Site History:	Petroleum hydrocarbon-impacted soil was encountered in January 2006 during grading operations for redevelopment of an 8-acre property located in the Loma Portal neighborhood of San Diego, California. The property had been occupied by a medical center from approximately 1963 through 2005, when it was demolished in preparation for construction of residential condominiums. The impacted soil was located near the intersection of Kenyon and Fordham Streets at depths of 6 to 10 feet below ground surface (bgs). Excavation of the impacted soil was performed over an area approximately 40 feet wide by 50 feet long and continued until staining was no longer observed in the sidewalls and floor. Analytical results for four confirmation soil samples collected from the excavation indicated no detection of petroleum hydrocarbons. The consultant (DPRA) estimates that 5,298 cubic yards of petroleum-impacted soil remain in place at depth of 5 to 10 feet bgs due to accessibility issues. The excavated soil was stockpiled onsite pending profiling for offsite disposal. Fourteen hundred gallons of petroleum hydrocarbon-impacted water accumulated in the excavation, which was removed and transported offsite for treatment and disposal. Analysis of a sample of the ponded water indicated a maximum total petroleum hydrocarbon (TPH) as gasoline concentration of 19,000 micrograms per liter (g/l) and TPH as diesel of 140,000 g/l. Thirty-three samples were collected from the stockpiled soil. Analytical results for the samples indicated maximum concentrations of total petroleum hydrocarbon (TPH) as gasoline of 1,400 milligrams per kilogram (mg/kg) and TPH as diesel of 8,200 mg/kg. Benzene, toluene, and ethylbenzene were not detected in the

CABRILLO HOSPITAL (Continued) **1000368464**

samples. Xylenes were detected in one sample at a concentration of 5.4 mg/kg. The volume of stockpiled soil transported offsite for disposal was 2,663 tons. Four Strataprobe soundings were advanced at the site in March 2007 for the collection of soil and discrete-depth groundwater samples. An additional four soundings were advanced October 2010 for sample collection. TPH as diesel was detected in one of the six discrete-depth groundwater samples at a concentration of 1,900 micrograms per liter (g/l). Benzene, toluene, naphthalene, methyl-tert-butyl ether (MTBE) and volatile organic compounds indicative of degraded gasoline were also detected in one or more of the samples at very low concentrations. Based on removal of the petroleum hydrocarbon-impacted soil, the low concentrations of petroleum hydrocarbons in groundwater, and the lack of beneficial uses for groundwater at the site, DPRA has recommended no further action and case closure. DEH concurs with these recommendations.

Feature Description:	On March 25, 1942, this site was acquired in fee (through a Declaration of Taking) by the Department of the Army as agent for the Defense Plant Corporation. The Defense Plant Corporation furnished all funds necessary for that acquisition. Pursuant to a directive dated 21 February 1942, the site was quitclaimed to the Defense Plant Corporation on 8 September 1943. This site was used for the manufacture of heavy bombers. In a Declaration of Taking filed 16 June 1955, the Secretary of the Air Force acquired 70.39 acres of land in the vicinity of and adjacent to the site. Careful examination of the Title information for that Taking reveals that the site of the former San Diego Manufacturing Plant was not included in that Air Force action. The site is currently owned by the State of California, Department of Parks and Recreation, and is used for parking areas for Old Town State Park, a UCSD shuttle lot, and Parks Department equipment storage.

Site History:	San Diego Gas & Electric (SDG&E) submitted an application to the Voluntary Assistance Program (VAP) and was assigned case H28656-002, for a project to install a new electric transmission line that would connect the newly constructed Otay Mesa Generation Plant (OMGP) with the Sycamore Canyon Substation, and the installation of a second electric transmission line that connects OMGP with the existing Old Town Substation. The Department of Environmental Health (DEH) historical case H28656-001 is located on one specific parcel along the proposed route at 4370 Pacific Highway. The client requested that DEH use this address for the project application. The new project included the construction of both overhead and underground transmission lines. The project was broken up into five different sections or segments with different consultants screening and managing the impacted soil. Potentially impacted soil was identified by pre-construction Phase II investigations which included soil sampling, groundwater sampling, and soil vapor sampling. A Revised Hazardous Substance Control and Emergency Response Plan, prepared by Haley & Aldrich and dated November 10, 2005, was submitted with the VAP application. The plan was prepared to provide SDG&E s construction contractors direction in the event of a spill from their equipment and for the proper segregation and management of impacted soil or groundwater. Soil was proposed to be screened by visual observations of staining or discoloration, petroleum or other chemical odors, presence of other potential impacts such as debris or ash, and field meter photoionization detector (PID) measurements. If dewatering was necessary, groundwater would be removed from excavations and placed in temporary aboveground tanks for characterization prior to disposal. The Department of Environmental Health (DEH) approved the plan on November 21, 2005. Individual soil management reports were submitted to DEH by T N & Associates and Haley & Aldrich in 2007, and Sullivan in 2008 for the five segments for review. These five segments were where the electric transmission line was constructed underground via excavation and back fill of trenches. DEH requested a comprehensive report summarizing the

