

February 27, 2025

Mr. David W. Gibson, Executive Officer
California Regional Water Quality Control Board
2375 Northside Drive, Suite 100
San Diego, CA 92108

Subject: 2024 combined Pretreatment Annual Report for the:

- (1) Point Loma Publicly Owned Treatment Works (POTW) Order No. R9-2017-0007 and subsequent amendments; and
- (2) South Bay Water Reclamation Plant Order No. R9-2021-0011

Dear Mr. Gibson:

The City of San Diego (City) Wastewater Pretreatment Program Annual Report is hereby submitted in accordance with the requirements of NPDES Permits Nos. CA0107409 and CA0109045. Because flows from industries tributary to the South Bay Water Reclamation Plant (SBWRP) can be diverted to the Point Loma Wastewater Treatment Plant (PLWTP), this report also includes data for industries tributary to the SBWRP.

The City is committed to protecting public health and the environment through a program of environmental management, which includes source control, wastewater treatment, improved ocean outfalls, and extensive monitoring. One key element of the program is an aggressive pretreatment and pollution prevention program to minimize toxic discharges to the sewerage system. This report includes a summary of pretreatment program activities and accomplishments throughout jurisdictions tributary to the Metropolitan Sewerage System, which includes the PLWTP, the North City Water Reclamation Plant and the SBWRP.

Should you have any questions concerning the information provided herein, or wish to discuss the report in detail, please contact John Steger, Pretreatment Program Manager, at (858) 654-4103.

Sincerely,

Peter S. Vroom, Ph.D.
Deputy Director, Public Utilities Department

JAS/jn

cc: Lisa Celaya, Executive Assistant Director of Public Utilities, City of San Diego
Orelia DeBraal, Assistant Director of Public Utilities, City of San Diego
Joy Newman, Industrial Wastewater Control Program Manager, Public Utilities, City of San Diego

POTW PRETREATMENT ANNUAL REPORT

COVER SHEET

NPDES Permit Holder or Sewer Authority Name: City of San Diego

Report Due Date: March 1, 2025

Period Covered by This Report: January 1, 2024 to December 31, 2024

Period Covered by Previous Report: January 1, 2023 to December 31, 2023

Name of Wastewater Treatment Plant: Point Loma Wastewater Treatment Plant
NPDES Permit Number: CA 01107409

Name of Wastewater Treatment Plant: South Bay Water Reclamation Plant
NPDES Permit Number: CA 0109045

Person to contact concerning information contained in this report:

CHAPTER 1 – EXECUTIVE SUMMARY

1.1 INTRODUCTION

The City of San Diego (City) is committed to protecting public health and the environment through a program of environmental management that includes pollution prevention, industrial pretreatment, chemically enhanced primary waste treatment, improved ocean outfalls, and extensive monitoring. A key element of this program is an aggressive pretreatment and pollution prevention program to minimize toxic discharges to the sewerage system. The City's federally-approved Industrial Wastewater Control Program (IWCP) consists of: (1) an industrial wastewater discharge permit system to establish industrial discharge limits and requirements; (2) facility inspections and unannounced sampling; (3) effective enforcement procedures to deter violations and bring non-compliant dischargers back into compliance with discharge standards and requirements, and; (4) industrial user (IU) guidance and permit conditions designed to encourage pollution prevention and waste minimization.

The IWCP implements an industrial wastewater discharge permit system for the City of San Diego and 11 other Participating Agencies whose sewage is treated by the Point Loma Wastewater Treatment Plant (PLWTP). The South Bay Water Reclamation Plant (SBWRP) is tributary to a subset of this area and because of this the PLWTP and SBWRP pretreatment annual reports have been combined.

1.2 EFFECTIVENESS

- Since 1982, while the average daily wastewater flow into the Metro System has increased by approximately 10%, the total mass of heavy metals entering the Metro collection system and that are subsequently treated at the Publicly Owned Treatment Works (POTWs) has decreased by over 70%.
- Since federal approval and implementation of the IWCP in 1982, average metal loadings contributed by industrial sources have decreased by almost 90%. Whereas in 1982, industrial discharges of metals constituted nearly 27% of all the cadmium, chromium, copper, lead, nickel, and zinc discharged to the collection system, today industrial loadings constitute approximately 5% of the total metals discharged to the system.
- San Diego's sludge qualifies as “exceptionally clean” under the criteria set forth in 40 Code of Federal Regulations (CFR) Part 503, attesting to the effectiveness of the City's IWCP. The “exceptionally clean” designation provides maximum options for beneficial reuse of the sludge.
- There were no pass-through or interference incidents attributed to industrial discharges during the reporting period.

1.3 SUMMARY

- During the reporting period, the IWCP administered 94 Significant Industrial User (SIU) permits, and monitored at 138 sample points covering 117 outfalls. Nine outfalls at nine SIUs were in significant non-compliance (SNC) during the year resulting in a SNC rate of 8% (9 of 117 outfalls). SIUs were in full compliance with discharge standards and requirements (no

pollutant violations) at 75% of the outfalls. Included in the system wide counts above, the 17 SIUs discharging to the SBWRP were monitored at 20 sampling locations constituting 19 outfalls. Of the nine outfalls found to be in SNC, two were dischargers to the SBWRP.

- During the year, in addition to the 94 SIU permits, the IWCP administered 2,079 total control mechanisms, including 35 Class 1 Categorical Industrial User (CIU) permits, 794 Class 2 and 3 permits (of which 59 were SIUs), 139 Hauled Waste permits, and 1,073 Best Management Practice (BMP) discharge authorizations, covering targeted commercial sectors. The IWCP also performed annual inspections to confirm continuing non-regulated status at 38 additional facilities (Class 4C and 4Z) with processes subject to federal pretreatment standards that either do not generate regulated wastestreams, or do not discharge regulated wastestreams to sewer.
- 3,428 inspections and site assessments were conducted; 2,986 unannounced sampling visits were performed; and results from 2,417 industry self-monitoring samples and 2,066 BMP self certifications were received and reviewed to evaluate compliance.
- 737 Notice of Violations (NOVs) were issued to industries for exceeding discharge limits or failing to comply with permit conditions; 237 of these were issued to SIUs. For formal enforcement actions; no Administrative Penalty or Compliance Orders were issued. Non-compliance fees in the amount of \$62,882 were invoiced.
- The annual publication list of SIUs in SNC during the calendar year is based on compliance determinations for the entire year.
- The Annual Point Loma POTW Local Limits Re-evaluation submitted July 1, 2024 confirms that the local limits developed in 1996 remain technically justified and sufficient to protect the PLWTP and the environment.

CHAPTER 2 – IWCP STRUCTURE

2.1 JURISDICTION

The IWCP administers the pretreatment program in the City of San Diego (Map areas 01 – 12) and in 11 participating agencies contributing to the San Diego Metropolitan Sewerage System, including five service areas of the San Diego County Sanitation District (SDCSD). Table 2.1-1 lists the areas served; Figure 2.1-1 shows the areas geographically.

Table 2.1-1 DISCHARGE AREA / AGENCY BY AREA NUMBER			
Area	Description	Area	Description
01	¹ SD: Rancho Bernardo	14	City of Coronado
02	SD: Sorrento Valley & Torrey Pines	15	City of Del Mar
03	SD: Miramar, Mira Mesa, Scripps Ranch	16	City of El Cajon
04	SD: Mission Bay, Pacific Beach, La Jolla	17	City of Imperial Beach
05	SD: Clairemont Mesa	18	City of La Mesa
06	SD: Kearny Mesa	19	City of National City
07	SD: Mission Gorge	20	City of Poway
08	SD: Point Loma, Lindberg Field	21	Santee/Padre Dam Municipal Water District
09	SD: North Downtown	22	City of Lemon Grove
10	SD: East San Diego	32	² SDCSD: Alpine Service Area
11	SD: South Downtown	33	² SDCSD: Lakeside Service Area
12	SD: San Ysidro, Otay Mesa	34	² SDCSD: Spring Valley Service Area
13	City of Chula Vista	35	² SDCSD: Winter Gardens Service Area Maintenance District
		36	² SDCSD: East Otay Mesa Service Area

¹ All flows from the Rancho Bernardo area of San Diego are treated by the Hale Avenue Resource Recovery Facility (Treatment Plant 5), which is owned and operated by the City of Escondido. Except for parts of areas 12, 13, and 36, which are in part diverted to the South Bay Water Reclamation Plant, the remaining areas are tributary to the City's Point Loma Wastewater Treatment Plant. Permitted flows in some areas include significant volumes of construction dewatering and groundwater remediation.

² San Diego County Sanitation District: In July 2011, Areas 32 through 36, previously separate sewer districts, were incorporated into the newly formed San Diego County Sanitation District; the former districts are now "service areas."

2.2 ORGANIZATION

The IWCP is part of the Environmental Monitoring and Technical Services (EMTS) Division of the City of San Diego Public Utilities Department. The IWCP consists of four operational sub-sections: (1) SIU Permits, (2) Enhanced Source Control (ESC) Permits divided into north, central, and south areas, (3) Support Services, and (4) Industrial Wastewater (IW) Sampling. Figure 2.2-1 shows the current organizational chart.

