Project/Site: Southwest Village Specific Plan Project		City/Count	y: San Dieg	0	Sampling Da	ate: 4/27/23
Applicant/Owner: Tri Point Homes				State: CA	Sampling Po	oint: 79-UPL
Investigator(s): Andrew Smisek		Section,	Γownship, R	Range: Section 31, T18	S R01W	
Landform (hillslope, terrace, etc.): mesa		Local reli	ef (concave,	, convex, none): none		Slope (%): 0
Subregion (LRR): C	Lat:	32.55848		Long: -117.01888	Da	atum: NAD83
Soil Map Unit Name: Huerhuero loam, 2-9% slopes				NWI classifica	ation: none	
Are climatic / hydrologic conditions on the site typical	for this time of	f year? Yes	X No	o(If no, explain	in Remarks.)	
Are Vegetation, Soil, or Hydrology	signifi	icantly disturbe	ed?	Are "Normal Circumstan	nces" present?	res X No
Are Vegetation Soil , or Hydrology				(If needed, explain any a	answers in Rema	arks.)
SUMMARY OF FINDINGS – Attach site map				s, transects, importa	ant features, e	etc.
Hydrophytic Vegetation Present? Yes	No X					
Hydric Soil Present? Yes	No X		e Sampled	Yes	No	X
Wetland Hydrology Present? Yes	No X	With	in a Wetlan	a? —		
Remarks: Paired sample point for feature #79. Upla	and sample poi	int paired to 79)-W. This sa	mpled area is not a wetl	and.	
VEGETATION – Use scientific names of plan	nts.

Procedure for identifying and characterizing the flood						
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and						
vegetation present at the site.						
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.						
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.						
a) Record the floodplain unit and GPS position.						
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the						
floodplain unit. c) Identify any indicators present at the location.						
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.						
5. Identify the OHWM and record the indicators. Record the OHWM position via:

0 % of reach with surface flow									
% of reach with sub-surface or surface flow									
0 # of isolated pools									

1. Hydrophytic plant species

Record up to 5 hydrophytic plant species (FACW or OBL in the **Arid West** regional wetland plant list) within the assessment area: **within the channel or up to one half-channel width**. Explain in notes if species has an odd distribution (e.g., covers less than 2% of assessment area, long-lived species solely represented by seedlings, or long-lived species solely represented by specimens in decline), or if there is uncertainty about the identification. Enter photo ID, or check if photo is taken.

Check if applicable:	☐ No vegetation in assessment area		☑ No hydrophytes in assessment are		
Species		Odd distribution?	Notes	Photo ID	
Notes on hydrophytic vegetati	ion:				

2 and 3. Aquatic invertebrates

2. How many aquatic invertebrates are quantified in a 15-minut search?	and Trichoptera)?	3. Is there evidence of aquatic stages of EPT (Ephemeroptera, Plecoptera and Trichoptera)? Yes No		
Number of individuals quantified: □ 1 to 19 quantified: □ 20 + (Do not count mosquitos)				
Photo ID:	Ephemeroptera larva Image credit: <u>Dieter Tracey</u>	Plecoptera larva <u>Tracey Saxby</u>	Trichoptera larva <u>Tracey Saxby</u>	

Notes on aquatic invertebrates:

4. Algal Cover

Are algae found on the	✓ Not detected	Notes on algae cover:	Photo ID:
stream bed?	☐ Yes, < 10% cover		
☐ Check if <u>all</u> observed algae appear to be deposited from an upstream source.	☐ Yes, ≥ 10% (check Yes in single indicator below)		

5. Are single indicators observed?

Indicator	Present	Notes	Photo ID
Fish	□ Yes		
	☑ No, no fish		
	☐ No, only non-native mosquitofish		
Algae cover ≥ 10%	□ Yes		
	☑ No		

Supplemental information	E.g., aquatic or semi-aquation	amphibians, snakes,	or turtles; iron-oxidizing	bacteria and
fungi; etc.

