RE: Qualifying Bus Stops In San Diego Are Tier 2 Transit-Oriented Development Stops Under Senate Bill 79

Dear SANDAG Chair & Staff,

On behalf of the YIMBY Democrats of San Diego County, we write to urge SANDAG to adopt the interpretation of SB 79 (2025) that recognizes qualifying bus stops in the San Diego region as Tier 2 Transit-Oriented Development Stops. This interpretation is consistent with the legislature’s stated intent to increase housing near transit in furtherance of the state’s housing, transit, and climate goals.¹

SB 79 establishes Tier 1 and Tier 2 Transit-Oriented Development Stops based on the type and quality of transit service present.² Each tier carries development standards governing parcel density depending on proximity to the stop and the surrounding population density.³ The type of transit service is therefore the threshold question when determining which development standards apply to any given parcel.

Under SB 79, a Tier 2 Transit-Oriented Development Stop is defined in relevant part as a transit-oriented development stop within an urban transit county served by “bus service meeting the standards of paragraph (1) of subdivision (a) of Section 21060.2 of the Public Resources Code.”⁴ The full “bus rapid transit” definition in PRC § 21060.2 is more demanding than what SB 79 requires: it imposes additional features including transit signal priority, all-door boarding, an efficient fare collection system, and defined stations.⁵ SB 79, by contrast, incorporates only paragraph (1) of subdivision (a) of PRC § 21060.2—the dedicated-lane and frequency prong—and no other features.⁶ Under that standard, a bus stop qualifies as a Tier 2 stop if it is served by a route operating with (1) full-time dedicated bus lanes or operation in a separate right-of-way dedicated for public transportation, and (2) a service frequency of no greater than 15 minutes during weekday peak commute hours.⁷ HCD’s March 20, 2026 advisory to the state’s MPOs confirms this standard, defining a qualifying bus service TOD stop as one where

¹ Gov. Code § 65912.155.

² Gov. Code §§ 65912.156(n)–(o).

³ Gov. Code § 65912.157(a).

⁴ Gov. Code § 65912.156(o).

⁵ Pub. Resources Code § 21060.2(a).

⁶ Gov. Code § 65912.156(o) (cross-referencing only “paragraph (1) of subdivision (a) of Section 21060.2” of the Public Resources Code).

⁷ Pub. Resources Code § 21060.2(a)(1).

the bus stop is adjacent to a full-time dedicated transit lane and the average bus service intervals across the combined morning and afternoon peak periods is 15 minutes or less.⁸

This lower threshold was deliberately crafted to include higher-quality bus services that fall short of a full BRT system but nonetheless provide the commuter-focused, frequent, reliable, dedicated-lane service that justifies transit-oriented upzoning.⁹ In the San Diego region, five bus routes meet SB 79's criteria: Routes 1, 7, and 10, as well as Rapid 215 and Rapid 235. These routes operate on four principal corridors, Park Boulevard, El Cajon Boulevard, University Avenue, and the SR-15 Centerline busway through City Heights, all of which feature full-time dedicated bus lanes and peak-hour service frequencies of 15 minutes or less, yielding 52 bus stops that satisfy the SB 79 Tier 2 threshold.¹⁰

Recognizing these 52 stops as Tier 2 Transit-Oriented Development Stops is legally compelled by the plain text of SB 79 and serves the law's purpose of directing new housing to locations well-served by frequent, reliable transit. Failing to do so would arbitrarily exclude stops that satisfy every criterion in the statute, deny upzoning protections to parcels within walkable distance of high-quality bus service, and expose the county and local jurisdictions to potential legal challenges. It would also undermine the region's RHNA compliance efforts and broader climate and transportation goals.

Adopting this interpretation will keep SANDAG consistent with the intent and language of the law,¹¹ advance the county's housing production, support RHNA and climate obligations, and strengthen ridership on these corridors. The YIMBY Democrats of San Diego County respectfully urge SANDAG to designate the qualifying bus stops described herein as Tier 2 Transit-Oriented Development Stops under SB 79. Thank you for your time and consideration.

Re: April 16 Planning Commission Agenda Item 6 (SB 79 Implementation)

Chair Modén and Planning Commissioners:

Neighbors For A Better San Diego (NFABSD) submits the following comments and recommendations regarding the proposed implementing ordinance for SB 79.

SB 79 is a complicated bill, and we appreciate the Planning Department's stepwise approach to implementation, which will also provide flexibility as the state law is revised in the current and future legislative sessions.

NFABSD will comment on the assumptions of SB 79 separately. This letter focuses on our specific recommended changes to the proposed San Diego ordinance.

Recommendation 1

Change Recital C as follows (NFABSD recommended changes are highlighted):

C. Government Code section 65912.156 adds the definition of a Transit Oriented Development (TOD) stops as a major transit stop, as defined by section 21064.3 of the California Public Resources Code (Public Resource Code), that is served by rail transit or bus service within an urban transit county (TOD Stops).

The reason for this recommendation is that SB 79's reference to 21064.3 is just to define SB 79's reduction in BRT criteria for SB 79 alone and does not change the state's major transit stop definition for mapping Transit Priority Areas, Sustainable Development Areas, or other maps derived from the State's major transit stops definition.

Recommendation 2

Delete Section 7 of the Action Items which states that this ordinance doesn't have to go before the Planning Commission. This section appears to have been left over from the original draft ordinance that was proposed in March to go directly to City Council.

Recommendation 3

Section 9. Change to "This Ordinance will take effect and be in force on the thirtieth day from and after its final passage, **or July 1, 2026, whichever is later.**"

Recommendation 4

Add a Section 10 stating that if the effective date of SB 79 is changed by the Legislature, then the effective date of San Diego's implementing ordinance will similarly be delayed.

Recommendation 5

Add a Section 11 stating that if SB 79 is repealed by the Legislature, statewide initiative, or legal judgement, then San Diego's implementing ordinance will similarly be repealed.

Note that the scope of the adopting ordinance is defining the sites that will be eligible for SB 79 developments when San Diego's implementing ordinance goes into effect. Project applicants and Development Services Department staff will need to refer to the provisions of Public Resources Code Chapter 4.1.5 for the development requirements for specific projects.

Respectfully,

Geoffrey Hueter, Chair
Neighbors For A Better San Diego

Re: Proposed Housing Development Project at 7020 Airway Road

To: Planningcommission@sandiego.gov;

**Cc: cityattorney@sandiego.gov; cityclerk@sandiego.gov;
citymanager@sandiego.gov;**

Dear San Diego Planning Commission,

The California Housing Defense Fund (“CalHDF”) submits this letter to remind the City of its obligation to abide by all relevant state laws when evaluating the proposed 985-unit housing development project at 7020 Airway Road, which includes 26 very low-income units and 62 low-income units. These laws include the Housing Accountability Act (“HAA”) and the Density Bonus Law (“DBL”).

The HAA provides the project legal protections. It requires approval of zoning and general plan compliant housing development projects unless findings can be made regarding specific, objective, written health and safety hazards. (Gov. Code, § 65589.5, subd. (j).) The HAA also bars cities from imposing conditions on the approval of such projects that would reduce the project’s density unless, again, such written findings are made. (*Ibid.*) As a development with at least two-thirds of its area devoted to residential uses, the project falls within the HAA’s ambit, and it complies with local zoning code and the City’s general plan. Increased density, concessions, and waivers that a project is entitled to under the DBL (Gov. Code, § 65915) do not render the project noncompliant with the zoning code or general plan, for purposes of the HAA (Gov. Code, § 65589.5, subd. (j)(3)). The HAA’s protections therefore apply, and the City may not reject the project except based on health and safety standards, as outlined above. Furthermore, if the City rejects the project or impairs its feasibility, it must conduct “a thorough analysis of the economic, social, and environmental effects of the action.” (*Id.* at subd. (b).)

CalHDF also writes to emphasize that the DBL offers the proposed development certain protections. The City must respect these protections. In addition to granting the increase in residential units allowed by the DBL, the City must not deny the project the proposed waivers and concessions with respect to parking location, transparency, private open space, motorcycle parking, bicycle parking, loading areas, private storage, height, setback, and parking dimensions. If the City wishes to deny requested waivers, Government Code section 65915, subdivision (e)(1) requires findings that the waivers would have a specific, adverse impact upon health or safety, and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact. If the City wishes to deny requested concessions, Government Code section 65915, subdivision (d)(1) requires findings that the concessions would not result in identifiable and actual cost reductions, that the concessions would have a specific, adverse impact on public health or safety, or that the concessions are contrary to state or federal law. The City, if it makes any such findings, bears the burden of proof. (Gov. Code, § 65915, subd. (d)(4).) Of note, the DBL specifically allows for a reduction in required accessory parking in addition to the allowable waivers and concessions. (*Id.* at subd. (p).) Additionally, the California Court of Appeal has ruled that when an applicant has requested one or more waivers and/or concessions pursuant to the DBL, the City “may not apply any development standard that would physically preclude construction of that project as designed, even if the building includes ‘amenities’ beyond the bare minimum of building components.” (*Bankers Hill 150 v. City of San Diego* (2022) 74 Cal.App.5th 755, 775.)

As you are well aware, California remains in the throes of a statewide crisis-level housing shortage. New housing such as this is a public benefit: it will provide badly needed affordable housing; it will increase the city’s tax base; it will bring new customers to local businesses; and it will reduce displacement of existing residents by reducing competition for existing housing. While no one project will solve the statewide housing crisis, the proposed development is a step in the right direction. CalHDF urges the City to approve it, consistent with its obligations under state law.

CalHDF is a 501(c)(3) non-profit corporation whose mission includes advocating for increased access to housing for Californians at all income levels, including low-income households. You may learn more about CalHDF at www.calhdf.org.

Sincerely,

Dylan Casey

06 April 2026

Heidi Vonblum
Director, Planning Department
202 C St., M.S. 413
San Diego, CA 92101

Re: Allied Gardens - Grantville Community Council Position Concerning Phasing Implementation of SB 79 & Planning Department Housing Element Data

Director Vonblum,

We are taking this opportunity to provide feedback on the implementation of the subject legislation at the community level. With recent state and city legislation in this 6th housing cycle, major strike-throughs and nullifications of our community plans city-wide have occurred; and we are impressed with the pace at which you are meeting your policy goal of updating 10 community plans per cycle. However, Grantville is the focus of our discussion on this point.

Grantville's 2015 focused plan amendment is also suffering from the impacts of these laws and ordinances. And city-wide our communities infrastructure problems are made worse through a policy of diverting critical Development Impact Fees (DIF) to 'Communities of Concern' away from the neighborhoods generating this revenue. Fire/water/sewer mains, roads, mobility, public safety, evacuation routes and sites, emergency communications networks, the growing list of public infrastructure degrading in every community to the benefit of a few is alarming. Particularly when 'Communities of Concern' are also generating their own DIF through the operation of these laws and housing development.

