

Planning Commission Public Comment for 12/7/2023

Completed	First Name	Last Name	Meeting Date	Position	Comments
11/28/2023 14:36	Scott	Chipman	12/7/2023	In Support of Item	
11/30/2023 6:59	Christie	Dunning	11/30/2023		I ask you to please adopt the science-based San Diego Audubon Society's "Wildest" Plan for the northeast corner of Mission Bay rather than the City's De Anza Natural. It is a better plan, overall.
11/30/2023 7:06	Chuck	Dunning	11/30/2023		"Balance"? The park has 1,461 land acres for recreation. Wildest uses 315 for wetlands, or only 21%.
12/1/2023 15:51	George	Heatherington	12/7/2023	In Opposition to Item	The Environmental Center of San Diego is dedicated to the enhancement and protection of the natural environment throughout San Diego. We are in opposition to De Anza Natural for several reasons listed
12/4/2023 15:17	Belen	Hernandez	12/7/2023	In Support of Item	Mid-City CAN supports. Please read the attached letter. Thank you.
12/5/2023 10:37	Marcella	Bothwell	12/7/2023	In Opposition to Item	<p>Speaking as Chair of the Park Board, recreation is a vital component for all of San Diego, not just the area around Mission Bay Park. However, in the immediate area of Balboa and Morena corridors, 22,300 residents are planned to move into the area in addition to its regional use. Housing is a primary concern for the City, but the mental and physical health of its residents should be no less of a concern. Increased density leaves little green space for recreation which is vital for a healthy community.</p> <p>We must navigate the best solution when thinking about the next 50 years. Children using this space in Mission Bay are in their formative years and we need to prioritize raising healthy and well-balanced kids. I am hopeful about the transitioning of the MB park, with the added language of the MBP Master Plan which states "will phase development in a manner that minimizes disruption" And, "buffer zones" for the site" should be implemented after these facilities have been modified, moved, or replaced. "Given the importance of children and their development into healthy members of society, I would urge that the "should" become a "must." Please see my unbiased chair's report.</p>
12/5/2023 11:10	Marcella	Teran	12/7/2023	In Support of Item	I am ceding my time to scott chipman for his DeAnza presentation on December 7th. I support Scott Chapman's De Anza proposal. It strikes a balance between preserving nature and recreation access that is needed. Please support it.
12/5/2023 11:58	Judith	Munoz	12/7/2023	In Support of Item	<p>On July 11, 2003, the Mission Bay Park Committee voted to support and recommend adoption of the DeAnza Natural Amendment to the Mission Bay Park Master Plan and the associated Programmatic Environmental Impact Report as presented. Whereas the Committee did not view the proposed plan as perfect, it is concerned that the Master Plan, which has been delayed far too long, move forward. The water quality of Mission Bay is a paramount issue for the Committee. The expansion of wetlands will be important to the improvement of the water quality, but will not be the entire solution. The Committee urges the City to also seek other measures, especially improving the runoff to the Bay from Rose Creek and improving the flow of water the is limited by the Fiesta Island causway. The Committee is also concerned that the toxins at South Shore be mitigated before recreational activities, replaced by increased wetlands, are placed there. Thank you.</p> <p>Judith Muñoz, Chair, Mission Bay Park Committee</p>

12/5/2023 13:18	Barry	Homer	12/7/2023	In Opposition to Item	<p>De Anza Peninsula is a jewel for San Diego. Let's not squander its unique attraction for the dubious value of adding a small amount of marshland to an existing already large marsh.</p> <p>Campland's proven 50-plus year history shows how they have been good stewards of this precious resource. Jacob Gelfand's Campland organization has recently transformed De Anza from an unusable eye-sore into affordable waterfront access enjoyed by many. San Diego continues to benefit from this good neighbor. San Diego is lucky to have De Anza and the Campland organization. They are magnets for campers who bring revenue and jobs to the City.</p> <p>Mission Bay Park Master Plan supports that this Regional Park serves all of the residents of San Diego as well as visitors.</p> <p>And further states land use recommendations include regional recreation needs, including Guest Housing (camping facilities and recreational vehicles).</p> <p>Leaseholds that support the Mission Bay recreation use are already in place with Campland and Mission Bay RV Resort.</p> <p>Keep them BOTH. It's a no-brainer, good business, win-win decision.</p>	
12/5/2023	Denise	Zellmann	12/7/2023		I would like to submit this letter on behalf of MBLA for Item 1 on Thursday's PC meeting agenda - See Attached	
12/5/2023	Denise	Zellmann	12/7/2023		Here's another letter from The Dana on Mission Bay re: Item 1 on Thursday's PC meeting agenda - See attached	
Kurt	Carlson	12/7/2023	1	In Opposition to Item	My name is Kurt Carlson and am the current chair of the San Diego Municipal Golf Committee (SDMGC). Please see attached position letter from the 2023 Municipal Golf Committee.	https://www.sandiego.gov/system/files/webform/webform_989827/4870/SD%20Municipal%20Golf%20regarding%20De%20Anza%20Cove%20Plan_V2_Draft_120623.pdf
Karin	Zirk	12/7/2023	1	In Opposition to Item	I have attached my comments concerning the deficiency of the Final PEIR in the attached letter. I am writing today to share my OPPOSITION to the De Anza Natural Plan Final PEIR in its current form. The final PEIR has a number of deficiencies that should be corrected prior to a recommendation from the Planning Commission, which I will list below. Please ask the City of San Diego Planning Department to correct the deficiencies and then ask to review the plan again at a later date.	https://www.sandiego.gov/system/files/webform/webform_989827/4878/PlanningCommissionMeeting_20231207_Agendaltem_1.pdf
Brigitte	Browning	12/7/2023	Item 1	In Support of Item		https://www.sandiego.gov/system/files/webform/webform_989827/4902/DeAnzaNatPlan_PlanningComm_20231206.pdf

Kirk	Nelson	12/7/2023	1	In Support of Item	<p>Dear Planning Commission,</p> <p>My family and I have enjoyed Youth Baseball at Bob McEvoy fields for generations. My uncle played there when it first opened and my son is playing there now. I am happy to see the additional acreage allotted for youth sports in the new revision of the plan. At the same time, I worry that the Rose Creek buffer will be zoned environmental and consequently developed outside of the full De Anza project with specific environmental / wetlands restorations grants. If this is done prior to reorienting McEvoy fields it would represent a loss of more than 50% of the active rec fields for the youth baseball, softball and soccer players in our local community. Please protect youth sports at Bob McEvoy fields.</p> <p>Sincerely, Kirk Nelson</p>	
Comments Below were added on 12/7/2023						
Kristin	Brinner	12/7/2023	1	In Opposition to Item	<p>I urge the Planning Commission to send this project back to the Planning Department to address the issues that the Parks and Rec Board and the ReWild Coalition have highlighted, especially the need to increase the restored habitat acreage to 315 acres and to commit to transitional infrastructure on the De Anza peninsula that becomes tidally influenced as sea levels rise.</p> <p>The City's De Anza Natural plan continues the illegal privatization of our Public Trust Tidelands by giving guest accommodations a monopoly on the proposed shoreline. There needs to be publicly-accessible Regional Parkland between the wetland or beach and the leased areas in the park.</p> <p>The City must commit to low-impact, transitional infrastructure, including low-cost visitor accommodation options, on the De Anza "island," and plan for these facilities to evolve over time into additional acres of wetlands as sea levels rise.</p> <p>The City's own Design Guidelines call for a 150-ft minimum public use zone along beach areas and 100-ft minimum public use zone along bulkhead/rip-rap areas of the shore. The De Anza Natural land use plan does not meet these minimum criteria.</p>	
Jeffrey	Chine	12/7/2023	1	In Support of Item	Please see attached correspondence.	https://www.sandiego.gov/system/files/webform/webform_989827/4928/LT%20Planning%20Commission%20120623.pdf
Joana	Guerra	12/7/2023	1	In Opposition to Item	I strongly encourage the Planning Commission to reconsider and refer the matter back to the Planning Department for further attention to concerns raised by the Parks and Rec Board and the ReWild Coalition. Specifically, it is crucial to address the highlighted issues, with a particular emphasis on expanding the restored habitat acreage to 315 acres. Additionally, I recommend a commitment to implementing transitional infrastructure on the De Anza peninsula that adapts to tidal influences as sea levels inevitably rise.	