				BRYOPHYTES			
SPHAEROCARPACEAE							
Geothallus tuberosus Campbell's liverwort	-/-	1B.1	_	Ephemeral liverwort; mesic coastal sage scrub, vernal pools; elevation below 2,000 feet. California endemic. Known from San Diego and Riverside counties. Recently reported from Camp Pendleton, likely extirpated elsewhere in urbanized San Diego County.	No	Low	This species was not observed during focused rare plant surveys. Although natural vernal pool habitat was observed within the project parcels, many of the vernal pools undergo frequent disturbance thereby making the potential for this species to occur on-site as low.
Sphaerocarpos drewei bottle liverwort	_/-	1B.1	_	Ephemeral liverwort; openings in chaparral and coastal sage scrub; elevation 300–2,000 feet. California endemic. Known from San Diego and Riverside counties.	No	Low	This species was not observed during focused rare plant surveys. The site contains very few suitably mesic areas which are preferred by this species. Any potentially suitable locales appear to be disturbed by vehicular traffic and/or invaded by non-native plant species, thereby making the potential for this species to occur on-site as low.
		1		LYCOPODS			
SELAGINELLACEAE SPIKE-MOSS FAMILY							
Selaginella cinerascens ashy spike-moss	-/-	4.1	_	Perennial rhizomatous herb; chaparral, coastal scrub; elevation 65–2,100 feet.	Yes	Observed	This species was observed on undisturbed mesa tops within maritime succulent scrub habitat, scattered throughout the project-level areas, including the vernal pool restoration area.

		-	- 9-	ANGIOSPERMS: DICOTS			
CHENOPODIACEAE GOOSEFOOT FAMILY							
Aphanisma blitoides aphanisma	-/-	1B.2	NE, MSCP	Annual herb; coastal bluff scrub, coastal sage scrub; sandy soils; blooms March–June; elevation less than 1,000 feet.	No	Low	Surveys were conducted during times when this species would have been apparent, if present, and results were negative. However, due to the presence of coastal sage scrub on-site, there is a low potential for the species to occur.
Atriplex pacifica south coast saltscale	-/-	1B.2	-	Annual herb; coastal bluff scrub, coastal dunes, coastal sage scrub, playas; blooms March–October; elevation less than 500 feet.	Yes	Observed	This species was observed within the disturbed areas of the Beyer Boulevard alignment and on mesa top of the southwestern edge of the project-level analysis area within disturbed maritime succulent scrub and nonnative grassland habitat.
	GLORY FAMILY	1	1			T	
Dichondra occidentalis western dichondra	-/-	4.2	_	Perennial herb; chaparral, cismontane woodland, coastal sage scrub, where it often grows hidden beneath shrubs; blooms January-July; elevation less than 1,640 feet.	Yes	High	This species was observed within the maritime succulent scrub within Phase 1b within the Beyer Boulevard alignment.

APIACEAE CARROT FAMILY Eryngium aristulatum var. parishii San Diego button-celery	CE/FE	1B.1	NE, MSCP	Biennial/perennial herb; vernal pools, mesic areas of coastal sage scrub and grasslands, blooms April–June; elevation less than 2,000 feet. Known from San Diego and Riverside counties. Additional populations occur in Baja California, Mexico.	Yes	Observed	This species was observed within one vernal pool on the mesa top within Phase 1b (see Figure 26.3) and within the non-native grassland, outside of a vernal pool, within the southern vernal pool restoration area. This species is also documented in the program-level area through Vernal Pool Habitat Conservation Plan (VPHCP) during City of San Diego mapping efforts.
ASTERACEAE SUNFLOWE Ambrosia chenopodiifolia San Diego bur-sage	R FAMILY -/-	2B.1	_	Perennial shrub; coastal sage scrub; cobbly loam soils; blooms April–June; elevation 150–500 feet. Known in California from fewer than 15 occurrences all of which are in San Diego County. Additional populations in Baja California, Mexico.	Yes	Observed	This species was observed throughout the project-level analysis area within maritime succulent scrub and Diegan coastal sage scrub habitats, as well as within disturbed areas such as roads and trails on site.

