Re: Midway Rising. Project No. 1106734

PARK DEFICIENCIES

There are many serious deficiencies with this project. These include the traffic impacts, excessive heights, and the many geological problems: the subsurface water, soil quality, earthquake safety, and impacts of sea-level rise.

This comment letter will address only the park deficiencies.

4,254 housing units would add about 10,000 residents. Using the common national standard of 3.0 to 5.0 acres of parks per 1000 people, that means that the new project should have a minimum of 30 acres of parks and sports fields. Yet the current plan includes only 8.1 acres of parks, about one-quarter of the needed park space.

Alternatively, measured by Recreation Value Points, the plan is still highly deficient.

The proposed design includes no fields for soccer, baseball, no areas for skateboarding, disc golf, tennis or pickleball. Do the developers anticipate no families as part of the 10,000 new residents? No need for adult sports?

The Midway/ Sports Arena project area will obviously attract visitors from the San Diego region and tourists from other regions. That indicates that more park space will be needed, in addition to that required by the new residents.

A view of the proposal layout adds visual support to this reality: The proposed design fills too much of the site with buildings, while leaving the project seriously deficient in park space and sport fields.

To: City of San Diego Planning Commission

Re: Item 2 – Midway Rising – Project No. 1106734 of Planning Commission Agenda of September 25, 2025

Dear Planning Commissioners,

I have some concerns regarding Item 2: Midway Rising (Project No. 1106734). Although this project offers potential for housing and redevelopment, the current Environmental Impact Report (EIR) clearly states that several impacts will remain significant and unavoidable: traffic congestion, failures at freeway ramps, increased noise levels, conflicts in land use, and possible damage to cultural resources. These negative effects cannot be completely mitigated.

Additionally, the developer has removed the hotel and cut back on middle-income housing. The City is not receiving what was initially promised, which weakens the argument for adopting a Statement of Overriding Considerations. If the public benefits are diminished, how can they possibly outweigh the long-term consequences?

Even Caltrans has pointed out that the traffic analysis omitted crucial freeway interchanges and underestimated the extent of traffic backups at the ramps. They emphasized that the City cannot resolve these issues independently, as they involve state highways. The EIR itself indicates that these freeway impacts will remain significant and unavoidable—meaning drivers should expect severe congestion and safety risks that no mitigation can fix.

The developer, Midway Rising, is also actively seeking public support, using social media to guide people to their website where letters of support can be sent directly to the City Council. However, most of these individuals will likely be unaware of the serious issues highlighted in the EIR and mainly want a new arena. This makes it even more crucial for the Planning Commission to ensure these problems are addressed now—before the project is presented to the Council.

I strongly urge you not to recommend approval unless these issues are resolved with enforceable conditions, or unless the project is modified to decrease its scale and restore the promised benefits.

Respectfully submitted,

Sue Taylor

**RE: 09/25/2025 Planning Commission Hearing Agenda Item # 2 -
Comment on and Objections to Midway Rising Project Approvals
and its Subsequent Environmental Impact Report [Project No.
1106734; Case No. PRJ-1106734/SCH No. 2023120451]**

Dear Chair and Members of the Planning Commission and City Officials:

On behalf of the Western States Regional Council of Carpenters (“**Western Carpenters**” or “**WSRCC**”), my Office is submitting these comments regarding the Subsequent Environmental Impact Report (“**Subsequent EIR**” or “**SEIR**”) for the Midway Rising Project (“**Project**”) in the City of San Diego (“**City**”), as well as on the numerous disclosed and undisclosed entitlements, including but not limited to: (1) Amendments to the General Plan and Community Plan; (2) Vacation of Easements; (3) Specific Plan; (4) Rezone; (5) Land Division (Subdivision, etc.); and Site Development Permit.

Per the Final SEIR reporting on CEQAnet, the Project involves the adoption of a Midway Rising Specific Plan, which includes all of the following:

- 1) GENERAL PLAN and COMMUNITY PLAN MENDMENT to the Midway-Pacific Community Plan to redesignate the site from Community Commercial-Residential Permitted (0-44 dwelling units/acre (du/ac)) to Mixed Community Village (0-72 du/ac),
- 2) Adoption of a SPECIFIC PLAN,
- 3) REZONE from Cc-3-6 (Community-Commercial) to RMX-2 (Mixed-Use Residential),
- 4) an ORDINANCE propose the Midway Rising Entertainment Center District overlay,
- 5) a VESTING TENTATIVE MAP,
- 6) various EASEMENT VACATIONS, and
- 7) a SITE DEVELOPMENT PERMIT

(Exhibit D [FSEIR Description on CEQANet.])

The Midway Rising Specific Plan would reportedly “establish goals, policies, development standards, and architectural guidelines for a transit-oriented development with a range of land uses.” (*Ibid.*)

Also, reportedly,

... the **buildout** of the **Midway Rising Specific Plan** would allow for approximately **4,254 housing units**, including up to **2,000 affordable units, public parks and open space**, a **multi-purpose Entertainment Center**, and up to **130,000 square feet of commercial uses**. The Project would also include **infrastructure improvements on- and off-site**, including **extensions and/or upgrades of existing water, sewer, storm drain, drainage, roadways, bike paths, transit, mobility and pedestrian facilities**. The Specific Plan would encompass the **City-owned Sports Arena site**, which includes other commercial buildings, totaling **49.23-acres** located at **3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard**. The site is **zoned CC-3-6** and **designated** for **Community Commercial-Residential Permitted** (0-44 du/ac) and the **Midway-Pacific Highway Community Plan area**. Additionally, the site is located in the **following overlays: Airport Land Use Compatibility Overlay Zone** (San Diego International Airport (SDIA) and NAS North Island); **Airport Influence Areas Overlay Zone** (SDIA- Review Areas 1 and 2; NAS North Island - Review Area 2); **Airport FAA Part 77 Noticing Areas Overlay Zone** (SDIA notification threshold at 70 feet through 100 feet AMSL and NAS North Island notification threshold at 181 feet

through 206 feet AMSL); **Airport Noise Contours** (CNEL) Overlay Zone (SDIA 60-65 CNEL - partially within); **Coastal Height Limitation Overlay Zone**; Community of Concern: Low; Community Plan Implementation Overlay Zone: Type B, Complete Communities Mobility Zone 2; Complete Communities Housing Solutions FAR Tier 2.5 **Coastal (2.5 FAR)**; Parking Standards Transit Priority Areas Overlay Zone; Transit Priority Area Overlay Zone; Sustainability Development Area; and **partially** within the **Transit Area Overlay Zone**. The site is included on a **list** compiled pursuant to California Government Code, Section 65962.5, for **hazardous waste sites**. (Assessor Parcel Number: 441-590-04.)

(**Exhibit D**, *emph. added*.)

WSRCC is a labor union representing almost 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Western Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Western Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Western Carpenters **incorporates** by reference all comments raising issues on the Project and its environmental clearance, submitted prior to the approval of the Project. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Western Carpenters **requests** that the City provide **advance notice** for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and

California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

To reduce the development (demolition, construction) impacts and risks (hazards) on the surrounding environment, the City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

(**Exhibit A** [March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling]; **Exhibits B-C** [Experts' Background].)

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce

can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled ("**VMT**"). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and

² South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

³ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cprroundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁴ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.

Western Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. Western Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Western Carpenters' experience with safe construction site work practices, Western Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.

- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health

Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁵

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The City should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Western Carpenters has also developed a rigorous Infection Control Risk Assessment (“ICRA”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁶

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE CITY’S SUBSEQUENT EIR IS BOTH LEGALLY INADEQUATE AND ALSO FACTUALLY UNSUPPORTED AND SHOULD NOT BE CERTIFIED

CEQA is a California statute designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations (“CEQA Guidelines”) § 15002(a)(1). At its core, “[i]ts purpose is to inform the public and its responsible officials of the environmental consequences of

⁵ See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

⁶ For details concerning Western Carpenters’ ICRA training program, *see* <https://www.swmsctf.org/courses/icra-best-practices-in-health-care-construction/>

their decisions before they are made.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564.)

To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. (*Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80.) The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

CEQA requires a CEQA document to be recirculated when the addition of new information *deprives* the public of a *meaningful* opportunity to comment on *substantial adverse project impacts* or *feasible mitigation measures* or *alternatives* that are not adopted. (*Laurel Heights Improvement Ass’n v Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1120.)

Furthermore, “CEQA compels an *interactive process* of assessment of environmental impacts and *responsive project modification* which must be *genuine*. It must be *open* to the public, premised upon a *full* and *meaningful disclosure* of the scope, purposes, and effect of a consistently described project, with *flexibility* to *respond* to *unforeseen insights* that emerge from the process.” (Id., at p. 366, 212 Cal.Rptr. 127, internal quotation marks omitted.).” (*Burbank-Glendale-Pasadena Airport Authority v. Hensler* (1991) 233 Cal.App.3d 577, 592, *emph. added* (“*Hensler*”).)

For reasons stated below, the SEIR here fails to pass muster, as detailed below.

A. The EIR Fails to Provide a Stable, Accurate, and Finite Project Description.

“The requirement of an accurate, stable, and finite project description as the sine qua non of an informative and legally sufficient EIR has been reiterated in a number of cases since County of Inyo.” (*Stopthemillenniumhollywood.com v. City of Los Angeles* (2019) 39 Cal.App.5th 1, 17.) Whether the EIR’s project description is adequate is reviewed *de novo*. (*San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, 729–730 [“the selection and use of a ‘truncated project concept’ violated CEQA”].)

The Project Description in the Draft EIR lists several discretionary approvals:

- 1) **General Plan Amendment:** The Project would require a General Plan Amendment to redesignate the site from **Community Commercial – Residential Permitted to Community Village** in the Community Plan. The

proposed Community Village land use designation is consistent with the existing Multiple Use land use designation identified in the 2008 General Plan.

- 2) **Community Plan Amendment:** The Project would require a Community Plan Amendment addressing the following modifications to the 2018 Community Plan as shown in Table 3-4, Community Plan Amendment, which includes amendments to the following sections:

Introduction: no change.

1. Table of Contents: no change.

2. Land Use, Villages and Districts: Amendments to **text and figures** to reflect the Specific Plan, **redesignate** the **site** from Community Commercial – Residential Permitted (**0-44 du/ac**) to Community Village (**0-72 du/ac**), and **revise policies** for **consistency** with the **Specific Plan**. Additional text edits to reflect the updated San Diego Association of Governments Series 14 Regional Growth Forecast has been added that revises the ratio for persons that reside in each household from 2.46 to 2.56 and the occupancy rate from 95 percent to 89.1 percent. Additional policies are also proposed to provide guidance for the future redevelopment of other properties within the Sports Arena Community Village District, including additional City-owned land.

Other changes include **updates** to **Sports Arena Community Village CPIOZ – Type B. Amendment** to **tables** to reflect **updated 2023 data** and to **reflect** the **increase** in **household population** from **28,260** to **30,800** and the **increase** in residential dwelling **units** from **12,090** to **13,500**.

3. Mobility: Amendments to **text, figures, and policies** to reflect the **facilities** proposed by the **Specific Plan**. Changes include **updates** to planned **bicycle facilities** and the **reclassification** of **street segments** along Sports Arena Boulevard, Rosecrans Street, and Kurtz Street. Other **network changes** include the **removal** of the **Greenwood Street extension** through the Project site.

4. Urban Design: Amendments to figures to reflect the Specific Plan and proposed street network.

5. Economic Prosperity: No change.

6. Public Facilities, Services, and Safety: Amendments to policies and text to support future infrastructure improvements, which can include fire facilities, schools, and stormwater/drainage improvements.

7. **Recreation:** Amendments to text and figures to update the community-wide parks and recreation facilities inventory to the recreational value-based standard of the adopted Parks Master Plan (2021). Other updates to reflect the proposed park and recreation facilities from the Specific Plan.

8. **Conservation:** No Change.

9. **Noise:** No Change.

10. **Historic:** Amendments to text and figures to reflect the historical significance of the Sports Arena.

11. **Implementation:** No change.

- 3) **Specific Plan:** Adoption of the Midway Rising Specific Plan to allow for the development of the Project site.
- 4) **San Diego Municipal Code Amendment:** The Project requires a Municipal Code Amendment to Chapter 5, Article 9, Division 6 for the Midway Rising Entertainment Center District.
- 5) **Rezone:** A rezone is required to change the Project site's base zone from CC-3-6 (Community Commercial) to a Mixed-Use Residential base zone (RMX-2), which allows residential and commercial uses that include **retail sales, commercial services, personal services, entertainment, assembly, and visitor accommodation** uses that serve **residents** and **workers** in the **community** and **adjacent communities** (Figure 3-2, Land Use Map). **No visitor accommodations are currently proposed** as part of the Project;
- 6) **Vesting Tentative Map:** The Project includes a Vesting Tentative Map to allow for grading and development of the Midway Rising Specific Plan. The Vesting Tentative Map provides details relative to grading, street design, and utility layout necessary to implement the land use plan of the Project. Further, the Vesting Tentative Map provides for the implementation of residential and commercial land uses.
- 7) **Site Development Permit:** A historic resource (San Diego International Sports Arena) is present on the Project site. In addition, the Project proposes development of a large retail establishment in Community Plan Implementation Overlay Zone (CPIOZ) -B. Therefore, a Site Development Permit would be required in accordance with Section 126.0502(d)(2) and (d)(7) of the SDMC.