SUNBELT TOWING INC DBA PERFECTION AUTOBO (Continued) **S102438155**

individual reports. In 2014, a comprehensive report was prepared by Onside Total Integrated Enterprises (OTIE), and submitted to DEH. The report states that the handling of soil was in accordance with the Hazardous Substance Control and Emergency Response Plan. The deposition of impacted soil has been summarized as follows: (Cubic Yards) Facility Segment A: Old Town Station to West Vine Street 3/29/06 11/7/06 1,863 soil* TPS (Haley & Aldrich) Segment B: W. Vine to W. Harbor Drive 4/21/06 8/23/06 440 soil TPS (Sullivan International) 126 burn ash Kettleman Hills Segment 3: Sweetwater River to J Street 3/20/06 9/13/06 288 soil Otay, TPS (TN & Associates) 143 soil^ Kettleman Hills Segment 5A: Harbor Drive to 26th Street 9/27/06 1/18/07 911 soil Otay, TPS (TN & Associates) 1,258 burn ash Kettleman Hills South Bay Power Plant: 7/31/06 8/07/06 *Included with Segment A totals (Haley & Aldrich) ^ This includes 10 cubic yards of asbestos containing material The report did not mention any disposal of groundwater, so DEH is assuming that this did not occur. No confirmation soil samples were obtained from the bottom of the excavations, nor were they required. There is known soil and groundwater contamination still remaining in the areas where the line is located. Some of the soil sampling locations compiled in the summary tables do not have the laboratory results in the report, such as two sample results for the South Bay Power Plant (SBBP-01-0725/06). However, the Inspection Reports by Haley & Aldrich during the excavation in the area where the samples were taken state that soil was removed and sent to TPS Recycling. The VAP case was opened for review of soil management, and the manifests indicate that proper handling of impacted soil has been shown. Non- impacted soil was primarily transported to Hansen Aggregates in Mission Valley, SDG&E s Silver Gate backfill project in San Diego or was characterized and used as backfill in designated areas along the trench corridor.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The site consists of approximately 1.92 acres in the shape of a wedge located between Sports Arena Boulevard and Pacific Highway, approximately 500 feet northwest of their intersection. Pacifica Companies (now Pacific Groves LTD), entered the Department of Environmental Health (DEH), Voluntary Assistance Program (VAP) in January 2004 in anticipation of site redevelopment activities in areas where soil and groundwater impacts associated with underground storage tank (UST) cases H28826-001 and H28826-002 were known to exist. The VAP application indicated that the property owner intended to conduct a vapor risk evaluation and excavation of hydrocarbon-impacted soil at the site to alleviate any potential vapor risks. The majority of assessment activities related to VAP case H28826-003 were conducted under previous UST cases H28826-001 and H28826-002, which were closed in November 1991 and February 2007, respectively. The primary focus of this VAP case, H28826-003, was to evaluate vapor risk for the site, which had not been conducted in accordance with the Site Assessment and Mitigation Manual under the previous UST cases. Historically, the site was reportedly occupied by two large warehouse/storage facilities and one 550 gallon gasoline UST until the late 1980s. Prior to redevelopment to the existing configuration, the site was utilized as a Park-N-Ride facility with a single story garage. Currently the site is developed as a self storage center with three slab on grade structures and associated parking. Hydrocarbon-impacts observed at the subject site were primarily related to the property to the north, located at 4370 Pacific Highway, identified as unauthorized release case H28656-001. Hydrocarbon impacts, including liquid-phase hydrocarbons (LPH),