Sensitiv	State/	Observed C	n with the Fote	ential for Occurrence within the Program-leve	and Project-N	Potential to			
Species' <i>Scientific Name</i> Common Name	Federal Status	CNPS Rank	City of San Diego	Habitat/Preference/ Requirements/ Blooming Period	Detected On-Site?	Occur On-Site?	Determination of Occurrence Potential		
Ambrosia pumila San Diego ambrosia	-/FE	1B.1	NE, MSCP	Perennial herb (rhizomatous); chaparral, coastal sage scrub, valley and foothill grasslands, creek beds, vernal pools, often in disturbed areas; blooms May—September; elevation less than 1,400 feet. Many occurrences extirpated in San Diego County. Potential habitat in San Diego County is along creek beds, seasonally dry drainages, and floodplains along the edge of willow woodland, in riverwash or sandy alluvial soils from the San Luis Rey River south to the Sweetwater River (Beauchamp 1986).	No	Low	No individuals were observed within the project-level analysis survey area during the rare plant surveys. However, there is a low potential to occur within the survey area due to the presence of coastal sage scrub, non-native grassland, and vernal pools on-site.		
Baccharis vanessae Encinitas baccharis [=Encinitas coyote brush]	CE/FT	1B.1	NE, MSCP	Perennial deciduous shrub; chaparral; maritime; sandstone; blooms August– November; elevation less than 2,500 feet. San Diego County endemic. Known from fewer than 20 occurrences. Extirpated from Encinitas area.	No	Low	This species is not expected to occur as the project-level analysis area is out of the species' known range, and no individuals were observed within the survey area during rare plant and other field surveys.		
Bahiopsis [=Viguiera] laciniata San Diego viguiera [=San Diego County viguiera]	-/-	4.3	-	Perennial shrub; chaparral, coastal sage scrub; blooms February–June; elevation less than 2,500 feet.	Yes	Observed	This species was observed in Phase 1a and 1b, 2a and 2b. Individuals occur both scattered and in groups within maritime succulent scrub and Diegan coastal sage scrub habitats.

Deinandra [=Hemizonia] conjugens Otay tarplant	CE/FT	1B.1	NE, MSCP	Annual herb; clayey soils of coastal scrub openings, valley and foothill grassland; blooms April–June, elevation less than 1,000 feet.	Yes	Observed	This species was observed within the maritime succulent scrub and Diegan coastal sage scrub within the Beyer Boulevard alignment Additionally, this species has been known to occur within a 1-mile buffer of the survey area (CDFW 2019a).
Holocarpha virgata ssp. elongata graceful tarplant	-/-	4.2	_	Annual herb; coastal sage scrub, cismontane woodland, valley and foothill grasslands, chaparral; blooms July–November; elevation 200–3,600 feet. California endemic. Known from San Diego, Riverside, and Orange counties.	No	Moderate	This species was not observed, but has a moderate potential to occur within the survey area due to the presence of coastal sage scrub and non-native grassland on-site.
Isocoma menziesii var. decumbens decumbent goldenbush	-/-	1B.2	-	Perennial shrub; chaparral, coastal sage scrub; sandy soils, often in disturbed areas; blooms April–November; elevation less than 500 feet.	Yes	Observed	This species was observed within Phase 1a. Two individuals were noted within the Diegan coastal sage scrub habitat.
Microseris douglasii ssp. platycarpha small-flowered microseris	-/-	4.2	-	Annual herb; Clay lenses on perennial grasslands, vernal pools, openings in coastal sage scrub; blooms March–May; elevation 50–3,500 feet.	No	Moderate	This species was not observed, but has a moderate potential to occur within the survey area due to the presence of non-native grassland on-site.

FABACEAE LEGUME FAMILY Astragalus tener var. titi coastal dunes milkvetch	CE/FE	1B.1	NE, MSCP	Annual herb; coastal bluff scrub, coastal dunes, sandy soils, mesic coastal prairie; blooms March–May; elevation less than 200 feet. California endemic. Known from fewer than 10 occurrences in San Diego (presumed extirpated), Los Angeles (presumed extirpated), and Monterey counties.	No	Low	This species was not observed during field surveys, and not expected to occur within the survey area due to the lack of suitable habitats.
Acanthomintha ilicifolia San Diego thornmint	CE/FT	1B.1	NE, MSCP	Annual herb; chaparral, coastal sage scrub, and grasslands; friable or broken clay soils; blooms April–June; elevation less than 3,200 feet.	No	Low	This species was not observed on-site; however, there is a low potential to occur due to the presence of clay soils, non-native grassland, and Diegan coastal sage scrub habitats.
Pogogyne abramsii San Diego mesa mint	CE/FE	1B.1	NE, MSCP	Annual herb; vernal pools; blooms April– July; elevation 300–700 feet. San Diego County endemic.	No	Low	This species was not observed during focused rare plant surveys. Although natural vernal pool habitat was observed within the project parcels, many of the vernal pools on-site undergo frequent disturbance thereby making the potential for this species to occur as low.

