicate numbers that are expected to change once programmatic improvements occur. Brief explanations regarding how and why numbers may change are provided where applicable.

Should you have any questions concerning the information provided herein, or wish to discuss the report in detail, please contact John Steger, Pretreatment Program Manager, at (858) 654-4103.

Sincerely,

Peter S. Vroom, Ph.D.
Deputy Director, Public Utilities Department

INFORMATION ABOUT THIS REPORT

The Industrial Wastewater Control Program (IWCP) was created in 1982 after being formally approved by the U.S. Environmental Protection Agency. Since that time, significant enhancements have been made to the program including: (1) implementation of an Enforcement Response Plan in 1987, (2) implementation of an Annual Local Limits Re-Evaluation in 1998, and (3) establishment of a focused Source Control group in 2003. However, with the exception of these enhancements, the program has not changed significantly since its inception.

With the City's Pure Water Program coming on-line, the Public Utilities Department determined that critical evaluation of the IWCP and its effectiveness in protecting human and environmental health was necessary. In June 2018, the City embarked on an evaluation of the IWCP by engaging two external consultants with extensive experience in managing and evaluating large municipal pretreatment programs. The IWCP was evaluated for the following six areas including: (1) Permit processing, (2) Compliance inspection, (3) Compliance enforcement, (4) Industrial discharge monitoring, (5) Records management, and (6) Organization. Multiple areas for improvement were documented and IWCP started the process of implementation by increasing the staff and reorganizing the Program. IWCP expected to have all new staff hired in 2020 but due to the Pandemic the program is hoping to have all staff hired in 2021. The program shifted its focus to have three programmatic components by giving each one its own designated work group: 1) Significant Industrial Users (SIUs); 2) Industries considered part of the Enhanced Source Control Program tributary to Point Loma with its NPDES permit and associated waiver from secondary treatment; AND 3) Industries considered part of the Enhanced Source Control Program mandated by the Pure Water NPDES permit.

This report was generated using the current data available in the IWCP's Pretreatment Information Management System (PIMS). The consultants identified issues with how some data are managed within the PIMS, and actions to correct these deficiencies are underway. Until these corrections are made, the state of the data presented here is the most accurate the program is able to provide. However, the program has flagged data on several pages throughout the report to indicate numbers that are expected to change once programmatic improvements occur. Brief explanations regarding how and why numbers may change are provided where applicable.

CHAPTER 1 – EXECUTIVE SUMMARY

1.1 INTRODUCTION

The City of San Diego is committed to protecting public health and the environment through a program of environmental management which includes pollution prevention, industrial pretreatment, chemically enhanced primary waste treatment, an improved ocean outfall, and extensive monitoring. A key element of this program is an aggressive pretreatment and pollution prevention program to minimize toxic discharges to the sewerage system. The City's federally-approved Industrial Wastewater Control Program (IWCP) consists of: (1) an industrial wastewater discharge permit system to establish industrial discharge limits and requirements; (2) periodic facility inspections and unannounced sampling; (3) effective enforcement procedures to deter violations and bring non-compliant dischargers back into compliance with discharge standards and requirements, and; (4) industrial user guidance and permit conditions designed to encourage pollution prevention and waste minimization.

1.2 PROGRAM EFFECTIVENESS

- Since 1982, while the average daily wastewater flow into the Metro System at the Point Loma Treatment Plant has increased by approximately 10%, the total mass of heavy metals entering the Metro collection system has decreased by more than 61%.

- Since federal approval and implementation of the program in 1982, average metal loadings contributed by industrial sources have decreased by more than 95%. Whereas in 1982, industrial discharges of metals constituted nearly 27% of all the cadmium, chromium, copper, lead, nickel, and zinc discharged to the collection system, today industrial loadings constitute approximately 3% of the total metals discharged to the system. See Figure 1.2-1, Figure 1.2-2 and Figure 1.2-3.

- San Diego's sludge qualifies as “exceptionally clean” under the criteria set forth in 40 CFR Part 503, attesting to the effectiveness of the City's IWCP and providing maximum options for beneficial reuse of the sludge.

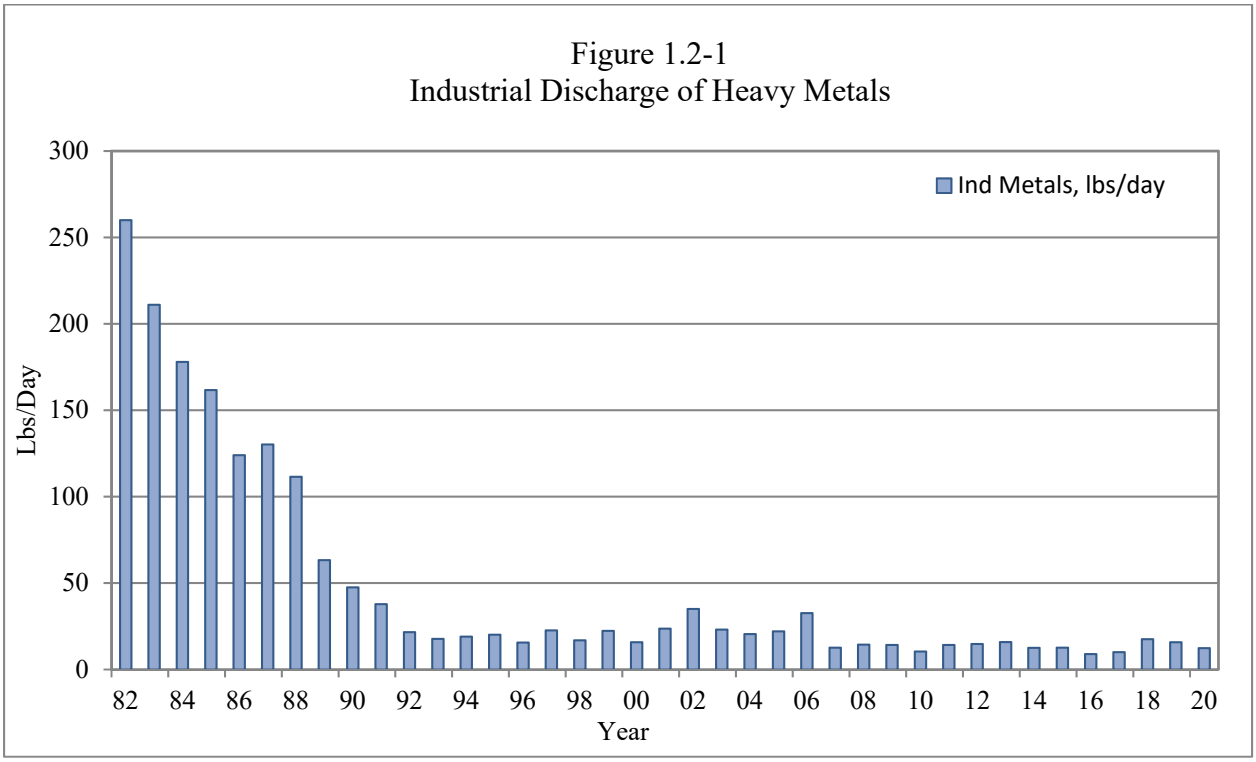

Figure 1.2-1 Average daily industrial discharge of heavy metals (Cd, Cr, Cu, Pb, Ni, Zn) to the Pt Loma plant since program approval in 1982.

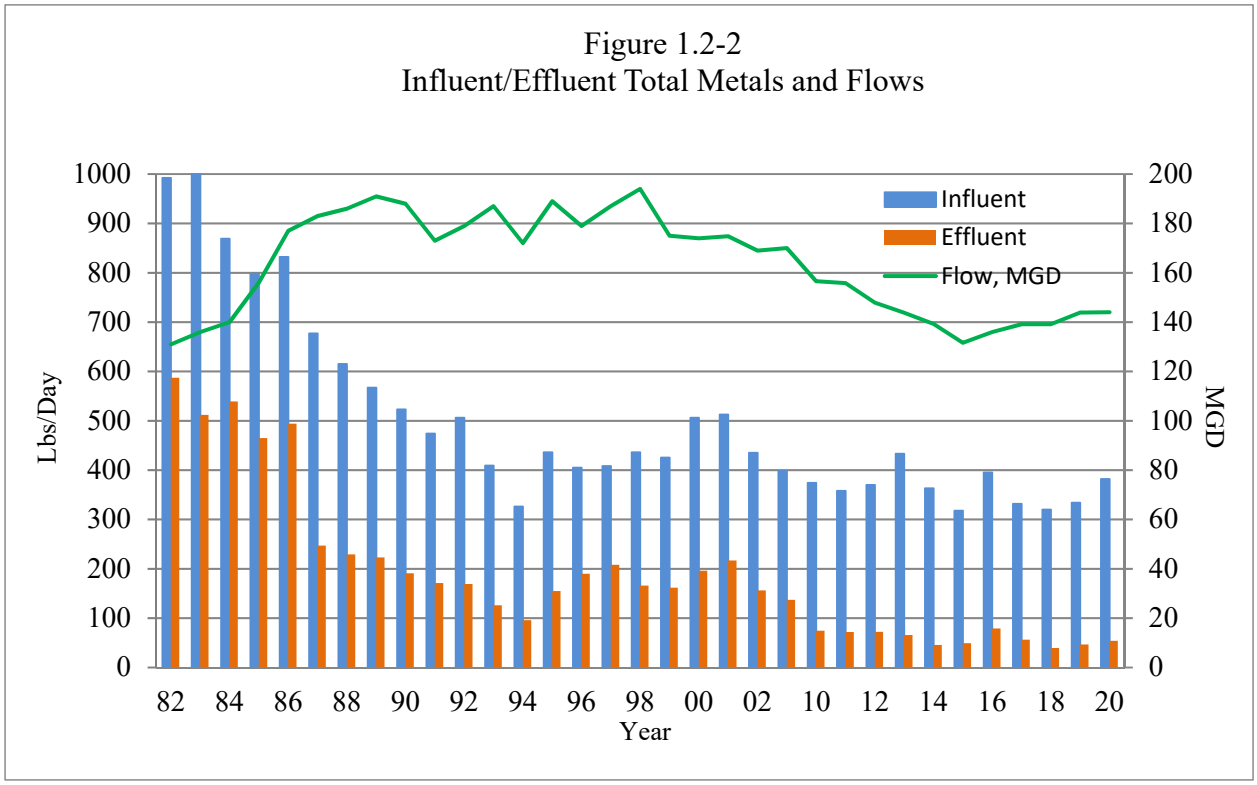

Figure 1.2-2 Long-term trends of Pt Loma plant flows and influent and effluent loadings of potentially toxic heavy metal pollutants are shown above.

