EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Midway Rising, LLC to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, CA 92110 (the "Subject Property") (Figure 1). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Subject Property is located approximately 800 feet to the northwest of the intersection with Sports Arena Boulevard and Camino del Rio West in San Diego, California. The Subject Property consists of the Sports Arena entertainment complex (currently known as Pechanga Arena) and vicinity, located in the central and eastern portions of Assessor's Parcel Number (APN) 441-590-04, comprising approximately 48-acres of land (Figure 2). The Subject Property is currently developed with Pechanga Arena, a gasoline service station, restaurants, and various commercial/retail businesses (Figure 3). The Client is planning to redevelop the Subject Property into an entertainment-anchored mixed-use development that includes new residential, office, and retail uses, as well as a new arena.

During the site reconnaissance, the Subject Property was observed to consist of the following commercial tenants and areas:

- Parcel A: 3500 Sports Arena Blvd: Pechanga Arena and parking lot
- Parcel B: 3494 Sports Arena Blvd: Chili's Restaurant
  3570 Sports Arena Blvd: Chick-Fil-A Restaurant
  3580 Sports Arena Blvd: Summit Gasoline & Sports Arena Car Wash
- Parcel C: 3340 Sports Arena Blvd: Sports Arena Square-Commercial/Retail
  3350 Sports Arena Blvd: Two vacant units, Crack in the Wall Picture Frames, Kite Country, The Arena Gym, Soma Concert Venue
  3360 Sports Arena Blvd: Rock and Roll San Diego Music School, The Arena Gym, and Kobey's Swap Meet
- Parcel D: 3250 Sports Arena Blvd: Dixieline Lumber
- Parcel E: 3240 Sports Arena Blvd: Salvation Army Thrift Store
- Parcel F: 3220 Sports Arena Blvd: The Alpha Project Shelter and parking area

Site Access Limitations – With the exception of the Pechanga Arena on Parcel A, the Subject Property was only observed from the sidewalks, roadways, and parking lots surrounding the Subject Property, including no access to building interiors and storage areas. In addition, only areas likely to contain hazardous substances and hazardous wastes, based on previous observations, were observed in Parcel A. With the possible exceptions of the gasoline service station on Parcel B, discussed in the "Records Review" section below and the Top Grade General Engineering storage area discussed in the "Stained Soil or Pavement" section below, this data gap is not a significant data gap in our opinion based on the availability of other relevant information, including that the Subject Property uses have not changed significantly since SCS conducted a site reconnaissance in the other areas of the Subject Property in 2023.

Environmental concerns observed during the site reconnaissance include:

Clarifier Systems/Ice Pits

Six inground wastewater clarifiers are present on the Subject Property, one is associated with the Sports Arena car wash (5-stage) and the other five are food grade grease traps associated with the Sports Arena food service, the Summit Gasoline Station convenience store, Chick-fil-A, and Chili's.

According to information provided by the Sports Arena manager, Mr. Ralph Bedoe, during the previous site reconnaissance, two grease traps are present within the concourse of the Sports Arena, two are present on the exterior of the Arena (inground), and one is present on the arena floor level. All of the grease traps are associated with food service. The grease traps associated with the arena are cleaned out approximately every six months by Ecogrease.

In addition, according to Mr. Bedoe, sludge and paint from the arena floor accumulates in the two ice pits located on either end of the Sport Arena floor. The pits have reportedly been cleaned once in the life of the sports arena.

Based on our experience, inground wastewater clarifiers and ice pits have the potential to release (e.g., through cracks or degradation of the concrete from poorly fitting or degraded piping) wastewater containing petroleum products, solvents, and hazardous wastes into the subsurface. This potential is exacerbated with time as the clarifier/ice pit systems age. In our experience, it becomes increasingly likely that systems more than 10 years old will experience a release. Based on their age (approximately 20 years or more), the car wash clarifier in Parcel B represents a recognized environmental condition (REC) to the Subject Property. Due to the potential presence of metals and VOCs associated with the sludge and the length of time the pits have been present (more than 50 years), the potential for subsurface impacts beneath the pits cannot be ruled out. Therefore, the ice pits are considered an environmental concern. SCS recommends oversight by an environmental professional upon removal of the ice pits during the proposed redevelopment activities.

The grease traps associated with food operations are not considered a concern due to the collection of food grade waste within these units.

Stained Soil or Pavement

Stained surfaces were observed in the area leased by Top Grade General Engineering. Based on the presence of fuel containers, the use of the area for construction storage, and the observed leaking vehicles, the staining observed in this storage yard is considered a recognized environmental condition. Furthermore, the inability to observe all of the surfaces is considered a significant data gap. SCS recommends further observation and shallow soil sampling once all of the vehicles and stored items are removed.

The Subject Property was interpreted to have been occupied by various buildings from circa 1903 to the present and some type of agricultural activity took place at the Subject Property and vicinity, circa 1928. Also, previous uses of environmental concern of the Subject Property include potential heating oil use in the early 1940s, printing and furniture stripping circa 1977 to 1989 in Parcel C, 3360 Sports Arena Boulevard (SAB), and previous uses of a gasoline service station and car wash circa 1966 to present in Parcel B, 3580 or 3640 SAB. Since the Subject Property was occupied by buildings as early as 1903, based on SCS's experience, there is a potential for the presence of elevated concentrations of lead in the shallow soil due to the potential former usage of lead-based paint at the Subject Property, and/or detectable concentrations of organochlorine pesticides (OCPs) to be present in the soil due to the former use of pesticides and/or termiticides. In addition, the southwestern portion of the Subject Property is part of the former Point Loma Dump, which was in operation from 1899 to 1908 and possibly longer. There is the potential for burned or incinerated ash from "backyard" incinerators or "burn pits" to be present or mixed with the soil, such as with the reported presence of the Point Loma Dump. Burn ash and/or fill materials may contain high concentrations of Chemicals of Concern (CoCs), notably certain metals (e.g., copper, lead, zinc, mercury, and cadmium). Also, elevated concentrations of metals may exist in the shallow soil from other sources as well (e.g., imported fill, aerially deposited lead, paint from previous structures).

Furthermore, the Subject Property is interpreted to be underlain by fill soil. Because the history or "pedigree" of the fill material is not known, there is a potential that the fill material is impacted with CoCs, such as petroleum products, volatile organic compounds, pesticides, semi-volatile organic compounds, polychlorinated biphenyls (PCBs), or metals (e.g., if the fill came from a contaminated property). Potential environmental concerns from previous adjoining land uses include dry cleaning facilities adjoining to the northeast circa the 1940s to 1980s, automotive repair and industrial trucking facilities adjoining circa the 1960s to present and automotive repair and a gas station were adjoining to the southeast circa the 1970s to 2023. Environmental assessments were conducted recently to evaluate the potential impacts of these historical concerns, which are summarized further below.

Summary, Conclusions, and Recommendations Based on a Review of the Previous Environmental Reports.

SCS has previously completed Phase I and II Environmental Site Assessment reports for the Subject Property:

- *Phase I Environmental Site Assessment*, dated April 28, 2023 (Phase I ESA - 2023)
- *Phase II Environmental Site Assessment Report*, dated July 10, 2023 (Phase II ESA)
- *Phase II Environmental Site Assessment Report Number 2, Geophysical Survey and Trenching Assessment*, dated September 22, 2023 (Trenching Phase II ESA)

The Phase I ESA – 2023 identified the following previous environmental land uses/features of concern at various properties within the Subject Property boundaries:

- Clarifier system and ice pits
- Current and past gasoline service stations, including the presence of underground storage tanks (USTs)
- Off-site upgradient facilities that used or have records of a release of petroleum hydrocarbon or halogenated solvent products.
- Lead-based paint (LBP), pesticides, and termiticides
- Previous agricultural use
- Previous printing and furniture stripping shops
- Previous barracks-style housing with possible fuel oil heating systems
- Presence of fill soils, including burn ash and waste
- Other petroleum hydrocarbon and hazardous materials storage and uses including Kobey's waste storage area

Various subsurface investigations events have been carried out by SCS in various representative and focused portions of the Subject Property between February 2023 and March 2024, and have consisted of soil, soil vapor, and groundwater sampling, as well as extensive geophysical surveys of select areas at the Subject Property followed by focused shallow soil trenching efforts. The subsurface investigations have indicated the following findings regarding environmental concerns:

- Former burn dump area – This feature, known as the Point Loma Dump, is located in the southwestern portion of the Subject Property and is interpreted to be a former open burn pit area that was present prior to the development of Frontier Housing, which was later covered with 2 to 3 feet of fill soils. Burn ash with elevated concentrations of metals including antimony, arsenic, cobalt, and/or mercury that exceed residential health risk-based

screening levels were discovered in this area of the Subject Property, buried at depths of approximately 2 to 5 feet deep along with old household debris including bottles, ceramics, and other trash. Portions of these soils are considered a California hazardous waste. Although several soil borings as well as trenching were completed in this area for delineation, additional delineation is required to further determine the lateral extent of these soils. SCS also recommends that the San Diego Department of Health and Quality (DEHQ) and the San Diego Local Enforcement Agency (LEA) be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.

- Pesticide-bearing soils – Shallow soils with elevated concentrations of the organochlorine pesticide identified as chlordane were identified in several samples collected from Parcel C at the Subject Property, some of which are considered a California hazardous waste. The known pesticide-bearing soil within the Construction Excavation Envelope that exceeds the mitigation criteria for chlordane needs to be properly managed during excavation and grading activities.
- Underground storage tank (UST) discovered – the geophysical operations completed at the Subject Property indicated the presence of a UST within the western parking lot area of the Subject Property. A backhoe was used to expose the UST in June of 2023, which was measured to be approximately 12 feet long by 4 feet in diameter, with visible petroleum hydrocarbon staining observed near the bottom of the UST.
- Groundwater with detectable CoCs - Although detectable concentrations of total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) (i.e., bromodichloromethane and dibromochloromethane) were reported to be present in up to 3 of the 5 samples analyzed, all of the groundwater samples analyzed for TPH and VOCs were reported to be below the Health Risk-Based Mitigation Criteria. However, due to the detectable concentrations of CoCs in one or more of the samples collected and analyzed, and due to the relatively shallow depth of groundwater at the Subject Property (i.e., approximately 8 to 10 feet below grade), if dewatering activities are required during construction, groundwater filtration and proper permits may be required prior to discharging to the sanitary sewer system.
- Soil vapor – VOCs including benzene, ethylbenzene, xylenes, and tetrachloroethene (PCE) were reported to be present in various samples collected. After applying the applicable 2011 Department of Substances Control (DTSC) attenuation factors for the existing commercial and possible future residential land use (0.001 and 0.0005 respectively) to the maximum reported concentrations of VOCs in soil vapor beneath the Subject Property, the maximum theoretical concentrations of VOCs in indoor air at the Subject Property do not exceed the commercial and residential screening levels (DTSC- Modified Screening Levels [SLs]); however, if using the California Environmental Protection Agency (CalEPA)-recommended attenuation factor of 0.03, the maximum theoretical concentrations of benzene and ethylbenzene in indoor air at the Subject Property exceed the commercial and residential screening levels (DTSC-SLs) and m,p-xylene and PCE in indoor air at the Subject Property exceed the residential screening levels (DTSC-SLs).

Based on these findings and the proposed redevelopment of the Subject Property into a mixed-use development, preparation of a Soil Management Plan (SMP) is recommended to provide a dynamic strategy to properly manage CoC-bearing soil and to assess and mitigate, and document, as necessary, releases of CoCs in a manner that is protective of human health for the proposed future land use and the beneficial uses of water resources of the Subject Property and vicinity. The SMP should guide both the reuse and/or export of impacted soil, as well as the environmental oversight of the excavation and removal of the UST and associated petroleum hydrocarbon-bearing soil, removal of the clarifiers/ice pits on the Subject Property, further delineation of impacts from the

recognized environmental conditions identified on the Subject Property, and confirmation soil sampling as needed on the Subject Property.

According to the review of the regulatory database and agency files for the Subject Property, several tenants, such as the Sports Arena, Kobey's Swap Meet, Summit Gasoline, Dixieline Lumber, etc, formerly and currently use hazardous materials and generate hazardous wastes, such as maintenance chemicals like paint, batteries, and fluorescent lights, and also use of petroleum hydrocarbons like gasoline, diesel, oil, and waste oil and the use of solvents on the Subject Property. Based on a review of the available information, it is unlikely that any of the information reviewed from the regulatory database and agency files has negatively affected the environmental condition of the Subject Property, with the possible exception of the gasoline service/fueling stations described below.

On-Site Gasoline Service/Fueling Stations

The Subject Property has been developed with current or historical fueling operations, including Dixieline Lumber at 3520 Sports Arena Boulevard (Parcel D, Figure 8) that previously contained a fueling station circa approximately 1970 to 2003 (33 years), a gasoline service station identified as Arena Fuels/Arco AM-PM/Summit Gasoline Service Station at 3580 Sports Arena Boulevard (Parcel B, Figure 4) since 2003 (20 years), and a historical gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard (Parcel B, Figure 3) from approximately 1966 to 1974 (8 years). Gasoline service/fueling stations are associated with features of environmental concern (petroleum products/wastes, underground storage tanks [USTs], fuel dispensers, and clarifier/sumps).

DEHQ records indicate the USTs and fueling systems at Dixieline have been removed and soil confirmation samples taken in the excavation areas indicated CoCs were not detected above laboratory reporting limits.

DEHQ and EDR records indicate that a historical gasoline service station occupied the area where Summit Gasoline is currently, or possibly, where Chili's is currently according to information obtained through interviews with the tenant, circa late 1960s to early 1970s. Soil and groundwater samples taken on the Subject Property in geotechnical borings in the area opposite Kemper Street indicated CoCs were not detected above laboratory reporting limits.

DEHQ records report the existing gasoline service station at 3580 Sports Arena Boulevard, USTs and system was installed in 2003, including a split regular unleaded gasoline 10,000-gallon and diesel fuel 12,000-gallon USTs, and one premium unleaded 20,000-gallon UST. In February 2020, one additional regular unleaded gasoline 40,000-gallon UST was added to this system. These four USTs and associated fueling system are currently in place. At the time of the site reconnaissance, one UST was observed east of the convenience store and west of the car wash.

No unauthorized releases of petroleum hydrocarbons and minor violations were reported in the DEHQ files regarding the existing gas station. Based on an absence of disposal violations, and the lack of known and reported releases, there does not appear to be a recognized environmental condition associated with the current use of this portion of the Subject Property as a gas station. However, based on our experience, there are likely surface release(s) spills at the gas station that have occurred, as the well possible vapor phase releases as a result of piping systems that were not historically vapor "tight." Also the lack of information regarding the one UST observed east of the convenience store and west of the car wash. Combined with the proposed redevelopment plans for

the Subject Property into a mixed-use development with commercial/retail and residential uses along with the sports arena complex, these possible releases are considered potential recognized environmental conditions.

Information regarding removal of USTs from the historical service station is not available. Therefore, based on the lack of records pertaining to the condition of the subsurface following UST removal, this historical gas station is considered a recognized environmental condition and requires further research or investigation.

Subsurface investigation (geophysical survey, soil and soil vapor sampling) is recommended, in particular due to the proposed change in land use to include residential properties in the area of the current and historical gas stations.

Consultation with the DEHQ is recommended to address potential petroleum hydrocarbon impacts during the removal of the fuel systems and clarifiers on the Subject Property, and proper permits pertaining to the UST removal/replacement should be obtained from the DEHQ and City of San Diego Fire-Rescue department prior to redevelopment. Additional soil and soil vapor sampling, as recommended above, will also serve to update the prior investigations based on current regulatory standards.

SCS attempted soil and soil vapor sampling at 3580 Sports Arena Boulevard in 2023 and 2024 to assess for potential impacts from the gasoline service station uses in association with the redevelopment of the Subject Property, although access to this area was not granted. When access is available, subsurface investigation (geophysical survey, soil and soil vapor sampling) at The Summit Gasoline Service Station, 3580 Sports Arena Blvd, on the Subject Property is recommended. Details of the assessments conducted in the other historical fueling areas on the Subject Property, Dixieline 3520 Sports Arena Boulevard and the historical gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard are further discussed in the previous environmental reports summary above.

Regulatory database information identified several known and suspected contamination sites in the area surrounding the Subject Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Subject Property, with the possible exceptions listed below. Soil, soil vapor, and groundwater sampling was completed in regard to the adjacent property recognized environmental conditions to the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended and are further discussed in the previous environmental reports summary above.

Former Cleaners – 3496 and 3502 Kurtz Street

Due to the listings in the EDR Hist Cleaner database of The Launderette in 1961 located at 3502 Kurtz Street and Triles in 1948 located at 3496 Kurtz Street, SCS submitted requests for records to the DEHQ. No records were identified in the DEHQ files for these facilities. The facilities are located at least 75 or 200 feet, respectively, to the northeast of the Subject Property, across Kurtz Street, and are not technically located on an adjoining property. The properties have since been redeveloped. The facilities do not appear on any databases indicating an unauthorized release has been documented; however, the facilities were present prior to the time of regulatory oversight; therefore, we cannot assess whether these facilities represent a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface

at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

H21153-1/H19221, Former Truck Terminal/Golden Chariot Trucking/Loyola Trucking/Clean Harbors

This facility is a truck terminal located on an adjoining property to the northeast of the Subject Property consisting of a former diesel fueling station and oil UST circa 1963 to the mid-1980s to early 1990s which impacted groundwater.

Although closure was granted by the regulatory agency, due to the limited nature of the previous assessments and close proximity and upgradient location of the former freight terminal, the property remains an environmental concern and there is a moderate likelihood that reported release(s) from this facility represents a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

H21151-001 and -002, Former Shorebreak Materials-Butler Property, 3612 Kurtz Street

In September 1989 contamination of the soil and groundwater was discovered with the removal of two USTs on this northeast adjacent property and a DEHQ case was opened, in addition hazardous wastes and substances stored and used by Shorebreak in 1991 were observed impacted soil in the solvent storage and paint mixing area (approximately 350 feet to the northeast) as a HMMD complaint.

Based on the close proximity of the contaminated areas to the Subject Property and the possible up-gradient location of the contamination with respect to the groundwater flow direction, this property represents a recognized environmental condition to the Subject Property in connection with reported releases from this northeast adjacent facility. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

HMD/UST 211463 and 131595, Exponents, Inc., 3280 Kurtz Street

Although Exponents, Inc. does not appear on any databases indicating an unauthorized release has been documented, there is a possibility that Exponents, Inc. performed dry cleaning activities, and since there is a record of the use of chlorinated solvents (trichlorethylene), an unidentified release would have the potential to impact the Subject Property. Therefore, the use of chlorinated solvents at this facility is considered a potential recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

HMD 207798/103138 3467-3469 Kurtz Street

Although no releases were documented at the facility, based on the former presence of a UST, the reported generation of the solvent TCE and petroleum hydrocarbon waste, and the close proximity, this facility represents a recognized environmental condition exists for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

Yellow Cab Company of San Diego, 3473 Kurtz Street

Given the presence of a taxi company, it is possible that a UST was present and/or automotive repair operations have occurred. If a previously unidentified release had occurred, this facility represents a recognized environmental condition for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

Conclusions

In summary, SCS performed a Phase I ESA of the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, CA 92110. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed recognized environmental conditions and significant data gaps in connection with the Subject Property, as discussed above. Subsurface investigation work was commenced at the Subject Property in 2023 to further assess these recognized environmental conditions as further discussed herein, and additional assessment to further characterize identified environmental concerns as well as preparation of a Soil Management Plan is recommended prior to commencing redevelopment activities. SCS also recommends that the DEHQ and the LEA be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Midway Rising LLC (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, CA 92110 (the "Subject Property"). A location map for the Subject Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM International (ASTM) E1527-21.

The Subject Property consists of the central and eastern portions of Assessor's Parcel Number (APN) 441-590-04, comprising approximately 48-acres of land. The Subject Property is currently developed with Pechanga Arena, a gasoline service station, restaurants, and various commercial/retail businesses. The Client is planning to redevelop the Subject Property into an entertainment-anchored mixed-use development that includes new residential, office, and retail uses, as well as a new arena.

PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Subject Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively, the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of the presence of hazardous substances as defined in CERCLA Section 101, and petroleum products, in, on, or at the Subject Property due to a release, likely release, or under conditions that pose a material threat of a future release to the environment.

If known or suspected contamination is identified, a User seeking to maintain LLPs has responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances or petroleum products during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. If warranted, SCS can provide support for clients with continuing obligations, as appropriate.

SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Subject Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspection of the Subject Property and adjoining sites performed on April 4 & 19, 2024.
- Review of historical Subject Property use information (topographic maps, aerial photographs, fire insurance maps, previous environmental reports, etc.).

- Commonly known or reasonably ascertainable information about the Subject Property (e.g., interviews with appropriate regulatory agency personnel, review of readily available agency files and documents, interviews with other knowledgeable persons, etc.).
- Degree of obviousness of the presence or likely presence of releases or threatened releases of hazardous substances or petroleum products at the Subject Property and the ability to detect releases or threatened releases by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.
- Review of environmental liens, if provided or authorized to obtain by the User.

SPECIAL TERMS AND CONDITIONS

This Phase I ESA for Midway Rising, located in San Diego, California, has been prepared specifically for Midway Rising, LLC in accordance with email authorization from the Client dated April 2, 2024 to proceed with the Phase I ESA, as well as Exhibit 07 to the Consulting Contract (Contract) between SCS and the Client. Exhibit 07 was fully executed on May 23, 2023. The Contract is dated January 6, 2023. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this report. Third parties use this report at their own risk. SCS assumes no liability of any kind with respect to such use. Third party reliance letters may be issued on request to SCS subject to approval of Midway Rising, LLC and payment to SCS of a fee for such letters.

LIMITATIONS AND ASSUMPTIONS

The assessment focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by applicable regulatory authorities) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances not currently deemed hazardous by the U.S. Environmental Protection Agency (U.S. EPA) or the California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials (ACMs), lead-based paint (LBP), water supply plumbing, mold, indoor air quality, and similar matters are not part of this assessment. SCS did not evaluate the Subject Property for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, radon, etc.) are not typically considered in a Phase I ESA. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered a concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, including regulatory agency listings. SCS assumes that information collected during this Phase I ESA is accurate and correct, unless SCS determines that reliable information exists to the contrary or the information is obviously inaccurate. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. Unless warranted, information collected has not been independently validated as part of this assessment. SCS is not responsible for consequences or conditions arising from facts that were not fully disclosed to SCS during the assessment.

PHASE I ESA VIABILITY

This Phase I ESA is based on conditions at the time the individual elements of the report were completed. A Phase I ESA that meets or exceeds the requirements of ASTM E1527-21 and 40 CFR 312 is presumed to be viable when it is conducted within 180 days of the date of the intended transaction (acquisition, lease, refinance, etc.). The completion dates for the Phase I ESA components with a 180-day shelf life are identified below.

Component of Phase I ESA with Shelf Life Requirement	Completion Date
Interviews	None
Review of Governmental and Historical Records	March 28, 2024
Visual Inspection	April 4 & 19, 2024
Declaration of Environmental Professional	May 3, 2024
Environmental Lien Search	Not provided by User

2 GENERAL SITE CHARACTERISTICS

SUBJECT PROPERTY LOCATION

The Subject Property is located approximately 800 feet to the northwest of the intersection with Sports Arena Boulevard and Camino del Rio West in San Diego, California. It comprises the central and eastern portions of San Diego County tax assessor parcel number (APN) 441-590-04, approximately 48-acres of land. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SUBJECT PROPERTY DESCRIPTION

The Subject Property consists of the Sports Arena entertainment complex (currently known as Pechanga Arena) and vicinity. The Subject Property is currently developed with Pechanga Arena, a gasoline service station, restaurants, and various commercial/retail businesses.

The following table summarizes general information in connection with the Subject Property (Figure 3).

APN	Central and eastern portions of APN 441-590-04
Addresses	3220, 3240, 3250, 3350 and 3500 Sports Arena Boulevard, San Diego, CA 92110
Area	Approximately 48 acres
Site Land Use	Various commercial uses

Occupants and Figure Reference	**Parcel A** 3500 Sports Arena Blvd: Pechanga Arena and parking lot **Parcel B** 3494 Sports Arena Blvd: Chili's Restaurant 3570 Sports Arena Blvd: Chick-Fil-A Restaurant 3580 Sports Arena Blvd: Summit Gasoline & Sports Arena Car Wash **Parcel C** 3340 Sports Arena Blvd: Sports Arena Square-Commercial/Retail 3350 Sports Arena Blvd: Two vacant units, Crack in the Wall Picture Frames, Kite Country, The Arena Gym, Soma Concert Venue 3360 Sports Arena Blvd: Rock and Roll San Diego Music School, The Arena Gym, and Kobey's Swap Meet **Parcel D** 3250 Sports Arena Blvd: Dixieline Lumber **Parcel E** 3240 Sports Arena Blvd: Salvation Army Thrift Store **Parcel F** 3220 Sports Arena Blvd: The Alpha Project Shelter and parking area

PHYSICAL SETTING

Physiographic Setting

According to the U.S. Geological Survey (USGS), La Jolla Quadrangle California 7.5-minute topographic map (**Appendix C**), the Subject Property is located in the south of Mission Bay and the San Diego River channel at an elevation of approximately 5 feet above mean sea level. Subject Property topography is generally flat with a slight regional slope to the west.