David	Zoutendyk	12/7/2023	1	In Opposition to Item	The U.S. Fish and Wildlife Service is writing in response to the City's Final Amendment to the Mission Bay Park Master Plan (Amendment) and Final Program Environmental Impact Report (FPEIR) for the De Anza Natural Amendment to the Mission Bay Park Master Plan. De Anza Cove is the best location to maximize wetland restoration to help achieve the water quality improvement goals of the Master Plan which will benefit wildlife and recreational uses throughout Mission Bay. We continue to recommend that the City adopt either the Wild Wildest or Wetlands Optimized alternative as the preferred alternative for the Amendment. If the City adopts the De Anza Natural Alternative we continue to recommend that it be modified to replace RV camping and associated permanent facilities on the De Anza peninsula with tent camping and day uses that may easily be removed to allow wetland development as sea level rises. Consistent with the City's De Anza Ad Hoc Committee and Parks and Recreation Board we recommend the Planning Commission not approve of the Amendment and FPEIR and request further coordination to address our recommendations. Our full comments and recommendations are provided in the attached letter to the Planning Commission.	https://www.sandiego.gov/system/files/webform/webform_989827/4936/20231206_2023-0074014-CEQA-DPEIR-SD_De%20Anza%20Planning%20Commission%20letter.pdf
Teresa	Ogot	12/7/2023	1	In Opposition to Item	I respectfully ask that you improve De Anza Cove while maintaining or increasing the Campland space. I'm a member of San Diego Outrigger Canoe Club, which has had its canoes located at Campland for nearly 40 years. I am at Campland at least three days a week for practice, and it is such a gem for giving affordable access to Mission Bay for families and our team. It is such a joyful place, the staff is amazing and I have met so many wonderful visitors who are interested when they see us bringing out our outriggers. In this time when the city is looking to densify, I urge you to be INCREASING access to Mission Bay in an equitable way, not just for hotel stays. Campland provides an affordable option for many who otherwise could not vacation by the bay. The loss would be devastating to our team as well. There aren't many other options available to give us water access. In our current arrangement, the team is able to keep dues low, providing recreational, fitness and social benefits to our members for a very reasonable cost. Our team is like a family, please consider our needs in your planning	
Diane	Moss	12/7/2023	1	In Support of Item	See Attached	https://www.sandiego.gov/system/files/webform/webform_989827/4943/Project%20New%20Village%20Letter%2012.06.23.pdf
Megan	Tarnovskiy	12/7/2023	1	In Opposition to Item	I am opposed to approving this project. It does not make sense to move Campland. Why not rewild the currently vacant mobile home park? A wetland expansion does not need to be adjacent to the Kendall Frost Marsh Reserve. The disturbance to wildlife associated with demolishing and reconstructing all the current infrastructure associated with Campland does not make sense. It is costly and will take years making this area completely unusable for residents who routinely recreate here. Campland provides low cost recreational accommodation to visitors to San Diego and is open to residents of San Diego providing more than 20 public parking spaces, beach, and boat ramp for launching kayaks and paddle boards. We are in an urban area and recreational opportunities combined with low cost accommodations do not need to be interfered with to achieve your environmental goals. Why not rewild the vacant mobile home park? Please really think about this decision. Recreational opportunities should not be shrunk, nor relocated. You will have to avoid bird breeding season, making construction last over many years during which low-cost accommodation and recreational opportunities will not be available. San Diego is a safe city because of the recreational outlets readily available to residents.	

Patrick	Macpherson	12/7/2023	1	In Opposition to Item	Great Ecology, on behalf of Terra Vista Management (operator of Campland), recommends studies be conducted to determine if motorized watercraft should be prohibited from accessing De Anza Cove.	https://www.sandiego.gov/system/files/webform/webform_989827/4955/Great%20Ecology_Planning%20Commission%20Comment%20Letter_20231206.pdf
James	Royer	12/7/2023	1	In Opposition to Item	We need at least 315 acres of restored habitat, including salt marsh and other related tidal wetland and riparian habitats. With Wildest, we've demonstrated that 315 acres is a feasible goal, and 350 acres of restored tidal wetland is already required by 2030 in the city's Climate Action Plan. This will go a long way toward the city meeting its legally-binding benchmarks.	
Sean	Schwab	12/7/2023	1	In Support of Item	<p>We are sharing the attached letters from more than 600+ residents, Californians and frequent visitors of northeast Mission Bay. We respectfully request the attached comments be submitted into the record and shared with Planning Commissioners for the Dec. 7 hearing.</p> <p>While the De Anza Natural Plan is the best option of those studied, all of the alternatives significantly reduce campsites at a time when affordable access is needed more than ever. Please do not allow further reductions beyond what has already been proposed. To further ensure coastal equity, the City should also study best practices for motorized boating that protect the environment instead of limiting this use outright. Continued discussion is necessary to ensure the community is fully informed and can provide input on this issue.</p> <p>Thank you for your consideration of these issues, on behalf of the many who have submitted the attached letters and to the hundreds of thousands who visit this corner of Mission Bay's coastline each year.</p> <p>Sincerely, Elizabeth Van Clief, Terri Campbell, and Sean Schwab Residents and Co-Chairs of Friends of Campland</p>	https://www.sandiego.gov/system/files/webform/webform_989827/4961/De%20Anza%20PlanningCommission%20Support%20Letters%2012-6-23%205pm.pdf
Cindy	Lin	12/7/2023	1	In Opposition to Item	<p>As a citizen and business owner, I recommend City Council to NOT APPROVE the amendment as it is presented, and instead send it back to address critical issues to support a complete wetland restoration, address climate change and land access equity.</p> <p>We need the City to commit to implementing habitat restoration in the northeast corner of Mission Bay by 2030. With sea level rise projections, we need at least 80 acres of contiguous low-, mid-, and high-elevation salt marsh and associated uplands to remain in this habitat complex at mouth of Rose Creek in 2100. This would align is required by the Climate Action Plan.</p> <p>We need to see the City do the following to successfully meet our Climate Action Plan:</p> <ol style="list-style-type: none"> (1) Must commit to low-impact, transitional infrastructure, e.g., low-cost visitor accommodation options, on the De Anza "island," (2) Plan for these facilities to convert into additional acres of wetlands as sea levels rise. (3) Need the active land-use designation on this island to sunset as a reasonable choice and allow for increased wetland & habitat restoration. (4) Widen the waterway between the mainland and this island for optimal water flow <p>Sincerely, Dr. Cindy J Lin Hey Social Good</p>	