Figure 1.2-3
Influent Industrial Metals and Flow Compared to Influent Total Metals and Flow

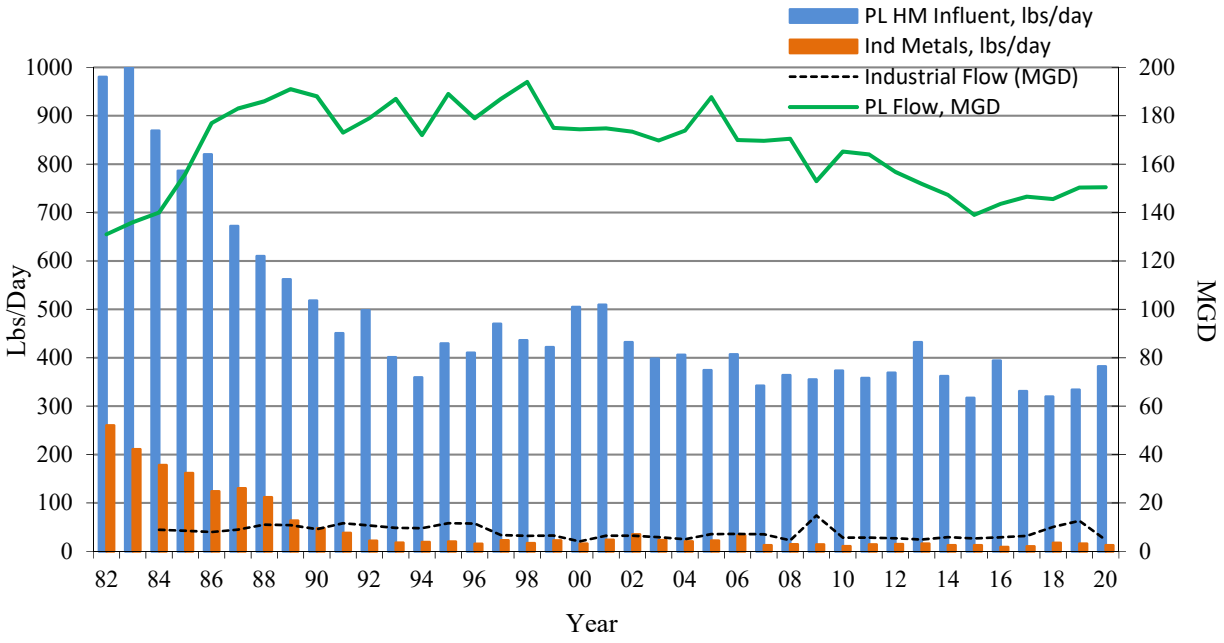

Figure 1.2-3 There were no pass-through or interference incidents attributed to industrial discharges.

Note: The industrial loadings and statistics exclude 9.87 lbs/day of copper in sanitary discharges from navy ships, which has been determined to originate from seawater corrosion of shipboard copper piping and not from industrial operations. Where there is no federal limit, metals loadings in industrial discharges that are below domestic/commercial background screening level concentrations are also excluded from the industrial loadings.

1.3 PROGRAM SUMMARY

- During the year, IWCP administered 100 Significant Industrial User (SIU) permits, covering 129 outfalls and monitored at 159 sample points. Eighteen (18) outfalls at eighteen (18) SIU facilities were in SNC during the year resulting in a Significant Non-Compliance Rate of 14% (18 of 129 outfalls). SIUs were in full compliance (no pollutant violations) with discharge standards and requirements at 78% of the outfalls.

- At the end of the year, 74 SIU permits remained active and the program administered 1,436 total control mechanisms[1], including 36 Class 1 Categorical Industrial User (CIU) permits, 361 Class 2, and 3 permits[1], 126 Hauled Waste permits, and 913 Best Management Practice Discharge Authorizations[1], covering targeted commercial sectors. IWCP also performed annual inspections to confirm continuing non-regulated status at 35 additional non-permitted facilities with processes subject to federal pretreatment standards that either do not generate regulated wastestreams, or do not discharge regulated wastestreams to sewer.

1 Based on the current data available in the program's data system and expected to change once an extensive review of the industrial user inventory has been completed.

- 2,209 inspections and site assessments were conducted; 950 unannounced sampling visits were performed; and results from 2,471 industry self-monitoring samples and 909 BMP self-certifications were received and reviewed to evaluate compliance.
- 446 Notices of Violation were issued to industries for exceeding discharge limits or failing to comply with permit conditions; 221 of these were issued to SIUs. No new formal enforcement actions, including Administrative Penalty Orders and Compliance Orders, were issued. Non-compliance fees in the amount of $34,299 and no penalties were collected.
- The annual publication list of Significant Industrial Users in SNC during the calendar year is based on compliance determinations for the entire year.
- The Annual Point Loma Publicly Owned Treatment Works (POTW) Local Limits Re-evaluation submitted July 1, confirms that the local limits developed in 1996 remain technically justified and sufficient to protect the Point Loma POTW and the environment.

CHAPTER 2 – PROGRAM STRUCTURE

2.1 PROGRAM JURISDICTION

The IWCP administers the pretreatment program in the City of San Diego (Map areas 01 – 12) and in 11 participating agencies contributing to the San Diego Metropolitan Sewerage System, including five service areas of the San Diego County Sanitation District. Table 2.1-1 lists the areas served; Figure 2.1-1 shows the areas geographically.

Table 2.1-1
DISCHARGE AREA / AGENCY BY AREA NUMBER

Area	Description	Area	Description
01	[1]SD: Rancho Bernardo	14	City of Coronado
02	SD: Sorrento Valley & Torrey Pines	15	City of Del Mar
03	SD: Miramar, Mira Mesa, Scripps Ranch	16	City of El Cajon
04	SD: Mission Bay, Pacific Beach, La Jolla	17	City of Imperial Beach
05	SD: Clairemont Mesa	18	City of La Mesa
06	SD: Kearny Mesa	19	City of National City
07	SD: Mission Gorge	20	City of Poway
08	SD: Point Loma, Lindberg Field	21	Santee/Padre Dam Municipal Water District
09	SD: North Downtown	22	City of Lemon Grove
10	SD: East San Diego	32	[2]SDCSD: Alpine Service Area
11	SD: South Downtown	33	[2]SDCSD: Lakeside Service Area
12	SD: San Ysidro, Otay Mesa	34	[2]SDCSD: Spring Valley Service Area
13	City of Chula Vista	35	[2]SDCSD: Winter Gardens Service Area Maintenance District
		36	[2]SDCSD: East Otay Mesa Service Area

[1] All flows from the Rancho Bernardo area of San Diego are treated by the Hale Avenue Resource Recovery Facility (Treatment Plant 5), which is owned and operated by the City of Escondido. Except for parts of areas 12 and 36, which are in part diverted to the South Bay Water Reclamation Plant, the remaining areas are tributary to the City's Point Loma Wastewater Treatment Plant. Permitted flows in some areas include significant volumes of construction dewatering and groundwater remediation.

[2] San Diego County Sanitation District: In July 2011, Areas 32 through 36, previously separate sewer districts, were incorporated into the newly formed San Diego County Sanitation District; the former districts are now "service areas".

2.2 PROGRAM ORGANIZATION

The IWCP is part of the Environmental Monitoring and Technical Services (EMTS) Division of the City of San Diego Public Utilities Department. The IWCP consists of four operational sub-sections: SIU Permits, Enhanced Source Control (ESC) Permits divided into north and south areas, Support Services, and Industrial Wastewater Sampling. Figure 2.2-1 shows the current organizational chart.

Figure 2.1-1

2.4 PROGRAM CHANGES AND DEVELOPMENTS

The new NPDES Permit for the North City Water Reclamation Plant (NCWRP) and Pure Water Facility was issued and became effective on June 1, 2020 (Tentative Order No. R9-2020-0001 NPDES Permit No. CA0110938). The program completed its restructuring into four sub-sections: SIU, ECS, Support Services, and Industrial Sampling, with the enforcement duties distributed to the permitting sub-sections. Significant further updates to the industrial user inventory for the areas tributary to NCWRP, film processors, and dry cleaners were completed. Permit requirements for flow proportioned sampling and a second, unannounced inspection at SIUs were initiated. A new "4M" class was established for dental offices subject to the federal categorical "Dental Rule". The program solicited one-time compliance reports from remaining dental offices and initiated enforcement actions for noncompliance. Finally, the Program participated in an extensive cost of service study as the basis for updating its fees.

2.5 HOUSEHOLD HAZARDOUS WASTE PROGRAM

The City of San Diego Environmental Services, Public Utilities, and Transportation and Storm Water Departments jointly finance a Household Hazardous Waste (HHW) collection program designed to reduce the introduction of pollutants from non-point sources into sewers, storm drains, and municipal landfills. The City's permanent household hazardous waste collection facility at the Miramar Landfill is open to City of San Diego residents on Saturdays excluding holidays (such as Thanksgiving and Christmas weekends); an appointment and proof of residency is required. The City's program also sponsors seven to eight auto product recycling events per year, coordinates and advertises commercial locations that accept auto products for recycling. Each contributing agency has also implemented a strategy for handling household hazardous wastes originating within its jurisdiction.