Geologic Characteristics

According to the *Geologic Map of the San Diego 30' x 60' Quadrangle, California* (2008) and United States Department of Agriculture Web Soil Survey, https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx, the Subject Property is underlain by artificial fill (af), urban land, placed historically, which consist of Urban land and deposits of fill resulting from human construction, mining, or quarrying activities; includes compacted engineered and non-compacted, non-engineered fill.

Possible concerns from artificial fill at the Subject Property are further discussed in the "Historical Research" section below.

Hydrogeologic Characteristics

Data regarding depth to groundwater and flow direction for the Subject Property were available from the *Phase II Environmental Site Assessment Report, Midway Rising, Portions of Assessor's Parcel Number 441-590-04 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, California 92110* completed for the Subject Property on July 10, 2023. According to information reviewed in this report, groundwater was encountered at depths between 8 to 10 feet below ground surface (bgs) in February 2023. Groundwater flow direction for the property was estimated to flow to the west/northwest but variable.

Many variables influence depth to groundwater and flow direction and the actual depth to groundwater and flow direction at the Subject Property may be different than presented in this section.

Water Quality Survey

The following table summarizes the reported water quality in the Subject Property vicinity.

Reported Hydrologic Subarea	Mission San Diego (907.11)
Reported Hydrologic Area	Lower San Diego (907.10)
Reported Hydrologic Unit	San Diego (907.00)
Reported Beneficial Use	None. Due to the Subject Property's location west of the easterly boundary of the Interstate 5 right-of-way, the Subject Property is excepted from the sources of drinking water policy.
Source	California RWQCB, San Diego Region, *Water Quality Control Plan for the San Diego Basin*, September 8, 1994, with amendments effective prior to September 1, 2021

3 SITE RECONNAISSANCE

Allison O'Neal and Jennifer Bauer Morton of SCS conducted a reconnaissance of the Subject Property and surrounding area on April 4 & 19, 2024. The inspection on April 4, 2024, was of the exterior areas of the Subject Property and was conducted unaccompanied.

On April 19, 2024, the interior areas of the Sports Arena buildings that SCS was provided access to were observed, and this area of the Subject Property grounds and perimeter were systematically traversed on foot during the site reconnaissance. Mr. Simon Yaqo, Pechanga Arena Engineer for 1 year and 8 months, accompanied SCS personnel, provided access to the observed features, and answered questions posed by SCS personnel. An aerial image showing the Subject Property is provided as **Figures 3, 4, 5, 6, 7, and 8** in **Appendix A**. Photographs taken during the site reconnaissance are included in **Appendix B**.

Site Access Limitations

During the site reconnaissance of Parcel A, only areas likely to contain hazardous substances and hazardous wastes, based on previous observations, were observed. Based on the nature of the operations and the availability of other pertinent records, this data gap is not considered significant.

With the exception of the Pechanga Arena on Parcel A, the Subject Property was only observed from the sidewalks, roadways, and parking lots surrounding the Subject Property, including no access to building interiors and storage areas. With the possible exceptions of the gasoline service station on Parcel B, discussed in the "Records Review" section below and the Top Grade General Engineering storage area discussed in the "Stained Soil or Pavement" section below, this data gap is not a significant data gap in our opinion based on the availability of other relevant information, including that the Subject Property uses have not changed significantly since SCS conducted a site reconnaissance in the other areas of the Subject Property in 2023.

GENERAL SITE INFORMATION

The following table summarizes information in connection with the Subject Property buildings.

Number of Buildings	13 buildings and approximately 5 sheds
Interpreted Construction Date	Circa 1966 for parcels A, D, E and F Circa 1979 for parcel C Circa 1970*/2003 for parcel B
Number of Stories	Various, 1 to 3
Construction Types	Various: pre-cast concrete, masonry block, and wood frame construction types. Concrete slab-on-grade foundations
Figure Reference	Appendix B

Note:
* A group of structures interpreted to be a gasoline service station are present in a 1970 aerial photograph in the approximate location of the current gasoline service station in Parcel B. This station was not present in the 1979 or subsequent aerial photographs.

Summit Gasoline Service Station & Sports Arena Car Wash: Parcel B, 3580 Sports Arena Blvd

Summit Gasoline Service Station and Sports Arena Car Wash, or the western portion of Parcel B, on Subject Property is developed with two one-story buildings (Figure 4). The building on the central portion of this part of the Subject Property is occupied by Summit gasoline service station and food mart. The building on the eastern portion of this area is occupied by the Sports Arena Car Wash. The Subject Property's current and historical use as a gasoline service station and car wash and the associated features of environmental concern (petroleum products/wastes, underground storage tanks [USTs], fuel dispensers, and sumps/clarifiers) are discussed in the "Record Review" section below.

Based on observations made during the Subject Property reconnaissance and our interpretations, the car wash on Subject Property consists of a drive through car wash equipped with a five-stage clarifier system for reclaiming wash water.

The gasoline service station consists of eight multiple product dispensers on eight dispenser islands, with a total of sixteen fueling stations located underneath a fuel canopy, dispensing up to three grades of gasoline fuel (premium, plus, and regular unleaded) and diesel fuel. According to previous assessments completed on the Subject Property, further discussed in the "Previous Environmental Reports" section below, there are a total of four USTs on the Subject Property (Figure 4):

- Three unleaded gasoline USTs, 10,000-, 12,000-, and 40,000-gallons, are located near the western edge of the fuel canopy (Figure 4).

- One 10,000-gallon diesel UST located near the western edge of the fuel canopy (Figure 4).

A printout from the monitoring system, which would have confirmed the UST volumes, was not available during the previous 2023 site visit.

At the time of the site reconnaissance, one UST was observed aboveground east of the convenience store and west of the car wash. No information was provided during the site visit regarding this UST.

The food mart consists of retail space, office space, and a storage area. A three-stage clarifier/grease trap was observed on the western exterior of the building and appears to be used by the food mart (Figure 4).

The Summit Gasoline & Sports Arena Car Wash grounds were observed to be developed with asphalt-paved parking areas, concrete-paved sidewalks (at the southern edge of the Subject Property perimeter), and limited landscaping.

A fuel system vapor recovery system, including a clean air separation system tank, was observed west of the fuel dispensers (Figure 4).

Propane cages storing 20-pound cylinders for sale were observed along the northern and eastern areas of the gas station building.

An outdoor storage and trash/waste disposal area was observed along the eastern side of the gas station building and east of the car wash. In addition, a structure in the process of construction was observed to be located north of the gas station building. Several shipping containers and dirt/concrete stockpiles were observed in this area.

Two clarifiers were observed in this area of the Subject Property (Figure 4):

- One five-stage clarifier/reclaimed water system associated with the car wash located in the eastern portion of this area of the Subject Property;

- One food grade three-stage clarifier/grease trap associated with the food mart.

The interior of the clarifiers were not inspected at the time of the site assessment. The environmental concerns associated with the clarifiers are further discussed in the "Clarifier Systems/Ice Pits" section below.

Chick-fil-A

The Chick-fil-A building is a one-story fast-food establishment (Figure 5). The building is surrounded by asphalt-paved parking areas, concrete sidewalks, and landscaping. A grease trap and a grease container were observed in the parking lot to the west of the building. Given the use of the grease trap and container solely for food waste, they are not considered an environmental concern. Transformers were observed, which are discussed below.

Chili's

Chili's is a one-story restaurant and bar. The restaurant is surrounded by asphalt paved parking, concrete sidewalks, and landscaping (Figure 5). A grease trap was observed in the parking lot to the north of the building. Given the use of the grease trap solely for food waste, it is not considered an environmental concern. One transformer was observed, which is discussed below.

What appeared to be patched soil borings were observed near the northwest and southeast corners of the building. These soil borings appear to coincide with locations of soil borings discussed in the "Records Review" section below.

Pechanga Arena

The Pechanga Arena is a sports and entertainment venue. Mr. Simon Yaqo, engineer, accompanied SCS during the arena site reconnaissance. A concourse with various concessions and eight restrooms surrounds the arena. Numerous concessions stands were inaccessible. Given the food service nature of these portions of the Subject Property, this limitation is not expected to alter the findings of this assessment and is not considered significant. Three grease traps are reportedly present within various food vendors' facilities and are discussed further below.

Administrative offices and a box office are present on the ground floor of the north side of the building. Cleaning supplies are stored in a janitor's closet within the administrative offices. The box office was not observed during this site assessment. Given the administrative nature of this portion of the Subject Property, this limitation is not expected to alter the findings of this assessment and is not considered significant.

On the arena floor level, storage areas are present on the west and south sides of the building. The storage areas contained chairs, flooring, and maintenance supplies as well as items for the various sports teams occupying the arena, including the San Diego Gulls, San Diego Sockers, and the San Diego Seals. Two kitchens are present at the southeast corner, equipped with grease traps. A sewer sump pump was present in one kitchen. The sewer sump pumps on the Subject Property are serviced by an outside vender every six months. To the south of the southernmost kitchen is an electric room with a dry transformer. A green room/catering room/dining room is also present in the southeast corner, as well as a press room. Five dressing rooms are present on the southeast side of the building. The San Diego Gulls locker room facility is present at the east side of the arena floor level.

Multiple offices are present throughout the arena floor level. A First Aid office is present on the Concourse level. These areas were not observed during the current Phase I ESA site reconnaissance, however, based on the nature of their use and observations during the previous two site visits, this data gap is not considered significant.

A carpenter's shop is present to the north of the dressing rooms on the east side of the building. Within the carpenter's shop two dry transformers were observed, as well as typical maintenance and cleaning supplies. The containers were observed to be in good condition with no evidence of significant spills or leaks.

The facility consists of showers, locker rooms, storage, restrooms, and a laundry room; however, many of the rooms were locked and inaccessible. Based on the nature of the use as a sports facility, this limitation is not considered significant.

A storage room containing janitorial supplies and laundry facilities is present to the north of the Gull's facility. Cleaning products were observed in containers of 1-gallon or less and appeared to be in good condition with no evidence of significant spills or leaks. An additional sewer sump pump was observed at the east end of the room.

The Zamboni parking area is present in the northeast corner of the building. A large drain to capture melting ice was observed. The drain is connected to the municipal sewer system. Sludge is cleaned from the drain approximately every six months by an outside vendor. No hazardous materials were observed to be stored near the drain.

The main electrical room is present at the northeast corner of the building. Within the electrical room is a diesel generator. The generator reportedly holds 30 gallons of diesel fuel. The generator appeared to be in good condition, and no signs of spills or leaks were observed in the vicinity. One battery was observed next to the generator. A dry transformer was also present in the electrical room.

The mechanical room is occupied by various equipment and serves as storage for typical maintenance and paint supplies. The original electric chiller, installed in 1966, is present in the southeast corner of the room. The chiller utilizes approximately 34,000 gallons of a water and ethylene glycol mixture. Periodically the chiller is serviced and ethylene glycol is drained into drums, then replaced back into the system. Numerous empty drums for this purpose are stored in the parking lot and are discussed further below.

A boiler for heating the building is present in the northeast portion of the mechanical room. The boiler is reportedly powered by natural gas.

Two additional electric-powered chillers are present in the northwest portion of the mechanical room.

A paint storage room was present on the exterior of the building along the north side of the mechanical room. Multiple 1- and 5-gallon containers of paint and other smaller volumes of paint supplies were present. The containers were observed to be in good condition with no signs of significant spills or leaks.

A total of four flammables cabinets were observed in the mechanical room. Materials stored in the cabinets are discussed further below. One cabinet was inaccessible.

Additional maintenance supplies were stored throughout the mechanical room and are discussed further below. Materials were generally observed to be in good condition with no significant staining or other evidence of spills or releases. Therefore, the maintenance supplies are not considered a significant environmental concern.

The arena floor is equipped with two ice pits at either end. Each pit is 5 feet wide by 35 feet long and 5 feet deep. Ice drains into the pits as it melts and is later pumped out with a portable pump. According to information provided by Mr. Ralph Bedoe, Chief Engineer for 40 years at Pechanga Arena, during the previous site reconnaissance, sludge and paint from the arena floor accumulates in the pits. The pits were reportedly cleaned out once by an outside service.

A fenced storage area was present on the north side of the building exterior. A hydraulic recycling trash compactor was present. The hydraulic hoses appeared to be in good condition and no signs of significant leaks were observed. Near the compactor were multiple blue plastic 55-gallon drums labeled Clean. Small containers of diesel fuel and gasoline for an ice edger and power washer were observed, as well as propane cylinders. Three 20-gallon containers of biocides and inhibitors for the cooling system were also observed. All of the containers appeared to be in relatively good condition with no signs of significant spills or leaks. Multiple CO_2 cylinders for soft drinks were also observed in this area.

Two grease traps are present on the southeast side of the Arena. The grease traps are used for the food concessions and are discussed further below. Given the nature of the use for food grade wastes, the grease traps are not considered an environmental concern.

Six cellular equipment sites are located on the exterior of the Arena. The cellular equipment areas were inaccessible. One of the cell sites, located on the southeast corner of the building, is equipped with a backup diesel generator. Information pertaining to hazardous substances or petroleum products associated with cellular equipment was not available. Generators at cell sites typically have above ground storage tanks. No evidence of a significant spill or release was observed within the vicinity of the cellular equipment. In addition, the 55-gallon diesel AST associated with the generator is regularly inspected by the HMMD, and no violations indicating a significant release or incident was identified in DEH records. Therefore, the diesel tank does not represent a significant environmental concern.

Food service offices are present on the northeast side of the exterior of the Arena building. The offices were inaccessible at the time of our site reconnaissance. Given the presumed administrative nature of the offices, this limitation is not considered significant.

<u>Pechanga Arena Site Grounds</u>

The Arena is surrounded by a large asphalt-paved parking lot. Typical minor staining was observed throughout the parking lot and is considered *de minimis*.

The western portion of the parking lot is occupied by Kobey's Swap Meet on Fridays, Saturdays, and Sundays. Several structures related to the Swap Meet were present, however none of the features were accessed during the site reconnaissance. No signs of any significant spills or releases in the vicinity of the storage structures were noted. Given the presumed retail and food service nature of the structures, the access limitations are not expected to alter the findings of this report and are not considered significant.

To the northeast of the Arena are several storage areas and a grass-covered outdoor arena. Several storage sheds were present and could not be accessed. However, given the use of the arena for sports training, this limitation is not considered significant.

To the north of the outdoor arena is a gated storage area used by Kobey's Swap Meet. This area was accessed during the previous Phase I ESA but was not accessible during this site visit. The area was

observed through the fence. Housekeeping in the area appeared to have improved relative to observations made during the previous site reconnaissance, and no drums or significant trash appeared to be present, however, several 5-gallon buckets were present and could not be directly observed. No signs of a significant release were observed. The area was partially dirt-covered and staining was observed. A trash compactor was present on the north side of the area. No evidence of significant leaks was observed near the hydraulic lines. Therefore, there is a low likelihood that the trash compactor represents an environmental concern. SCS evaluated this area during a Phase II environmental site assessment, which is discussed further in the "Previous Environmental Reports" section below. A pole-mounted transformer was observed in this area and is discussed further below.

South of the outdoor arena is the "Boneyard", a storage area for the Sports Arena. Within the Boneyard was a shed which was inaccessible and is reportedly used to store new paint. It is possible that a significant amount of paint is stored in the shed. Housekeeping in the Boneyard area had significantly improved relative to prior site visits. Numerous 1- and 5-gallon paint buckets were present and were properly stored on pallets or in a larger container, pending recycling/disposal, and are discussed further below. No evidence of significant releases or spills was observed. Four shipping containers used for storage were present. With the exception of a small container of Roundup and additional paint, no items of environmental concern were stored in the shipping containers. No evidence of significant spills or releases were observed, therefore, this area is not considered an environmental concern. SCS recommends to proper disposal of all paint, painting-related chemicals, and Roundup, prior to redevelopment.

South of the Boneyard was a storage building for the San Diego Gulls. No hazardous substances or hazardous wastes were observed in the building.

East of the Gull's storage building are several additional storage areas. The first was a fenced area with multiple storage containers reportedly used by the San Diego Gulls. Several plastic totes reportedly used for water were observed in this area. Further east was equipment storage for Strike Force, an indoor football team. No hazardous substances or petroleum products were observed.

The following eastward area is leased by Top Grade General Engineering and was observed to store construction equipment and supplies. A portable diesel tank was observed in a truck bed, and several unidentified blue plastic drums were observed. The surface of the area was mostly obscured with vehicles and supplies, and minor staining was observed in accessible areas. The inability to observed all of the surfaces is considered a significant data gap, given the use and condition of the storage area. Some of the vehicles were observed to be leaking, with small plastic pools used as catchment. A generator, gas tanks, and an unidentified drum were observed. Three storage containers were also present, which could not be accessed Given the nature of the business and the features observed, it is possible that hazardous substances and petroleum products have impacted this area. Therefore, SCS recommends limited shallow soil sampling and further observations once the area is fully accessible.

The easternmost storage area is occupied by Kobey's Swap Meet. This area was not accessible during the current site visit, however it was observed through the fence. In addition to storage, the area is used for employee parking. No environmental concerns were noted.

Sports Arena Square: Parcel C, 3340, 3350, and 3360 Sports Arena Blvd

Sports Arena Square, or Parcel C, consists of two commercial retail buildings, parking areas, and limited landscaping (Figure 7). Access to the interior of these buildings was not available at the time of the site reconnaissance. From outside observation, the tenants that occupy the buildings are:

- 3350 Sports Arena Blvd: Two vacant units, Crack in the Wall Picture Frames, Kite Country, The Arena Gym, Soma Concert Venue
- 3360 Sports Arena Blvd: Rock and Roll San Diego Music School, The Arena Gym, and Kobey's Swap Meet

These are the same tenants that occupied this area of the Subject Property during the site visit that SCS conducted for the previous Phase I Environmental Site Assessment last year, which is summarized in the "Previous Environmental Reports" section below. Based on a review of the site reconnaissance section of the previous report, no environmental concerns were noted for this area of the Subject Property.

Dixieline Lumber: Parcel D, 3250 Sports Arena Blvd

Dixieline Lumber, or Parcel D, consists of a two-story retail and corporate office building in the southern portion and a one-story retail product overstock storage building, a two-story lumber mill, and five single-story retail sheds that encompass a lumber yard in the central and northern portions of this area on the Subject Property (Figure 8). Overstock lumber storage and a parking area were located in the northwest portion. This portion of the Subject Property is enclosed by a 10-foot cinderblock-wall along the northern, western, and eastern perimeters. Access to this area of the Subject Property was not available at the time of publishing this report. The hazardous materials/wastes used in this area of the Subject Property are further discussed in the "Records Review" section below.

Salvation Army Thrift Store: Parcel E, 3240 Sports Arena Blvd

The Salvation Army Thrift Store, or Parcel E, was observed to consist of one two-story retail building with a front-loading dock, parking area, and limited landscaping (Figure 8).

The Alpha Project Shelter: Parcel F 3220 Sports Arena Blvd

Parcel F was observed to consist of one commercial building and associated parking lot in the southern portion and a parking area with storage units and a shipping container in the northern portion (Figure 8). The building on this portion of the Subject Property was observed to be used as a homeless shelter for the Alpha Project. The shelter parking lot contained portable showers in the southern area, portable restrooms and a recreation area with tables and a canopy in the eastern area, individual storage bins for each tenant and a shipping container with furniture in the northern portion. A six-foot tall chain link fence is present along the entrance to the shelter building parking lot as well as separating the northern and southern parking areas. The northern parking area is accessible from Kurtz Street and has storage units and a shipping container along the dividing fence. No hazardous materials/wastes were observed in the exterior areas of Parcel F on the Subject Property.

The presence of the following features was considered by SCS during the site reconnaissance. Features observed are discussed further below.

Feature	Observed	Feature	Observed
Sources of Heating and Cooling	Yes	Polychlorinated Biphenyl-Containing Items	Yes
Potable Water Supply	Yes	Pits, Ponds or Lagoons	No
Sewage Disposal System	Yes	Drains and Sumps	Yes
Hazardous Substances and Petroleum Products in Connection with Identified Uses	Yes	Stained Soil or Pavement	Yes
Hazardous Substances and Petroleum Products Not in Connection with Identified Uses	No	Stressed Vegetation	No
Storage Tanks	Yes	Septic Systems or Cesspools	No
Strong, Pungent, or Noxious Odors	No	Wells	No
Standing Surface Water and Pools or Sumps	No	Natural Drainage	Yes
Drums, Totes and Intermediate Bulk Containers	Yes	Solid Waste Dumping, Landfilling, or Suspected Fill Material	No

SOURCES OF HEATING AND COOLING

SDG&E supplies electricity and natural gas to the Subject Property.

POTABLE WATER SUPPLY

Drinking water is supplied to the Subject Property by the City of San Diego. All large public water suppliers in California have been required to test their water and comply with federal and state drinking water standards since the mid-1980s. Consequently, lead and other contaminants of concern are not expected to be present above applicable primary and secondary drinking water standards.

SEWAGE DISPOSAL SYSTEM

Sanitary wastewater is directed to the municipal sanitary sewer.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS IN CONNECTION WITH IDENTIFIED USES

Hazardous materials and petroleum products observed to be used or stored at the Subject Property are summarized in the table below.

Hazardous Materials / Petroleum Products	Storage Location	Approximate Amount
Summit Gasoline & Sports Arena Car Wash: western portion of Parcel B, 3580 Sports Arena Blvd		
Unleaded gasoline	USTs in western portion of the facility	10,000, 12,000, and 40,000 gallon USTs
Diesel fuel	UST in western portion of the facility	10,000 gallon UST
Propane	Propane cage exchange	Several 20-pound cylinders
Pechanga Arena: Parcel A, 3350 Sports Arena Blvd		
Diesel fuel	Generator in electrical room	30 gallons
Diesel fuel	Storage area on north side of building exterior	Small retail volumes
Diesel fuel	Cellular equipment, southeast side of arena	55-gallon AST
Diesel fuel	Portable diesel tank, storage area, east of arena	Unknown
Ethylene glycol/water mixture	Mechanical room	34,000 gallons in system
Biocides & inhibitors	North side of building exterior, near cooling equipment	Three 20-gallon containers
Propane	Fenced area, north side of building exterior; and on forklift	approximately 96 gallons
Gasoline and diesel	Fenced area, north side of building exterior	Small retail volumes
CO_2 cylinders	Cooling equipment enclosure	39 cylinders of unknown volume
CO_2 cylinders	Concourse food service	Unknown volumes and number of cylinders
Various refrigerants	Throughout mechanical room	Various sizes
Paint	Paint storage room	Approximately 80 1-gallon, 10 5-gallon

Hazardous Materials / Petroleum Products	Storage Location	Approximate Amount
Maintenance and paint supplies (xylene, paint, paint remover, paint thinner, gasoline, sewer solvent, propylene glycol, orange solv, sodium hydroxide, acetone, panel adhesive, roof coating, spray paint, cleaners, motor oil, expansion joint material, nitrogen for leak tests and to charge refrigeration systems, canisters for recovering refrigerant)	Mechanical room, paint storage room	SRQs
Used refrigerator oil	Mechanical room	55-gallon drum
Maintenance supplies	Carpenter's shop	SRQs
Paint	Boneyard, northeast of arena	Approximately 40 5-gallon and 50 1-gallon containers

Note:
SRQs = Small retail quantities; i.e., quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

With the possible exception of petroleum storage at the gasoline service station that is further discussed in the "San Diego County Department of Environmental Health and Quality Records" section below and the hazardous materials stored in the Top Grade General Storage discussed in the "Stained Soil or Pavement" section below, the hazardous materials and petroleum products were observed to be stored in their original containers with no obvious evidence of spills or releases. Therefore, the observed hazardous materials, with the exception of the gasoline service station and Top Grade General Storage areas, do not represent a recognized environmental condition to the Subject Property.

No obvious indications of the generation of hazardous wastes were observed in Parcels A, D, E, and F at the Subject Property during the site reconnaissance. Access to the gasoline service station on Parcel B was not provided and has the potential for hazardous waste generation. See the "Records Review" section below for further information.

STORAGE TANKS

The following underground storage tanks (USTs) were observed at the Subject Property during the previous site inspection and are further discussed in the "Records Review" section below:

Number of Tanks	Volume	Contents	AST/UST	Construction	Secondary Containment	Age
3	10,000, 12,000, and 40,000 gallons	Unleaded gasoline	USTs	Steel	Double-walled	Unknown
1	10,000 gallons	Diesel	UST	Steel	Double-walled	Unknown

DRUMS, TOTES, AND INTERMEDIATE BULK CONTAINERS

Various drums and totes to store hazardous materials/wastes were observed on the Subject Property and are further detailed in the "Hazardous Substances and Petroleum Products in Connection with Identified Uses" section above.

