

# Los Peñasquitos Lagoon Restoration – Phase 1

RESILIENCY ADVISORY BOARD  
MARCH 19, 2026

# AGENDA

- ❖ Introductions
- ❖ Project Background
- ❖ Project Goals & Key Project Components
- ❖ Work completed and future activities
- ❖ Project Schedule
- ❖ Questions/Discussion

# Project Background

- ❖ Priority in 2018 Los Peñasquitos Lagoon Enhancement Plan and Program EIR.
- ❖ Regulatory Driver: Lagoon Sediment Total Maximum Daily Load
  - Joint project between TMDL responsible parties, in partnership with LPLF and CA State Parks
- ❖ Compliance Targets:
  - Sediment Load Reduction.
  - Lagoon Compliance Target (Salt Marsh Restoration).
- ❖ Project Components:
  - Salt Marsh Restoration
  - Riparian Corridor Enhancement
  - Floodway Improvements & Storm Water Infrastructure Improvements

# Historical Salt Marsh

- ❖ Historical salt marsh lost due to sediment & persistent freshwater flows
- ❖ Total Maximum Daily Load (TMDL) developed to address this loss

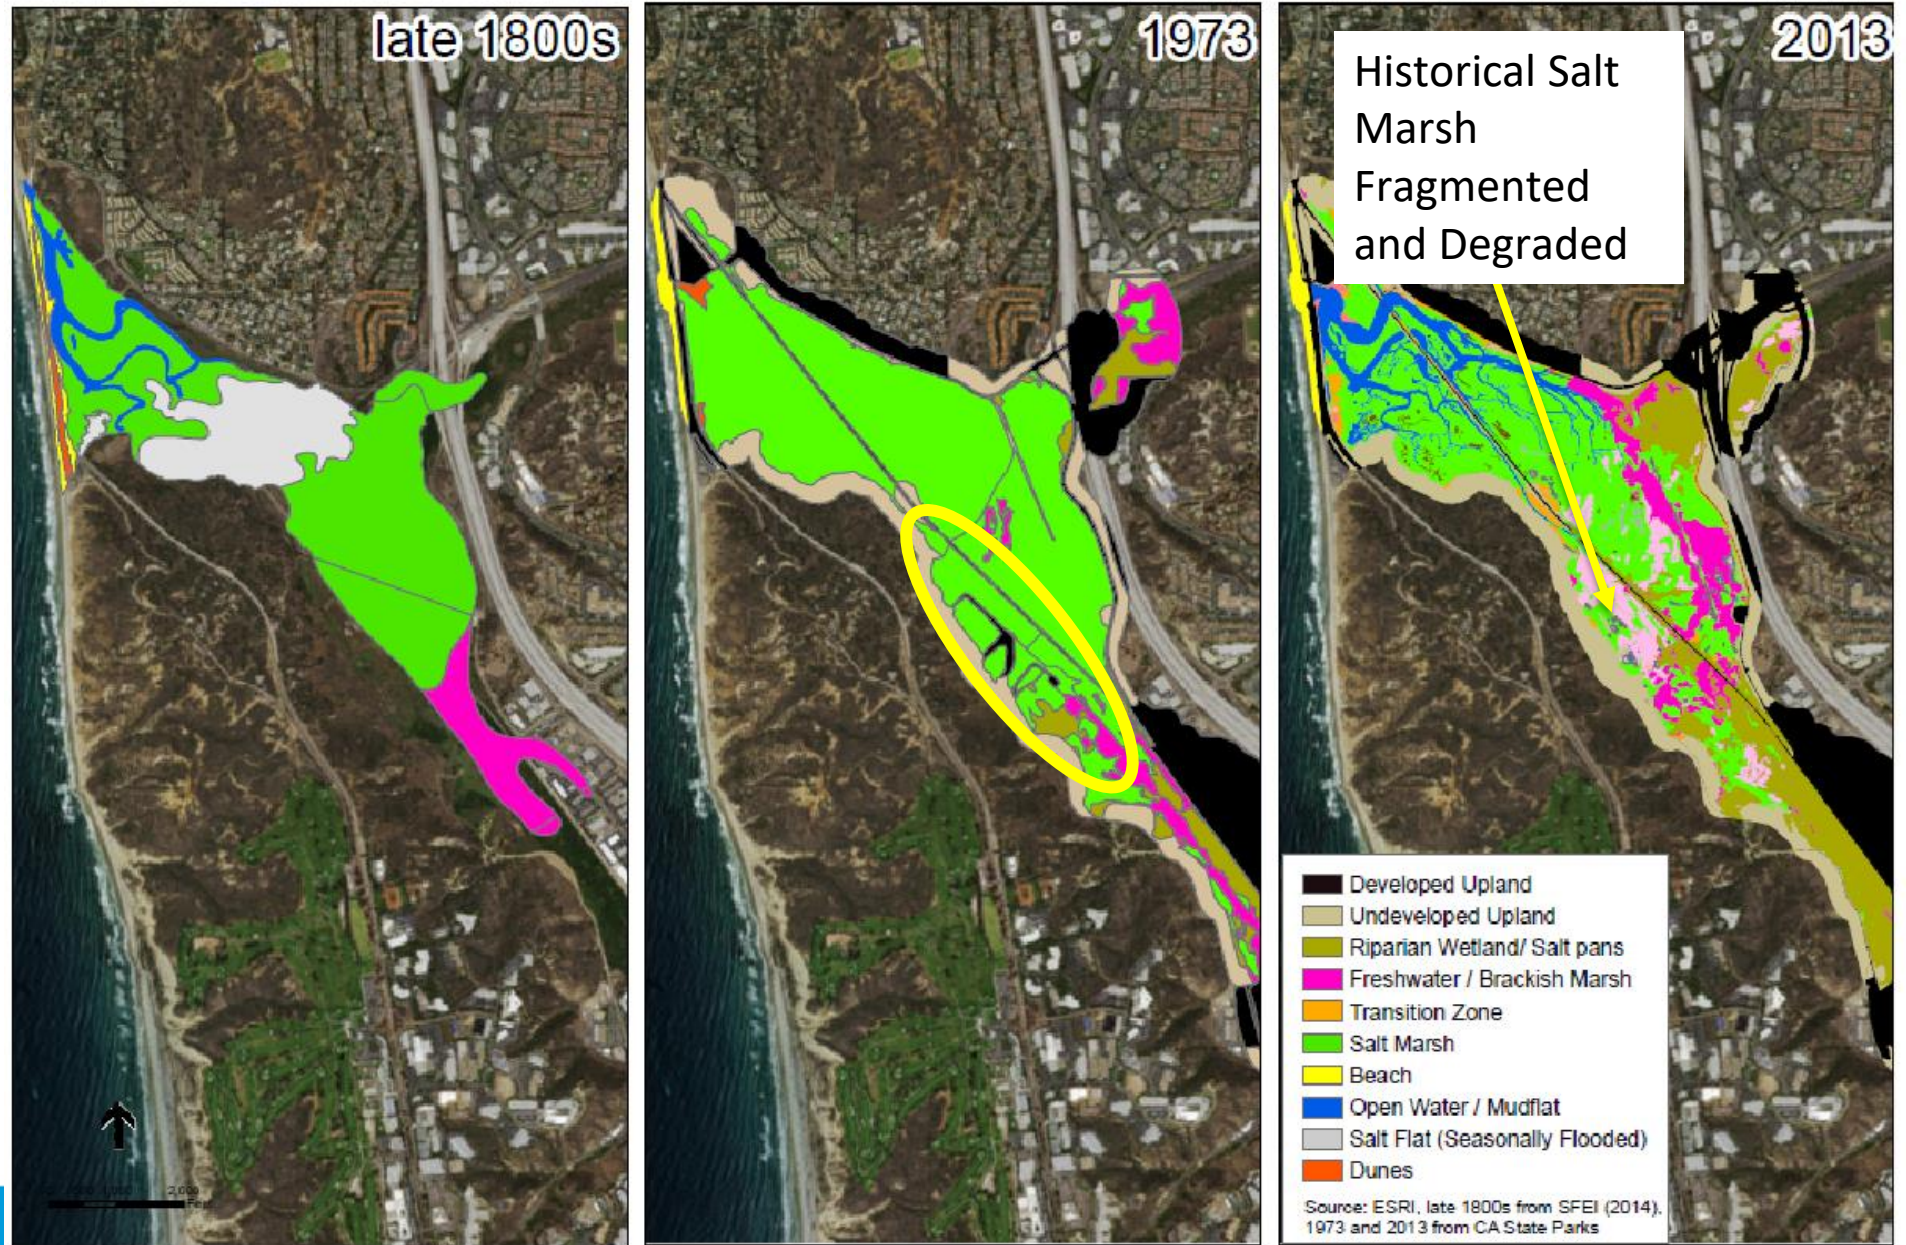

Figure from Updated LPL Enhancement Plan (LPLF, 2016)

# Los Peñasquitos Lagoon Restoration

## Phase 1 & 2

- ❖ Phase 1 – Floodplain Improvements, Riparian Enhancements, Salt Marsh Restoration/Recovery
- ❖ Project Area – Sorrento Valley and Torrey Pines State Natural Reserve
- ❖ Phase 2 – TBD later with approach and design informed by Phase 1
- ❖ Phase 1 is focus of presentation

Figure from 2018 Watershed Master Plan (Phase 1 boundary has expanded during current design effort)