2.6 STORM WATER DIVISION

The City's Transportation & Storm Water Department implements Monitoring and Inspection, Policy and Enforcement, Construction and Development Standards, Watershed Planning, Education and Outreach, and Administration of the Storm Water Division. The inspection groups perform commercial, industrial, and municipal facility inspections to ensure compliance with the minimum best management practices listed in Appendix IX of the Jurisdictional Runoff Management Plan (JRMP) and the Municipal Code (43.0307(a)). In addition, the storm water code enforcement unit investigates alleged illegal discharges and takes enforcement action against violators of the Storm Water Management and Discharge Control ordinance (San Diego Municipal Code 43.0304). The IWCP assisted the Storm Water Program by performing 57 industrial storm water compliance inspections in the City of San Diego, and providing the findings to the Storm Water Program.

2.7 STORM WATER DIVERSION

Municipal Low Flow Storm Water Diversion Systems

Waste streams originating in storm drains tributary to City of San Diego low flow diversion structures have been monitored to characterize the pollutant loads and ensure that the City's collection and treatment facilities will not be harmed by the pollutants in the accepted storm water. Some low flow diversion systems are controlled by sensors that automatically shut the diversions off during rain events; others are manually diverted back to storm drains during rain events to protect the collection system and treatment facilities from hydraulic overloads. Analytical results have established that the pollutant loadings have not interfered with or passed through the treatment plant; therefore, existing plant processes are sufficient to treat the additional loads contributed as a result of the low flow diversions. In addition, operational experience has demonstrated that the automatic and manual controls have effectively prevented any hydraulic impacts on the collection or treatment system. The City is working with participating agencies to ensure any low flow diversion systems they may install, conform to these same standards and provide the same levels of collection system and treatment plant protection.

First Flush Industrial Storm Water Diversion Systems

In recognition of the fact that there may be situations where runoff from industrial or commercial facilities may not meet Regional Water Quality Control Board discharge standards, the City has worked with industrial facilities to provide for capture and discharge to the sewer of first flush storm water runoff where it is clearly demonstrated that the pollutant and/or hydraulic load will not negatively affect the collection or treatment system. The industry is required to provide information about the tributary area, diversion mechanism, capture and holding facilities, and expected pollutants, and must demonstrate adequate discharge controls prior to receiving authorization for discharge. In general, facilities must capture and hold storm water and may discharge it to sewer no sooner than twenty-four hours after the end of the last rain event. Careful evaluation of analytical data for proposed discharges, determination of available line capacity, and review of proposed discharge controls ensures that the industrial first flush discharges will not negatively impact the collection system or the treatment facilities.

2.8 PRETREATMENT PROGRAM HISTORY

Industrial wastewater control activities were initiated by the City in the late 1960s and informally continued through the 1970s. Sewerage service contracts with the Metro agencies were adopted in 1960 and later became the basis for participation of the Metro Agencies in the IWCP, approved by EPA in 1982.

1981 Industrial Survey conducted, building on work of 1970s.

1981-2 Consultants develop program structure and procedures; submit to EPA for approval.

1982 Program formally approved by EPA on July 1, 1982.

1983 IW Ordinance, permit fees and trucked waste fees approved by City Council.

1983-5 Number of permits increased from 300 to 1200+. Compliance conferences with IUs.

1985 NOVs initiated. Program audit by EPA and RWQCB results in findings of excellent data management, knowledgeable staff, and good procedures for permitting, inspecting, and sampling; need for stronger legal authority in Municipal Code and with contract agencies.

1986 First Annual Pretreatment Report.

1987 First Pretreatment Compliance Inspection (PCI). First Enforcement Response Plan developed. Interjurisdictional Pretreatment Agreements with Metro Agencies initiated.

1988 PCI by RWQCB results in no required Program actions.

1989 Estimated capital investment in pretreatment equipment by industries in the San Diego service region exceeds $20 million.

1990-1 Consent Degree, EPA trial in federal court for secondary treatment, and Administrative Order.

1991-2 Program audit by EPA, SWRCB, and RWQCB in March 1991 followed by a Pretreatment Program Evaluation (PPE) from May 1991 through August 1992.

1992 Technical fact sheets initiated, sampling frequencies modified to comply with PPE recommendations.

1993 Administrative Order issued to program incorporating Consent Decree and PPE recommendations. All AO requirements completed by due dates, including fact sheets completed, SIU permits reissued, and Enforcement Response Plan submitted.

1994 Waiver application initiated by City.

1995 Waiver granted, new NPDES Permit issued; PCI by SWRCB establishes no requirements; new Pretreatment Information Management System (PIMS) implemented; Administrative Civil Penalty policy implemented.

1996 Urban Area Pretreatment Program requirements satisfied; local limits study and innovative non-CIU contributory flow industrial pollutant loadings allocation strategy results in proposed modification of local limits; PCI by SWRCB establishes no requirements.

1997 Public participation meetings held by the City and RWQCB prior to adoption of Urban Area Pretreatment Program and new local limits; SIU permits modified to include new local limits.

1998 Tijuana Industrial Wastewater Control Training Project conducted with 30 trainees completing course in pretreatment facility inspections, laboratory procedures, and field work; City participates in national Silver Council / AMSA study; first Annual Local Limits re-evaluation confirms 1996 limits remain valid; graphs of heavy metals discharged by industry revised to include only SIU discharges; targeted commercial sectors issued BMP discharge authorizations.

1999 Tijuana Project continues with wastewater characterization study and laboratory personnel training; ordinance provisions relating to General and Specific Prohibitions and civil penalties strengthened; Program assumes implementation of regulations in 4 County Sanitation Districts.

2000 RWQCB report from December 1999 audit requires SDMC revisions to detail specific authorities and increase maximum criminal penalties to $25,000 / day per violation; revision adopted by City Council in November 2000. Permit document generation and program billing automated. IW Lab fully implements ICP-MS for all metals analyses.

2001 IW Lab personnel assist with translation of Ken Kerry Pretreatment Program training manual and videos into Spanish; Pt Loma Waiver Renewal Permit Application submitted.

2002 Regional Board and EPA issue waiver permit for the Point Loma Treatment Plant. South Bay Water Reclamation Plant comes on-line. Program provides inspector training in Tecate, Mexico and performs storm water compliance inspections at SIUs to assist the Storm Water Pollution Prevention Program. IW Lab continues to provide sampling training and services in Tijuana, Tecate, Mexicali, and Ensenada, Mexico.

2003 New group created to administer source control mechanisms and respond to complaints. Increased focus on surveillance monitoring.

2004 Program continues to perform Storm Water P^3 assistance, and to participate in cooperative program of technical assistance with the State of California and Mexico.

2005 Program initiates classification of Large User account billing rates under the 10/01/04 new rate structure.

2006 Program initiates regulation of remediation sites with free product or discharging > 14,000 gpd and construction dewatering sites discharging > 25,000 gpd as SIUs.

2007 Program and IW Lab participate in Business Process Re-engineering effort to develop Most Efficient Organization resulting in loss of 2 Inspector II positions, 1 Assistant Chemist position, and 1 Assistant Laboratory Technician position.

2008 Program performs study to identify sources of TDS to reclamation plants and adds program TDS monitoring to new permits tributary to reclamation facilities; initiates rainwater diversion testing and certification requirements in permits; allocates 0.7 Inspector III position to sewer surcharge evaluation reviews and approvals.

2009 Program quantifies self-regenerating water softener TDS contributions from regulated industries.

2010 Program reviewed Interjurisdictional Pretreatment Agreements and Ordinances for all Participating Agencies to identify deficiencies.

2011 Program surveyed dental facilities to evaluate compliance with voluntary ADA BMPs; program automated billing for imported flows and hauled waste surcharges.

2012 Program developed proposed changes to Municipal Code and Interjurisdictional Pretreatment Agreements.

2013 Independent audit of program permit administration, billing, and laboratory operations.

2014 Cost of service developed for each program activity.

2015 The IW Lab's Data Management and Field/Wet Chemistry groups were combined with the IWCP section, and the Inorganic and GC/MSA groups were combined with the Environmental Chemistry Services section.

2016 Modified permits to enforce an instantaneous limit for oil and grease instead of a daily maximum.

2017 Waiver granted, new NPDES Permit issued. The dental amalgam discharger inventory and survey forms were created.

2018 Independent review by a consultant conducted to determine IWCP's readiness to support the department's Pure Water effort and identify areas for improvement. Initial round of dental amalgam BMP surveys were mailed.

2019 Changes in the structure of the program and new management, field and administration positions added. New permitting procedure implemented to initiate the permitting process 6 months (previously 90 days) prior the expiration date. The dental amalgam BMP compliance report was sent to over 600 dental offices, nearly 550 forms completed and submitted. The industrial users inventory significantly updated.

2020 A new NPDES Permit for the NCWRP and Pure Water Facility was issued. Program restructuring into four sub-sections (SIU, ECS, Support Services, and Industrial Sampling) completed, with enforcement distributed to the permitting sub-sections. Further updated the industrial users' inventory for the all areas tributary to NCWRP, film processors, and dry cleaners. Initiated permit requirements for flow proportioned sampling and a second, unannounced inspection at SIUs. Solicited Dental Rule one-time compliance reports from remaining dental offices and initiated enforcement actions for noncompliance.

CHAPTER 3 - DISCHARGE PERMITS

3.1 INTRODUCTION

The IWCP implements an industrial wastewater discharge permit system for the City of San Diego and 11 other Participating Agencies whose sewage is treated by the Point Loma Wastewater Treatment Plant (PLWTP). The program regulates pollutant discharges into the Metropolitan Sewerage System from industrial facilities by issuing permits that establish enforceable pollutant limits and authorize civil and criminal penalties for discharge violations. They also establish sampling, reporting, record keeping, and notification requirements. Permits are issued for a maximum of five years and are non-transferable.