We support the following SB 79 implementation actions with minor variations:

- Exempting areas that are more than one-mile pedestrian walk from transit.
- Delay additional implementation of SB 79 in Low Resource Areas until the City adopts its next General Plan Housing Element in 2031.
- Delay implementation of SB 79 in Very High Fire Severity Zones; and at sites with a potential or designated historic resource; until spring 2027 to give community planning groups a chance to

Allied Gardens Grantville Community Council
5173 Waring Road #445, San Diego, CA 92120-2705

provide more meaningful feedback on any newly drafted Transit-Oriented Development Alternative Plan.

To honor Mayor Gloria’s call in his 2026 State of the City address to “prove our progress,” and to help meet the objectives of Goal Six in the General Plan’s Housing Element, we request that the following data—already collected by the Development Services Division (DSD) during the permit process—be permanently posted on the 'DSD Dashboard' for public use." This single gesture would contribute immeasurably to each planning group’s understanding and ability to partner with the planning department, and it will educate the public on the scale and need of these laws where they live, provide transparency necessary in a democracy, and build trust in government.

This request is supported by the city’s housing element goals and objectives as well as a variety of policies. The data requested are as follows:

- Show the location and number of adequate public sites available for development by planning area. (Goal 1 Objective A, Policies HE-A.1&2, 5, 6, & 7)
- Give the number of projects and units provided by each incentive program in each planning area for each year of the cycle (i.e., ADU, Density Bonus Programs, Expedite Programs, Accessibility Programs.) (Goal 1, Objective C, Policy HE-C.10)
- Provide data specific to each project’s infrastructure improvements and DIF collected, by planning area and year. (Goal 1, Objective D, Policies HE-D.2 & 4)
- List building permits issued for projects including housing of vulnerable populations, including the number of units, by planning area; And publish the measures and targets for each housing element program objective. (Goal 1 Objective E, Policies HE-E.1, 2 & 7 through 11)
- Demonstrate program and incentives effectiveness to encourage new affordable housing across all income groups in all planning areas using filterable TCAC census tract demographic data, by planning area, including targets for each year. (Goal 3, Objective I, Policies HE-I.1-3, 5-7, 9 & 11)
 - The number of units by affordability level in high opportunity areas.
 - The number of new recreational, active transportation, and transit infrastructure projects located in disadvantaged communities.
 - The number of new housing units produced annually through each incentive program.
 - The number of affordable and naturally occurring housing units preserved annually.
 - The number of affordable multifamily housing units produced in each community.

Allied Gardens Grantville Community Council
5173 Waring Road #445, San Diego, CA 92120-2705

- The number of Permanent Supportive Housing (PSH), Transition Housing (TH), and Emergency Shelter (ES) units or beds available by community.

Housing element goal six (Publicizing housing needs & resources) and achievement of its objectives (fostering city-wide discussion and accessibility to information) can be amplified through the Mayor's invitation for the public to observe, "results you can see," sharing your successes and inspiring collaboration. We urge you and your teams to consider the benefits we all can share through making this data readily available on multiple SDHC and departmental web pages.

As a reminder we await a response from your office to our 2 February 2026 request for a community presentation of the progress made to date on the Affordable Homes Development Master Plan (AHDMP). This was requested as part of our feedback on the Pro-housing Designation renewal application, as was a request for a list of public lands being considered for designation as excess land under Housing Element policy HE-A.6 for this purpose. Thank you for your attention to these matters.

Sincerely,

The Allied Gardens / Grantville Community Council

Kensington & Talmadge
Mid City Communities Plan
P&R Workshop

April 16, 2026

A Reminder:

From Parks Master Plan and my November 2024 Letter to P&R Board:

Park Points are to be evaluated “within a given community plan area”

<p>Cumulative Recreational Value for a Community Planning Area</p>	<p>The score of local parks and local-serving portions of Regional Developed Parks + points for proximity to Regional Developed Parks, Regional Resource-Based Parks, trails, and shorelines. The cumulative score represents the total recreational value within a given community plan area (CPA). This score will only be calculated and used during the community plan update process. See Appendix E. Park Scoring for Sample Community Plan Areas for CPA scores. At least 20 percent (or 20 points per 1,000 residents) of a community’s parks standard shall be satisfied through increased land acquisition.</p>
---	---

4 Community Planning Areas

4 Park Point Scores

City's Proposal

Max & Monroe – 1900 sf of flat space

Other Ideas A:
Adams & 51st – 2000 sf of flat, usable space

Other Ideas B: Miracle & Jean – 8600 sf of flat, usable space

Other Ideas C: Hoover Bleachers – 5400 sf of flat, usable land

Other Ideas D: Estrella Avenue 4400 Block

30,500 sf of flat, usable land

SB 79 Implementation

Planning Commission April 16, 2026

Topics

- **SD has already zoned for housing around transit stops through community plan updates and zoning overrides such as Complete Communities Housing Solutions and Accessory Dwelling Unit density bonus.**
- **San Diego SB 79 implementation should maintain flexibility to structure an Alternative Plan and anticipate further legislative action.**

Transit Oriented Development (TOD) Assumptions: April 9 Staff Memo

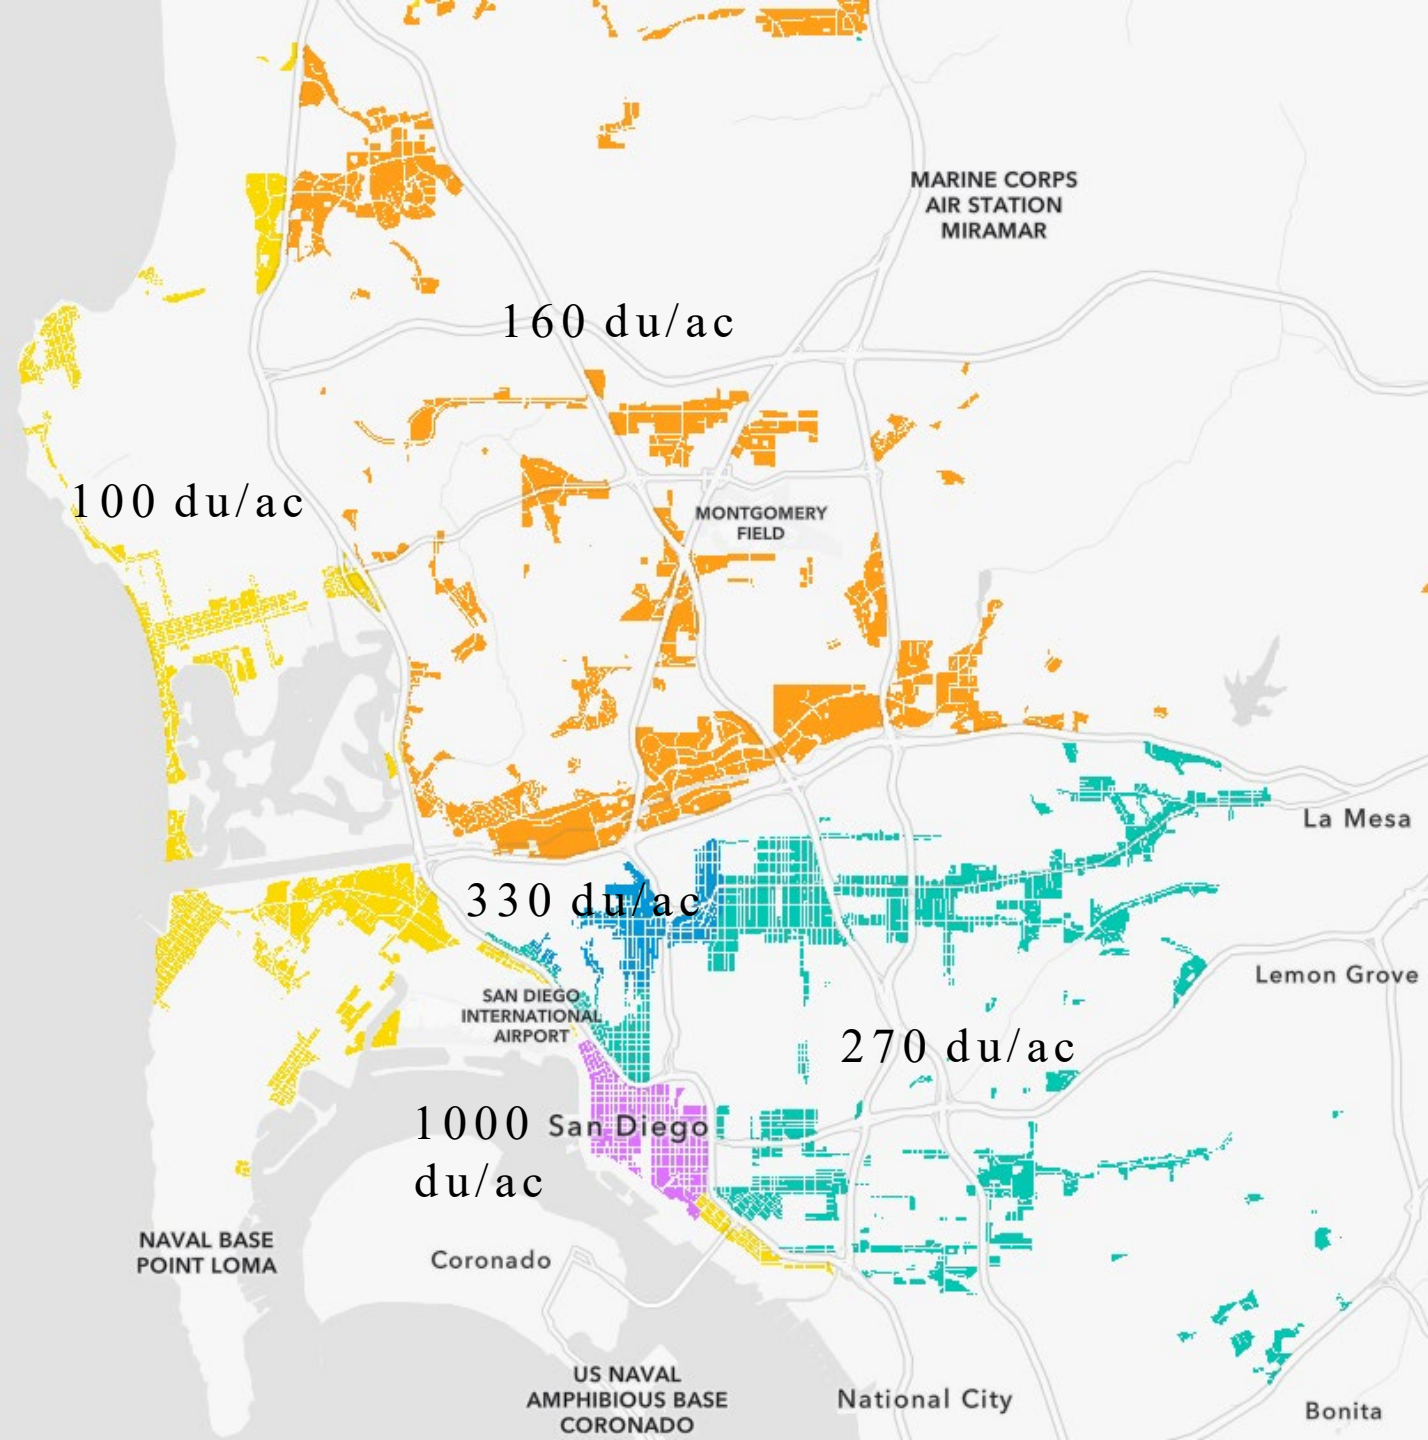

Table 1 - SB 79 Required Zoning Capacity in City of San Diego TOD Zones

	Estimated Home Capacity
SB 79 Required Home Capacity	861,000
Existing Base Zone Home Capacity	494,000
Additional SB 79 Home Capacity Required	367,000²