- 8) **Neighborhood Development Permit**: The Project proposes development in the CPIOZ-B. However, because the Project proposes affordable housing, a Neighborhood Development Permit is allowed instead of a Site Development Permit in accordance with Section 126.0402(q) of the SDMC.
- 9) **Easement Vacations**: Certain public **easements** and **rights-of-way** would be **vacated** as part of the Project. The vacated easements and **rights-of-way have been either previously abandoned** by the City or **are proposed** to be **relocated** in conjunction with the Vesting Tentative Map.
- 10) **Development Agreement**: A Development Agreement is being processed as part of the Project. It defines the rights and duties of the City and the Project applicant regarding buildout of the Project and identifies extraordinary benefits resulting from the Project.
- 11) **Park Agreements**: The Project requires a Park Development Agreement, Park Maintenance Agreement and Park Operations Agreement.

(Draft SEIR, p. 3-19—22.)

The above-noted discretionary approvals, however, fail to disclose the full scope of the Project, including the number of residential units, development details, such as the height of buildings, floor area ratio (“FAR”), or the amount of commercial uses contemplated in the Project.

In turn, the project description in the SEIR provides the following details:

PROJECT DESCRIPTION: GENERAL PLAN and COMMUNITY PLAN AMENDMENT to the Midway-Pacific Community Plan to redesignate the site from Community Commercial-Residential Permitted (0-44 dwelling units/acre (du/ac)) to Community Village (0-72 du/ac), Adoption of a SPECIFIC PLAN, REZONE from CC-3-6 (Community-Commercial) to RMX-2 (Mixed-Use Residential), an ORDINANCE propose the Midway Rising Entertainment Center District overlay, a VESTING TENTATIVE MAP, various EASEMENT VACATIONS, and a SITE DEVELOPMENT PERMIT to adopt the Midway Rising Specific Plan that would establish goals, policies, development standards, and architectural guidelines for a transit-oriented development with a range of land uses. Buildout of the Midway Rising Specific Plan would allow for **approximately 4,254 housing units**, including up to **2,000 affordable units**, **public parks** and **open space**, a **multi-purpose Entertainment Center**, and up to **130,000 square feet of commercial uses**. The Project would also include **infrastructure improvements** on-

and **off-site**, including **extensions** and/or **upgrades** of **existing** water, sewer, storm drain, drainage, **roadways**, **bike paths**, **transit**, **mobility** and **pedestrian facilities**. The **Specific Plan** would encompass the **City owned Sports Arena site**, which includes **other commercial buildings**, totaling 49.23-acres located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard. The site is zoned **CC-3-6** and designated for **Community Commercial-Residential Permitted (0-44 du/ac)** and the **Midway-Pacific Highway Community Plan area**. Additionally, the site is located in the following overlays: Airport Land Use Compatibility Overlay Zone (San Diego International Airport (SDIA) and NAS North Island); Airport Influence Areas Overlay Zone (SDIA – Review Areas 1 and 2; NAS North Island – Review Area 2); Airport FAA Part 77 Noticing Areas Overlay Zone (SDIA notification threshold at 70 feet through 100 feet AMSL and NAS North Island notification threshold at 181 feet through 206 feet AMSL); Airport Noise Contours (CNEL) Overlay Zone (SDIA 60-65 CNEL – partially within); Community of Concern: Low; Community Plan Implementation Overlay Zone: Type B, Complete Communities Mobility Zone 2; Complete Communities Housing Solutions FAR Tier 2.5 Coastal (2.5 FAR); Parking Standards Transit Priority Areas Overlay Zone; Transit Priority Area Overlay Zone; Sustainability Development Area; and partially within the Transit Area Overlay Zone. **The site is included on a list compiled pursuant to California Government Code, Section 65962.5, for hazardous waste sites. (Assessor Parcel Number: 441-590-04.)**

(Draft SEIR, p. 1, *emph. added.*)

The Draft SEIR further provides:

The Specific Plan's purpose is to provide guidance and direction on land use, site planning, building, public space, and landscape design to ensure that future development of the Project site results in a pedestrian- and transit-oriented mixed-use entertainment destination. The Specific Plan allows for the redevelopment of the **49.23-acre** site with a **mix** of uses, including **entertainment**, **retail**, **residential**, **recreational**, and **public park** uses.

The Specific Plan would provide up to **4,254 housing units**, including up to **2,000 affordable units** restricted to households with incomes less than 80 percent area median income, to provide a range of housing opportunities in a variety of sizes and number of bedrooms. The Specific Plan allows for the development of a multi-purpose entertainment center that may host a **range of activities**. The entertainment center would reach

a **maximum height of 165 feet** and replace the existing San Diego International Sports Arena. The entertainment center would host a variety of entertainment events including but not limited to concerts, family shows, sporting events, motorsports, comedy, and musical and artistic entertainment productions. The Project would also include a maximum of **130,000 square feet of commercial retail⁷ uses**, excluding the entertainment center and outdoor retail markets, such as farmers markets. **Commercial uses** may include **restaurants, shops, and supporting neighborhood retail**.

(Draft SEIR, p. S-2--3, *emph. added.*)

First, while here, the Draft SEIR’s project description provides *some* details on the number of proposed residential units, it nonetheless omits details about the number, height and FAR of all the buildings that would accommodate the residential units. Specifically, the Draft SEIR’s project description fails to provide critical and relevant details provided only in the *Final* SEIR and only in response to comments (“**RTC**”) therein, such as:

The Project includes a **250-foot high-rise** residential building, **105-foot mid-rise mixed-use** buildings, and **165-foot entertainment center**. Project buildings would be constructed on relatively low ground (10 to 15 feet above mean sea level). These **heights** would be **allowed** via the **approval** of the **Midway Rising Specific Plan** (Specific Plan). Development on site will be governed by the development regulations in the SDMC and the supplemental development regulations in the Specific Plan. Where development regulations in the SDMC conflict with the Specific Plan, the **Specific Plan shall prevail**.

⁷ Notably, the Final SEIR *replaces* the word “retail” with commercial square footage but presents it as merely a *clarification* and fails to recirculate the Draft EIR (Final SEIR, p. Preface-2.) This is a distinct flaw making the EIR legally inadequate and requiring recirculation, because there is a significant difference between a definition of 130,000 sf. of “commercial retail,” vs. simply retail, including but not limited to water, waste, gas, electricity, intensity of uses and hours of operation (more for restaurants rather than retail), the associated traffic and traffic-related impacts, public services (fire/police), and others. As such, contrary to the City’s responses in the Final SEIR, this very change in the EIR required recirculation, as it presents new information (of non-retail uses) which may have significant impacts that need to be studied and mitigated.

(FSEIR, RTC-5, emph. added.)

The above-noted specific details appear in the Draft EIR only in the scenic vista analysis, starting at p. 5.8-20, which is pdf p. 468 out of 810 pages, and only in a skewed format:

Key Viewpoint 1: View South from Sea World Drive Overpass

KVP 1 represents a typical view from motorists traveling westbound on Sea World Drive and southbound on I-5. Visual changes would generally occur in the background view. Foreground and midground views would not change. The Project would be visible along the horizon to the southwest. The distant views of Point Loma would be partially obstructed by the proposed development. A portion of the **165-foot entertainment center**, the **105-foot mid-rise mixed-use buildings**, and the **250-foot high-rise building** in the center background view would be visible from KVP 1. Viewers would notice a *minor* change in the view; however, the **level of impact** on view **quality** would depend on **distance** from their vantage point and the density and flow (speed) of traffic. There would be an **increase** in sense of **direction** and **destination** given the **concentrated presence** of **taller buildings** in the direction travelers would be headed. The overall viewer response would be **low** because the new buildings would be in the background, the proposed development heights would primarily **coincide** with the **existing horizon** from this view, and **views** would be **fleeting while driving**.

(Draft SEIR, p. 5.8-20/pdf p. 468, emph. added.)

And notably, both the Draft and Final SEIRs improperly claim that visual or scenic impacts are not a CEQA impacts and thereby foreclose any further review. (Draft SEIR, p. 5.8-25; Final SEIR, p. RTC-4.)

But, contrary to the City’s claims and responses, aesthetic impacts should not be disregarded because, as the City itself concedes (Draft EIR, p. 2-8), the Project is not fully included in the Transit Priority Area (“**TPA**”) identified by SANDAG, as required by law. Notably, the City relies upon its *own* TPA maps and then equivocates and replaces TPAs with Sustainable Development Areas to purportedly better align those with other plans. (Draft EIR, p. 2-8.)

And yet, under Pub. Res. Code section 21099(d), a TPA is precisely defined based as an existing or planned major transit stop:

(7) “Transit priority area” means an area within **one-half mile** of a **major transit stop** that is **existing** or **planned**, **if** the planned stop is **scheduled** to be completed **within** the planning horizon included in a **Transportation Improvement Program** or **applicable regional transportation plan**.

(Pub. Res. Code § 21099(a)(7), *emph. added.*)

In addition, CEQA is unequivocal that only the aesthetic (or parking) impacts *within* TPA areas and further those that are *outside* the coastal zone, historical or cultural resources are exempted from CEQA review:

(d)(1) **Aesthetic** and **parking impacts** of a residential, mixed-use residential, or employment center project on an infill site **within** a **transit priority area** shall not be considered significant impacts on the environment.

(2)(A) This subdivision **does not affect, change**, or modify the authority of a lead agency to consider **aesthetic impacts** pursuant to **local design review ordinances** or **other discretionary powers** provided by **other laws** or **policies**.

(B) For the purposes of this subdivision, **aesthetic impacts** do **not** include impacts on **historical** or **cultural** resources.

(Pub. Res. Code § 21099(a)(7), *emph. added.*)

Here, in addition to the fact that the City fails to show any major transit stop near the Project as mapped by SANDAG and relies on its own mapped TPA (which is irrelevant for CEQA purposes), the Project is also located within the Coastal Zone. Therefore, under Pub. Res. Code section 21099(d)(2), which provides that the aesthetic and scenic impacts of the Project’s heights should be analyzed under other laws, the Coastal Act, § 30251 requires such analysis (and compliance). Simply put, under the express language of CEQA, it does not override the Coastal Act.

Moreover, the Project contains a designated historical resource on its own Site, which further disqualifies the Project from the exemption of analyzing aesthetic (and parking) impacts.

Further yet and critically, the details about the *number* and *height* of the buildings to be located at the 49-acre site are critical not only for *aesthetic* impacts, but also for *geological* (soil stability) impacts, for conflicts with the operation and flights of the nearby airport, for conflicts with other applicable development standards and laws, such as the Coastal Act. Notably, based on its own Phase II Environmental Assessments, the Project Site

has significant flooding issues as it is atop the tidal flats of the San Diego River: “[H]istorical photos depict earthwork and what was likely fill operations to level and perhaps raise the grade of the [Project] area, which would have been *part* of the *historical* San Diego River *floodplain* or *tidal flats*.” (Draft EIR, Appendix H3, p. [Phase II, ESA 2].) The City’s own analysis confirms that the Project is in a high geological risk area for liquefaction: “High Potential-shallow groundwater major drainages, hydraulic fills.” (**Exhibit E** [Report on the Project Site, pulled from Accela Citizen Access].)

The Draft and Final SEIR’s failure to properly disclose the number and height of the proposed heights of the buildings on site is a fatal flaw that makes the SEIR legally inadequate as it deprives the public and the decisionmakers of critical information about the Project’s potential impacts. The public or decisionmakers should not ferret out critical information in the EIR. (*Communities for a Better Env’t v. City of Richmond* (2010) 184 Cal. App. 4th 70, 85 [“decision makers and general public should not be forced to ... ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis”].)

Second, the Draft and Final SEIRs fail to duly disclose the *types* of commercial uses and, as related, their *intensity* proposed on the Project site, beyond stating that the Project would include a “maximum of 130,000 square feet of commercial retail uses, excluding the entertainment center and outdoor retail markets, such as farmers markets. Commercial uses may include restaurants, shops, and supporting neighborhood retail.” (Draft EIR, p. S-3.) To compound the omission, the Final SEIR makes several revisions removing the word “retail,” and leaving only the square footage for commercial uses. And yet, depending on the *specific types* of the 130,000 sf of commercial uses, the Project’s impacts may be more severe. For example, as noted earlier, the restaurant or eating places involve more impacts than retail uses, including due to their consumption/production of gas, electricity, water, waste/sewage, heat, greenhouse gas emissions, air pollution/odors, fire/police services. In addition, restaurant/café uses typically extend to longer hours and operate on all the days of the week, as compared with retail or other uses.

As relevant, while this is not disclosed in the Draft or Final SEIRs, the Project had originally included plans for a 200-room *hotel*, as well as 250 middle-income housing units. Nonetheless those were removed from the Project – for now. Based on the

information found in the media,⁸ the removal of the 200-room hotel was associated with the discovery of a 96-inch sewer line on the Project Site, which prevents the developer from building a hotel at the site:

And yet, with the City’s failure to specify the types of commercial uses on the Project Site, it is reasonably foreseeable that some of those uses will accommodate a hotel. Notably, hotel uses are also more intensive uses as compared with retail and may have more impacts that need disclosure and analysis.