POLYCHLORINATED BIPHENYLS (PCBS)

Electrical Equipment

Eleven SDG&E transformers were observed to be located at the Subject Property. SDG&E has been contacted regarding the possibility of PCBs being present in its transformers. SDG&E reported that it has never specified PCBs in their transformers. A copy of a letter from SDG&E explaining this and its PCB testing policy is included in Appendix D. No obvious indications of leaks, such as stained concrete, were noted near the transformer.

Elevators and Other Hydraulic Equipment

One hydraulic recycling trash compactor was observed to be present on the north side of the Sports Arena building exterior and one additional hydraulic trash compactor was observed to be located in the north gated storage area used by Kobey's Swap Meet. The hydraulic hoses appeared to be in good condition, and no signs of significant leaks were observed. The trash compactors do not represent a recognized environmental condition to the Subject Property.

DRAINS AND SUMPS

Clarifier Systems/Ice Pits

Six inground wastewater clarifiers are present on the Subject Property, one associated with the Sports Arena car wash (5-stage) and the other five are food grade grease traps associated with the Sports Arena food service, the Summit Gasoline Station convenience store, Chick-fil-A, and Chili's. According to information provided by Mr. Bedoe during the previous site reconnaissance, two grease traps are present within the concourse of the Sports Arena, two are present on the exterior of the Arena (inground), and one is present on the arena floor level. All of the grease traps are reportedly associated with food service. The grease traps associated with the arena are reportedly cleaned out approximately every six months by Ecogrease.

In addition, according to Mr. Bedoe, sludge and paint from the arena floor accumulates in the two ice pits located on either end of the Sport Arena floor; however, according to Mr. Bedoe the pits have only been cleaned out once by an outside company.

Based on our experience, inground wastewater clarifiers and ice pits have the potential to release (e.g., through cracks or degradation of the concrete from poorly fitting or degraded piping) wastewater containing petroleum products, solvents, and hazardous wastes into the subsurface. This potential is exacerbated with time as the clarifier/ice pit systems age. In our experience, it becomes increasingly likely that systems more than 10 years old will experience a release.

Mr. Bedoe stated that the pits were constructed of 10-inch thick concrete which had been poured in place, and, to his knowledge, no cracks were present. Given the presence of sludge and paint, as well as the age of the structure (approximately 56 years) the ice pits are an environmental concern. SCS recommends an environmental consultant observe the removal of the pits during redevelopment activities and collect soil samples beneath the pits to be analyzed for volatile organic compounds (VOCs) and petroleum hydrocarbons.

The car wash wastewater clarifier has been used on the Subject Property for approximately 20 years or more. Due to the potential presence of petroleum hydrocarbons, metals, and VOCs associated with the clarifier use and the length of time the car wash clarifier has been present (more than 20 years), the potential for subsurface impacts beneath car wash clarifier cannot be ruled out. Therefore, the car wash clarifier is considered an environmental concern. SCS recommends oversight and confirmation soil sampling by an environmental professional upon removal of the car wash clarifier unit during the proposed redevelopment activities.

The grease traps associated with food operations are not considered a concern based on the collection of food grade wastes in these units.

STAINED SOIL OR PAVEMENT

Stained surfaces were observed in the area leased by Top Grade General Engineering. Based on the presence of fuel containers, the use of the area for construction storage, and the observed leaking vehicles, the staining observed in this storage yard is considered a recognized environmental condition. Furthermore, the inability to observe all of the surfaces is considered a significant data gap. SCS recommends further observation and shallow soil sampling once all of the vehicles and stored items are removed.

With regard to other areas of the Subject Property, with the exception of minor surficial staining (interpreted to be from automotive lubricants) observed at various locations on the asphalt-paved parking areas, and a minor release from a quart-sized oil container, no obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Subject Property. The minor surficial releases identified above on paved surfaces are considered likely to be *de minimis* as defined by ASTM.

NATURAL DRAINAGE

Natural waterways are not currently located on the Subject Property. Stormwater at the Subject Property infiltrates into the ground or flows overland to the adjoining streets, ultimately joining the municipal storm sewer.

VISUAL INSPECTION OF ADJOINING SITES

SCS viewed the adjoining sites from the Subject Property and/or publicly accessible areas (e.g., public roadways, etc.). Autohaus Munich Auto Repair, (3770 Hancock Street) and Quality Towing and Truck Repair (3550 Kurtz Street) was observed adjacent across Kurtz Street northeast from the Subject Property. These auto repair facilities are further discussed in the "Database Search" section below. No other obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site reconnaissance.

4 INTERVIEWS

Please see the "Site Reconnaissance" section above for information provided by current available Subject Property tenants.

Attempts were made to interview the owners of the Subject Property but a response has not yet been received at the time of publishing this report. This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

5 HISTORICAL RESEARCH

Subject Property history was evaluated from the following standard historical resources:

Resource	Source	Years Available
Historical Aerial Photographs	NETR Online Historic Aerials https://www.historicaerials.com/viewer and Google Earth	1953, 1964, 1966, 1972, 1978, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2002, 2003, 2005, 2009, 2010, 2012, 2014, 2016, 2019, 2020, 2021, 2022, 2023, 2024
Historical Topographic Maps	NETR Online Historic Aerials https://www.historicaerials.com/viewer	1915, 1938, 1955, 1957, 1960, 1963, 1973, 1975,

	Cultural Resources Technical Report – Positive Findings, Midway Rising Project, prepared by Harris & Associates and dated April 2024 (Cultural Resources Report)	
Previous Reports	*Phase I Environmental Site Assessment,* by SCS Engineers and dated April 28, 2023	2023

The following standard historical resources were not reviewed:

- Property Tax Files were not reviewed, as historical information is not reasonably ascertainable through the County of San Diego Assessor's office.
- Zoning/land use records were not reviewed, as this information is not considered useful for identifying historical uses of the Subject Property.
- City of San Diego Building Department Records for the years 1955 through 2003 were not available prior to the issuance of this report. This data gap is not considered significant, given the availability of other relevant information.

PREVIOUS SITE AND VICINITY LAND USE

The following table provides a chronology of the apparent historical Subject Property land uses, as interpreted from a review of information from the sources referenced.

Year	Interpreted Subject Property Tenants	Interpreted Subject Property Use
1899 to 1908	Client-provided report indicates the Point Loma Dump encroaches on the southwestern portion of the Subject Property	**Municipal trash disposal and burn dump**
1903 to 1927	Topographic maps indicate two small structures onsite, one in the northwestern portion and one in the southeastern portion and vacant land	Single-family residential; undeveloped land
1928	Aerial photo indicates additional structures throughout the Subject Property and agricultural fields observed in the central and eastern portions of the Subject Property	Single-family residential and **agricultural**
1934 to 1943	Topographic maps indicate several more small structures throughout the Subject Property	Single-family residential
1944 to 1964	Frontier district multi-family housing, single-family residences, and Frontier School in the southwestern portion	Single and multi-family residential and school
1966	Vacant, graded land, and San Diego Sports Arena under construction	None

Year	Interpreted Subject Property Tenants	Interpreted Subject Property Use
1966 to 1975	*Western and central portions* San Diego Sports Arena and associated parking lot (3500 Sports Arena Blvd, area A) **Union Oil/76 Gasoline Service Station (3494, 3580, or 3640 Sports Arena Blvd, Area B)** *Eastern portion:* Dixieline Lumber (3250 Sports Arena Blvd, Parcel D) Trend Furniture (3240 Sports Arena Blvd, Parcel E) Pier I Imports (3220 Sports Arena Blvd, Parcel F)	Commercial, industrial, and **gasoline service station (3580 or 3640 Sports Arena Blvd, Area L, 1966 and 1970 photographs only)**
1977 to 1989	*Western and central portions:* San Diego Sports Arena and associated parking lot (3500 Sports Arena Blvd, Area A) *Eastern portion:* Dixieline Lumber (3250 Sports Arena Blvd, Parcel D) Trend Furniture (3240 Sports Arena Blvd, Parcel E) Pier 1 Imports (3220 Sports Arena Blvd, Parcel F) Various commercial and retail tenants: Mann Theaters, restaurants, **Sir Speedy Printing (1979 to 1989), Furniture Strip Shop (1979 to 1989) [both 3360 Sports Arena Blvd, Parcel C]**, Crack in the Wall Framing (3300 – 3360 Sports Arena Blvd, Parcel C)	Commercial, retail, **Print shop and furniture stripping (3360 Sports Arena Blvd, Parcel C)**
1990 to 2000	*Western and central portions:* San Diego Sports Arena, Kobey's Swap Meet, and associated parking lot (3500 Sports Arena Blvd, Parcel A) *Eastern portion:* Dixieline Lumber (3250 Sports Arena Blvd, Parcel D) Trend Furniture (3240 Sports Arena Blvd, Parcel E) Pier 1 Imports (3220 Sports Arena Blvd, Parcel F) Various tenants: Mann Theaters, restaurants, Tap Lighting, Crack in the Wall Framing, silk screen business (3300 – 3360 Sports Arena Blvd, Parcel C)	Commercial and industrial

Year	Interpreted Subject Property Tenants	Interpreted Subject Property Use
2003 to 2024	Current Subject Property configuration *Western and central portions:* San Diego Sports Arena, Kobey's Swap Meet, Verizon/AT&T Wireless, and associated parking lot (3500 Sports Arena Blvd, Parcel A) **Arena Fuels/Arco AM-PM/Summit Gasoline Service Station and Sports Arena Car Wash** (3580 Sports Arena Blvd, Parcel B) Various restaurant tenants, Krispy Kreme/Chick-Fil-A (3570 Sports Arena Blvd, Parcel B) Chili's Restaurant (3494 Sports Arena Blvd, Parcel B) *Eastern portion:* Dixieline Lumber (3250 Sports Arena Blvd, Parcel D) Salvation Army Thrift Store (3240 Sports Arena Blvd, Parcel E) Pier 1 Imports/Alpha Project Shelter (3220 Sports Arena Blvd, Parcel F) Various tenants: restaurants, Soma Concert Venue, Rock & Roll Music School, The Arena Gym, Crack in the Wall Framing (3300 – 3360 Sports Arena Blvd, Parcel C)	**Gasoline service station and car wash (3580 Sports Arena Blvd, Parcel B)**, commercial and industrial

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Subject Property uses listed above may have been earlier or later than indicated.

With the possible exceptions of the gasoline service stations and car wash described in the "Site Reconnaissance" above and the "Record Review" section below and the heating oil, lead based paint/pesticides/termiticides, agricultural, printing and furniture stripping facilities described below, no obvious former facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

Lead-Based Paint, Pesticides and Termiticides

The Subject Property was interpreted to have been occupied by various buildings from circa 1903 to the present. Based on SCS's experience, there is a potential for the presence of elevated concentrations of lead in the shallow soil due to the potential former usage of lead-based paint at the Subject Property, and/or detectable concentrations of organochlorine pesticides (OCPs) to be present in the soil due to the historical use of pesticides and/or termiticides.

Regarding the former potential usage of lead-based paint at the Subject Property, based on SCS' experience with older structures that have previously used lead-based paint, there is the potential

that shallow soils at the perimeter of the structures are impacted with lead from the accumulated weathering, scraping, flaking, and dissolution of lead-based paints.

Regarding the potential presence of OCPs, based on our experience and a review of available literature, OCPs such as chlordane were commonly applied as termiticides around residential and commercial structures until approximately 1988. According to a study conducted on residential properties by the California Department of Toxic Substances Control (DTSC) in California, the most commonly detected OCPs in surface soil samples (0 to 0.5 foot below grade) at residential properties were chlordane, dichlorodiphenyltrichloroethane (DDT), dichlorodiphenyldichloroethylene (DDE), and dieldrin. These OCPs were found to exist at concentrations exceeding applicable health risk criteria, even at properties that were previously used solely for residential purposes (i.e., no historical agricultural, commercial, or industrial land use).

Residue from lead-based paint, as well as OCPs, are known to have the potential to remain detectable in the subsurface soil for extended periods of time. Based on the interpreted land use, SCS's experience with residential and commercial properties, and a review of the available literature, it is our judgment that it is likely that detectable concentrations of lead and/or trace concentrations of OCPs are present in the soil at the Subject Property as a result of the potential historical usage of lead-based paint and/or termiticide and/or pesticide application.

If lead-based paint and/or pesticides or termiticides were historically applied at the Subject Property, there is a low to moderate likelihood that residual concentrations of lead and OCPs are present in the shallow surface soil beneath the Subject Property. The enforcement actions requiring the remediation of elevated concentrations of lead and/or OCPs at a property due to historical termiticide and/or pesticide application are typically driven by redevelopment, excavation, and/or soil export, as well as potential exposure concerns, if present.

Based on our experience, if elevated concentrations of lead, pesticides, or termiticides are present in soil, the likelihood of an enforced remediation is low as long as the soil remains undisturbed. The Subject Property was observed to be covered with various improvements and pavement; therefore, there is a low likelihood of open routes of exposure to these soils and a corresponding low likelihood of a recognized environmental condition.

However, it is SCS' understanding that the Subject Property is to be redeveloped in the future. If the soil at the Subject Property is disturbed, excavated, or exposed in connection with future Subject Property redevelopment, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Subject Property buildings, construction workers, and others are not exposed to elevated concentrations of lead and/or OCPs, if present. In addition, if any soil at the Subject Property will not be covered by hardscape or landscape, the soil should be assessed for lead and OCP concentrations to ensure there is no human health risk to future Subject Property occupants.

Limited soil sampling was conducted on the Subject Property in 2023 to assess for potential impacts of lead-based paint, pesticides, and termiticides in association with the redevelopment of the Subject Property and is further discussed in the "Previous Environmental Reports" section below.

Previous Agricultural Land Use

A review of aerial photographs revealed that some type of agricultural activity took place at the Subject Property and vicinity, circa 1928. The presence of agricultural fields at the Subject Property is evident in the 1928 aerial photograph.

If the Subject Property was, in fact, used as agricultural fields circa 1928, there is a low to moderate likelihood that residual concentrations of arsenical pesticides are present in the shallow surface soil beneath the Subject Property. A review of 35 proposed school sites along with the historical background of OCP use in California indicates that sites with agricultural usage ending prior to 1950 do not need to be evaluated for OCPs. Organochlorine pesticides were first introduced into California agriculture in 1944 and reached peak usage in the 1960's. In 1974 the use of the OCP DDT was banned for agricultural purposes, and the elimination of remaining OCPs in California agriculture quickly followed. Data from 35 proposed school sites where agricultural use ended prior to 1950 indicates that OCPs were not identified as chemicals of potential concern. In those cases where OCPs were identified, the source appears to have been the application to structures on the property, and not the agricultural crops grown prior to 1950. It is recommended that former agricultural properties that terminated operation prior to 1950 not be evaluated for agriculturally related OCPs. Arsenic should still be evaluated as a chemical of concern (CoC) since its use as arsenical pesticides and herbicides predates 1950.

The Subject Property is currently developed and was observed to be covered with several buildings, asphalt pavement, and landscaping. If the soil did contain arsenical pesticides, SCS judges that under normal circumstances (i.e., no excavation), there is a low likelihood that a complete exposure pathway exists. Assuming the legal and permitted application of these pesticides, and assuming existing Subject Property use remains the same, this common occurrence is, in SCS' experience, unlikely to lead to an enforcement action and is therefore likely to be considered de minimis, as defined by ASTM.

However, based on the Subject Property's redevelopment plans (including extensive grading, soil excavation and export, and proposed residential use), if the Client desires further confidence as to whether arsenic residues are present and in order to be conservative, SCS recommends that limited soil sampling be conducted for arsenic as a precautionary measure to ensure that future occupants of Subject Property buildings, construction workers, and others are not exposed to elevated concentrations of CoCs. In addition, if soil is to be transported off of the Subject Property, soil sampling should be conducted to assess whether the soil contains concentrations of CoCs that would cause the soil to be classified as a hazardous or regulated waste.

Limited soil sampling was conducted on the Subject Property in 2023 to assess for potential impacts from the previous agricultural land use in association with the redevelopment of the Subject Property and is further discussed in the "Previous Environmental Reports" section below.

Previous Printing and Furniture Stripping

Based on review of historical record sources, 3360 Sports Arena Blvd, the northern building in Area C (now Rock & Roll Music School) was previously utilized as a printing and furniture stripping facility (from approximately 1977 to 1989) and 3350 Sports Arena Blvd, the central portion of the southern building in Area C, was previously utilized as a silk-screening business (1990 to 2000). Based on our experience assessing printing and furniture stripping facilities, printing inks, solvents utilized to clean printing and painting equipment, and solvents used to strip paint from furniture, typically contain VOCs, particularly chlorinated VOCs. VOCs are known to penetrate concrete floors due to the porous nature of the concrete or due to thin cracks and joints that may be present, resulting in VOC impacts to the subsurface. HE-17 records indicate 165-gallons of halogenated solvents were used in this portion of the Subject Property in 1992. Based on the length of time this portion of the Subject Property was utilized for printing and furniture stripping, the amount of VOCs typically associated with these uses, and the proposed redevelopment plans for the Subject Property, these previous uses represent a recognized environmental condition to the Subject Property. Focused soil vapor sampling

at the Subject Property in Area C is recommended to assess possible impacts from the previous printing and furniture stripping use in this area.

Limited soil vapor sampling was conducted on this area of the Subject Property in 2023 to assess for potential impacts from the previous printing and furniture stripping land use in association with the redevelopment of the Subject Property and is further discussed in the "Previous Environmental Reports" section below.

Heating Oil

Based on review of historical records sources, the Subject Property was initially developed in the early 1940s as multi-family housing (Frontier Housing) for personnel supporting the war effort and who were working in the area. This housing included many "barrack"-type structures. The development at this time also included a large "L"-shaped structure that was the former Frontier School. Our review of aerial photograph records shows that this school structure overlapped the current Sports Arena structure. In our experience with military housing, and with areas not connected to natural or "manufactured" gas, heating may have relied on heating oil as a fuel source. Based on the types of structures that appear on the property in historical photos, if heating oil (similar to diesel fuel) was used, it would typically be stored in underground storage tanks near the structures to fuel the heating system for the buildings. As there appears that previously there were in excess of 100 such "barrack"-type structures on the Subject Property and the vicinity, possible leaks from numerous former heating fuel underground tanks, if present, are considered a recognized environmental condition for the property.

A geophysical survey, limited soil, soil vapor, and groundwater sampling, and trenching was conducted on the Subject Property in 2023 to assess for potential impacts from the previous heating oil land use in association with the redevelopment of the Subject Property and is further discussed in the "Previous Environmental Reports" section below.

Undocumented Fill Soil

Based on the review of historical record sources, as well as published geologic maps covering the Subject Property, the Subject Property is interpreted to be underlain by fill soil. Because the history or "pedigree" of the fill material is not known, there is a potential that the fill material is impacted with CoCs, such as petroleum products, volatile organic compounds, pesticides, semi-volatile organic compounds, PCBs, or metals (e.g., if the fill came from a contaminated property). Based on the unknown origin of the fill, we cannot assess the likelihood that a recognized environmental condition exists at the Subject Property in connection with fill material.

SCS recommends soil sampling to attempt to assess the potential for CoCs to be present in the fill material located at the Subject Property. This recommendation is based on the fact that the Subject Property is proposed to be redeveloped for residential use, and as a precautionary measure to ensure that future occupants of the Subject Property buildings, construction workers, and others are not exposed to elevated concentrations of hazardous materials/wastes. In addition, to address the possibility that the fill material may need to be removed or exported from the Subject Property for geotechnical purposes (i.e., if the fill material contains CoCs, it may be classified as a waste or hazardous waste for off-site disposal purposes).

Limited soil sampling was conducted on the Subject Property in 2023 to assess for potential impacts from undocumented fill soil in association with the redevelopment of the Subject Property and is further discussed in the "Previous Environmental Reports" section below.

Point Loma Dump – Southwestern Portion of the Subject Property Along Sports Arena Boulevard

Based on information provided in the Cultural Resources Report as well as the Trenching Phase II ESA, summarized in the "Previous Environmental Reports" section below, the southwestern portion of the Subject Property is part of the former West Point Loma Dump or Pueblo Lands Dump (Point Loma Dump), which was in operation from 1899 to 1908 and possibly longer. Based on trenching activities conducted by SCS in the southwestern portion of the Subject Property where it intersects with the Point Loma Dump, this feature is interpreted to be a former open burn pit area that was subsequently covered with approximately 2 to 3 feet of fill soils and was reported to be present prior to the development of Frontier Housing. Burn ash soils with elevated concentrations of metals including antimony, arsenic, cobalt, lead, and/or mercury that exceed residential health risk-based screening levels were discovered in this area of the Subject Property during the Phase II ESAs completed by SCS, discussed in the "Previous Environmental Reports" section below, buried at depths of approximately 2 to 5 feet deep along with old household debris including bottles, ceramics, and other trash. Note that the Cultural Resources Report indicates that the depth that refuse is buried in the Point Loma Dump ranges from approximately 8-inches deep to 36-inches deep. Portions of the burn ash soils are considered a California hazardous waste. Although several soil borings as well as trenching were completed in this area for delineation as part of the Phase II ESA and Trenching Phase II ESA, additional delineation is required to further determine the lateral extent of these soils. SCS also recommends that the San Diego Department of Environmental Health and Quality (DEHQ) and the San Diego Local Enforcement Agency (LEA) be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.

PREVIOUS SITE VICINITY LAND USE

The following table provides a chronology of the apparent previous Subject Property vicinity land uses as interpreted from a review of information from the sources referenced.

Years	Interpreted Subject Property Vicinity Tenants	Interpreted Subject Property Vicinity Use
3280 – 3612 Kurtz Street, 3770 – 3780 Hancock Street, and 3710, 3740, & 3780 Greenwood Street (Northeast)		
1903 to 1927	Topographic maps indicate small structures in the area and undeveloped land	Single-family residential; undeveloped
1928	Aerial photo indicates additional small structures and agricultural fields in the area	Single-family residential and **agricultural**
1934 to 1943	Topographic maps indicate several additional small structures in the area	Single-family residential
1948 to 1953	Frontier District multi-family housing, several single-family residences and a storage yard. Triles Clothes Pressers and Cleaners/Causway Cleaner (3496 Kurtz St)	Single- and multi-family residential and storage, and **drycleaning**

Years	Interpreted Subject Property Vicinity Tenants	Interpreted Subject Property Vicinity Use

3730 & 3740 Sports Arena Blvd and 4035, 4045, 4055, & 4065 Hancock Street (Northwest)		
1903 to 1943	Topographic maps or aerial photos indicate undeveloped land	None
1948 to 1970	Frontier District housing	Multi-family residential
1975 to 2024	Various commercial and light industrial tenants and associated parking areas	Commercial and light industrial

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Subject Property vicinity uses/development described above may have been earlier or later than indicated.

With the possible exceptions of agriculture land described in the "Historical Site Research" section above and dry cleaning, automotive repair, industrial, and adjacent commercial facilities with underground storage tanks, described in the "Database Search" section below, no obvious former facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

SUBJECT PROPERTY PREVIOUS USE SUMMARY

The Subject Property was interpreted to have been occupied by various buildings from circa 1903 to the present, and some type of agricultural activity took place at the Subject Property and vicinity, circa 1928. Also, previous uses of environmental concern of the Subject Property include former health oil use in the 1940s, printing and furniture stripping circa 1977 to 1989 in Parcel C, 3360 Sports Arena Boulevard, and previous uses of a gasoline service station and car wash circa 1966 to present in Parcel B, 3580 or 3640 SAB. Since the Subject Property was occupied by buildings as early as 1903, based on SCS's experience, there is a potential for the presence of elevated concentrations of lead in the shallow soil due to the potential former usage of lead-based paint at the Subject Property, and/or detectable concentrations of organochlorine pesticides (OCPs) to be present in the soil due to the previous use of pesticides and/or termiticides. In addition, the southwestern portion of the Subject Property is part of the former Point Loma Dump, which was in operation from 1899 to 1908 and possibly longer. There is the potential for burned or incinerated ash from "backyard" incinerators or "burn pits" to be present or mixed with the soil, such as with the reported presence of the Point Loma Dump. Burn ash and/or fill materials may contain high concentrations of CoCs, notably certain metals (e.g., copper, lead, zinc, mercury, and cadmium). Also, elevated concentrations of metals may exist in the shallow soil from other sources as well (e.g., imported fill, aerially deposited lead, paint from previous structures). Furthermore, the Subject Property is interpreted to be underlain by fill soil. Because the history or "pedigree" of the fill material is not known, there is a potential that the fill material is impacted with CoCs, such as petroleum products, volatile organic compounds, pesticides, semi-volatile organic compounds, PCBs, or metals (e.g., if the fill came from a contaminated property). Environmental assessments were conducted in

2023 to evaluate the potential impacts of these concerns, which are summarized further below in the "Previous Environmental Reports" section.