Figure 2.1-1

San Diego Metropolitan Sewerage System Tributary Agency Map

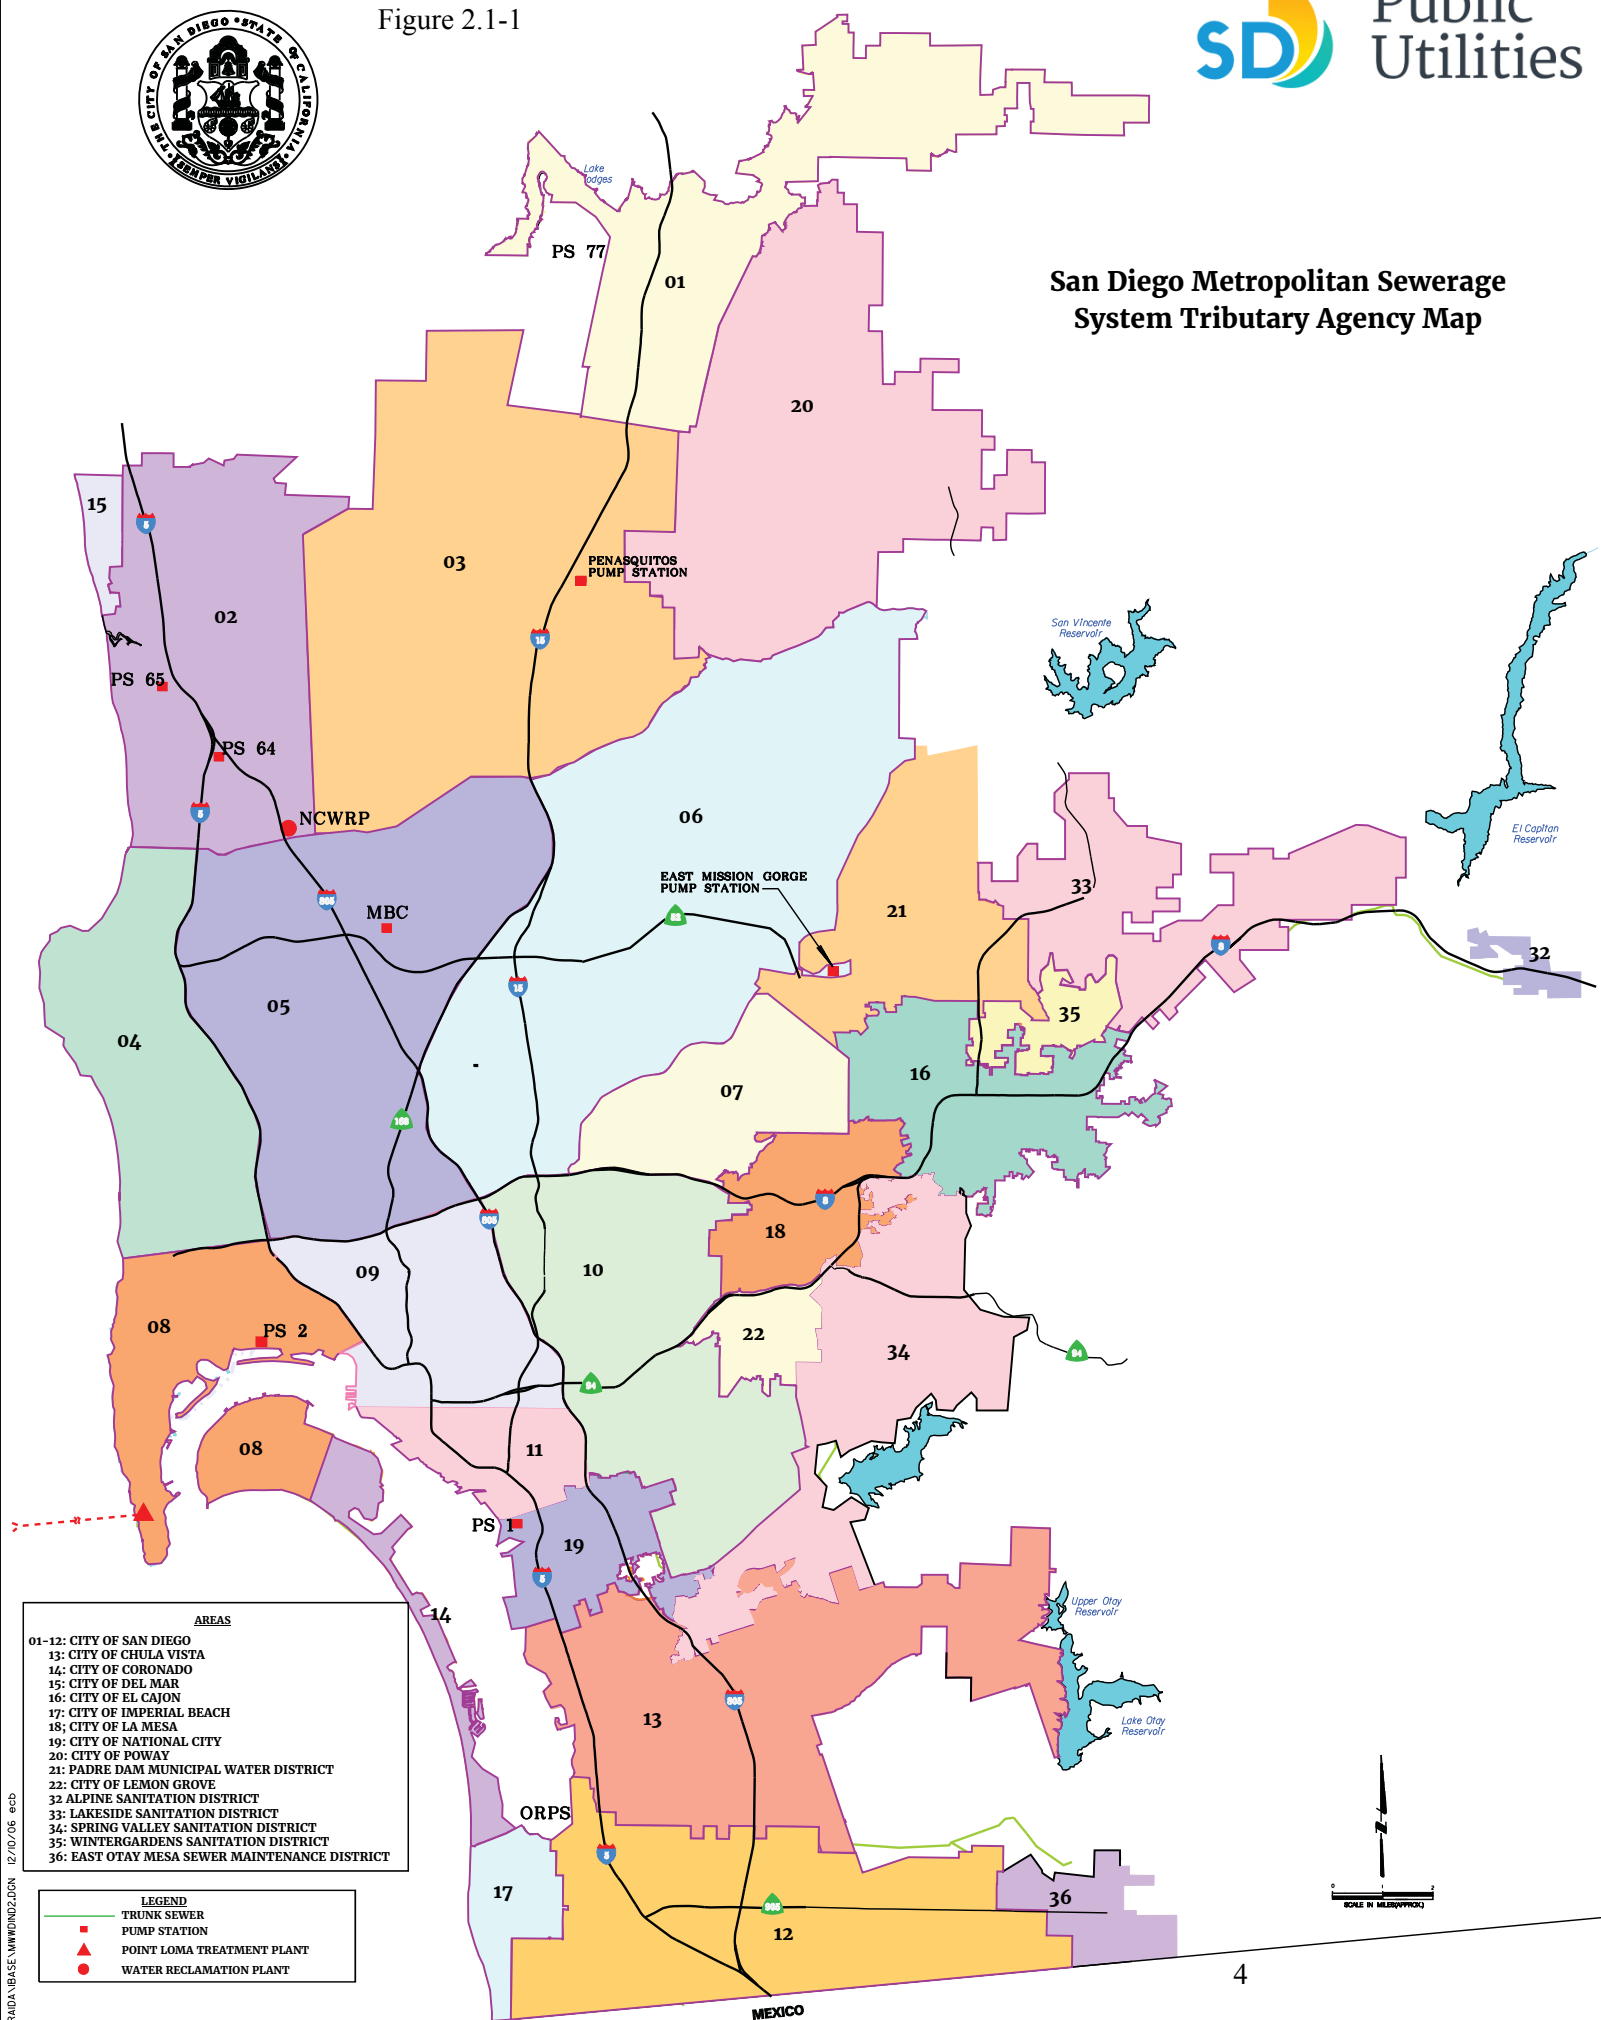

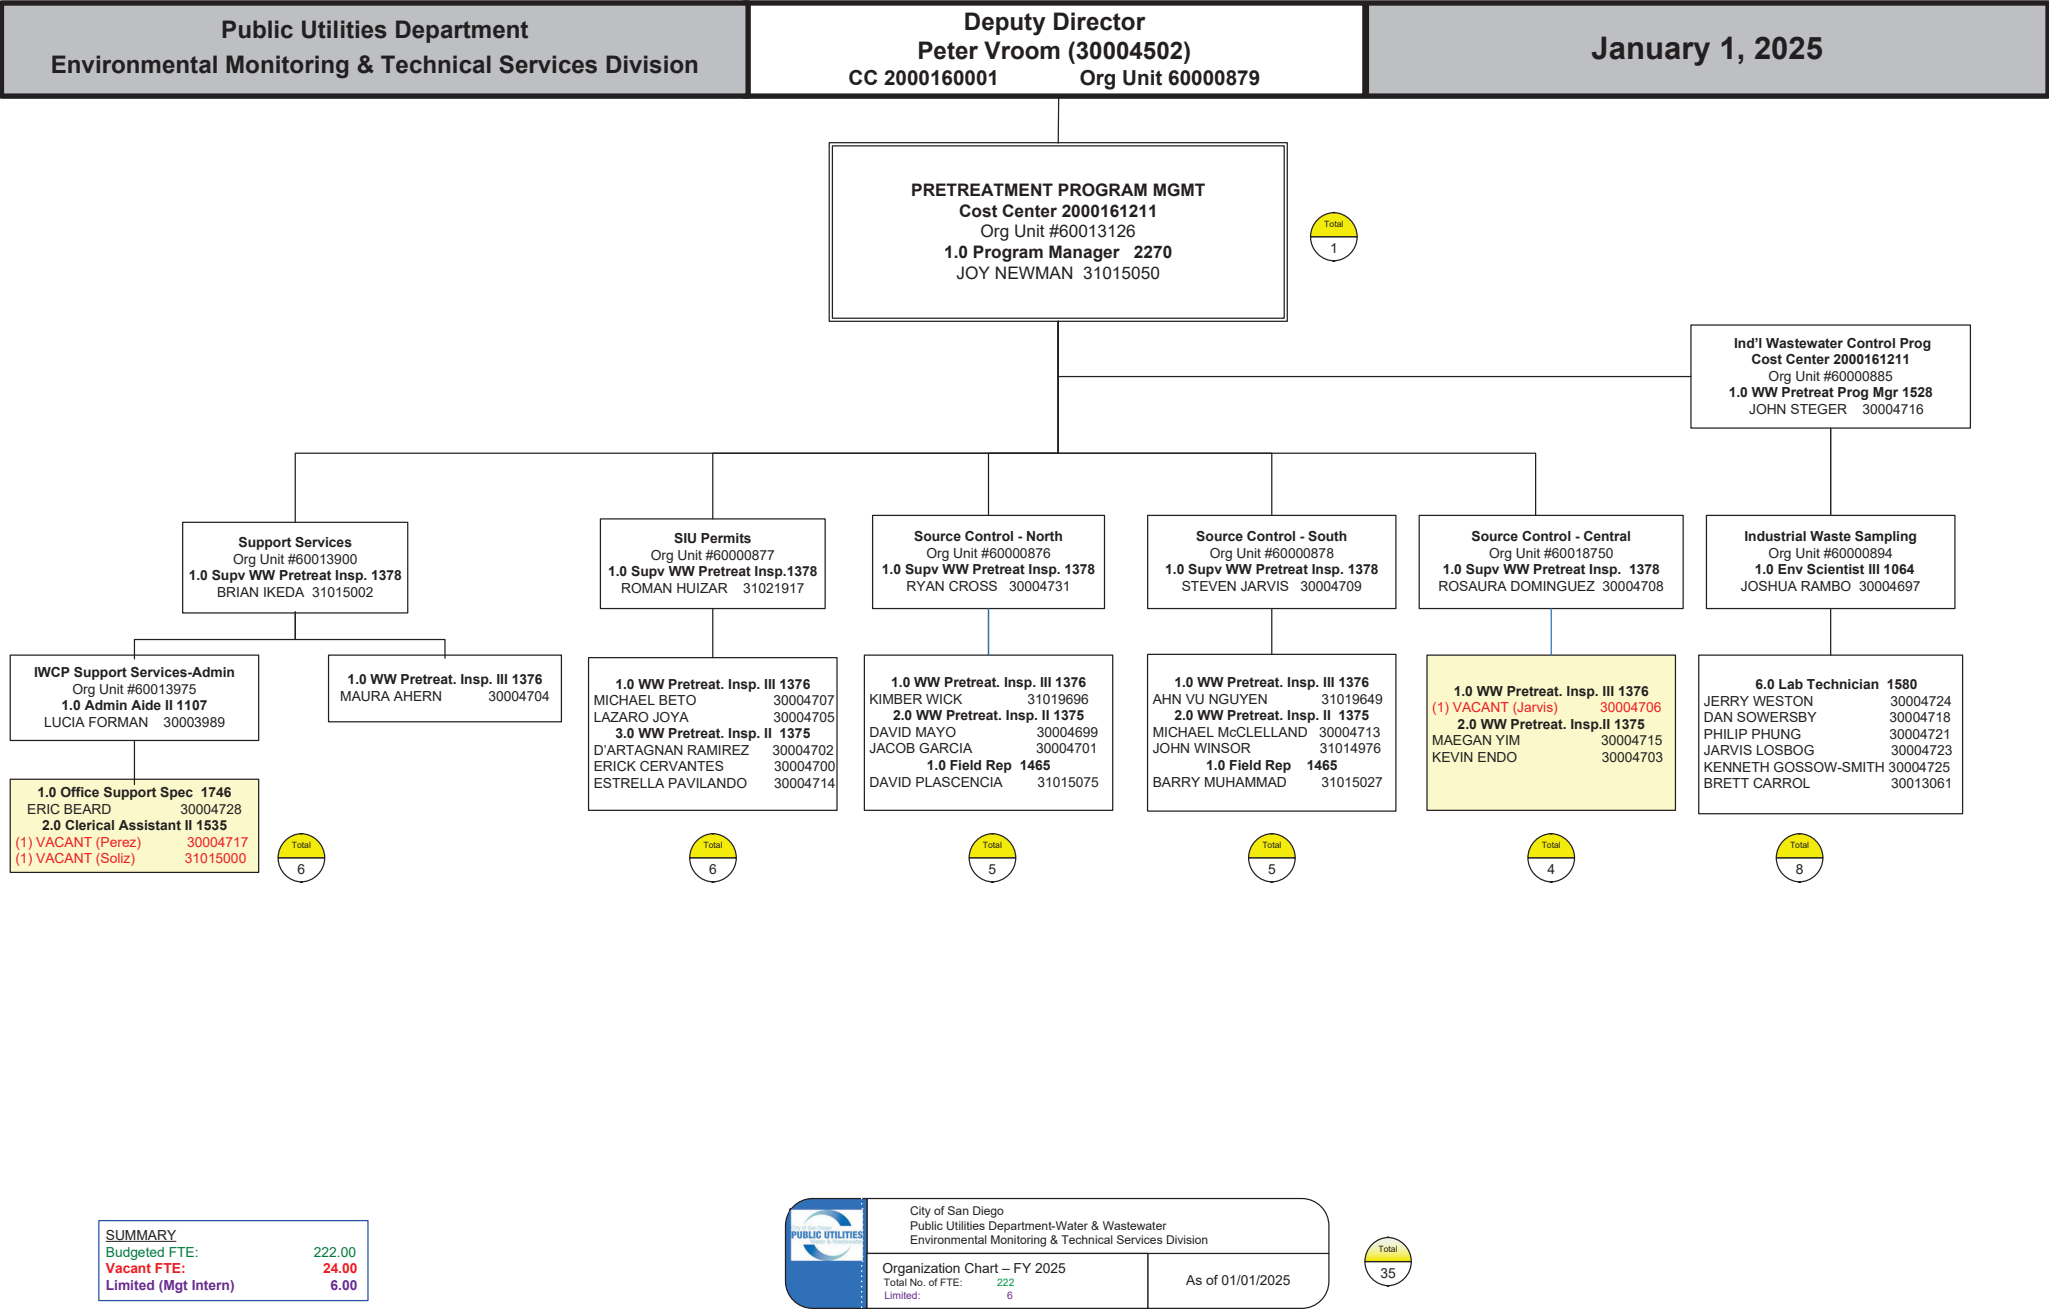

Figure 2.2-1

2.3 PERSONNEL AND BUDGET

The IWCP budgeted positions and monies for fiscal year 2023 are summarized below:

Table 2.3-1 INDUSTRIAL WASTEWATER CONTROL PROGRAM BUDGET		
# of Positions	Budget	
35	Personnel	\$3,999,207
	Supplies	\$70,535
	Contracts, training, IT services, fleet, other expenses	\$856,103
	Capital Outlay	\$91,150
	Total	\$5,016,995

2.4 CHANGES AND DEVELOPMENTS

At the end of 2024, 76% of SIUs and 57% of non-SIUs with self-monitoring were signed up to use the Cross-Media Electronic Reporting Rule compliant data portal, which allows IUs to submit self-monitoring data electronically.

2.5 HOUSEHOLD HAZARDOUS WASTE PROGRAM

The City of San Diego Environmental Services and Public Utilities Departments jointly finance a Household Hazardous Waste (HHW) collection program designed to reduce the introduction of pollutants from non-point sources into sewers, storm drains, and municipal landfills. The City's permanent household hazardous waste collection facility at the Miramar Landfill is open to City of San Diego residents on Saturdays excluding holidays (such as Thanksgiving and Christmas weekends); an appointment and proof of residency are required. The City's program also sponsors seven to eight auto product recycling events per year and coordinates and advertises commercial locations that accept auto products for recycling. Each contributing agency has also implemented a strategy for handling household hazardous wastes originating within its jurisdiction.

Table 2.5-1 HOUSEHOLD HAZARDOUS WASTE SERVICES BY MEMBER AGENCIES		
JURISDICTION	COLLECTION SERVICE	HOTLINE/EDUCATION SERVICE (Yes or No)
Chula Vista	Chula Vista Regional HHW Facility Temporary HHW Collection Events Door-to-Door Collection for Seniors/Disabled Curbside Used Oil and Filter Collection	Yes

County of San Diego - Unincorporated Areas**	El Cajon, Ramona, and the Chula Vista Regional HHW facility Temporary HHW Collection Events Door-to-Door Collection for Seniors/Disabled	Yes

* **City of San Diego** includes communities such as La Jolla, Mira Mesa, Normal Heights, North Park, Otay Mesa, Pt. Loma, Rancho Bernardo, Rancho Penasquitos, and San Ysidro.

** Unincorporated Areas include communities such as Alpine, Lakeside, Winter Gardens, and Spring Valley.

2.6 STORMWATER DIVISION

The City's Stormwater Department implements Monitoring and Inspection, Policy and Enforcement, Construction and Development Standards, Watershed Planning, Education and Outreach, and Administration of the Stormwater Planning Division. The inspection groups perform commercial, industrial, and municipal facility inspections to ensure compliance with the minimum best management practices listed in Appendix IX of the Jurisdictional Runoff Management Plan and the San Diego Municipal Code Section 43.0307(a). In addition, the stormwater code enforcement unit investigates alleged illegal discharges and takes enforcement action against violators of the Stormwater Management and Discharge Control ordinance (San Diego Municipal Code Section 43.0304). The IWCP assisted the Stormwater Inspections Program by performing 63 industrial stormwater compliance inspections in the City of San Diego and providing the findings to the Stormwater Inspections Program.