Sean	Schwab	12/7/2023	1	In Support of Item	<p>Dear Planning Commissioners,</p> <p>We are writing to share the attached letters from 650+ residents and visitors of northeast Mission Bay. We respectfully request the attached be submitted into the official record for the Dec. 7 hearing.</p> <p>While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce existing campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed.</p> <p>To further coastal equity, the City should also study best practices for motorized boating instead of limiting this use. Public recreational areas should be inclusive, and continued discussion is necessary to ensure the community is fully informed and can provide input.</p> <p>Thank you for considering this input on behalf of the many who have submitted the attached letters and to the hundreds of thousands of campers and recreationists who visit this corner of Mission Bay's coastline each year.</p> <p>Sincerely,</p> <p>Elizabeth Van Clief, Terri Campbell, and Sean Schwab Residents and Co-Chairs of Friends of Campland</p>	https://www.sandiego.gov/system/files/webform/webform_989827/4963/De%20Anza%20PlanningCommission%20Support%20Letters%2012-6-23%205pm.pdf
Susan	Crowers	12/7/2023	1	In Support of Item	<p>As a native of Pacific Beach I feel fortunate to have a world class regional park within walking distance of my neighborhood.</p> <p>I acknowledge the importance of preserving the De Anza Cove habitat and improving water quality in the bay as proposed in this plan, while protecting active recreation opportunities for residents of all ages in Pacific Beach and the surrounding communities who use these facilities.</p> <p>In the near future, Pacific Beach will experience a population increase of 22,000+ residents in the areas adjacent to this part of the park. Now is the time to not only protect, but to look for opportunities to enhance and expand active recreation and regional parklands for current and future residents and visitors.</p> <p>Many stakeholders in our community raised their voices to ask that the City protect what little active recreation facilities we have. We thank the City for listening and responding to the needs of our residents while looking to preserve the natural resources of the De Anza Cove area.</p> <p>I respectfully request the Planning Commission to support this fair and balanced plan- the physical and mental health of our community rests in your hands. Thank you!</p>	
Richard	Crowers	12/7/2023	1	In Support of Item	<p>After 20+ years in the US Navy I am happy to call Pacific Beach home!</p> <p>One of the main reasons my family settled in PB was because of access to Mission Bay Park and the active recreation amenities like the public golf course, boat launches, and miles of bike paths around the bay. We feel fortunate to have a such a great park within walking distance of our neighborhood.</p> <p>My wife and I enjoy volunteering in beach & bay cleanups! We appreciate the importance of preserving the De Anza Cove habitat and improving water quality while protecting active recreation opportunities for residents of all ages in PB and the surrounding communities.</p> <p>There are plans for a population increase of over 20,000 residents right near Mission Bay Park. Now is the time to not only protect, but to look for opportunities to enhance and expand active recreation and regional parklands for current and future residents and visitors. I've lived in many locations around the US and abroad, and our ball fields pale in comparison. Our children deserve a safe place to play, socialize and exercise.</p> <p>For the physical & mental health of our community, please support this fair and balanced plan.</p>	

Charlie	Nieto	12/7/2023	1	In Support of Item	<p>The Pacific Beach Town Council Board of Directors has carefully reviewed and supports the Proposed Project Site Plan for the De Anza Natural Amendment to the MBPMP.</p> <p>We acknowledge the importance of preserving the natural habitat and improving water quality of the bay in this proposed project, while protecting active recreation opportunities for residents of all ages in Pacific Beach and the surrounding communities who use these facilities.</p> <p>Pacific Beach will experience a population increase of 22,000+ residents along the Mission Bay Drive and Morena Blvd corridors immediately adjacent to this part of the park. Now is the time to not only protect, but to look for opportunities to enhance and expand active recreation and regional parklands for current and future residents and visitors.</p> <p>We thank the City for listening and responding to the needs of our residents while looking to preserve the natural resources of the De Anza Cove area. As advocates for our community, the PB Town Council respectfully requests the Planning Commission to support this fair and balanced plan.</p> <p>Regards, Charlie Nieto Pacific Beach Town Council President</p>	
Emma	Pack	12/7/2023	1	In Support of Item	I played Little League here as a kid and want my children to have a place to play! I love golfing there and overall want PB to have more active recreational areas. Perhaps a pool?	
Isabelle	Kay	12/7/2023	1	In Opposition to Item	The DeAnza Natural Plan is fatally flawed because it tries to shove too many uses into this small corner of Mission Bay that barely supports the last remnants of struggling saltmarsh habitat. For the city to achieve stature for its wise management of its natural resources and its genuine commitment to its Climate Action Plan, it needs to embrace and protect the maximum wetland acreage that it can in this area, and look to other areas of the bay to achieve the "balance" desired.	https://www.sandiego.gov/system/files/webform/webform_989827/4973/Kay%20Planning%20Commission%20webform%20attachment%202023Dec7.pdf
Chris	Jones	12/7/2023	1	In Support of Item	Young & Prosperous letter of support for Item 1 DE ANZA AMENDMENT TO THE MISSION BAY PARK MASTER PLAN	https://www.sandiego.gov/system/files/webform/webform_989827/4980/City%20of%20San%20Diego%20Planning%20Commission.pdf
Adam	Howe	12/7/2023	1	In Support of Item	I love playing golf here every week and it would be such a shame to lose this classic course. It honestly has so much more potential too.	