ADJOINING SITES PREVIOUS USE SUMMARY

Circa 1928, some type of agricultural activity took place at the Subject Property and vicinity. Circa the 1940s to 1980s dry cleaning facilities were adjoining to the northeast of the Subject Property. Circa 1960s to present automotive repair and industrial trucking facilities were adjoining to the northeast of the Subject Property. Circa 1970s to 2023 automotive repair and a gas station were adjoining to the southeast of the Subject Property. These previous land uses of environmental concern are further discussed in the "Database Search" section below.

6 RECORD REVIEW

PREVIOUS ENVIRONMENTAL REPORTS

SCS previously prepared the following reports for the Subject Property which are reviewed and summarized below. Copies of these reports are provided in **Appendix G**.

- *Phase I Environmental Site Assessment*, dated April 28, 2023 (Phase I ESA - 2023)
- *Phase II Environmental Site Assessment Report*, dated July 10, 2023 (Phase II ESA)
- *Phase II Environmental Site Assessment Report Number 2, Geophysical Survey and Trenching Assessment*, dated September 22, 2023 (Trenching Phase II ESA)

The Phase I ESA - 2023 report provided the following conclusions and recommendations in connection with the Subject Property:

> **"Clarifier Systems/Ice Pits**
>
> "Six inground wastewater clarifiers were observed on Site, one was associated with the Sports Arena car wash (5-stage) and the other five are food grade grease traps associated with the Sports Arena food service, the Summit Gasoline Station convenience store, Chick-fil-A, and Chili's. According to Mr. Bedoe [Chief Engineer], two grease traps are present within the concourse of the Sports Arena, two are present on the exterior of the Arena (inground), and one is present on the arena floor level. All of the grease traps are associated with food service. The grease traps associated with the arena are cleaned out approximately every six months by Ecogrease.
>
> "In addition, according to Mr. Bedoe, sludge and paint from the arena floor accumulates in the two ice pits located on either end of the Sport Arena floor. The pits have reportedly been cleaned once in the life of the sports arena.
>
> "Based on our experience, inground wastewater clarifiers and ice pits have the potential to release (e.g., through cracks or degradation of the concrete from poorly fitting or degraded piping) wastewater containing petroleum products, solvents, and hazardous wastes into the subsurface. This potential is exacerbated with time as the clarifier/ice pit systems age. In our experience, it becomes increasingly likely that systems more than 10 years old will experience a release. Based on their age (approximately 20 years or more), there is a low to moderate likelihood that a recognized environmental condition (REC) exists at the Site from the car wash clarifier located in Area B. Due to the potential presence of metals and VOCs

associated with the sludge and the length of time the pits have been present (more than 50 years), the potential for subsurface impacts beneath the pits cannot be ruled out. Therefore, the ice pits are considered an environmental concern. SCS recommends oversight by an environmental professional upon removal of the ice pits during redevelopment activities.

"The grease traps associated with food operations are not considered a concern due to the collection of food grade waste within these units.

"Indications of Releases of Hazardous Materials/Wastes or Petroleum Products

"Staining observed in the Kobey's waste/storage area on the north side of the Site, west of the Clean Harbors property, may be associated with spills of petroleum products and/or hazardous substances. Given the apparent use of the area for minor waste storage, as well as the presumed length of time that this area may have been used to store wastes (more than 35 years, based on aerial photograph review), this area has a low to moderate likelihood of representing a recognized environmental condition.

"On-Site Gasoline Service/Fueling Stations

"The Site has been developed with Dixieline Lumber including fueling stations at 3520 Sports Arena Boulevard (Parcel D, Figure 7) since approximately 1970 (53 years), a gasoline service station identified as Arena Fuels/Arco AM-PM/Summit Gasoline Service Station at 3580 Sports Arena Boulevard (Parcel , Figure 3) since 2003 (20 years), and a historical gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard (Parcel B, Figure 2) from approximately 1966 to 1974 (8 years). Gasoline service/fueling stations are associated with features of environmental concern (petroleum products/wastes, underground storage tanks [USTs], fuel dispensers, and clarifier/sumps).

"DEHQ records indicate the USTs and fueling systems at Dixieline have been removed and soil confirmation samples taken in the excavation areas indicated CoCs were not detected above laboratory reporting limits.

"DEHQ and EDR records indicate that a historical gasoline service station occupied the area where Summit Gasoline is currently, or possibly, where Chili's is currently according information obtained through interviews with the tenant, circa late 1960s to early 1970s. Soil and groundwater samples taken on Site in geotechnical borings in the area opposite Kemper Street indicated CoCs were not detected above laboratory reporting limits.

"DEHQ records report the existing gasoline service station at 3580 Sports Arena Boulevard, USTs and system was installed in 2003, including a split regular unleaded gasoline 10,000-gallon and diesel fuel 12,000-gallon USTs, and one premium unleaded 20,000-gallon UST. In February 2020, one additional regular unleaded gasoline 40,000-gallon UST was added to this system. These four USTs and associated fueling system are currently in place. At the time of the site reconnaissance, three USTs were observed east of the convenience store and west of the car wash (Figure 3b). No information was provided by the gas station manager regarding the USTs.

"No unauthorized releases of petroleum hydrocarbons and minor violations were reported in the DEHQ files the existing gas station. Based on an absence of disposal violations, and the lack of known and reported releases, there does not appear to be a recognized

environmental condition associated with the current use of this portion of the Site as a gas station. However, based on our experience, there are likely surface release(s) spills at the gas station that have occurred, as the well possible vapor phase releases as a result of piping systems that were not historically vapor "tight." Also the lack of information regarding the three USTs observed east of the convenience store and west of the car wash. Combined with the proposed redevelopment plans for the Site into a mixed use development with commercial/retail and residential uses along with the sports arena complex, these possible releases are considered potential recognized environmental conditions."
"Information regarding removal of USTs from the historical service station are unavailable. Therefore, based on the lack of records pertaining to the condition of the subsurface following UST removal, this historical gas station is considered a recognized environmental condition and requires further research or investigation.

"Subsurface investigation (geophysical survey, soil and soil vapor sampling) is recommended, in particular due to the proposed change in land use to include residential properties in the area of the current and historical gas stations.

"Consultation with the DEHQ is recommended to address potential petroleum hydrocarbon impacts during the removal of the fuel systems and clarifiers on Site, and proper permits pertaining to the UST removal/replacement should be obtained from the DEHQ and City of San Diego Fire-Rescue department prior to redevelopment. Additional soil and soil vapor sampling, as recommended above, will also serve to update the prior investigations based on current regulatory standards.

"Offsite Sources

"Former Cleaners – 3496 and 3502 Kurtz Street

"Due to the listings in the EDR Hist Cleaner database of The Launderette in 1961 located at 3502 Kurtz Street and Triles in 1948 located at 3496 Kurtz Street, SCS submitted requests for records to the DEHQ. No records were identified in the DEHQ files for these facilities. The facilities are located at least 75 or 200 feet, respectively, to the northeast of the Site, across Kurtz Street, and are not technically located on an adjoining property. The properties have since been redeveloped. The facilities do not appear on any databases indicating an unauthorized release has been documented; however, the facilities were present prior to the time of regulatory oversight; therefore we cannot assess whether these facilities represent a recognized environmental condition to the Site. Subsurface assessment is recommended to assess whether operations at these facility have resulted in impacts to the subsurface at the Site.

"H21153-1, Clean Harbors, 3495 Kurtz Street

"The Clean Harbors facility is a former truck terminal located on an adjoining property to the northeast of the Site consisting of a diesel fueling station and oil UST circa 1963 to the mid-1980s to early 1990s which impacted groundwater.

"Although closure was granted by the regulatory agency, due to the limited nature of the previous assessments and close proximity and upgradient location of the former freight terminal, the property remains an environmental concern and there is a moderate likelihood that reported release(s) from this facility represents a recognized environmental condition to

the Site. Therefore, SCS recommends subsurface assessment at the Site (i.e., soil, soil vapor, and/or groundwater sampling) adjacent to the Clean Harbors property.

"H21151-001 and -002, Former Shorebreak Materials-Butler Property, 3612 Kurtz Street

"In September 1989 contamination of the soil and groundwater was discovered with the removal of two USTs on this northeast adjacent property and a DEHQ case was opened, in addition hazardous wastes and substances stored and used by Shorebreak in 1991 were observed impacted soil in the solvent storage and paint mixing area (approximately 350 feet to the northeast) as a HMMD complaint.

"Based on the close proximity of the contaminated areas to the Site and the possible up-gradient location of the contamination with respect to the groundwater flow direction, there is a moderate likelihood that a recognized environmental condition exists at the Site in connection with reported releases from this northeast adjacent facility, and subsurface assessment (i.e., soil, soil vapor, and/or groundwater) is recommended.

"HMD/UST 211463 and 131595, Exponents, Inc., 3280 Kurtz Street

"Although Exponents, Inc. does not appear on any databases indicating an unauthorized release has been documented, there is a possibility that Exponents, Inc. performed dry cleaning activities, and since there is a record of the use of chlorinated solvents (trichlorethylene), an unidentified release would have the potential to impact the Site. Therefore, the use of chlorinated solvents at this facility is considered a potential recognized environmental condition to the Site, and subsurface assessment (i.e., soil, soil vapor, and/or groundwater) is recommended.

"HMD 207798/103138 3467-3469 Kurtz Street

"Although no releases were documented at the facility, based on the former presence of a UST, the reported generation of the solvent TCE and petroleum hydrocarbon waste, and the close proximity, there is a moderate to high likelihood that a recognized environmental condition exists for the Site, and subsurface assessment (i.e., soil, soil vapor, and/or groundwater) is recommended.

"Yellow Cab Company of San Diego, 3473 Kurtz Street

"Given the presence of a taxi company, it is possible that a UST was present and/or automotive repair operations have occurred. If a previously unidentified release had occurred, there is a moderate likelihood that a recognized environmental condition exits for the Site, and subsurface assessment (i.e., soil, soil vapor, and/or groundwater) is recommended.

"Historical Sources

"Lead-Based Paint, Pesticides and Termiticides

"Based on the fact that the Site has been developed with residential buildings as early as 1903, the potential exists for the presence of concentrations of lead and organochlorine pesticides (OCPs) to be present in the soil due to the historical potential use of lead-based paint, pesticides, and/or termiticides. SCS understands that the Site is currently developed

with a building with hard scape and/or landscaping. Therefore, if termiticides, pesticides, and/or lead-based paint residues were present in the soil at the Site, there is a low likelihood of open routes of exposure to these soils and a corresponding low likelihood of a recognized environmental condition.

"However, if redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of lead and/or OCPs, if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of lead and/or OCPs that would cause the soil to be classified as a hazardous or regulated waste.

"Historical Agricultural Land Use

"A review of aerial photographs revealed that some type of agricultural activity took place at the Site and Site vicinity, circa 1928. The presence of agricultural fields at the Site is evident in the 1928 aerial photograph.

"If the Site was, in fact, used as agricultural fields circa 1928, there is a low to moderate likelihood that residual concentrations of arsenical pesticides are present in the shallow surface soil beneath the Site.

"The Site is currently developed and was observed to be covered with several buildings, asphalt pavement, and landscaping. If the soil did contain arsenical pesticides, SCS judges that under normal circumstances (i.e., no excavation), there is a low likelihood that a complete exposure pathway exists. Assuming the legal and permitted application of these pesticides, and assuming existing Site use remains the same, this common occurrence is, in SCS' experience, unlikely to lead to an enforcement action and is therefore likely to be considered de minimis, as defined by ASTM.

"However, based on redevelopment plans for the Site (including extensive grading, soil excavation and export, and proposed residential use), if the Client desires further confidence as to whether arsenic residues are present and in order to be conservative, SCS recommends that limited soil sampling be conducted for arsenic as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of CoCs. In addition, if soil is to be transported off Site, soil sampling should be conducted to assess whether the soil contains concentrations of CoCs that would cause the soil to be classified as a hazardous or regulated waste.

"Historical Printing and Furniture Stripping

"Based on review of historical sources, 3360 Sports Arena Blvd, the northern building in Area C (now Rock & Roll Music School) was historically utilized as a printing and furniture stripping facility (from approximately 1977 to 1989) and 3350 Sports Arena Blvd, the central portion of the southern building in Area C, was historically utilized as a silk screening business (1990 to 2000). Based on our experience assessing printing and furniture stripping facilities, printing inks, solvents utilized to clean printing and painting equipment, and solvents used to strip paint from furniture, typically contain volatile organic compounds (VOCs), particularly chlorinated VOCs. VOCs are known to penetrate concrete floors due to the porous nature of the concrete or due to thin cracks and joints that may be present, resulting in VOC impacts to

the subsurface. HE-17 records indicate 165-gallons of halogenated solvents were used in this portion of the Site in 1992. Based on the length of time this portion of the Site was utilized for printing and furniture stripping, the amount of VOCs typically associated with these uses, and the proposed redevelopment plans for the Site, there is a moderate likelihood that a recognized environmental condition exists at the Site as a result of the historical operations at this facility. Focused soil vapor sampling at the Site in Area C is recommended to assess possible impacts from the historical printing and furniture stripping use in this area."

"Historical Heating Oil

"Based on review of historical sources, the Site was initially developed in the early 1940s as multi-family housing (Frontier Housing) for personnel supporting the war effort and who were working in the area. This housing included many "barrack"-type structures. The development at this time also included a large "L"-shaped structure that was the former Frontier School. Our review of historical aerial photographs shows that this school structure overlapped the current Sports Arena structure. In our experience with military housing, and with areas not connected to natural or "manufactured" gas, heating may have relied on heating oil as a fuel source. Based on the types of [previous] structures that appear on the property in historical photos, if heating oil (similar to diesel fuel) was used, it would typically be stored in underground storage tanks near the structures and fueled the heating system for the buildings. As there appears to be in excess of 100 such [former] "barrack"-type structures on Site and the vicinity, possible leaks from numerous former heating fuel underground tanks, if present, are considered a recognized environmental condition for the property.

"Undocumented Fill Soil

"Based on the review of historical sources, as well as published geologic maps covering the Site, the Site is interpreted to be underlain by fill soil. Because the history or "pedigree" of the fill material is not known, there is a potential that the fill material is impacted with CoCs, such as petroleum products, volatile organic compounds, pesticides, semi-volatile organic compounds, PCBs, or metals (e.g., if the fill came from a contaminated property). Based on the unknown origin of the fill, we cannot assess the likelihood that a recognized environmental condition exists at the Site in connection with fill material.

"SCS recommends soil sampling to attempt to assess the potential for CoCs to be present in the fill material located at the Site. This recommendation is based on the fact that the Site is proposed to be redeveloped for residential use and as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of hazardous materials/wastes. In addition, to address the possibility that the fill material may need to be removed or exported from the Site for geotechnical purposes (i.e., if the fill material contains CoCs, it may be classified as a waste or hazardous waste for off-Site disposal purposes).

"Burn Ash and Refuse Dumps

"The Site was historically developed with a residential land use as early as 1903 to approximately 1964, and a commercial and industrial land use from approximately 1966 to the present. Based on our experience with properties in older neighborhoods of San Diego, there is the potential for burned or incinerated ash from "backyard" incinerators or "burn pits" to be present or mixed with the soil. In addition, elevated concentrations of metals may

exist in the shallow soil from other sources as well (e.g., imported fill, aerially deposited lead, paint from [former] structures). Burn ash and/or fill materials may contain high concentrations of CoCs, notably certain metals (e.g., copper, lead, zinc, mercury, and cadmium).

"Based on our experience, if burn ash and/or metals-bearing fill are present, the likelihood of an enforced remediation is low as long as the soil remains undisturbed and covered by hardscape or landscape. If burn ash and/or metals-bearing fill is present, it would typically be considered a waste management issue if disturbed or, particularly, if the soil was exported. Any such disturbed materials should be handled, possibly as a regulated or hazardous waste, in accordance with appropriate laws and regulations.

"Based on the current Site land use (developed), and the absence of exposure pathways (the Site was observed to be covered with a building and hardscape), it is our opinion that there are no recognized environmental conditions at the Site based on the possible presence of burn ash and/or metals-bearing fill at the Site.

"If shallow soil (possibly containing burn ash) at the Site will be disturbed, excavated, or exported in connection with Site development, a Phase II investigation or detailed soil observations should be conducted. Such assessment would ideally involve trenching and sampling of the shallow subsurface soil at the Site and subsequent analysis for typical burn ash constituents. In addition, if any soil at the Site will not be covered by hardscape or landscape, the soil should be assessed for burn ash constituents to ensure there is no human health risk to future Site occupants."

The Phase II ESA report provided the following conclusions and recommendations in connection with the Subject Property:

"Conclusions

"Based on the data obtained and reviewed as part of this Report, laboratory results, and current regulatory guidelines, and SCS' experience and professional judgment, SCS concludes the following:

"Background

- "SCS performed an Assessment consisting of the following:
    - "Advancement of 22 soil borings, 16 with a direct drill rig (borings DP-23-031 through DP-23-043, DPV-23-051, DPV-23-052, and DPV-23-053) and 6 using hollow stem auger drilling methods (A-23-011 through A-23-016) to maximum depths of 15 feet below ground surface (bgs) at the Site to assess the soils for constituents of concern (CoCs) including, total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), organochlorine pesticides (OCPs), and metals.
    - "Soil borings DP-23-034, DPV-23-035, DP-23-036, DP-23-037, and A-23-13 also had temporary wells installed with PVC casing so that groundwater could be sampled. Note that groundwater was encountered at depths of approximately 8 to 10 feet bgs.
    - "Advancement and sampling of 17 soil vapor probes (identified as DPV-23-053 and SV-23-061-5 through SV-23-076-5) and the collection of 19 soil vapor samples

(including 2 replicate samples) from 5 feet below grade for analysis of VOCs. Soil vapor probe DPV-23-053 was originally used for a soil boring that was converted to a soil vapor probe by backfilling the boring with hydrated bentonite from the total depth of soil boring to approximately 5 feet deep.

"Geophysical Survey

"Although the results of the geophysical survey did not conclusively reveal the presence of underground storage tanks (USTs), it did reveal the presence of subsurface features consistent with some type of utility lines that were in a pattern resembling the layout of the former housing structures in the area of the survey. Based on these results, the geophysical survey was judged to be useful in gaining an understanding of subsurface conditions and choosing potential targets for an investigation of subsurface features of potential concern. A broader geophysical survey was later conducted, the results of which successfully identified features that were evaluated by exploratory trenching. These activities will be covered in a later report.

"Soil Investigation

- "Detectable concentrations of TPH, VOCs, and OCPs and somewhat elevated concentrations of the metals antimony, arsenic, barium, copper, lead, mercury, and zinc were reported to be present in certain samples collected at the Site and exceed Waste-Based Mitigation Criteria (i.e., Regional Water Quality Control Board [RWQCB] Tier 1 Soil Screening Levels [SSLs]). Reported concentrations of TPH include relatively low concentrations in the gasoline, diesel, and oil carbon chain lengths. Reported concentrations of VOCs include ethylbenzene, m,p-xylenes, and o-xylene. Reported concentrations of OCPs include relatively low concentrations of 4,4'-dichlorodiphenyldichloroethylene (DDE), and an elevated concentration of chlordane in one soil sample.

    - "The OCP chlordane was detected above the Health Risk-Based Mitigation criteria in one sample (DP-23-038-2.5) collected at approximately 2.5 feet below the ground surface at a concentration of 1,800 micrograms per kilogram (µg/kg), which exceeds the ESL of 480 µg/kg. SCS recommends this soil be excavated, segregated, and properly managed during grading and excavation activities (i.e., either managed on-Site under a clean soil cap under oversight and approval from the Department of Environmental Health and Quality (DEHQ), or exported to a properly licensed facility (e.g., landfill) as a regulated waste.

    - "Detectable chemical constituents such as TPH, VOCs, and OCPs in soil exceed applicable Waste-Based Mitigation Criteria (i.e., the RWQCB Tier 1 SSLs), which applies to soil that is exported from the Site. In the event that the soil that exceeds the Waste-Based Mitigation Criteria is exported from the Site, it should be exported to a properly licensed facility as a regulated waste, likely as a non-hazardous regulated waste.

    - "With the possible exception of sample A-23-012-5.0 discussed below, none of the metal concentrations were reported to exceed Hazardous Waste-Based Mitigation Criteria. Due to insufficient sample volume, toxicity characteristic leaching procedure of lead could not be analyzed for A-23-012-5.0. Additional sampling in the area of sample A-23-012-5.0 would be required to determine if it would be considered a California hazardous waste.

- "With the possible exception of arsenic, lead, and chlordane that is further described in the bullets below, none of the reported TPH, OCP, VOC, and metal concentrations were reported to exceed Health Risk-Based Mitigation Criteria for residential users established by the Department of Toxic Substances Control (DTSC) (recommended Screening Levels [SLs]), San Francisco Bay Regional Water Quality Control Board (Environmental Screening Levels), and US Environmental Protection Agency RSLs, as stipulated in the Report. Therefore, based on the soil samples collected and analyzed for TPH, OCPs (except chlordane described below), VOCs, and Title 22 metals (except arsenic and lead described below), the soil is not considered to represent a human health risk to future residential users of the Site, and can be freely graded on-Site during grading activities.

- "For the metal arsenic, concentrations were reported above the DTSC SL for arsenic of 0.36 milligrams per kilogram (mg/kg) in 28 of the 32 soil samples analyzed for arsenic. Although arsenic was reported to exceed the residential DTSC RSL, the 95 percent upper confidence limit (95UCL) concentration of 7.328 mg/kg is below the DTSC upper-bound background concentration for arsenic in southern California soil of 12 mg/kg. Therefore, the 95UCL arsenic concentration of 7.328 mg/kg is below the upper-bound background concentration of 12 mg/kg established by the DTSC. Therefore, the reported arsenic concentrations in shallow soil at the Site are within the range of typical background concentrations and may not be indicative of a release of arsenic.

  "Note, however, that for the one reported sample that exceeds the DTSC upper-bound background concentration (sample DPV-23-051-0.5 reported with 24 mg/kg arsenic), this sample will likely require proper management during grading based on this concentration.

- "For the metal lead, concentrations were reported above the DTSC RSL for lead of 80 mg/kg in 2 of the 90 soil samples analyzed for lead. The two soil samples reported to exceed the DTSC RSL for lead (samples A-23-012-2.5 and A-23-012-5.0) were collected from depths of approximately 2.5 to 5.0 feet at the Site and reported with lead concentrations of 3,500 and 1,400 mg/kg, respectively, indicating soil represented by these samples would be a hazardous waste if excavated and export from the Site. SCS recommends soil represented by these samples be excavated and exported to an appropriately licensed facility prior to or during the proposed grading operations for the Project.

"Groundwater Investigation

- "Although detectable concentrations of TPH and VOCs (i.e., bromodichloromethane and dibromochloromethane) were reported to be present in up to 3 of the 5 samples analyzed, all of the groundwater samples analyzed for TPH and VOCs were reported to be below the Health Risk-Based Mitigation Criteria.

"Soil Vapor Investigation

- "The maximum reported concentrations of CoCs reported in soil vapor samples above the laboratory reporting limits are 32 micrograms per meters cubed (µg/m^3) for benzene, 870 µg/m^3 for ethylbenzene, 3,600 µg/m^3 for m,p-xylene, 990 µg/m^3 for o-xylene, and 41 µg/m^3

for tetrachloroethene (PCE). No other constituents analyzed under EPA Method 8260SV were reported above their respective laboratory reporting limits.

- "Because VOCs were reported above the laboratory reporting limits in the soil vapor samples collected from the Site, a vapor intrusion risk screening was conducted to assess the potential for Significant vapor intrusion risk posed to the existing commercial and possible future commercial and residential occupants at the Site due to the upward migration of VOCs in soil vapor.

- "After applying the applicable 2011 Department of Substances Control (DTSC) attenuation factors for the existing commercial and possible future residential land use (0.001 and 0.0005 respectively) to the maximum reported concentrations of VOCs in soil vapor beneath the Site, the maximum theoretical concentrations of VOCs in indoor air at the Site do not exceed the commercial and residential screening levels (DTSC- Modified Screening Levels).

- "After applying the applicable CalEPA-recommended attenuation factor of 0.03 to the maximum reported concentrations of VOCs in soil vapor beneath the Site (i.e., benzene, ethylbenzene, m,p-xylene, o-xylene, and PCE), the maximum theoretical concentrations of benzene and ethylbenzene in indoor air at the Site exceed the commercial and residential screening levels (DTSC-SLs) and m,p-xylene and PCE in indoor air at the Site exceed the residential screening levels (DTSC-SLs).