2.7 STORMWATER DIVERSION

Municipal Low Flow Stormwater Diversion Systems

Waste streams originating in storm drains tributary to City of San Diego low flow diversion structures have been monitored to characterize the pollutant loads and ensure that the City's collection and treatment facilities will not be harmed by the pollutants in the accepted stormwater. Some low flow diversion systems are controlled by sensors that automatically shut the diversions off during rain events; others are manually diverted back to storm drains during rain events to protect the collection system and treatment facilities from hydraulic overloads. Analytical results have established that the pollutant loadings have not interfered with or passed through the treatment plant; therefore, existing plant processes are sufficient to treat the additional loads contributed as a result of the low flow diversions. In addition, operational experience has demonstrated that the automatic and manual controls have effectively prevented any hydraulic impacts on the collection or treatment system. The City is working with Participating Agencies to ensure any low flow diversion systems they may install, conform to these same standards and provide the same levels of collection system and treatment plant protection.

First Flush Industrial Stormwater Diversion Systems

In recognition of the fact that there may be situations where runoff from industrial or commercial facilities may not meet Regional Water Quality Control Board (RWQCB) discharge standards, the City has worked with industrial facilities to provide for capture and discharge to the sewer of first flush storm water runoff where it is clearly demonstrated that the pollutant and/or hydraulic load will not negatively affect the collection or treatment system. The industry is required to provide information about the tributary area, diversion mechanism, capture and holding facilities, and expected pollutants, and must demonstrate adequate discharge controls prior to receiving authorization for discharge. In general, facilities must capture and hold stormwater and may discharge it to sewer no sooner than twenty-four hours after the end of the last rain event. Careful evaluation of analytical data for proposed discharges, determination of available line capacity, and review of proposed discharge controls ensures that the industrial first flush discharges will not negatively impact the collection system or the treatment facilities.

2.8 PRETREATMENT HISTORY

Industrial wastewater control activities were initiated by the City in the late 1960s and informally continued through the 1970s. Sewerage service contracts with the Participating Agencies were adopted in 1960 and later became the basis for participation of the Participating Agencies in the IWCP, approved by the Environmental Protection Agency (EPA) in 1982.