ESTATE OF DOLLIE G. HERBERT (Continued) **S102429281**

migrated south impacting the subject site and were subsequently mitigated through excavation and groundwater pump and treat activities. These remedial activities significantly reduced hydrocarbon concentrations based on subsequent investigations, however soil vapor sampling indicated the presence of hydrocarbon impacts beneath the human occupied (office) portion of the existing storage facility. The detection of soil vapor impacts from soil vapor probes installed and sampled in 2005 and several insufficient vapor risk evaluations prompted DEH to request additional vapor risk evaluation be conducted. DEH staff ultimately completed the vapor risk evaluation utilizing default input values with the exception of the appropriate slab attenuation factor of 0.01. Taking a simple average of the most recent (2005) vapor risk data for benzene and ethylbenzene, collected from appropriate locations beneath or in close proximity to the existing human occupied portion of the building, the cumulative risk was calculated to be 7.73x10-7, which is less than the 1x10-6 SAM risk threshold. The consultant concluded that the current site use as slab on grade commercial is protective of human health. It is the consultant s opinion that no further action is necessary at the site. Based on the provided data, the County of San Diego, Department of Environmental Health agrees with this conclusion.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

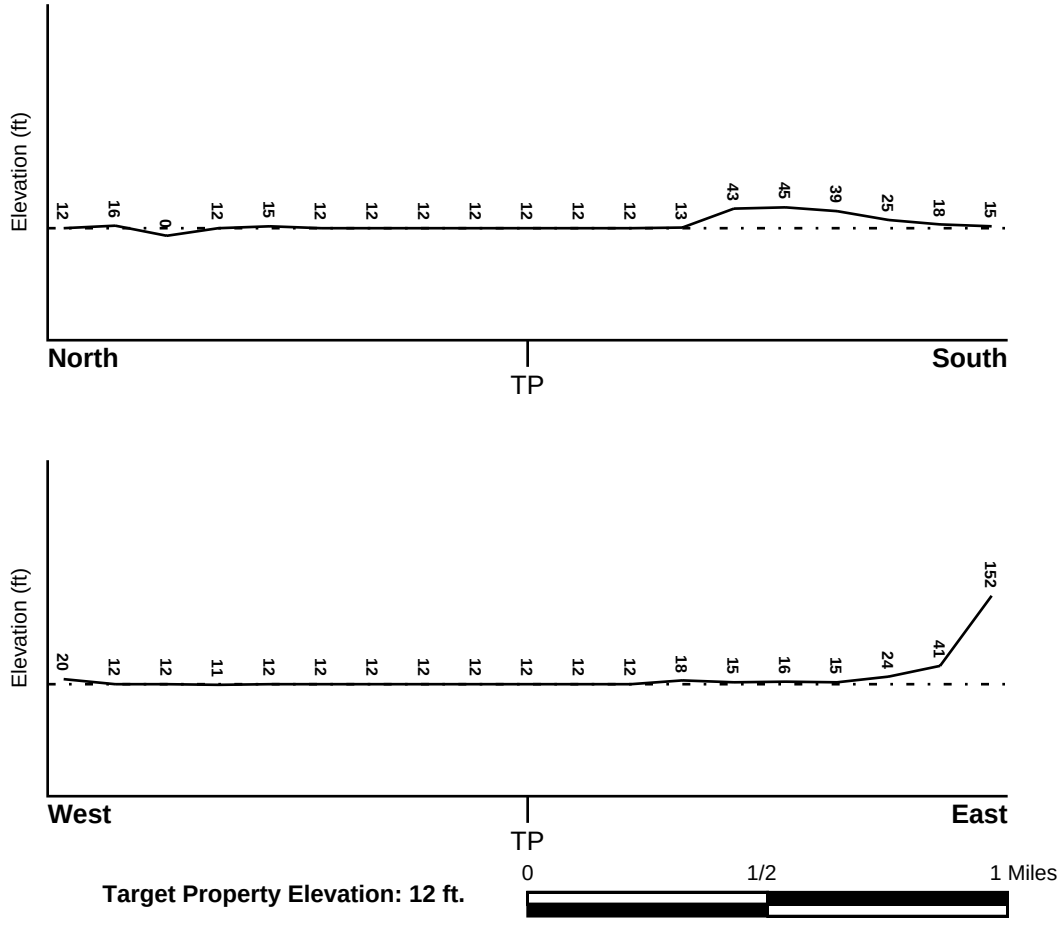
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 12 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Ms. O'Neal is an environmental professional with specialized experience in site assessment, subsurface investigation, and due diligence reporting. She is responsible for performing site reconnaissance, reviewing regulatory agency records and historical documents, interpreting evidence related to historical land use, monitoring soil management, collecting data (soil, groundwater, soil vapor sampling, etc.), and generating maps for soil boring/well logs, groundwater gradients, and hydrocarbon iso-concentrations. She also oversees drilling and groundwater monitoring well installations, writes reports for Phase I and II Environmental Site Assessments (ESAs), and ensures that groundwater monitoring reports meet regulatory agency standards.