3.2 PERMIT AUTHORITY

On June 6, 1983, the San Diego City Council adopted Ordinance Sections 64.01 through 64.05 of Chapter VI, Article 4 of the San Diego Municipal Code pertaining to industrial waste discharges, permits, and regulations. Section 64.07, establishing specific pretreatment regulations for wastes discharged from commercial food establishments, was added on July 11, 1988. Revisions adopted in 1988, 1989, 1993, and 2000 strengthened pretreatment provisions and authorized increased penalties. The current Chapter 6, Article 4 of the Municipal Code is available on the internet at:

https://www.sandiego.gov/city-clerk/officialdocs/municipal-code/chapter-6

The IWCP implements the pretreatment program in all agencies served by the Metropolitan Sewerage System in accordance with contractual service agreements and Interjurisdictional Pretreatment Agreements signed by the City of San Diego and each of the participating agencies. These agreements establish the program's authority to implement and enforce pretreatment regulations in contributing agencies and require the agencies to adopt equivalent ordinances, penalties, and procedures for regulation of industrial users.

3.3 PERMIT CLASSIFICATIONS

Permit classifications include Industrial Class 1, Class 2, and Class 3; Trucked Waste permits; and Groundwater Discharge Permits. Classes 4 and 5 are used for facilities that do not require permits.

Class 1 Permits: Class 1 dischargers are defined as those users with processes subject to federal categorical pretreatment standards. These users require source control, pretreatment, or both.

Class 2 Permits: Class 2 permits are issued to targeted industrial sectors, which have some toxic constituents in their discharge but are not subject to federal categorical pretreatment standards. Class 2 permits may include numeric limits, as at industrial laundries and membrane manufacturers discharging >25,000 gpd, or Best Management Practice requirements (BMPs), as at laboratories, radiator shops, and hospitals. Groundwater remediation projects receive Class 2 permits.

Class 2C Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not discharge to sewer**, perform processes which have some toxic constituents in their discharge, but are not subject to federal categorical pretreatment standards.

Class 2Z Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not generate process wastewater**, perform processes which have some toxic constituents in their discharge, but are not subject to federal categorical pretreatment standards.

Class 3 Permits: Class 3 permits are issued to targeted industrial sectors to regulate

conventional pollutants. Class 3 facilities may include numeric limits, as at commercial laundries discharging > 25,000 gpd, or Best Management Practice requirements (BMPs), as at auto repair facilities and boat- and shipyards. Construction dewatering projects receive Class 3 permits.

Class 3C Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not discharge to sewer**, perform processes that discharge process wastewater containing conventional pollutants.

Class 3Z Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not generate process wastewater**, perform processes that discharge process wastewater containing conventional pollutants.

Class 4 (No permit required): Class 4 facilities include industries with sanitary flow only and Class 2 and 3 facilities with flows below permitting thresholds (25 gpd and 2500 gpd respectively); these Class 4 facilities are re-evaluated periodically.

Class 4C (No permit required): Facilities with processes subject to federal categorical pretreatment standards that generate process wastewater and have elected to go zero discharge to sewer are issued Class 4C "Conditional Permit Waiver" letters. These facilities are inspected annually and must also sign a Certification of Zero Discharge of Federally Regulated Wastewater as a condition of retaining their Class 4C status.

Class 4Z (No permit required): Facilities with processes subject to federal categorical pretreatment standards that generate no process wastewater are issued Class 4Z letters. These facilities are inspected annually and must also sign a Certification of Zero Regulated Wastewater generated as a condition of retaining their Class 4Z status.

Class 4M Best Management Practice (BMP) (No permit required): Dental Offices with processes subject to the federal categorical "Dental Rule" under 40 CFR Part 441. Dental offices that place or remove amalgam must operate under the BMP to maintain an amalgam separator and not discharge scrap amalgam or use certain kinds of line cleaners. These dental offices must also submit a one-time compliance report acknowledging they have implemented and are in compliance with the BMPs.

Class 5 (No permit required): Class 5 facilities include industries with sanitary flow only and minimal potential to ever generate industrial wastewater.

Trucked Waste Hauler Permits: Permits are issued to trucked waste haulers authorizing the disposal of wastes into the Metro System at designated dumpsites. Two types of waste hauler permits are issued:

Domestic:	For hauling of domestic septic tank/cesspool, holding tank and portable toilet wastes. These permits are issued for one year. Referenced as Class 6 Permits in the program's data system.
Industrial:	For hauling of industrial wastes under generator-specific permits; wastes under one permit cannot be combined with any other waste. Referenced as Class 7 Permits in the program's data system.

Trucked Waste Generator Permits: Generators that propose to have wastes hauled to the City sewer dumpsite must obtain a Trucked Waste Generator Permit. These permits specify a source, such as bilge water from a Navy ship and are issued for the duration of the job. The generator must collect a representative sample of the proposed discharge, analyze for pollutants known or expected to be present, and submit the results with the permit application. Referenced as Class 9 Permits in the program's data system.

Temporary Groundwater Discharge Permits: These permits are issued for flows resulting from construction dewatering and groundwater remediation projects, where no alternative

disposal method is reasonably available. These permits are issued for a maximum of two years, after which time the generator must discharge under an NPDES permit; purchase sewer capacity, if available; or cease discharge. In 2006, the program began regulating groundwater remediation discharges >14,000 gpd or having free product; and construction dewatering discharges > 25,000 gpd as SIUs.

Class 2F and 4D Best Management Practice (BMP) Discharge Authorizations: These authorizations consist of a statement of BMP requirements followed by a certification of compliance for management and discharge of silver-rich solutions (2F) or dry-cleaning solvents (4D). When signed by the commercial discharger, the certification authorizes discharges in compliance with BMP requirements for a period of up to five years. Random inspections are performed after receipt of the certification to ensure compliance. Additionally, re-certification is required every six months. Implementation of the BMP Certification and Discharge Authorization programs in 1998, in lieu of the previously applied numeric limits, enabled the program to extend coverage of BMP requirements with no increase in inspection staff and a reduction in laboratory sampling and analysis costs formerly associated with the targeted sectors.

Batch Discharge Authorizations: Batch Discharge Authorizations for one-time, or short-term non-routine discharges not otherwise covered by a current permit, are issued subject to review of analytical data from a sample of the proposed discharge and compliance with all applicable requirements and standards.

3.4 SIGNIFICANT INDUSTRIAL USERS

The Program defines a SIU in accordance with Federal regulations, as an Industrial User that:

1. Is subject to federal categorical pretreatment standards under 40 CFR 403.6 and 40 CFR chapter I, subchapter N; and
2. Any other industrial user that:
   (a) Discharges an average of 25,000 gallons per day or more of process wastewater to the POTW (excluding sanitary, non-contact cooling and boiler blowdown wastewater); or,
   (b) Contributes a process wastestream which makes up 5 percent or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant; or,
   (c) Is designated as such by the Control Authority on the basis that the industrial user has a reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement. For metals, program policy defines "reasonable potential" as a facility having the potential to discharge 5% or more of the allowable industrial headworks loading in a single non-routine discharge. For groundwater remediation sites, the presence of free product or discharges >14,000 gpd have "reasonable potential" and are regulated as SIUs.

Streamlining regulations provide that the Program may determine that an Industrial User subject to federal categorical pretreatment standards under 40 CFR 403.6 and 40 CFR Chapter I, Subchapter N is a Non-Significant Categorical Industrial User rather than a Significant Industrial User in accordance with requirements and conditions established at 40 CFR 403.3(v)(2). The program has not implemented this provision of the streamlining regulations.

All class 1 permittees are SIUs. Class 2 and Class 3 permittees having flows > 25,000 gpd are also SIUs (flow SIUs). Groundwater remediation sites having free product or discharging > 14,000 gpd are also SIUs. As of the end of 2020, the program included 74 SIUs of which 36 are class 1 permittees subject to federal categorical pretreatment standards (CIUs); 14 are class 2 flow SIUs (including 6 groundwater remediation and/or construction dewatering projects), 7 are class 2 slug

potential SIUs (including 6 groundwater remediation projects with free product); 9 are class 3 flow SIUs (including 1 construction dewatering permits); 2 are class 3 high-strength SIUs; and 6 are class 3 slug potential SIUs.

3.5 IDENTIFICATION OF INDUSTRIAL USERS

The City of San Diego utilizes the following methods to maintain a complete and current Industrial User Inventory, and to identify new sources or SIUs:

1. Industrial User application requests.
2. Referrals from the following sources:
    - County of San Diego, Department of Environmental Health, Hazardous Materials Division
    - City of San Diego, Development Services Mechanical Plan Check Section
    - Public Works Departments of Participating Agencies' Permit Assistance Centers
    - City of San Diego, Economic Development Department
3. Drive-by surveys
4. Questioning of industry contacts about their competitors in the area.

3.6 SIU PERMIT REQUIREMENTS

The program's SIU permits identify pollutants of concern; list prohibited discharges; specify applicable federal or local limits, standards, and requirements; require access for sampling and inspections; describe sources and volume of the authorized industrial discharge; and specify self-monitoring and reporting requirements. Permits may also establish additional requirements and compliance schedules.

The San Diego Municipal Code authorizes the Program Manager to establish local limits (see Table 3.6-1) and apply those limits in user permits. Local limits were developed to apply only to SIU facilities: they are applied such that each SIU gets the full federal allowance for applicable federally regulated pollutants and the local limit for each locally regulated pollutant that is not federally regulated and that is discharged by the facility at a concentration higher than background levels. SIU sampling and facility inspection frequencies meet or exceed the required minimum standards set by regulations and EPA Guidance. SIU permits incorporate detailed fact sheets and, when necessary, require formal Slug Discharge Control Plans.