- 1981 Industrial Survey conducted, building on work of 1970s.
- 1981-2 Consultants develop program structure and procedures; submit to EPA for approval.
- 1982 IWCP formally approved by EPA on July 1, 1982.
- 1983 Industrial Wastewater Ordinance, permit fees and trucked waste fees approved by City Council.
- 1983-5 Number of permits increased from 300 to more than 1200. Compliance conferences with IUs.
- 1985 NOVs initiated. IWCP audit by EPA and RWQCB results in findings of excellent data management, knowledgeable staff, and good procedures for permitting, inspecting, and sampling; need for stronger legal authority in the San Diego Municipal Code and with contract agencies.
- 1986 First Annual Pretreatment Report submitted.
- 1987 First Pretreatment Compliance Inspection (PCI). First Enforcement Response Plan developed. Interjurisdictional Pretreatment Agreements with Metro Agencies initiated.
- 1988 PCI by RWQCB results in no required actions.
- 1989 Estimated capital investment in pretreatment equipment by industries in the San Diego service region exceeds \$20 million.
- 1990-1 Consent Decree, EPA trial in federal court for secondary treatment, and Administrative Order.
- 1991-2 IWCP audit by EPA, State Water Resources Control Board (SWRCB), and RWQCB in March 1991 followed by a Pretreatment Program Evaluation from May 1991 through August 1992.
- 1992 Technical fact sheets initiated; sampling frequencies modified to comply with Pretreatment Program Evaluation recommendations.
- 1993 Administrative Order issued to IWCP incorporating Consent Decree and Pretreatment Program Evaluation recommendations. All Administrative Order requirements completed by due dates, including fact sheets completed, SIU permits reissued, and Enforcement Response Plan submitted.
- 1994 Waiver application initiated by City.
- 1995 Waiver granted, new National Pollutant Discharge Elimination System (NPDES) Permit issued; PCI by SWRCB establishes no requirements; new Pretreatment Information Management System (PIMS) implemented; Administrative Civil Penalty policy implemented.
- 1996 Urban Area Pretreatment Program requirements satisfied; local limits study and innovative non-CIU contributory flow industrial pollutant loadings allocation strategy results in proposed modification of local limits; PCI by SWRCB establishes no

requirements.

- 1997 Public participation meetings held by the City and RWQCB prior to adoption of Urban Area Pretreatment Program and new local limits; SIU permits modified to include new local limits.
- 1998 Tijuana Industrial Wastewater Control Training Project conducted with 30 trainees completing course in pretreatment facility inspections, laboratory procedures, and field work; City participates in national Silver Council / Association of Metropolitan Sewerage Agencies study; first Annual Local Limits re-evaluation confirms 1996 limits remain valid; graphs of heavy metals discharged by industry revised to include only SIU discharges; targeted commercial sectors issued BMP discharge authorizations.
- 1999 Tijuana Project continues with wastewater characterization study and laboratory personnel training; ordinance provisions relating to General and Specific Prohibitions and civil penalties strengthened; IWCP assumes implementation of regulations in 4 County Sanitation Districts.
- 2000 The RWQCB report from December 1999 audit requires San Diego Municipal Code revisions to detail specific authorities and increase maximum criminal penalties to \$25,000 / day per violation; revision adopted by City Council in November 2000. Permit document generation and IWCP billing automated. Industrial Wastewater Lab fully implements ICP-MS for all metals analyses.
- 2001 Industrial Wastewater Lab personnel assist with translation of Ken Kerry Pretreatment Program training manual and videos into Spanish; Pt Loma Waiver Renewal Permit Application submitted.
- 2002 The RWQCB and EPA issue the waiver permit for the Point Loma Treatment Plant. The South Bay Water Reclamation Plant comes on-line. IWCP provides inspector training in Tecate, Mexico and performs storm water compliance inspections at SIUs to assist the Storm Water Pollution Prevention Program. The IW Lab continues to provide sampling training and services in Tijuana, Tecate, Mexicali, and Ensenada, Mexico.
- 2003 New group created to administer source control mechanisms and respond to complaints. Increased focus on surveillance monitoring.
- 2004 IWCP continues to perform Storm Water Pollution Prevention Program assistance, and to participate in cooperative program of technical assistance with the State of California and Mexico.
- 2005 IWCP initiates classification of Large User account billing rates under the 10/01/04 new rate structure.
- 2006 IWCP initiates regulation of remediation sites with free product or discharging > 14,000 gallons per day (gpd) and construction dewatering sites discharging > 25,000 gpd as SIUs.
- 2007 IWCP and Industrial Wastewater Lab participate in Business Process Re-engineering effort to develop Most Efficient Organization resulting in loss of 2 Inspector II positions, 1 Assistant Chemist position, and 1 Assistant Laboratory Technician position.
- 2008 IWCP performs study to identify sources of Total Dissolved Solids (TDS) to reclamation plants and adds TDS monitoring to new permits tributary to reclamation facilities; initiates rainwater diversion testing and certification requirements in permits; allocates 0.7 Inspector III position to sewer surcharge evaluation reviews and approvals.
- 2009 IWCP quantifies self-regenerating water softener TDS contributions from regulated

industries.

- 2010 IWCP reviewed Interjurisdictional Pretreatment Agreements and Ordinances for all Participating Agencies to identify deficiencies.
- 2011 IWCP surveyed dental facilities to evaluate compliance with voluntary American Dental Association BMPs; program automated billing for imported flows and hauled waste surcharges.
- 2012 IWCP developed proposed changes to San Diego Municipal Code and Participating Agencies Interjurisdictional Pretreatment Agreements.
- 2013 Independent audit of IWCP permit administration, billing, and laboratory operations.
- 2014 Cost of service developed for each IWCP activity.
- 2015 The Industrial Wastewater Lab's Data Management and Field/Wet Chemistry groups were combined with the IWCP section, and the Inorganic and GC/MSA groups were combined with the Environmental Chemistry Services section.
- 2016 Modified permits to enforce an instantaneous limit for oil and grease instead of a daily maximum were initiated.
- 2017 Waiver for allowing the PLWTP to operate at advanced primary treatment was extended, granted, and new modified NPDES Permit issued. The dental amalgam discharger inventory and survey forms were created.
- 2018 Independent review by a consultant conducted to determine IWCP's readiness to support the department's Pure Water effort and identify areas for improvement. Initial round of dental amalgam BMP surveys were mailed.
- 2019 Changes in the structure of IWCP and new management occurred, field and administration positions added. New industry permitting procedure implemented to initiate the permitting process 6 months (previously 90 days) prior the expiration date to ensure renewal prior to the expiration date. The dental amalgam BMP compliance report was sent to over 600 dental offices, nearly 550 forms completed and submitted. The industrial users inventory was significantly updated.
- 2020 A new NPDES Permit for the North City Water Reclamation Plant (NCWRP) and Pure Water Facility was issued. IWCP restructuring into four sub-sections (SIU, ESC, Support Services, and Industrial Sampling) was completed, with enforcement distributed to the permitting sub-sections. Further updated the industrial users' inventory for the all areas tributary to NCWRP, film processors, and dry cleaners. Initiated permit requirements for flow proportioned sampling and a second, unannounced inspection at SIUs. Solicited Dental Rule one-time compliance reports from remaining dental offices and initiated enforcement actions for noncompliance.
- 2021 A new NPDES Permit for the SBWRP was issued. The pretreatment annual reports for PLWTP and SBWRP were combined for the first time. Flow proportioned monitoring was implemented.
- 2022 Facilities with processes subject to federal categorical pretreatment standards that do not discharge from the CIU processes and only have flows below the other permitting thresholds were issued permits for the first time to better establish the requirements and ensure compliance. Previously, a conditional permit waiver was issued. Based on the 2021 Local Limit re-evaluation for the SBWRP, TDS limits were added to SIU permits on a case by case basis and overview monitoring for manganese was added to SIU and

groundwater permits.

- 2023 Prior to 2023, only permits that were active at the end of the calendar year were included for annual reporting purposes. The IWCP redeveloped and updated its PIMS, allowing all active permits managed within a single calendar year to be included in the counts presented in annual reports. Permits that were renewed or amended where the IU retained the same permit classification were only counted once. California law required all perchloroethylene solvent dry-cleaning machines be taken out of service by January 1, 2023, thus IWCP discontinued all remaining class 4D BMP discharge authorizations. Based on guidance from the RWQCB during the 2023 PCI, previously reported information that was not required by the NPDES permit was removed from annual reports.
- 2024 At the end of 2024, 76% of SIUs and 57% of non-SIUs with self-monitoring were signed up to use the Cross-Media Electronic Reporting Rule compliant data portal, which allows IUs to submit self-monitoring data electronically.

CHAPTER 3 - DISCHARGE PERMITS

3.1 INTRODUCTION

The IWCP implements an industrial wastewater discharge permit system for the City of San Diego and 11 other Participating Agencies whose sewage is treated by the PLWTP or the SBWRP. The IWCP regulates pollutant discharges into the Metropolitan Sewerage System from industrial facilities by issuing permits that establish enforceable pollutant limits and authorize civil and criminal penalties for discharge violations. They also establish sampling, reporting, record keeping, and notification requirements. Permits are issued for a maximum of five years and are non-transferable.

3.2 PERMIT AUTHORITY

On June 6, 1983, the San Diego City Council adopted Ordinance Sections 64.01 through 64.05 of Chapter VI, Article 4 of the San Diego Municipal Code pertaining to industrial waste discharges, permits, and regulations. Section 64.07, establishing specific pretreatment regulations for wastes discharged from commercial food establishments, was added on July 11, 1988. Revisions adopted in 1988, 1989, 1993, and 2000 strengthened pretreatment provisions and authorized increased penalties. The current Chapter 6, Article 4 of the Municipal Code is available on the internet at: <https://www.sandiego.gov/city-clerk/officialdocs/municipal-code/chapter-6>

The IWCP implements the pretreatment program in all agencies served by the Metropolitan Sewerage System in accordance with Interjurisdictional Pretreatment Agreements signed by the City of San Diego and each of the Participating Agencies. These agreements establish IWCP's authority to implement and enforce pretreatment regulations in contributing agencies and require the agencies to adopt equivalent ordinances, penalties, and procedures for regulation of industrial users.

3.3 PERMIT CLASSIFICATIONS

Permit classifications include Industrial Class 1, Class 2, and Class 3; Trucked Waste permits; and Groundwater Discharge Permits.

Class 1 Permits: Class 1 dischargers are defined as those users with processes subject to federal categorical pretreatment standards. These users require source control, pretreatment, or both.

Class 2 Permits: Class 2 permits are issued to targeted industrial sectors, which have some toxic constituents in their discharge but are not subject to federal categorical pretreatment standards. Class 2 permits may include numeric limits, as at industrial laundries and membrane manufacturers discharging >25,000 gpd, or BMP requirements, as at laboratories, radiator shops, and hospitals. Groundwater remediation projects receive Class 2 permits.