Akin to the facts in the *Stopthemillenniumproject.org* case, *supra*, the SEIR’s failure to provide the specific commercial uses makes the Project description inaccurate, unstable, and non-finite and the SEIR legally inadequate, in violation of CEQA.

Third, the Draft and Final SEIRs fail to accurately disclose, including among the necessary discretionary approvals, that the Project proposes *removal* of traffic lanes and

⁸ See, <https://www.youtube.com/watch?v=P7b1yKi5bFk>

the *specific* changes to the public right-of-ways by describing all of those as vacation of easements and right-of-ways or street modifications. Specifically, “the City plans to reduce the six-lane Sports Arena Boulevard, which will abut the residential and commercial buildings to four lanes in order to create a dedicated bus and right-turn only lane, as well as expand the sidewalk into a protected, multi-use promenade. (**Exhibit G** [4/4/2025 Article re “Draft report offers new details on city’s plans for Midway Rising project”].) Similar road changes to create designated lanes for buses, bikes and right turns is also planned for Rosecrans and Kurtz streets. (*Ibid.*)

But the Draft SEIR in the traffic impact section obscures the fact of lane-removal and *physical* street modifications by describing them as merely a “roadway classification”:

The Project would change the **roadway classification** for Sports Arena Boulevard from **six-lane prime** to **four-lane prime** with **bus-only lanes**. The Project’s proposed improvements would provide a 33-foot promenade along the Project frontage with a Class I multi-use path (Bay-to-Bay Urban Path) and a Class IV one-way cycle track in the westbound direction, landscape areas, and a bicycle buffer. The Project would also provide an **exclusive bus/right-turn only lane** in both directions (Figure 3-14, Sports Arena Boulevard). The segment would continue to have a raised center median.

(Draft SEIR, p. 3-7/ pdf p. 101, *emph. added.*)

This omission of road-lane *removal* and making certain lane-turns only exclusive for buses, however, is critical as it may translate into more traffic congestion, traffic delays, and the associated impacts of increased air pollution, GHG, traffic noise, and others. Notably, CEQA’s shift to vehicle-miles traveled for purposes of assessing a project’s traffic impacts does not relieve the City from the duty to consider the impacts of traffic congestion and delays:

(3) This subdivision does not relieve a public agency of the requirement to analyze a project's potentially significant transportation impacts related to air quality, noise, safety, or any other impact associated with transportation. The methodology established by these guidelines shall not create a presumption that a project will not result in significant impacts related to air quality, noise, safety, or any other impact associated with transportation. Notwithstanding the foregoing, the adequacy of parking for a project shall not support a finding of significance pursuant to this section.

(Pub. Res. Code § 21099(b)(3), *emph. added.*)

In addition, the City’s failure to disclose the approval of the removal of street-lanes is fatal to the SEIR since it leaves out the fact that the City is yet to comply with the procedural and substantive requirements of the Vehicle Code.

Specifically, the State of California preempted the field of traffic-control under Vehicle Code (VC) § 21(a): “a local authority shall not enact or enforce any ordinance on the matters covered by this code unless expressly authorized by this code.” The State delegated only limited, “narrowly-defined” power to cities to regulate the streets under VC §21101. *Sunset*, 87 Cal.App.4th at 1180. VC §21101 is “strictly construed.” (*Rumford v. City of Berkeley* (1982) 31 Cal.3d 546, 550 [“*Rumford*”].)

The court independently considers an agency’s VC §21101 violations. (*Save the Sunset Strip Coalition v. City of West Hollywood* (2001) 87 Cal.App.4th 1172, 1179 (“*Sunset*”).)

Under VC §21101(a), the City may permanently close a highway/street to vehicular traffic when it is: (1) “No longer needed for vehicular traffic”; or (2) “The closure is in the interests of public safety....” For the latter, the legislative body must meet “all” of the specific procedural/substantive requirements, including, *inter alia*: “.... (B) “The street has an unsafe volume of traffic and a significant incidence of crime. (C) The affected local authority conducts a public hearing on the proposed street closure. (D) Notice of the hearing is provided to residents and owners of property adjacent to the street proposed for closure. (E) The local authority makes a finding that closure of the street likely would result in a reduced rate of crime.” (VC §21101(a)(1)(A)-(E).)

To the extent City could rely on VC §21101(a) for its Project, it failed to comply with its requirements. The City made no findings that the lanes to be removed were not necessary. Neither could it. Lane-removals were proposed on busy arterial streets, which will become even busier and more congested upon arrival and buildout of the proposed massive Project here.

Neither did the City make findings that lane-removals are to reduce and will reduce crime rates. The City failed to provide due notice.

In addition, the City’s vacation of right-of-ways here violates the Highway and Streets Code requirements. The City’s attempt to approve vacating of streets all in one action/hearing of approving the Project and without the specific findings required for such vacation violates the procedures of Streets and Highways (“S&H”) Code sections 8300, *et. seq.*

S&H Code Sec. 8313 requires the agency to consider the General Plan and obviously consistency therewith when planning to vacate the street. As mentioned above, the City inconspicuously plans to amend the *Community Plan* to effectuate the vacating of the right-of-ways, since the General Plan amendment, as described in the Draft of Final SEIRs, does not include those actions.

The S&H Code defines “vacation” as “the complete or partial abandonment or termination of the public right to use a street, highway, or public service easement.” (S&H Code § 8309.) The code defines a “street” and “highway” as “all or part of, or any right in, a state highway or other public highway, road, **street, avenue, alley, lane, driveway, place, court, trail, or other public right-of-way or easement**, or purported public street or highway, **and rights connected therewith**, including, but not limited to, **restrictions of access or abutters’ rights, sloping easements, or other incidents** to a street or highway.” (S&H Code § 8308, *emph. added.*)

The Code also provides that “[t]his part shall be liberally construed in order to effectuate its purposes.” (*Id.* § 8310.) Thus, both the street, easement, and right-of-way, and alley vacation in this case are subject to the H&S Code requirements.

“The authority to vacate a street rests with the city legislative body and may occur only after a hearing is held and evidence presented to the city council and a resolution of vacation adopted. (S&H §§ 8312, 8320–8325; *City of Los Angeles v. Fiske* (1953) 117 Cal.App.2d 167, 172 [“The act of vacating can be done only upon a finding that the property in question is unnecessary for present or future uses as a street”].)” (*County of Amador v. City of Plymouth* (2007) 149 Cal.App.4th 1089, 1106–1107.)

Stated otherwise, before the City vacates a street, it must engage in prescribed procedures, such as noticing and holding an evidentiary hearing after which the legislative body should find “from all the evidence submitted, that the street, highway, or public service easement described in the notice of hearing or petition is unnecessary for present or prospective public use,” and thereafter vacate the street. (S&H Code §§ 8320, 8324.)

The City’s failure to properly notice the street vacation particularly violates S&H Code § 8320, which requires a *separate public notice* and provides:

- (b) The **notices** required by this chapter **shall** contain **both** of the following:

- (1) A **description** of the street, highway, or public service easement proposed to be vacated and a reference to a map or plan, that shows the portion or area to be vacated and includes a statement that the vacation proceeding is conducted under this chapter. In the case of a **street or highway**, the description shall include its general location, its lawful or official name or the name by which it is commonly known, and **the extent** to which it is to be vacated. In the case of a public service easement, the description shall identify it with common certainty. The **map or plan** showing the location of the street, highway, or public easement proposed to be vacated is sufficient compliance with this paragraph.
- (2) The **date, hour, and place for hearing** all persons interested in the proposed vacation. The **date shall not be less than 15 days** after the initiation of proceedings.

(S&H § 8320(b), emph. added.)

Also, in view of all the General Plan inconsistencies noted above and not disclosed or analyzed in the SEIR, the Planning Commission has no substantial evidence to recommend that the City Council find the street and alley vacation to be conforming and consistent with the General Plan, to allow street and easement vacation.

In addition, it is well-settled that a street may not be vacated for exclusive private use. (*Citizens Against Gated Enclaves v. Whitley Heights Civic Assn.*, *supra*, 23 Cal.App.4th 812, 820, citing *Constantine v. City of Sunnyvale* (1949) 91 Cal.App.2d 278, 282.)

Here, it is obvious that the public easements and public right-of-ways will become essentially a *private* development upon the Project approval. The Real Party apparently needs the space in question to make the project more inviting to the public or to increase its buildable area and thereby maximize its profits. As part of maintaining the Project Site, the owner will deploy cleaning crews, private security, and other services. Even if the Project site will be open to the general public, the public will be deprived of the street, easement, and alley use, since it will turn into a completely private use.

Apart from the public-private issue, the vacation procedure requires findings that a street “is no longer needed *for vehicular traffic*.” (*Zack’s, Inc. v. City of Sausalito* (2008) 165 Cal.App.4th 1163, 1188 (*Zack’s*)). In *Zack’s*, a city leased portions of a public street to a private company to use for boat storage. When the city argued that certain statutes relating to reclaimed tidelands allowed the city to lease the land, the Court of Appeal held that “[i]t cannot reasonably be supposed that the Legislature intended that governments holding these streets can summarily close them to vehicular traffic, even

if they are heavily trafficked major thoroughfares, but can close nearby nontideland streets, even those of marginal use, only on the basis of a resolution or ordinance made upon a formal finding that the street is no longer needed for vehicular traffic after a noticed hearing on the issue.” [Citation.] (*Id.* at p. 1188.)

Since the Draft and Final SEIRs fail to accurately disclose the specific easements and public right-of-ways proposed for vacation, it is impossible for the public or decisionmakers to evaluate the impacts of such proposed changes, the City’s power to make those changes, or their legal validity.

In addition, the Streets and Highways Code includes specific provisions for the conversion of a street from vehicular use to a pedestrian mall. (See S&H Code § 11200.) A “pedestrian mall” is defined as “one or more ‘city streets,’ or portions thereof, on which vehicular traffic is or is to be restricted in whole or in part and which is or is to be used exclusively or primarily for pedestrian travel.” (*Id.* § 11006.)

While City in this case did not make such S&H Code findings, did not check the consistency of the General Plan with the proposed street and alley vacation, and did not provide the specific separate public notice as required under S&H Code, there is no substantial evidence that the City can find that the public street and alley are no longer necessary for vehicular traffic, especially now when the 49-acre Project site will be put to a more high intensity use, as compared to the baseline conditions of a mostly vacant Sports Arena land.

In sum, the City violated CEQA by failure to accurately disclose the street and public right-of-way modifications the Project proposes, the additional discretionary approvals the Project needs, and, derivatively, the City also violated CEQA by failing to disclose, study, and mitigate the full scope of impacts the Project will have, in light of the proposed amendments. The City’s noted omissions also violated the Vehicle Code and the S&H Code’s substantive and procedural requirements for failure to comply with the procedural requirements and make the specific findings needed for the proposed changes. Neither can those findings be made, in view of the mass, scale, and intensity of the Project.

For all of the reasons above, the Draft and Final SEIRs are incomplete, inaccurate, unstable, and non-finite, and violate CEQA’s informational disclosure and impact mitigation purposes. As such, the SEIR for the Project may not be certified.

B. The Draft SEIR's Cumulative Impact Analysis and the Final SEIR's Responses to Comments on that Issue Are Flawed, Making the SEIR Legally Inadequate.

The cumulative impacts in the Draft SEIR are presented in Section 6, which states, in pertinent parts:

Additionally, one of the following two possible approaches is required for considering cumulative effects:

- A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency (i.e., the List of Projects approach).
- A summary of projections contained in an adopted General Plan or related planning document, or in a prior environmental document that has been adopted or certified, that described or evaluated region- or areawide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency (i.e., the Plan approach).

A **combination of these approaches** may **also** be used.

(Draft SEIR, p. 6-1, *emph. added.*)

And yet nothing in CEQA Guidelines section 15130 suggests that a *combination* of these list or Plan approaches may be used, to support the City's claim above. To the contrary, CEQA Guidelines section 15130 expressly distinguishes one approach from the other approach with the word "either" and by providing separate instructions for each approach:

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The **discussion** should be guided by the **standards of practicality** and **reasonableness**, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The **following elements** are **necessary** to an **adequate discussion** of significant cumulative impacts:

(1) **Either:**

(A) A **list** of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A **summary of projections** contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such **plans may** include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A **summary of projections** may also be contained in an adopted or certified **prior environmental document** for such a plan. Such projections may be **supplemented** with additional information such as a regional modeling program. **Any such document shall be referenced and made available to the public at a location specified by the lead agency.**

(2) When **utilizing a list**, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.

....

(d) Previously approved land use documents, including, but not limited to, general plans, specific plans, regional transportation plans, plans for the reduction of greenhouse gas emissions, and local coastal plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one or more previously certified EIRs may be incorporated by reference pursuant to the provisions for tiering and program EIRs. No further cumulative impacts analysis is required when a project is consistent with a general, specific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(f), in a certified EIR for that plan.

(e) If a cumulative impact was **adequately addressed** in a **prior EIR** for a community plan, zoning action, or general plan, **and** the **project** is **consistent** with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section 15183(j).

(CEQA Guidelines § 15130.)