Table 3.6-1
LOCAL CONTRIBUTORY FLOW DISCHARGE LIMITS

Pollutant	Instantaneous	Pollutant	Daily Maximum
pH	5.0 - 12.5	Cadmium	1.0 mg/L
Flash Point	> 140 Deg F	Chromium	5.0 mg/L
Plant and Animal-based Grease and Oil	500 mg/L	Copper	11.0 mg/L
Dissolved Sulfides	1.0 mg/L	Lead	5.0 mg/L
Temperature	< 150 Deg F	Nickel	13.0 mg/L
		Zinc	24.0 mg/L
		Cyanide, Total	1.9 mg/L

Note: Local limits apply to SIU discharges where the parameter is not subject to a federal CIU pretreatment standard and sampling has demonstrated that the facility discharges the pollutant at > background concentration levels.

3.7 PROGRAM ACTIVE PERMITS

At year-end the IWCP administered 1,436 active permits, including class 1, 2 (includes three 2C and three 2Z permits), 3 (includes zero 3C and zero 3Z) permits, Trucked Waste permits, and issued Pollution Prevention Best Management Practice Discharge Authorizations; Groundwater remediation and construction/dewatering permits are classified as class 2 and 3 and could be flow or slug potential SIUs. The facilities classified as class 4 and 5, 4C and 4Z do not require a permit. The inventory of permits administered by the program is shown in Table 3.7-1. The facilities classified as 2C, 2Z, 3C, 3Z, 4C and 4Z are inspected annually to confirm no discharge or no generation of wastewater from federally regulated processes.

Table 3.7-1
ACTIVE PERMITS* METROWIDE AT YEAR END

Year	Class 1	Class 2[1]	Class 3[1]	GW[2]	BMP[3]	Trucked Waste	Total Permits[4]	CIU Class 4C, 4Z[5]	Class 4 & 5[6]
2001	73	411	37	14	1,287	71	1,879	41	1,668
2002	66	410	35	17	1,280	75	1,866	38	1,570
2003	58	378	30	26	1,175	82	1,723	35	1,527
2004	60	368	35	19	1,144	85	1,692	39	1,572
2005	51	352	43	34	1,142	83	1,671	36	1,858
2006	50	340	35	30	1,123	98	1,646	38	1,896
2007	49	324	37	34	1,077	107	1,594	37	1,962
2008	48	299	37	33	1,022	113	1,519	37	2,088
2009	42	297	44	33	835	118	1,336	33	2,160
2010	44	292	46	48	922	119	1,423	35	2,251
2011	43	285	46	40	890	114	1,378	34	2,324
2012	42	274	45	43	868	120	1,349	35	2,378
2013	41	266	44	42	855	112	1,318	38	2,373
2014	41	260	46	33	804	131	1,282	40	2,392
2015	41	258	55	39	779	115	1,248	40	2,378
2016	40	310	54	39	768	151	1,323	42	2,369
2017	39	302	56	35	766	149	1,312	40	2,480
2018	36	297	54	32	759	143	1,289	43	2,478
2019	36	291	58	37	369	137	891	36	2,263
2020	36	307	54	24	913	126	1,436	35	2,300

[1] Class 2 and 3 permits include flow and/or slug potential SIUs.
[2] Groundwater discharge permits are either class 2 (remediation) or class 3 (construction dewatering).
[3] Class 2F, 4D, and 4M Best Management Practice (BMP) Discharge Authorizations.
[4] Includes BMP and Trucked Waste permits, Groundwater permits are already included in Class 2 and Class 3 figures.
[5] Facilities with categorical processes but do not discharge or do not generate wastewater from regulated operation(s); these facilities are inspected annually to confirm CIU status with no generation/ no discharge. Prior to 2019, the class 2C/3C and 2Z/3Z facilities were previously tallied with this CIU class; however, these IUs have permits and starting in 2019 they are accounted for in class 2 and 3, respectively.
[6] Active facilities that are dry or have industrial flows < permitting thresholds; no permit is required.
* Based on the current data available in the program's data system and expected to change once an extensive review of the industrial user inventory has been completed.

The program continues to issue temporary Batch Discharge Authorizations in lieu of full permits wherever appropriate; the program processed 125 of these authorizations.

3.8 PROGRAM SIU PERMITS

Table 3.8-1 lists the number of active categorical (CIU) and non-categorical significant industrial user (SIU) permits as of December 31 for each year. Decreases from late 1990s to 2005 were due to either closure, relocation of manufacturing operations, or installation of technology that recycled or reclaimed all wastewater, thereby resulting in zero discharge of process water by former SIUs. In 2007, the program established criteria for regulating groundwater remediation facilities and construction dewatering operations as SIUs due to one or more of the following concerns: toxicity, fire/explosion hazard, or hydraulic capacity in the collection system. The increase in the program's SIU inventory since 2007 is due to inclusion of these facilities.

Table 3.8-1
SIGNIFICANT INDUSTRIAL USERS PERMITTED METROWIDE

Year	Categorical Significant Industrial Users (CIUs)	Non-Categorical Significant Industrial Users (SIUs)[1]	Total SIUs
2001	73	18	91
2002	66	20	86
2003	59	19	78
2004	60	21	81
2005	51	19	70
2006	50	20	70
2007	49	25	74
2008	48	24	72
2009	42	33	75
2010	44	38	82
2011	43	37	80

2019	36	50	86
2020	36	38	74

[1] Includes Class 2 and Class 3 non-SIU and GW SIUs

3.9 CHANGES IN POINT LOMA SIU INVENTORY

Table 3.9-1: Changes in SIU Inventory					Note: UT; = Extracted Groundwater Permit
FACILITIES that BECAME SIUs					See report page 3-11
Facility	Name	Class	Permit	Date	Prior Name
03-0347	Sungear	1	05-A	15-Jan-2020	Sungear
03-1070	Johnson Matthey Medical Products	1	05-A	05-Aug-2020	Johnson Matthey Medical Products
SIU FACILITIES INACTIVATED					See report page 3-13
SIU FACILITIES that REPORTED a NAME CHANGE					
Facility	Name	Class	Permit	Date	Prior Name
11-0573	UT; Gilbane Company	2	03-A	20-May-2020	UT; Granite Construction
FORMER SIU FACILITIES that BECAME NON-SIUs					
Facility	Name	Class	Permit	Date	Comments
11-0272	Major Scientific Industries	1	06-A	20-May-2020	Metal finishing operations discontinued, and equipment removed.
02-0505	Curtis Technology Inc	1	06-A	08-Sep-2020	IU discontinued core metal finishing operations, and IU reclassified as a Class 2.

3.10 BASELINE MONITORING REPORTS REQUESTED OR RECEIVED

During this calendar year there were no BMRs requested or received at facilities not already operating. Facilities operating under a BMR are listed under a BMR report on page 3-14.

3.11 DISTRIBUTION OF PERMITS AND INDUSTRIAL FLOWS

The following table lists the distribution of permits by Class and Area.

Table 3.11-1
DISTRIBUTION OF PERMITS[1] AND INDUSTRIAL WASTE FLOW[2] BY AREA
The geographical areas are described in Table 2.1-1 and Figure 2.1-1

Area	Class 1	IW (GPD)	Class 2, 2C, 2Z	IW (GPD)	Class 3, 3C, 3Z	IW (GPD)	BMP	Total Permits/ BMPs	Total (gpd)	Class 4C, 4Z	Class 4 and 5
01	0	0	3	1,571	0	0	42	45	1,571	2	50
02	4	34,029	77	697,819	1	320	26	108	732,168	1	149

1 Totals do not include trucked waste permits and are based on the current data available in the program's data system and expected to change once an extensive review of the industrial user inventory has been completed.

2 Industrial Wastewater (IW) flows are not metered at all facilities. The flows reported here are based on the information available at each industry and include data from meters, calculations, and estimates.

3.12 PROGRAM INSPECTION AND MONITORING REQUIREMENTS

When an application for a new permit is received, a site inspection of the discharger's facility and operations is conducted to identify and characterize wastewater flows and pollutants; obtain process information; determine applicable federal pretreatment standards, if any; locate discharge points where limits apply and compliance will be determined; and communicate permit requirements, such as Standard Conditions, General and Specific Prohibitions, and site-specific sampling, analysis, and reporting requirements.

SIU permits: After a permit is issued, the IWCP sampling workgroup makes periodic unannounced site visits to collect samples of the permittee's discharge over a 24-hour period, using automatic samplers; grab samples are collected to determine compliance with discharge standards for grease and oil, total toxic organics, cyanide, and pH. Samples are collected, preserved, and analyzed in accordance with requirements set forth at 40 CFR Part 136. Analytical results are used to determine compliance status, identify operational and housekeeping problems, and evaluate effectiveness of pretreatment equipment. Annual inspections are performed at all SIU facilities to evaluate on-going process and pretreatment operations and maintenance, identify operational changes requiring a permit amendment, evaluate the need for a slug control plan, and maintain the industry's awareness of Permit requirements. In 2020, a second unannounced site visit by the inspector has been implemented. SIUs also have self-monitoring (sampling and analysis) and reporting requirements as conditions of their permits.

Non-SIU permits: Permits include local limits or best management practices and semi-annual certification requirements. Sampling and analysis are performed to determine compliance with limits.

3.13 INDUSTRIAL WASTE SAMPLING AND ANALYTICAL SERVICES

In addition to industry monitoring, the City's EMTS sampling and laboratory services sections continue to:

- Conduct quarterly collection system sampling and analysis to provide data for the reevaluation of the Local Limits
- Conduct quarterly sampling and analysis of wastewater from the participating agencies to determine their respective sewage-strength contributions for billing purposes
- Conduct monitoring of trucked liquid waste discharges 72 hours/week at Pump Station 1 (PS1)

3.14 SUMMARY OF SAMPLING AND INSPECTION STATISTICS

EMTS Sampling and laboratory services performed for industrial facilities included unannounced sampling visits, collecting samples, and performing pollutant analyses. Inspections and site assessments included tasks such as: initial inspections, annual inspections, renewal inspections, billing surcharge inspections, complaint investigations, rainwater diversion inspections, stormwater inspections, compliance inspections, site closure/permit inactivation assessments, and batch discharge site assessments. The sampling and inspection statistics for the last 10 years are presented in the table below.

