<input type="checkbox"/> Sandy Gleyed Matrix (S4)		

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (any one indicator is sufficient)		Secondary Indicators (2 or more required)
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Salt Crust (B11)	<input type="checkbox"/> Water Marks (B1) (Riverine)
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Biotic Crust (B12)	<input type="checkbox"/> Sediment Deposits (B2) (Riverine)
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Aquatic Invertebrates (B13)	<input type="checkbox"/> Drift Deposits (B3) (Riverine)
<input type="checkbox"/> Water Marks (B1) (Nonriverine)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Drainage Patterns (B10)
<input type="checkbox"/> Sediment Deposits (B2) (Nonriverine)	<input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3)	<input type="checkbox"/> Dry-Season Water Table (C2)
<input type="checkbox"/> Drift Deposits (B3) (Nonriverine)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Thin Muck Surface (C7)
<input checked="" type="checkbox"/> Surface Soil Cracks (B6)	<input type="checkbox"/> Recent Iron Reduction in Plowed Soils (C6)	<input type="checkbox"/> Crayfish Burrows (C8)
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)
		<input type="checkbox"/> FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>
Water Table Present?	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	
Saturation Present? (includes capillary fringe)	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and the presence of hydrophytic vegetation indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 278
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5525727168 Long: -117.018529913 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

--	--

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____

Water Table Present? Yes _____ No _____ Depth (inches): _____

Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2.27.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 281
 Investigator(s): Beth Proscal, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5518668359 Long: -117.018420382 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: depression
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of a biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2.27.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 284
 Investigator(s): Beth Proscal, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5514452844 Long: -117.018443359 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>7</u> (A)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: <u>shovel refusal</u> Depth (inches): <u>5</u>	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
---	---

Remarks: Some redox features observed, but insufficient to meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and a biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 293
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5545644097 Long: -117.022773463 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. While the sample area does not support a predominance of hydrophytic vegetation, it does support one vernal pool plant indicator species (Plagiobothrys acanthocarpus).

SOIL

Sampling Point: 293

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Table with columns: Depth (inches), Matrix (Color (moist), %), Redox Features (Color (moist), %, Type1, Loc2), Texture, Remarks. Multiple empty rows for data entry.

1Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. 2Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
___ Histic Epipedon (A2)
___ Black Histic (A3)
___ Hydrogen Sulfide (A4)
___ Stratified Layers (A5) (LRR C)
___ 1 cm Muck (A9) (LRR D)
___ Depleted Below Dark Surface (A11)
___ Thick Dark Surface (A12)
___ Sandy Mucky Mineral (S1)
___ Sandy Gleyed Matrix (S4)

- ___ Sandy Redox (S5)
___ Stripped Matrix (S6)
___ Loamy Mucky Mineral (F1)
___ Loamy Gleyed Matrix (F2)
___ Depleted Matrix (F3)
___ Redox Dark Surface (F6)
___ Depleted Dark Surface (F7)
___ Redox Depressions (F8)
___ Vernal Pools (F9)

Indicators for Problematic Hydric Soils3:

- ___ 1 cm Muck (A9) (LRR C)
___ 2 cm Muck (A10) (LRR B)
___ Reduced Vertic (F18)
___ Red Parent Material (TF2)
___ Other (Explain in Remarks)

3Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
Depth (inches): _____

Hydric Soil Present? Yes ___ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ___ Surface Water (A1)
___ High Water Table (A2)
___ Saturation (A3)
___ Water Marks (B1) (Nonriverine)
___ Sediment Deposits (B2) (Nonriverine)
___ Drift Deposits (B3) (Nonriverine)
___ Surface Soil Cracks (B6)
___ Inundation Visible on Aerial Imagery (B7)
___ Water-Stained Leaves (B9)
___ Salt Crust (B11)
X Biotic Crust (B12)
___ Aquatic Invertebrates (B13)
___ Hydrogen Sulfide Odor (C1)
___ Oxidized Rhizospheres along Living Roots (C3)
___ Presence of Reduced Iron (C4)
___ Recent Iron Reduction in Tilled Soils (C6)
___ Thin Muck Surface (C7)
___ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ___ Water Marks (B1) (Riverine)
___ Sediment Deposits (B2) (Riverine)
___ Drift Deposits (B3) (Riverine)
___ Drainage Patterns (B10)
___ Dry-Season Water Table (C2)
___ Thin Muck Surface (C7)
___ Crayfish Burrows (C8)
___ Saturation Visible on Aerial Imagery (C9)
___ Shallow Aquitard (D3)
___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes ___ No X Depth (inches): _____
Water Table Present? Yes ___ No ___ Depth (inches): _____
Saturation Present? Yes ___ No ___ Depth (inches): _____
(includes capillary fringe)

Wetland Hydrology Present? Yes X No ___

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Only a small portion contains biotic crust, in a small basin within the vernal pool. Although no surface water was present at the time of the delineation, evidence of biotic crust indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Surface water was present at the time of the delineation, and the presence of hydrophytic vegetation; both indicating that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3.3.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 296
 Investigator(s): Andrew Smisek, Katy Chappaz Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5543353307 Long: -117.022184214 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: redox observed; but insufficient amount within top layer (0-2") to meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks, a biotic crust, and aquatic invertebrates all indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3.3.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 299
 Investigator(s): Beth Proscal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5543837644 Long: -117.022682808 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Restrictive Layer (if present): Type: _____ Depth (inches): _____			Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

---	--

Remarks: Redox features only in top 1" but insufficient to meet hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors.