- "Based on our review of independent and peer-reviewed literature, SCS is of the opinion that the attenuation factor of 0.03 is not representative of Site conditions, as explained previously in this Report in the "Supplemental Draft Guidance Attenuation Factor Results" section above, and more in-depth in Appendix [H].

- "Under the current commercial land use at the Site, based on the lack of open exposure routes due to the presence of asphalt paving and structures across the Site, no further action is recommended relative to the features of potential concern and investigation results from this Assessment.

- "For the proposed redevelopment of the Site with a mixed-use land use, further assessment and possibly Site mitigation (e.g., impacted soil removal) is recommended prior to and during the proposed construction activities.

- "If significant excavation or grading occurs at the Site, particularly in the areas of historical concern (former gasoline service station, former inground sump, and former agricultural uses), or if the Site is redeveloped and/or if the land use of the Site changes, excavated soil impacted with petroleum hydrocarbons, elevated metals, and OCPs will require proper management (i.e., reuse under a clean soil cap subject to the approval of the DEHQ, or disposal as a hazardous or regulated waste at a properly licensed disposal facility). If such occurs, confirmation sampling should be done to verify conditions after soil excavation, and additional soil sampling will be needed to further delineate the extent of subsurface impacts or profile export soil for disposal.

"Recommendation

"Based on the data obtained during this Assessment and our conclusions, current regulatory guidelines, and our experience and professional judgment, SCS recommends the following:

- "Considering that the Site is proposed to be redeveloped, SCS recommends that the issues identified above be incorporated into a comprehensive Soil Management Plan to address regulated waste criteria, worker exposure issues, and the proposed future residential and commercial development plans and land uses. The Soils Management Plan will describe the methods and details and other aspects of the proper handling and management of soils that exceed the Mitigation Criteria that will be encountered during the grading and construction of the proposed Project.

- "Additional soil sampling is recommended as well in focused areas of the Site to further delineate CoC impacted areas and for pre-characterization of soil proposed to be graded within the Project redevelopment footprint, particularly in areas where soil borings could not be advanced during this Assessment due to the presence of the existing Site buildings."

The Trenching Phase II ESA report provided the following conclusions and recommendations in connection with the Subject Property:

"Conclusions

"Based on the data obtained and reviewed as part of this Report, laboratory results, and current regulatory guidelines, and SCS' experience and professional judgment, SCS concludes the following:

"Historical Research

"Frontier Housing occupied the entire Midway Rising Site and was present from 1944 until the mid-1960s when the Sports Arena was constructed. Subsurface features evaluated by the geophysical surveys and observed during trenching were generally consisted with the Frontier Housing development. It is noted that, based on information obtained from artifacts in buried burned waste deposits observed in the southwest corner of the Site, the trash in that waste deposit (c. late 1800s through 1930s) appears to pre-date the Frontier Housing development.

"Geophysical Survey

"Like the results of the historical research, information from the geophysical survey confirmed former development features of Frontier Housing. Features interpreted in the geophysical data included metallic piping, possible excavations, areas of relatively high conductivity (high metallic content), and possible USTs. Metallic pipes were surveyed in locations consistent with roads and structures of Frontier Housing. The burned waste deposit exhibited a relatively high metallic content, consistent with high metals concentrations, in particular lead. Possible USTs were identified in the western and central portions of the Site. The feature in the central portion was two pieces of metallic pipe. However, the feature noted in the western portion of the Site was a UST. Based on these results, the geophysical survey was judged to be useful in gaining an understanding of subsurface conditions and choosing potential targets for the trenching investigation.

"Trenching

"A total of 32 trenches were excavated. Detectable concentrations of TPH, VOCs, and metals were reported to be present in certain samples collected from the trenches. Based on observations during trenching and analytical results, SCS concludes the following:

- "Several artifacts (glass bottles) observed while excavating the trenches in the burn dump area in the southwestern portion of the Site included product names that allowed a search of

these products and the timeframe when they were on the market. Information obtained about these products indicated that they were available generally from the late 1800s through the 1930s, and so the former trash burning deposits are interpreted to predate the Frontier Housing development.

- "In addition, delineation of the burned waste indicated that it occupies an area much larger than the Frontier Housing yard area observed in the southwestern portion of the Site in the aerial photographs. Therefore, it does not appear that multiple burn pits are present through the Frontier Housing development, as was initially thought.
- "Trench T13 encountered an underground storage tank (UST) approximately 12 feet by 4 feet, with visible staining observed near the bottom of the UST.
- "A total of 29 soil samples were analyzed for extended-range TPH in accordance with EPA Method 8015B. TPH was reported in 7 of the 29 samples analyzed.
- "Reported concentrations of TPH exceeded Health- Risk-Based Mitigation Criteria in only two samples, both collected from trench T13 where the UST was encountered.
- "The 7 soil samples with detectable TPH exceed Waste-Based Mitigation Criteria for TPH.
- "A total of 6 soil samples collected from the Site were analyzed for VOCs in accordance with EPA Method 8260B. Detectable concentrations of VOCs were reported in only one of the samples analyzed, T-13-7.
- "The reported concentration of naphthalene in sample T-13-7 (18,000 mg/kg) exceeds the Health Risk-Based Mitigation Criteria.
- "Detectable VOCs in sample T-13-7 exceed Waste-Based Mitigation Criteria.
- "A total of 77 soil samples were analyzed for total lead in accordance with EPA Method 6010B. Detectable concentrations of lead were reported in 64 of the 77 samples analyzed.
- "Reported concentrations of lead were above the Health Risk-Based Mitigation Criteria (i.e., DTSC RSL) for lead of 80 mg/kg in 12 of the 77 soil samples analyzed. All of these samples were within the burned waste/burn ash deposit at the southwest corner of the Site.
- "A total of 40 soil samples were analyzed for Title 22 metals in accordance with EPA Method 6010B.
- "Reported concentrations of antimony, arsenic, cobalt, and/or mercury exceeded Health Risk-Based Mitigation Criteria in 8 soil samples. All of these samples were within the burned waste/burn ash deposit at the southwest corner of the Site.
- "A total of 21 soil samples exceed Waste-Based Mitigation Criteria for metals.
- "A total of 6 soil samples exceed the Hazardous Waste Criteria (i.e., STLC criteria) for lead and copper and would be classified as a California hazardous waste. All 6 of these samples were within the burned waste/burn ash deposit at the southwest corner of the Site.
- "None of the samples analyzed following the TCLP exceeded Hazardous Waste Criteria.

"Recommendations

"Based on the data obtained during this Assessment and our conclusions, current regulatory guidelines, and our experience and professional judgment, SCS recommends the following:

- "Considering that the Site is proposed to be redeveloped, SCS recommends that the issues identified above, along with issued identified in earlier Phase II assessment activities involving drilling, be incorporated into a comprehensive Soil Management Plan to address regulated waste criteria, worker exposure issues, and the proposed future residential and commercial development plans and land uses. The Soils Management Plan will describe the methods and details and other aspects of the proper handling and management of soils that

exceed the Mitigation Criteria that will be encountered during the grading and construction of the proposed Project.

- "During the geophysical survey activities, Parcels B and E were not surveyed due to access constraints imposed by the tenants, and Parcels C, D, and E, as well as portions of Parcel A were not surveyed due to time constraints. Additional focused geophysical surveys are recommended to further evaluate possible subsurface features of potential concern. One area specifically targeted for additional geophysical survey is the area just southwest of the existing arena structure. SCS has interpreted from aerial photographs that this area was likely office/administration buildings for the Frontier School. It is possible that an additional UST or USTs may be located in this area. Other portions of the Site could have additional geophysical surveys once existing structures have been demolished.

- "Additional soil and soil vapor sampling is recommended as well in focused areas of the Site to further delineate CoC impacted areas and for pre-characterization of soil proposed to be graded within the Project redevelopment footprint, particularly in areas where either soil borings could not be advanced due to the presence of the existing Site buildings, or trenches were not advanced due to either access or time constraints. Areas specifically targeted for additional soil and/or soil vapor sampling are as follows:

    - "Additional soil sampling in the southwestern portion of the Site to further delineate the extent of the former burn waste/burn ash deposits, particularly in the area of the current Summit gasoline service station.

    - "Additional soil sampling in the vicinity of the UST discovered in trench T-13 to delineate the extent of petroleum hydrocarbon-bearing soil.

    - "Soil and soil vapor sampling in the area just southwest of the existing arena structure if results of the additional geophysical survey (discussed above) suggests that an additional UST or USTs may be present.

    - "Soil sampling in the southern portion of Parcel C and extending west and east into Parcels A and D, respectively, to delineate soil reported during the drilling assessment in early 2023 to have concentrations of organochlorine pesticides that exceeded Health Risk-Based Mitigation Criteria for residential users.

    - "Soil vapor sampling at the gasoline service station, Parcel B, where access was denied during initial assessment activities in early 2023.

    - "Soil and soil vapor sampling on Parcel E (Salvation Army) where access was denied during initial assessment activities in early 2023.

    - "Soil and soil vapor sampling under the ice pits at either end of the existing arena structure.

    - "Soil sampling in Parcel D, the yard area of Dixieline, to further assess the possible presence and concentrations of the metal arsenic and organochlorine pesticides.

- "SCS recommends that the UST encountered at trench T13 and any other USTs that may be encountered at the Site be properly removed, under permit from the DEHQ and San Diego Fire Department.

- "SCS recommends that CoC-bearing soil that exceeds Health Risk-Based Mitigation criteria be excavated, segregated, and properly managed during grading and excavation activities (i.e., either managed on-Site under a clean soil cap under oversight and approval from the Department of Environmental Health and Quality (DEHQ), or exported to a properly licensed facility (e.g., landfill) as a regulated waste.

- "In the event that soil that exceeds the Waste-Based Mitigation Criteria is exported from the Site, it should be exported to a properly licensed facility as a regulated waste, either as a non-hazardous regulated waste, or as a hazardous waste."

- "Soil represented by samples that were reported not to exceed Health Risk-Based Mitigation Criteria for residential users established by the Department of Toxic Substances Control (DTSC) (recommended Screening Levels [SLs]), San Francisco Bay Regional Water Quality Control Board (Environmental Screening Levels), and US Environmental Protection Agency RSLs, as stipulated in the Report, is not considered to represent a human health risk to future residential users of the Site, and can be freely graded on-Site during grading activities.

- "For the metal lead, concentrations were reported above the DTSC RSL for lead of 80 mg/kg in 12 of the 77 soil samples analyzed for lead. These samples were collected from within the burned waste/burn ash deposit at the southwest corner of the Site. Six of these samples exceed the STLC criteria for lead and copper and would be classified as a California hazardous waste. SCS recommends soil represented by these samples be excavated and exported to an appropriately licensed facility prior to or during the proposed grading operations for the Project."

Summary, Conclusions, and Recommendations Based on a Review of the Previous Environmental Reports.

SCS has previously completed Phase I and II Environmental Site Assessment reports for the Subject Property. The Phase I ESA – 2023 identified the following previous environmental land uses/features of concern at various properties within the Subject Property boundaries:

- Clarifier system and ice pits
- Current and former gasoline service stations, including the presence of underground storage tanks (USTs)
- Off-site upgradient facilities that used or have records of a release of petroleum hydrocarbon or halogenated solvent products.
- Lead-based paint (LBP), pesticides, and termiticides
- Former agricultural use
- Former printing and furniture stripping shops
- Barracks-style housing with possible fuel oil heating systems
- Presence of fill soils, including burn ash and waste
- Other petroleum hydrocarbon and hazardous materials storage and uses including Kobey's waste storage area

Various subsurface investigations events have been carried out by SCS in various representative and focused portions of the Subject Property between February 2023 and March 2024, and have consisted of soil, soil vapor, and groundwater sampling, as well as extensive geophysical surveys of select areas at the Subject Property followed by focused shallow soil trenching efforts. The subsurface investigations have indicated the following findings regarding environmental concerns:

- Former burn dump area – This feature, known as the Point Loma Dump, is located in the southwestern portion of the Subject Property and is interpreted to be a former open burn pit area that was present prior to the development of Frontier Housing, which was later covered with 2 to 3 feet of fill soils. Burn ash with elevated concentrations of metals including antimony, arsenic, cobalt, and/or mercury that exceed residential health risk-based screening levels were discovered in this area of the Subject Property, buried at depths of approximately 2 to 5 feet deep along with old household debris including bottles, ceramics, and other trash. Portions of these soils are considered a California hazardous waste. Although several soil borings as well as trenching were completed in this area for delineation, additional delineation is required to further determine the lateral extent of these soils. SCS also recommends that the San Diego Department of Environmental Health and Quality (DEHQ) and the San Diego Local Enforcement Agency (LEA) be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.

- Pesticide-bearing soils – Shallow soils with elevated concentrations of the organochlorine pesticide identified as chlordane were identified in several samples collected from Parcel C at the Subject Property, some of which are considered a California hazardous waste. The known pesticide-bearing soil within the Construction Excavation Envelope that exceeds the mitigation criteria for chlordane needs to be properly managed during excavation and grading activities.

- Underground storage tank (UST) discovered – the geophysical operations completed at the Subject Property indicated the presence of a UST within the western parking lot area of the Subject Property. A backhoe was used to expose the UST in June of 2023, which was measured to be approximately 12 feet long by 4 feet in diameter, with visible petroleum hydrocarbon staining observed near the bottom of the UST.

- Groundwater with detectable CoCs - Although detectable concentrations of TPH and VOCs (i.e., bromodichloromethane and dibromochloromethane) were reported to be present in up to 3 of the 5 samples analyzed, all of the groundwater samples analyzed for TPH and VOCs were reported to be below the Health Risk-Based Mitigation Criteria. However, due to the detectable concentrations of CoCs in one or more of the samples collected and analyzed, and due to the relatively shallow depth of groundwater at the Subject Property (i.e., approximately 8 to 10 feet below grade), if dewatering activities are required during construction, groundwater filtration and proper permits may be required prior to discharging to the sanitary sewer system.

- Soil vapor – VOCs including benzene, ethylbenzene, xylenes, and tetrachloroethene (PCE) were reported to be present in various samples collected. After applying the applicable 2011 Department of Substances Control (DTSC) attenuation factors for the existing commercial and possible future residential land use (0.001 and 0.0005 respectively) to the maximum reported concentrations of VOCs in soil vapor beneath the Subject Property, the maximum theoretical concentrations of VOCs in indoor air at the Subject Property do not exceed the commercial and residential screening levels (DTSC- Modified Screening Levels [SLs]); however, if using the CalEPA-recommended attenuation factor of 0.03, the maximum theoretical concentrations of benzene and ethylbenzene in indoor air at the Subject Property exceed the commercial and residential screening levels (DTSC-SLs) and m,p-xylene and PCE in indoor air at the Subject Property exceed the residential screening levels (DTSC-SLs).

Based on these findings and the proposed redevelopment of the Subject Property into a mixed-use development, preparation of a Soil Management Plan (SMP) is recommended to provide a dynamic strategy to properly manage CoC-bearing soil and to assess and mitigate, and document, as necessary, releases of CoCs in a manner that is protective of human health for the proposed future land use and the beneficial uses of water resources of the Subject Property and vicinity. The SMP should guide both the reuse and/or export of impacted soil, as well as the environmental oversight of the excavation and removal of the UST and associated petroleum hydrocarbon-bearing soil, the on-site clarifiers, further delineation of impacts from the recognized environmental conditions identified on the Subject Property, and confirmation soil sampling as needed on the Subject Property.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were reviewed in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal, which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Subject Property. Generally, this includes records for the Subject Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the County of San Diego, the San Diego County Department of Environmental Health and Quality (DEHQ) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the San Diego Regional Water Quality Control Board (SDRWQCB) may become the lead agency in supervising contaminant characterization and cleanup. For release cases other than USTs (i.e., dry cleaners, etc.), the Department of Toxic Substances Control (DTSC) may become the lead agency.

California Environmental Protection Agency

The Subject Property is listed on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website as Verizon Wireless: Sports Arena, AT&T Mobility – Sports Arena, Pechanga Arena San Diego, and Summit Gasoline of San Diego. (**Appendix D**).

Verizon Wireless: Sports Arena and AT&T Mobility – Sports Arena are listed as chemical storage facilities. Chemicals listed are lead acid batteries (119-gallons) and diesel fuel (59-gallons). One violation listed for missing a hazardous materials permit in 2023, which was returned to compliance in 2024.

Pechanga Arena San Diego is listed as a chemical storage facility and hazardous waste generator. Violations include missing training and missing records from 2018 to 2024, which were returned to compliance.

Summit Gasoline of San Diego is listed as a chemical storage facility, hazardous waste generator, and underground storage tank facility. Chemicals listed are Organic Waste Solids (499-pounds), aqueous waste solution (59-gallons), soap – car wash (119-gallons), regular unleaded gasoline (119,999-gallons), and propane (1,199-gallons). Violations include missing secondary containment testing, failure to operate UST system to prevent unauthorized releases, missing UST inspection, missing qualified technician to review UST leak detection system, missing UST monitoring system, missing UST financial responsibility, missing records, and liquid in secondary UST system. All were returned to compliance.

See the "Previous Environmental Reports" section above and the "San Diego County Department of Environmental Health and Quality Records" section below for more details on the hazardous waste use at the Sports Arena and the gasoline service station use on the Subject Property.

San Diego Regional Water Quality Control Board

The Subject Property appears on the State Water Resources Control Board (SWRCB) GeoTracker website as Summit Gasoline of San Diego, as a permitted underground storage tank facility. Recent SDRWQCB case files, if any, would be listed on this website (**Appendix D**).

See the "Previous Environmental Reports" section above and the "San Diego County Department of Environmental Health and Quality Records" section below for more details on the gasoline service station use on the Subject Property.

In addition, the San Diego RWQCB was contacted for records for the current and former Subject Property addresses of 3550, 3220, 3240, 3250, 3340, 3350, 3360, 3494, 3530, 3550, 3570, 3580, and 3640 Sports Arena Boulevard, San Diego, CA 92110 (former addresses were on Frontier Street and little cross-streets of the Frontier district, named for colleges and war planes and defense contractors [Holyoke Street, Liberator Street, Fleet Street, etc.]. These addresses were not researched, as they were present prior to regulatory oversight). The RWQCB reported that no records are maintained for the Subject Property and a copy of the correspondence is included in Appendix **D**.

Department of Toxic Substances Control

The Subject Property does not appear as a listed site on the DTSC EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

SCS also reviewed hazardous waste manifest information on the DTSC Hazardous Waste Tracking System (HWTS) website. The Subject Property appears on the website as detailed below.

- 3500 Sports Arena Blvd: San Diego Sports Arena as a hazardous waste generator since 1997 to present and Shelby Jordan II as a hazardous waste generator in 2023.
- 3350 Sports Arena Blvd: Bumper Medic as a hazardous waste generator since in 2002.
- 3250 Sports Arena Blvd: Dixie Line Lumber as a hazardous waste generator since 2003 to present.
- 3580 Sports Arena Blvd: Summit Gasoline/Sports Arena Fuels as a hazardous waste generator since 2006 to present.

See the "Previous Environmental Reports" section above and the "San Diego County Department of Environmental Health and Quality Records" section below for more details on the hazardous waste use at the Sports Arena, Dixieline, and Bumper Medic and the gasoline service station use on the Subject Property.

San Diego County Air Pollution Control District

The San Diego Air Pollution Control District (APCD) was contacted regarding records for the Subject Property. Ms. Jitka Parez of the APCD reported records were available for the APN 441-590-04 with some association with 3500 Sports Arena Boulevard, which are summarized in the table below. Ms. Parez reported that no APCD records are available for 3550, 3220, 3240, 3350, 3494, 3530, 3550, 3570, and 3640 Sports Arena Boulevard and that to keep in mind that there may be limited or no

records available for some retired sites and/or permits due to SDAPCD's retention schedule (**Appendix D**).

Year	Description	Reported Applicant/Owner
Dixieline Lumber (3250 Sports Arena Blvd)		
2001	Application to register natural gas-powered emergency generator.	Dixieline Lumber
2001 to 2024	Emergency generator inspection, natural gas fuel, no violations and certificate of registration to operate	Dixieline Lumber
2016	Water heaters sold in store do not meet code and were removed from sale	Dixieline Lumber
Arena Fuels/Arco AM-PM/Summit Gasoline Service Station (3580 Sports Arena Blvd)		
2003 to 2024	Permit to operate gasoline dispensing facility with a vapor control system for each gasoline storage tank	Arena Fuels/Arco AM-PM
2008	Permit to construct a new vapor recovery system	Arena Fuels
2011	CalEPA complaint received that the dispensers do not shut off when the purchase is completed, and gas spills down the side of the vehicle onto the ground. The service station attendant was notified but nothing was done and the complaint reported that it is an ongoing issue. APCD inspection reported that interlock mechanisms at fueling points #5, #6, and #13 failed.	Arco AM-PM
2013 2014	Vapor recovery inspection passed	Arena Fuels/Arco AM-PM
2014	Missing maintenance records	Arena Fuels/Arco AM-PM
2015	Ullage pressure leak test warning alarms were cleared without records of certified technicians completing the repairs. Corrected.	Arco AM-PM
2015	Failed insertion interlock on #16 dispenser nozzle, replaced.	Arena Fuels/Arco AM-PM
2016	Failed to pass all required annual tests	Arena Fuels/Arco AM-PM
2019	Application to add one 40,000 gallons UST and convert one UST to renewable diesel fuel	Summit Gasoline
2021	Permit to change processor from gas to arid permeator	Summit Gasoline
2022	Application to remodel with four additional dispenser with the addition of 8 dispenser nozzles	Arco

Year	Description	Reported Applicant/Owner
2023	Filter sponge and metal holder pulled loose at bottom of the spill box	Summit Gasoline
Valley View Casino Center (3500 Sports Arena Blvd)		
2009	Permit to maintain an emergency diesel generator	Valley View Casino Center
2021	Medium boiler registration, natural gas.	Valley View Casino Center
Sports Arena Square (3340 Sports Arena Blvd)		
2016	Permit to remove 300 square feet floor tile containing asbestos, no violations during inspection	Sports Arena Square

San Diego County Department of Environmental Health and Quality Records

A request was submitted to the San Diego County Department of Environmental Health and Quality (DEHQ) Hazardous Materials Department (HMD) for records pertaining to USTs, storage of hazardous substances and/or petroleum products, and generation of hazardous waste. The DEHQ files for the Subject Property include Compliance Inspection Reports (CIRs) and/or UST Removal/Install reports for the period from 1989 through 2022. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs, the in-house HE-17 database, and the EDR Radius Map Report regarding hazardous materials and petroleum products reported to be used and stored at the Subject Property, hazardous wastes reported to be generated at the Subject Property, and violations of the hazardous waste control law.