3.15 TRUCKED WASTE PERMITS

In 2020, 160 industrial trucked waste generator permits were issued; 29 trucking companies registered with the program to provide hauling services for industrial wastes; and 42 domestic waste hauler permits were issued. Industrial trucked wastes originate from sources such as landfill leachate/condensate, dewatering of grease trap wastes, ship maintenance and repair, and private treatment system sludge disposal. Domestic wastes originate from portable toilets (construction sites, public events), sewage holding tanks, and septic tanks (non-sewered residences). The designated discharge point to the POTW for all hauled wastes is at Pump Station 1 (PS1) on Harbor Drive.

Approximately 58.4 million gallons of domestic and industrial wastes were received at PS1 from trucked waste haulers. A total of 24,800 gallons of grease trap water was received after separation of grease, solids, and oils; this volume is decreasing as facilities that treat grease trap wastes are gaining sewer access, where they directly discharge to the collection system sewer instead of hauling the waste streams via trucks to PS1. A total of 3,160,820 gallons of sludge and high strength waste streams were received from landfills, other POTWs, water treatment plants, and Indian reservations. All truckloads are logged in at the pump station and monthly billings are prepared by program staff to recover costs of treatment and disposal.

In addition to the hauled liquid wastes received at PS1, approximately 16.4 million gallons of hauled domestic wastes were received by the El Cajon Department of Public Works.

Monthly volumes of trucked wastes received at PS1 during the period covered in this report are shown in Trucked Waste Discharge totals per month and Trucked Industrial Discharge totals per month by Type in 2020 reports as shown on pages 3-66 and 3-67, respectively.

CHAPTER 4 - ENFORCEMENT

4.1 INTRODUCTION

The IWCP has the primary objectives of bringing permittees into compliance with applicable Federal Pretreatment Standards and requirements and controlling and reducing mass emissions of industrial pollutants to the sewer. As provided in its Enforcement Response Plan (ERP) and the City of San Diego Municipal Code, the Program has a broad range of enforcement mechanisms available, including the recovery of administrative and supplemental monitoring costs related to violation identification and processing; Notices of Violation; Compliance or Penalty Orders; publication of the annual List of Facilities in Significant Non-Compliance (SNC); and permit revocations and suspensions.

The enforcement section implements the program's approved ERP for violations identified through monitoring at designated sample points. When a permittee violates a discharge limit, enforcement actions are initiated, including issuance of a Notice of Violation (NOV) and scheduling of additional sampling. The industry is billed to recover violation sampling and NOV administrative costs. Subsequent non-compliance results in escalating enforcement, which may include issuance of a Compliance Order requiring corrective measures and compliance by a prescribed date. Following a Compliance Order, the Program will issue an Administrative Penalty Order to recover, at a minimum, any economic benefit accrued to the violator because of non-compliance; the economic benefit is calculated using EPA's BEN model. Additionally, the Program is authorized to seek administrative civil penalties. All compliance schedules resulting from violations of pretreatment standards are issued in Administrative Compliance Orders. Violators that do not achieve and maintain compliance through the Administrative Notice and Order procedure are referred to the court system for civil or criminal prosecution. Enforcement procedures are detailed in the Program's ERP, copies of which are available to the public.

4.2 ANNUAL SIU COMPLIANCE STATISTICS

The Program assesses the compliance status of its inventory of SIUs according to the criteria set forth in NPDES Permit No. CA0107409, Order No. R9-2017-0007, pages 34 and 35 and NPDES Permit No. CA 0109045, Order No R9-2013-0006, page 25. These criteria include identification of all SIUs in SNC, as defined in the federal regulations at 40 CFR 403.8(f)(2)(viii). Table 4.2-1 presents a summary of annual SIU compliance status determinations. The Program is required to meet a minimum standard of no more than 15% of SIUs in SNC for the calendar year. As provided in the Pt Loma NPDES permit, SIUs who have been issued Administrative Penalty Orders are not included in determining compliance with the 15% SNC standard.

Table 4.2-1 COMPLIANCE STATUS SUMMARY FOR SIGNIFICANT INDUSTRIAL USERS										
	NUMBER OF PERMITTED OUTFALLS									
Status	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Consistent Compliance	104	104	99	102	103	101	96	102	101	100
Inconsistent Compliance	10	15	11	13	15	13	13	10	14	11
Significant Non-Compliance	8	3	8	4	7	4	6	11	12	18
Total	122	122	118	119	125	118	114	123	127	129

For the period covered in this report a total of 100 SIUs were monitored at 159 sampling locations constituting 129 outfalls. Eighteen (18) outfalls at eighteen (18) SIU facilities were found to be in SNC and no Administrative Penalty Orders were issued. **The resulting non-compliance rate is 14%** (18 of 129 outfalls). For the year, SIUs were in full compliance (no pollutant violations) with discharge standards and requirements at 78% of the permitted outfalls.

4.3 ANNUAL SIU COMPLIANCE STATUS REPORT

The Annual SIU Compliance Status Report is presented on page 4-11 at the end of this section. The report lists the industry name, address, permit number, permit class; industrial flow by Connection; violation dates and descriptions, if applicable; discharge standard and period, and actual value resulting in the violation; whether the violation exceeded the Technical Review Committee (TRC); and whether the industry has been in SNC at any time during the year.

4.4 PUBLICATION OF INDUSTRIES IN SNC

Public participation provisions of the Federal Pretreatment Regulations require that industries found to be in Significant Non-Compliance at any time during the previous calendar year be published in a newspaper of general circulation that provides meaningful public notice within the jurisdiction(s) served by the POTW. Each spring, the program publishes the annual Notice of Significant Non-Compliance in the San Diego edition of the Union Tribune. The notice for this year follows:

Table 4.4-1

NOTICE OF SIGNIFICANT NON-COMPLIANCE WITH SEWER DISCHARGE REQUIREMENTS

NOTICE is hereby given by the City of San Diego that in 2020, the following industries discharging to the Metropolitan Sewerage System were found to be in Significant Non-Compliance (SNC) for exceeding applicable discharge limits or failing to meet reporting requirements, based on statistical criteria established by the US EPA and set forth at 40 CFR 403.8(f)(2)(viii). For additional information contact John Steger, Pretreatment Program Manager, Industrial Wastewater Control Program, (858) 654-4103.

4.6 ENFORCEMENT ACTIONS BY TYPE

Compliance Inspections: To investigate non-compliance, determine required or recommended corrective actions, and/or evaluate the progress of permittees operating under Compliance Orders or specific permit requirements or schedules, program inspectors conduct non-routine compliance inspections. The program did not conduct any non-routine compliance inspections this year.

Notices of Violation - Administrative Fees: An NOV is a written notification from the Program of specific violations of discharge limits or requirements that have occurred. Simultaneously, the discharger is invoiced for fees to cover costs associated with administering the NOV. The NOV requires the permittee to take corrective actions. Supplemental violation monitoring is performed by the Program's analytical laboratory within 30 days of becoming aware of the violation, and the cost of the extra sampling and analyses is billed to the violator. This year a total of 446 NOVs were issued to categorical and non-categorical permittees, and $34,299 in related administrative fees was billed.

Compliance Orders: Compliance Orders (CO) are issued to permit violators for the purpose of imposing schedules, requiring pretreatment installation, or mandating other measures needed in order to achieve and maintain permit compliance. The Program did not issue any COs this year.

Administrative Penalties and Other Fees: Pursuant to the authority of Municipal Code Chapter I, Article 2, Sections 12.0801 - 12.0810, the Program may issue Administrative Orders and Penalties. The Program did not issue any Administrative Penalty Orders this year:

Civil / Criminal Referral to Prosecuting Agencies: When a permittee intentionally or negligently violates any provision of the Municipal Code, permit conditions, or discharge limits, the Program may refer the matter to the City or District Attorneys for investigation and possible action. The Program did not make any civil or criminal referrals this year.

4.7 ENFORCEMENT SUMMARIES

4.7-1: Summary of Program Enforcement Actions

4.7-2: SIU Enforcement Actions Initiated, Continued, or Finalized

JDZ Inc DBA AleSmith Brewing Company; IU # 03-1300
This medium sized brewery is currently discharging about 10,000 gpd after pretreatment including flow equalization, screening, and pH neutralization as it has the potential for low pH and/or high strength slug discharges. The IU met the criteria for SNC status for the six-month period ending in the 4th quarter of 2019, when 6 of the 9 samples collected violated the lower limit for pH. NOVs were issued for the violations and the IU indicated they are talking to their software provider to determine if a better alarm system can be implemented so the brewers know the optimal time to dump caustic for neutralization.

The IU met the criteria for SNC status for the six-month period ending in the 4th quarter of 2020, when in 5 of the 6 sampling periods the pH was out of range for both the lower and higher limits. NOVs were issued for the violations and the IU attributed the low values to “u-trap fermentation”. The IU explained it is brewing sour beer more often, so the lactic bacteria in the wastewater thrived at the warmer temperatures that started in July. Once flow was restored, the pH in the u-trap went back to being within specification. Additional program monitoring is planned for the first half of 2021 to determine whether these new actions are sufficient to achieve consistent compliance.

Jensen Meat Company Inc; IU # 12-0275
This meat processing facility discharges about 27,000 gpd after pretreatment from cleaning and sanitizing operations. The IU met the SNC criteria for the six-month period ending in the third quarter of 2019, when 5 of the 6 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC. The IU responded that its contractor concluded "we have too much decomposing or too much organic matter in our grease trap" and that they are taking several steps to improve their cleaning procedures including: jet-cleaning the drainpipes 3 times a year instead of 2, cleaning the grease trap once a month and deep cleaning it twice a year, and implementing a new cleaning procedure to reduce the solids into the drains. NOVs were issued for the violations and additional program monitoring was planned for the first half of 2020 to determine whether these actions were sufficient to achieve compliance.