For reference San Diego 2021-2029 housing target (RHNA) is 108,036

CCHS already provides a transit-oriented overlay around SB 79 designated transit stops

Total estimated capacity > 1 million units

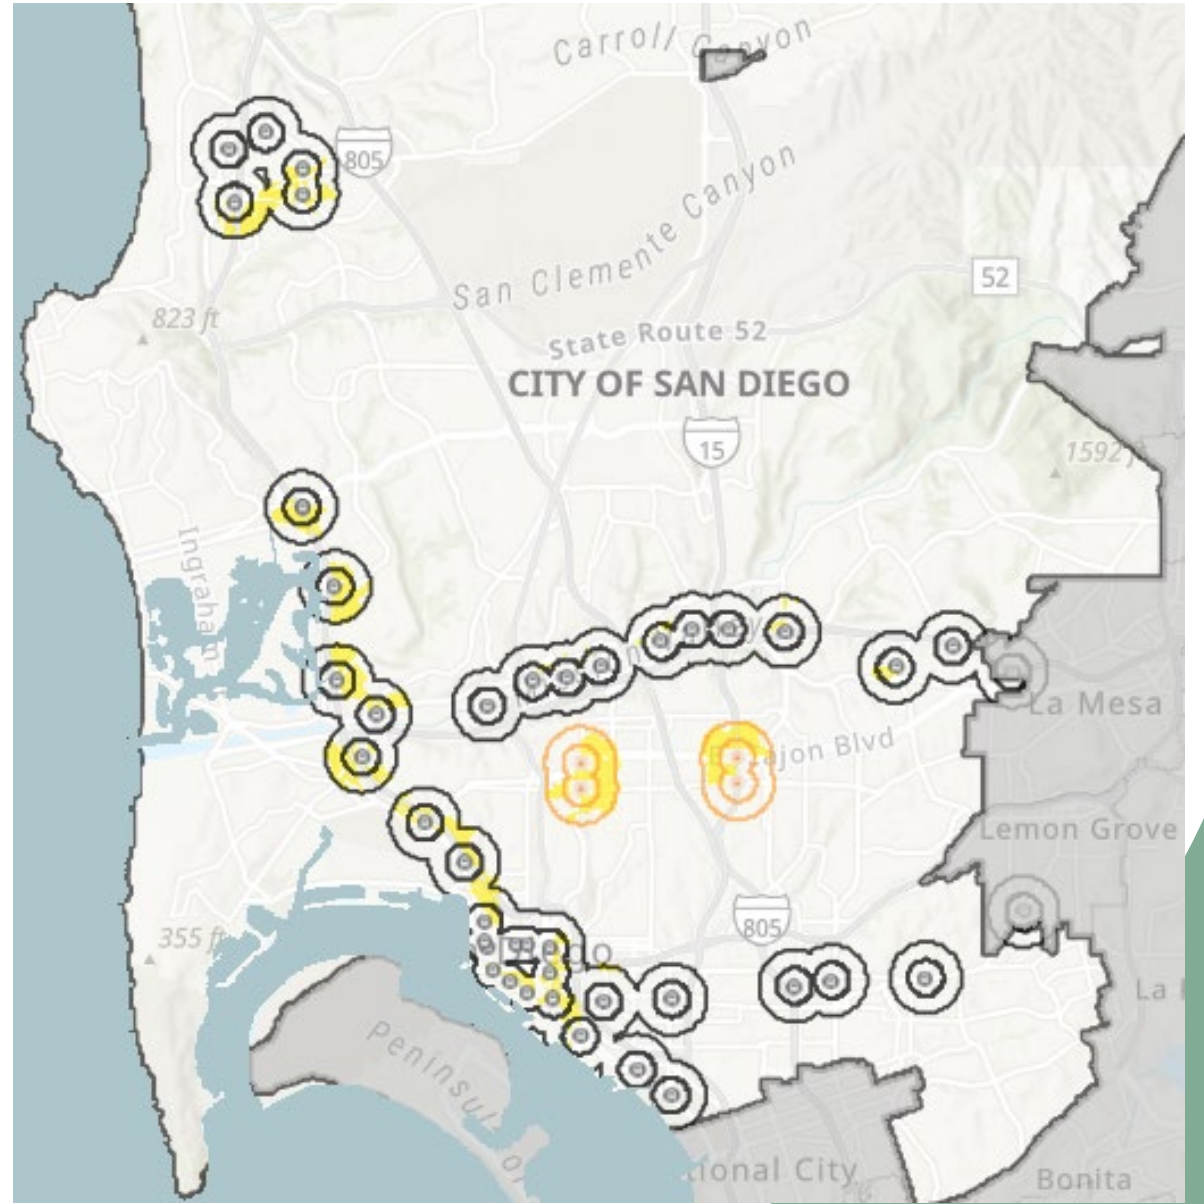

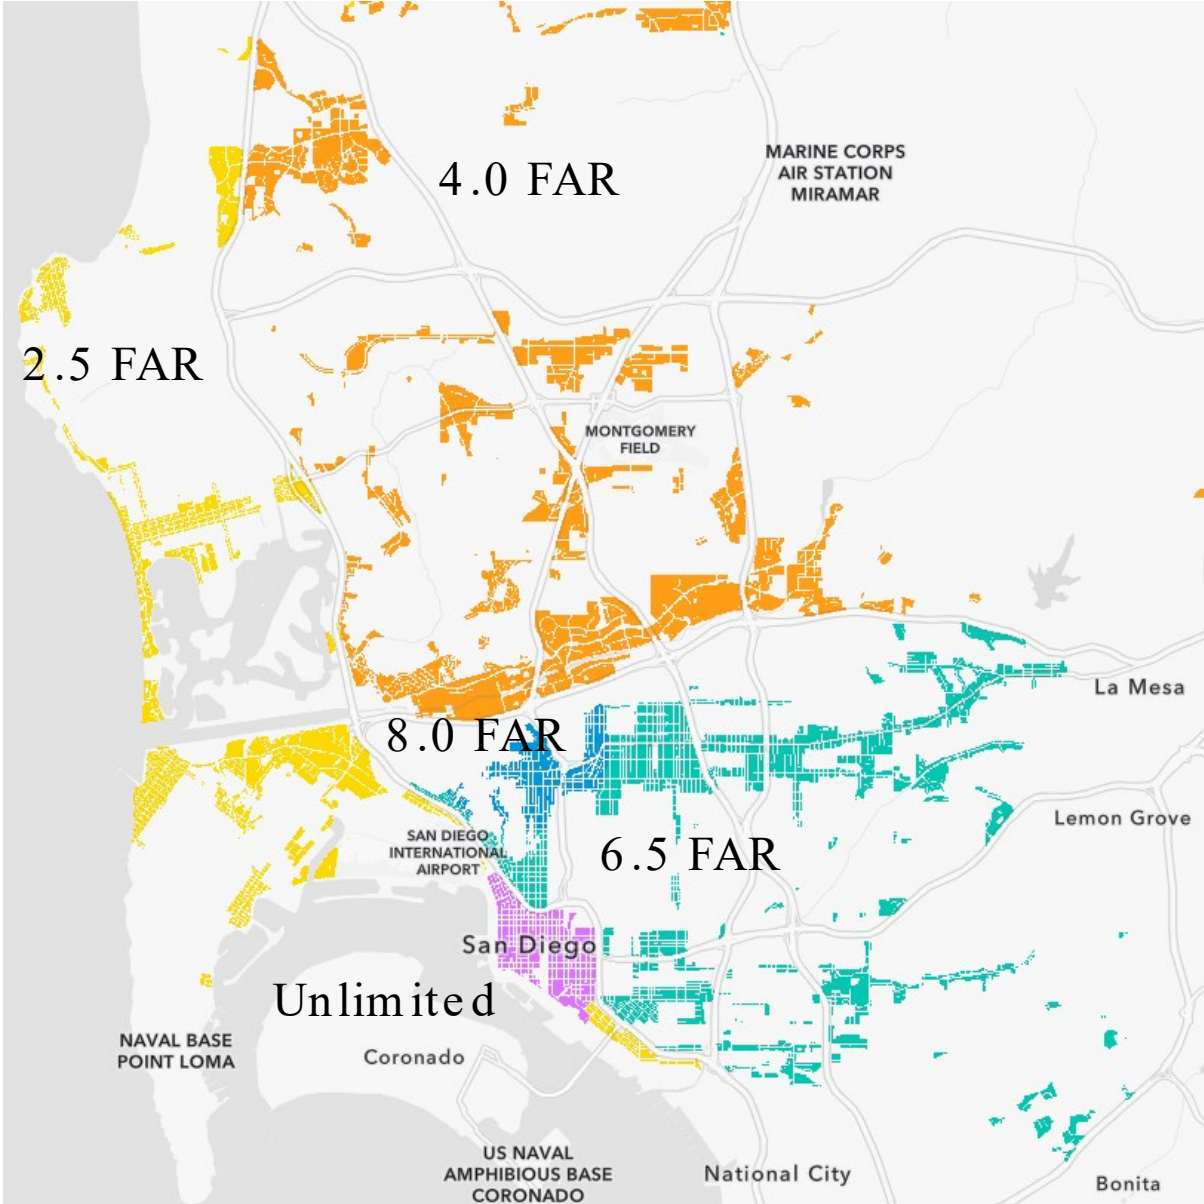

CCHS Floor Area Ratio (FAR) Tiers

	FAR Tier 1: No Limit on FAR	35 stories
	FAR Tier 2: 8.0 FAR	16 stories
	FAR Tier 3: 6.5 FAR	10 stories
	FAR Tier 4: 4.0 FAR	6 stories
	Coastal Zone: 2.5 FAR	4 stories

Dwelling units per acre estimated from FAR tier assuming 800 sf units and 25% common areas

TOD Comparison – CCHS (left) vs. SB 79 (right)

CCHS exceeds SB 79's density requirements

CCHS Tier	Tier 2	Tier 3	Tier 4	Tier 5	SB 79 ½ mi / ¼ mi
Floor Area Ratio	8.0 FAR	6.5 FAR	4.0 FAR	2.5 FAR	2.5 / 3.0 FAR
Equivalent Density (Note 1)	330-580 du/acre	270-480 du/acre	160-290 du/acre	100-180 du/acre	80 / 100 du/acre
% Affordable	1-2%	2-3%	3-5%	4-8%	7 to 13%

Note 1: CCHS dwelling units per acre estimates based on 450-800 sf units and 25% common areas

Note 2: For comparison, SD Inclusionary Housing requires 10% low / very low units

Recommendations

Recommendation 1

Change Recital C as follows (NFABSD recommended changes are highlighted):

C. Government Code section 65912.156 adds the definition of **a Transit Oriented Development (TOD) stop as a major transit stop, as defined by section 21064.3 of the California Public Resources Code (Public Resource Code)**, that is served by rail transit or bus service within an urban transit county (TOD Stops).