Class 2C Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not discharge to sewer**, perform processes which have some toxic constituents in their discharge, but are not subject to federal categorical pretreatment standards.

Class 2Z Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not generate process wastewater**, perform processes which have some toxic constituents in their discharge, but are not subject to federal categorical pretreatment standards.

Class 3 Permits: Class 3 permits are issued to targeted industrial sectors to regulate conventional pollutants. Class 3 facilities may include numeric limits, as at commercial laundries discharging > 25,000 gpd, or BMP requirements, as at auto repair facilities and boat-and shipyards. Construction dewatering projects receive Class 3 permits.

Class 3C Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not discharge to sewer**, perform processes that discharge process wastewater containing conventional pollutants.

Class 3Z Permits: Facilities that, in addition to conducting processes subject to federal categorical pretreatment standards that **do not generate process wastewater**, perform processes that discharge process wastewater containing conventional pollutants.

Class 4 (No permit required): Class 4 facilities include industries with sanitary flow only and Class 2 and 3 facilities with flows below permitting thresholds (except for labs, 25 gpd and 2500 gpd respectively); these Class 4 facilities are re-evaluated periodically.

Class 4C: Facilities with processes subject to federal categorical pretreatment standards that generate process wastewater and have elected to go zero discharge to sewer. These facilities are inspected annually and must also sign a Certification of Zero Discharge of Federally Regulated Wastewater as a condition of retaining their Class 4C permit.

Class 4Z: Facilities with processes subject to federal categorical pretreatment standards for Metal Finishing that do not generate process wastewater. These facilities are inspected annually and must also sign a Certification of Zero Regulated Wastewater generated as a condition of retaining their Class 4Z permit.

Class 4M BMP (No permit required): Dental Offices with processes subject to the federal categorical Dental Rule under 40 CFR Part 441. Dental offices that place or remove amalgam must operate under the BMP to maintain an amalgam separator and not discharge scrap amalgam or use certain kinds of line cleaners. These dental offices must also submit a one-time compliance report acknowledging they have implemented and are in compliance with the BMPs.

Class 5 (No permit required): Class 5 facilities include industries with sanitary flow only and minimal potential to ever generate industrial wastewater.

Trucked Waste Hauler Permits: Permits are issued to trucked waste haulers authorizing the disposal of wastes into the Metro System at designated dumpsites. Two types of waste hauler permits are issued:

- | | |
|-------------|---|
| Domestic: | For hauling of domestic septic tank/cesspool, holding tank and portable toilet wastes. These permits are issued for one year. Referenced as Class 6 Permits in the IWCP's PIMS. |
| Industrial: | For hauling of industrial wastes under generator-specific permits; wastes under one permit cannot be combined with any other waste. Referenced as Class 7 Permits in the IWCP's PIMS. |

Trucked Waste Generator Permits: Generators that propose to have wastes hauled to the City sewer dumpsite must obtain a Trucked Waste Generator Permit. These permits specify a source, such as bilge water from a Navy ship and are issued for the duration of the job. The generator must collect a representative sample of the proposed discharge, analyze for pollutants known or expected to be present, and submit the results with the permit application. Referenced as Class 9 Permits in the IWCP's PIMS.

Temporary Groundwater Discharge Permits: These permits are issued for flows resulting from construction dewatering and groundwater remediation projects, where no alternative

disposal method is reasonably available. Within the City of San Diego these permits are issued for a maximum of two years, after which time the generator must discharge under an NPDES permit; purchase sewer capacity, if available; or cease discharge. In 2006, IWCP began regulating groundwater remediation discharges >14,000 gpd or having free product; and construction dewatering discharges > 25,000 gpd as SIUs.

Class 2F BMP (No permit required): These authorizations consist of a statement of BMP requirements followed by a certification of compliance for management and discharge of silver-rich solutions (2F). When signed by the commercial discharger, the certification authorizes discharges in compliance with BMP requirements for a period of up to five years. Random inspections are performed after receipt of the certification to ensure compliance. Implementation of the BMP Certification and Discharge Authorization programs in 1998, in lieu of the previously applied numeric limits, enabled the IWCP to extend coverage of BMP requirements with no increase in inspection staff and a reduction in laboratory sampling and analysis costs formerly associated with the targeted sectors.

Batch Discharge Authorizations: Batch Discharge Authorizations for one-time, or short-term non-routine discharges not otherwise covered by a current permit, are issued subject to review of analytical data from a sample of the proposed discharge and compliance with all applicable requirements and standards.

3.4 SIGNIFICANT INDUSTRIAL USERS

The IWCP defines a SIU in accordance with Federal regulations, as an Industrial User that:

1. Is subject to federal categorical pretreatment standards under 40 CFR 403.6 and 40 CFR Chapter I, Subchapter N; and
2. Any other industrial user that:
 - (a) Discharges an average of 25,000 gallons per day or more of process wastewater to the POTW (excluding sanitary, non-contact cooling and boiler blowdown wastewater); or,
 - (b) Contributes a process wastestream which makes up 5 percent or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant; or,
 - (c) Is designated as such by the Control Authority on the basis that the industrial user has a reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement. For metals, IWCP policy defines "reasonable potential" as a facility having the potential to discharge 5% or more of the allowable industrial headworks loading in a single non-routine discharge. For groundwater remediation sites, the presence of free product or discharges >14,000 gpd have "reasonable potential" and are regulated as SIUs.

Streamlining regulations provide that IWCP may determine that an IU subject to federal categorical pretreatment standards under 40 CFR 403.6 and 40 CFR Chapter I, Subchapter N is a Non-Significant Categorical Industrial User rather than an SIU in accordance with requirements and conditions established at 40 CFR 403.3(v)(2). IWCP has not implemented this provision of the streamlining regulations.

All Class 1 permittees are SIUs. Class 2 and Class 3 permittees having flows > 25,000 gpd are SIUs (flow SIUs). Groundwater remediation sites having free product or discharging > 14,000 gpd are also SIUs. There are also Class 2 and Class 3 permittees with the potential for slug loads or high strength discharge we choose to regulate as SIUs (slug SIUs).

3.5 IDENTIFICATION OF INDUSTRIAL USERS

The City of San Diego utilizes the following methods to maintain a complete and current IU Inventory, and to identify new sources or SIUs:

1. Industrial User application requests
2. Referrals from the various departments within the City of San Diego or Participating Agencies
3. County of San Diego, Business Tax License list
4. Industry contacts refer competitors

3.6 SIGNIFICANT INDUSTRIAL USER PERMIT REQUIREMENTS

The IWCP's SIU permits identify pollutants of concern; list prohibited discharges; specify applicable federal or local limits, standards, and requirements; require access for sampling and inspections; describe sources and volume of the authorized industrial discharge; and specify self-monitoring and reporting requirements. Permits may also establish additional requirements and compliance schedules.

The San Diego Municipal Code authorizes to establish local limits (see Table 3.6-1) and apply those limits in user permits. The local limits were developed to apply to all IUs. They are applied such that each SIU gets the full federal allowance for applicable federally regulated pollutants and the local limit for each locally regulated pollutant that is not federally regulated and that is discharged by the facility at a concentration higher than background levels. SIU sampling and facility inspection frequencies meet or exceed the required minimum standards set by regulations and EPA Guidance. SIU permits incorporate detailed fact sheets and, when necessary, require formal Slug Discharge Prevention and Control Plans.

Table 3.6-1 LOCAL CONTRIBUTORY FLOW DISCHARGE LIMITS			
Pollutant	Instantaneous	Pollutant	Daily Maximum
pH	5.0 - 12.5	Cadmium	1.0 mg/L
Flash Point	> 140 Deg F	Chromium	5.0 mg/L
Total Grease and Oil	500 mg/L	Copper	11.0 mg/L
Dissolved Sulfides	1.0 mg/L	Lead	5.0 mg/L
Temperature	< 150 Deg F	Nickel	13.0 mg/L
		Zinc	24.0 mg/L
		Cyanide, Total	1.9 mg/L

Note: Local limits apply to SIU discharges where the parameter is not subject to a federal CIU pretreatment standard and sampling has demonstrated that the facility discharges the pollutant at > background concentration levels.

3.7 ACTIVE PERMITS

Within the calendar year, there were 2,079 active permits in the entire service area, of which 68 were tributary to SBWRP. This included Class 1, 2, 3, 4C, and 4Z permits, Trucked Waste permits, and issued BMP Discharge Authorizations. Groundwater remediation and construction/dewatering permits are classified as Class 2 and 3 and could also be flow or slug potential SIUs. The facilities classified as Class 4 and 5 did not require a permit. The inventory of permits administered by IWCP is shown in Table 3.7-1.

Year	Class 1	Class 2 ¹	Class 3 ¹	CIU Class 4C, 4Z ²	GW ³	BMP ⁴	Trucked Waste	Total Permits ⁵	Class 4, 5 ⁶
2005	51	352	43	36	34	1,142	83	1,671	1,858
2006	50	340	35	38	30	1,123	98	1,646	1,896
2007	49	324	37	37	34	1,077	107	1,594	1,962
2008	48	299	37	37	33	1,022	113	1,519	2,088
2009	42	297	44	33	33	835	118	1,336	2,160
2010	44	292	46	35	48	922	119	1,423	2,251
2011	43	285	46	34	40	890	114	1,378	2,324
2012	42	274	45	35	43	868	120	1,349	2,378
2013	41	266	44	38	42	855	112	1,318	2,373
2014	41	260	46	40	33	804	131	1,282	2,392
2015	41	258	55	40	39	779	115	1,248	2,378
2016	40	310	54	42	39	768	151	1,323	2,369
2017	39	302	56	40	35	766	149	1,312	2,480
2018	36	297	54	43	32	759	143	1,289	2,478
2019	36	291	58	36	37	369	137	891	2,263
2020	36	307	54	35	24	913	126	1,436	2,300
2021	36	452	72	36	33	927	133	1,620	2,300
2022 ⁷	37	516	95	35 ⁷	23	952	121	1,756	2,467
2023 ⁸	38	581	145	37	49	961	146	1,908	2,991
2024	35	622	172	38	52	1,073	139	2,079	3,388

¹ Class 2 and 3 permits include flow and/or slug potential SIUs, and sub-classes 2C, 2Z, 3C, and 3Z.

² Facilities with categorical processes but do not discharge or do not generate wastewater from regulated operation(s). Prior to 2019, the Class 2C/2Z and 3C/3Z facilities were previously tallied with this CIU class; however, these IUs have industrial discharges and starting in 2019 they are accounted for in classes 2 and 3, respectively.

³ Groundwater discharge permits are either Class 2 (remediation) or Class 3 (construction dewatering).

⁴ Class 2F and 4M BMP Discharge Authorizations. 4D was included prior to 2024.

⁵ Includes BMP and Trucked Waste permits, Groundwater permits are already included in Class 2 and Class 3 figures.

⁶ Active facilities that are dry or have industrial flows < permitting thresholds; no permit is required.

⁷ 4C and 4Z facilities are issued permits to better establish requirements and ensure compliance. Prior to 2022 conditional permit waivers were issued to these facilities.