Western burrowing owl (burrow sites) Athene cunicularia	SC, MSCP	Grassland, agricultural land, coastal dunes. Require rodent burrows. Declining resident.	Yes	Moderate	This species was incidentally observed within the coastal sage scrub within the northern portion of the project-level analysis area during a Quino checkerspot butterfly survey. Suitable habitat occurs within VTM North and VTM South; however, this species was not detected during protocol burrowing owl breeding season surveys conducted in 2018 or 2020. This species has been known to occur within one mile of the survey area (CDFW 2022d).
LANIIDAE SHRIKES					
Loggerhead shrike Lanius ludovicianus	CSC	Agricultural areas, parks, ponds, rivers. Rare fall and spring migrant, winter visitor, summer resident. Breeding rare.	No	Moderate	This species was not observed during surveys; however, there was a recent observation posted to a public citizen science mobile application within the project-level survey area (I-Naturalist) and there is suitable habitat present to support the species.

Attachment 8 Sensitive Wildlife Species Occurring or with the Potential to Occur within the Program-level and Project-level Analysis Areas					
Species' Common Name/ Scientific Name VIREONIDAE VIREOS	Listing Status	Habitat Preference/ Requirements	Detected On-Site?	Potential to Occur On-Site?	Basis for Determination of Occurrence Potential
Least Bell's vireo (nesting) Vireo bellii pusillus	FE, CE, MSCP	Willow riparian woodlands. Summer resident.	Yes	Observed	by vocalizations within the riparian habitat on the western end of the proposed Beyer Boulevard extension. This species was also detected by vocalizations within the southeastern portion of the mitigation lands within mule fat scrub. This species has also been known to occur within one mile of the survey area (CDFW 2022e).
ALAUDIDAE LARKS			T	Γ	
California horned lark Eremophila alpestris actia	WL	Sandy shores, mesas, disturbed areas, grasslands, agricultural lands, sparse creosote bush scrub.	Yes	Observed	This species was observed several times on-site during surveys including in VTM North in non-native grassland habitat and within disturbed lands in the mitigation lands.

TROGLODYTIDAE WRENS						
Coastal cactus wren Campylorhynchus brunneicapillus sandiegensis	CSC, MSCP	Maritime succulent scrub, coastal sage scrub with Opuntia thickets. Rare localized resident.	No	High	This species was not observed but has a high potential to occur within the maritime succulent scrub habitat located at the western end of Beyer Boulevard. Coastal cactus wren was detected within the western end of the proposed Beyer Boulevard in 2017 (RECON 2022) and due to the high suitability of the habitat on the west end of the project and the past detections, this species is assumed present. This species has also been known to occur within one mile of the survey area (CDFW 2022d).	

Sansitiva Wildlifa Spac	ies Occurring or with	Attachment 8 the Potential to Occur within the	Program-level	and Project-leve	al Analysis Areas
Species' Common Name/ Scientific Name SYLVIIDAE GNATCATCHER	Listing Status	Habitat Preference/ Requirements	Detected On-Site?	Potential to Occur On-Site?	Basis for Determination of Occurrence Potential
Coastal California gnatcatcher Polioptila californica californica	FT, CSC, MSCP	Coastal sage scrub, maritime succulent scrub. Resident.	Yes	Observed	This species was observed in Diegan coastal sage scrub habitat during protocol surveys performed in VTM North and the mitigation lands, and incidental sightings during general vegetation surveys along Beyer Boulevard. This species has also been known to occur within one mile of the survey area (CDFW 2022e).
PARULIDAE WOOD WARBL	ERS				
Yellow warbler (nesting) Setophaga [=Dendroica] petechia	CSC	Breeding restricted to riparian woodland. Spring and fall migrant, localized summer resident, rare winter visitor.	Yes (within mitigation lands)	Observed	A yellow warbler was detected by vocalizations along the eastern edge of the mitigation lands within the mule fat scrub habitat. There is a high potential for this species to nest within the riparian vegetation within the western end of the Beyer Boulevard extension.