Her project experience is summarized below.

Mission Village Shopping Center, Former Dry Cleaning Facility, San Diego, CA. Ms. O'Neal conducted soil and groundwater assessments to determine the attenuation of a plume of constituents of concern while meeting requirements of the Department of Environmental Health. She oversaw six well installations that included properly documenting well log data. She also assisted with the technical writing of the Subsurface Assessment Report, and created groundwater gradient and constituents of concern iso-concentration maps.

Villa de Vida Project, Special Needs Residential Community, Phase I and II ESA, San Diego, CA. Ms. O'Neal performed a Phase I ESA on the property and analyzed the status of potential Recognized Environmental Concerns (RECs), such as a release from on-site underground storage tanks (USTs) (the tanks were used when the site was a Public Works Road Station). The Phase I ESA recommended a subsurface site assessment because of the close proximity to the former USTs. During the Phase II investigation, soil samples detected elevated concentrations of petroleum hydrocarbons. Ms. O'Neal oversaw excavation of the contaminated soil and collected soil confirmation samples at the edges of the excavation.

Former Country Hills Dry Cleaners, In Situ Chemical Reduction Feasibility Study, Diamond Bar, CA. Ms. O'Neal oversaw drilling and direct push injection of the appropriate amendments to remediate constituents of concern associated with a former dry cleaner at the site. She created

boring logs, collected waste characterization samples, and helped manage site safety. In addition, she assisted in obtaining the regulatory permits required for the site from the City of Diamond Bar.

Community HousingWorks San Marcos, Affordable Housing Development, Phase I and II ESAs, San Marcos, CA. Ms. O'Neal performed a Phase I ESA on the property and analyzed the status of RECs, such as a release from a dry cleaning facility adjacent to the site. After completing the Phase I ESA, SCS recommended a subsurface assessment regarding a historically documented release of constituents of concern. During the Phase II investigation, Ms. O'Neal organized the utility mark-out, mapped boring locations, and oversaw the installation and retrieval of soil vapor samples that were collected. She wrote technical reports for both phases of the environmental investigation.

Clairemont Village Shopping Center, Phase I ESA, San Diego, CA. Ms. O'Neal completed a Phase I ESA investigation that included extensive historical research on several automotive repair facilities adjacent to the site, and historic releases from a former gas station and dry cleaning facility also on site. In addition, the client required asbestos, radon, lead-based paint, and mold inspections at the property, using their specific guidance. After completing the Phase I ESA, SCS recommended additional soil vapor sampling in the areas of the former dry cleaner and gas station.

Professional Experience

Ms. Morton has worked as an environmental consultant since 2001. As a staff and project geologist Ms. Morton conducted site assessments for numerous leaking underground storage tank projects, installing groundwater monitoring wells, collecting soil and groundwater samples, writing workplans and reports, assisting with remediation, and evaluating data. After several years primarily conducting Phase II site assessments for open environmental cases, Ms. Morton moved into the due diligence area of environmental consulting, initially conducting Phase I/Phase II assessments for gas stations, and later for a wide variety of properties throughout California, as well as in Las Vegas, Nevada and Tucson, Arizona. As a Project Manager, Ms. Morton has overseen numerous Phase I and Phase II site assessments and remediation projects, developing work plans, managing staff and field work, writing and reviewing Phase I and Phase II site assessment reports, developing remediation plans, and interfacing with clients, property owners, land developers, brokers, and regulatory agencies.