Megan	Brunner	12/7/2023	1		<p>Subject: Supporters of Recreation, Access, and Use of Mission Bay Park</p> <p>Consider the Mission Bay Gateway Plan as the best option for our community. Our children NEED and use the sports fields. The MBG plan is the better option and takes into consideration the residents who live in Pacific Beach. We need continued space for our children to play in their community- not in another town over. MBG is the least disruptive and so the most environmentally friendly plan. MBG provides the most recreation is the least expensive to implement and provides the most annual revenue to the city and Mission Bay Park fund. MBG is the most balanced plan between recreation, education, and the environment.</p> <p>Thank you, Megan Brunner</p>
Jay	Schweikert	12/7/2023	1	In Opposition to Item	<p>Subject: Supporters of Recreation, Access, and Use of Mission Bay Park</p> <p>I support the MBG plan over the options for for DeAnza cove the city has put forward. Most of all, our family and our children need space for their recreational sports. While the bay is a great tourist attraction for many to enjoy from all over, for those of us who live IN Pacific Beach we need space for our needs, our children.</p> <p>MBG is the least disruptive and so the most environmentally friendly plan.</p> <p>MBG provides the most recreation is the least expensive to implement and provides the most annual revenue to the city and Mission Bay Park fund.</p> <p>MBG is the most balanced plan between recreation, education, and the environment.</p> <p>Thank you, Jay Schweikert</p>
Megan	Brunner	12/7/2023	1	In Opposition to Item	<p>I am in opposition to the plans the city is putting forward and in support of the MBG plans.</p> <p>MBG is the least disruptive and so the most environmentally friendly plan.</p> <p>MBG provides the most recreation is the least expensive to implement and provides the most annual revenue to the city and Mission Bay Park fund.</p> <p>MBG is the most balanced plan between recreation, education, and the environment.</p>
Rebekah	Loveless	12/7/2023	1	In Opposition to Item	<p>I fully support the spirit of the project, but due to some major short falls I cannot fully support the project at this time.</p> <ul style="list-style-type: none"> -As compliance archaeologist primarily working in San Diego. I would like to see a full cultural resources impact study. The technical memorandum does not engage with Kumeyaay to evaluate the impacts of religious or sacred sites. -do support the relocation of the Boat and Ski Club. They have been and plan to continue to engage with Kumeyaay community members and will perpetuate the spirit of cooperation and access. However, if their relocation date is reliant upon the development of the south shore project, this project needs to develop a plan of interim relocation. if you grant the relocation without an interim location you will either cause the De Anza project unnecessary delays or unfairly homeless. -Sea level rise is eminent. In order to be a good steward of the current. At minimum we need to see more specific wording on how the project will design flexible infrastructure to endure and change with climate change and sea level rise. Please reevaluate the use of hard scape and inflexible shorelines. -Access is not a historical sign. Presence please

Deborah	Gostin	12/7/2023	1		<p>As you consider how to build and improve upon the De Anza Natural wetland restoration plan for the northeast corner of Mission Bay, I'd like to ask you to prioritize the need for maximum wetland restoration in order to truly make the city's wetland restoration effort successful.</p> <p>The city's final Environmental Impact Report (EIR) for this project must prioritize water quality by adding a specific project objective to improve the water quality of the study area and the bay through natural, resilient infrastructure. As you're aware, water quality is a crucial component of the 1994 Mission Bay Park Master Plan, and water quality can best be guaranteed by the kind of green infrastructure restored wetlands will provide.</p> <p>The city's draft EIR for the De Anza plan is also missing details on the foreseeable impacts from sea level rise. How can the city determine the best land-use plan without knowing how climate change will affect our park? While the city's Climate Action Plan calls for 700 acres of restored tidal marsh by 2035, only the ReWild Mission Bay Wildest plan provides the most direct way to achieve this goal with maximum wetland restoration. Unfortunately, the draft EIR for the De Anza Natural plan fails to consider the ReWild Mission Bay Wildest proposal against the city's own Climate Action Plan goals.</p> <p>The ecological implications are critical and time is wasting. Kendall-Frost Marsh Preserve in Mission Bay provides the best habitat for endangered Ridgway's Rails. Yet these birds – original members of the 1973 Endangered Species Act – will lose their habitat over the next several decades as sea levels rise and their habitat is inundated. Unless we begin the ReWilding process now, these and other threatened and endangered native species will be lost, when they could've readily been saved.</p> <p>The city's proposal also fails to analyze the recreational and cultural opportunities of connecting Mission Bay Park to a restored tidal ecosystem. Doing so would better balance and expand the park's recreational offerings. This will ensure that everyone, especially the Kumeyaay and those in underserved communities, will benefit from access to a vibrant tidal marsh with expanded recreation opportunities.</p> <p>Thank you for your kind consideration of our recommendations on how to improve the De Anza Natural plan.</p>	
Sam	Esqueda	12/7/2023	1		<p>It surprises and concerns me that there has been so much effort in restructuring Mission Bay when the blame for literally every single "concern" is the City of San Diego's fault to begin with. And, no one has actually voted for these changes. It's all a farce.</p> <p>I wonder how it must be for you, plus everyone on that council, to sleep at night when you're helping to railroad taxpayers who've enjoyed such a wonderful place with their families and friends for generations. Just to sell them out. Shameful.</p> <p>You're part of this grift-machine. You're helping to make your fellow San Diego residents miserable because of pure greed. Does that make you feel like a horrible person? It should.</p>

Subject: Feedback on De Anza Natural Plan and Mission Bay Park Master Plan Amendment

Dear Planning Commissioners,

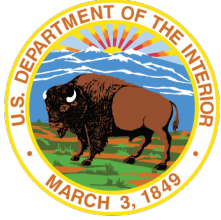

On behalf of the Young and Prosperous Foundation, we would like to provide feedback related to the De Anza Natural Plan to shape the future of Northeast Mission Bay Park and acknowledge the City for presenting a balanced way forward for affordable waterfront camping, recreation, and environmental stewardship.

At the Young and Prosperous Foundation, we provide college and career exposure, as well as resources and service opportunities to empower youth across City Heights, Southeastern San Diego, and Lemon Groves as future leaders in their communities. Thanks to partners like Campland on the Bay, we are able to support students across San Diego and ensure they have the resources they need to be successful.

The coastline should be a communal treasure, and every person should have the opportunity to benefit from these valuable experiences. Access to transit-friendly coastal experiences, as well as affordable accommodations and free camping programs, like those provided at Campland on the Bay today, help promote more equitable access to these natural treasures.

Sincerely,

Chris Jones, CEO and Founder
Young and Prosperous Foundation

Subject: De Anza Natural Amendment to the Mission Bay Park Master Plan and Final Program Environmental Impact Report for the De Anza Natural Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners:

The U.S. Fish and Wildlife Service (Service) is writing in response to the City of San Diego's (City) Final Amendment to the Mission Bay Park Master Plan (Amendment) and Final Program Environmental Impact Report (FPEIR) for the De Anza Natural Amendment to the Mission Bay Park Master Plan. Our comments and recommendations are based on our knowledge of sensitive and declining vegetation communities and species in Mission Bay, the Mission Bay Master Plan Update (Master Plan), the City's Multiple Species Conservation Program (MSCP) Subarea Plan (SAP), the Mission Bay Park Natural Resource Management Plan (NRMP), and our participation on the Wetlands Working Group and Scientific and Technical Advisory Committee for the ReWild Mission Bay Project.

The mission of the Service is working with others to conserve, protect, and enhance fish, wildlife, plants, and their habitats for the continuing benefit of the American people. Consistent with our mission, we have been working with partners to improve conditions for habitat, wildlife, and the human community in northeast Mission Bay. The Service also has legal responsibility for the welfare of migratory birds, anadromous fish, and threatened and endangered animals and plants occurring in the United State and is responsible for administering the Federal Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 *et seq.*), including habitat conservation plans (HCP) developed under section 10(a)(1) of the Act. The City participates in the HCP program by implementing its approved MSCP SAP.

Within the project area, the Service has provided funding and technical assistance to San Diego Audubon for the ReWild Mission Bay: Wetlands Restoration Feasibility Study Report (ReWild Feasibility Study) and to San Diego Earth Works and University of California Reserve System for their Transition Zone Habitat Restoration Project at the Kendall-Frost Marsh Reserve.