As a distinct issue here, contrary to CEQA Guidelines section 15130, while the RSEIR manifestly relies on the Program EIR of the 2018 Community Plan, it fails to make that EIR available to the public, as required. While the RSEIR references those documents and provides a link to it, the link takes only to a general City website, where no 2018 plan EIR⁹ is available¹⁰. (**Exhibit H** [PDF printout of the link to the Community Plan].) There is also no evidence that the Final EIR of the Community Plan was certified since there is no notice of determination filed for the Project. (**Exhibit I** [CEQAnet printout on the Community Plan].)

As evident from the CEQA Guidelines quoted above, CEQA does not contemplate a *hybrid* approach. Moreover, the City may use the *plan* option and projections only if the cumulative impacts of the *projected* growth as proposed by the current Project have been “adequately” addressed, as defined in section 15152(f).

In turn, Section 15152(f) provides:

(f) A later EIR shall be required when the initial study or other analysis finds that the later project may cause significant effects on the environment that were not adequately addressed in the prior EIR. A negative declaration shall be required when the provisions of Section 15070 are met.

(1) Where a lead agency determines that a cumulative effect has been adequately addressed in the prior EIR, that effect is not treated as significant for purposes of the later EIR or negative declaration, and need not be discussed in detail.

(2) When **assessing whether** there is a **new significant cumulative effect**, the lead agency **shall consider** whether the **incremental effects** of the **project** would be **considerable** when viewed in the context of **past, present, and probable future** projects. At this point, the question is not whether there is a significant cumulative impact, but whether the effects of the project are cumulatively considerable. For a discussion on

⁹ The 2018 Community Plan EIR is incorporated herein by reference, and we request that the City include it into the record, as available at:

https://www.sandiego.gov/sites/default/files/midway-pacific_hwy_cpu_peir_final.pdf

Notably, the Draft Environmental Impact Report for the Community Plan, which includes most of the impact analysis, was not available and could not be located.

¹⁰ The Community Plan itself is available on the City’s website and we incorporate it by reference herein, available at [sandiego.gov/sites/default/files/midway -
_pacific_highway_community_plan_sept_2018_0.pdf](https://www.sandiego.gov/sites/default/files/midway_-_pacific_highway_community_plan_sept_2018_0.pdf)

how to assess whether project impacts are cumulatively considerable, see Section 15064(i).

(3) Significant environmental effects have been "**adequately addressed**" if the lead agency determines that:

(A) they have been **mitigated** or **avoided** as a result of the prior **environmental impact** report and findings adopted in connection with that prior environmental report; or

(B) **they** have been **examined** at a **sufficient level** of **detail** in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

(Emph. added.)

Also critically, CEQA Guidelines section 15152 applies to *tiering* and requires that the proposed Project be *consistent* with the overarching general plan, community plan for which the prior program EIR was prepared:

(d) Where an **EIR** has been **prepared** and certified for a **program, plan, policy, or ordinance** consistent with the requirements of this section, any lead agency for a **later project pursuant to** or **consistent with** the program, plan, policy, or ordinance **should limit** the EIR or negative declaration on the later project to **effects which**:

(1) **Were not examined** as significant effects on the environment in the prior EIR; or

(2) Are **susceptible** to **substantial reduction** or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.

(e) **Tiering** under this section shall be **limited** to **situations** where the project is **consistent** with the **general plan** and **zoning** of the city or county in which the project is located, except that a project requiring a rezone to achieve or maintain conformity with a general plan may be subject to tiering.

(CEQA Guidelines § 15152(d).)

Here, *none* of the conditions in CEQA Guidelines sections 15130 or 15152(f). CEQA Guidelines section 15130 does not allow for a cherry-picked projects and does not contemplate that the Project proposing over 4,000 units and 130,000 sf commercial uses – which has *not* been studied in any general plan and community plan, which is *not*

consistent with the applicable general plan or community plan, and which *expressly requires* numerous amendments to the general plan and community plan and zone change not to conform *to* that general or community plan but rather to make that general or community plan conforming to the Project itself – may nonetheless rely on a program EIR of the prior general plan or community plan or any other plan.

CEQA Guidelines section 15152 similarly emphasizes and mandates *consistency* of the proposed Project with the general plan, community plan, or other plans, which necessarily includes the consistency of the Project with the density and intensity for the Project Site as studied in the general plan or community plan.

Here, the Draft SEIR claims: “The SEIR cumulative analysis assumes buildout of the **2018 Midway-Pacific Highway Community Plan (2018 Community Plan)** along with one relevant development project not included in the Community Plan.” (Draft SEIR, p. 6-2/pdf p. 672, *emph. added.*) In other words, the City seeks to tier off of the EIR of the 2018 Community Plan. And yet, under the same RSEIR, the Project seeks approvals of numerous *amendments* and *changes* to that same 2018 Community Plan, including to almost *all* of the sections thereof.

As such, no consistency between the Project with the community plan or general plan exists or may be shown, to use the *projections* approach contemplated and allowed under CEQA Guidelines sections 15130 and 15152 and the City’s reliance on the *plan* or *projection* option for cumulative impact analysis is wholly misplaced.

As yet another flaw in the Draft SEIR and Final SEIR is that the City, for some reason, *conflated* the *baseline* analysis standards under CEQA and CEQA Guidelines with the *cumulative impact analysis* standard. To wit, the Draft SEIR claims the City has *discretion* to pick the “cutoff” for its cumulative impact analysis and may lawfully rely on the information available *only* in 2023 when the Notice of Preparation was issued for the Project:

CEQA Guidelines Section **15125(a)(1)** states that a lead agency should describe the **physical environmental conditions** as they exist **at the time** the Notice of Preparation is **published** from both a local and regional perspective. The City published the Project’s Notice of Preparation on **December 18, 2023**. **Projects submitted** to the City for review **after that date** are not a part of **this analysis**. The City possesses the **discretion** to determine the **cutoff point** during environmental review to **cease** considering **new applications** for **cumulative analysis**

purposes, lest the CEQA process never end (*Gray v. County of Madera* [2008] 167 Cal.App.4th 1099, 1128).

(Draft SEIR, p. 6-2/pdf p. 672, *emph. added.*)

The City repeats the same flawed reasoning about the possibility to use the “combination” of the project list and plan projections and its discretion to disregard any proposed projects after the Notice of Preparation was issued in 2023 in its Final SEIR responses to comments. (Final SEIR, pp. RTC-2—3.)

As evident above, however, the City conflates the *baseline* provision under CEQA Guidelines section 15125 with the *cumulative impact* analysis provision under CEQA Guidelines sections 15130 and 15152. Such conflating of various CEQA provisions is a fatal legal error, which makes the RSEIR legally inadequate.

Neither does *Gray v. County of Madera* cited by the City allow an unreasonable discretion for the City to utilize the date of filing of the Notice of Preparation as the cutoff for its cumulative impact analysis in the subsequent EIR. Or else, why would the City even issue a Notice of Preparation and provide to the public an opportunity to raise issues to be addressed in the EIR? Neither do the facts in *Gray v. County of Madera* even remotely similar to the facts here.

Specifically, in *Gray v. County of Madera*, the Notice of Preparation was issued in 2003, and the City inquired about any projects until 2004:

According to the DEIR, “[t]he County **Planning Department** was **contacted for other projects** for which applications have been filed, or which have been recently approved, but not yet constructed **through June 1, 2004**. CEQA establishes that the environment for which the Project is evaluated is established at the time of issuance of the **Notice of Preparation** (Guidelines Section 15130(b)), which was issued **February 10, 2003**.” “The County Planning Department **does not identify** any **newly permitted** or proposed projects in the vicinity that could result in cumulative impacts when considered in concert with the proposed Project. Therefore, the cumulative impacts analyses provided in each section of this Draft EIR focuses on past projects as well as planned growth as outlined in applicable planning documents (e.g., Madera County General Plan).”

(*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1127 [85 Cal.Rptr.3d 50].)

As such, in the *Gray v. County of Madera* case, the County considered projects well after the Notice of Preparation was issued but *did not* identify any newly permitted or proposed project. Also, the *Gray v. County of Madera* case is distinct from the case at hand because it involved the *County*, which typically involves far more projects and has a tougher task to track those projects, than an individual City, as here.

Lastly, as also shown in the above-quoted passage, the Court’s holding in *Gray v. County of Madera* about the agency having discretion to decide the cutoff is based on the facts of that case and the reasoning in the EIR showing that the County there *did not* act *arbitrarily* but *made a good faith effort to investigate* the list of proposed projects in the vicinity, by quoting directly from the challenged EIR:

Appellants also contend that the County could not **arbitrarily choose a deadline of June 1, 2004**, as the **cutoff** date to **decide** what projects to include in the cumulative analysis. However, since “Projects are **constantly being fed** into the environmental review process[,] [t]he problem of **where to draw** the line on ‘projects under review’ that must be included in the cumulative impact analysis of a particular project **could be solved** by the use of a **reasonable cutoff** date which could be set for every project according to a standard procedure.” (*San Franciscans for Reasonable Growth v. City and County of San Francisco*, supra, at p. 74, fn. 14.) Thus, the **County** had the **discretion** to set the date of the application for the **current Project** as the **cutoff date** to determine **which projects** should be included in the cumulative impacts analysis.

(*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1128, *emph. added*.)

Notably, the *Franciscans for Reasonable Growth v. City and County of San Francisco* case, on which *Gray v. County of Madera* relies and from which it quotes, also involves a *county* rather than a City, as here, and speaks about a “reasonable cutoff” and do not, as a *general proposition*, suggest that the City here could use the date of sending out the Notice of Preparation as the cutoff for cumulative impact analysis.

Notably, CEQA Guidelines sections 15130 or 15152 that the City cites in its cumulative impact analysis do not contemplate for such cutoffs, and section 15152 cautions for purposes of the City’s reliance on the *plan projections* as here: “Tiering does not excuse the lead agency from **adequately analyzing** reasonably **foreseeable significant environmental** effects of the **project** and does **not justify deferring** such analysis to a later tier EIR or negative declaration.” (*Emph. added*.) As such, the City had to *adequately* analyze the reasonably foreseeable significant environmental effects

and could not lawfully cut the date for the examination of the Project's cumulative impacts as of the date of issuing the Notice of Preparation.

Because the City's cumulative impact analysis is based on several legal flaws, its RSEIR is legally inadequate and cannot be certified. The City should inquire in good faith and provide an accurate list of all related past, present, and reasonable foreseeable projects in the RSEIR, and cannot rely on any prior EIR for the general plan or community plan, since the Project is manifestly inconsistent with the density and intensity and land uses contemplated in that prior EIR for the Project Site.

C. The SEIR Should Not Be Approved, In Light of the Unstudied and Unmitigated Hazards and Improper Deferred Mitigation.

The SEIR should not be certified also in light of the unstudied and unmitigated hazards and hazardous materials impacts. Specifically, Appendix H3 of the Draft SEIR includes a Phase II Environmental Site Assessment ("ESA") 2, dated September 22, 2023, which provides several recommendations to *further* study and mitigate the undisputed hazards impacts. (Draft SEIR Appendix H3, pp. 20-22.)

In addition, the Phase II ESA provides that it did not study *all* of the Project area proposed for the development because it had no access to those.

Phase II ESA admits that *not* all of the accessible 49-acre Project site was studied for soil samples and admits the possibility that certain hazards may be present in the unstudied portions.

Lastly, among the limitations of the Phase II ESA 2, the report notes that its conclusions are valid only as of the date of its issue of 2023 and are limited to the information available to the experts at the time:

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during the referenced assessments by SCS was in general conformance with the requirements of the Client and the specifications and limitations presented in the Agreement between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Agreement between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

The conclusions of this Report are judged to be relevant **at the time the work described in this Report was conducted. Future conditions may differ** and this Report should **not** be relied upon to represent **future** Site conditions **unless** a qualified consultant familiar with the practice of Phase II environmental assessments in San Diego County is consulted to assess the necessity of updating this Report.

Although this Assessment has **attempted** to assess the **likelihood** that the Site has been impacted by a hazardous material/waste release, **potential sources of impact may have escaped** detection for reasons which include, but are not limited to: 1) **our reliance on inadequate or inaccurate information rightfully provided** to SCS by third parties such as public agencies and other outside sources; 2) the **limited scope of this Assessment**; and 3) the **presence of undetected, unknown, or unreported environmental releases**.

(Draft SEIR, Appendix H3, p. 22, *emph. added.*)

To the extent the Phase II ESA 2 suggests that the Project should still conduct studies of the entire site and the City's SEIR contemplates such studies as part of the mitigation measures, this would be improper deferred mitigation under CEQA and is therefore unlawful.

In addition, the above-noted facts suggest that the SEIR is not complete and accurate and failed to conduct an in-depth analysis of *whether* mitigation would be possible *in case* the studies yet to be conducted detect hazards or hazardous materials. This is particularly the case where, as here, the Project Applicant – due to financial feasibility of the Project – chose not to provide 250 additional moderate-income affordable units and instead shifted to provide those for market rate.

In any event, CEQA precludes deferred mitigation unless the agency can show any practical and legal hardship, and then provides specific performance measures and further shows that the proposed mitigation measures will indeed be feasible. No such showing is present here.

For these reasons, too, the RSEIR should not be certified since it violates CEQA's prohibition against deferred mitigation, fails to show such deferred mitigation may be excused here, and further fails to show that the hazards impacts were adequately and fully studied and mitigated. These failures are further critical where, as here, the Project Site does contain numerous hazardous sources and seeks to build over 4,000 units, including 2,000 affordable. These failures are also critical where, as here, the Project

may have significant unstudied and unmitigated geology hazards as well, as noted earlier.