---	---

Remarks: redox throughout entire soil profile but only at 1%, insufficient to meet hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Surface water was present at the time of the delineation, as well as evidence of saturation, drift deposits, biotic crust, aquatic invertebrates, and the presence of hydrophytic vegetation, all indicating that the area supports wetland hydrology.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No soil pit was dug due because the sample point is outside of the Review Area. However, hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology.

HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (2 or more required)
Primary Indicators (minimum of one required; check all that apply)		
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Salt Crust (B11)	<input type="checkbox"/> Water Marks (B1) (Riverine)
<input type="checkbox"/> High Water Table (A2)	<input checked="" type="checkbox"/> Biotic Crust (B12)	<input type="checkbox"/> Sediment Deposits (B2) (Riverine)
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Aquatic Invertebrates (B13)	<input type="checkbox"/> Drift Deposits (B3) (Riverine)
<input type="checkbox"/> Water Marks (B1) (Nonriverine)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Drainage Patterns (B10)
<input type="checkbox"/> Sediment Deposits (B2) (Nonriverine)	<input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3)	<input type="checkbox"/> Dry-Season Water Table (C2)
<input type="checkbox"/> Drift Deposits (B3) (Nonriverine)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Thin Muck Surface (C7)
<input checked="" type="checkbox"/> Surface Soil Cracks (B6)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Crayfish Burrows (C8)
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)

		<input type="checkbox"/> FAC-Neutral Test (D5)

Field Observations:	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Surface Water Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____	
Water Table Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____	
Saturation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and a biotic crust both indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 324
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5542377382 Long: -117.01518034 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks, water stained leaves, and the presence of fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 327
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.55214 Long: -117.01510 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 30 to 50 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Olivenhain cobbly loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: redox observed in top 1" only, insufficient to meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 331
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5523043141 Long: -117.023263102 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

Restrictive Layer (if present): Type: _____ Depth (inches): _____		Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Remarks: Olivenhain cobbly loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

HYDROLOGY

Wetland Hydrology Indicators: <u>Primary Indicators (any one indicator is sufficient)</u> <input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> High Water Table (A2) <input type="checkbox"/> Saturation (A3) <input type="checkbox"/> Water Marks (B1) (Nonriverine) <input type="checkbox"/> Sediment Deposits (B2) (Nonriverine) <input type="checkbox"/> Drift Deposits (B3) (Nonriverine) <input checked="" type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input type="checkbox"/> Water-Stained Leaves (B9)	<input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> Biotic Crust (B12) <input type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Presence of Reduced Iron (C4) <input type="checkbox"/> Recent Iron Reduction in Plowed Soils (C6) <input type="checkbox"/> Other (Explain in Remarks)	<u>Secondary Indicators (2 or more required)</u> <input type="checkbox"/> Water Marks (B1) (Riverine) <input type="checkbox"/> Sediment Deposits (B2) (Riverine) <input type="checkbox"/> Drift Deposits (B3) (Riverine) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> FAC-Neutral Test (D5)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Evidence of surface water and hydrophytic vegetation both indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego / San Diego Sampling Date: July 13, 2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 346
 Investigator(s): G. Scheid Section, Township, Range: Imperial Beach Sec. 31 T18S R1W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): none Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.557 dd Long: -117.029 dd Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
---	--

Remarks: The vegetation at the sample site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.

VEGETATION – Use scientific names of plants.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug. As these pools were added to the project development footprint after the 2019/2020 wet season fairy shrimp surveys were conducted, the presence of San Diego fairy shrimp is assumed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego / San Diego Sampling Date: July 13, 2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 347
 Investigator(s): G. Scheid Section, Township, Range: Imperial Beach Sec. 31 T18S R1W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): none Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.557 dd Long: -117.029 dd Datum: NAD83
 Soil Map Unit Name: Huerhuero loam NWI classification: Depression

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The vegetation at the sample site has been disturbed due to past land uses. The vegetation and hydrology of the seasonal depression are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status