# Phase 1 Project Boundary - Ownership

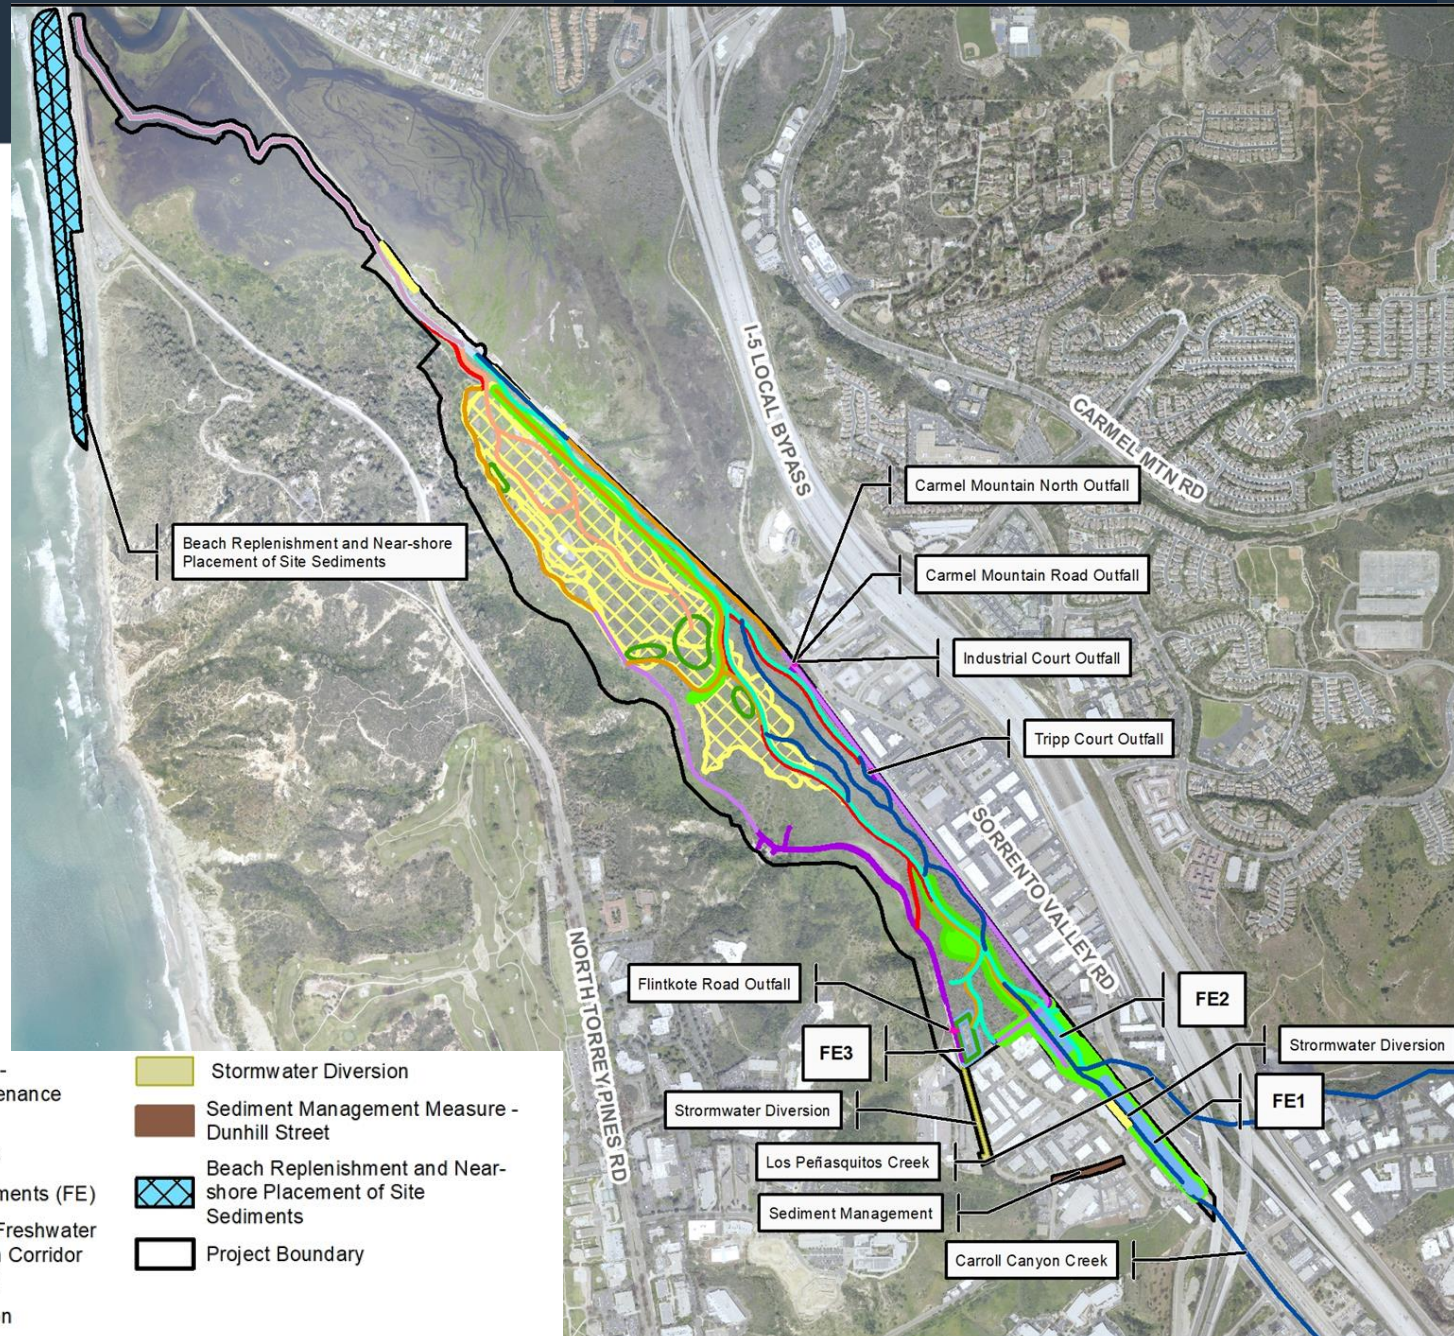

# Project Benefits to the Community

- ❖ Restores and preserves open space that contains rare and sensitive habitats native to Los Peñasquitos Lagoon.
- ❖ Improved protection for businesses and roadways in Sorrento Valley from flooding and mud flows following frequent rain events.
- ❖ Enhanced public access along the Marsh Trail.
- ❖ Stormwater outfall improvements to reduce trash and debris as well as eliminating areas of ponded water (mosquito breeding habitat).