Year(s)	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
H211563, San Diego Sports Arena (3500 Sports Arena Blvd)		
2009 to 2014	Paint Sludge (60 gallons) Waste and mixed oil (25 gallons) Propane (432 cubic feet) Oxygen, nitrogen and acetylene gas (200 to 800 cubic foot cylinders) Dowterm SR-1: cooling tower chemicals (55 gallons) Used oil (5 gallons) Diesel generator Fluorescent light tubes Paint (fifty 5-gallon buckets)	Waste containers not closed Incomplete records Inadequate training Inadequate waste inspections Missing labels Waste accumulated greater than time allowed Missing EPA number Missing Hazardous Materials Business Plan

Year(s)	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2015 to 2021	Oxygen, nitrogen and acetylene gas (200 to 800 cubic feet) Propane (1,944 cubic feet) Ethylene glycol (55 gallons) Lead acid batteries Diesel fuel Fluorescent light tubes	Inadequate training Missing labels Missing records
Kobey's Swap Meet (3500 Sports Arena Blvd)		
2005 to 2006	Unspecified solvent mixture Waste & mixed oil Oil water separation sludge (SCS did not observe an oil water separator on sight during our site visit, this record maybe associated with the infrequent oil changes conducted at the Kobey's Swap Meet Unit in Parcel C described in the "Previous Environmental Reports" section above and is not an environmental concern.	None listed
H201381, Arena Fuels/Arco AM-PM/Summit Gasoline Service Station (3580 Sports Arena Blvd)		
2004 to 2010	Regular unleaded gas (one 10,000-gal UST and one 20,000-gal UST) Premium unleaded gas (one 12,000-gal UST) Organics solids (220 pounds)	Missing secondary containment test Pump shut down/stop flow (2006) Response plan incomplete Monitoring procedures unavailable Inadequate records Line leak detector not installed/not functional (2007) Missing labels Water in sump UST system not product tight (2008) Containers not closed Stormwater construction
2011 to 2014	Regular unleaded gas (one 10,000-gal UST and one 20,000-gal UST) Premium unleaded gas (one 12,000-gal UST) Car wash chemicals Water & fuel aqueous solution Used fuel filters	Missing records Leak line detector not installed UST system not product tight Secondary containment not liquid free No pump shut down

Year(s)	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2015 to 2019	Regular unleaded gas (one 10,000-gal UST and one 20,000-gal UST) Premium unleaded gas (one 12,000-gal UST) Car wash chemicals/soaps (55 gallons) Waste absorbent, fuel contaminated solids Sump/fuel-contaminated water	Spill bucket in poor condition Chemical inventory incomplete Inadequate records Liquid in sumps Inadequate inspections
2020 to 2021	Regular unleaded gasoline (one 10,000-gal UST and one 40,000-gal UST installed February 2020) Premium unleaded gasoline (one 20,000-gal UST) Diesel fuel (one 12,000-gal UST) Car wash chemicals/soaps (55 gallons) Waste absorbent, fuel contaminated solids Sump/fuel-contaminated water	Correct the contents and product piping in records Inadequate spill container Inadequate test leak detection
2022	Regular unleaded gasoline (one 10,000-gal UST and one 40,000-gal UST installed February 2020) Premium unleaded gasoline (one 20,000-gal UST) Diesel fuel (one 12,000-gal UST) Car wash chemicals/soaps (55 gallons) Waste absorbent, fuel contaminated solids Sump/fuel-contaminated water	Small leak in sump, not enough to trigger alarm was cleaned Inadequate inspections Missing records Correct the contents and product piping in records Inadequate spill container Inadequate test leak detection
2023	Regular unleaded gasoline (one 10,000-gal UST and one 40,000-gal UST installed February 2020) Premium unleaded gasoline (one 20,000-gal UST) Diesel fuel (one 20,000-gal UST) Car wash chemicals/soaps (55 gallons) Waste absorbent, fuel contaminated solids Sump/fuel-contaminated water	Spill containers observed to leak, leak detector failure

Year(s)	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
H203017/121169, Dixieline Lumber/Pro Build (3250 Sports Arena Blvd)		
1989	The DEHQ proposed action to remove one existing 1,000-gal regular leaded gasoline UST and one 1,000-gal diesel UST and install one double-walled 675-gal unleaded gasoline UST and one double walled 1,000-gal diesel UST. During this transition, no observations of an unauthorized release were observed; no staining or odors were present and the USTs were in good condition. Confirmation sampling in the excavation indicated no detections above the laboratory reporting limit for total petroleum hydrocarbons (TPH).	None
1991 to 1999	Organic solids (10 pounds) Gasoline pump dispensers One 675-gal unleaded gasoline UST One 1,000-gal diesel UST	Inadequate records Inadequate UST monitoring methods/records Missing hazardous materials business plan
2002	Organic solids (10 pounds) Gasoline pump dispensers One 675-gal unleaded gasoline UST One 1,000-gal diesel UST	None
2003	One 1,000-gal diesel UST and one 675-gal regular unleaded gasoline UST were removed from the Subject Property. USTs were observed to be in excellent condition and confirmation samples in the UST excavation areas indicated TPH and VOCs were not detected above laboratory reporting limits.	None

Year(s)	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2004 to 2021	Paint/stain (1 gallon) Propane (176 to 184 gallons) Waste caulking Oily absorbent Waste paint/stain/varnishes Liquids with halogenated organic compounds Other inorganic waste	Incomplete records Inadequate training Missing labels Accumulated waste too long
H201737, Verizon Wireless (3500 Sports Arena Blvd)		
2002 to 2019	Sulfuric acid 30% battery electrolyte (88 gallons) Diesel generator (55 gallon aboveground storage tank [AST])	None
H001012, AT&T Mobility (3500 Sports Arena Blvd)		
2016 to 2018	Lead acid batteries (78.8 gallons)	None
H135404, Air Touch Cellular (3500 Sports Arena Blvd)		
1995 to 2003	Lead acid batteries (78.8 gallons)	None
Bumper Medic (3350 Sports Arena Blvd)		
2002 to 2003	Unspecified solvent mixture (15 gallons)	None
Shelby Jordan II (3500 Sports Arena Blvd)		
2023	None listed	None

Gasoline Service/Fueling Stations

The Subject Property has reportedly been developed with the following petroleum fueling stations:

- Dixieline Lumber including fueling stations at 3520 Sports Arena Boulevard (Parcel D, Figure 8) from approximately 1970 to 2003 (33 years),
- A gasoline service station identified as Arena Fuels/Arco AM-PM/Summit Gasoline Service Station at 3580 Sports Arena Boulevard (Parcel B, Figure 3) since 2003 (20 years), and
- A former gasoline service station identified as Union Oil/76 at 3494, 3580 or 3640 Sports Arena Boulevard (Parcel B, Figure 4) from at least 1966 to 1974 (8 years).

Gasoline service/fueling stations are associated with features of environmental concern (petroleum products/wastes, underground storage tanks [USTs], fuel dispensers, and clarifier/sumps).

According to the DEHQ records, soil sampling was conducted at Dixieline Lumber in 1989 and 2003 with the removal of Dixieline's USTs and fueling systems, in which these confirmation soil sampling events in the excavation areas, during both removals, indicated no detectable constituents of concern (CoCs), TPH and VOCs. No UST or fueling systems currently occupy this Area D on the Subject Property.

The DEHQ file H98431 regarding borings drilled at the Subject Property during the Sports Arena Development in 2001 was reviewed. In September 1999, two borings were drilled near the southern perimeter of the Subject Property, opposite Kemper Street approximately where Summit Gasoline is currently. The DEHQ file map indicated 'Union Oil Company of California', which could be affiliated with a former Union Oil/Union76/Unocal/76 Gasoline Station at this location of the Subject Property. Mr. Ralph Bedoe, Chief Engineer for the Pechanga Arena since 1984, reported that he heard that there was a former gas station on the Subject Property around the early 1970s in the area where the Chili's restaurant is currently. Two patched borings were observed in the Chili's parking lot during the Subject Property reconnaissance; although, one aerial photograph from 1970 shows a possible gasoline service station located where Summit gasoline station is currently. The DEHQ records indicate the borings were drilled opposite Kemper Street, the location of the existing station. In addition, the EDR Radius Map report indicates a Union Oil/Sports Arena Union gasoline service station at 3640 Sports Arena Blvd from 1970 to 1974 which is closer to the Summit Gas Station at 3580 Sports Arena Blvd. DEH, HE-17, and the response from the San Diego Fire Department (SDFD) indicated no other records are maintained for 3640 Sports Arena Blvd. No additional information such as laboratory analytical data for any soil or groundwater samples that may have been collected regarding the two patched borings observed in the Chili's parking lot were found in the provided records.

Based on the available information, it appears likely that the borings were located where the gas station is currently instead of the Chili's restaurant. From the DEHQ report, the borings were advanced to 52 feet bgs and 91.5 feet bgs. Groundwater was encountered at 8.5 and 10 feet bgs. TPH (gasoline and diesel) and VOCs (methy-tert-butly-ether [MTBE], benzene, toluene, ethylbenzene, and xylenes) were not detected above laboratory reporting limits in any of the soil or groundwater samples analyzed. In addition, the boring logs indicated that this location was a "[former] dump site (circa 1900)". For more information of the Subject Property being used formerly as a dumpsite, please see the "Burn Ash and Refuse Dumps" section above.

DEHQ records report the existing gasoline service station at 3580 Sports Arena Boulevard, USTs and system was installed in 2003, including a split regular unleaded gasoline 10,000-gallon and diesel fuel 20,000-gallon USTs, and one premium unleaded 20,000-gallon UST. In February 2020, one additional regular unleaded gasoline 40,000-gallon UST was added to this system. These four USTs and associated fueling system are currently in place. At the time of the site reconnaissance, one UST was observed east of the convenience store and west of the car wash. No information was provided by the gas station manager regarding the USTs.

No unauthorized releases of petroleum hydrocarbons were reported in the DEHQ files for the existing gas station. Minor violations were reported, however none were indicative of a significant spill or release and do not represent an environmental concern. Based on an absence of disposal violations, and the lack of known and reported releases, there does not appear to be a recognized environmental condition associated with the current use of this portion of the Subject Property as a gas station. However, based on our experience, it is likely that surficial spills at the gas station have

occurred, as the well possible vapor phase releases as a result of piping systems that were not historically vapor "tight." Given the proposed redevelopment plans for the Subject Property into a mixed-use development with commercial/retail and residential uses along with the sports arena complex, these possible releases are considered recognized environmental conditions.

Information regarding removal of USTs from the former service station is not available. Therefore, based on the lack of records pertaining to the condition of the subsurface following UST removal, this former gas station is considered a recognized environmental condition and requires further research or investigation.

Subsurface investigation (geophysical survey, soil and soil vapor sampling) is recommended, in particular due to the proposed change in land use to include residential properties in the area of the current and former gas stations.

Consultation with the DEHQ is recommended to address potential petroleum hydrocarbon impacts during the removal of the fuel systems and clarifiers on Subject Property, and proper permits pertaining to the UST removal/replacement should be obtained from the DEHQ and City of San Diego Fire-Rescue department prior to redevelopment. Additional soil and soil vapor sampling, as recommended above, will also serve to update the prior investigations based on current regulatory standards. Also, the additional focused soil vapor sampling at the Subject Property is recommended to assess possible impacts from the following (which are further discussed in the "Database Search" section below and "Historical Research" section above):

- Research of nearby automotive repair, gas station, leaking underground storage tank (LUST) cases, and dry cleaning facilities to assess whether they have resulted in impacts.
- Former agricultural, burn ash/refuse dumps, print shop, furniture stripping, and heating oil land use and to assess whether they have resulted in impacts.

SCS attempted soil and soil vapor sampling at 3580 Sports Arena Boulevard in 2023 and 2024 to assess for potential impacts from the gasoline service station uses in association with the redevelopment of the Subject Property, although access to this area was not granted. When access is available, subsurface investigation (geophysical survey, soil and soil vapor sampling) at Summit Gasoline Service Station, 3580 Sports Arena Blvd, on the Subject Property is recommended. Details of the assessments conducted in the other former fueling areas on the Subject Property, Dixieline 3520 Sports Arena Boulevard and the former gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard are further discussed in the "Previous Environmental Reports" section summary above.

City of San Diego Fire Department

The City of San Diego Fire Department (SDFD) was contacted regarding hazardous materials/waste or UST records for the current and former Subject Property addresses of 3550, 3220, 3240, 3250, 3340, 3350, 3360, 3494, 3530, 3550, 3570, 3580, and 3640 Sports Arena Boulevard; 3464, 3280 Kurtz Street San Diego; and for 3640 Frontier Street, the likely historical address of the former gasoline service station. (Former addresses were on Frontier Street and minor cross-streets of the Frontier district, named for colleges, war planes, and defense contractors [Holyoke Street, Liberator Street, Fleet Street, etc.]).

The following table summarizes the SDFD records provided to date for the Subject Property. Copies of the records and correspondence are included in the Appendices.

Year	Description	Reported Owner
1989	Remove one 1,000-gal regular leaded gasoline UST and one 1,000-gal diesel UST and install one new 675-gal unleaded gasoline UST and one 1,000-gal diesel UST	Dixieline Lumber Company, 3250 Sports Arena Blvd
2003	Remove one 1,000-gal diesel UST and one 675-gal regular unleaded gasoline UST	Dixieline Lumber Company, 3250 Sports Arena Blvd
2003	Install new gasoline USTs, one 20,000-gal and one split 10,000-gal and 12,000-gal	Arena Fuels, 3500 (3580) Sports Arena Blvd
2003	Install 3,500 cubic foot carbon dioxide compressed gas system	Chili's, 3494 Sports Arena Blvd
2009	Install gas vapors system	Arena Fuels, 3580 Sports Arena Blvd
2015	Install new 350 pound air compressor	Valley View Casino Center, 3500 Sports Arena Blvd
2019	Connect new double wall flex product piping and fiberglass vapor line from existing dispenser sump to new double wall dispenser sumps	Arco AM/PM, 3580 Sports Arena Blvd
2019	Install new 40,000-gal unleaded gasoline UST	Arena Fuels, 3580 Sports Arena Blvd
2018 - 2020	Fire Department Inspections found no violations	Chili's Grill & Bar, 3494 Sports Arena Blvd Salvation Army Thrift Store, 3240 Sports Arena Blvd Chick-fil-a, 3570 Sports Arena Blvd Rock and Roll Music School, 3360 Sports Arena Blvd Soma Concert Venue, 3350 Sports Arena Blvd
2022	Fuel system upgrade, new aboveground vapor pump and remove existing unit	Summit Gasoline, 3580 Sports Arena Blvd
2023	Fire Department Company inspection found missing flame-retardant certification on drapery; corrected	Soma Concert Venue, 3350 Sports Arena Blvd

Please see the "Department of Environmental Health and Quality (DEHQ) Records Review" section above regarding a further discussion of current and former USTs at the Subject Property.

City of San Diego Industrial Wastewater Control Program Records

SCS submitted a request for public records to the City of San Diego for information pertaining to Industrial Wastewater Records. The city has not yet responded at the time of publishing this report. A copy of the correspondence is in included in (**Appendix D**). This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

California Department of Conservation, Geologic Energy Management Division

SCS reviewed the California Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder website to identify oil and gas wells on the Subject Property or in the nearby area. According to the CalGEM Well Finder online database, the Subject Property is not located within the boundaries of a delineated oil and gas field.

A map showing the location of the Subject Property relative to nearby oil and gas wells is provided in **Appendix D**. No oil and gas wells are located on the Subject Property or within 1 mile of the Subject Property.

National Pipeline Mapping System

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Subject Property and surrounding area to identify any hazardous liquid and gas pipelines.

Based on review of the NPMS website, there are no hazardous liquid and gas pipelines within 0.25 mile of the Subject Property (**Appendix D**).

DATABASE SEARCH

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Subject Property was obtained from EDR (March 28, 2024). A description of each of the databases searched is included in the EDR report, which is attached as **Appendix E**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Subject Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-21.

SCS evaluated known or suspected contaminated sites within 0.25 mile as to their potential to impact the Subject Property based on the following factors:

- Reported distance of the facility from the Subject Property[1]
- Reported case type (e.g., soil only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, "no further action")
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater

Sites likely to impact the Subject Property, based on these criteria, are discussed below. As a general rule, sites beyond 0.25 mile are not anticipated to impact a site significantly. However, any sites beyond 0.25 mile with a high potential to impact the Subject Property are also discussed. Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous substances and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Subject Property.

Please refer to **Appendix E** for further information on these sites.

Subject Property Database Listings

The Subject Property was listed on the following databases:

- UST, UST FINDER, HWTS, San Diego County HMMD, CERS Haz Waste, CERS TANKS, HAZNET, CERS, CIWQS, and RCRA NONGEN/NLR databases as Summit Gasoline of San Diego, 3580 Sports Arena Blvd
- San Diego County HMMD, FINDS, CERS Haz Waste, CERS as Verizon Wireless, 3500 Sports Arena Blvd
- HWTS and HAZNET databases as Bumper Medic, 3350 Sports Arena Blvd

[1] Based on "Technical Justification for Groundwater Media-Specific Criteria," (Groundwater Study) (March 2012) developed to support the state of California "Low Threat Closure Policy" (adopted May 2012), "plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation." The Groundwater Study goes on to cite Shih et al., 2004, that a peer-reviewed study of plume lengths at 500 petroleum UST subject properties in the Los Angeles area is widely accepted as representative of plume lengths at California UST subject properties. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjoining to the Subject Property were interpreted to have the potential to represent a recognized environmental condition.

- HWTS and HAZNET databases as Kobey's Swap Meet, 3500 Sports Arena Blvd
- San Diego County HMMD, CERS Haz Waste, FINDS, ECHO, HWTS, HAZNET, RCRA NONGEN/NLR, and CERS databases as San Diego Sports Arena, 3500 Sports Arena Blvd
- EDR Historical Auto, FINDS, RCRA Non-generator, CIWQS, and ECHO database as Arena Fuels LLC/Sports Arena Fuels, 3500 Sports Arena Blvd
- Haulers, HWTS, San Diego County HMMD, CERS Haz Waste, FINDS, ECHO, UST, SWEEPS UST, HIST UST, Haznet, RCRA NONGEN/NLR, CIWQS, and CERS databases as Dixieline Lumber/Pro Build/Sports Arena Retail Store/Builders First Source, 3250 Sports Arena Blvd
- FINDS, and San Diego County HMMD databases as Arco AM/PM, 3500 Sports Arena Blvd
- FINDS database as AT&T Mobility, 3500 Sports Arena Blvd
- FINDS and RCRA NONGEN/NLR database as Shelby Jordan II, 3500 Sports Arena Blvd

Regulatory agency files were requested for the Subject Property and are discussed in the "Record Review" section above.

Adjoining Site Database Listings

The following adjoining sites appear in the EDR database report:

H202102, R&M Auto Repair & Fleet Services, 3550 Kurtz Street

Due to the listing in the SWEEPS UST and Hist UST databases as National Car Rental, and on the RCRA NonGen/NLR database as Quality Auto and Truck, SCS submitted a request for records to the DEHQ. The following DEHQ records were reviewed by SCS.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2003	Waste oil (AST), used oil filters, antifreeze	Waste containers improperly labeled, corrected during site visit; fuel filters and non-empty aerosol cans were found in trash can, corrected during site visit; lack of EPA ID number; inadequate training program; used absorbent observed around tank and inspection area. Corrected by October 29, 2003.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2006	Used oil filters, waste antifreeze	Wastes improperly labeled, corrected during site visit.

The facility is located approximately 50 feet northeast of the Subject Property, across Kurtz Street. The facility does not appear on any databases indicating an unauthorized release has occurred. According to the database report, the facility is listed as a non-generator/historical generator with no violations or evaluations on file. The facility does not appear on any databases indicating an unauthorized release has been identified. However, the facility is listed on the SWEEPS UST and Hist UST databases. Three USTS have reportedly been present at the facility, including two 12,000- gallon gasoline USTs and one 500-gallon waste oil UST. No UST inspection or removal records were provided by DEHQ; however, records discussed below for 3520 Kurtz Street indicate that the USTs permitted under that address were actually located at 3550 Kurtz Street. UST removal documentation is discussed below, under the 3520 Kurtz Street HMMD summary.

H04438, Cloud 9 Shuttle, 3520 Kurtz Street

Based on its listing on the UST and San Diego Co. HMMD databases and its proximity to the Subject Property (adjacent to the northeast), the DEHQ file for this facility was requested. SCS reviewed the following records.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1996	Two 12,000-gallon gasoline USTs, one 500-gallon waste oil UST, antifreeze,	None
1996	Tank integrity test	None
1998	New 20,000-gallon motor vehicle fuel, double-wall fiberglass UST	N/A
1998	Waste antifreeze (two 55-gallon drums); unidentified drum; waste solvent, used oil, used oil filters	Incomplete hazardous waste label; missing label; missing documents
1998	New fuel UST permit	Complaint/Prop 65 Disclosure Report – "Shoddy UST work", tanks not buried properly due to high groundwater. DEHQ and SDFD issued stop work notice.
1998	UST removal permit (two 12,000-gallon steel gasoline USTs; one 500-gallon waste oil UST)	None
1999	UST (equipment inspected)	None

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1999	Three 55-gallon drums of antifreeze; 500-gallon AST for used oil	Improper labeling
2001	Antifreeze, hazardous waste (not specified), USTs (not specified)	Improper labeling
2002	Hazardous materials, hazardous waste, USTs (not specified)	Improper labeling
2003	USTs (not specified), hazardous waste (not specified); used batteries	Oil and water pooled in the under dispenser containment; fill sump contained liquid; monitoring equipment improperly installed; testing and maintenance records not available; permit expired; improper labeling; monitoring plan not submitted. Most violations corrected by October 29, 2003
2004	UST (monitoring system certification and secondary containment testing, 87 fuel UST)	None
2004	USTs, hazardous waste, hazardous materials	Improper labeling; secondary containment with fluid; training records unavailable
2005	USTs (secondary containment testing certification, 20,000-gallon gasoline UST)	Several failures noted
2005	20,000-gallon gasoline UST (repairs conducted on secondary containment, retested and passed)	Improper labeling; alarm duration too short (corrected)
2006	Waste antifreeze (55-gallon drum); used oil (three 55-gallon drums); universal waste (fluorescent lamps, batteries); USTs	Improper labeling
2007	Diesel USTs (tank monitoring system certification and spill bucket testing); AST (not specified)	None
2007	UST (not specified); mixed hazardous waste	Liquid in UST fill sump (corrected during inspection); CUPA form not available

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2008	Fuel UST	Failure to complete UST permit; failure to register UST system; failure to submit various UST documentation
2008	Diesel fuel UST (annual monitoring certification, secondary containment testing)	DSL secondary failed; repairs conducted, retested and passed
2009	UST	UST documentation deficient

According to DEHQ records, three USTs were installed in 1978, including one 500-gallon waste oil UST, and two 12,000-gallon unleaded fuel USTs. The tanks were placed in temporary closure in 1996 and were removed in 1998. The dispenser island was located approximately 100 feet northeast of the Subject Property, and the USTs were located approximately 150 feet to the northeast. Upon removal, one of the 12,000-gallon USTs cracked in half; however, no obvious signs of a release were observed. Eight soil samples were collected from the fuel UST excavation and analyzed for total petroleum hydrocarbons as gasoline (TPHg) and as diesel (TPHd). Two samples were collected from the waste oil UST excavation and analyzed for total recoverable petroleum hydrocarbons (TRPH). TPHd was detected in one sample at a concentration of 54 mg/kg. TPHg, TPHd, and TRPH were not detected above laboratory reporting limits in any other samples analyzed. The UST closure was completed with no further action required. The fuel USTs were replaced with a 20,000-gallon UST.

Cloud 9 Shuttle vacated the facility in October 2007, according to a letter dated November 15, 2007. The letter further notes that the Hazmat and UST permits were for activities conducted at 3550 Kurtz Street.

In December 2007, ten soil borings were advanced to a maximum depth of 15 feet bgs in the vicinity of the USTs, dispenser islands, hoists, and known waste storage areas. Soil and groundwater samples were collected from each boring and submitted for laboratory analyses. VOCs and petroleum hydrocarbons were not detected above laboratory reporting limits in any of the groundwater samples analyzed, with the exception of MTBE, which was detected at a maximum concentration of 12 micrograms per liter (μg/L), and TRPH, which was detected at a concentration of 2.6 μg/L. VOCs were not detected above laboratory reporting limits in any of the soil samples analyzed. TPHg was detected in soil at a maximum concentration of 8 milligrams per kilogram (mg/kg). TRPH, TPHg, and for total petroleum hydrocarbons as oil (TPHo) were not detected above laboratory reporting limits in any soil samples. Based on the results of the investigation, DEHQ determined that a LUST case would not be opened for the facility.

The 20,000-gallon UST, associated piping, and dispensers, as well as the used oil AST, were removed in July 2009. Soil samples were collected and analyzed for TPHg and TPHd, which were not detected above laboratory reporting limits. One sample was analyzed for benzene, toluene, ethylbenzene, and xylenes (collectively, BTEX) and fuel oxygenates, which were not detected above laboratory reporting limits.

Depth to groundwater was reported to be approximately 10 feet bgs.

Based on distance and the lack of evidence of a significant release from each generation of USTs, the reported release at the adjoining Cloud 9 Shuttle site is not expected to have impacted the Subject Property and does not represent a recognized environmental condition to the Subject Property.

H21153-1, Golden Chariot Trucking/Loyola Trucking/Clean Harbors, 3495 Kurtz Street

Based on its listing on the LUST database and its proximity to the Subject Property (adjacent to the east/northeast), the DEHQ file for this facility was reviewed.

This facility is located on an adjoining property to the northeast and is listed in the LUST and MWMP databases. Therefore, SCS submitted a request for public records to DEHQ. According to records provided by DEHQ, one 10,000-gallon steel diesel UST was removed from the property in 1986. No holes were observed; however, moderate corrosion was present. No indications of a release were reported, such as stained soil or odor. Water was observed in the tank pit at approximately 8 feet bgs.

According to the *Supplemental Assessment, Former Underground Fuel Tank, Central Freight Lines Terminal, 3495 Kurtz Street, San Diego, California 92110, APN 441-339-01*, prepared by Bryant GeoEnvironmental, Inc. (BGI) and dated May 19, 2001, the property was used as a truck terminal for at least 30 years. A diesel fueling center was installed in 1963 and operated until the diesel tank was removed in 1986. At the time of removal, confirmation soil sampling was not routinely conducted. No evidence of significant hydrocarbon impacts was observed in soil or groundwater during tank removal activities, as noted above. The report further notes that a previous, 4,000-gallon oil-storage UST had existed onsite in 1963 but was reportedly removed in 1991. No records of removal were identified, although permits were typically required for tank removals in 1991. A geophysical survey was conducted to identify any remaining buried tanks. An anomaly was observed in an area where the 4,000-gallon tank may have been located; however, it was not indicative of a tank; rather, BGI speculated that it may have been a concrete slab with rebar or remnants of a crushed tank. Refusal was met at 10.5 feet bgs during subsequent soil sampling activities.