Note: SB 79 does not change the state's major transit stop definition for mapping Transit Priority Areas, Sustainable Development Areas, or other maps derived from the State's major transit stops definition.

Recommendation 2

Delete Section 7 of the Action Items which states that this ordinance doesn't have to go before the Planning Commission. This section appears to have been left over from the original draft ordinance that was proposed in March to go directly to City Council.

Recommendations (cont.)

Recommendation 3

Section 9. Change to "This Ordinance will take effect and be in force on the thirtieth day from and after its final passage, or July 1, 2026, whichever is later."

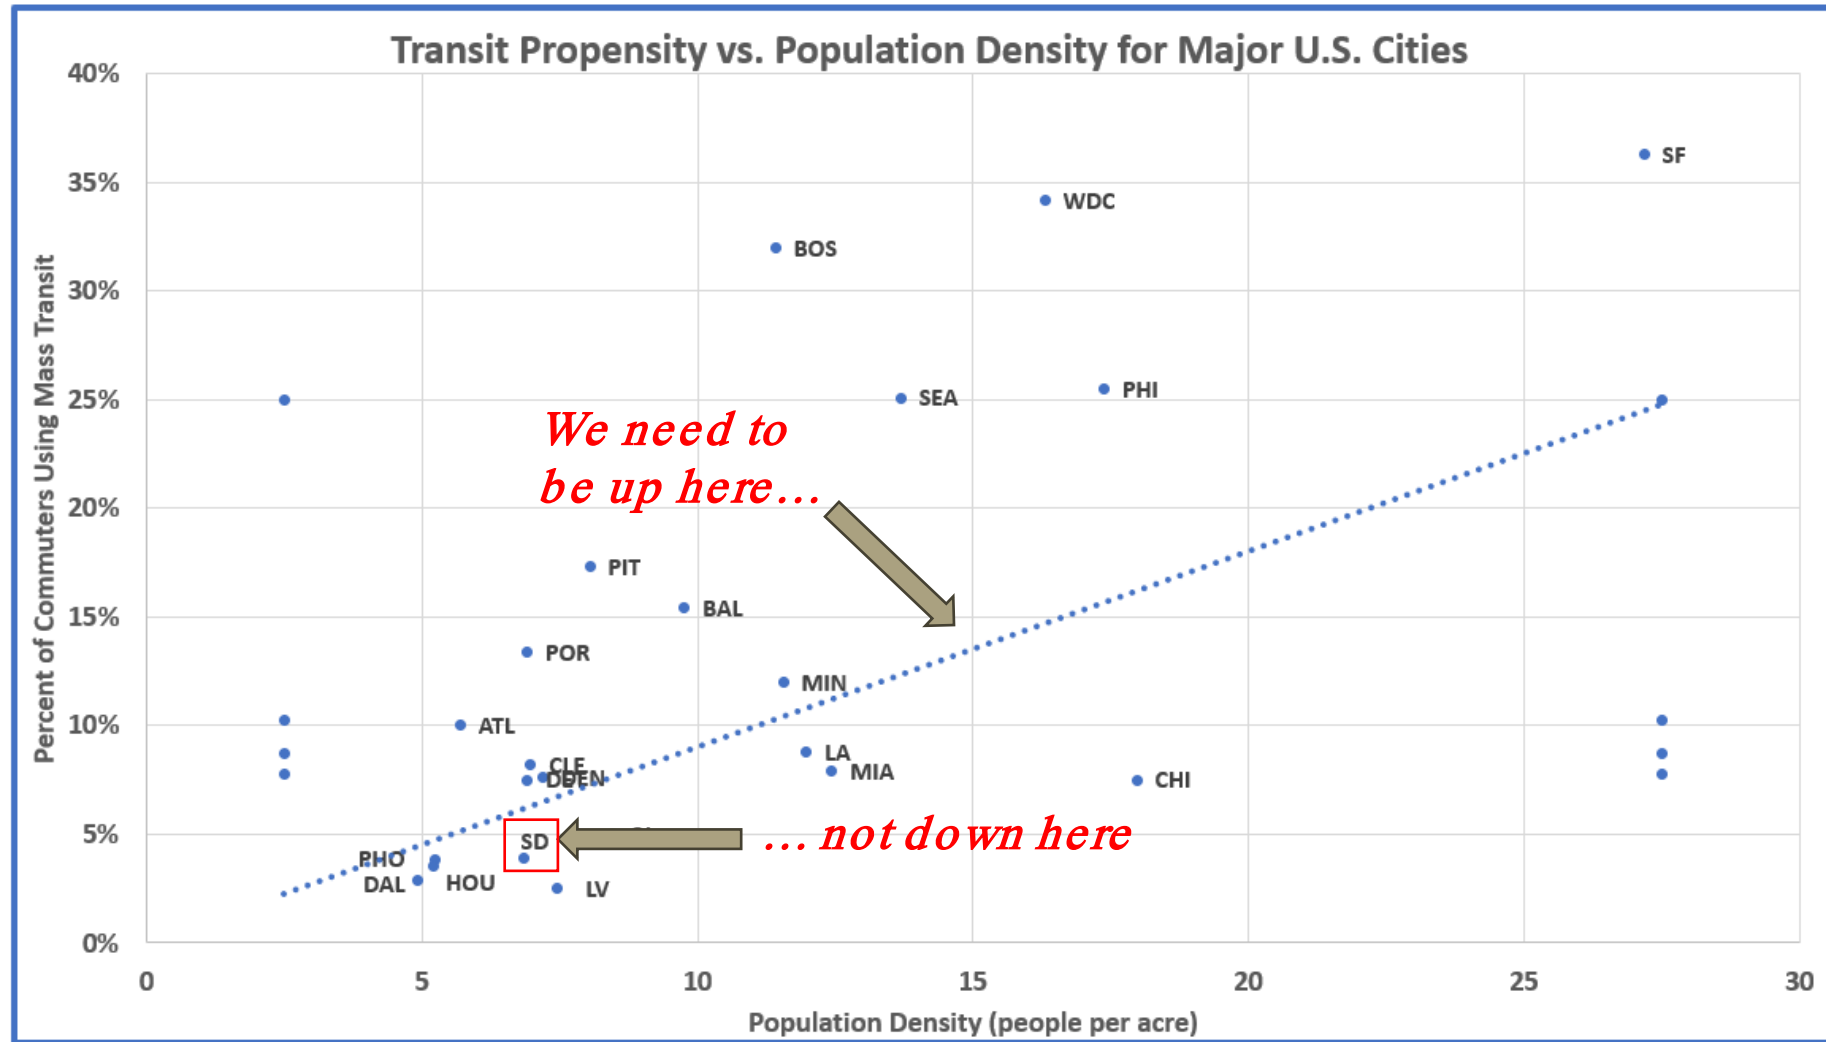

Recommendation 4

Add a Section 10 stating that if the effective date of SB 79 is changed by the Legislature, then the effective date of San Diego's implementing ordinance will similarly be delayed.

Recommendation 5

Add a Section 11 stating that if SB 79 is repealed by the Legislature, state wide initiative, or legal judgement, then San Diego's implementing ordinance will similarly be repealed.

Population density determines transit adoption

It's not a level-of-service problem!

In closing

- San Diego has done more than enough to create the capacity for new housing near transit.
- SB 79 faces considerable uncertainty pending further legislative action in the current legislative session and the coming years prior to the June 15, 2032, deadline for adopting full changes.
- The Planning Department's proposed phasing retains flexibility in crafting an alternative plan.
- NFABSD's recommended changes further address potential legislative and legal contingencies.

Thank you!

Geoffrey Hueter

RE: The Collection at Cactus Project – Addendum (SCH# 2004051076)

Dear Kelli Rasmus,

On behalf of the Western States Regional Council of Carpenters (“**Western Carpenters**” or “**WSRCC**”), our firm is submitting these comments in connection with the City of San Diego (“**City**”) Collection at Cactus Project (“**Project**”) and the Addendum (“**ADM**”) associated therewith.

The Notice of Completion of the Project’s EIR Addendum describes the Project as follows:

The project would construct 985 multi-family residential units on a 38.8-acre site located at 7020 Airway Road. Additionally, the project would allow for the development of 20,949 sf in leasing/amenity space, two detention basins and a 3.5-acre park site. The project would also include improvements to Cactus Road, Continental Street, and Airway Road, as well as the construction of internal roadways. Additionally, the project would include the construction of a waterline, sewer gravity line, and sewer force main within the Cactus Road ROW and 2,400 lateral feet of 24-inch sewer gravity line and sewer force main within the Otay Mesa Road ROW.

NOC, p. 1.

The Western States Regional Council of Carpenters is a labor union representing almost 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Western Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Western Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Western Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) and the Addendum submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Western Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the

applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7,

¹ California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, available at <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When

needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).⁵ At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR ‘protects not only the environment but also informed self-government[.]’” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564 (internal citation omitted).

To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80. The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners of the City of Oakland* (2001) 91 Cal.App.4th 1344, 1354; *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 400. The

⁵ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

Environmental Impact Report (EIR) serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2).

A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, supra*, 13 Cal.App.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112. If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, §§ 15092, subds. (b)(2)(A)-(B).

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064(f)(1)-(2); see *No Oil, supra*, 13 Cal.App.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384, subd. (a).

The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm’rs.* (2001) 91 Cal. App. 4th 1344, 1354 (“*Berkeley Jets*”); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that

the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom, supra*, 202 Cal.App.3d at p. 311.

“Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Ibid*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Ibid.*

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Keep Jets, supra*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights, supra*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Ibid.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102,

131. As the First District Court of Appeal has previously stated, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. *Berkeley Keep Jets, supra*, 91 Cal.App.4th at p. 1355 (internal quotations omitted).

Both the review for failure to follow CEQA's procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. Whether the agency's record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist., supra*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

Section 15088.5(a) of the CEQA Guidelines provides that an EIR must be recirculated whenever there is disclosure of significant new information. Significant new information includes: (1) disclosure of a new significant environmental impact resulting from the project or from a new proposed mitigation measure; (2) disclosure of a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance; and (3) disclosure of a feasible project alternative or mitigation measure considerably different from others previously analyzed which would clearly lessen the significant environmental impacts of the project which the project proponents decline to adopt. *Id.*

Additionally, an EIR must be recirculated when it is so fundamentally inadequate and conclusory in nature that meaningful public review and comment is precluded. *Id.* [citing *Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043].

Here, as further discussed in the section below, the EIR fails to substantiate all of its conclusions to allow meaningful public review and comment, provide adequate mitigation measures, and fully assess all pertinent environmental factors. Accordingly, this comment letter discloses significant new information, necessitating revision and recirculation of the EIR.

A. An Addendum to the 2014 OMCPU (Otay Mesa Community Plan Update) PEIR (Program Environmental Impact Report) Is Improper as There Is a Fair Argument the Approved Project and the Revised Project May Have Significant Impacts

For its original project in 2014 (“**Approved Project**”), the City had prepared and adopted a Program Environmental Impact Report (“**PEIR**”) (State Clearinghouse No. 2004051076) on March 11, 2014.⁶ The proposed project consists of a Vesting Tentative Map (VTM) (VTM No. 3273796), Neighborhood Development Permit (NDP) (PMT-3273795), and a Site Development Permit (SDP) (PMT-3398899) for a 38.8-acre site located within the Central Village Specific Plan (CVSP) in the Otay Mesa area of the City of San Diego. The Project Applicant now seeks to implement a significantly revised project (“**Revised Project**”) with nothing but a vague Addendum.

“An agency may prepare an addendum to a prior EIR to document its decision that a subsequent EIR is not required.” CEQA Guidelines § 15164(b), (e). An addendum is prepared only for “minor technical changes,” when changes to the EIR made by the addendum do not raise new issues; it is reviewed *with prior EIRs*. *Fund for Environmental Defense v. County of Orange* (1988) 204 Cal.App.3d 1538, 1553; CEQA Guidelines § 15164(a)-(b). “The addendum is the other side of the coin from the supplement to an EIR.” *Save Our Heritage Organization v. City of San Diego* (2018) 28 Cal.App.5th 656, 664-665. An addendum to a previously certified EIR is prepared only where “some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” CEQA Guidelines § 15164(b).

To the extent that the Revised Project seeks to proceed with an *addendum* to the prior EIR, it is settled that such an addendum is reviewed under the *fair argument* standard, similar to the EIR it is an addendum to; accordingly, the case is reviewed *de novo*. As explained in *Friends of College of San Mateo*, which rejected the Respondent District’s argument that the fair argument standard must be used in limited cases of addenda and which further found substantial evidence to support a fair argument that the project in that case may have impacts:

⁶ Los Angeles Department of City Planning, Initial Study HPMC Building Project Addendum Case Number ENV-2015-310-MND-REC1 (“**Addendum**”) (Apr. 2021), p. 11.

We disagree with the District. There is only one reasonable interpretation of *San Mateo Gardens*: where, as here, an agency originally prepares a negative declaration, we must assess whether there is “substantial evidence that the changes to a project for which a negative declaration was previously approved *might have* a significant environmental impact not previously considered in connection with the project as originally approved.” (*San Mateo Gardens, supra*, 1 Cal.5th at p. 959, 207 Cal.Rptr.3d 314, 378 P.3d 687, italics added.) If there is such evidence, we cannot uphold the agency's determination that no major revisions were required. It is of no consequence whether the District believed that the prior MND remained “wholly relevant” or whether the District independently identified a new potentially significant environmental impact. *San Mateo Gardens* held that where a project is originally approved through a negative declaration, “agencies [cannot] evade their obligation to prepare an EIR based on the more demanding ‘fair argument’ standard, so long as the potential environmental effects of the project are caused by changes in the project after a negative declaration [has] been approved.” (Id. at p. 957.) Were we to accept the District's argument, it would create just the sort of “loophole” for agencies that the Supreme Court emphasized does not exist. (Ibid.)

Friends of College of San Mateo Gardens v. San Mateo County Community College Dist. (2017) 11 Cal.App.5th 596, 608 [emph. orig.], quoting from *Friends of College of San Mateo Gardens v. San Mateo County Community College Dist.* (2016) 1 Cal.5th 937, 953–959.

Moreover, “[i]t is a question of law, not fact, whether a fair argument exists, and the courts owe no deference to the lead agency’s determination.” *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928.

Contrary to these established legal principles, the Project here is seeking to create a “loophole” to suggest that the CEQA review now must be based only on the change, regardless of whether certain impacts were or were not adequately studied in the prior EIR. Stated differently, such an interpretation would yield to subversion of CEQA mandates, whereby any project applicant can seek approval of a smaller project by using a less-demanding environmental study, such as an MND, and by disposing of an EIR and then continue increasing the project’s scope by revisions and through addenda. Yet, courts “choose the construction that comports most closely with the

apparent intent of the lawmakers, with a view to promoting rather than defeating the general purpose of the statute. *Ibid.*; *Torres v. Parkhouse Tire Service, Inc.* (2001) 26 Cal.4th 995, 1003, 111 Cal.Rptr.2d 564, 30 P.3d 57. Any interpretation that would lead to absurd consequences is to be avoided. (*Ibid.*)” *Allen v. Sully-Miller Contracting Co.* (2002) 28 Cal.4th 222, 227. The intent of the lawmakers is embodied in CEQA Guidelines § 15003(f), whereby CEQA must be interpreted in a way to provide the fullest possible protection of the environment.

Moreover, an addendum is improper here since the *Revised Project* is not just about a “minor” or technical change, but rather a significant physical addition of information on air quality, land use, biological resources, and more. All these changes were not considered in the prior PEIR and are not minor or technical changes to warrant an addendum – this is a substantial revision of the prior project and implementation of it with an addendum is in violation of CEQA. As stated in *San Mateo*:

In sum, there is substantial evidence that the Building 20 demolition project might have a significant environmental effect due to its aesthetic impact on the College campus.⁵ We will not, however, order the District to prepare an EIR on remand, as Friends requests. The District can choose to prepare a subsequent MND if it determines that the possibly significant environmental effects will “be reduced to insignificance” through the implementation of mitigation measures. (*Moss v. County of Humboldt, supra*, 162 Cal.App.4th at p. 1048, 76 Cal.Rptr.3d 428.) What is **clear** is that the decision to adopt an **addendum** was **improper** under CEQA’s subsequent review provisions, since an addendum may be prepared **only** if there are “minor technical changes or additions” or if none of the circumstances calling for a subsequent EIR or negative declaration have occurred. (CEQA Guidelines, § 15164, subd. (b).)

Friends of College of San Mateo Gardens v. San Mateo County Community College Dist. (2017) 11 Cal.App.5th 596, 611 (Emph. added).

Lastly, an addendum is improper in this case in view of changes *in the Project*, changes *in the circumstances* around the Project, and *new information* about new impacts or new feasible mitigation measures. Under CEQA Guidelines § 15164(b):

An addendum to an adopted negative declaration may be prepared **if** only minor technical changes or additions are necessary **or** none of the

conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

Emph. added.

CEQA Guidelines Section 15162 requires *subsequent* CEQA review – distinct and different from an *addendum* – if changes occur in the project, changes occur in the circumstances of the project, or new information that was not and could not have been known before is now known that suggests the Project may have more impacts or there are more feasible mitigation measures available than considered before. CEQA Guidelines Section 15162(a)(1)-(3). The Guidelines Section 15162 exceptions apply here, as detailed below.

In sum, an addendum is wholly inappropriate in this case and the Project must have adequate CEQA review to evaluate the Project as “the whole of an action” and its impacts. A *new* rather than a *subsequent* CEQA review should be ordered, and the baseline for such review should revert back to the 2014 IS/MND, when the initial development applications were made and the environmental review began, rather than the incrementally inflated baseline of the entitlements that the Applicant relies upon.

Further, the PEIR was created in 2014, making it twelve years old and thus insufficient to account for the present state of the City and the various impacts projects will have. It has not been sufficiently updated to assess how the conditions have changed since its initial drafting, and to assess whether the general mitigation measures are still sufficient.

III. THE EIR ADDENDUM IS INADEQUATE UNDER CEQA AND SUBSEQUENT OR SUPPLEMENTAL EIR SHOULD BE PREPARED AND CIRCULATED.

A. The EIR Addendum Fails to Support Its Findings with Substantial Evidence

CEQA requires that an EIR identify and discuss the significant effects of a Project, and how those significant effects can be mitigated or avoided. CEQA Guidelines § 15126.2; PRC §§ 21100(b)(1), 21002.1(a). If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns.” CEQA Guidelines § 15092(b)(2) (A–B). Such findings must be supported by substantial evidence. CEQA Guidelines § 15091(b).

When new information is brought to light showing that an impact previously discussed in the EIR but found to be insignificant with or without mitigation in the DEIR's analysis has the potential for a significant environmental impact supported by substantial evidence, the EIR must consider and resolve the conflict in the evidence. See *Visalia Retail, L.P. v. City of Visalia* (2018) 20 Cal.App.5th 1, 13, 17; see also *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1109. While a lead agency has discretion to formulate standards for determining significance and the need for mitigation measures—the choice of any standards or thresholds of significance must be “based to the extent possible on scientific and factual data and an exercise of reasoned judgment based on substantial evidence. CEQA Guidelines § 15064(b); *Cleveland Nat'l Forest Found. v. San Diego Ass'n of Gov'ts* (2017) 3 Cal. App. 5th 497, 515; *Mission Bay Alliance v. Office of Community Inv. & Infrastructure* (2016) 6 Cal. App. 5th 160, 206. And when there is evidence that an impact could be significant, an EIR cannot adopt a contrary finding without providing an adequate explanation along with supporting evidence. *East Sacramento Partnership for a Livable City v. City of Sacramento* (2016) 5 Cal. App. 5th 281, 302.

Here, for the reasons discussed in detail in the section below, the EIR fails to comply with the foregoing requirements because rather than a Supplemental or Subsequent EIR being drafted and circulated due to the significant changes, just an addendum is published. Cal. Code Regs. Tit. 14, § 15164 – Addendum to an EIR or Negative Declaration states the following:

- (a) The lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.
- (b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.
- (c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision-making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's required findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.