Phase I ESA, cold storage facility, Downtown Los Angeles, California. Ms. Morton conducted a Phase I ESA at a cold storage facility constructed in the 1880's in downtown Los Angeles slated for redevelopment. The facility was located adjacent to railroad tracks and in close proximity to a large remedial excavation for multiple leaking underground storage tanks. The cold storage facility included heavy equipment and stored used oil. Historical fire insurance maps revealed that a large transformer had previously been located at the site during the time period when PCBs were likely used. Ms. Morton also identified the former presence of machine shops and spray paint booths, and provided recommendations for soil and soil vapor sampling prior to redevelopment of the site.

Phase I, Phase II, and Remedial Excavation, auto salvage yard, Chula Vista, California. Ms. Morton conducted a Phase I ESA at an auto salvage yard slated for redevelopment as an office building complex. Ms. Morton identified historical use of the property as a dairy farm. Due to the potential presence of petroleum hydrocarbons associated with auto dismantling activities, Ms. Morton

recommended and conducted soil sampling throughout the property. During grading activities, a large, 20-foot deep illegal landfill was uncovered. Ms. Morton developed a plan for a remedial excavation and confirmation sampling in conjunction with the local oversight agency, leading to case closure and allowing for redevelopment of the property.

Phase I, Phase II, and Soil Vapor Extraction, vacant land/former commercial property, Long Beach, California. Ms. Morton oversaw Phase I, Phase II, health risk assessment, and remediation activities for a property in Long Beach slated for redevelopment as mixed-use commercial and affordable housing. A former dry cleaner and automotive repair facility were identified onsite. Adjoining properties included automotive repair facilities and an upgradient leaking underground storage tank site. Petroleum hydrocarbons and tetrachloroethylene were identified in soil and groundwater at the site. Ms. Morton oversaw the installation of groundwater monitoring wells, permanent soil vapor probes, soil vapor extraction wells, and a soil vapor extraction system. Ms. Morton developed a Removal Action Workplan and worked with the Department of Toxic Substances Control to achieve approval in a short time period to accommodate construction schedules.

Phase I site reconnaissance at a large apartment complex, Los Angeles, California. Ms. Morton was part of a team conducting a site reconnaissance for a Phase I ESA at a large apartment complex in the La Brea neighborhood of Los Angeles. The complex included high-rise apartment towers and garden apartment homes constructed in the 1940s above a shallow oil field. Ms. Morton implemented a radon survey during the site reconnaissance. Ms. Morton identified locations of oil collection sumps and methane monitoring equipment, and discovered that USTs used for fueling resident's vehicles were historically located on the subject property.

Phase I ESA, Historic Inn, Rancho Santa Fe, California. Ms. Morton conducted a Phase I ESA at a hotel and associated residential properties. Ms. Morton identified former agricultural land using historical aerial photographs at the location of the residences located on the hotel property and provided a recommendation for soil sampling prior to redevelopment of the properties.

Phase I and Phase II ESA, palm tree farm, Carlsbad, California. Ms. Morton conducted a Phase I ESA on a property that had been used as a palm tree farm and residence. Ms. Morton discovered regulatory records indicating a UST had also been located at the property. Based on the historical site usage, Ms. Morton recommended soil sampling to determine if the site had been impacted by organochlorine pesticides as well as by petroleum hydrocarbons from the UST. Ms. Morton collected shallow soil samples using a hand auger for pesticide analysis and oversaw direct push drilling in the location of the former UST identified by the property owner to collect soil samples for petroleum hydrocarbon and VOC analysis.

Leaking Underground Storage Tank Investigations, throughout Southern California. Ms. Morton worked on a portfolio of leaking UST projects at gas stations for a major oil company. Ms. Morton conducted groundwater monitoring well installations, soil, and groundwater sampling, and workplan, site assessment, and groundwater monitoring report preparation.

Apartment Complex, San Diego, California. Ms. Morton conducted a Phase I ESA at a 448 unit apartment complex per Freddie Mac guidelines. Although the subject property did not appear on any regulatory databases, Ms. Morton determined that the complex was constructed within the footprint of a former missile manufacturing facility impacted by chlorinated solvents. Ms. Morton completed an extensive file review at the San Diego County Department of Environmental Health, as well as a limited health risk assessment. Ms. Morton determined that the continued presence of volatile organic compounds in soil vapor beneath the subject property at concentrations representing a potential human health risk could not be ruled out, and was therefore considered a recognized environmental condition.