# Project Components

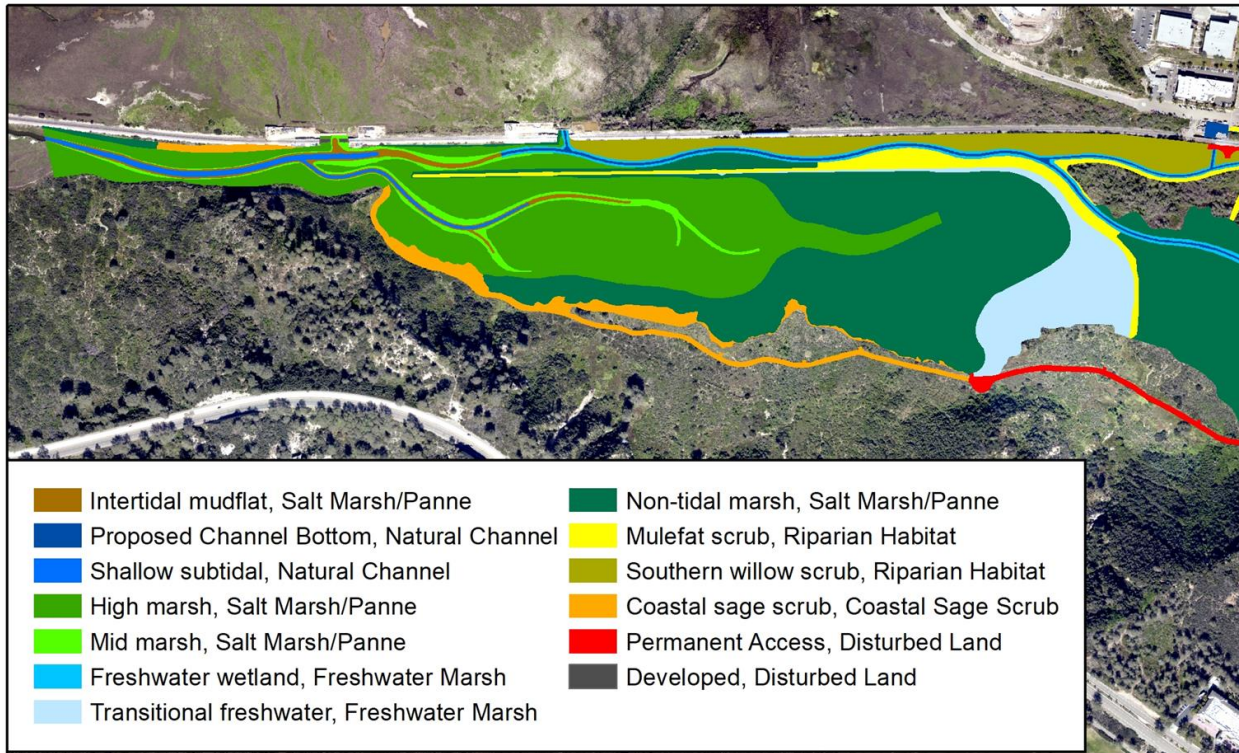

- ❖ Salt Marsh Restoration
- ❖ Riparian Corridor Enhancement & Wildlife Corridor
- ❖ Sediment Management
- ❖ Nuisance Freshwater Management
- ❖ Flood Level Reduction
- ❖ Public Access Enhancement

- |  |  |   |  |
|--|--|---|--|
| Storm Water Diversion  | Proposed Main Freshwater Channels                      | Existing Paved Road - Construction & Maintenance Access                             | Stormwater Diversion   |
| Stormdrain Connections for Freshwater and Mosquito Breeding Habitat Management | New Tidal Channels                                     | Temporary Stockpiles  | Sediment Management Measure - Dunhill Street                   |
| Planned Existing Tidal Channel Dredging to Remove Sill                         | Adaptive Management Period / Construction Access Roads | Flood Plain Enhancements (FE)   | Beach Replenishment and Near-shore Placement of Site Sediments |
| Existing Tidal Channels  | Construction Access Roads                              | Planned Grading for Freshwater Channel and Riparian Corridor Habitat Rehabilitation | Project Boundary   |
| Existing Riparian Corridors / High Flow Freshwater Channels                    | Long-Term / Construction Access Roads                  | Salt Marsh Restoration  |  |