The circumstances for simply publishing an addendum are not present here. There are significant changes, not simply minor technical changes, as identified and discussed below. Therefore, a Subsequent or Supplemental EIR needs to be prepared and circulated for public review.

1. The EIR Addendum Includes New Significant Information in Numerous Sections, Which Demonstrates the Need for a Subsequent or Supplemental EIR.

Within the Addendum to the EIR provided for this proposed Project, numerous changes have been made from the EIR to this recently-released Addendum that constitute significant new information and changes. Significant new information necessitates a Subsequent or Supplemental EIR to ensure that sufficient notice is provided, and that there is an opportunity for public comment. Additionally, the revised Addendum is not provided on the CEQAnet website, which makes it unclear to the public as the controlling version of the Addendum has not been clearly identified and provided.

The Land Use Plan Conflict section of the Addendum clearly states that the PA 10 is inconsistent with land use designations and zoning, and will use an Affordable Housing Density Bonus waiver to remove the requirement for a commercial land use component in a commercial zone. Additionally, the project proposes a total of 985 dwelling units, which is 4 above the 981 analyzed in the CVSP (Central Village Specific Plan). This new information requires a Subsequent or Supplemental EIR. (Addendum, Page 10).

The Air Quality section of the Addendum now states that there will be less than significant impact to Air Quality after mitigation, but the mitigation measures that have been added to reach this conclusion are unclear. The PEIR stated that there will be significant and unmitigable impacts to air quality, and this departure from that

conclusion is not explained. Additionally, the Air Quality section of the Addendum does not consider how the additional units added to the proposed Project would potentially change the emissions projected, and this requires additional analysis. The Addendum goes from claiming that the project does not have the potential to emit toxic air contaminants, to stating that the potential exposure of sensitive receptors to air toxins would be significant and unavoidable at the project site due to its close proximity to off-site commercial or industrial uses to the south and southeast of the project site. (Addendum, Page 19). This constitutes a substantial change in the severity of the Air Quality impacts that must be thoroughly evaluated in a subsequent or supplemental EIR. Despite this, the Addendum claims that the impacts caused by existing and future off-site industrial activities or operations would be less than significant. This is incorrect. Additionally, the PEIR states that the air quality impacts from construction emissions and operational emissions, stationary sources, and collocation will be significant and unavoidable even after mitigation. (FEIR Page S-12 - S-15). The fact that new information was provided necessitates a Subsequent or Supplemental EIR to be prepared and circulated for public review.

The Addendum removes code sections and measures with which the project must comply to ensure that the impacts are less than significant to Biological Resources. The Addendum no longer concludes that the impacts to species' nesting could be significant and would be avoided through project compliance with the California Fish and Game Code, and the City's Standard Biological Resource Protection Measures, and now only includes the Migratory Bird Treaty Act. (Addendum, Page 23). This change is not explained, and it is unclear how the significant impacts can be avoided if compliance with these is not required. This would result in a substantial increase in the severity of a previously identified significant effect that would warrant the preparation of a subsequent or supplemental EIR. Additionally, the Addendum includes additional information on measures designed to avoid impacts to the wetland habitat that necessitate the preparation of a Subsequent or Supplemental EIR for its impact to be fully discussed and commented on. The Addendum included the following new language:

The project is specifically designed to avoid impacts to the wetland habitat located in the northwestern drainage channel and would provide a 30-foot-wide buffer. The first 20 feet from the channel would be the ESL avoidance buffer. and an additional 10-foot-wide buffer outside the ESL buffer would be planted with a coastal sage scrub seed mix that meets brush management requirements.

Additionally, a water retention basin would be constructed adjacent to the avoidance buffer to further protect the disturbed wetland by treating stormwater runoff from the project site before it enters the channel. Additionally, and consistent with ESL avoidance standards. The project's proposed undergrounding of existing power lines at the western border of the project site has been designed to maintain full avoidance of the disturbed wetland. Specifically, the power line would transition to above-ground at the drainage crossing to eliminate the need for trenching or grading within or adjacent to the wetland, thereby avoiding direct or indirect impacts to the disturbed wetland.

(Addendum, Page 23). Since this is new information that was not provided in the EIR for the public to comment on, an addendum is insufficient. This includes a measure that will allegedly avoid impacts to the disturbed wetland, and since it is a new measure that is designed to address a biological impact, it needs to be provided for public comment. Additionally, a Subsequent or Supplemental EIR is necessary because at the time of the PEIR's adoption, the location of this proposed Project was not a wetland habitat. A covenant for an easement was recorded on November 24, 2015, after the PEIR's adoption.⁷ This is new information of substantial importance that, according to CEQA Guidelines 15162(a)(3), was not known and could not have been known at the time the previous EIR was certified as complete and therefore this new information must be accounted for in a Subsequent or Supplemental EIR.

These examples of new information added to the Addendum highlight the need for a Supplemental or Subsequent EIR to ensure that sufficient public process and opportunity to comment and raise issues was provided. Thus, simply providing an Addendum is insufficient under CEQA and additional steps must be taken to remedy this issue, such as the revision and recirculation of the EIR before the Project is approved.

B. The EIR's Mitigation Measures Are Insufficient

A fundamental purpose of an EIR is to identify ways in which a proposed project's significant environmental impacts can be mitigated or avoided. Pub. Res. Code §§ 21002.1(a), 21061. To implement this statutory purpose, an EIR must describe any feasible mitigation measures that can minimize the project's significant environmental effects. PRC §§ 21002.1(a), 21100(b)(3); CEQA Guidelines §§ 15121(a), 15126.4(a).

⁷ https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL209274202.

If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(A); and find that ‘specific overriding economic, legal, social, technology or other benefits of the project outweigh the significant effects on the environment.’ PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(B). “A gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4th 1018, 1039.

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. (CEQA Guidelines § 15126.4(a)(1)(B) [providing “[f]ormulation of mitigation measures should not be deferred until some future time.”]) While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project's environmental review.

According to CEQA Guidelines, “[w]hen an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.” CEQA Guidelines Section 15096(g)(2).

Moreover, CEQA forbids deferred mitigation. Guidelines § 15126.4(a)(1)(B). CEQA allows deferral of details of a mitigation measure only “when it is impractical or infeasible to include those details during the project’s environmental review.” (*Id.*) CEQA further requires: “that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard...” Guidelines § 15126.4(a)(1)(B). Deferring formulation of a Project’s actual mitigation measures to some undefined time after the Project’s approval is improper and cannot be used as a substitute for proper mitigation under CEQA. Impermissible deferral can occur when an EIR calls for mitigation measures to be created based on future studies or describes mitigation measures in general terms but the agency fails to commit itself to specific performance standards. (*Preserve Wild Santee v. City of Santee*

(2012) 210 Cal.App.4th 260, 281 [city improperly deferred mitigation to butterfly habitat by failing to provide standards or guidelines for its management].)

As elaborated upon further below, there is a lack of critical details elaborating on mitigation measures and what Project issues they will address. There are no clear performance standards that must be met for the mitigation measures and as a result it is unclear how the success of mitigation measures is being quantified or can be quantified. Additionally, there is a failure to mitigate the Project's impacts in numerous areas to less than significant levels. These failures need to be addressed to ensure that the impacts are sufficiently analyzed and sufficient information is provided.

The OMCPU EIR states that it has

identified significant impacts related to land use, air quality/odor, biological resources, historical resources, human health/public safety/hazardous materials, hydrology/water quality, geology/soils, noise, paleontological resources, transportation/circulation, public utilities, and greenhouse gas emissions. All impacts would be mitigated to below a level of significance except air quality, greenhouse gas (GHG) emissions, noise, transportation/circulation, and utilities.

(Addendum, Page 7). It claims that the impacts would be mitigated to below a level of significance except for air quality, greenhouse gas (GHG) emissions, noise, transportation/circulation, and utilities. However, there is insufficient evidence to support this claim. Further, the general mitigation measures do not address all potential Project-related impacts. There are insufficient mitigation measures to address what have been clearly identified as significant impacts that will result from this proposed Project. Though significant impacts to numerous areas are identified by the OMCPU PEIR, there is a lack of project level new mitigation, even though the PEIR mitigation measures are insufficient and are not specific to the Project. (Addendum, Page 7-8).

It is important to note that the PEIR does not have sufficient specific data to adequately assess the potential impacts and the sufficiency of mitigation measures. Relying on the PEIR and the Addendum without conducting sufficient study, and including additional significant information in the Addendum to attempt to address some issue areas, is not legally sufficient.

Environmental Issues	OMCPU PEIR Finding	OMCP Mitigation	Project	Project Level New Mitigation?	Project Impact
Land Use	Significant but mitigated	Yes	No new impacts	No	Less than significant
Visual Effects and Neighborhood Character	Less than significant	No	No new impacts	No	Less than significant
Air Quality/Odor	Significant, unmitigated	Yes	No new impacts	Yes	Mitigated to a Level Less than significant
Biological Resources	Significant but mitigated	Yes	No new impacts	No	Less than significant
Historical Resources	Significant but mitigated	Yes	No new impacts	Yes	Mitigated to a Level Less than significant
Human Health/Public Safety/Hazardous Materials	Significant but mitigated	Yes	No new impacts	No	Less than significant
Hydrology/Water Quality	Significant but mitigated	Yes	No new impacts	No	Less than significant
Geology/Soils	Significant but mitigated	Yes	No new impacts	No	Less than significant
Energy Conservation	Less than significant	No	No new impacts	No	Less than significant
Noise	Significant, unmitigated	Yes	No new impacts	No	Less than significant
Paleontological Resources	Significant but mitigated	Yes	No new impacts	No	Less than significant
Traffic/Circulation	Significant, unmitigated	Yes	No new impacts	Yes	Impacts would remain significant and unavoidable
Public Services	Less than significant	No	No new impacts	No	Less than significant
Utilities	Significant, unmitigated	Yes	No new impacts	No	Less than significant

Water Supply	Less than significant	No	No new impacts	No	Less than significant
Population and Housing	Less than significant	No	No new impacts	No	Less than significant
Agricultural and Mineral Resources	Less than significant	No	No new impacts	No	Less than significant
Greenhouse Gas Emissions	Significant, unmitigated	Yes	No new impacts	No	Less than significant

(Addendum, Page 7-8). This excerpt from the Addendum demonstrates that significant but mitigated issues identified by the OMCPU PEIR Finding will allegedly

have less than significant impacts from the Project, yet there are no Project specific mitigation measures.

1. The EIR and EIR Addendum Unlawfully Defer Critical Details of the Project’s Mitigation Measures for the Project’s Impacts.