⁸ In 2023, the IWCP redeveloped and updated its PIMS, allowing the inclusion of all active permits managed within the reporting calendar year. Permits that were renewed or amended, where the IU retained the same permit classification were only counted once. Prior to 2023, the permit counts were of those permits active at the end of the calendar year.

The IWCP continues to issue temporary batch discharge authorizations in lieu of full permits wherever appropriate; IWCP processed 29 of these authorizations.

3.8 SIGNIFICANT INDUSTRIAL USER PERMITS

Table 3.8-1 lists the number of active CIU, and non-categorical SIU permits for each year. In 2007, the IWCP established criteria for regulating groundwater remediation facilities and construction dewatering operations as SIUs due to one or more of the following concerns: toxicity, fire/explosion hazard, or hydraulic capacity in the collection system.

Table 3.8-1 SIGNIFICANT INDUSTRIAL USERS PERMITTED METROWIDE			
Year	Categorical Significant Industrial Users	Non-Categorical Significant Industrial Users ¹	Total SIUs
2005	51	19	70
2006	50	20	70
2007	49	25	74
2008	48	24	72
2009	42	33	75
2010	44	38	82
2011	43	37	80
2012	42	35	77
2013	41	34	75
2014	41	33	74
2015	41	41	82

2020	36	38	74
2021	36	43	79
2022	37	37	74
2023 ²	38	53	91
2024	35	59	94

¹ Includes Class 2, 3, and GW SIUs

² In 2023, the IWCP redeveloped and updated its PIMS, allowing the inclusion of all active permits managed within the reporting calendar year. Permits that were renewed or amended where the IU retained the same permit classification were only counted once. Prior to 2023, the permit counts were of those permits active at the end of the calendar year.

3.9 CHANGES IN SIGNIFICANT INDUSTRIAL USER INVENTORY

For changes in the SIU inventory, see the following reports immediately following the last section (3.15) of this chapter:

- SIU Facilities that are New
- SIU Facilities with Name Change
- SIU Facilities that became nonSIUs
- SIU Facilities Inactivated

3.10 BASELINE MONITORING REPORTS REQUESTED OR RECEIVED

During this calendar year, there were no Baseline Monitoring Reports requested or received at facilities not already operating under a SIU discharge permit.

3.11 DISTRIBUTION OF PERMITS AND INDUSTRIAL FLOWS

The following table lists the distribution of permits by Class and Area¹.

Table 3.11-1 DISTRIBUTION OF PERMITS ² AND PERMITTED INDUSTRIAL WASTE FLOW ³ BY AREA The geographical areas are described in Table 2.1-1 and Figure 2.1-1											
Area	Class 1	IW (gpd)	Class 2, 2C, 2Z	IW (gpd)	Class 3, 3C, 3Z	IW (gpd)	Class 4C, 4Z	BMP	Total Permits & BMPs	Total (gpd)	Class 4 and 5
01	0	0	14	6,898	3	21,903	1	49	67	28,801	59

Total	35	517,003	622	5,143,728	172	5,556,620	38	1,073	1,940	11,217,351	3,388

¹ The SBWRP inventory of permits are in parts of areas 12, 13, and 36.

² Totals do not include trucked waste permits.

³ Industrial wastewater flows are not metered at all permittees. The flows reported here are based on the information available for each permittee and include data from meters, calculations, and estimates.

3.12 INSPECTION AND MONITORING REQUIREMENTS

When an application for a new permit is received, a site inspection of the discharger's facility and operations is conducted to identify and characterize wastewater flows and pollutants; obtain process information; determine applicable federal pretreatment standards, if any; locate discharge points where limits apply and compliance will be determined; and communicate permit requirements, such as Standard Conditions, General and Specific Prohibitions, and site-specific sampling, analysis, and reporting requirements.

SIU permits: After a permit is issued, the IWCP sampling group makes periodic unannounced site visits to collect samples of the permittee's discharge over a 24-hour period, using automatic samplers; grab samples are collected to determine compliance with discharge standards for grease and oil, total toxic organics (TTO), cyanide, and pH. Samples are collected, preserved, and analyzed in accordance with requirements set forth at 40 CFR Part 136. Analytical results are used to determine compliance status, identify operational and housekeeping problems, and evaluate effectiveness of pretreatment equipment. Annual inspections are performed at all SIU facilities to evaluate on-going process and pretreatment operations and maintenance, identify operational changes requiring a permit amendment, evaluate the need for a slug control plan, and maintain the industry's awareness of its permit requirements. SIUs also have self-monitoring (sampling and analysis) and reporting requirements as conditions of their permits.

Non-SIU permits: Permits include local limits or BMPs and semi-annual certification requirements. Sampling and analyses are performed to determine compliance with limits.

3.13 INDUSTRIAL WASTE SAMPLING AND ANALYTICAL SERVICES

In addition to industry monitoring, the City's EMTS Division sampling and laboratory services sections continue to:

- Conduct quarterly collection system sampling and analyses to provide data for the reevaluation of the local limits
- Conduct quarterly sampling and analyses of wastewater from the Participating Agencies to determine their respective sewage-strength contributions for billing purposes
- Conduct monitoring of trucked liquid waste discharges during open hours (72 hours/week) at Pump Station 1 (PS1)

3.14 SUMMARY OF SAMPLING AND INSPECTION STATISTICS

The EMTS sampling and laboratory services performed for industrial facilities included unannounced sampling visits, collecting samples, and performing pollutant analyses. Inspections and site assessments included tasks such as: initial inspections, annual inspections, renewal inspections, billing surcharge inspections, complaint investigations, rainwater diversion inspections, stormwater inspections, compliance inspections, site closure/permit inactivation assessments, and batch discharge site assessments. The sampling and inspection statistics for the last 10 years are presented in the table below.

Table 3.14-1 SUMMARY OF ROUTINE SAMPLING, CERTIFICATION, AND INSPECTIONS										
Action / Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
Facility inspections & site assessments	595	495	343	367	623	2,209	5,486	6,400	5,847	3,428
Unscheduled sampling events	1,597	1,736	1,587	1,458	1,391	950	1,042	1,415	1,321	1,512
IWCP Lab samples collected	3,826	3,948	3,812	3,686	3,437	2,419	2,537	3,441	3,285	3,336
IWCP Lab analyses performed	16,849	9,886	16,161	16,258	15,752	9,035	7,361	15,934	15,102	15,291
Self-Monitoring samples	2,547	2,535	2,791	2,847	2,842	2,471	2,278	2,266	3,160	2,635
Self-certifications	978	1,033	1,180	1,197	1,117	909	1,021	1,856	2,271	2,234
Self-Monitoring analyses and data evaluated by IWCP	12,127	11,637	12,335	13,217	13,128	13,054	12,194	12,359	19,280 ¹	13,592

¹ In 2023, the IWCP redeveloped and updated PIMS changed how IWCP sampling data are finalized which resulted in counting towards the Self-Monitoring analyses and data evaluated by IWCP count. The 2023 count excluding IWCP sampling data is 13,583. In 2024, the count in PIMS was updated to exclude IWCP sampling data.

3.15 TRUCKED WASTE PERMITS

Industrial trucked wastes originate from sources such as landfill leachate/condensate, dewatering of grease trap wastes, ship maintenance and repair, and private treatment system sludge disposal. The generator of the waste stream is permitted as an Industrial Trucked Waste Generator, and contracted haulers are permitted as Industrial Trucked Waste Haulers. Domestic wastes originate from portable toilets (construction sites, public events), sewage holding tanks, and septic tanks (non-sewered residences). Domestic Waste Hauler permits are issued to these haulers. The designated discharge point to the POTW for all hauled wastes is at PS1 on Harbor Drive.

Approximately 71 million gallons of domestic and industrial wastes are received annually at PS1 from trucked waste haulers. Grease trap water was received after separation of grease, solids, and oils; this volume is decreasing as facilities that treat grease trap wastes are gaining sewer access, where they directly discharge to the collection system sewer instead of hauling the waste streams via trucks to PS1. Sludge and high strength waste streams were received from landfills, other POTWs, water treatment plants, and Indian reservations. All truckloads are logged in at the pump station and monthly billings are prepared by IWCP staff to recover costs of treatment and disposal. Monthly volumes of trucked industrial and domestic wastes received at PS1 during the period covered in this report are shown in the Trucked Waste Annual Discharges Summary.

In addition to the hauled liquid wastes received at PS1, approximately 16 million gallons of hauled domestic wastes were received by the El Cajon Department of Public Works.

SIU Facilities that are New

As of 2025-01-13 11:59:40 PST • Generated by Ryan Cross

Name ↑	Name	Permit	Class	Issued Date	Comments
Athletic Brewing Company LLC	FAC-9181	PMT-1920	3 - Conventional	1/3/2024	Renewed under PMT-35694 effective 1/1/2025. jas C3 brewery flow SIU with H SM for COD, TSS, pH, flows, & pH reporting and Q PM for same pollutants & TDS, conduct, dissolved sulfide, and overview metals. Att C to submit slug plan, install flow proportioned meter, install pH monitoring, and purchase capacity. jas
Super Star Car Wash	FAC-10246	PMT-1150	3 - Conventional	3/1/2024	C3 car wash over SIU flow threshold with Q SM for flow reporting only and Q PM for sump inspections and overview for pH and LL metals. Att C requirements established to submit app and TOMP, and reduce rainwater intrusion and prevent spills in car tunnel. jas
UT; Barnard Elementary School	FAC-10497	PMT-34564	3 - Conventional	6/18/2024	C3 GW flow SIU., short 2-month project expected. M SM for MRs, IF, FRs, COD & TSS. Q PM COD, TSS & Mn overview. jas
UT; Burtech Pipeline Inc - Mission Beach	FAC-10517	PMT-35511	3 - Conventional	9/10/2024	C3 GW w/settling only since no POCs. M SM for MRs, IF, FRs w/ wet weather restriction, COD, TSS, and Q PM for COD, TSS and overview for TDS, conductivity, chloride and Mn. Connection 200 added to expedite project from beach moratorium-BDI/jas
UT; Chevron Midway	FAC-11137	PMT-35654	2 - Toxic	9/18/2024	C2 SIU - GW remediation with no FP. Short 2-month project with M SM for flow parms, COD, TSS, benzene, BTEX, TPH/PetHC and Q PM for COD, TSS, PetHC, benzene, BTEX, and overview Mn - BDI/jas
UT; Orion Construction Corporation	FAC-11061	PMT-35518	3 - Conventional	10/8/2024	C3 flow SIU with M SM for meter reads, imported flow, flow rates, and COD/TSS. Q PM for COD & TSS plus overview Mn. Project expected to last until May 2025 and the min/max flow rate range is 6.5 - 50 gpm. jas
UT; PW Wohl G Street LLC - Parcel B	FAC-8603	PMT-34692	2 - Toxic	6/20/2024	C2 GW flow SIU with M SM for MRs, IF, FRs, COD, TSS, flash, pet HC, TPH, metals incl Ag, benzene, BTEX, TCE, DCE, TCA, PCE, vinyl chloride, and PCBs; restricted to 10-100 gpm. Q PM for same pollutants + Mn overview -BDI/jas
UT; San Diego County Regional Airport Authority	FAC-8322	PMT-34666	2 - Toxic	3/26/2024	C2 flow SIU; M SM for flow parms, COD, TSS, O/G, metals, BTEX, benzene; Q PM for same pollutants plus overview Mn. BDI/jas