The results of the initial Limited Phase II investigation indicated that TPHg and benzene were present in the groundwater sample collected at the location of the presumed former 4,000-gallon UST at concentrations of 2,400 μg/L and 5,200 μg/L, respectively; however, it was noted that no free product was observed. TPHg and TPHd were not detected above laboratory reporting limits in any of the soil samples analyzed, and BTEX was not detected in the other two groundwater samples collected. One soil sample was analyzed for TRPH, which was not detected above laboratory reporting limits. Additional assessment was recommended; therefore, one groundwater monitoring well was installed downgradient from the presumed 4,000-gallon tank location and two additional soil borings were drilled in the presumed upgradient and downgradient directions. Soil and groundwater samples were collected from each boring and analyzed for TPHg, BTEX and MTBE. Two groundwater samples were additionally analyzed for VOCs. Groundwater stabilized at a depth of approximately 8.3 feet bgs following monitoring well installation.

Analytical results indicated that shallow soils did not appear to be impacted by fuel-related hydrocarbons in the vicinity of the former (presumed) UST. Soil samples from each of the three soil borings and groundwater samples collected from BH-5 and BH-6 were submitted for analysis. TPHg and BTEX were not detected in soil or groundwater samples. MTBE was detected at a maximum concentration of 1.9 μg/L in groundwater. A groundwater sample was collected following the development of MW-1. Although the chain of custody indicates that TPHg analysis was requested,

only the results for BTEX were found in the laboratory analytical report. BTEX were not detected in groundwater above laboratory reporting limits, and BGI reported that TPHg also was not detected.

It should be noted that, although the fuel reported to be present at the former freight terminal was diesel, soil and groundwater appear to only have been analyzed for TPH as gasoline during the supplemental site assessment.

BGI concluded that petroleum hydrocarbon impacts were limited in extent and no further investigation was deemed warranted. Closure was granted by DEHQ in October 2001.

Although closure was granted by the regulatory agency, due to the limited nature of the previous assessments and close proximity and upgradient location of the former freight terminal, the property remains an environmental concern and this reported release(s) from this facility represents a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property, and further discussed in the "Previous Environmental Reports" section above.

HUPFP-002071 Clean Harbors/MAT Parcel Express, 3495 Kurtz Street

In addition to the LUST records, the HMMD file for this adjacent facility was reviewed. The DEHQ file includes CIRs for the period from 2015 through 2019. In addition, the September 2010 DEHQ HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs database regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2015	Propane (five tanks for forklift); hazardous waste (10-day storage)	No permit for propane; no hazardous materials business plan. Corrected on April 29, 2015.
2017	Propane (50 gallons); no hazardous waste generated at the time of the site visit.	HMBP not certified annually; corrected on October 6, 2017.
2019	Propane (50 gallons); no hazardous waste generated at the time of the site visit.	None
2023	Used oil (330 gallons) Used oil filters (110 gallons)	Waste container not closed Missing labels Did not accumulate waste in a container, minor in nature

No violations were identified indicating an unauthorized release had occurred at the Clean Harbors or MAT Parcel Express facility. Therefore, although an environmental concern exists in connection

with the previous USTs further described above, the more recent Clean Harbors and current MAT Parcel Express operations (i.e., circa 2015 to present) are not considered to represent a recognized environmental condition to the Subject Property.

HUPFP-123526, British and Italian Automotive, 3770 Hancock Street

Based on its listing on the HMMD database and proximity to the Subject Property, the DEHQ records for this adjacent facility were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1996	Used oil and oil filters.	Faded labels on hazardous waste; training not reviewed every 12 months.
1997	Used oil.	Labels faded on hazardous waste; training records unavailable.
1999	Used oil (two 55-gallon drums)	Incomplete hazardous waste label.
2000	Hazardous waste, hazardous materials	Training records unavailable
2001	Hazardous waste (not specified; values not reported)	None
2002	None identified	None
2007	Used oil, used oil filters, used batteries, degreaser, carb cleaner	None
2008	Used oil, used oil filters, universal waste	None
2010	Hazardous waste (not specified)	None
2016	Business no longer operating at the property.	None

Based on the lack of significant violations and documented releases, the adjoining facility is not expected to have significantly impacted the Subject Property, and this facility does not represent a recognized environmental condition to the Subject Property.

HUPFP-133479, Autohaus Munich, 3770 Hancock Street, Unit E

Based on its listing on the HMMD database and proximity to the Subject Property, the DEHQ records for this adjacent facility were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1996	Used oil, antifreeze	None
1999	Used oil, waste coolant	Training records unavailable; minor oil spillage near waste oil drum.
2000	Hazardous waste (not specified)	Training records unavailable
2000	Hazardous waste, hazardous materials	Training records unavailable
2001	Waste oil	Minor oil spillage on shop floor near waste oil drum
2003	Not specified	None
2004	Not specified	None
2006	Used oil, antifreeze	Drums not properly labeled; corrected on December 23, 2006
2008	Waste antifreeze, used oil, universal waste	HMBP not available for review; failure to keep hazardous waste manifests for last 3 years; waste stored onsite longer than 6 months; waste oil accumulated in secondary containment; improper labeling of hazardous waste. Corrected in June and July 2008.
2010	Waste antifreeze; kerosene (55-gallon drum)	None
2015	Waste antifreeze, used oil	HMBP not submitted, not annually certified; training records not available; failure to keep hazardous waste manifests for 3 years
2016	N/A	Documentation of corrective action not received by DEHQ
2017	N/A (return to compliance on January 23)	N/A

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2017	Used oil (110 gallons); waste antifreeze (55 gallons)	None
2018	N/A	Notice: HMBP not completed
2019	Used oil (110 gallons); waste antifreeze (55 gallons)	Training records not available; returned to compliance on August 1, 2019
2022	New motor oil (70 gallons) Waste oil (220 gallons) Waste antifreeze (110 gallons) Waste filters (110 gallons)	Failure to dispose of waste in required timeframe.

Based on the lack of significant violations and documented releases, the adjoining facility is not expected to have significantly impacted the Subject Property, and this facility does not represent a recognized environmental condition to the Subject Property.

HUPFP-001449, Lach Motorsports, 3770 Hancock Street, Unit D

Based on its listing on the HMMD database and proximity to the Subject Property, the DEHQ records for this adjacent facility were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2015	Used oil filters	None
2016	Waste oil (55 gallons)	Training records unavailable
2016	Hazardous waste (not specified)	Training records unavailable; returned to compliance on October 4, 2016
2016	Business no longer present (Lach Motorsports)	None
2018	Waste oil (55-gallon drum) (Business identified as Torque-Spec Garage, Inc., DBA Lach Motorsports)	Training records unavailable
2018	N/A	Notice: Annual HMBP not completed
2021	Closure inspection, none	None

Based on the lack of significant violations and documented releases, the adjoining facility is not expected to have significantly impacted the Subject Property, and this facility does not represent a recognized environmental condition to the Subject Property.

H21151-001 and -002, Former Shorebreak Materials-Butler Property, 3612 Kurtz Street

Based on its listing on the LUST database and its proximity to the Subject Property (adjacent to the northeast), the DEHQ file for this facility was reviewed. The following reports were included in the DEHQ file and reviewed as part of this Assessment:

Case Closure Summary, Former Shorebreak Materials-Butler Property, 3612 Kurtz Street San Diego, CA prepared by the DEHQ and dated January 13, 1998

Confirmation Sampling Results and Site Closure Recommendation, 3612 Kurtz Street San Diego, CA prepared by International Technology Corporation (IT) and dated July 15, 1996

Site Assessment – Solvent Storage and Paint Mixing Area at 3612 Kurtz Street, San Diego, CA, prepared by Applied Consultants and dated June 18, 1992

General Incident Information & Record of Meeting, Shorebreak, 3612 Kurtz Street San Diego, CA prepared by the San Diego County Hazardous Material Management Division and dated February 12 & 18, 1998

In September 1989 contamination of the soil and groundwater was discovered with the removal of two USTs on the property, one 3,000-gallon gasoline UST and one 1,000-gallon diesel UST that had been used since 1969. Phase-separate hydrocarbons (PSH) were observed in the groundwater during excavation.

To remediate the contamination, a product skimming remediation system was used on the property from 1990 to 1992 that removed an estimated 430 gallons of PSH. Then in April 1993 an air sparging and vapor/extraction (AS/VE) remediation system was used and was estimated to have removed 20,650 pounds of volatile petroleum hydrocarbons.

Soil and groundwater sampling results are summarized in the table below:

Analyte		Pre-Treatment	March 1995 Highs	January 1996 Highs	Target Levels (# of samples exceeding)
Soil (in milligrams per kilograms [mg/kg])					
TPH		24,000	Not measured	10,020	1,000 (3)
Groundwater (in micrograms per liter [ug/L])					
Benzene	(BTEX)	14,500	361.4	1812	40 (3)
Toluene		3,250	317.3	427.7	5,000 (0)
Ethylbenzene		10,000	76.0	1,062	430 (1)
Total Xylenes		20,400	568.2	618.2	3,770 (0)

From confirmation sampling in January 1996, the monitoring well (MW-17) closest to the Subject Property (approximately 10 feet to the northwest) indicated 82.7 ug/L 1,2-Dichloroethane and all

other VOCs, as well as TPH and BTEX, were reported to be below the laboratory reporting limits. No PSH was detected. The soil boring B-44 closest to the Subject Property (approximately 50 feet to the northwest) indicated 3,545 mg/kg TPH and 8.31, 5.46, 38.88, and 444.8 mg/kg of BTEX respectively.

In January 1996, IT found that the majority of sampling locations had been reduced below California's maximum contaminant levels (MCLs), extensive free product removal, relatively low residual contaminant levels, lack of remaining sources of contamination, the onset and predicable efficacy of passive bioremediation, and lack of impact and pathways to ecological resources and health, a risk based corrective action (RBCA) closure was recommended.

In November 1997, a vapor risk assessment was completed for benzene of the indoor air located in the small office building on the property and concluded that the results indicated a less than one in one million increased incremental cancer risk.

The DEHQ closed the case in January 1998 noting that corrective action should be reviewed if land use changes.

In addition to the leaking USTs, San Diego County Hazardous Material Management Division (HMMD) observed hazardous wastes and substances stored and used by Shorebreak in 1991 where soil in the solvent storage and paint mixing area (approximately 350 feet to the northeast) had been impacted. According to HE-17 records in 1991 the area stored up to:

- 840-gallons of hydrocarbon solvents,
- 55-gallons of halogenated solvents,
- 20-gallons of photochemical or photo processing waste
- 60-gallons of ink degradant
- 800-gallons of paint
- And 600-gallons of 1,1,1-Trichloroethane

Soil sampling in 1992 by Applied Consultants found low levels of 1,1,1-Trichloroethane (1,1,1-TCA) and Trichloroethene (TCE) in the soil and 1,1,1-TCA and 1,1-Dichloroethene (1,1-DCE) in the groundwater. All other VOCs, TPH, and BTEX indicated non-detect results. Soil boring B3 closest to the Subject Property (approximately 350 feet to the northeast) indicated non-detect for all VOCs and the only groundwater well sampled, MW2 (approximately 340 feet to the northeast), indicated 15 ug/L 1,1-DCE and 12 ug/L 1,1,1-TCA.

Applied Consultants reported that they did not believe there was significant halogenated hydrocarbon contamination in the soil and groundwater and indicated that no further investigation or action was warranted. The HMMD determined the investigation as sufficient and found no information that warranted opening an unauthorized release case and the investigation was closed in February 1998.

Based on the close proximity of the contaminated areas to the Subject Property and the possible up-gradient location of the contamination with respect to the groundwater flow direction, the reported releases from this northeast adjacent facility represent a recognized environmental condition at the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

H15272, USA Petroleum Corporation/Mobile/Oasis Gas Station, 3229 Sports Arena Boulevard

Based on its listing on the LUST database, former use as a gasoline service station, and proximity to the Subject Property (adjacent to the southeast, across Sports Arena Boulevard), the DEHQ file for this facility was reviewed. The following report was included in the DEHQ file and reviewed as part of this Assessment:

Site Assessment Case Closure Summary, 3229 Sports Arena Boulevard, San Diego, CA prepared by the DEHQ and dated October 25, 1993

In February 1989, an unauthorized release of gasoline was discovered during the removal of three 10,000-gallon USTs on the property. Remediation methods included excavation and passive bioremediation/aeration of the soil. Soil and groundwater cleanup levels were established, with the exception of benzene, and the maximum concentrations remaining on property are detailed in the table below:

Analyte		Maximum concentrations remaining on property	Target Levels
Soil (in milligrams per kilogram [mg/kg])			
TPH		863	1,000
Benzene	(BTEX)	<0.5 – 0.240	--
Toluene		<0.5 – 2.19	--
Ethylbenzene		<0.5 – 49.4	--
Total Xylenes		<0.5 – 0.740	--
Lead		<0.5 – 0.73	--
Groundwater (in milligrams per liter [mg/L])			
TPH		<0.5 – 14	--
Benzene	(BTEX)	<0.005 - 0.650	0.21
Toluene		<0.005 - 0.010	300
Ethylbenzene		<0.005 - 0.930	--
Total Xylenes		<0.005 – 1.0	--
Lead		<0.02	--

Even though benzene concentrations in groundwater exceed the established clean-up levels, the DEHQ closed the case in October 1993, noting that after four years of groundwater monitoring indicating the groundwater contaminant concentrations were stable or decreasing and that the

plume is not migrating off property. The DEHQ noted that corrective action should be reviewed if land use changes.

Given that the DEHQ case was closed with limited amounts of CoCs remaining in the soil and groundwater, and it was determined that the groundwater plume was not migrating off the property, this facility does not represent a recognized environmental condition at the Subject.

HMD/UST 200896, Evans Tire & Service Centers, 3655 Sports Arena Blvd

Based on its listing on the HMMD, Hazardous Waste Tracking System, CERS Hazardous Waste, and HAZNET databases and proximity to the Subject Property (adjacent to the southwest, across Sports Arena Boulevard), the DEHQ records for this adjacent facility were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2002	None listed	Inadequate training Inadequate records
2004	Used oil filters (1,800 pounds) Used batteries (21,000 pounds) Organic liquids with metals (110 gallons) Waste and mixed oil (2,400 gallons) Hydrocarbon solvents (200 gallons) Antifreeze	Hazardous waste tanks without professional assessment Oil filters improperly managed Storage area not inspected weekly Fire/explosion/release not minimized Waste container improperly managed Missing labels Missing records
2007 to 2008	Used oil filters (1,800 pounds) Used batteries (21,000 pounds) Organic liquids with metals (110 gallons) Waste and mixed oil (2,400 gallons) Unspecified aqueous solution (16 gallons)	Missing labels Inadequate records
2010	Used oil filters (1,800 pounds) Used batteries (21,000 pounds) Organic liquids with metals (110 gallons) Waste and mixed oil (2,400 gallons) Unspecified aqueous solution (16 gallons)	Waste accumulation longer than what is allowed Inadequate records Missing labels
2015	Paint Waste antifreeze	None
2016	New oil (550 gallons) Used oil (240 gallons) New antifreeze (55 gallons) Used antifreeze (55 gallons)	Open waste container Inadequate records

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
2019, 2022	New oil (550 gallons) Used oil (220 gallons) New antifreeze (110 gallons) Used antifreeze (55 gallons) Transmission fluid (110 gallons)	Missing permit Inadequate records Open waste container Missing labels
2024	Closure inspection, none	None

Based on the lack of significant violations and documented releases, the adjoining facility is not expected to have significantly impacted the Subject Property and does not represent a REC.

HMD/UST 211463 and 131595, Exponents, Inc., 3280 Kurtz Street

Based on its listing on the Drycleaner, HMMD, NPDES, and CERs databases and proximity to the Subject Property (adjacent to the northeast, across Kurtz Street), the DEHQ records for this adjacent facility were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1994 to 1995	Empty container (1,200 pounds) Water-based adhesive (110 gallons) Propane (1,728 cubic feet) Polychloroprene 40% (1,000 gallons) Trichlorethylene (110 gallons)	Missing labels Inadequate training Inadequate records
2000 to 2001	Unspecified alkaline solution (25 gallons)	None

Although this property does not appear on any databases indicating an unauthorized release has been documented, there is a possibility that Exponents, Inc. performed dry cleaning activities, and since there is a record of the use of chlorinated solvents (trichlorethylene), an unidentified release would have the potential to impact the Subject Property. Therefore, the use of chlorinated solvents at this facility is considered a potential recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

HMD 207798/103138 3467-3469 Kurtz Street

Based on its listing on the San Diego County HMMD, and SWEEPS UST databases and proximity to the Subject Property (adjacent to the northeast) a records request was submitted to DEHQ. The following records were reviewed.

Year	Hazardous Materials, Petroleum Products, Hazardous Waste	Violations
1996	(San Diego Testing Engineers) 50 gallons of TCE waste	Hazardous waste stored for longer than allowed time
2007	(Econo Auto Repair) Two 55-gallon steel drums of used oil filters 55 gallons waste antifreeze 55 gallons waste aerosols 55 gallons motor oil 55 gallons used oil Used batteries	Improperly labeled Improper storage Hazardous waste stored for longer than allowed time Oil in secondary containment for used batteries hazardous materials business plan not submitted Failed to keep container closed Failed to conduct weekly inspections

In addition, according to DEHQ records, one 1,000-gallon steel UST was removed from the San Diego Testing Engineers facility in 1988. The tank was noted to be in good condition with no holes, and no odors were present in the excavation.

Although no releases were documented at the facility, based on the former presence of a UST, the reported generation of TCE and petroleum hydrocarbon waste, and the close proximity, this facility represents a recognized environmental condition for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

Yellow Cab Company of San Diego, 3473 Kurtz Street

Based on its listing on the RCRA-SQG, Haznet, and HWTS databases and proximity to the Subject Property (adjacent to the northeast) a records request was submitted to DEHQ. The DEHQ responded that no records are on file. Given the presence of a taxi company, it is possible that a UST was present and/or automotive repair operations have occurred. If a previously unidentified release had occurred, this facility represents a potential a recognized environmental condition for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

Boyce Industries, 3344 Kurtz Street

Based on its listing on the EnviroStor, San Diego County HMMD, and Hist Cortese databases and proximity to the Subject Property (adjacent to the northeast, across Kurtz Street), the EnviroStor records for this adjacent facility were reviewed. According to the EnviroStor listing, a preliminary assessment of the facility indicated that it was deleted from Cortese due to a lack of evidence of contamination. The facility was found to only be a distributor of detergents and washer parts. Therefore, this facility does not represent a recognized environmental condition.

Don Pollock Excavating, 3366 and 3370 Kurtz Street

Based on its listing on the EnviroStor and SEMS-Archive databases and proximity to the Subject Property (adjacent to the northeast, across Kurtz Street), the EnviroStor record for this adjacent facility were reviewed. According to the EnviroStor listing, a preliminary assessment of the facility indicated that there was no evidence that a UST was removed prior to property development, however the case was referred to the local agency. SCS submitted a request for records to the DEHQ and the DEHQ responded that no records are on file for the facility.

In addition, the SEMS database was searched, however no records were on file for this facility. This facility does not appear on any other databases indicating an unauthorized release has occurred; therefore, based on a lack of documented releases and distance, this facility does not represent a recognized environmental condition.

Other Offsite Database Listings

The EDR report provides a summary table of regulatory database sites within specified distances of the Subject Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**).

Several sites located within 0.25 mile of the Subject Property are listed in databases associated with known releases of hazardous substances or petroleum products such as LUST, SLIC, ENVIROSTOR, DEED, Cortese, Hist Cortese, CHMIRS, TRIS, and ICIS, but are located relatively cross- or downgradient, or based on case status and/or distance are not anticipated to have impacted the Subject Property and are not considered RECs.

Several sites located within 0.25 mile also appear only in databases not typically associated with documented releases, such as RCRA-LQG, RCRA-SQG, HAZNET, ECHO, FINDS, HIST UST, San Diego County HMMD, SWEEPS UST, CA FID UST, UST, and NPDES. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have impacted the Subject Property and are not considered RECs.

In addition to the Subject Property and adjacent site listings discussed above, SCS identified the following sites of concern within 0.25 mile of the Subject Property:

3502 Kurtz Street

Due to the listing in the EDR Hist Cleaner database as The Launderette in 1961, SCS submitted a request for records to the DEHQ. No records were identified in the DEHQ files for this facility. The facility is located at least 75 feet to the northeast of the Subject Property, across Kurtz Street, and according to ASTM guidelines is not located on an adjoining property. The property has since been

redeveloped. The facility does not appear on any databases indicating an unauthorized release has been documented; however, this facility was present prior to the time of regulatory oversight; therefore we cannot assess whether this facility represents a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

3496 Kurtz Street

Due to the listing in the EDR Hist Cleaner database as Triles in 1948, SCS submitted a request for records to the DEHQ. No records were identified in the DEHQ files for the site. The facility is interpreted to have been located approximately 200 feet to the northeast of the Subject Property. The property has since been redeveloped. The site does not appear on any databases indicating an unauthorized release has been documented; however, this facility was present prior to the time of regulatory oversight; therefore we cannot assess whether this facility represents a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended, further discussed in the "Previous Environmental Reports" section above.

3462 Kurtz Street

Due to the listing in the EDR Historical Auto database as Quality Foreign, SCS submitted a request for records to the DEHQ. No records were identified in the DEHQ files for the site. The site is located at least 75 feet to the northeast on an adjoining property across Kurtz Street. The site does not appear on any databases indicating an unauthorized release has been identified. Therefore, based on distance and lack of documented releases, the facility is not considered a significant environmental concern and does not represent a recognized environmental condition to the Subject Property.

3740 Greenwood Street

Due to the listing in the EDR Historical Auto database as Araki Automotive, SCS submitted a request for records to the DEHQ. No records were identified in the DEHQ files for the site. The facility is located approximately 200 feet northeast of the Subject Property and is not located on an adjoining property. The facility does not appear on any databases indicating an unauthorized release has been identified. Therefore, based on distance and lack of documented releases, the facility is not considered a significant environmental concern and does not represent a recognized environmental condition to the Subject Property.

3780 Greenwood Street

Due to the listing in the EDR Historical Auto database as Dick Gibson Automotive, SCS submitted a request for records to the DEHQ. No records were identified in the DEHQ files for the site. The facility is located approximately 200 feet northeast of the Subject Property and is not located on an adjoining property. The facility does not appear on any databases indicating an unauthorized release has been identified. Therefore, based on distance and lack of documented releases, the

facility is not considered a significant environmental concern, and does not represent a recognized environmental condition to the Subject Property.

3464 Kurtz Street

Due to the listing in the EDR Historical Auto database as Shoupe and Celeste, SCS submitted a request for records to the DEHQ. The DEHQ reported that no records are maintained for this property.

According to the EDR database report, the facility was an automotive repair shop from 1969 through 1985. The former auto repair shop was likely located at least 120 feet to the north-northwest, across Kurtz Street. The facility was not listed on any databases indicating an unauthorized release has occurred, and does not appear on any of the UST databases. Therefore, based on a lack of documented releases, as well as distance, the facility is not expected to have impacted the Subject Property and does not represent a recognized environmental condition to the Subject Property.

Golden Boy Pies of San Diego, 3465 Hancock Street

Based on its listing on the LUST, San Diego County SAM, SWEEPS UST, Cortese, Hist Cortese, San Diego County LOP, and CPS SLIC release databases and proximity to the Subject Property (approximately 170 feet north), the GeoTracker record for this up- to cross-gradient facility was reviewed. According to the GeoTracker listing, the facility is listed as a having a release of gasoline impacting soil only. The case was closed in 1990. Given the distance, soil-only nature, and closed case status, this facility does not represent a recognized environmental condition.

Jensen Meat Company, 3477 Hancock Street

Based on its listing on the LUST, San Diego County SAM, SWEEPS UST, Hist Cortese, and CPS SLIC release databases and proximity to the Subject Property (approximately 170 feet north), the GeoTracker record for this up- to cross-gradient facility was reviewed. The facility is listed as Xtermite on Geotracker, and the database indicates that the case was closed in 1986. No documents were available on GeoTracker, therefore a request for records was submitted to the DEHQ. DEHQ provided records indicating that one 3,000-gallon steel UST which had been used for diesel fuel was removed in 1986. The tank was noted to have corrosion and a hole, and evidence of contamination was observed. Depth to groundwater was noted to be approximately 8 feet bgs. Records pertaining to a 1,000-gallon steel UST containing diesel were also provided in the files. It is unclear if an additional UST was removed from the property. Although no closure documents were provided, given the distance to the Subject Property, lack of additional assessment mandated by the DEHQ, and closed case status for the property on GeoTracker, this facility does not represent a recognized environmental condition.

The records provided by DEHQ also included records for 3465 and 3467 Hancock Street, identified as Golden Boy Pies, and 3459 Hancock Street, identified as Sinner Brothers. Golden Boy Pies is discussed above and was listed with a closed case status. Based on review of the records, it appears that the three addresses are related to the release at Golden Boy Pies, discussed above. Therefore, the additional properties do not appear to represent additional releases and are unlikely to represent a recognized environmental condition.