# Salt Marsh Restoration – Phase 1

## Key Goals

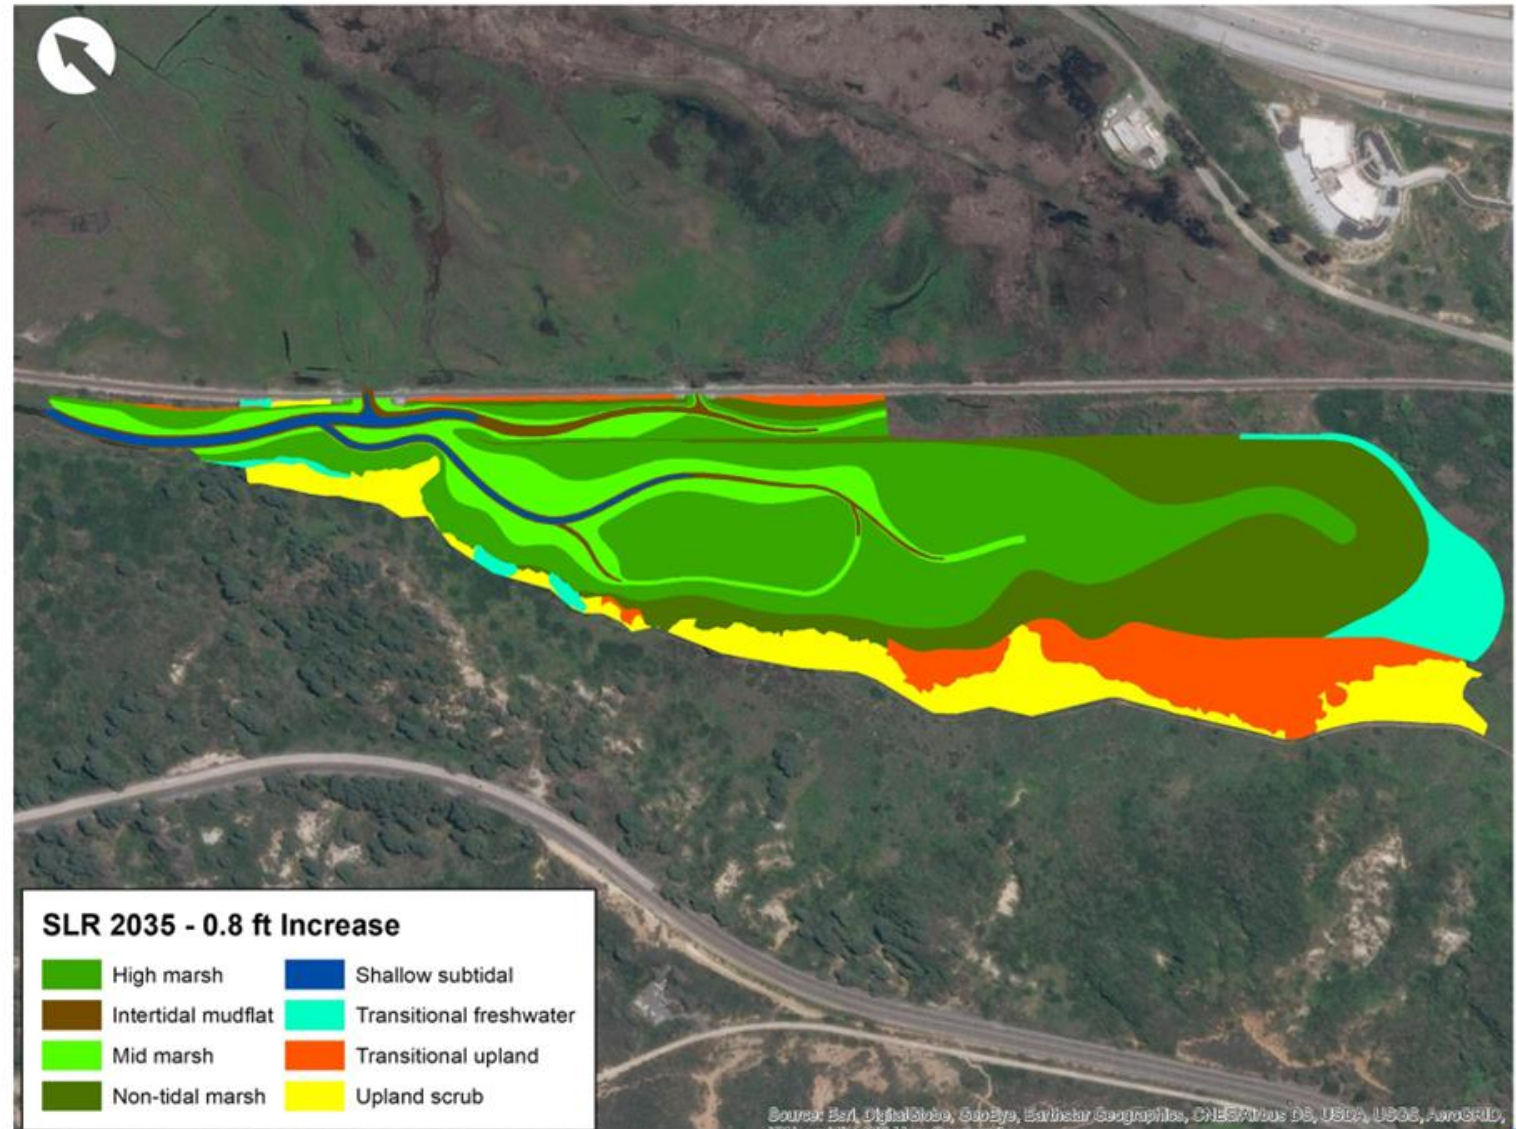

- ❖ Restore 45-55 acres toward 84 acres of salt marsh habitat by 2035 (TMDL).+
- ❖ Remove existing non-native rye grass and replace with salt marsh vegetation.
- ❖ Consider future sea level rise