D. The SEIR Should Not Be Approved, Since the City’s Statement of Overriding Considerations Lacks Substantial Evidence and Fails to Show the Legal Infeasibility of Further Mitigation or Infeasibility of Other Reduced Density Alternatives.

CEQA does not allow agencies to approve a Project with significant and unavoidable impacts without first showing that all feasible mitigation measures and alternatives were considered but could not fully mitigate the Project impacts below significant levels, and further that specific benefits override the Project’s specific impacts. (Pub. Res. Code § 21081(a); CEQA Guidelines § 15091(a).)

That evidentiary showing is not present here, including in the Statement of Overriding Considerations (“SOC”) for the Project.

To provide a few examples, the City’s Draft SEIR provides: “For the Project, impacts related to **land use, transportation, historical resources, and noise** would remain **significant** and **unavoidable**.” (Draft SEIR, p. 7-7.) The Draft SEIR further provides that certain impacts will be significant and irreversible. (*Id.*)

And yet, the City’s 56-page SOC provides that the Project will have benefits, including housing, mobility changes, reduction of GHG and consistency with the GHG reduction plans, etc. However, the SOC fails to show how the same benefits could not have been achieved by reducing the scope of the Project. Simply put, under the City’s reasoning, the Project should have provided not 4,000 but rather 16,000 units since a 4-times larger project would have accomplished the noted goals even better.

And yet, CEQA is to ensure that the environmental considerations and the price-tag of the Project are weighed against the land use and other needs of the City and strike a balance. Here, that balance is not struck since the Project will have significant and unavoidable and irreversible impacts.

To wit, there is substantial evidence and legitimate public concerns in the record that the Project has significant geology and stability issues and the proposed numerous buildings with the height of 105-feet and 250 feet may sink over time due to such flooding and soil instability. (**Exhibit J** [Article re “What to Know About the Multibillion-Dollar MidwayRising Project”].) The hazard would be akin to the San Francisco’s sinking Millenium Tower. (**Exhibit K** [Article re “SF’s Millennium Tower

now may be sinking in the center – NBC Bay Area”].) On these facts, the Project and its proposed *affordable* and *market-rate* housing units – regardless of how many they area – would be akin to a sinking boat. To speak about the benefits of housing when the Project may have significant impacts and present hazards to the public and its own residents is unwarranted.

Stated differently, the SEIR failed to show that further mitigation measures or other alternatives, including a further reduced alternative are truly infeasible. Notably, infeasibility in this sense under CEQA is not about the Project’s profitability, but rather legal and practical infeasibility.

Accordingly, the SEIR should not be certified since the Project may have significant impacts which *may* still be mitigated with feasible mitigation measures and alternatives, and since any generic benefits that the City identified may be achieved with a smaller scale project and no genuine infeasibility is shown.

IV. THE PROJECT SHOULD NOT BE APPROVED AS IT VIOLATES THE COASTAL ACT

The Project should not be approved also because it – along with its proposed massive 105-, 250-, and 165-foot buildings and the concentration of such buildings in the coastal zone, violates several provisions of the Coastal Act, including public access to the coastal zone, public views, and affordability.

The Density Bonus Act specifically states its provisions do not supersede the Coastal Act. (Gov. Code §65915, subd. (m).) The Affordable Housing Regulations and Density Bonus Law specifically allow a project to be denied if it is contrary to state law.

In this case, the Project is contrary to the LCP and subsequently the California Coastal Act, including in that it proposes massive 105-feet, 250-feet, and 165-foot buildings and concentrates them in one place, thereby precluding public views to the coastal area. In addition, the Project seeks to remove the 30-foot limit of the height of the buildings here, without properly and accurately disclosing in the Project description the height of the buildings and the number of such tall buildings in the area.

For this reason, too, the Project should not be approved.

//

//

V. THE PROJECT SHOULD NOT BE APPROVED AS IT VIOLATES THE VEHICLE CODE AND STREET AND HIGHWAY CODE

As detailed in Section I, *supra*, the Project approvals contain changes to the streets and public right-of-ways, for which the City failed to comply with the Vehicle Code and the Streets & Highways Code. For these reasons distinct from CEQA, the Project should not be approved.

VI. THE PROJECT SHOULD NOT BE APPROVED AS IT VIOLATES THE GENERAL PLAN CONSISTENCY REQUIREMENT AND THE PLANNING AND ZONING LAW

The Project here is not only *vertically* inconsistent with the applicable General Plan and Community Plan in terms of the proposed building, density, intensity, and inadequate infrastructure to accommodate such growth (the Project approvals seek to *modify* the General Plan), but also *internal* inconsistency within the General Plan. As just one example, the Project proposes to reduce the lanes on busy and congested streets, and to designate certain streets for bicycle or transit use. While such bicycle and transit uses are beneficial by themselves, nonetheless the proposed street changes in the Land Use element are not properly studied, proceed without the respective changes to the Mobility Element, and will thereby create an inconsistency within the General Plan.

In addition, the Planning and Zoning Plan specifically requires that any changes to the Land Use Element (which includes Community Plan) occur concurrently and correlate with changes in the Mobility Element, to ensure that the proposed growth has adequate infrastructure and is orderly. And yet, no such changes to the Mobility Element of the General Plan have been studied or considered here.

For these reasons, too, the Project should not be approved since it violates both the General Plan of the City, as well as the Planning and Zoning Law, by proposing a Project which is vertically inconsistent with the General Plan, which creates an internal inconsistency within the General Plan and its Elements, and by further failing to ensure concurrent changes to the Land Use and Mobility Elements of the General Plan, among many other changes.

VII. CONCLUSION

In sum, WSRCC requests that the City require a local workforce, that the City impose training requirements for the Project's construction activities to prevent community spread of COVID-19 and other infectious diseases, and that the City address the

concerns mentioned in this comment letter, recirculated the SEIR, and not certify the SEIR or approve any Project entitlements and SOC, since the Project lacks an adequate CEQA clearance and since its approvals violate several state laws.

If the City has any questions, please feel free to contact my Office.

Sincerely,

Naira Soghatyan, Esq.

Attorney for Western States Regional Council of Carpenters

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ "CalEEMod User's Guide." CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Disclaimer

SWAPE has received limited discovery. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Present Land Use

Community Commercial-Residential Permitted (0-44 du/ac)/Zoned Commercial-Community CC-3-6/Residential; Multiple Use; Commercial Employment, Retail & Services, and Industrial Employment

Document Description

Midway Rising Specific Plan: GENERAL PLAN and COMMUNITY PLAN MENDMENT to the Midway-Pacific Community Plan to redesignate the site from Community Commercial-Residential Permitted (0-44 dwelling units/acre (du/ac)) to Mixed Community Village (0-72 du/ac), Adoption of a SPECIFIC PLAN, REZONE from Cc-3-6 (Community-Commercial) to RMX-2 (Mixed-Use Residential), an ORDINANCE propose the Midway Rising Entertainment Center District overlay, a VESTING TENTATIVE MAP, various EASEMENT VACATIONS, and a SITE DEVELOPMENT PERMIT to adopt the Midway Rising Specific Plan that would establish goals, policies, development standards, and architectural guidelines for a transit-oriented development with a range of land uses. Buildout of the Midway Rising Specific Plan would allow for approximately 4,254 housing units, including up to 2,000 affordable units, public parks and open space, a multi-purpose Entertainment Center, and up to 130,000 square feet of commercial uses. The Project would also include infrastructure improvements on- and off-site, including extensions and/or upgrades of existing water, sewer, storm drain, drainage, roadways, bike paths, transit, mobility and pedestrian facilities. The Specific Plan would encompass the City-owned Sports Arena site, which includes other commercial buildings, totaling 49.23-acres located at 3220, 3240, 3250, 3350, and 3500 Sports Arena Boulevard. The site is zoned CC-3-6 and designated for Community Commercial-Residential Permitted (0-44 du/ac) and the Midway-Pacific Highway Community Plan area. Additionally, the site is located in the following overlays: Airport Land Use Compatibility Overlay Zone (San Diego International Airport (SDIA) and NAS North Island); Airport Influence Areas Overlay Zone (SDIA- Review Areas 1 and 2; NAS North Island - Review Area 2); Airport FAA Part 77 Noticing Areas Overlay Zone (SDIA notification threshold at 70 feet through 100 feet AMSL and NAS North Island notification threshold at 181 feet through 206 feet AMSL); Airport Noise Contours (CNEL) Overlay Zone (SDIA 60-65 CNEL - partially within); Coastal Height Limitation Overlay Zone; Community of Concern: Low; Community Plan Implementation Overlay Zone: Type B, Complete Communities Mobility Zone 2; Complete Communities Housing Solutions FAR Tier 2.5 Coastal (2.5 FAR); Parking Standards Transit Priority Areas Overlay Zone;

Transit Priority Area Overlay Zone; Sustainability Development Area; and partially within the Transit Area Overlay Zone. The site is induded on a list compiled pursuant to California Government Code, Section 65962.5, for hazardous waste sites. (Assessor Parcel Number: 441-590-04.)

Description:

Expedite Program-Discretionary Project: Midway Rising
3500/Sports Arena

▼ More Details

📁 Application Information

PROJECT INFORMATION

Application Opened Date: 10/27/2023

Address Validation

Is the project site located within the public right of way, within a public easement or, is there anything unique about the project location that does not tie it to an address or parcel: No

Code Enforcement

Is there a code enforcement violation case on this site?: No

DISCRETIONARY INFO

Please define the scope of work:

Midway Rising is a mixed-use redevelopment of the Sports Arena Site.

Applicant Type:

Authorized Agent of Property Owner or Other Person per M.C Section 112.0102

Is there a Discretionary Permit currently in process associated with this project: No

Provide associated prior Discretionary Approval Number(s): N/A

PERMIT SPECIFIC REQUIREMENTS

Select the project type: Expedite Program

Is the project proposing residential development of 10 units or more, or a condominium conversion development of two residential condominiums units or more: Yes

Is the submittal by the Professional Certification No

Process:**Select applicable Expedite Eligibility Requirement:**

Mixed-Use with Affordable Units (Minimum 50% gross FAR for residential)

Will you comply with the Commitment Requirement of the Affordable, In-fill Housing & Sustainable Buildings Expedite Program: Yes

Geographic Information

Location: 100 Grid Scale: AX122, SE, 2141704
Location: Base Zones ("Official Zoning Map"): CO-3-1, O-20992 NS, 11/09/2018

Sports Arena redevelopment group Midway Rising scraps middle-income housing and hotel

New plans were revealed to San Diego City Council this week about the redevelopment of the sports arena site, and some councilmembers were angry about it.

By **Priya Sridhar** • Published October 3, 2023 • Updated on October 4, 2023 at 4:17 pm

Log in or create a free profile to save articles

The much anticipated Sports Arena redevelopment project is making major changes to the plans and the City Council is not happy about it.

Midway Rising, the group that will develop the 48-acre Sports Arena District, says the project will no longer include 250 residential units that had been planned for middle-income housing, or a 200-room hotel.

The subtractions were revealed at a San Diego City Council meeting Monday.

Stream San Diego News for free, 24/7, wherever you are with NBC 7.

 **WATCH HERE**

The original plan included a new 16,000-seat arena, 25,000 square feet of commercial space, 20 acres of plazas and parks, a 200-room hotel, and 4,250 residential units. Around 2,000 of those units are set aside for low-income affordable housing, or families who make 80% or less of the area's median income. Those units are required because of California's Surplus Land Act, but the group had also said they would dedicate 250 units for middle-income housing, which would be for families who make anywhere from 80% to 120% of the area median income. Now the group is saying those 250 units are no longer financially feasible.

"With the middle-income housing, there are statewide programs that are incentives that offer subsidies, so to say, to developers to incentivize different types of housing and right now, some of those housing sources just aren't available due to the economic market," said Penny Maus, director of the city of San Diego's real estate and airport management. "For the team to pursue that, outside of those economic incentives, with interest rates being as high as they are right now, just wasn't something that's feasible."

Midway Rising Development Inches Closer to Reality in San Diego

But several San Diego City Councilmembers expressed anger and disappointment about this new development.

Watch 24/7

going to be market or luxury suites and that's really just unacceptable because they've been telling us this whole time that regardless of the economic details they were going to live up to their promises," said San Diego City Councilmember Raul Campillo, who represents District 7.

In addition, Midway Rising has said that they can no longer build a 200-room hotel they had planned. This is because they discovered an 8-foot sewage line that was previously undisclosed underneath the ground they were planning on building the arena on. The city requires a 30-foot setback area from sewage lines to conduct maintenance and repairs, meaning it was no longer possible to build the arena where they were planning to. Now, Midway Rising will build the arena where they were planning on building the hotel leaving no more space to build the hotel and everything else the group had promised.

"We also have an approved Midway Community plan in place, which requires a lot of things for the benefit of the residents of that area with open space, and to continue to pursue the hotel would have impacted the team's ability to deliver that open space and that was just a higher priority," said Maus.

"The loss of the hotel concerns me. Part of that is, it was going to be part of the entertainment district, along with the sports arena, that was going to draw tourists here in terms of TOT (transient occupancy tax) revenue, in terms of creating thousands of good jobs for hotel workers that are unionized hotel workers as well, it's sad to see that go," Campillo said.