The EIR claims that all feasible mitigation measures have been evaluated and included, but this is not the case. Certain mitigation measures unlawfully defer the development of critical details necessary to help determine the effectiveness of the mitigation measure and fail to provide sufficient performance standards to ensure the Project is mitigating impacts.

CEQA mitigation measures proposed and adopted into an environmental impact report are required to describe what actions that will be taken to reduce or avoid an environmental impact. (CEQA Guidelines § 15126.4(a)(1)(B) [providing “[f]ormulation of mitigation measures should not be deferred until some future time.”].) While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, but such exception is narrowly proscribed to situations where “measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way.” (Id.) Courts have also recognized a similar exception to the general rule against deferral of mitigation measures where the performance criteria for each mitigation measure is identified and described in the EIR. (*Sacramento Old City Ass’n v. City Council* (1991) 229 Cal.App.3d 1011.)

Impermissible deferral can occur when an EIR calls for mitigation measures to be created based on future studies or describes mitigation measures in general terms but the agency fails to commit itself to specific performance standards. (*Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4th 260, 281 [city improperly deferred mitigation to butterfly habitat by failing to provide standards or guidelines for its management]; *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 671 [EIR failed to provide and commit to specific criteria or standard of performance for mitigating impacts to biological habitats]; see also *Cleveland Nat’l Forest Found. v San Diego Ass’n of Gov’ts* (2017) 17 Cal.App.5th 413, 442 [generalized air quality measures in the EIR failed to set performance standards]; *California Clean Energy Comm. V. City of Woodland* (2014) 225 Cal.App.4th 173, 195 [agency could not rely on a future report on urban decay with no standards for determining whether mitigation required];

POET, LLC v. State Air Resources Bd. (2013) 218 Cal.App.4th 681, 740 [agency could not rely on future rulemaking to establish specifications to ensure emissions of nitrogen oxide would not increase because it did not establish objective performance criteria for measuring whether that goal would be achieved]; *Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1119 [rejecting mitigation measure requiring replacement water to be provided to neighboring landowners because it identified a general goal for mitigation rather than specific performance standard]; *Endangered Habitats League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 794 [requiring report without established standards is impermissible delay].)

Additionally, the EIR fails to consider all feasible mitigation measures for a significant and unmitigable impact. However, all feasible mitigation measures are not considered and adopted to the extent feasible. Because there are large potential impacts, as discussed below, certain issues with the EIR's approach to mitigation measures must be addressed.

2. Failure to Mitigate Significant and Unmitigable Impacts to the Extent Feasible

An EIR must identify describe mitigation of a proposed project's potentially significant environmental impacts. PRC § 21002.1(a); 21081(a)(1). A project's environmental impact must be mitigated to a less than significant level or at the least, adopt all feasible mitigation to avoid a project's significant environmental impacts. PRC §§ 21002.1(b), 21081(a)91); CEQA Guidelines § 15021(a)(2 – 3), 15091(a)(1).

As discussed below, the EIR fails to do so for numerous areas. Additionally, as discussed further below, the EIR fails to mitigate significant impacts.

- i. The EIR Fails to Adequately Assess the Cumulative Impacts on agricultural resources, air quality, biological resources, geologic resources, health and safety, historical resources, hydrologic resources, land use, mineral resources, noise, paleontological resources, population and housing, public facilities, public services and utilities, transportation/ traffic/ circulation/ parking, visual effects and community character, water quality and global warming. (PEIR 6-1).*

The EIR must more adequately assess the cumulative impacts on numerous areas, which are two or more effects that when considered together are considerable or

compound or increase environmental impacts. The relevant code section (Cal. Code Regs. Tit. 14, § 15130 - Discussion of Cumulative Impacts) states the following:

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by the standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:

(1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.

The EIR vaguely mentions plans and programs that allegedly will reduce cumulative impacts, but does not provide adequate information on how they will address cumulative impacts. (PEIR 6-1). The EIR does not sufficiently identify the cumulative impacts possible, and this is not addressed in the Addendum at all.

ii. The EIR Fails to Adequately Assess the Baseline Existing Environmental Conditions on the Project Site.

Additionally, clear baseline metrics are not provided to compare the Project's potential impacts to and understand the full scope of impacts. There are numerous impact areas for which a baseline is not provided in the PEIR or the Addendum. This needs to be corrected to ensure a clear analysis is provided to the public for comment. In the *Save Our Peninsula Comm. v. Monterey County Bd. of Supervisors* (2001) 87 CA4th 99, 125 case, the Court held that the agency erred by failing to evaluate project's impacts against baseline of environmental conditions as they actually existed at beginning of EIR process. Though conditions may change over time, and in some instances may need to be considered over a range of time periods, the baseline still must be provided and assessed. Therefore, a baseline to measure the Project's impact against must be provided.

3. Lack of Proper Mitigation of Biological Resources Impacts

There are insufficient mitigation measures to address the impacts to biological resources likely to occur due to this proposed Project. The PEIR claims that the impact to several key areas of biological resources (sensitive plants and animals, migratory wildlife, sensitive habitat, MSCP, invasive plants, wetland impacts, and noise generation) will all have a less than significant impact level after mitigation. (PEIR, Page S-16 – S-18). However, these are unsubstantiated conclusions because the mitigation measures provided in the PEIR are not specific enough to address Project impacts, nor do they specifically correlate to Project impacts.

The PEIR identifies that there are sensitive vegetation communities, or those of highly limited distribution, and sensitive species, both plant and animal. (PEIR Page 5.4-9 – 5.4-13). The PEIR states that site-specific analysis will be conducted for projects implemented in accordance with the CPU to determine the extent of impacts to wildlife nesting, foraging, and movement (PEIR Page 5.4-61), but this does not seem to have been done sufficiently for this proposed Project. Additionally, how exactly the mitigation measures will serve to reduce the impacts to sensitive vegetation communities to below a level of significance is not sufficiently substantiated. (PEIR 5.4-64 – 5.4-65).

Since there are not sufficient mitigation measures implemented and the full scope of impacts to biological resources has not been adequately assessed and disclosed, this must be better studied and addressed in the Subsequent or Supplemental EIR for this proposed Project.

4. Lack of Proper Mitigation of Hazards Impacts

Sufficient mitigation measures have not been considered and implemented to address the impact of the potential hazards of this proposed Project. The Soil Management Plan (SMP) that has been approved with conditions has not been revised, and alone, it is insufficient without the inclusion of the conditions required under the Project approval. It is premature to say that the SMP would fully resolve the issues that the Project poses because this does not seem to be the case.

The Addendum conclusively states that:

Construction activities associated with the project would require the transportation and use of limited quantities of hazardous construction materials. However, these materials are not acutely hazardous, and their use in small quantities would not pose a significant hazard to the public or the environment. The use of hazardous materials and substances during construction would be subject to federal, state, and local health and safety regulations. Additionally, construction activities are inherently temporary in nature. As a result, hazardous material impacts related to construction activities would be less than significant.

(Addendum, Page 29). However, there is a lack of substantiation for this conclusion, and it is unclear how these conclusions were reached. The presence of hazards on the site must be additionally studied and addressed.

5. Lack of Proper Mitigation of Air Quality Impacts

The air quality impacts from this proposed Project are not mitigated to below a level of significance. (Addendum, Page 7). There are identified to be large significant impacts to air quality that will have drastic environmental and health impacts, and sufficient mitigation measures are not considered to address this. (PEIR 5.3-30).

i. The EIR Fails to Adequately Assess Air Quality Impacts.

The EIR does not sufficiently detail the potential air quality impacts and due to this, emissions and health risk impacts from construction and operation of the proposed Project may be underestimated and inadequately addressed. Thus, the mitigation measures are not sufficient to mitigate the potential harm because the scope of the Project's impacts have not been sufficiently identified and addressed. As such, a Subsequent or Supplemental EIR must be prepared to adequately assess and mitigate air quality impacts from this Project.

In fact, the PEIR states the following:

While the Mitigation Framework identified above would reduce the potential impacts associated with exposure to air toxics, no specific projects or improvements have been proposed as part of the CPU, and it cannot be determined whether the proposed mitigation would reduce all impacts to below a level of significance. Therefore, impacts related to exposure to air toxics would be significant and unavoidable.

(PEIR, Page 5.3-32). It is inadequate to simply state that the sufficiency of mitigation measures cannot be determined. If it is difficult to do so within a plan that encompasses a large area of land, then project-level specific research and determinations must be made to ensure adequate mitigation measures are implemented to address the scale of the impacts to air quality.

6. Lack of Proper Mitigation for Conversion of Agricultural Land

Additional mitigation measures are necessary to address the conversion of agricultural land. The project site was historically used as agricultural land from at least 1949 to 1996, according to the Addendum for the Project. (Addendum, Page 5). At present, the project site is allegedly vacant and includes disturbed wetland and disturbed land vegetation communities. However, given that the land previously contained agricultural land, which is of critical importance to the state due to the decreasing available agricultural land, additional mitigation measures can be implemented to ensure that the potential impacts are sufficiently addressed. For instance, conservation easements can be pursued in other parts of the state to ensure that state-wide, the impact of converting this previously agricultural land is mitigated and addressed. It is critical to consider additional mitigation measures because this issue was not adequately addressed for this proposed Project.

Further, the presence of pesticides on the site do not seem to have been sufficiently addressed.

Due to the site's historical agricultural use, the historic use of pesticides was considered a business environmental risk, and a Limited Phase II Investigation was recommended. The Limited Phase II Assessment determined the project site had residual contamination of pesticides above the residential levels. An SMP was prepared in accordance with Mitigation Framework HAZ-3 and includes soil management requirements that the project would be required to implement as part of the project conditions of approval. With the implementation of the requirements included in the SMP, the impacts would be less than significant.

(Addendum, Page 29).

7. Significant New Information Has Been Added to the FEIR, Requiring Recirculation for Public Comment.

The EIR should be recirculated as "significant new information" was added to the FEIR to address concerns. (14 Cal. Code of Regs. § 15088.5.) The FEIR underlines all additions made to the FEIR as a result of the comments made to the DEIR. Some of these changes are significant new information that requires the opportunity for the public to comment. These significant changes include changes to mitigation measures that will change the impact these measures have on various areas such as biological resources, substation upgrades, and more. These significant changes have been discussed in detail above, and have been noted in multiple impact areas. As such, a Subsequent or Supplemental EIR must be prepared and circulated, and allow for additional public comment to allow adequate public participation.

C. Addendum Should Review the Project's Consistency with the Central Village Specific Plan

CEQA Guidelines section 15125(d) requires that an environmental impact report "discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. *See also Golden Door Properties, LLC v. County of San Diego* (2020) 50 Cal. App. 5th 467, 543.

Here, the Addendum fails to review the Project for consistency with the Central Village Specific Plan ("CVSP"). As the CVSP has specific goals for these planning areas, evaluating the Project's consistency is critical for compliance with section 15125(d).