# Los Penasquitos Lagoon Restoration Project – Designed for Adaptive Resiliency

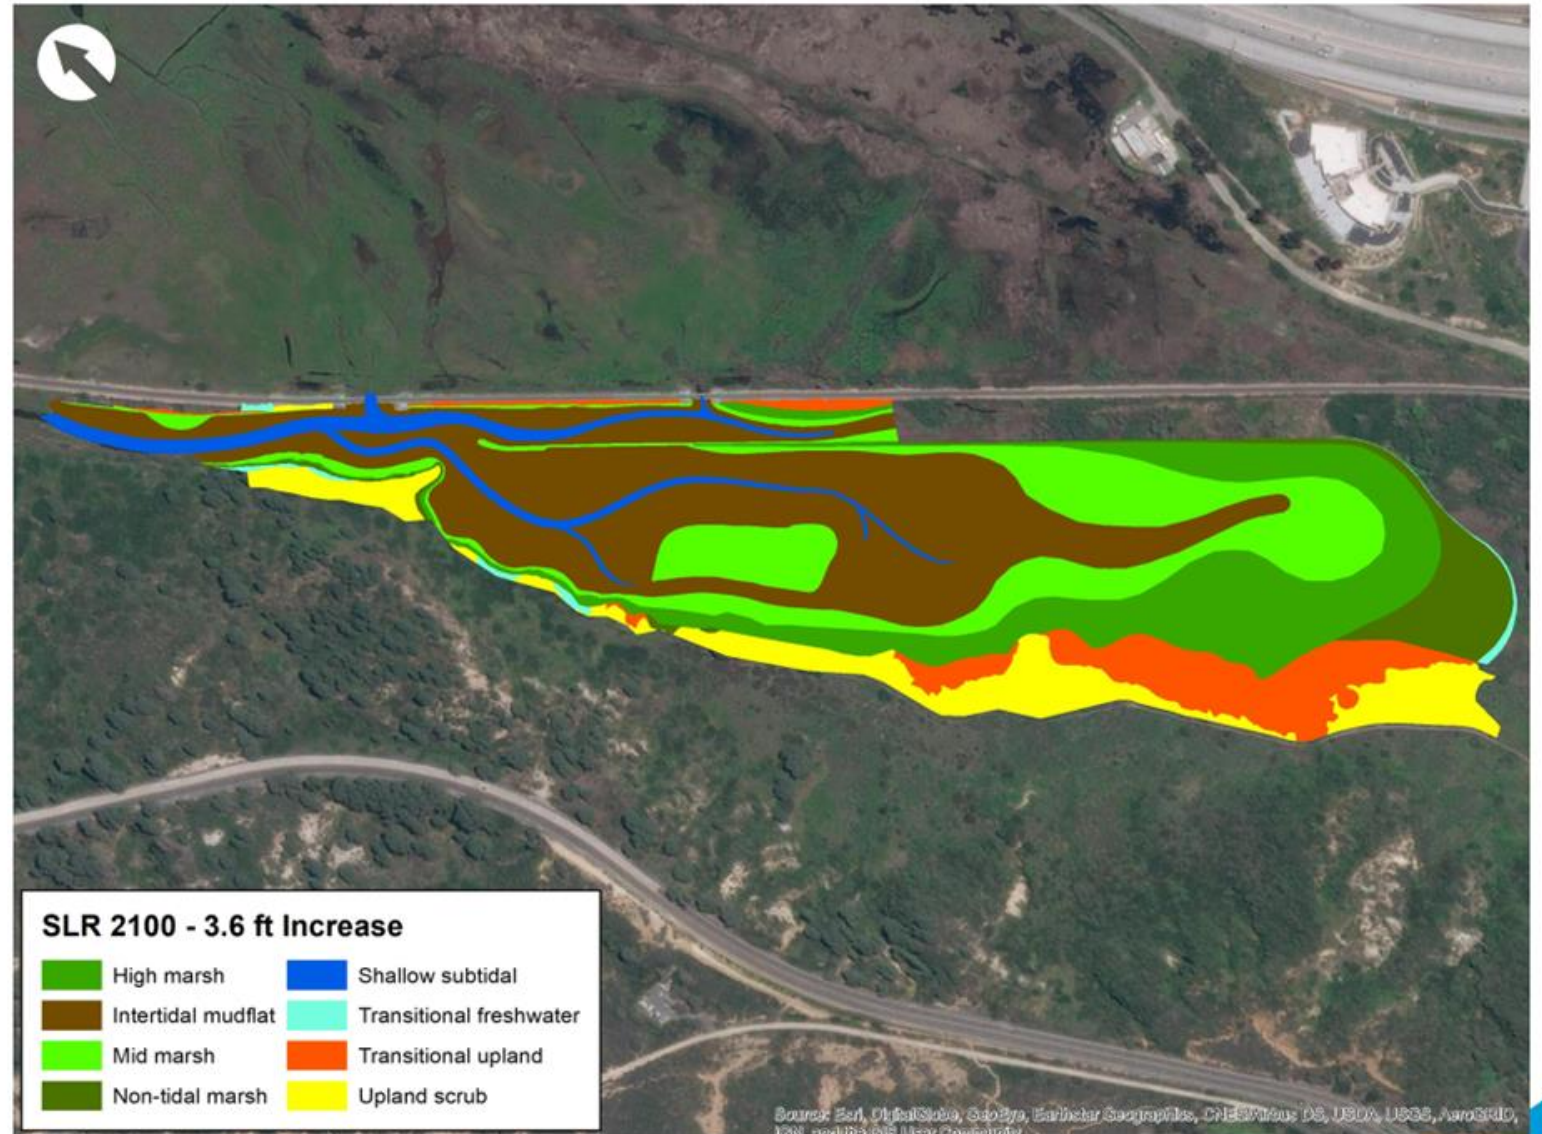

## - Sea Level Rise (SLR) Considerations

- ❖ Design included Adaptive Management for Future SLR
- ❖ Design Team used Hydrodynamic Modeling of SLR at 2035 and 2100
- ❖ Modeling results used to provide for Transition Zones to allow for restored areas to adapt to future SLR
- ❖ Transition zones allow for expanded tidal wetlands while not creating less valuable sub-tidal habitat per TMDL

# Salt Marsh Restoration – Vegetation Communities – 2035 – SLR (0.8 ft.)

# Salt Marsh Restoration – Vegetation Communities – 2100 – SLR (3.6 ft.)

# Mitigation

## **Wetlands Re-establishment (4.1 acres)**

- Salt marsh (4.1 acres)

## **Wetlands Rehabilitation (47.9 acres)**

- Salt marsh (29.8 acres)
- Riparian habitat (11.6 acres)
- Freshwater marsh (5.1 acres)
- Natural channels (2.3 acres)

## **Wetlands Enhancement (18.6 acres)**

- Salt marsh (16.1 acres)
- Riparian habitat (2.5 acres)

- Additional Wetlands Restoration Following Temporary Construction Impact (12.2 acres)
- Additional Upland (coastal sage scrub) Restoration (6.6 acres)

# Impact Analysis

## Type Conversion - Loss

- 4.3 acres Riparian Habitat
- 1.4 acres Coastal Sage Scrub
- 2.9 acres Non-Native Grassland

## Type Conversion - Gain (8.9 acres net)

- 6.7 acres of Salt Marsh/Panne
- 4.4 acres of Freshwater Marsh
- 2.2 acres of Natural Channel

## Upland Restoration (2.5 acres onsite)

- 3.63 acres Coastal Sage Scrub deficit
- 0.59 acre Non-Native Grassland deficit
- Additional onsite upland restoration, bank credits, or HAF