The Service previously provided comments to the City in letters dated December 7, 2016, August 10, 2017, July 11, 2018, February 16, 2022, and most recently in our letter dated May 9, 2023, on the draft Amendment and Program Environmental Impact Report (DPEIR). We also met with the City on July 28, 2023, to discuss our comments and recommendations on the Amendment. Most of our previous recommendations were not accepted in the Amendment and FPEIR.

As stated in our previous comments, De Anza Cove is the best location to maximize wetland restoration to help achieve the water quality improvement goals of the Master Plan which will benefit wildlife and recreational uses throughout Mission Bay. In addition, the City's 2022 Climate Action Plan (CAP) includes the goals of restoring 350 acres of "salt marsh and other associated tidal wetland and riparian habitats" by 2030 and 700 acres by 2035. Considering these more recent CAP goals, the 1995 Master Plan was visionary in prioritizing wetland restoration in north Mission Bay, including De Anza Cove, and we know of no better place to help achieve these significant CAP goals.

In addition, of all the assets identified in the City's Climate Resilient SD, conservation areas/open space/source water land assets, such as De Anza Cove, face the greatest number of coastal hazards. Furthermore, Climate Resilient SD identifies De Anza Cove as an area vulnerable to sea level rise and flooding and identifies wetland restoration as natural infrastructure to meet the City's Thriving Natural Environments (TNE) policies. Prioritizing/maximizing wetland restoration at De Anza Cove would specifically address policies TNE-2: Protect and improve the integrity of open space, habitat and parks; and TNE-3: Prioritize the implementation of nature-based climate change solutions wherever feasible.

To facilitate synergistic implementation of the Master Plan, the CAP, and Climate Resilient SD, wetland restoration should be prioritized/maximized in the Amendment while allowing for other uses that will avoid and minimize impacts to existing or restored wetlands. To that end, we continue to recommend that the City adopt either the "ReWild Wildest" or "Wetlands Optimized" alternative as the preferred alternative for the Amendment. The ReWild Wildest and Wetland Optimized Alternatives are environmentally superior to the De Anza Natural Alternative because they would restore more contiguous wetland across the De Anza peninsula, thus maximizing habitat for wildlife, benefitting water quality, and increasing carbon sequestration. Implementation of either of these alternatives would also go further than the De Anza Natural Alternative in achieving the CAP goals and Climate Resilient SD policies, especially with the sea level rise and flooding projections identified in these documents. We understand that the City wishes to provide recreational uses in Mission Bay, and we support the Park and Recreation Board recommendation (July 20, 2023, meeting) for an analysis of the feasibility of utilizing the South Shores as a viable replacement for recreation activities at De Anza Cove.

The federally listed endangered light-footed Ridgway's rail (*Rallus obsoletus levipes*) and California least tern [*Sternula antillarum browni* (*Sterna a. b.*)], and federally threatened western snowy plover [*Charadrius nivosus nivosus* (*C. alexandrinus n.*)] use Mission Bay for nesting, roosting, and/or foraging, and potential impacts to these species within U.S. Army Corps of Engineers (Corps) jurisdiction are not covered under the City's SAP. If potential impacts to

federally listed species cannot be avoided, consultation with the Service pursuant section 7 or permitting pursuant to section 10 of the Act will be required. In our comments on the DPEIR, we recommended several conservation measures to avoid, minimize and mitigate potential impacts to these species that were not included in the Amendment and FPEIR. The Service continues to recommend that these conservation measures be included in the Amendment and FPEIR, which will help expedite any future consultation or permitting process. In addition to consultation or permitting pursuant to the Act, the project will likely require permitting by the Corps, the California Coastal Commission, and the California Department of Fish and Wildlife. Prior to approving the project, we recommend that the City coordinate with these agencies to ensure that the project can be implemented consistent with applicable laws and regulations.

The Amendment proposes to fill portions of Mission Bay to create uplands at De Anza Cove. As stated in our previous comments, while the Service does not support fill to create uplands, we may support fill to restore eelgrass or intertidal habitat (i.e., mudflat, low-, mid-, or high-elevation salt marsh) if it is shown to have a net environmental benefit and help make Mission Bay more resilient to sea level rise.

Based on the Amendment and FPEIR, the City intends to adopt De Anza Natural Alternative. However, the sea level rise analysis that was added to the FPEIR since the DPEIR was out for public review shows that significantly more fill in Mission Bay will be needed than is currently shown in the in the Amendment and FEIR for the De Anza Natural Alternative to achieve a minimum of 80 acres of wetland by 2100. If the City adopts the De Anza Natural Alternative, we continue to recommend that the following be included in the Amendment and FPEIR to achieve a minimum 80 acres of wetland in light of sea level rise while avoiding additional fill in Mission Bay and still allowing other uses that avoid and minimize impacts to existing or restored wetlands (e.g., primitive/tent camping and passive recreation):

1. Language that allows only soft, unarmored, gently sloped (e.g., 20:1), living shorelines around the De Anza peninsula/boot and island/foot.
2. Language that allows only habitat restoration, primitive/tent camping, passive recreation (e.g., pedestrian trails and educational features) on the De Anza peninsula (e.g., no RV camping).
3. Language that allows only infrastructure on the De Anza peninsula that can be removed and will not be protected to allow managed retreat/wetland establishment as sea level rises (e.g., no pavement, utilities).
4. Language that commits to implementing a habitat restoration design by 2030 that has undergone sea level rise modeling demonstrating that, with sea level rise projections, upland buffers, and at least 80 acres of contiguous low-, mid-, and high-elevation salt marsh will remain at the mouth of Rose Creek in 2100.

Given the importance of the decisions made during this planning process to the future of wetlands in Mission Bay and our concerns regarding the De Anza Natural Alternative, we recommend the Planning Commission not approve of the Amendment and FPEIR until further

coordination with the Service is completed to address our recommendations. If you have questions or comments regarding this letter, please contact [Carolyn Lieberman](#),¹ [Anita Eng](#),² or [Sandy Vissman](#)³ at 760-431-9440.

Sincerely,

Jonathan D. Snyder
Assistant Field Supervisor

Subject: Feedback on De Anza Natural Plan and Mission Bay Park Master Plan Amendment

Dear Planning Commissioners,

On behalf of Project New Village, we are reaching out to provide feedback on the future of Northeast Mission Bay Park, and the importance of preserving affordable coastal accommodations that promote more equitable access to our beaches, as well as recreation and sustainability measures.

At Project New Village, we are working to improve fresh food access in Southeastern San Diego as part of a broad-based movement to build healthy neighborhoods. We embrace urban farming and community engagement as our primary tools to improve food security and environmental wellness. Thanks to our partners like Campland on the Bay, Project New Village is able to create resident-led, community-rooted experiences that result in better health and help address social inequities.

One of our core beliefs at Project New Village is advocating for initiatives that empower our younger generations. Outdoor coastal experiences like camping are more than recreational, but an investment in our youths' well-being. These experiences help foster a deep appreciation for the outdoors, impart essential life skills, and improve mental and physical health.