The IU was not in SNC for the first half of 2020; however, no monitoring for dissolved sulfides was conducted. The IU met the SNC criteria for the six-month periods ending in the third and fourth quarters of 2020, when 4 of the 6 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC. The IU responded that it will further improve its cleaning steps by increasing the jet-cleaning of the drainpipes to 4 times a year instead of 3 and by increasing the grease trap cleaning frequency to 17 times (every 3 weeks) a year instead of 12. NOVs were issued for the violations and additional program monitoring is planned for the first half of 2021 to determine whether these new actions are sufficient to achieve compliance.

Otay Landfill Inc; IU # 25-0105
This Trucked Waste generator of landfill leachate has approximately 45,000 gpd hauled for discharge to the receiving/disposal site at Pump Station 1. The IU met the criteria for SNC status for oil and grease for the six-month periods ending in the 2nd, 3rd, and 4th quarters of 2020, as 8 of the 17 samples collected exceeded the daily maximum by more than the TRC. Additionally, the permit requires monthly self-monitoring and the IU submitted its self-monitoring report (SMR) due September 15, 2020 on November 14, 2020 (60 days late) and is therefore also in SNC in the 3rd quarter for late reporting. NOVs were issued for the violations. The IU responded its self-monitoring results demonstrate compliance, the leachate storage system will undergo an annual cleaning, and the leachate conveyance system has been jetted and will be jetted again and more frequently in the future to prevent any potential build-up of oil and grease. Additional program monitoring is planned for the first half of 2021 to determine whether these new actions are sufficient to achieve compliance.

RJ Donovan Correctional Facility; IU # 12-0038
This medium security prison discharges about 55,000 gpd from its laundry, kitchen, and bakery. The IU was in SNC for late reporting in 2016, 2017, and 2018, but it avoided SNC status in 2019. However, the IU failed to comply with its permit condition to submit an updated Toxic Organics Management Plan (TOMP) by December 1, 2019. As a result, the IU was in SNC for missing a compliance schedule milestone by more than 90 days. First and second NOVs were issued and IU submitted the TOMP on August 17, 2020. No further enforcement actions are planned.

Santier Incorporated; IU # 03-1380
This manufacturer of heat sinks made from high thermal conductivity metals is subject to production-based pretreatment standards under the Nonferrous Refractory/Precious Metal Forming subcategories; based on the production and flow data submitted, the approximately 140 gpd discharge is subject to limits that are slightly lower than metal finishing pretreatment standards. In November 2020 a single sample exceeded the monthly average for zinc by > TRC and resulted in SNC status for 4th quarter. An NOV was issued, and the IU's response is due March

15, 2021. Additional program monitoring will be scheduled for the first half of 2020 to determine whether compliance is re-established.

Spectex Inc dba Specialty Textile Services; IU # 12-0283
This commercial laundry currently discharges about 48,000 gpd after pretreatment from laundry operations and is required to self-monitor monthly. The IU submitted its self-monitoring report due June 15, 2020 on August 6, 2020 (57 days late) and thus was in SNC for late reporting in the second quarter. An NOV was issued, and no further enforcement actions are planned.

Sungear; IU # 03-0347
Performing machining of metal parts including a test etching process, this small metal finisher is required to self-monitor quarterly at connections 100 and 110. The IU submitted its self-monitoring reports due July 15, 2020 on October 1, 2020 (78 days late) and thus was in SNC for late reporting in the third quarter. The IU also missed its compliance milestones to submit a TOMP and install a sample reservoir within 90 days of the February 15 and March 1, 2020 due dates. NOVs were issued and a Preliminary Conference was conducted in October, The IU then complied with both requirements, and no further enforcement actions are planned.

US General Services Administration – SYLPOE; IU # 12-0285
This border crossing facility has a wastewater reclamation plant that discharges high strength activated sludge into the upstream end of the sewer main. The IU was initially permitted in May 2014 when it discharged 1,000 gpd but this flow has fallen to a daily average of only 50 gpd of high strength wastewater. The IU failed to comply with its permit condition due January 1, 2020, requiring it to submit an updated TOMP. An NOV was issued, and the IU submitted the TOMP on August 30, 2020. Thus, the IU missed its compliance schedule milestone by more than 90 days. No further enforcement actions are planned.

USN; Naval Base Coronado – NASNI; IU # 08-0018
This large Navy base on San Diego Bay discharges around 338,000 gpd of combined sanitary and pretreated industrial wastewater through a single sewer outfall designated as Connection 100. Industrial processes are monitored at 6 upstream sampling locations, most notably at Connection 120, which receives an average of 3,300 gpd from the Industrial Wastewater Treatment Plant, and Connection 150, which receives an average of 40,000 gpd from the Oil Recovery Plant. After program monitoring at Connection 100 yielded elevated values for dissolved sulfides, the permit was amended in January 2013 to include the 1 mg/L dissolved sulfides local limit and add self-monitoring requirements for this pollutant.

The IU was in SNC status in 2013, 2014, and 2015. NASNI has implemented a wet well cleaning schedule, internal monitoring for dissolved sulfides in additional areas of concern and has upgraded the ferrous chloride injection systems. Monitoring in 2016 (28 events, 24 by the program) and the first six months of 2017 (11 events, 9 by the program) established that the IU avoided SNC status for all 4 quarters in 2016 and the first 2 quarters in 2017. However, daily maximum violations for dissolved sulfides in April, July, and August resulted in SNC status for the six-month periods ending in the 3rd and 4th quarters of 2017. NOVs were issued for the violations and the IU reported the following: 1) the pump stations were cleaned in May, June, and November 2017, 2) implemented additional monitoring of dissolved sulfides in areas of concern. On August 2017, the IU identified an oil blanket in the storage tank at the IWTP/ORP that was creating an anaerobic environment in the tank which caused the dissolved sulfides level to increase. The IU has identified a firm to come out and regularly reduce the oil blanket/layer. On November 2017, the IU reported that they are currently revising the Batch Discharge Request SOPs for

Collection, Holding, and Transfer (CHT) System Discharges and Construction Contractor work. The monitoring events performed in October and November were in compliance.

In 2018 monitoring in the 1st quarter established that the IU had avoided SNC status. However, daily maximum violations for dissolved sulfides in April through October resulted in a return to SNC status for the 2nd, 3rd, and 4th quarters of 2018. NOVs were issued for the violations and the Navy reported it began "working on the beginning stages of an Intergovernmental Support Agreement (IGSA) with the city of Coronado which would allow for a partnership-based contract that would help provide dissolved sulfides mitigation and treatment to both the city and two Navy bases (NASNI & NAB)."

In 2019 the IU had avoided SNC status for all 4 quarters based on the 10 monitoring events (4 by the IU and 6 by the program) conducted. In response to the NOV issued for the single dissolved sulfides violation in August 2019, the Navy reported it completed the financial analysis for the IGSA and submitted the contract documents to the regional Commanding Officer for approval.

In 2020, all 10 monitoring events at Connection 100 (4 by the IU and 6 by the program) demonstrated compliance was maintained for all pollutants including dissolved sulfides, therefore no further enforcement actions are planned. However, at Connection 123 (upstream cyanide monitoring point for the Industrial Wastewater Treatment Plant also monitored on Connection 120) the IU met the criteria for SNC status for the six-month periods ending in the 2nd and 3rd quarters when a single self-monitoring sample collected in July (3rd of 4 batch discharges in 2020 – others were in March, June, and December) exceeded the daily maximum and monthly average for cyanide, amenable. NOVs were issued and the only subsequent discharge in December was in compliance. Therefore, unless there are additional violations in 2021, no further enforcement actions are planned.

USN; Naval Base San Diego; IU # 11-0016
This second large Navy base on San Diego Bay discharges about 800,000 gpd through multiple outfalls including 44,000 gpd to Connection 850 from its bilge and oily waste treatment system subject to local limits. A single self-monitoring sample in violation for zinc by > TRC in April 2020 and 1 of only 3 samples collected in the first 3 quarters, resulted in SNC status for the second and third quarters. An NOV was issued, and the 3 subsequent samples collected (1 by IWCP) in 2020 demonstrated compliance. No further enforcement actions are planned.

UT; Blue Pacific Engineering & Construction; IU # 20-0261
This construction dewatering project was required to self-monitor monthly at connection 100. The IU submitted its SMRs due March 15 through June 15, 2020 in August or September (93+ days late) and thus was in SNC for late reporting in the second quarter. NOVs were issued, the project was completed in October, and no further enforcement actions are planned.

UT; KTA Construction Inc; IU # 08-0620
This construction dewatering project was required to self-monitor monthly at connection 100. The IU submitted its SMR due April 15, 2020 on June 16, 2020 (62 days late) and thus was in SNC for late reporting in the second quarter. An NOV was issued, the project was completed in January 2021, and no further enforcement actions are planned.

UT; PL Boutique LLC; IU # 08-0617
This construction dewatering project was required to self-monitor monthly at connection 100. The IU failed to submit its self-monitoring report due February 15, 2020 prior to the project's

completion in May 2020 (95+ days late) and thus was in SNC for late reporting in the first quarter. NOVs were issued, and no further enforcement actions are planned.

UT; Shimmick Construction; IU # 02-1400
This construction dewatering project was required to self-monitor monthly at connection 100. The IU submitted its self-monitoring reports due May 15, June 15, and July 15, 2020 on August 28, 2020 (105 days late), September 1, 2020 (78 days late), and September 1, 2020 (48 days late), respectively, and thus was in SNC for late reporting in the second and third quarters. NOVs were issued, the project was completed in August, and no further enforcement actions are planned.

Veridiam Inc; IU # 16-0348
This specialty metal tubing manufacturer discharges about 2,300 gpd from surface treatment, etching, passivation, and cleaning operations and is regulated under metal forming (production-based) and metal finishing categorical standards. In January and November 2019 there were daily maximum and monthly average violations for fluoride that resulted in SNC status for the 1st and 4th quarters. NOVs were issued and in response to these new violations, the IU indicated that 1) no anomalies that support a fluoride result of this magnitude were found, 2) there have been no changes in existing coatings, chemicals or processes, and 3) by contract with existing customers they do not allow changes in processes or coatings and chemicals used.