## Wetlands Mitigation

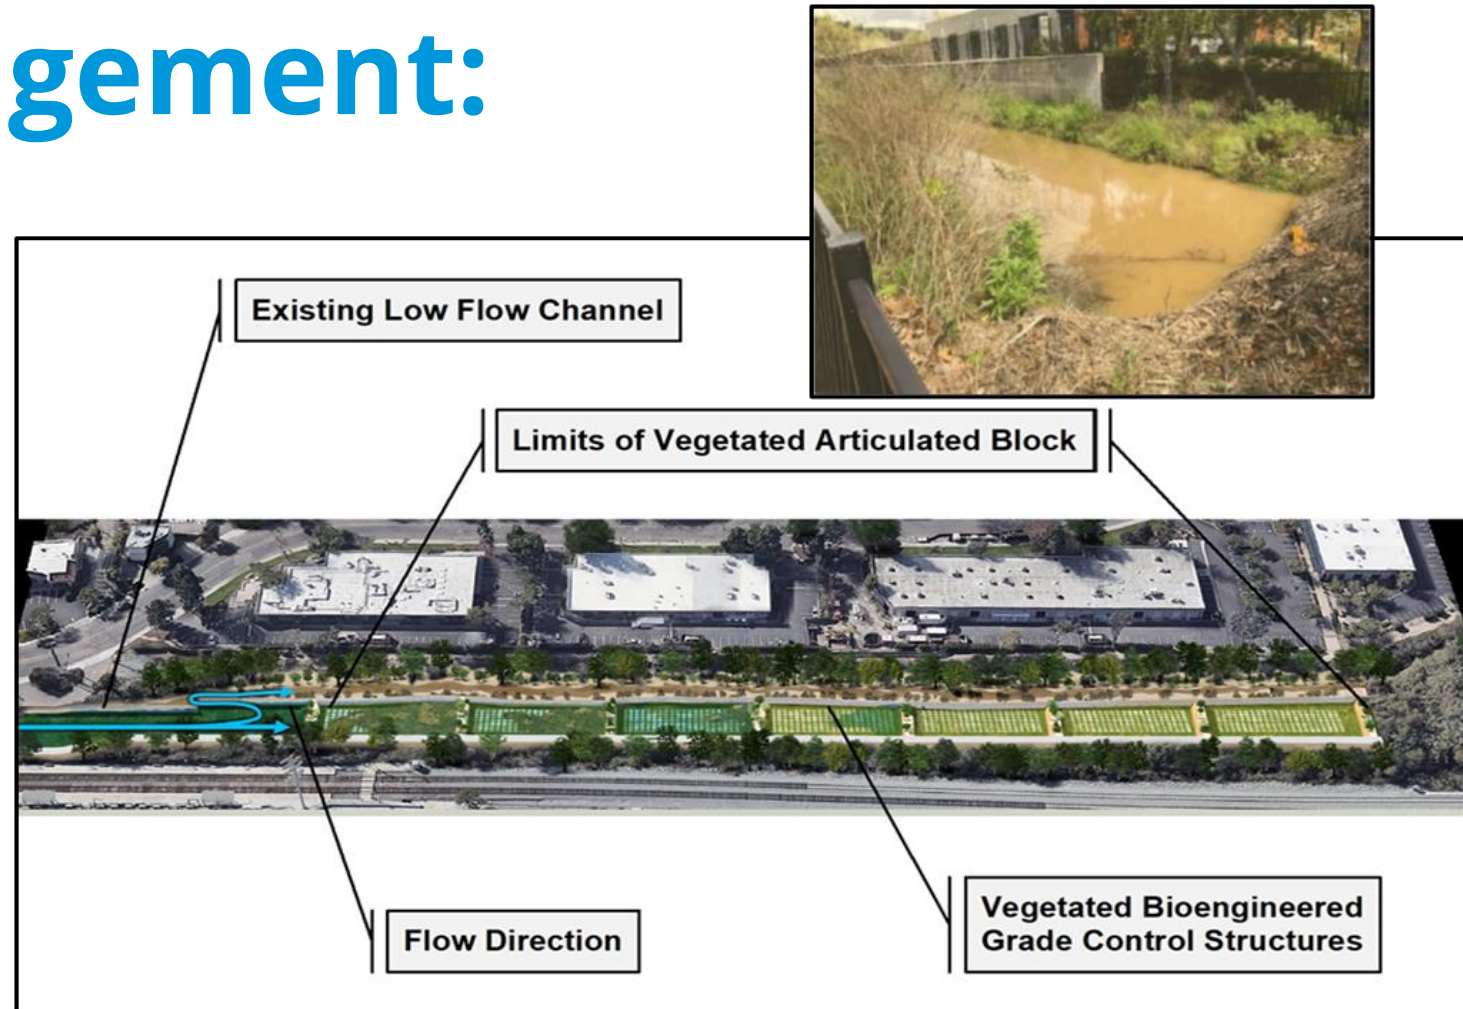

- To support Phase 1 with excess applied to Phase 2

# Sediment Management:

## Key Goals

- ❖ Remove coarse sediment before impacting Riparian and Lagoon Habitats
- ❖ Address sediment, trash & vector issues at storm drains

# Riparian Corridor Enhancement

## Key Goals

- ❖ Remove invasive plants
- ❖ Improve and preserve a key wildlife corridors

DUDEK

FIGURE 4  
Light-Footed Clapper Rail Movement Corridor Section  
Light-footed Ridgway's Rail Report-Los Peñasquitos Lagoon Restoration - Phase 1

# Nuisance Freshwater Management:

## Key Goals

- ❖ Convey nuisance freshwater flows away from salt marsh habitat
- ❖ Reduce retention time of storm runoff to levels that support salt marsh health

# Flood Extent & Level Reductions – Frequent Events

Existing Conditions (10-Year Storm Event)

Improved Conditions (10-Year Storm Event)

# Public Access Enhancement – Marsh Trail

- ❖ Improvements similar to the Broken Hill Trail in Torrey Pines State Natural Preserve.
- ❖ Design to be coordinated with LPLF project for upslope realignment of the Marsh Trail's western segment.

# Project Maintenance

- ❖ 5-Yr. Project Adaptive Management Period –informs Phase 2 design and maintenance for Phase 1
- ❖ City is working with State Parks on Access Agreement for Construction & Maintenance