NBC 7 reached out to the Zephyr Group, one of the three developers of the housing in the Midway Rising project, but did initially hear back. On Wednesday afternoon, however, we received the following statement from Shelby Jordan II, a project director at Legend's, one of other developers, who said he was speaking on behalf of the whole development team:

"Midway Rising is proud to be the largest affordable housing project in California state history. As is common with transformational projects like this one, site due diligence revealed a pre-existing site condition – in this case, an immovable 96" sewer line – that has reshaped aspects of our original proposal. We remain committed to delivering a world-class entertainment center along with more than 4,000 homes, of which 2,000 will be affordable for working San Diegans."

Maus said the city's exclusive negotiating agreement with Midway Rising ends in December of 2024. After the environmental impact study is conducted, permits will be issued. Maus doesn't expect

The final plans will still have to be approved by city council. Public meetings about the Midway Rising project and updates are held quarterly. You can check [here](#) to find out when the next one will be.

Draft report offers new details on city's plans for Midway Rising project

*Rendering of the proposed Midway Rising project. (Safdie Rabines Architects/Courtesy of City of San Diego)*by: [Danielle Dawson](#)

Posted: Apr 4, 2025 / 04:31 PM PDT

Updated: Apr 4, 2025 / 04:31 PM PDT

SHARE

SAN DIEGO (FOX 5/KUSI) — A [recently released draft environmental report](#) on the “Midway Rising” project — the ambitious overhaul of San Diego’s Sports Arena area into a large-scale, mixed-use space — lays out new specifics about what the development could look like.

The long-awaited makeover of the site is poised to become the largest affordable housing project in California history, with 2,000 income-restricted units and up to 2,254 market-rate apartments on top of a new 16,000-seat arena, extensive commercial space, parks and more.

For the affordable units, city staff have said [rent prices could range](#) from about \$900 for a one-bedroom to \$3,000 for a three-bedroom unit, depending on income level. All of these units would be reserved for households making 80% of the city’s average income or below.

[| Katsuya Ko opening soon in Westfield UTC >](#)

The environmental impact report, which was released by the state last month to allow for public comment, offers additional details about the city’s plans to bring the project to life — from plans for the space to how it plans to pursue construction.

According to the report, the roughly 49-acre site — bounded by Kurtz Street to the northeast, Hancock Street to the northwest, and Sports Arena Boulevard to the south — would be divided based on three public spaces: “The Square,” “The Plaza” and “The Green.”

Midway Rising project site overview. (City of San Diego Midway Rising project environmental impact report draft)

“The Square” and “The Green” would be the bookends of the site, serving as public hubs for the entertainment center and residential space respectively. “The Plaza” would run between the two, serving as a Spanish Paseo-style pedestrian corridor with shopping and dining.

Concepts of each of these spaces incorporate multi-use lawns and plazas, spaces for family-friendly activities, dining and retail patios, and public art, among other things. These areas will also largely be contiguous, split only by two new streets planned for the residential area.

The new roads, named Frontier Drive and Kemper Street, will serve as entrance points for the residential and business district. These two-lane roads will also give people access to street and structured parking for both residents and the greater public, the report says.

Each of the buildings inside the development will have a maximum height of about 105 feet, except for the arena would be about 165 feet tall, per the report. These buildings will also be used as an architectural screen for the parking structures, wrapping around the garages’ exterior.

However, only 7,040 parking spots will be available in these structures: 4,550 for residents, 2,100 for the entertainment center, and 390 for those shopping or dining. When events that draw out more than 7,500 people are happening at the arena, the city says it plans to utilize

Shelter-in-place order lifted in Spring Valley after chemical spill

READ NEXT >

Next story in 5

Cancel

goal of making the area less car-centric and more friendly for public transit, pedestrians and bicyclists.

According to the report, the city plans to reduce the six-lane Sports Arena Boulevard, which will abut the residential and commercial buildings, to four-lanes to create a dedicated bus and right-turn only lane, as well as expand the sidewalk into a protected, multi-use promenade.

Similar road work to create designated lanes for buses, bikes and right turns is also planned for Rosecrans and Kurtz streets.

CONTENT CONTINUES BELOW SURVEY

| **North Park street to be renamed after beloved diner owner, Lucky Wong** ➤

As for details about the potential construction of the project, the report says crews will take a phased approach.

The phasing could start with the entertainment center while the existing Sports Arena remains operational before moving to the residential and commercial buildings nearby, according to the report. The second phase would then shift to the demolition of the Sports Arena and construction of buildings to the west of what would become Frontier Drive.

That said, construction is still contingent on securing financing for the project.

The city has explored creating a special tax district that would allow a segment of property taxes from that area to go towards the project and grants based on certain aspects of the project, like the affordable housing, but neither of these options have been solidified.

Some funding may come from billionaire Stan Kroenke, who [joined the Midway Rising development team](#) as a chief investor in 2023, although the extent of his involvement remains unclear.

As for the environmental report, with the draft released, the public now has the ability to provide feedback on the project through May 8. More information on how to provide input can be found on the [city of San Diego's website](#).

About Midway-Pacific Highway

The Midway-Pacific Highway Community (formerly known as Midway/Pacific Highway Corridor) is an urbanized community situated north of Downtown between Old Town and Point Loma. Midway-Pacific Highway encompasses approximately 800 acres of mostly flat land, and is comprised of main areas: the central Midway area, the Pacific Highway corridor and the U.S. Marine Corps Recruit Depot.

The Midway area has a commercial core containing numerous shopping centers, institutional facilities, multifamily residential developments, visitor-oriented uses, older industrial areas and U.S. military properties. It is also the location of the Pechanga Arena, formerly known as the San Diego Sports Arena. The area is characterized by wide streets, flat topography, and a varied mixture of commercial and industrial uses, multifamily residential developments and airport-related commercial uses.

The U.S. Marine Corps Recruit Depot, located in the southwestern portion of the community adjacent to Barnett Avenue, was developed in the early 1920s after significant dredging and filling along the shores of San Diego Bay. By the early 1900s, central Midway - Pacific Highway was known as Dutch Flats, and in the 1920s the Marine Advanced Expeditionary Base (Marine Corps Recruit Depot) was built along Barnett Avenue, which was then the main thoroughfare from the New Town area to the Point Loma community. Later, during WWII, areas along Pacific Highway were used for numerous wartime factories, and in the 1940s the Midway area became the location of approximately 4,000 temporary wartime housing units in the Frontier Housing development.

In the post-war period, some industrial uses remained in the community, and land that was no longer needed for wartime uses was developed over time with auto-oriented commercial uses and institutional uses. [Read more](#)

Project Info

Title
Midway-Pacific Highway Community Plan Update

Description
Note: Review Per Lead

The proposed Midway-Pacific Highway Community Plan Update includes the comprehensive update to the 1991 Midway/Pacific Highway corridor community plan, which is intended to guide development through 2035. For facility planning, technical evaluation, and environmental review purposes, build-out is assumed to occur in 2035. The land use is analyzed at build out using a total dwelling unit yield for a max projection. This is based on the assumption that some properties would not redevelop at the greater density while others will be developed with a higher density as permitted under state and local density bonus regulations, as discussed in greater detail in appendix N. The max projection for residential density is utilized b/c the required infrastructure is in place and documented development reflects max development potential due to the cost of land and the demand for housing.

What to Know About the Multibillion-Dollar Midway Rising Project

The massive, 48-acre concept—complete with a new 16,000-seat stadium—is slated to transform the Point Loma district if approved

Rendering Courtesy of Midway Rising

By Claire Trageser (<https://sandiegomagazine.com/author/claire-trageser/>)

When the filmmaker Cameron Crowe needed a stadium to look like it was from the 1970s for his 2000 movie *Almost Famous*, he turned to his hometown. He filmed the scene in which protagonist William Miller meets the rock band Stillwater for the first time at Sports Arena Stadium (now called Pechanga Arena (<https://pechangaarenasd.com/>)).

Twenty-five years after the release of *Almost Famous*, the 1966 stadium still looks much the same—but maybe not for long. Now the site is slated for a massive revamp dubbed “Midway Rising (<https://www.midwayrising.info/>).” The plan is to replace the original Pechanga Arena (which currently seats about 14,000) with a new 16,000-seat stadium, along with 2,000 affordable apartments, 2,250 market-rate apartments, 130,000 square feet of shops and restaurants, and 14.5 acres of parks and public space.

Courtesy of Pechanga Arena

The team behind the project includes Chelsea Investment Corporation, sports venue developer Legends, and market-rate housing developer Zephyr. It’s funded by real estate investment firm The Kroenke Group.

SUBSCRIBE AND GET 1 YEAR FOR \$18

([HTTPS://SANDIEGOMAGAZINE.SECURE.DARWIN.CX/J4WNEW4S](https://sandiegomagazine.secure.darwin.cx/j4wnew4s))

“I think it’s the opportunity to bring a world-class, modernized entertainment center to the city,” says Zephyr CEO Brad Termini. “Having a new arena at the Midway has been a goal of the city for as long as I’ve lived here, and it feels like we’re really close to delivering that vision, a facility that could attract the globe’s best talent (<https://sandiegomagazine.com/everything-sd/sports-illustrated-womens-games-innagural-event-san-diego/>) and shows for San Diego.”

What's Next for Downtown San Diego?

(https://sandiegomagazine.com/features/san-diego-downtown-future-revitalization-projects/?utm_source=internal&utm_medium=internal_link&utm_campaign=

RELATED ARTICLE

(https://sandiegomagazine.com/features/san-diego-downtown-future-revitalization-projects/?utm_source=internal&utm_medium=internal_link&utm_campaign=highlight_embed)

utm_source=internal&utm_medium=internal_link&utm_campaign=highlight_embed)

The redevelopment began in September 2022 (<https://www.midwayrising.info/process>), when the San Diego City Council formally selected the Midway Rising team to take on the project. This spring, the draft environmental impact report (<https://ceqanet.lci.ca.gov/2023120451/2>) (EIR) for the project was released, and the team is holding a series of meetings to collect community feedback. The goal is for it to go to the City Council this fall for approval.

Rendering Courtesy of Safdie Rbaines Architects

The Kroenke Group are the majority funders of the project, but Termini says they aren't ready to state publicly how much it will cost. "It's evolving. With the crazy construction markets we find ourselves in today, it's very difficult to peg that, so we're not releasing any public budget numbers at this time," he adds.

However, those figures have the potential to be massive. According to the City of San Diego, the project's affordable housing developer, Chelsea Investment Corporation, led 65 projects in San Diego County (<https://www.chelseainvestco.com/communities/category/San+Diego>) and more than 120 throughout Southern California at a total cost of over \$3 billion. Meanwhile, Zephyr has headed more than \$1 billion in mixed-use developments (<https://builtbyzephyr.com/projects/>).

Whatever the final investment, Pechanga Arena will be completely transformed. Termini tells us that the current iteration is too old and outdated to attract big-name concerts. Its loading dock, lighting, and sound aren't up to current standards.

Courtesy of Pechanga Arena

"It's kind of like a dive bar—when the lights are low and it's full, it can still be a fun place," he says. "But when the lights go up, you really see what's there. It's really lacking."

That rings true for local sports fan Zack Tembi, who regularly attends San Diego Seals (<https://www.sealslax.com/>) lacrosse games at the old stadium. "It's just stale," he says. "San Diego isn't known for being a sports city (<https://sandiegomagazine.com/features/the-best-of-san-2025-sports/>), right? So, if we have something that can attract good events and talent, I'm all about that."

Belmont Park Celebrates 100 Years in San Diego

Ideally, Tembi adds, the vision would expand beyond the stadium.

“I think they should make more of a community center, like what you see with most of the modern stadiums,” he continues. “Things that are accessible (<https://sandiegomagazine.com/things-to-do/wheelchair-accessible-sensory-friendly-places-san-diego/>) around the stadium—whether it’s parks or shops or restaurants—that bring people in even when there’s no event. I’d also love to see things around the stadium that you can go to without needing a ticket. Stuff that’s fun, like a restaurant with golf simulators or interactive experiences. Just more ways people in the community can use the space all the time, not just when there’s a concert or a game.”

Courtesy of Pechanga Arena

While there's no promise of golf simulators just yet, developers do intend to include lots of retail and restaurant space, along with public parks. Termini says his team predicts it will have a massive economic impact—perhaps equivalent to the three largest events the San Diego Convention Center hosts every year, including Comic-Con (<https://sandiegomagazine.com/things-to-do/san-diego-comic-con-guide/>).

Christina Bibler, director of economic development for the City of San Diego, is excited about the project's potential effects. "Just the sheer magnitude and size of a 48-acre parcel that is going to [have a ton of housing units and create many] jobs—it will be legacy-leaving for Midway," she says. "[We're looking at] more amenities, increased revenue, and the revitalization of a site that hasn't really been revitalized since the mid-1960s."

The project is a major priority for her team, she explains, because of the affordable housing (<https://sandiegomagazine.com/features/san-diego-affordable-housing-crisis/>) it will bring and because it will help make better use of the land owned by the city. "Its [value depreciates] when you don't reinvest," she says. "This is about revitalizing and catalyzing the Midway area in a way that will have a lasting impact for future generations."