In February, March, and December 2020 there were daily maximum and/or monthly average violations for fluoride that resulted in SNC status for the 1st, 2nd, and 4th quarters. NOVs were issued and in response to these new violations, the IU indicated the incoming water supply has fluoride levels exceeding its monthly average limit and its initial rinse was performed with city water, while the second rinse used RO/DI water. To eliminate this source of fluoride, all rinses were switched to RO/DI water in October, but the only subsequent result in December was also above the limits. Additional program monitoring is planned for the first half of 2021 to determine whether these new actions are sufficient to achieve compliance.

Vision Systems Inc; IU # 21-0288
This metal finisher discharges around 550 gpd of rinse water from chem-filming operations on architectural aluminum to connection 120 after pretreatment using model technology. In July and December there were daily maximum and monthly average violations for chromium that resulted in SNC status for the 4th quarter. NOVs were issued and the IU reported it determined that “aging filter housings were no longer providing an adequate seal allowing a small amount of treated wastewater to pass through the filter system, unfiltered. Two new, high-capacity filter housings were installed to replace the malfunctioning housings providing a secure seal to the filter cartridges."

Then in the second half of 2020, monthly average violations for cyanide, amenable in September, October, and November resulted in SNC status for the 4th quarter. NOVs were issued and the IU reported it determined the rinse tank was "too clean" due to an imbalance of DI water. The chemical supplier recommended fewer batches be run for a short period of time allow the pH to decrease and the conductivity to increase. Further investigation established that the DI water imbalance may have affected sensors in the CR-1 Treatment Unit. New sensors were purchased and installed. The IU is continuing to monitor the treatment process closely to ensure optimal operations. All 5 (1 by IWCP) of the subsequent monitoring events in December demonstrated a return to compliance. Therefore, as long as the additional program monitoring in the first half of 2021 indicates compliance is being maintained, no further enforcement actions are planned.

WC IPA; IU # 03-0966
This medium sized brewery discharges about 15,000 gpd from its brew house and has the potential for low pH and/or high strength slug discharges. The IU failed to comply with a permit requirement to install a totalizing flow meter on the discharge by February 1, 2019 and as a result, was in SNC for missing a compliance schedule milestone by more than 90 days. The IU submitted plans for approval for the piping and location of the flow meter on September 25, 2019 and has indicated that the meter installation was scheduled for January 2020.

In 2020, notification of completion for the meter install was not received, and the requirement is under review for flow proportioned monitoring. The IU is required to self-monitor monthly at connection 110 but failed to do so between March and August. Thus, the SMRs due April 15 through September 15, 2020 were not received and the IU was in SNC for late reporting in the second and third quarters. NOVs were issued and the SMRs due subsequently were completed and submitted on time, except the December 15 report which was 14 days late. Further enforcement actions are planned.

nVent - Schroff Inc; IU # 03-1203
This manufacturer of electronic enclosures was first permitted in January of 2019 as a metal finisher for discharging about 350 gpd from a tumbling operation after filtration to connection 110 and < 10 gpd from passivation and silk screening after pH adjustment to connection 120. The IU met the criteria for SNC status for the six-month periods ending in the 2nd, 3rd, and 4th quarters of 2019 when samples collected at connections 110 and 120 in June and December exceeded the daily maximums and/or monthly averages for cadmium and zinc by more than the TRCs. NOVs were issued for the violations and IU responded that they replaced the filter bag in their pretreatment system after metal debris was found. The IU also determined that some stamped components were being incorrectly washed in a sink discharging to connection 120 that are now washed in the tumbling sink discharging through filtration prior to connection 110.

In 2020, the IU met the criteria for SNC status for the six-month period ending in the 2nd quarter when a single sample collected at connection 110 in July (and the only 2 samples collected were in July) exceeded the daily maximum and monthly average for zinc. NOVs were issued and IU responded that it has improved the current filter system to allow more frequent changes. The 3 subsequent self-monitoring events in second half of the year demonstrated compliance. Therefore, as long as the additional program monitoring in the first half of 2021 indicates compliance is being maintained, no further enforcement actions are planned.

4.8 POLLUTION PREVENTION PLANS

During this calendar year, no industries were required to prepare and / or implement pollution prevention plans under the provisions of CA SB709 and SB2165.

CHAPTER 5 - INDUSTRIAL POLLUTANT DISCHARGES

5.1 INTRODUCTION

This section presents the results of influent and effluent monitoring for industrial pollutants as well as historical influent and effluent data. The data demonstrate that there has been a steady decline in industrial pollutants discharged to the PLWTP over the past 30 years. Since 1982, when the pretreatment program received EPA approval, the total influent metal loadings have declined by more than 61%, and the total effluent metal loadings have declined by 91%. During the same period growth has resulted in a 10% increase in wastewater flows to the system. Since 1982 there has been a 95% decrease in total heavy metals discharged by industry. Some of the reductions are attributed to the diversion of wastestreams to the South Bay and North City Water Reclamation Plants. The effluent from North City discharges through PLWTP. For South Bay Water Reclamation Plant (SBWRP) loadings see the SBWRP & Ocean Outfall Annual Pretreatment Report.

5.2 POINT LOMA INFLUENT AND EFFLUENT METALS TRENDS

Figure 5.2-1 presents the long-term trends in influent and effluent metals loadings at the PLWTP.

Figures 5.2-2 through 5.2-8 are graphs of individual constituent metals in the treatment plant influent and effluent over the period of 1982 through the year covered in this report. The constituents presented are cadmium, chromium, copper, lead, nickel, silver, and zinc.

Enforcement of Pretreatment Standards and implementation of Source Control Programs have effectively reduced pollutant loadings at the plant headworks, ensuring that there are no incidents of pass-through or interference attributed to industrial discharges at the Point Loma facility, the receiving waters are protected, and the plant's biosolids qualify for maximum beneficial use.

5.3 POINT LOMA TREATMENT PLANT MONITORING

During the year covered in this report, the PLWTP did not experience any upset, interference, or pass through incidents attributable to non-domestic users of the Metropolitan Sewerage system. A summary of the influent and effluent average metals loadings for the PLWTP is presented on pages 5-6, Tables 5.3-1 and 5.3-2. For monthly averaging purposes in these tables and graphs, “less than” and “not detected” values were treated as zero when all values for a given month were < MDL. From January to June 2020, the metal analyses were performed using EPA method 200.7. From July to December 2020, they were performed using EPA method 200.8.

5.4 POINT LOMA INFLUENT AND EFFLUENT ANALYTICAL RESULTS

The following pages summarize analytical results from representative flow-proportioned 24-hour composite sampling of the influent and effluent for those pollutants USEPA has identified under Section 307(a) of the CWA, which are known or suspected to be discharged by nondomestic users, and for non-priority pollutants. The data include results of monthly full priority pollutant scans.

POINT LOMA WASTEWATER TREATMENT PLANT
DAILY INFLUENT AND EFFLUENT

Chlorpyrifos	6	UG/L	DNQ21
Thiophosphorus Pesticides	230	UG/L	0.00
Demeton -O, -S	7	UG/L	0.00
Total Organophosphorus Pesticides	230	UG/L	0.00

* = Sample analyzed in a batch that was deemed non-reportable due to a closing calibration verification which was biased low. The analyst, however, inadvertently missed the holding time of the sample extract for reanalysis; results are not included for average calculations.

** = Analysis was performed by the contract laboratory (Weck) and results show the presence of two other parameters (chlorpyrifos and diazinon) that are not NPDES permit-required. The in-house laboratory conducted due diligence by reanalyzing the samples albeit past their holding time using a Gas Chromatograph/Pulsed Flame Photometric detector (GC/PFPD) as well as a Gas Chromatograph/Triple Quad Mass Spectrophotometer (GC-TQ) for confirmation. Chlorpyrifos was verified by the GC-TQ; the GC/PFPD did not detect the low level concentration of this analyte, which is below the detector sensitivity. Diazinon was detected by Weck but is a suspect artifact as disproved by both the in-house laboratory's GC/PFPD and GC-TQ instruments.
DNQ= Detected but not quantified. Sample result is less than Minimum Level but greater than or equal to MDL.
ND=not detected, NS=not sampled, NA=not analyzed

5.5 BIOSOLIDS BENEFICIAL USE AND LANDFILL DISPOSAL SUMMARY

The table below summarizes the biosolids beneficially used as alternate cover and land applied.

Table 5.5-1 Annual Biosolids Beneficial Use & Landfill Disposal Summary

2020 Month	Otay Landfill Beneficial Use[1] (PTL) (wet Tons)	Otay Landfill Beneficial Use[1] (MBC) (wet Tons)	Otay Landfill (PTL) (wet Tons)	Otay Landfill (MBC) (wet Tons)	Otay Landfill Total (wet Tons)	AZ Total (wet Tons)	Total Dry Tons	Total Biosolids (dry metric tons)
January					0.00	9,985.68	2,953.76	2,679.65
February					0.00	9,572.03	2,814.18	2,553.02
March					0.00	9,730.66	2,815.22	2,553.97
April					0.00	9,510.82	2,777.16	2,519.44
May					0.00	9,677.27	2,767.70	2,510.86
June					0.00	10,788.90	2,966.95	2,691.61
July					0.00	11,272.60	2,998.51	2,720.25
August					0.00	8,873.79	2,395.92	2,173.58
September					0.00	11,995.45	3,226.78	2,927.33
October					0.00	11,792.27	3,148.54	2,856.35
November					0.00	10,247.74	2,797.63	2,538.01
December					0.00	11,415.37	3,230.55	2,930.75
Total:					0.00	124,862.58	34,892.90	31,654.84
Monthly Average:					0.00	10,405.22	2,907.74	2,637.90

[1]No Biosolids were shipped to, disposed of, or beneficially used at Otay landfill.
Biosolids generated by Point Loma/MBC were land applied in Arizona.