The coastline is a communal treasure, and we firmly believe that every individual deserves the chance to experience and benefit from it. Today, too many families throughout San Diego County have inequitable access to our coastal areas, and transit-friendly coastal experiences, affordable accommodations and free camping programs, like those provided at Campland on the Bay today, help promote equitable access to these natural treasures.

We commend the De Anza Natural plan for preserving these accessible and sustainable coastal experiences, which help meet a critical community need.

Sincerely,

Diane Moss
Managing Director
Project New Village

To: San Diego Planning Commission

Re: Item #1: DeAnza Amendment to the Mission Bay Park Master Plan, PEIR and Amendments

Date: December 7, 2023

Dear Planning Commissioners and members of the public:

This final PEIR does not allay my fears for the future of the natural environment in the vicinity of the terminus of Rose Creek at Mission Bay if the city pursues the DeAnza Natural Plan. In spite of decades of advancement in the understanding of how ecosystems function, much research at institutions of higher learning in the city of San Diego, and studies at the Kendall-Frost Marsh Reserve itself, this plan remains an obviously flawed pursuit of poorly conceived goals. The PEIR responses to objections regarding the lack of explicit purpose and clarity of the stated goals are repeatedly that this degree of specificity is not appropriate until later, during the project-level analyses:

"This comment states that the DEIR doesn't give any specific goals for wetland restoration west of Rose Creek, and should include specific population goals for the endangered species within the MHPA, acres of critical habitat, and specific adjacency rules to protect existing and future populations of these species. As discussed in PEIR Chapter 3.0, Project Description, no development is currently being proposed; therefore, specific details regarding schedule, construction activities, and implementation of the project are not currently available" (p. RTC-S3-8).

Needless to say, the objections go far beyond not knowing the schedule, construction activities, and implementation details.

In spite of these protestations about not being able to provide specifics, the entire PEIR analysis turns on comparisons of acreages calculated to a 1/10 of an acre. But for what purpose are we trying to save (at least) 80 acres in 2100? Theoretically, for the functionality of those acres, their ability to preserve the habitat that supports listed endangered species, such as the Light-footed Ridgway's rail, as well as the ecosystem services of water quality improvement, migratory bird foraging, and fish nurseries. So it makes a very big difference whether the acres that the city is counting as wetlands, are actually covered in verdant vegetation (i.e. salt marsh) or mudflats, which do not support rails, nor water quality improvement, nor many of the other functions of wetland ecosystems.

The fact that the sea level rise (SLR) analysis does not combine the two habitats is a jarring revelation of how bad the city's plans are, and that they are essentially indefensible: Tidal inundation is the primary focus of the SLR analysis as it is the ultimate factor in determining whether the planned land uses will be above or below water, which plants grow where in the marsh, and whether marsh plants can survive at all (i.e. those areas inundated for longer than cordgrass can tolerate become mudflats, which is exactly what is occurring in the NWP.)

The "solution" that the SLR analysis provides (somewhat apologetically, to give GHD credit) is to fill the entire open water area to a height that allows for saltmarsh to grow, something that is not proposed anywhere. See figure 17 and figure 18 of Appendix N, in which the starting condition (current sea level) is saltmarsh surrounding the lower mudflats of the Kendall-Frost Marsh, which would require fill to depths of up to 7.4 feet (see table 4). Even this is not enough to prevent the inundation of the majority of these areas by 2100, leaving only 43 acres of vegetated salt marsh in the DeAnza Natural scenario and 52.6 acres under the "Wetlands optimized" scenario -- see figures 12 and 16, respectively.

Unfortunately, the SLR analysis appears to be intentionally disingenuous in the presentation of the hypothetical cross-sections of fill. Why else would the cross-section B be shown for the "Wetlands Optimized" plan, but not in the same location for DeAnza Natural? It seems that this is because figure 18 makes it glaringly obvious that up to 10 feet of fill would be necessary to rescue or maintain the proposed remaining wetlands as well as the developed areas.

The Mission Bay Master Plan argued for the expansion of the wetlands by 80 acres, for a total of 120 acres of wetlands. Otherwise, there would be no improvement to the current situation of 80 acres of wetlands (approx. 40 acres) plus mudflats. I do not believe that the additional 80 acres were envisioned to be majority mudflat. The fact that the SLR analysis doesn't include the existing wetlands may be justified because, yes, the point was to find a way to make 80 acres of "wetlands" above water possible, and the answer would probably have been no different if they had been included, because they will be 100% under water with 7 feet of sea level rise. Figures 12 and 16 should show that inundation for the existing wetlands and mudflats, and the danger it poses to the Bay Villas condominiums specifically, as well as to Crown Point Drive, and to Mission Bay High School, and other low-lying areas.

Therefore, the letter from the UC Natural Reserve System commenting that the goals for the plan should have included the functionality of the wetlands (ie. supporting specific population goals for endangered species and other functions of the areas to be restored) remains valid: there is no use in the entire so-called wetland being mudflat. Counting mudflats as habitat will not suffice to support endangered rails; they don't/can't use mudflats for foraging or nesting or escaping recurrent high tides.

Other minor points:

- why does the Final SLR report include the UC upland property within the "DeAnza Cove Redevelopment Site" (fig. 1)?
- Why isn't the Mission Bay tide gauge used for the calculations?

In conclusion, the responses to comment letters and the additional analyses presented at this stage do not provide confidence in the city's plan development and environmental impact analysis processes: essentially, the city wishes to proceed with a poor design, and to analyze the component projects, and then to carry out mitigation piecemeal for these faulty components to the extent practicable...potentially leaving the whole of this area of Mission Bay Park a patched-up wreck.

Therefore, and for the many other reasons to oppose this Plan that you have read or heard, please do not approve the PEIR.

Thank you,
Isabelle Kay
La Jolla

COMMENT LETTER

To: City of San Diego Planning Commission

From: Great Ecology

Date: December 6, 2023

Subject: Motorized Boat Use in De Anza Cove

Great Ecology, on behalf of Terra Vista Management (operator of Campland), recommends studies be conducted to assess: 1) the impacts of motorized boat use on wetland structure and function; and 2) boat wake attenuation strategies in shallow water environments, *prior to* fully excluding motorized watercraft from the De Anza Cove (the Cove) under the City's proposed De Anza Cove Amendment to the Mission Bay Park Master Plan.

Great Ecology is well known in San Diego and across the country as a habitat restoration firm. We have worked with the Port of San Diego on Pond 20 and with the Del Mar Fairgrounds on the San Dieguito Lagoon restoration. We have built projects throughout the country including several in New York City and Denver. Our principles are based on bringing people to nature and bringing nature to people in urban settings. We have never felt it necessary to exclude people from experiencing nature – and for wetlands that means allowing people to come close to a wetland in a boat.

We request the City modify the De Anza Cove Amendment and Programmatic Environmental Impact Report to include explicit language requiring investigation of motorized boat use impacts and attenuation strategies.

INTRODUCTION AND POSITION

Currently, De Anza Cove allows for motorized watercraft access with a five mile per hour speed limit. Great Ecology strongly recommends an evaluation of the potential impacts of motorized watercraft on wetlands prior to disallowing this activity in the Cove. Existing research suggests impacts from boat wakes can be mitigated through placement and design of marsh vegetation, floating wake attenuators, shoreline improvements, and other design and/or policy choices.