1. Right-of-Way

Table 2.3-1 of the Central Village Specific Plan identifies the planned roadway improvements for the Project.

Table 2.3-1 CENTRAL VILLAGE ROADWAY IMPROVEMENT STANDARDS

Specific Plan Roadways	Segment(s)	Classification	ROW	Curb-to-Curb Width	Number of Travel Lanes (Width)	Median	Bike Facilities	Northern/ Eastern Parkway	Southern/ Western Parkway
Airway Road	Heritage Rd to Cactus Rd	6-Lane Prime Arterial	142'	98'	Six (11')	16' Raised and Landscaped	5' wide Class II Bike Lanes w/ 3' buffer from travel lanes; Class 1 Bike Lane	17' wide, w/ 6' wide non-contiguous sidewalk	27' wide with 6' non-contiguous sidewalk, Class 1 Bike Lane, and a total of 11' of landscaped buffers
	Cactus Rd to Continental Rd	6-Lane Urban Major	139'	98'	Six (11')	16' Raised and Landscaped	5' wide Class II Bike Lanes w/ 3' buffer from travel lanes; Class 1 Bike Lane	14' wide w/ 6' wide non-contiguous sidewalk	27' wide, with 6' non-contiguous sidewalk, Class 1 Bike Lane, and a total of 11' of landscaped buffer
	Heritage Rd to Western Specific Plan Boundary	4-Lane Major (Bridge)	90'	64'	Four (11')	4' Raised	5' wide Class II Bike Lanes w/ 3' buffer from travel lanes; Class 1 Bike Lane	6' wide contiguous sidewalk	20' wide, with 6' wide non-contiguous sidewalk, Class 1 Bike Lane, and 4' of non-landscaped buffer areas
Cactus Road	Siempre Viva Rd to Airway Road	4-Lane Major	114'	76'	Four (11')	16' Raised and Landscaped	5' wide Class II Bike Lanes w/ 3' buffer from travel lanes	12' wide w/ 6' wide non-contiguous sidewalk	26' wide with 8' wide non-contiguous sidewalk
	Airway Road to Northern Specific Plan Boundary	4-Lane Major	126'	102'	Four (11'), w/ three 12' wide turning lanes	6' Raised	5' wide Class II Bike Lanes w/ 3' buffer from travel lanes	12' wide w/ 6' wide non-contiguous sidewalk	12' wide w/ 6' wide non-contiguous sidewalk

Here, the planned roadway improvements for both Airway Road and Cactus Road fall short of the design envisioned in the CVSP. The Addendum describes the ROW improvements for Cactus Road as including “30 to 35 feet of dedication to achieve a total right-of-way (ROW) of 70 to 75 feet and widen Cactus Road to a 3-lane collector (2 lanes northbound/1 lane southbound), construction of a 12-foot-wide parkway with a 6-foot-wide non-contiguous sidewalk, a buffered Class II bike lane on the west side of Cactus Road only and a striped median along the project's frontage on Cactus Road.” (Addendum, p. 5.) This planned improvement would reduce the total planned ROW from 114 feet to 70 to 75 feet and reduce the total number of lanes from four to three. Further, the Addendum fails to describe whether the planned Class II bike lane would have sufficient width and buffer under the Specific Plan standards.

The Addendum describes the ROW improvements for Airway Road as including “43 to 70 feet of dedication to achieve a total ROW of 84.3 to 100 feet and widen Airway Road to a 3-lane collector (2 westbound lanes/1 eastbound lane), construction of a 14-foot wide parkway with a 6-foot wide non-contiguous sidewalk, and a buffered Class II bike lane on the north side only along the project's frontage.” (*Id.*) Similarly to Cactus Road, the planned improvements to Airway Road would reduce the total planned ROW from 139 feet to 84.3 to 100 feet and reduce the total number of lanes from six to three. Further, the Addendum fails to describe whether the planned Class II bike lane would have sufficient width and buffer under the Specific Plan standards. The Addendum further fails to identify whether a Class 1 bikeway would be created as

identified in the Specific Plan.

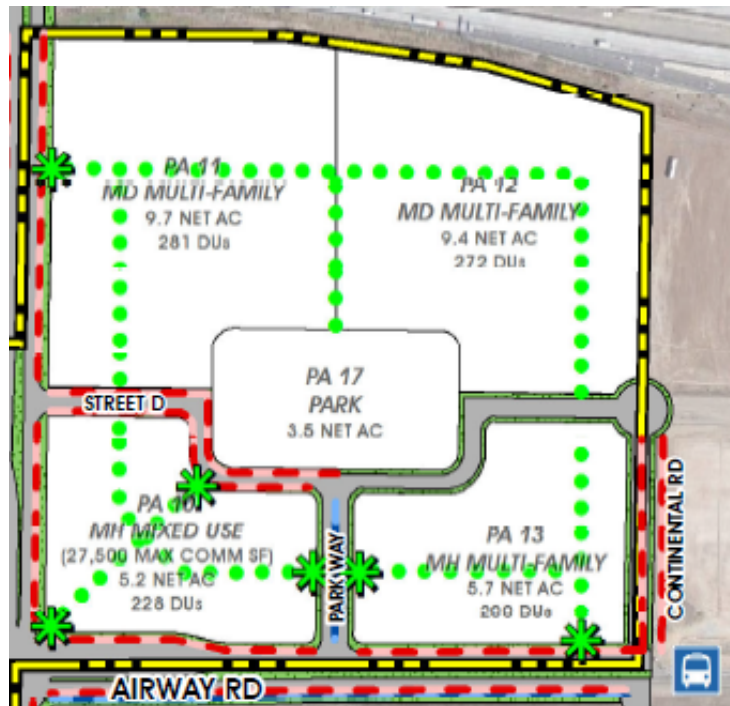

The Addendum fails to identify or address the clear shortfalls relating to the roadway specifications of the Specific Plan. As such, the Addendum clearly fails to meet the discussion requirements of CEQA Guidelines section 15125(d).

2. Park Design

The Addendum is also silent on the plans for the Park planned for the center of the development (Planning Area 17). The Addendum does not address any of the Goals or specific CVSP Policies and Design Standards, of which there are many (*See CVSP 2.4-3 through 2.4-6.*) Without providing any information on the park, the City cannot confirm that the standards of the CVSP are properly applied or that the goals of General Plan are being met. (*See General Plan Policy RE-A.8: Provide population-based parks at a minimum ratio of 2.8 useable acres per 1,000 residents.*) This missing analysis further establishes the Addendum's failure to clearly meet the discussion requirements of CEQA Guidelines section 15125(d).

3. Pedestrian Nodes

The Addendum additionally fails to address the CVSP's Pedestrian Node requirements. The CVSP envisioned six pedestrian nodes throughout the Project Site.

(CVSP Figure 2.3-4)

The Addendum doesn't include any mentions of these nodes. The Staff Report only identifies a single node. "An activity node and gateway are proposed on the northeast corner of Cactus Road and Airway Road to implement the Specific Plan and provide a place for residents and visitors to sit, relax, and observe." (Staff Report, p. 13.) As these Pedestrian Nodes are both a part of the Specific Plan and help to achieve the City's General Plan's Mobility Element and Urban Development Element goals, the Addendum must explain why only one of the six planned nodes are a part of the present Project design. The Addendum clearly fails to include the necessary discussion requirements of CEQA Guidelines section 15125(d).

D. The Project Relies on Inaccurate Density Bonus Calculations

The Staff Report and Addendum identify the Project as including 88 Affordable units across PA 11 and 12. The Addendum breaks down the calculations as follows:

Pursuant to State Density Bonus law, in exchange for reserving 10% of the PA 12 base dwelling units (51 units) for "Very Low" Income households, the project is entitled to a 32.5% density bonus (164 units), two incentives, and unlimited waivers.

The Project also is reserving 10% of the PA 11 and 12 dwelling units (62 units) for "Low" income households, entitling the project to a 20% density bonus, one incentive, and unlimited waivers. (Addendum, p. 3.)

The Staff Report further clarifies that the affordable units are broken down as follows:

- 44 dwelling units at 60 percent area median income (low income) in Planning Area 11; and
- 26 dwelling units at 50 percent area median income (very low income) in Planning Area 12; and
- 18 dwelling units at 60 percent area median income (low income) in Planning Area 12.

The mixture and distribution conflicts with the percentages as explained in the Addendum. If the Project was seeking to obtain the density bonuses based on reserving 10% of the PA 12 base dwelling units for "Very Low" Income households and also reserving 10% of the PA 11 and 12 dwelling units for "Low" income households, the distribution of affordable units would look very different:

- 29 dwelling units at 60 percent area median income (low

income) in Planning Area 11; and

- 28 dwelling units at 50 percent area median income (very low income) in Planning Area 12; and
- 28 dwelling units at 60 percent area median income (low income) in Planning Area 12.

Most apparent is that the total number of very low-income dwelling units has been decreased by 2 units, which is at odds with the density bonus percentage identified in the Addendum and Staff Report. Additionally, the low-income units have also been disproportionately distributed throughout PA 11 and 12. The Addendum must be revised with corrected information prior to any City approval of the Project to ensure the density bonus given matches the actual supply of affordable units.

IV. CONCLUSION

Based on the foregoing concerns, the City should require revision and recirculation of the EIR for the Project pursuant to CEQA. The Addendum alone is insufficient, and it introduces significant new information that necessitates the revision and recirculation of the EIR. Absent doing so, the EIR and Addendum in its current form directly violates CEQA in multiple respects. If the City should have any questions or concerns, please do not hesitate to contact this office.

Sincerely,

Ananya Raghavan

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Attachment C

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,623
Amortized (MT CO2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized (MT CO2e/year)	100.80
<i>% Decrease in Construction-related GHG Emissions</i>	17%

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Hagemann, M.F., and VanMouwerik, M., 1999. Potential Water Quality Concerns Related to Snowmobile Usage. Water Resources Division, National Park Service, Technical Report.

VanMouwerik, M. and **Hagemann, M.F.** 1999, Water Quality Concerns Related to Personal Watercraft Usage. Water Resources Division, National Park Service, Technical Report.

Hagemann, M.F., 1999, Is Dilution the Solution to Pollution in National Parks? The George Wright Society Biannual Meeting, Asheville, North Carolina.

Hagemann, M.F., 1997, The Potential for MTBE to Contaminate Groundwater. U.S. EPA Superfund Groundwater Technical Forum Annual Meeting, Las Vegas, Nevada.

Hagemann, M.F., and Gill, M., 1996, Impediments to Intrinsic Remediation, Moffett Field Naval Air Station, Conference on Intrinsic Remediation of Chlorinated Hydrocarbons, Salt Lake City.