Attachment 8 Sensitive Wildlife Species Occurring or with the Potential to Occur within the Program-level and Project-level Analysis Areas					
Species' Common Name/ Scientific Name Yellow-breasted chat (nesting) Icteria virens	Listing Status CSC	Habitat Preference/ Requirements Dense riparian woodland. Localized summer resident.	Detected On-Site? Yes	Potential to Occur On-Site? Observed	Basis for Determination of Occurrence Potential A yellow-breasted chat was observed within the western end of the proposed Beyer Boulevard extension and detected by vocalizations along the eastern edge of the mitigation lands within the
EMBERIZIDAE EMBERIZIDS					mule fat scrub habitat.
Southern California rufous-crowned sparrow Aimophila ruficeps canescens	WL, MSCP	Coastal sage scrub, chaparral, grassland. Resident.	Yes	Observed	This species was observed several times on-site during field surveys in VTM North, in Diegan coastal sage scrub habitat within VTM South, west of VTM South, and in non-native grassland habitat within the northern vernal pool restoration area parcel. This species has been known to occur within one mile of the survey area (CDFW 2022d).
Grasshopper sparrow (nesting) Ammodramus savannarum	CSC	Tall grass areas. Localized summer resident, rare in winter.	Yes	Observed	Grasshopper sparrows were detected by vocalizations at the northern section of VTM North in Diegan coastal sage scrub habitat and within the mitigation lands.

				Potential to	
Species' Common Name/	Listing	Habitat Preference/	Detected	Occur	Basis for Determination of
Scientific Name	Status	Requirements	On-Site?	On-Site?	Occurrence Potential
Bell's sage sparrow Artemisiospiza [=Amphispiza] belli belli	WL	Chaparral, coastal sage scrub. Localized resident.	No	Moderate	This species was not observed but has a moderate potential to occur in the Diegan coastal sage scrub and maritime succulent scrub areas within the survey area. This species has been known to occur within one mile of the survey area (CDFW 2022d).
	MAMM	IALS (Nomenclature from Bradle	y et al. (2014)		
VESPERTILIONIDAE VESPER BATS					
Western red bat Lasiurus blossevillii	CSC	Generally associated with riparian habitats, especially willows, cottonwoods, and sycamores	No	Low within mesa top areas associated with project and program level areas. Moderate within mitigation lands.	This species was not observed within the project area and not expected to due to the absence of riparian habitat. There is moderate potential for the western red bat to occur within the riparian habitats within the mitigation lands. This species has also been known to occur within one mile of the survey area (CDFW 2022d).

Attachment 8 Sensitive Wildlife Species Occurring or with the Potential to Occur within the Program-level and Project-level Analysis Areas					
Sensitive Wildlife Species Oct	curring or with	the Foteridal to Occur within th	le Frogram-lever	Potential to	Allalysis Aleas
Species' Common Name/ Scientific Name	Listing Status	Habitat Preference/ Requirements	Detected On-Site?	Occur On-Site?	Basis for Determination of Occurrence Potential
Townsend's [=western] big-eared bat Corynorhinus townsendii	CSC	Caves, mines, buildings. Found in a variety of habitats, arid and mesic. Individual or colonial. Extremely sensitive to disturbance.	No	Low	This species was not observed and has a low potential to occur due to a few old homesteads remaining on site. However, minimal foraging habitat is present on site that would be expected to attract this species. Foraging is more likely to occur in longer-standing water that attracts a high density of moths and other invertebrates. This species has been known to occur within one mile of the survey area (CDFW 2022d).
MURIDAE OLD WORLD MICE &	RATS (I)		<u> </u>		
San Diego desert woodrat Neotoma lepida intermedia	CSC	Coastal sage scrub and chaparral.	Yes	Observed	The San Diego desert woodrat and middens were observed in two separate locations during surveys, including along the eastern edge of VTM South in non-native grassland habitat and in the mitigation lands to the southeast of the borrow site, within Diegan coastal sage scrub habitat.

CERVIDAE DEER							
Southern mule deer Odocoileus hemionus fuliginata	MSCP	Many habitats.	No	Moderate	Although not observed, the project area and mitigation lands both provide suitable habitat for this species; however, habitat fragmentation has limited this species range. Frequent human disturbance may reduce habitat value, but this species could use the project area for foraging.		

(I) = Introduced species

STATUS CODES

Listed/Proposed

CE = Listed as endangered by the state of California

FE = Listed as endangered by the federal government

FPT = Proposed for listed as threatened by the federal government

FT = Listed as threatened by the federal government

SC = State of California candidate for listing as threatened or endangered

<u>Other</u>

BEPA = Bald and Golden Eagle Protection Act

CFP = California fully protected species

CSC = California Department of Fish and Wildlife species of special concern

WL = California Department of Fish and Wildlife watch list species

MSCP = City and County of San Diego Multiple Species Conservation Program covered species

VPHCP = City of San Diego Vernal Pool Habitat Conservation Plan
