SOIL Sampling Point: 277 Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.) Depth Redox Features Loc² Texture³ (inches) Color (moist) Color (moist) Type¹ \blacksquare \blacksquare \blacksquare lacksquare \blacksquare \blacksquare \blacksquare ¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix. 3Soil Textures: Clay, Silty Clay, Sandy Clay, Loam, Sandy Clay Loam, Sandy Loam, Clay Loam, Silty Clay Loam, Silt Loam, Silt, Loamy Sand, Sand. Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.) Indicators for Problematic Hydric Soils: Histosol (A1) 1 cm Muck (A9) (LRR C) Sandy Redox (S5) Histic Epipedon (A2) Stripped Matrix (S6) 2 cm Muck (A10) (LRR B) Black Histic (A3) Loamy Mucky Mineral (F1) Reduced Vertic (F18) Hydrogen Sulfide (A4) Loamy Gleyed Matrix (F2) Red Parent Material (TF2) Stratified Layers (A5) (LRR C) Depleted Matrix (F3) Other (Explain in Remarks) 1 cm Muck (A9) (LRR D) Redox Dark Surface (F6) Depleted Below Dark Surface (A11) Depleted Dark Surface (F7) Thick Dark Surface (A12) Redox Depressions (F8) Sandy Mucky Mineral (S1) Vernal Pools (F9) ⁴Indicators of hydrophytic vegetation and Sandy Gleyed Matrix (S4) wetland hydrology must be present. Restrictive Layer (if present): Type: Depth (inches): **Hydric Soil Present?** No (Yes (•) Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology **HYDROLOGY** Wetland Hydrology Indicators: Secondary Indicators (2 or more required) Primary Indicators (any one indicator is sufficient) Water Marks (B1) (Riverine) Surface Water (A1) Salt Crust (B11) Sediment Deposits (B2) (Riverine) High Water Table (A2) Biotic Crust (B12) Drift Deposits (B3) (Riverine) Saturation (A3) Aquatic Invertebrates (B13) Drainage Patterns (B10) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2) Water Marks (B1) (Nonriverine) Sediment Deposits (B2) (Nonriverine) Oxidized Rhizospheres along Living Roots (C3) Thin Muck Surface (C7) Drift Deposits (B3) (Nonriverine) Presence of Reduced Iron (C4) Crayfish Burrows (C8) Surface Soil Cracks (B6) Recent Iron Reduction in Plowed Soils (C6) Saturation Visible on Aerial Imagery (C9) Inundation Visible on Aerial Imagery (B7) Other (Explain in Remarks) Shallow Aquitard (D3) FAC-Neutral Test (D5) Water-Stained Leaves (B9) Field Observations: Surface Water Present? Yes (No (Depth (inches):

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and the presence of hydrophytic vegetation indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

Project/Site: Southwest Village Specific Plan Project		City/Coun	ity: San Dieg	0	Sampling Date: 4/12/2021
Applicant/Owner: Tri Point Homes				State: CA	Sampling Point: 388
Investigator(s): Beth Procsal, Andy Smisek		Section,	Township, R	ange: Section 31, T18S F	₹01W
Landform (hillslope, terrace, etc.): mesa top		Local rel	lief (concave,	convex, none): concave	Slope (%): 0-2
Subregion (LRR): C - Mediterranean California	Lat: 3	 32.55591242	87	Long: -117.018719073	Datum: NAD83
Soil Map Unit Name: Huerhuero loam, 2 to 9 percent sl	opes			NWI classification	on: none
Are climatic / hydrologic conditions on the site typical for	this time of	year? Yes	X No	(If no, explain in	Remarks.)
Are Vegetation X, Soil , or Hydrology					es" present? Yes X No
Are Vegetation , Soil X, or Hydrology				(If needed, explain any ans	swers in Remarks.)
SUMMARY OF FINDINGS – Attach site map sh				s, transects, important	t features, etc.
Hydrophytic Vegetation Present? Yes X	No	_ le ti	ne Sampled .	Aroa	
Hydric Soil Present? Yes X	No		nin a Wetlan	YAC)	X No
Wetland Hydrology Present? Yes X	No	_			
Remarks: The majority of the vegetation on the site has meets the wetland criteria. VEGETATION – Use scientific names of plants		urbed due to	past land use	s. This feature was sample	ed during the growing season an