Name ↑	Name	Permit	Class	Issued Date	Comments
UT; San Diego Regional Airport Authority	FAC-8229	PMT-35178	2 - Toxic	8/27/2024	C2 GW flow SIU; M SM for meter reads, imp flow, FRs, and COD/TSS, TPH, BTEX, benzene; Q PM for the same pollutants plus Mn overview. Flow rate min/max 1-100 gpm. jas
UT; SC Valley Engineering Inc	FAC-10562	PMT-34744	3 - Conventional	5/7/2024	C3 GW flow SIU with M SM for MRs, IF, FRs, COD, and TSS. Q PM for COD, TSS, plus Mn overview - BDI/jas
UT; SC Valley Inc. - Boulevard Drive Storm Drain Improvements	FAC-10707	PMT-34948	3 - Conventional	5/31/2024	C3 Flow SIU. Settling only. City of La Mesa CIP but discharging into CoSD manhole. M SM MR, Dates, IF, COD, TSS. Q PM COD, TSS, + Mn overview - BDI
UT; SCW Contracting Corp	FAC-10429	PMT-34379	2 - Toxic	5/7/2024	C2 GW Flow SIU - M SM for FM reads/dates, IF, COD, TSS, TCE, DCE, TCA, PCE. Q PM for pollutants, plus overview Mn. FR approved by CoCV. BDI/jas
	FAC-10429	PMT-35946	2 - Toxic	11/7/2024	C2 GW Flow SIU - M SM for FM reads/dates, IF, COD, TSS, TCE, DCE, TCA, PCE. Q PM for pollutants, plus overview Mn. Increased FRs with restrictions approved by CoCV. BDI/jas
UT; Sukut Construction LLC	FAC-10128	PMT-1598	3 - Conventional	7/11/2024	C3 GW flow SIU for Pure Water sewer/brine conveyance project. M SM for MRs, IF, FRs, COD, and TSS. Q PM for COD, TSS, and overview TDS, conductivity, chloride, and Mn. Contractor voluntarily installed GAC- BDI/jas
Zucrum Foods LLC dba Zucarmex USA	FAC-9169	PMT-34524	3 - Conventional	1/2/2024	C3 sugar refinery flow SIU with M SM for pH, O&G, COD, TSS, d sulfides, TDS, temp, & flow. Q PM for same + overview BOD5 (per SBWRP), metals, Cl-, & conduct. jas
	FAC-9169	PMT-34608	3 - Conventional	1/30/2024	C3 sugar refinery flow SIU with M SM for pH, O&G, COD, TSS, d sulfides, TDS, temp, & flow. Q PM for same + overview BOD5 (per SBWRP), metals, Cl-, & conduct. jas

CHAPTER 4 - ENFORCEMENT

4.1 INTRODUCTION

The IWCP has the primary objectives of bringing permittees into compliance with applicable Federal Pretreatment Standards and requirements and controlling and reducing mass emissions of industrial pollutants to the sewer. As provided in its Enforcement Response Plan and the City of San Diego Municipal Code, the IWCP has a broad range of enforcement mechanisms available, including the recovery of administrative and supplemental monitoring costs related to violation identification and processing; Notices of Violation; Compliance or Penalty Orders; publication of the annual List of Facilities in Significant Non-Compliance; and permit revocations and suspensions.

The IWCP follows the approved Enforcement Response Plan for violations identified through monitoring at designated sample points. When a permittee violates a discharge limit, enforcement actions are initiated, including issuance of a NOV and scheduling of additional sampling. The industry is billed to recover violation sampling and NOV administrative costs. Subsequent non-compliance results in escalating enforcement, which may include issuance of a Compliance Order requiring corrective measures and compliance by a prescribed date. Following a Compliance Order, the IWCP will issue an Administrative Penalty Order to recover, at a minimum, any economic benefit accrued to the violator because of non-compliance; the economic benefit is calculated using EPA's BEN model. Additionally, the IWCP is authorized to seek administrative civil penalties. All compliance schedules resulting from violations of pretreatment standards are issued in Administrative Compliance Orders. Violators that do not achieve and maintain compliance through the Administrative Notice and Order procedure are referred to the court system for civil or criminal prosecution. Enforcement procedures are detailed in the IWCP's Enforcement Response Plan, available on the City's website: <https://www.sandiego.gov/public-utilities/permits-construction/industrial-user-permits/enforcement>

4.2 ANNUAL SIGNIFICANT INDUSTRIAL USER COMPLIANCE STATISTICS

The IWCP assesses the compliance status of its inventory of SIUs according to the criteria set forth in the NPDES permits. These criteria include identification of all SIUs in SNC, as defined in the federal regulations at 40 CFR 403.8(f)(2)(viii). Table 4.2-1 presents a summary of annual SIU compliance status determinations. The IWCP is required to meet a minimum standard of no more than 15% of SIUs in SNC for the calendar year. As provided in the NPDES permits, SIUs who have been issued Administrative Penalty Orders are not included in determining compliance with the 15% SNC standard.

Table 4.2-1 COMPLIANCE STATUS SUMMARY FOR SIGNIFICANT INDUSTRIAL USERS										
Status	NUMBER OF PERMITTED OUTFALLS									
	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
Consistent Compliance	103	101	96	102	101	100	97	95	94	88
Inconsistent Compliance	15	13	13	10	14	11	8	13	13	20
Significant Non-Compliance	7	4	6	11	12	18	8	10	9	9
Total	125	118	114	123	127	129	113	118	116	117

For the period covered in this report a total of 88 SIUs were monitored at 138 sampling locations constituting 117 outfalls. Nine outfalls at nine SIUs were found to be in SNC, and no Administrative Penalty Orders were issued. **The resulting non-compliance rate is 8%** (9 of 117 outfalls). For the year, SIUs were in consistent compliance with discharge standards and requirements (no pollutant violations) at 75% of the permitted outfalls.

Included in the system wide counts above, the 17 SIUs discharging to the SBWRP were monitored at 20 sampling locations constituting 19 outfalls. Of the nine outfalls found to be in SNC, two were dischargers to the SBWRP.

4.3 ANNUAL SIGNIFICANT INDUSTRIAL USER COMPLIANCE STATUS

The Annual SIU Compliance Status report is presented after the last section (4.8) of this chapter. The report lists the industry name, address, facility number, permit class; industrial flow by connection; violation dates and descriptions, if applicable; discharge standard and period, and actual value resulting in the violation; and whether the violation exceeded the Technical Review Committee (TRC).

4.4 PUBLICATION OF INDUSTRIES IN SIGNIFICANT NON-COMPLIANCE

Public participation provisions of the Federal Pretreatment Regulations require that industries found to be in Significant Non-Compliance at any time during the previous calendar year be published in a newspaper of general circulation that provides meaningful public notice within the jurisdiction(s) served by the POTW. Each spring, the IWCP publishes the annual Notice of Significant Non-Compliance in the San Diego edition of the Union Tribune. The notice for this year follows:

Table 4.4-1
NOTICE OF SIGNIFICANT NON-COMPLIANCE
WITH SEWER DISCHARGE REQUIREMENTS

NOTICE is hereby given by the City of San Diego that in 2024, the following industries discharging to the Metropolitan Sewerage System were found to be in Significant Non-Compliance for exceeding applicable discharge limits or failing to meet reporting requirements, based on statistical criteria established by the EPA and set forth at 40 CFR 403.8(f)(2)(viii). For additional information contact John Steger, Pretreatment Program Manager, Industrial Wastewater Control Program, JSteger@sandiego.gov.

4.5 NON-COMPLIANCE FEES / PENALTIES

Non-compliance fees and administrative penalties issued during the past ten years are summarized in Table 4.5-1 below.

Table 4.5-1 NON-COMPLIANCE FEES AND PENALTIES SUMMARY										
Action	2015 SIU/ non-SIU	2016 SIU/ non-SIU	2017 SIU/ non-SIU	2018 SIU/ non-SIU	2019 SIU/ non-SIU	2020 SIU/ non-SIU	2021 SIU/ non-SIU	2022 SIU/ non-SIU	2023 SIU/ non-SIU	2024 SIU/ non-SIU

Civil (\$) Penalties Offset	0	0	0	0	0	0	0	0	0	0

4.6 ENFORCEMENT ACTIONS BY TYPE

Compliance Inspections: To investigate non-compliance, determine required or recommended corrective actions, and/or evaluate the progress of permittees operating under Compliance Orders or specific permit requirements or schedules, inspectors conduct non-routine compliance inspections. The IWCP conducted eight non-routine compliance inspections this year.

Notices of Violation - Administrative Fees: An NOV is a written notification from the IWCP of specific violations of discharge limits or requirements that have occurred. Simultaneously, the discharger is invoiced for fees to cover costs associated with administering the NOV. The NOV requires the permittee to take corrective actions. Supplemental violation monitoring is performed by the IWCP's analytical laboratory within 30 days of becoming aware of the violation, and the cost of the extra sampling and analyses is billed to the violator. This year a total of 737 NOV's were issued to SIU and non-SIU permittees. An increase of NOV's were issued to non-SIUs for: a) BMP only permits escalated to written NOV's after receiving phone NOV's; b) Trucked Waste permittees that submitted incomplete manifests; c) Dental Amalgam One Time Compliance Reports not submitted; d) and Attachment C delinquent requirement NOV's. Administrative fees billed for NOV's totaled \$62,882.

Compliance Orders: Compliance Orders are issued to permit violators for the purpose of imposing schedules, requiring pretreatment installation, or mandating other measures needed to achieve and maintain permit compliance. The IWCP did not issue any Compliance Orders this year.

Administrative Penalties and Other Fees: Pursuant to the authority of Municipal Code Chapter I, Article 2, Sections 12.0801 - 12.0810, the IWCP may issue Administrative Orders and Penalties. The IWCP did not issue any Administrative Penalty Orders this year.

Civil / Criminal Referral to Prosecuting Agencies: When a permittee intentionally or negligently violates any provision of the Municipal Code, permit conditions, or discharge limits, the IWCP may refer the matter to the City or District Attorneys for investigation and possible action. The IWCP did not make any civil or criminal referrals this year.

4.7 ENFORCEMENT SUMMARIES

4.7-1: Summary of IWCP Enforcement Actions

Table 4.7-1 ENFORCEMENT ACTIONS SUMMARY										
Action	2015 SIU / non-SIU	2016 SIU / non-SIU	2017 SIU / non-SIU	2018 SIU / non-SIU	2019 SIU / non-SIU	2020 SIU / non-SIU	2021 SIU / non-SIU	2022 SIU / non-SIU	2023 SIU / non-SIU	2024 SIU / non-SIU

4.7-2: Significant Industrial User Enforcement Actions Initiated, Continued, or Finalized

Action Powder Coating LLC; FAC-7316

This metal finisher discharges around 1,500 gpd from phosphating and cleaning metal parts. The IU met the SNC criteria for zinc for both chronic (2 of the 3 samples exceeded the daily limit) and TRC (1 of 2 months sampled exceeded the monthly average) violations in the six-month period ending in the 4th quarter of 2024. NOVs were issued and the IU is required to resample, investigate, and report by February 28, 2025. Extra IWCP monitoring is also planned for 2025 to determine whether compliance has been re-established.