Rendering Courtesy of Safdie Rbaines Architects

But the surrounding community has concerns. The biggest one for the Peninsula Community Planning Board (<https://www.pcpb.net/>), which advises the city on developments in that area, is the traffic a bigger stadium will bring.

“Rosecrans Street is already congested, and this project doesn’t fully mitigate that,” says Javier Saunders, head of the group’s long-range planning committee. “We just feel we’re going to be saddled with additional traffic that’s not going to be addressed properly.”

According to Saunders, the project’s current suggested traffic alleviation techniques are laughable. “What they’re proposing is a shuttle bus—one shuttle bus,” he notes. “And then they’re giving their employees public transit passes for the entertainment center as mitigation. I think it’s a slap in the face to the city.”

Courtesy of Pechanga Arena

Saunders says his group would like to see more—particularly a street extension on Greenwood Street and a pedestrian and bike overcrossing at Camino del Rio West—to help manage traffic. The Greenwood Street extension was in the community plan, he says, but it was removed to make more room for development.

The influx of new residences in the area may also increase traffic, but developers are exempt from having to explain how they intend to mitigate those concerns in the impact report because they plan to include affordable housing.

“The next step is to go to the City Council (<https://www.sandiego.gov/economic-development/real-estate/midway-rising>) and present our issues,” he adds. “The council can say the benefits outweigh the impacts and approve it as is, or it can say, ‘We’re not going to approve this now. We want you to go back and address some issues.’ [The latter is] what we’re hoping for.”

Rendering Courtesy of Safdie Rbaines Architects

Others in the community bring apprehensions, too, including Clifford Weiler, an attorney who filed a letter in response to the project's environmental impact report. He says the ground in the area is sinking. In 50 years, he believes, people will move into Midway apartments "and [be unable to] shut their doors. The foundations [will be] cracked or the water pipes [will be] cracked. Even though I'm going to be dead—and you can print that—I want it to be done right so nobody gets stuck with a catastrophe that might happen and the expense of trying to correct it decades from now."

Jim Royle, the environmental review committee chair for the San Diego County Archaeological Society (<https://sdcas.org/>), also feels the project has not done enough to check for and protect potential archaeological relics, including Native American artifacts, where construction will happen. "The bottom line is that there would have been an expectation for archaeological monitoring for the excavations in the area of the site. And [the developers] don't even call for monitoring," he says. "I was surprised, given that they basically

acknowledged in the EIR that they don't know what's there—because no prior evaluation has been conducted."

PARTNER CONTENT

The success of that goal remains to be seen. After all, the Midway Rising team is still holding public meetings with the goal of getting full approval by the City Council. According to Termini, the soonest we'll see them break ground is the end of 2026—so *Almost Famous* fans have a little more time to check out the set where it all began.

What's your opinion about top-tier talent and Michelin restaurants flocking to La Jolla?

Vote below

It's great for the local economy and dining scene.

It may exclude local, smaller restaurants from the market.

As long as the food quality improves, I'm all for it.

It doesn't affect me, I prefer cooking at home.

MILLENNIUM TOWER

SF's Millennium Tower now may be sinking in the center

While the Millennium Tower is no longer sinking anymore at the corner, and has reversed some settlement there, data shows there's only been about an inch of tilt reversal, a quarter of what the model had predicted.

The engineer of the so-called fix of the troubled Millennium Tower in San Francisco recently acknowledged there's been less than expected tilt improvement over the first six months of the \$120 million project's completion. Jaxon Van Derbeken reports.

The engineer of the so-called fix of the troubled Millennium Tower in San Francisco recently acknowledged there's been less than expected tilt improvement over the first six months of the \$120 million project's completion.

The advanced model designed to predict the tower's behavior had forecast as much as four inches of tilt correction within six months after the leaning high-rise was anchored on two sides to bedrock.

Watch NBC Bay Area News free wherever you are

 WATCH HERE

While the tower is no longer sinking anymore at the corner, and has reversed some settlement there, data shows there's only been about an inch of tilt reversal, a quarter of what the model had predicted.

Contractors in charge of the fix had made the more optimistic prediction under the theory that once supported on the north and west, the tower's newly shifted weight would cause it to settle more on its east and south sides.

But two outside engineers say the data suggests instead of sinking at the opposite sides, the tower appears to be sinking more in the center.

"With all tall buildings, there is a tendency, even though the foundation mat may be quite thick, there is a tendency for this center to settle more than the edges," says Harry Poulos, an internationally recognized expert on tall building foundations.

Poulos points to monitoring data that he says indicates the tower is now settling at the center an overall rate of about a tenth of an inch a year.

"A tenth of an inch is not that much but it's not heading in the right direction," Poulos said, "and that would be a little bit of a concern to the longer term."

SEP 29, 2023

Millennium Tower residents billed \$6.8 million for fix overruns

SEP 7, 2023

San Francisco's Millennium Tower stabilized, but still tilting

Robert Pyke, a veteran geotechnical engineer, says the data so far shows the risk of relying on even sophisticated modeling to predict performance.

“The overall situation is very complex,” he said.

Pyke said the concern about center sinking in buildings, also known as dishing, is that the deformation can trigger cracks underneath foundations. Such cracks, he said, carry the risk of long-term corrosion damage.

The concern is that should water seep in those cracks, it could rust exposed steel reinforcement. Rusted steel expands and that can trigger more damage to the cracked concrete.

“It’s highly likely that there's been an increase in cracking for this kind of fix,” Pyke said. “That should have been obvious that there was a possibility of further increasing cracking and water intrusion into the foundation.”

He said such damage can be fixed, but that would require a detailed examination of the underside of the foundation to reveal and repair cracks.

As for what might explain the building’s unpredicted behavior, Pyke points to a buried wall under the east side of the tower’s foundation as a likely factor.

Pyke says that wall, built to separate the Millennium Tower from a neighboring underground garage, could be preventing the tower from tilting back the predicted four inches to the east.

Fix engineers said the model predicted the dividing wall would sink under the new weight imposed by the tower settling in the opposite direction. But a skeptical Pyke says the monitoring data so far suggests the massive underground wall is holding fast.

The designer of the fix project, Ron Hamburger, told us in a statement that the northwest corner is now stable and cannot sink more. That has resulted in a quarter of an inch of improvement in the

settlement at the northwest corner.

The fix is expected to continue to reverse more tilt over time, he said, but not at the rate the model predicted because of unexpected soil response.

The “remainder of the building continues to settle as we always anticipated, resulting in tilt recovery, albeit it at [a] slightly lower rate,” than modeling predicted, Hamburger said. “We believe this lower rate of settlement is because stress relief of the soils under the building has been more effective than originally forecast.”

As it stands, the tower is leaning a little more than an inch less than before the fix was completed. Its currently tilting a little less than 29 inches at the northwest corner.

It's been six months since San Francisco's Millennium Tower was fully supported to stop it from sinking and leaning. While the project was hailed as an immediate success, the high-rise now appears to be sinking in the middle. Raj Mathai speaks with Jaxon Van Derbeken on this.

**Re: September 25, 2025 Planning Commission Hearing
Item 2: Midway Rising– Project No. 1106734**

Honorable Chairperson Moden, Vice-Chairperson Boomhower, Commissioners Miyahara, Mahzari, Malbrough, Renger and Reeves:

This letter is submitted on behalf of our client, Midway Rising, LLC, the applicant of the Midway Rising project (“Project”) to address late comments received by the City of San Diego (“City”) on the Final Subsequent Environmental Impact Report (“FSEIR”).

Specifically, this letter responds to the comments made by the California Department of Transportation (“Caltrans”) in their September 19, 2025 correspondence (“Caltrans Letter”) and Supporters Alliance for Environmental Responsibility in their September 23, 2025 submittal (“SAFER Letter”). As outlined below and the attached memoranda, the Caltrans and SAFER claims do not raise any issues with the accuracy or adequacy of the FSEIR. We therefore urge you to recommend that the City Council certify the California Environmental Quality Act (“CEQA”) analysis and approve the Project.

Caltrans Letter

As explained in the FSEIR, the Caltrans Local Development Review Safety Review Practitioner’s Guidance (“Caltrans Guidance”) that is the basis for the majority of Caltrans’ comments, was published in February of 2024 – after the Project’s Notice of Preparation was released in December of 2023. Therefore, the Caltrans Guidance does not apply to the Project. (FSEIR, Response to Comment S1-2.) Despite that fact, the Caltrans Letter provided subsequent comments criticizing the Project’s queuing analysis based on the Caltrans Guidance. As shown by

Kelly Moden, Chairperson
September 24, 2025
Page 2

Kimley-Horn and Associates in the memo attached hereto as **Exhibit A**, reviewing the Project pursuant to the inapplicable Caltrans Guidance does not alter the recommendations included in the FSEIR. The Project's transportation analysis is adequate; no changes are needed.

SAFER Letter

Initially, it is important to note that – after meeting with the Project applicant – SAFER's concerns have been resolved, SAFER has withdrawn its letter and SAFER now supports Project approval. Nonetheless, we will address the SAFER Letter, which includes a host of complaints about the Project's air quality and noise analyses, each of which is unfounded. In the memo attached hereto as **Exhibit B**, Harris & Associates, Inc. explains in detail why the FSEIR analysis is valid, supported by substantial evidence and in compliance with CEQA. In sum, the FSEIR does not need to be revised as a result of these comments.

With regard to SAFER's demand that the City adopt additional mitigation for the Project's significant and unmitigated noise and transportation impacts, the proposed measures are not required. First, the FSEIR imposes MM Noise 5.5-1, which requires preparation of a Noise Control Plan that demonstrates event acoustics have been planned to minimize their impact on the nearest noise sensitive receptors. (FSEIR, pp. 5.5-40-5.5-43, 5.5-56-5.5-57, 5.5-58-5.5-59, and 5.5-61.) As explained therein, "because the specifics of future events and required equipment cannot be determined at this time," the measure cannot fully reduce event noise below of a level of significance." (FSEIR, p. 5.5-61.)

Implementing the demanded mitigation, which would impose a hard limit on outdoor speaker volume, would not change the fact that the specifics of future events remain an unknown factor. (*Ibid.*) And, more importantly, a subjective outdoor noise limit would contravene Project Objectives that seek to redevelop an underutilized infill site and implement the City's long-established planning goals for the Sports Area Community Village that call for a "centralized, mixed-use neighborhood that would include entertainment, housing, commercial, public parks, and recreation opportunities near transit nodes." (FSEIR, pp. 3-2; *see also*, FSEIR, p. 5.5-42.)

An arbitrary noise limit imposed in advance of future special event applications, at which time the specifics of a potential noise impact will be known and may be addressed accordingly, would unnecessarily limit public events within the Project area and frustrate the purpose and goals of the Entertainment District proposed for the Project site. This fact renders such a noise limit speculative, ineffective and infeasible. (Pub. Res. Code § 21061.1; CEQA Guidelines §§ 15145, 15364.)

Next, the employee transit subsidy was designed to address the potentially significant impact of the entertainment center; implementation reduces the potential impact below a level of significance. (FSEIR, pp. 5.2-30-5.2-31, 5.2-34-5.2-36.) Extending that measure to the employees of the regionally serving restaurants onsite would not reduce the significant and unmitigated

Kelly Moden, Chairperson

September 24, 2025

Page 3

transportation impact caused by the regionally serving restaurants to a less than significant level. Thus, SAFER's demand may be rejected as infeasible. (*A Local and Regional Monitor v. City of Los Angeles* (1993) 12 Cal.App.4th 1773, 1809; Pub. Res. Code § 21061.1; CEQA Guidelines § 15364.)

Finally, the SAFER Letter incorrectly claims that the City must adopt the Retain Arena Alternative ("Alternative"), which the FSEIR identified as the environmentally superior alternative. (FSEIR, p. 8-40.) SAFER is wrong – CEQA allows lead agencies the ability to conclude that an alternative is infeasible based on a number of factors, including economic, environmental, social, technological, and legal factors among other considerations.

Here, the City is permitted to determine that the Alternative is infeasible for the reasons outlined in the CEQA Findings of Fact and Statement of Overriding Considerations ("Findings"). Contrary to the claims made by SAFER, the Findings do more than note that the Alternative would not satisfy Project Objective 6. Setting aside for a moment that a modern entertainment center is a key Project Objective – a fact that should not be dismissed out of hand – the Findings also explain that the Project would only *partially* meet Project Objectives 1, 2, 4 and 7. (Findings, pp. 37-38.)

In the current instance, Project Objective 2 is critical as the Project was specifically designed to meet the requirements of the City's Surplus Land Act Notice of Availability and to maximize housing onsite consistent with the City's Housing Element. (Findings, p. 38.) As the record contains substantial evidence that the Alternative would provide new housing at a substantially reduced level compared to the Project, the City may reject the Alternative based on established CEQA grounds. (Pub. Res. Code §§ 21061.1, 21081(a)(3); CEQA Guidelines §§ 15091(a)(3), 15364; Findings, pp. 38-39.)

The Project team will be present at the September 25, 2025 hearing in case you have additional questions. In light of the information presented above, we encourage you to recommend certification of the FSEIR and Project approval. Thank you in advance for your consideration.

Very truly yours,

Heather S. Riley

EXHIBIT A

MEMORANDUM

To: Ann Gonsalves, Meghan Lithgow – City of San Diego

CC: Heather S. Riley, Esq. – Allen Matkins Leck Gamble Mallory & Natsis LLP

From: Kimley-Horn and Associates, Inc.