Benton Roofing, 3691 Hancock Street

Based on its listing on the Hist Cortese and San Diego County LOP and proximity to the Subject Property (approximately 350 feet north), the GeoTracker record for this up- to cross-gradient facility was reviewed. According to the GeoTracker listing, the facility is listed as a having a release of diesel impacting soil only. The case was closed in 2000. Given the distance, nature of the release (diesel and soil-only), and closed case status, this facility does not represent a recognized environmental condition.

Unmappable or Orphan Sites

Nine unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Subject Property, it appears that the unmappable sites are not considered RECs to the Subject Property.

7 USER PROVIDED INFORMATION

The following information is the responsibility of the User (40 CFR 312.22) and a response from the User has not yet been received at the time of publishing the report and therefore is not included in this Phase I ESA. This data gap is not a significant data gap in our opinion based on the availability of other relevant information, and the information was provided in the previous Phase I ESA completed in 2023.

8 DATA GAPS AND DEVIATIONS

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – With the exception of the Pechanga Arena on Parcel A, the Subject Property was only observed from the sidewalks, roadways, and parking lots, no access was granted to building interiors and storage areas. With the possible exceptions of the gasoline service station on Parcel B and the Top Grade General Engineering storage area in Parcel A, this data gap is not considered a significant data gap in our opinion based on the availability of other relevant information, and considering that the Subject Property uses have not changed significantly since SCS conducted a site reconnaissance in the other areas of the Subject Property in 2023. Access and further assessment are recommended at the gasoline service station and Top Grade General Engineering.
- Physical Obstructions to Observations – None
- Outstanding Information Requests – The City of San Diego wastewater department did not respond to information requests and an appointment to view previous building permits was not available at of the date of this report. Based on the other information gathered during the course of this Phase I ESA, these outstanding requests are not considered a significant data gap.
- Historical Data Sources Failure – None
- Other Limitations – As noted earlier, an owner representative questionnaire and a User Questionnaire were not returned to SCS for inclusion in the report. Based on the other information gathered during the course of this Phase I ESA, this is not considered a significant data gap.

9 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

SCS Engineers (SCS) was retained by Midway Rising, LLC to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, CA 92110 (the "Subject Property") (Figure 1). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Subject Property is located approximately 800 feet to the northwest of the intersection with Sports Arena Boulevard and Camino del Rio West in San Diego, California. The Subject Property consists of the Sports Arena entertainment complex (currently known as Pechanga Arena) and vicinity, located in the central and eastern portions of Assessor's Parcel Number (APN) 441-590-04, comprising approximately 48-acres of land (Figure 2). The Subject Property is currently developed with Pechanga Arena, a gasoline service station, restaurants, and various commercial/retail businesses (Figure 3). The Client is planning to redevelop the Subject Property into an entertainment-anchored mixed-use development that includes new residential, office, and retail uses, as well as a new arena.

During the site reconnaissance, the Subject Property was observed to consist of the following commercial tenants and areas:

- Parcel A: 3500 Sports Arena Blvd: Pechanga Arena and parking lot
- Parcel B: 3494 Sports Arena Blvd: Chili's Restaurant
  3570 Sports Arena Blvd: Chick-Fil-A Restaurant
  3580 Sports Arena Blvd: Summit Gasoline & Sports Arena Car Wash
- Parcel C: 3340 Sports Arena Blvd: Sports Arena Square-Commercial/Retail
  3350 Sports Arena Blvd: Two vacant units, Crack in the Wall Picture Frames, Kite Country, The Arena Gym, Soma Concert Venue
  3360 Sports Arena Blvd: Rock and Roll San Diego Music School, The Arena Gym, and Kobey's Swap Meet
- Parcel D: 3250 Sports Arena Blvd: Dixieline Lumber
- Parcel E: 3240 Sports Arena Blvd: Salvation Army Thrift Store
- Parcel F: 3220 Sports Arena Blvd: The Alpha Project Shelter and parking area

Site Access Limitations – With the exception of the Pechanga Arena on Parcel A, the Subject Property was only observed from the sidewalks, roadways, and parking lots surrounding the Subject Property, including no access to building interiors and storage areas. In addition, only areas likely to contain hazardous substances and hazardous wastes, based on previous observations, were observed in Parcel A. With the possible exceptions of the gasoline service station on Parcel B, discussed in the "Records Review" section and the Top Grade General Engineering storage area discussed in the "Stained Soil or Pavement" section, this data gap is not a significant data gap in our opinion based on the availability of other relevant information, including that the Subject Property uses have not changed significantly since SCS conducted a site reconnaissance in the other areas of the Subject Property in 2023.

Environmental concerns observed during the site reconnaissance include:

Clarifier Systems/Ice Pits

Six inground wastewater clarifiers are present on the Subject Property, one is associated with the Sports Arena car wash (5-stage) and the other five are food grade grease traps associated with the Sports Arena food service, the Summit Gasoline Station convenience store, Chick-fil-A, and Chili's. According to information provided by the Sports Arena manager, Mr. Ralph Bedoe, during the previous site reconnaissance, two grease traps are present within the concourse of the Sports Arena, two are present on the exterior of the Arena (inground), and one is present on the arena floor level. All of the grease traps are associated with food service. The grease traps associated with the arena are cleaned out approximately every six months by Ecogrease.

In addition, according to Mr. Bedoe, sludge and paint from the arena floor accumulates in the two ice pits located on either end of the Sport Arena floor. The pits have reportedly been cleaned once in the life of the sports arena.

Based on our experience, inground wastewater clarifiers and ice pits have the potential to release (e.g., through cracks or degradation of the concrete from poorly fitting or degraded piping) wastewater containing petroleum products, solvents, and hazardous wastes into the subsurface. This potential is exacerbated with time as the clarifier/ice pit systems age. In our experience, it becomes increasingly likely that systems more than 10 years old will experience a release. Based on their age (approximately 20 years or more), the car wash clarifier in Parcel B represents a recognized environmental condition (REC) to the Subject Property. Due to the potential presence of metals and VOCs associated with the sludge and the length of time the pits have been present (more than 50 years), the potential for subsurface impacts beneath the pits cannot be ruled out. Therefore, the ice pits are considered an environmental concern. SCS recommends oversight by an environmental professional upon removal of the ice pits during the proposed redevelopment activities.

The grease traps associated with food operations are not considered a concern due to the collection of food grade waste within these units.

Stained Soil or Pavement

Stained surfaces were observed in the area leased by Top Grade General Engineering. Based on the presence of fuel containers, the use of the area for construction storage, and the observed leaking vehicles, the staining observed in this storage yard is considered a recognized environmental condition. Furthermore, the inability to observe all of the surfaces is considered a significant data gap. SCS recommends further observation and shallow soil sampling once all of the vehicles and stored items are removed.

The Subject Property was interpreted to have been occupied by various buildings from circa 1903 to the present and some type of agricultural activity took place at the Subject Property and vicinity, circa 1928. Also, previous uses of environmental concern of the Subject Property include potential heating oil use in the early 1940s, printing and furniture stripping circa 1977 to 1989 in Parcel C, 3360 Sports Arena Boulevard (SAB), and previous uses of a gasoline service station and car wash circa 1966 to present in Parcel B, 3580 or 3640 SAB. Since the Subject Property was occupied by buildings as early as 1903, based on SCS's experience, there is a potential for the presence of elevated concentrations of lead in the shallow soil due to the potential former usage of lead-based paint at the Subject Property, and/or detectable concentrations of organochlorine pesticides (OCPs) to be present in the soil due to the former use of pesticides and/or termiticides. In addition, the southwestern portion of the Subject Property is part of the former Point Loma Dump, which was in operation from 1899 to 1908 and possibly longer. There is the potential for burned or incinerated

ash from “backyard” incinerators or “burn pits” to be present or mixed with the soil, such as with the reported presence of the Point Loma Dump. Burn ash and/or fill materials may contain high concentrations of Chemicals of Concern (CoCs), notably certain metals (e.g., copper, lead, zinc, mercury, and cadmium). Also, elevated concentrations of metals may exist in the shallow soil from other sources as well (e.g., imported fill, aerially deposited lead, paint from previous structures). Furthermore, the Subject Property is interpreted to be underlain by fill soil. Because the history or “pedigree” of the fill material is not known, there is a potential that the fill material is impacted with CoCs, such as petroleum products, volatile organic compounds, pesticides, semi-volatile organic compounds, polychlorinated biphenyls (PCBs), or metals (e.g., if the fill came from a contaminated property). Potential environmental concerns from previous adjoining land uses include dry cleaning facilities adjoining to the northeast circa the 1940s to 1980s, automotive repair and industrial trucking facilities adjoining circa the 1960s to present and automotive repair and a gas station were adjoining to the southeast circa the 1970s to 2023. Environmental assessments were conducted recently to evaluate the potential impacts of these historical concerns, which are summarized further below.

Summary, Conclusions, and Recommendations Based on a Review of the Previous Environmental Reports.

SCS has previously completed Phase I and II Environmental Site Assessment reports for the Subject Property:

- *Phase I Environmental Site Assessment*, dated April 28, 2023 (Phase I ESA - 2023)
- *Phase II Environmental Site Assessment Report*, dated July 10, 2023 (Phase II ESA)
- *Phase II Environmental Site Assessment Report Number 2, Geophysical Survey and Trenching Assessment*, dated September 22, 2023 (Trenching Phase II ESA)

The Phase I ESA – 2023 identified the following previous environmental land uses/features of concern at various properties within the Subject Property boundaries:

- Clarifier system and ice pits
- Current and past gasoline service stations, including the presence of underground storage tanks (USTs)
- Off-site upgradient facilities that used or have records of a release of petroleum hydrocarbon or halogenated solvent products.
- Lead-based paint (LBP), pesticides, and termiticides
- Previous agricultural use
- Previous printing and furniture stripping shops
- Previous barracks-style housing with possible fuel oil heating systems
- Presence of fill soils, including burn ash and waste
- Other petroleum hydrocarbon and hazardous materials storage and uses including Kobey’s waste storage area

Various subsurface investigations events have been carried out by SCS in various representative and focused portions of the Subject Property between February 2023 and March 2024, and have consisted of soil, soil vapor, and groundwater sampling, as well as extensive geophysical surveys of select areas at the Subject Property followed by focused shallow soil trenching efforts. The subsurface investigations have indicated the following findings regarding environmental concerns:

- Former burn dump area – This feature, known as the Point Loma Dump, is located in the southwestern portion of the Subject Property and is interpreted to be a former open burn pit area that was present prior to the development of Frontier Housing, which was later covered with 2 to 3 feet of fill soils. Burn ash with elevated concentrations of metals including antimony, arsenic, cobalt, and/or mercury that exceed residential health risk-based screening levels were discovered in this area of the Subject Property, buried at depths of approximately 2 to 5 feet deep along with old household debris including bottles, ceramics, and other trash. Portions of these soils are considered a California hazardous waste. Although several soil borings as well as trenching were completed in this area for delineation, additional delineation is required to further determine the lateral extent of these soils. SCS also recommends that the San Diego Department of Health and Quality (DEHQ) and the San Diego Local Enforcement Agency (LEA) be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.
- Pesticide-bearing soils – Shallow soils with elevated concentrations of the organochlorine pesticide identified as chlordane were identified in several samples collected from Parcel C at the Subject Property, some of which are considered a California hazardous waste. The known pesticide-bearing soil within the Construction Excavation Envelope that exceeds the mitigation criteria for chlordane needs to be properly managed during excavation and grading activities.
- Underground storage tank (UST) discovered – the geophysical operations completed at the Subject Property indicated the presence of a UST within the western parking lot area of the Subject Property. A backhoe was used to expose the UST in June of 2023, which was measured to be approximately 12 feet long by 4 feet in diameter, with visible petroleum hydrocarbon staining observed near the bottom of the UST.
- Groundwater with detectable CoCs - Although detectable concentrations of total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) (i.e., bromodichloromethane and dibromochloromethane) were reported to be present in up to 3 of the 5 samples analyzed, all of the groundwater samples analyzed for TPH and VOCs were reported to be below the Health Risk-Based Mitigation Criteria. However, due to the detectable concentrations of CoCs in one or more of the samples collected and analyzed, and due to the relatively shallow depth of groundwater at the Subject Property (i.e., approximately 8 to 10 feet below grade), if dewatering activities are required during construction, groundwater filtration and proper permits may be required prior to discharging to the sanitary sewer system.
- Soil vapor – VOCs including benzene, ethylbenzene, xylenes, and tetrachloroethene (PCE) were reported to be present in various samples collected. After applying the applicable 2011 Department of Substances Control (DTSC) attenuation factors for the existing commercial and possible future residential land use (0.001 and 0.0005 respectively) to the maximum reported concentrations of VOCs in soil vapor beneath the Subject Property, the maximum theoretical concentrations of VOCs in indoor air at the Subject Property do not exceed the commercial and residential screening levels (DTSC- Modified Screening Levels [SLs]); however, if using the California Environmental Protection Agency (CalEPA)-recommended attenuation factor of 0.03, the maximum theoretical concentrations of benzene and ethylbenzene in indoor air at the Subject Property exceed the commercial and residential screening levels (DTSC-SLs) and m,p-xylene and PCE in indoor air at the Subject Property exceed the residential screening levels (DTSC-SLs).

Based on these findings and the proposed redevelopment of the Subject Property into a mixed-use development, preparation of a Soil Management Plan (SMP) is recommended to provide a dynamic strategy to properly manage CoC-bearing soil and to assess and mitigate, and document, as

necessary, releases of CoCs in a manner that is protective of human health for the proposed future land use and the beneficial uses of water resources of the Subject Property and vicinity. The SMP should guide both the reuse and/or export of impacted soil, as well as the environmental oversight of the excavation and removal of the UST and associated petroleum hydrocarbon-bearing soil, removal of the clarifiers/ice pits on the Subject Property, further delineation of impacts from the recognized environmental conditions identified on the Subject Property, and confirmation soil sampling as needed on the Subject Property.

According to the review of the regulatory database and agency files for the Subject Property, several tenants, such as the Sports Arena, Kobey's Swap Meet, Summit Gasoline, Dixieline Lumber, etc, formerly and currently use hazardous materials and generate hazardous wastes, such as maintenance chemicals like paint, batteries, and fluorescent lights, and also use of petroleum hydrocarbons like gasoline, diesel, oil, and waste oil and the use of solvents on the Subject Property. Based on a review of the available information, it is unlikely that any of the information reviewed from the regulatory database and agency files has negatively affected the environmental condition of the Subject Property, with the possible exception of the gasoline service/fueling stations described below.

On-Site Gasoline Service/Fueling Stations

The Subject Property has been developed with current or historical fueling operations, including Dixieline Lumber at 3520 Sports Arena Boulevard (Parcel D, Figure 8) that previously contained a fueling station circa approximately 1970 to 2003 (33 years), a gasoline service station identified as Arena Fuels/Arco AM-PM/Summit Gasoline Service Station at 3580 Sports Arena Boulevard (Parcel B, Figure 4) since 2003 (20 years), and a historical gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard (Parcel B, Figure 3) from approximately 1966 to 1974 (8 years). Gasoline service/fueling stations are associated with features of environmental concern (petroleum products/wastes, underground storage tanks [USTs], fuel dispensers, and clarifier/sumps).

DEHQ records indicate the USTs and fueling systems at Dixieline have been removed and soil confirmation samples taken in the excavation areas indicated CoCs were not detected above laboratory reporting limits.

DEHQ and EDR records indicate that a historical gasoline service station occupied the area where Summit Gasoline is currently, or possibly, where Chili's is currently according information obtained through interviews with the tenant, circa late 1960s to early 1970s. Soil and groundwater samples taken on the Subject Property in geotechnical borings in the area opposite Kemper Street indicated CoCs were not detected above laboratory reporting limits.

DEHQ records report the existing gasoline service station at 3580 Sports Arena Boulevard, USTs and system was installed in 2003, including a split regular unleaded gasoline 10,000-gallon and diesel fuel 12,000-gallon USTs, and one premium unleaded 20,000-gallon UST. In February 2020, one additional regular unleaded gasoline 40,000-gallon UST was added to this system. These four USTs and associated fueling system are currently in place. At the time of the site reconnaissance, one UST was observed east of the convenience store and west of the car wash.

No unauthorized releases of petroleum hydrocarbons and minor violations were reported in the DEHQ files regarding the existing gas station. Based on an absence of disposal violations, and the lack of known and reported releases, there does not appear to be a recognized environmental

condition associated with the current use of this portion of the Subject Property as a gas station. However, based on our experience, there are likely surface release(s) spills at the gas station that have occurred, as the well possible vapor phase releases as a result of piping systems that were not historically vapor "tight." Also the lack of information regarding the one UST observed east of the convenience store and west of the car wash. Combined with the proposed redevelopment plans for the Subject Property into a mixed-use development with commercial/retail and residential uses along with the sports arena complex, these possible releases are considered potential recognized environmental conditions.

Information regarding removal of USTs from the historical service station is not available. Therefore, based on the lack of records pertaining to the condition of the subsurface following UST removal, this historical gas station is considered a recognized environmental condition and requires further research or investigation.

Subsurface investigation (geophysical survey, soil and soil vapor sampling) is recommended, in particular due to the proposed change in land use to include residential properties in the area of the current and historical gas stations.

Consultation with the DEHQ is recommended to address potential petroleum hydrocarbon impacts during the removal of the fuel systems and clarifiers on the Subject Property, and proper permits pertaining to the UST removal/replacement should be obtained from the DEHQ and City of San Diego Fire-Rescue department prior to redevelopment. Additional soil and soil vapor sampling, as recommended above, will also serve to update the prior investigations based on current regulatory standards.

SCS attempted soil and soil vapor sampling at 3580 Sports Arena Boulevard in 2023 and 2024 to assess for potential impacts from the gasoline service station uses in association with the redevelopment of the Subject Property, although access to this area was not granted. When access is available, subsurface investigation (geophysical survey, soil and soil vapor sampling) at The Summit Gasoline Service Station, 3580 Sports Arena Blvd, on the Subject Property is recommended. Details of the assessments conducted in the other historical fueling areas on the Subject Property, Dixieline 3520 Sports Arena Boulevard and the historical gasoline service station Union Oil/76 at 3494, 3580, or 3640 Sports Arena Boulevard are further discussed in the previous environmental reports summary above.

Regulatory database information identified several known and suspected contamination sites in the area surrounding the Subject Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Subject Property, with the possible exceptions listed below. Soil, soil vapor, and groundwater sampling was completed in regard to the adjacent property recognized environmental conditions to the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended and are further discussed in the previous environmental reports summary above.

Former Cleaners – 3496 and 3502 Kurtz Street

Due to the listings in the EDR Hist Cleaner database of The Launderette in 1961 located at 3502 Kurtz Street and Triles in 1948 located at 3496 Kurtz Street, SCS submitted requests for records to the DEHQ. No records were identified in the DEHQ files for these facilities. The facilities are located at least 75 or 200 feet, respectively, to the northeast of the Subject Property, across Kurtz Street, and are not technically located on an adjoining property. The properties have since been

redeveloped. The facilities do not appear on any databases indicating an unauthorized release has been documented; however, the facilities were present prior to the time of regulatory oversight; therefore, we cannot assess whether these facilities represent a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

H21153-1/H19221, Former Truck Terminal/Golden Chariot Trucking/Loyola Trucking/Clean Harbors

This facility is a truck terminal located on an adjoining property to the northeast of the Subject Property consisting of a former diesel fueling station and oil UST circa 1963 to the mid-1980s to early 1990s which impacted groundwater.

Although closure was granted by the regulatory agency, due to the limited nature of the previous assessments and close proximity and upgradient location of the former freight terminal, the property remains an environmental concern and there is a moderate likelihood that reported release(s) from this facility represents a recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

H21151-001 and -002, Former Shorebreak Materials-Butler Property, 3612 Kurtz Street

In September 1989 contamination of the soil and groundwater was discovered with the removal of two USTs on this northeast adjacent property and a DEHQ case was opened, in addition hazardous wastes and substances stored and used by Shorebreak in 1991 were observed impacted soil in the solvent storage and paint mixing area (approximately 350 feet to the northeast) as a HMMD complaint.

Based on the close proximity of the contaminated areas to the Subject Property and the possible up-gradient location of the contamination with respect to the groundwater flow direction, this property represents a recognized environmental condition to the Subject Property in connection with reported releases from this northeast adjacent facility. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

HMD/UST 211463 and 131595, Exponents, Inc., 3280 Kurtz Street

Although Exponents, Inc. does not appear on any databases indicating an unauthorized release has been documented, there is a possibility that Exponents, Inc. performed dry cleaning activities, and since there is a record of the use of chlorinated solvents (trichlorethylene), an unidentified release would have the potential to impact the Subject Property. Therefore, the use of chlorinated solvents at this facility is considered a potential recognized environmental condition to the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property

and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

HMD 207798/103138 3467-3469 Kurtz Street

Although no releases were documented at the facility, based on the former presence of a UST, the reported generation of the solvent TCE and petroleum hydrocarbon waste, and the close proximity, this facility represents a recognized environmental condition exists for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

Yellow Cab Company of San Diego, 3473 Kurtz Street

Given the presence of a taxi company, it is possible that a UST was present and/or automotive repair operations have occurred. If a previously unidentified release had occurred, this facility represents a recognized environmental condition for the Subject Property. Subsurface assessment was previously completed on-site as part of the Phase II ESA to assess whether operations at this facility have resulted in impacts to the subsurface at the Subject Property and additional subsurface assessment (e.g., soil vapor sampling) to further evaluate whether this potential off-site source presents a vapor intrusion risk to the Subject Property is recommended.

10 CONCLUSIONS

In summary, SCS performed a Phase I ESA of the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, CA 92110. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed recognized environmental conditions and significant data gaps in connection with the Subject Property, as discussed above. Subsurface investigation work was commenced at the Subject Property in 2023 to further assess these recognized environmental conditions as further discussed herein, and additional assessment to further characterize identified environmental concerns as well as preparation of a Soil Management Plan is recommended prior to commencing redevelopment activities. SCS also recommends that the DEHQ and the LEA be consulted prior to grading and development activities to ensure the former waste areas of the Point Loma Dump are properly managed during construction activities.

11 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

This Phase I ESA report for the Midway Rising project located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard, San Diego, California dated May 3, 2024, was prepared by Allison O'Neal and Jennifer Bauer-Morton and reviewed by Luke Montague.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The resumes for the individuals below are included in **Appendix F**.

13 GLOSSARY

AAI – All Appropriate Inquiry

AUL – Activity and Use Limitations

BER – Business environmental risk. As defined in ASTM E1527-21, a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in the ASTM E1527-21 practice.

BTEX – Benzene, toluene, ethylbenzene, and total xylenes

CERCLA – Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System

CFR – Code of Federal Regulations

CORRACTS – Corrective Action Against Responsible Parties at a RCRA site

CREC – Controlled Recognized Environmental Condition. As defined in ASTM E1527-21, a recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority, or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity use limitations, or other property use limitations).

De Minimis Condition – A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a recognized environmental condition nor a controlled recognized environmental condition.

DTSC – California EPA Department of Toxic Substances Control

EDR – Environmental Data Resources, Inc.

ERNS – Emergency Response Notification System

ESA – Environmental Site Assessment

FINDS – Facility Index System

HAZNET – California EPA Hazardous Waste Facility and Manifest Data

HREC – Historical Recognized Environmental Condition. As defined in ASTM E1527-21, a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or

authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations).

LQG – Large Quantity Hazardous Waste Generator

LUST – Leaking Underground Storage Tank

MCL – Maximum contaminant level

MTBE – Methyl-tert-butyl-ether

NFA – No Further Action determination

NFRAP – No Further Remedial Action Planned

NPL – National Priority List (Superfund)

PAHs – Polynuclear aromatic hydrocarbons

PCBs – Polychlorinated biphenyls

RCRA – Resource Conservation and Recovery Act

RCRIS – Resource Conservation and Recovery Information System

REC – Recognized environmental condition. As defined by ASTM E1527-21, a REC means (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. A *de minimis condition* is not a recognized environmental condition.

ROD – Record of Decision

RBSLs – Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA – Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG – Small Quantity Hazardous Waste Generator

SWIS – Solid Waste Information System

SWLF – Solid Waste Facility/Landfills

TPH – Total Petroleum Hydrocarbons

TRIS – Toxic Release Inventory System

TSD – Treatment, Storage, and/or Disposal Facility

User – As defined in ASTM E1527-21, the party seeking to use Practice E1527 to complete an environmental site assessment of the Subject Property.

U.S. EPA – United States Environmental Protection Agency

USGS – United States Geologic Survey

UST – Underground Storage Tank

VCP – Voluntary Cleanup Program

VOCs – Volatile organic compounds

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 17A3-44A3-8103

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1584 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