GKN Aerospace Chem-tronics Inc; FAC-6514

This metal finisher performs fabrication and repair of engine components and discharges a combined total of approximately 54,000 gpd. In 2023, pollutant violations at connections 410, 420, 450, 460, and 610 met the SNC criteria with associated discharges of 1,100 gpd, 220 gpd, 200 gpd, 200 gpd, and 90 gpd respectively. Specifically, the IU met the criteria for SNC status by exceeded the limits by more than the TRC for the six-month periods ending in the 2nd, 3rd, and 4th quarters, as 1 of 2 months sampled at 410 exceeded the monthly averages for chromium, copper, nickel, and zinc, 1 of 2 months sampled at 420 exceeded the monthly average for silver, and 1 of 3 months sampled at 450, 460, and 610 exceeded the monthly average for zinc. NOVs were issued for the violations and the IU suspects the metal piping conveying the wastewater is the likely source. As a result, the IU replaced some of the metal piping with plastic materials. Additionally, the IU has reinstated quarterly sump cleaning to ensure any build-up from holding tanks is removed. Subsequent IU (2 events) and IWCP (1 event) monitoring in the 4th quarter of 2023 demonstrated that compliance has been re-established, therefore, no further enforcement actions were planned.

However, in 2024 another zinc violation at connection 450 returned the IU to SNC status. Specifically, the IU exceeded the monthly average limit by more than the TRC in 1 of the 3 months sampled for the six-month periods ending in the 3rd quarter. An NOV was issued for the violation and IU suspects the source of zinc was from degradation of the galvanized metal walls enclosing the fluorescent penetrant operation and the floor grating that is in contact with rinse water during spraying operations. Connection 450, a 55-gallon poly tank, was subsequently cleaned by the IU's 3rd party hazardous material handler and placed on a semi-annual preventative maintenance cleaning schedule. The IU is also evaluating having the galvanized walls re-coated and replacing all metal grating with non-metal material. Subsequent monitoring events by the IU in the 4th quarter of 2024 demonstrated that compliance has been re-established. Therefore, no further enforcement actions are planned.

Jensen Meat Company Inc; FAC-5916

Tributary to the SBWRP, this meat processing facility discharges about 32,000 gpd after pretreatment from cleaning and sanitizing operations. The IU met the SNC criteria for the six-month period ending in the 3rd quarter of 2019, when 5 of the 6 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC. NOVs were issued and the IU responded that "we have too much decomposing or too much organic matter in our grease trap" and stated that they were taking several steps to improve their cleaning procedures including: jet-cleaning the drainpipes 3 times a year instead of 2, cleaning the grease trap once a month and deep cleaning it twice a year, and implementing a new cleaning procedure to reduce the solids into the drains.

No monitoring for dissolved sulfides was conducted in the first half of 2020, and then the IU met the SNC criteria for the six-month periods ending in the 3rd and 4th quarters of 2020, when 4 of the 6 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC. NOV's were issued for the violations and the IU responded that it will further improve its cleaning steps by increasing the jet-cleaning of the drainpipes to 4 times a year instead of 3 and by increasing the grease trap cleaning frequency to every 3 weeks instead of every 4.

In 2021, the IU met the criteria for SNC status for the six-month periods ending in the 2nd, 3rd, and 4th quarters, when 4 of the 6 samples exceeded the 1.0 mg/L limit for dissolved sulfides. NOV's were issued for the violations and the IU began the permitting process for the construction of a pretreatment system.

The IU met the SNC criteria for the six-month periods ending in the 2nd, 3rd, and 4th quarters of 2022, when 3 of the 5 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC. The IU anticipated installing extraction equipment to intercept primary food waste before its introduction to the existing grease interceptor in 2023.

In 2023, all 6 samples collected demonstrated compliance with the daily maximum for dissolved sulfide and the IU avoided SNC status. The IU completed its installation of a new pretreatment system in July 2023 which added a rotary screen filter, a 10,000-gallon equalization tank, and a dissolved air floatation unit to the existing three stage clarifier.

In 2024, the IU again met the criteria for SNC status for dissolved sulfides for the six-month periods ending in the 3rd and 4th quarters, when 3 of the 7 samples exceeded the 1.0 mg/L limit. NOV's were issued and the IU attributed the cause to a build-up of meat products in the grease interceptor after discontinuing its regular cleaning when the new pretreatment system was installed. The IU has re-established routine cleaning of the interceptor at 4 times a year. A clogged pump in the wastewater treatment system was also identified as a likely cause. To address the wastewater system, inlet flows, and pumps are now checked daily to ensure they are in working order. No further enforcement actions are planned unless additional violations occur in 2025.

K-Tube Corporation; FAC-7553

This specialty metal (needle) tubing manufacturer discharges about 700 gpd from stainless steel tube manufacturing, cleaning, tumbling, and area clean-up operations and is regulated under the metal forming (production-based) and metal finishing categorical standards. The renewal permit, effective June 1, 2023, required the installation of a totalizing meter compatible with flow proportioned sampling techniques and for the IU to establish a flow meter maintenance and calibration log for the tube manufacturing wastestream at Connection 120. The IU failed to comply with the October 1, 2023 due date by the end of the year and thus was in SNC for missing a compliance schedule milestone by more than 90 days. First and second NOV's were issued, and in response the IU provided the flow meter maintenance and calibration logs and requested additional time for the flow proportioned meter installation due to the expected lead and installation time. The deadline was extended to June 7, 2024 and the IU completed its installation in May 2024. However, during the subsequent annual inspection the flow meter installation configuration was determined to be incorrect. An August site visit confirmed the IU had successfully addressed the installation issues and no further enforcement actions are planned.

Santier Inc; FAC-8454

This manufacturer of microelectronic housings, assemblies, and heat sinks made from thermal management metals discharges approximately 110 gpd and is regulated under the metal forming (production-based) and metal finishing categorical standards. In 2024, the IU met the SNC criteria for TRC in the six-month period ending in the 4th quarter of 2024, when 1 of 3 samples collected at connection 110 exceeded the daily maximum and monthly average for cyanide, total. NOV was issued and the IU is required to resample and respond by February 28, 2025. Extra self-monitoring is planned for 2025 to determine if compliance is re-established.

Soapy Joes; FAC-9024

This commercial car wash discharges about 25,000 gpd from exterior car washing. The IU submitted its Self-Monitoring Report (SMR) due April 15, 2024, on June 5, 2024 (51 days late) and thus was in SNC for late reporting in the 2nd quarter. An NOV was issued for the violation and no further enforcement actions are planned.

Super Star Car Wash; FAC-10246

This commercial car wash discharges about 26,000 gpd from exterior car washing. The IU submitted its SMR due April 15, 2024, on July 24, 2024 (100 days late) and thus was in SNC for late reporting in the 2nd quarter. An NOV was issued for the violation and no further enforcement actions are planned.

Tarantino Wholesale Food Distributor; FAC-2335

Tributary to the SBWRP, this food manufacturer of meat and broth discharges about 28,000 gpd from thawing, rinsing, cleaning, and sanitizing after pretreatment involving a 5,000-gallon sump or a 1,000-gallon 3-stage clarifier depending on the wastestream. For 2023 the IU met the SNC criteria for the six-month periods ending in the 3rd and 4th quarters, when 1 of the 2 samples collected exceeded the daily maximum for dissolved sulfide by more than the TRC at Connection 100. An NOV was issued and in response, the IU resampled the wastestream and updated its internal procedures for scheduling wastewater sampling. IWCP and Self-Monitoring in 2024 (7 total events) was conducted and yielded that compliance has been re-established.

The renewal permit, effective December 7, 2023, required the purchase of additional sewer capacity by March 1, 2024. The IU failed to comply by this date and thus was in SNC during the 2nd quarter for missing a compliance schedule milestone by more than 90 days. First and second NOV were issued, and the IU responded by asserting that its actual discharge is lower and thus less capacity needs to be purchased. Since it hasn't provided any evidence to support this lower amount, the IU is now required to submit meter data from the flow proportioned meters at their two industrial wastewater discharge points. This meter data will be used to determine the additional capacity the IU needs to purchase.

UT; Flatiron West Inc; FAC-9353

This construction dewatering project was required to self-monitor monthly at connection 100. The IU submitted its self-monitoring report due November 15, 2024, on January 9, 2025 (55 days late) and thus was in SNC for late reporting in the 4th quarter of 2024. An NOV was issued for the violation and no further enforcement actions are planned.

Valley Metals; FAC-6538

This specialty metal tubing manufacturer discharges about 900 gpd from stainless steel, nickel, and titanium tube manufacturing, etching, testing, polishing, and dye penetrant examinations and is regulated under the metal forming and metal finishing categorical standards. The IU met the SNC criteria for the six-month periods ending in the 2nd and 3rd quarters of 2024, when 1 of 3 samples collected at connection 110 exceeded the monthly average limit for nickel. An NOV was issued, and the IU attributed the issues to being behind on timely waste hauling of a process tank. Moving forward the IU also plans conduct more sampling in the beginning of the quarter to ensure more representative monthly averages. Subsequent monitoring events in the 4th quarter of 2024 demonstrated that compliance has been re-established, therefore no further enforcement actions are planned.

4.8 POLLUTION PREVENTION PLANS

During this calendar year, no industries were required to prepare and / or implement pollution prevention plans under the provisions of CA SB709 and SB2165.

Annual SIU Compliance Status

CHAPTER 5 - INDUSTRIAL POLLUTANT DISCHARGES

5.1 INTRODUCTION

This section presents the historical influent and effluent data for industrial pollutants. The data demonstrated a steady decline in industrial pollutants discharged to the plants over the past 40 years. Since 1982, when the pretreatment program received EPA approval, the total influent metal loadings declined by more than 65%, and the total effluent metal loadings declined by almost 90%. During the same period growth resulted in about a 10% increase in wastewater flows to the system, while the total heavy metals discharged by industry declined by over 90%. Some of the reductions are attributed to the diversion of wastestreams to the South Bay and North City Water Reclamation Plants. The effluent from North City discharges through PLWTP and the SBWRP effluent is discharged through its ocean outfall.

5.2 INFLUENT / EFFLUENT METALS TRENDS

For the PLWTP, Figure 5.2-1 presents the long-term trends in influent and effluent metals loading which after initial decreases have remained consistently low. For the SBWRP, the pretreatment program had already been fully implemented when the plant began operations, thus the metals have been consistently low. Implementation of Pretreatment Standards and Source Control Programs have effectively reduced or controlled pollutant loadings at the plant headworks, ensuring that there are no incidents of pass-through or interference attributed to industrial discharges at both the Point Loma and South Bay facilities, the receiving waters are protected, and the generated biosolids qualify for maximum beneficial use.

5.3 POINT LOMA AND SOUTH BAY PLANTS MONITORING

During this reporting period, the PLWTP and SBWRP did not experience any upset, interference, or pass through incidents attributable to industrial discharges.