Date: September 24, 2025

The Caltrans Local Development Review Safety Review Practitioner's Guidance (Caltrans Guidance) was published in February 2024, after the Project's Notice of Preparation, which was released in December 2023. Therefore, the Caltrans Guidance would not apply to the Project.

Regarding the off-ramp queue calculations, per Caltrans comments, the project team has an updated Synchro model to incorporate the recommendations made by Caltrans on the number and length of off-ramp lanes at the following three freeway off-ramp intersections:

1. Intersection 1: West Mission Bay Drive / I-8 Westbound Off-Ramp
2. Intersection 17: Camino Del Rio West / Hancock Street (includes I-8 westbound exit to Camino Del Rio West and I-5 southbound exit to Camino del Rio West)
3. Intersection 32: I-5 Southbound On-Ramp / Sea World Drive / I-5 Southbound Off-Ramp

Caltrans requested a fourth location be added to the study area (regarding Caltrans ramps) based on project traffic volumes. It should be noted, this intersection was not originally included in the study area as the scoping process with the City was completed prior to identifying Sea World Drive as an off-site parking location for certain event sizes. A total of 73 project trips during the PM peak hour and 37 project trips during the Pre-Event PM peak hour would be expected to use this off-ramp. As a result, the following intersection has been evaluated in Synchro:

4. Intersection X: I-5 Northbound Ramps / Sea World Drive

Based on the results of the queuing analysis of the four (4) locations, the project is not anticipated to cause queues to exceed the storage length of the ramp lanes adjacent to mainline lanes. Therefore, an impact, as suggested by Caltrans comments, is not anticipated to be caused by the project traffic, and no further project conditions or improvements should be required. Therefore, there is no need for the Project to evaluate the potential solution of extended synchronized and coordinated green time for traffic signals on Camino del Rio West, as is suggested by Caltrans. The 95th percentile queue results for all four of these intersections can be provided to Caltrans, including Synchro files and queue reports.

RE: SAFER Comments on Environmental Impact Report Midway Rising Specific Plan

Dear Ms. Riley:

Harris & Associates has reviewed the comments from the Supporters Alliance For Environmental Responsibility (SAFER) on the Subsequent Environmental Impact Report (SEIR) prepared for the Midway Rising Project (Project). Please see our response to the comments related to the air quality (Appendix K1) and noise (Appendix G1) analysis below.

Section I of the SAFER letter states that the Project must set an outdoor volume limit as an enforceable mitigation measure for the Project as part of Mitigation Measure MM NOISE 5.5-1. The requirement for a Noise Control Plan in Mitigation Measure NOI 5.5-1, Special Events Noise Best Management Practices, is consistent with existing City processes for special events. As discussed in Final SEIR Section 5.5.4.4, special events would be subject to limits outlined in the Special Event Permit rather than the limits outlined in SDMC Section 59.5.0401. Mitigation Measure NOI 5.5-1 establishes baseline best management practices to minimize noise exposure. Item 4 of the mitigation measure outlines a process for enforcing the limits of the measure and any other limits established in applicable event permits. It is the intent of the Special Events Permit process to allow for flexibility to accommodate a variety of events. SDMC Chapter 2, Article 2, Division 40: Special Events, does not prescribe a noise level limit. Additionally, the specifics of future events are unknown. As such, a noise level limit that would apply to all future events, rather than use of Noise Control Plans tailored to individual events, was determined to be infeasibly rigid and inconsistent with the Special Events Permit Process. The Final SEIR acknowledges that individual future events may exceed the noise level limits in SDMC Section 59.5.0401. As such, this impact was determined to be significant and unmitigated.

Section III and IV of the SAFER letter summarize comments prepared by Dr. Paul E. Rosenfeld, Ph.D., of the Soil/Water/Air Protection Enterprise (SWAPE), included as Exhibit A to the letter. Comments include two categories: assumptions for construction air quality modeling and operational health risks. The SWAPE letter asserts that the California Emissions Estimator Modeling (CalEEMod) prepared for the Project includes unsubstantiated changes to construction phase lengths, construction equipment, construction vehicle trips, demolition material, and material import and export. As noted by the commenter, detailed modeling phase lengths, construction equipment fleet, and vehicle trip estimates were provided by the applicant. This data was reviewed by the City and is referenced in the SEIR (AECOM 2023a and 2024). Additionally, these assumptions are provided as attachments to this letter. Regarding demolition material, material quantities were input as a mix of square footage (buildings) and tons (parking lot); however, the CalEEMod Detailed Report labels both inputs as "building square footage". In reality, the 93,746 quantity labeled as square feet is an input of 93,746 tons and represents the parking lot demolition that would occur in Phase 2b. See screenshot below.

Construction

Demolition

UPDATE DEFAULTS ⓘ

Water Demolished Area ⓘ

Frequency

2

PM10 (% Reduction)

36

PM2.5 (% Reduction)

36

Phase Name	Phase Type ⓘ	Size Metric	Total Amount	
P1 Demolition	Demolition	Building Square Footage ▾	847337	🗑️
P2a Demolition	Demolition	Building Square Footage ▾	184880	🗑️
P2b Demolition	Demolition	Ton of Debris ▾	93746	🗑️

Add Phase ▾

Additionally, the commenter's statement that all construction phases were modeled as one phase is incorrect. As shown in the screenshots included in Exhibit A, modeling includes multiple instances of each construction activity, such as demolition and grading, to individually model each construction phase (Phase 1, Phase 2a, and Phase 2b). The commenter also confuses total earthwork with material to be imported and exported. As stated in the referenced section of Chapter 3.0, Project Description (Page 3-16), import and export would be reduced by stockpiling suitable material for on-site reuse. Import and export quantities used in the model consist of material that would not be reused and would be hauled offsite.

Regarding health risks, as discussed in Section 6.3.1.4 of the Air Quality Technical Report and HRA (Appendix K1), Project impacts to sensitive receptors during operation were evaluated based on guidance from the California Air Resources Board's Air Quality and Land Use Handbook (2005). The land uses proposed by the Project are not typical sources of toxic air contaminants. Additionally, the commenter provides a conservative screening health risk assessment that does not show a significant health risk. Although the text describing the results of the analysis indicate a health risk of 187 in a million, the table actually shows a lifetime health risk of 1.87×10^{-4} , or 0.000187, which is well below the threshold of 10 in one million, including when conservatively added to construction health risks. The commenter does not identify a new or worsened impact related to air quality; therefore, the commenter's suggested mitigation measures do not need to be considered for the Project.

Section V of the SAFER letter summarizes comments prepared by Ani Toncheva and included as Exhibit B to the letter. The letter includes four main comments: (1) inconsistencies between the significance thresholds in the SEIR and 2018 Midway-Pacific Highway Community Plan Update (CPU) Program Environmental Impact Report (PEIR); (2) inadequate traffic noise analysis; (3) inadequate operational noise analysis; and (4) inadequate construction noise analysis. Regarding the first comment, the Project's analysis of ambient vehicle noise under Threshold 1 is consistent with the Midway-Pacific Highway CPU PEIR. Additionally, the analysis is consistent with the City's current California Environmental Quality Act Significance Determination Thresholds (2022). As shown under Significance Threshold 1 of the City's California Environmental Quality Act Significance Determination Thresholds, ambient noise thresholds are provided for changes in traffic noise levels. Noise impacts related to Project construction and operation are addressed and compared to applicable City thresholds under Threshold 4 and Threshold 5 in Appendix G1. Additionally, as noted under Threshold 1 in Appendix G1, although a comparison to ambient noise levels using a 5 A-weighted decibel (dBA) Community Noise Equivalent Level (CNEL) standard was included in the Draft Midway-Pacific Highway CPU PEIR, the 5 dBA CNEL standard is not part of the City of San Diego's adopted CEQA Significance Determination Thresholds. References to this standard were removed from the Revised Final Midway-Pacific Highway CPU PEIR (2018). Application of this standard to the Project is not appropriate.

The commenter states that the 2018 CPU PEIR "requires" hotels and motels to be included in a noise analysis. This assertion is incorrect. Hotels/motels are included in a list of typical sensitive receptors on page 3 of the 2018 CPU EIR Noise Analysis, but the analysis does not include any direction that requires the analysis of hotels or motels as

sensitive receptors. The list of sensitive receptors included in Appendix G1 of the SEIR comes from the 2008 City of San Diego General Plan Noise Element. As noted, the City does not include hotel and motel uses in its list of noise-sensitive land uses. Per the City's Noise Compatibility Guidelines (2008 General Plan Table NE-3), visitor accommodations are a commercial use, rather than a sensitive residential use. This is consistent with the list of sensitive land uses and noise compatibility guidelines provided in the July 2024 Noise Element update.

Regarding the traffic noise analysis, the commenter requests that California Department of Transportation (Caltrans) methodology for calibrating the Federal Highway Administration (FHWA) Technical Noise Model (TNM) be applied to Project traffic noise modeling, and requests additional noise measurements. Caltrans is not the lead agency for the Project, nor was the Project modeled with the FHWA TNM noise model. As identified in Table 9 of Appendix G1, the Project's calculated noise level of 59.0 dBA CNEL on Hancock Street from Sports Arena Boulevard and Channel Way under No Project conditions is similar to the modeling results of the Midway-Pacific Highway CPU PEIR, which calculated an existing noise level of 57 dBA CNEL for existing conditions on Hancock Street from Sports Arena Boulevard to Kurtz Street. Several representative noise measurements were taken in the Project area, as summarized in Table 4 and Table 5 of Appendix G1. The City of San Diego does not prescribe the number or location of noise measurements, nor are ambient measurements a required input for noise modeling. As such, additional noise measurements are not required.

The commenter requests that the operational impact of HVAC units be specifically analyzed at the Wyndham Garden Hotel. HVAC unit exposure from Project operation is addressed under Threshold 4 of Appendix G1, Noise Ordinance Compliance. It is inaccurate to say the SEIR assumes installation of only one HVAC unit. HVAC units are assumed for installation at for both commercial and residential uses, and a reference noise level is identified to demonstrate how distance would provide attenuation. Nevertheless, the SEIR does not rely on this calculation to determine significance. As discussed in the SEIR, new mechanical equipment would be required to demonstrate consistency with the San Diego Municipal Code (SDMC) during the building permit approval process, including noise level standards. Additionally, as part of the building permit process, design considerations submitted by the Project applicant would be required to demonstrate that Title 24 interior noise standards would be achieved at adjacent residences, including noise from proposed HVAC equipment. Per SDMC, future building design would incorporate adequate shielding for mechanical equipment to achieve interior and exterior noise standards for on-site residential and commercial uses. Therefore, because HVAC systems would be required to meet SDMC at on-site residences, noise levels would not exceed the SDMC off site. Additionally, as noted above, the hotel does not require specific analysis as a sensitive receptor.

Regarding construction impacts, the commenter states that the analysis should use Federal Transit Administration (FTA) methodology that assumes a 100 percent usage factor for equipment and should use a threshold that compares construction noise levels to ambient conditions. As detailed in Appendix G1, the Project uses general FTA methodology in that it focuses on predicting noise emissions from the loudest potential pieces of construction equipment from a given construction phase. The use of this term and the use of the FHWA Roadway Construction Noise Model (RCNM) is consistent with the Midway-Pacific Highway CPU PEIR, which applies usage factors below 100 percent. As discussed under Threshold 5 in Appendix G1, it would be overly conservative to assume that the entire equipment fleet anticipated for a given phase would be in operation at the same time, at the closest distance to a sensitive receptor. Multiple activities, requiring different equipment, would occur on a given day, and at different locations.

The City of San Diego, as the lead agency, has established a threshold of a 75 dBA average over a 12-hour period for construction noise that is the applicable standard for Project construction. This threshold is outlined in Significance Threshold 6 in the City's California Environmental Quality Act Significance Determination Thresholds (2022). As noted above, the 5 dBA increase above ambient conditions standard included in the Draft Midway-Pacific Highway CPU PEIR was determined to be inconsistent with City thresholds and was removed from the Final PEIR. It is noted that only impacts to residences are addressed in the Midway-Pacific Highway CPU PEIR related to

construction noise exposure, consistent with the City's threshold, which states that the 75 dBA standard applies at the property line of residential-zoned properties.

Finally, the comment states that Mitigation Measure NOI-2, Construction Noise Best Management Practices, would not reduce noise levels to below the threshold because the barrier outlined in the third bullet of the measure would not attenuate hotel floors above the ground floor. It should be noted that the barrier requirement is one of seven best management practices included in Mitigation Measure NOI-2 to reduce noise levels. The other best management practices include limiting construction to less-sensitive daytime hours, maintaining mufflers and other noise-reducing equipment features, located stationary equipment away from sensitive receptors, and establishing a procedure for addressing noise complaints. Additionally, the threshold states that construction noise levels should be determined at the property line of receiving residential properties and as described above, hotels are a commercial use not a sensitive residential receptor. As such, evaluation of noise exposure specifically at the hotel is not necessary for the Project.

As summarized in the above responses, the comments provided by SAFER do not identify an insufficiency in the SEIR analysis. No revisions to the SEIR are necessary to address the comment in the SAFER letter.

Sincerely,

Sharon Toland