- ❖ Maintenance includes sediment management

# Work completed and future activities

- ❖ Habitat Mitigation and Monitoring plan completed – Nov 2024
  - Hydrodynamic and hydraulic modeling coordinated with TAC in 2022 & 2023
- ❖ 100% Design Plans completed – Dec 2023
- ❖ Site Development Permit completed – Oct 2025
- ❖ Environmental permitting:
  - CEQA Addendum adopted by City Council – Mar 2025
  - Streambed Alteration Agreement with CDFW signed – Feb 2026
  - Remaining/ongoing permitting activities:
    - Coastal Development permit with CA Coastal Commission
    - 404/10 Permit with US Army Corps of Engineer
    - 401 Water Quality Certification with Regional Water Quality Control Board

# Anticipated Schedule

- ❖ 100% Design Plans Completed – December 2023
- ❖ Permits – Notice of Approvals and Final Design completion – Targeting 4<sup>th</sup> Quarter of 2027
- ❖ Construction-related activities for Phase 1 are dependent on securing the funds:
  - Plant procurement contract – start anticipated at the beginning of 3<sup>rd</sup> Quarter 2028
  - Construction contract – start anticipated at the beginning of 3<sup>rd</sup> Quarter 2029
  - Construction to be in subphases (1a, 1b, 1c) and last 2029-2033
- ❖ Adaptive Management Period –5-year period – begins as each subphase is completed

# Discussion/Questions