Los Angeles Unified School District, Los Angeles, California. Ms. Morton conducted a Phase I ESA in conformance with California Department of Education requirements at an LAUSD elementary school. Ms. Morton prepared Phase II workplans in conformance with DTSC and LAUSD requirements for several school projects slated for redevelopment, and oversaw soil sampling at one LAUSD property.

Oxnard School District, Oxnard, California. Ms. Morton oversaw Phase I and Phase II ESAs for a portfolio of projects in the Oxnard School District. Soil sampling was conducted in accordance with DTSC requirements. Ms. Morton further oversaw the disposal of contaminated soil encountered during the Phase II assessment at several schools where playgrounds were to be reconstructed.

His project experience is summarized below.

Brixton Capital, Gasoline Service Station Redevelopment with Retail Buildings, Chula Vista, CA. As Project Manager, oversaw assessment, remedial planning, and remediation consisting of oversight, segregation, and on-Site burial of residual petroleum hydrocarbon-impacted soils from a former gasoline service station release property redeveloped with new retail buildings.

RD Brown Company, Leaking Underground Storage Tank (LUST) Case Assessment and Remediation, City of Imperial, CA. As Project Manager, oversaw several on- and off-site soil, soil vapor, and groundwater assessments, and is currently overseeing ongoing remediation and monitoring of a proposed senior living facility at a former gasoline service station.

San Diego County Water Authority (SDCWA), Environmental Consulting Services, San Diego, CA. As Project Manager, completed several ESAs and subsurface assessments to assist the SDCWA in obtaining easements required to complete the Carlsbad Desalination Project.

City of Encinitas, Site Investigation and Planning, Encinitas Community Park, Encinitas, CA. As Project Geologist, provided oversight for the mitigation and monitoring activities of pesticides in soil from the Hall Property, which consists of 43 acres of coastal bluff that was formerly used as a nursery and was redeveloped into a community park. Under the oversight of the County of San Diego Department of Environmental Health (DEH), work consisted of Phase II ESAs, remedial planning and implementation of on-site reuse/burial of 45,000 cubic yards of pesticide-impacted soil in a Soil Management Zone, and creation of a land-use covenant. SCS received an award for this project with the Industrial Environmental Association.

Los Angeles Unified School District (LAUSD), Assessment and Remediation, Various Locations in Los Angeles County, CA. Managed and performed the environmental characterization and cleanup of various proposed school redevelopment projects overseen by the California Department of Toxic Substances Control (DTSC) that required Phase I ESAs, preliminary environmental assessments or subsurface investigations, and preparation and implementation of removal action work plans to obtain "no further action' status prior to redevelopment.

City Heights Revitalization Corporation, Brownfields Assessment and Remediation, City Heights, CA. Managed a subsurface investigation for an entire Brownfields city block planned for redevelopment. The investigation included extensive drilling, trenching, and hand auguring to estimate the volume of lead- and hydrocarbon-impacted soil from residual contamination from a former service station and from lead-based paint. Work also included negotiation of cleanup levels with the local regulatory agency.

Casmalia Steering Committee, Remedial Investigation, Casmalia, CA. Managed and performed soil vapor sampling at the Casmalia Hazardous Waste Management Facility, a Class I hazardous waste site, for a remedial investigation and feasibility study of soil gas impacts submitted to the Environmental Protection Agency (EPA). Soil gas impacts to ecological receptors were assessed considering specific regulatory guidance, including the joint DTSC and Los Angeles Regional Water Quality Control Board (LARWQCB) Advisory on Active Soil Gas Investigations.

The Boeing Company, Underground Storage Tank (UST) Assessment, Long Beach, CA. Performed subsurface vapor intrusion to indoor air analysis at a former aeronautics manufacturing facility. Soil, soil vapor, and sub-slab soil vapor assessments were conducted to determine appropriate corrective actions associated with former solvent USTs. Work was performed under the corrective action consent agreement with the DTSC.

Trihydro Corporation, Soil Vapor Sampling, Hooven, OH. Performed soil vapor sampling from indoor air probes and outdoor multi-level probes at residences in Hooven, OH. This project focused on helping evaluate the potential for subsurface vapor intrusion to indoor air from volatilization of petroleum hydrocarbons in groundwater or light, non-aqueous phase liquid petroleum product, originating from an adjacent former fuel and asphalt petroleum refinery. The vapor intrusion pathway was evaluated based on a request by the EPA, Region V, and was performed in accordance with the EPA-issued document, *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soil*, 2002.