It is easy to confuse a habitat restoration project in an urban setting with a remote and pristine habitat. Our company is rooted in creating habitats in such settings and our firm has consulted on and built dozens of projects in highly altered environments. They will never become pristine and coveted wetlands, although many elements of wetlands can be created or restored in the urban context. In this case, we are talking about postage stamp sized habitats, in the single largest recreational waterbody, in the tenth largest city in the United States. If the goal is to create a completely remote and pristine habitat that cannot be designed to handle modest boat wake, then it is already destined to fail.

SUPPORTING INFORMATION

Existing studies have evaluated the impacts of motorized watercraft on wetlands, both natural and constructed. The amount of boat wake energy affecting a given shoreline is a function of size, speed, and frequency of vessel traffic. Highly traveled waterways are more likely to experience boat wake-induced shoreline erosion than less frequently traveled waterways (Bilkovic et al. 2017).

In another study, the US Army Corps of Engineers (USACE) assessed the function of fringe wetlands and found that any marsh of a given size and roughness may be highly effective at attenuating short-period, low-energy waves such as those resulting from wind chop or boat traffic surges (Shafer and Yozzo 1998). The USACE report recommended conducting a functional assessment prior to implementation of a project and modeling post-project conditions to inform project design. The report advised that with the proper technical inputs and effective post-condition modeling, an effective wetland can be designed to attenuate wake and support the required rates of sediment deposition (Shafer and Yozzo 1998).

Wetlands both natural and created can attenuate waves under certain settings, as also demonstrated in Chesapeake Bay. Research in the Chesapeake Bay culminated in the following recommendations to manage potential boat wake and impacts to sensitive natural resources (Bilkovic et al. 2017):

- Develop predictive models to quantify the relative contribution of boat wake-induced erosion to overall shoreline erosion, which informs water quality, habitat restoration, and shoreline protection management strategies;
- Collect data necessary to identify shorelines vulnerable to erosion from boating, and to calibrate and validate predictive models. Data considerations include recreational boating usage patterns, boat generated wave energy and currents, shallow water bathymetry, shoreline slope and vegetation characteristics, suspended sediment concentration as a measure of potential erosion, and shoreline erosion rates; and
- Consider boat wake-induced turbidity and erosion when siting restoration activities (e.g., restoration of wetlands or submerged aquatic vegetation).

A third study evaluated the effects of boat wakes and maintained that cumulative erosion accelerated as the number of vessels passing through the study area increased (El Safty and Marsooli 2020). The cumulative erosion after the passage of five vessels was two to three times less than that after the passage of ten vessels. Importantly, the study also showed that regardless of vessel size, *slow moving vessels caused negligible changes in bed elevation, while vessels that move with a higher speed caused a cumulative bed elevation change*, specifically erosion in shallow areas in the vicinity of deep shipping channels.

RECOMMENDATIONS AND CONCLUSION

Great Ecology recommends the De Anza Cove Amendment be revised to state:

“Motorized boating in De Anza Cove should be studied further and only be considered if studies determine impacts to the wetlands can be avoided or mitigated.”

Potential future studies examining boat length, displacement, noise, and speed would inform the relationships among wake size, wake frequency, and impacts such as erosion within Mission Bay, and the resulting potential impacts on wetlands and wetland species. A thorough analysis is necessary to identify appropriate minimization and mitigation measures to reduce impacts and create a sustainable and resilient wetland design.

Great Ecology has seen over and over that the best intentions of environmental projects succeed when they are designed for the actual urban setting in which they will be built – not restricted for a mythical but never-to-be-achieved perfect ecological outcome. Boats and wetlands successfully co-exist and with appropriate engineering controls, signage, and speed restrictions we strongly believe, based on our more than 2 decades of experience, that there is no value in attempting to keep the public from using boats near the small, planned wetlands in the cove.

Great Ecology has never witnessed regulators or other authorities exclude the public and create no boating zones in our coastal wetland projects – and some of our projects have been in existence for nearly two decades with no adverse effects. Furthermore, in no case have we ever seen regulators try to remove the livelihood of a local business. In our experience, waterfront campgrounds such as Campland on the Bay and Mission Bay RV Resort serve as important environmental advocates within a community. The visitors that patronize Campland, and utilize their boats, are the exact people we want to encourage to access the wetlands, operate boats near the wetlands, and teach their children the value of habitats and their restoration. Great Ecology seeks further study and improved design to ensure the co-existence of wetlands and boats can continue.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Kristi Stanbery

Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

I am writing to express my strong opposition to the proposed De Anza Natural Amendment, particularly concerning the significant drawbacks it presents in terms of the loss of valuable amenities and recreational opportunities for our community.

First and foremost, I am deeply concerned about the potential loss of campsites as outlined in the amendment. Camping is a cherished outdoor activity that fosters a connection with nature and provides families and individuals with the opportunity to unwind and appreciate the great outdoors. Reducing the available acreage for camping could have a detrimental impact on the community's ability to enjoy this recreational pursuit.

Furthermore, the amendment's provision for the elimination of motorized water sports, including the removal of the public boat ramp and the potential displacement of the Mission Bay Boat & Ski Club, is distressing. Motorized boating is a popular and beloved activity that contributes to the vibrancy of our community. Losing these facilities would not only impact campers directly but also diminish the overall appeal of De Anza Cove as a recreational destination.

Equally troubling is the proposal's effect on sporting fields. At a time when our community is growing, it is essential to invest in improved and expanded facilities for youth athletics. The reduction in acreage for these fields, as suggested by the De Anza Natural Amendment, runs counter to the needs of our expanding community and jeopardizes the well-being and development of our youth.

I urge you to reconsider the proposed amendment, taking into account the concerns and interests of the community members who value the current recreational opportunities at De Anza Cove. It is crucial that any changes made prioritize the preservation and enhancement of these amenities for the benefit of current and future generations.

Thank you for your attention to this matter. I hope that, through thoughtful reconsideration, we can arrive at a solution that maintains and enhances the recreational experiences available in our community.

Thank you,

Jody Rens

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today need to be preserved to ensure a more equitable coastline for future generations and for the continued pleasure and use by locals and out of town visitors who desire a safe, fun outdoor experience for adults and kids alike. Sure, a small portion of the Campland visitors may be able to afford an Air BnB at the beach but it doesn't afford safe bicycling for kids as the boardwalk is too crowded and the area is full of bars catering to 20-somethings as is the beach. Hotels and rentals also don't create an environment of like-minded kids, parents and adults for social gathering unique to that offered at Campland. Campland levels the playing field and those who have been going there for decades will have NO other place to go for such an awesome experience if campsites are reduced.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, including local boat owners, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we implore the City to adopt the alternative that preserves the only available outdoor camping and recreational opportunities of this unique nature in the area, and to study the boating impacts for visitors and locals before limiting the use in Northeast Mission Bay.

The small beach town feel of a friendly community in Pacific Beach has already been so severely altered with expensive, unaffordable housing, that I feel it is imperative to maintain the wonderful enclave for families and boating enthusiasts that is offered at Northeast Mission Bay.

Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

With the expectation of increased population to PB. MB, Bay Park and all over San Diego, and the reduction of vehicle use, it is important to provide and keep recreation close to neighborhoods and tourist areas and not reduce it.

"Research indicates that we are cognitively stimulated, more creative, energized, and relaxed with regular recreation, especially when we're out in nature. Although we are inherently more physical when outside, we also benefit from improved psychosocial health enjoying nature. In a controlled trial which compared health outcomes of prescribed activity programs, participants who engaged in activity outdoors reported significantly lower rates of depression and anxiety than people who exercised indoors."

Please adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

William Craig

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Roman Beltran

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

CRAIG NARTA

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Steven Siqueland

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

I deleted all the pre-written text because I wanted to tell you how I feel about Campland and the Mission Bay area.

I have been camping at Campland since I was 4 years old. I am now 56 years old. It is hard to believe. My whole family camps there, as do many of our friends and their families.

Camping is fun and family oriented. So many things these days aren't !! Our younger generation needs more activities like this, not less. People like me (old) lol sure don't need this taken away from them in any matter.

This struggle has been going on for years. Can you imagine the time and money that has been spent trying to do away with or lessen Campland and the Mission Bay activities.

Please stop this nonsense and leave our Campland and Mission Bay activities alone !!

Thank you,

Jeffrey Mahle

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Brian Hunt

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Michele Winters

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Carol Martin

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

As an Environmentalist who wants to protect wildlife and promote environmentally sound solutions, I am also a teacher. I have found that giving people the opportunity to experience nature and fall in love with it is the best way to foster an appreciation for it and want to protect it. Camping is the only affordable way for people with less means to have the opportunity to get these experiences. Please protect the only thing available to low-income people in San Diego. I would be inclined to support this if it was rich people who lose out. But no, never them. They have everything. The loss of Campland would be a huge detriment to the City of San Diego!! The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

I live in Murrieta, California. I have been to Campland many times, both with my children and grandchildren, or just as a great escape for my husband and me. The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Sarah Suiter

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

As a person who regular visits San Diego for vacations and wants to bring boys clubs to the area for camping trips. My biggest concern is the availability and amount of family-friendly, affordable camping and recreation opportunities in Mission Bay. Mission Bay is the perfect location to RV or camp close to Balboa Park and San Diego's many top tourist destinations. Camping near to Balboa Park cuts down tourist drive times, traffic stress, and emissions. For us in particular, financial and health reasons prevent us from staying in hotels - they are just not an option as we have to cook all our own food from scratch. So if we cannot camp and RV conveniently and for low cost in San Diego, then we will have to visit somewhere else.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed and in fact, I would support more RV and camp sites. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors. The experience could be further supplemented with hiking or walking areas to enjoy the newly restored environment. Fees on using those camp and RV sites could even be used to supplement environmental efforts.

I think retaining some sport fields and park-like areas for non-camping community members is also ideal so that everyone can enjoy nature and do activities that are not damaging to the environment.

However, unlike many others, I completely support a removal of water sport activities and boat access in this area. I feel those activities are the most damaging to the environment and should no longer be an option.

Thank you,

Rebecca Holmes

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Mark Gaddis

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Cynthia Lockie

As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal environmental health, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

Trust me, Campland on the Bay has a negligible impact on climate change and the environment. As soon as China and India and many other countries start taking this issue seriously, then we can start straining out gnats like CL on the Bay.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

My family has been enjoying the camping on Mission Bay for the last 20 years, it has become a tradition with both my kids and grandkids. I think it is egregious that the city would want to take this away from families. Our children and grandchildren learn an appreciation for the beach and the marsh there at Mission Bay by visiting there each year. Besides which, I think the city just wants the land so that 5 years from now they can build hotels or condos on that prime property. Shame on all the politicians and their greed.

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Ait Lahcen

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Dean Johnson

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Marcos Casillas

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

There are a very limited number of places families can camp near the ocean or Mission Bay at present. The bay is a fabulous protected spot for doing that. Giving the bay back to the Earth is good for the earth but leaves our people even less alternatives for camping and recreation. How necessary is it to take the recreational use of the bay away? What is accomplished? Is it vitally important to increase the population of mosquitoes and birds in this one location?

Going ahead with the present proposed plan will be a huge loss for the people who live here. I would not want that on my conscience.

Thank you,

Gary Palmer

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Marco Ramos

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

De Anza Peninsula is a jewel for San Diego. Let's not squander its unique attraction for the dubious value of adding a small amount of marshland to an existing already large marsh.

Campland's proven 50-plus year history shows how they have been good stewards of this precious resource.

Jacob Gelfand's Campland organization has recently transformed De Anza from an unusable eye-sore into affordable waterfront access enjoyed by many. San Diego continues to benefit from this good neighbor.

San Diego is lucky to have De Anza and the Campland organization. They are magnets for campers who bring revenue and jobs to the City.

"Mission Bay Park Master Plan supports that this Regional Park serves all of the residents of San Diego as well as visitors".

And further states

"land use recommendations include regional recreation needs, including Guest Housing (camping facilities and recreational vehicles)".

"Leaseholds that support the Mission Bay recreation use"

are already in place with Campland and Mission Bay RV Resort.

Keep them BOTH. It's a no-brainer, good business, win-win decision.

.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Joanne Whitman

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

We are retired pharmacists who worked in San Diego. We have spent 2-3 months at Campland every off season since we retired in 2007. We see so many families enjoying the camping experience in RVs and tents. Campland is extremely well managed, safe and secure. We support continuing the current facility and expanding to De Anza Cove.

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Nancy Haupt

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and studies boating impacts before limiting this use in Northeast Mission Bay.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

Hello, as a Military family we used the camping facilities at Mission Bay RV and Campland by the Bay because they are affordable.

We need MORE campsites, not less.

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

Thank you,

Shelly Fulton

Item 1: De Anza Amendment to the Mission Bay Park Master Plan

Dear Planning Commissioners,

We come to CampLand 1-2 times a year, and spend anywhere from 7-14 days in the area where we frequent many of the cities restaurants, shopping and other amenities and attractions!

The family-friendly, affordable camping and recreation opportunities in northeast Mission Bay today should be preserved to ensure a more equitable coastline for future generations.

While the De Anza Natural Plan is the best option of those studied, all of the alternatives under consideration would significantly reduce the site's existing 970+ campsites at a time when affordable coastal access is needed more than ever. Please do not allow any further camping reductions beyond what has already been proposed. As an environmentally friendly use, camping complements wetlands and fosters a love of nature and the outdoors, and we cannot afford to make our coastline less accessible.

To further ensure coastal equity, the City should study best practices for motorized boating that protect the environment instead of limiting this use. Public recreational areas should be inclusive, providing equal access to all types of visitors, regardless of the level of accommodation they can afford. The City needs to study the issue further, and continued discussion is necessary to ensure the community is fully informed and can provide input on potential impacts.

For these reasons, we continue to call on the City to adopt the alternative that preserves the most outdoor camping and recreational opportunities, and study boating impacts before limiting this use in Northeast Mission Bay.

We support the waterfront campground 100% !!