Field Observations: Surface Water Present? Yes _____ No <u>X</u> Depth (inches): _____ Water Table Present? Yes _____ No <u>X</u> Depth (inches): _____ Saturation Present? Yes _____ No <u>X</u> Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No _____
--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks, a biotic crust (algae), and invertebrate eggs indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug. As these pools were added to the project development footprint after the 2019/2020 wet season fairy shrimp surveys were conducted, the presence of San Diego fairy shrimp is assumed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego / San Diego Sampling Date: July 13, 2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 349
 Investigator(s): G. Scheid Section, Township, Range: Imperial Beach Sec. 31 T18S R1W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): none Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.557 dd Long: -117.028 dd Datum: NAD83
 Soil Map Unit Name: Huerhuero loam NWI classification: Depression

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The vegetation at the sample site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Field Observations: Surface Water Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ Water Table Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ Saturation Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and a biotic crust (algae) indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug. As these pools were added to the project development footprint after the 2019/2020 wet season fairy shrimp surveys were conducted, the presence of San Diego fairy shrimp is assumed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego / San Diego Sampling Date: July 13, 2020

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and a biotic crust (algae) indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 19, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 357-WET
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.56 Long: -117.02 Datum: NAD83
 Soil Map Unit Name: Stockpen gravelly clay loam, 2-5% slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: surface soil cracks observed. This feature is known to pond after rain events, although no surface water was observed at the time of this survey.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 19, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 361-WET
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.56 Long: -117.02 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 30-50% slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

<p>Restrictive Layer (if present):</p> <p>Type: _____</p> <p>Depth (inches): _____</p>	<p>Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____</p>
---	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: sand inclusions and organic material inclusions. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	--	--

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: sand inclusions and organic material inclusions. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 372
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5564076909 Long: -117.018586512 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: none
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR C)
- 1 cm Muck (A9) (LRR D)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (LRR C)
- 2 cm Muck (A10) (LRR B)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: redox observed, but no hydric soil indicators met. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) (Nonriverine)
 - Sediment Deposits (B2) (Nonriverine)
 - Drift Deposits (B3) (Nonriverine)
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) (Riverine)
- Sediment Deposits (B2) (Riverine)
- Drift Deposits (B3) (Riverine)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)

- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: depleted matrix observed in second soil layer (2-5")

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 376
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5559634677 Long: -117.018557677 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: none
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: Large ceramic tiles (masonry) present in soil profile. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

<input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> High Water Table (A2) <input checked="" type="checkbox"/> Biotic Crust (B12) <input type="checkbox"/> Saturation (A3) <input type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Water Marks (B1) (Nonriverine) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Sediment Deposits (B2) (Nonriverine) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Drift Deposits (B3) (Nonriverine) <input type="checkbox"/> Presence of Reduced Iron (C4) <input checked="" type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Water-Stained Leaves (B9) <input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Water Marks (B1) (Riverine) <input type="checkbox"/> Sediment Deposits (B2) (Riverine) <input type="checkbox"/> Drift Deposits (B3) (Riverine) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> FAC-Neutral Test (D5)

Field Observations: Surface Water Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ Water Table Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ Saturation Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____
---	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 379
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5543205289 Long: -117.018128776 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: depression
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and is considered to meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>1</u> (A)

2. _____				
			= Total Cover	
% Bare Ground in Herb Stratum <u>90</u> % Cover of Biotic Crust _____				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it also supports one vernal pool plant indicator species (Plagiobothrys acanthocarpus).

SOIL

Sampling Point: 382

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		
0-4	10YR 3/2	100					sandy clay	
4-18	10YR 4/4	100					sandy clay	

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No _____

Remarks: indistinct surface between layers. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No Depth (inches): _____
 Water Table Present? Yes _____ No Depth (inches): _____
 Saturation Present? Yes _____ No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

<p>Restrictive Layer (if present):</p> <p>Type: _____</p> <p>Depth (inches): _____</p>	<p>Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____</p>
---	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	--	--

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: redox observed, but no hydric soil indicators met. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Field Observations:

Surface Water Present? Yes No Depth (inches): _____

Water Table Present? Yes No Depth (inches): _____

Saturation Present? Yes No Depth (inches): _____
(includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 388
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5559124287 Long: -117.018719073 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: none
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: depleted matrix observed

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/12/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 391
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5554499791 Long: -117.018846332 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: none
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status

- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No x

Remarks: no hydric soil indicators observed

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/9/2022
 Applicant/Owner: Tri Pointe Homes State: CA Sampling Point: 395
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C-Mediterranean California Lat: 32.547932 Long: -117.018973 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: none
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>0</u> (B)

- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- ___ 1 cm Muck (A9) **(LRR C)**
- ___ 2 cm Muck (A10) **(LRR B)**
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (TF2)
- ___ Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area is unvegetated and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) **(Nonriverine)**
- ___ Sediment Deposits (B2) **(Nonriverine)**
- ___ Drift Deposits (B3) **(Nonriverine)**
- X Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- X Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- X Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres along Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ___ Water Marks (B1) **(Riverine)**
- ___ Sediment Deposits (B2) **(Riverine)**
- ___ Drift Deposits (B3) **(Riverine)**
- ___ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Thin Muck Surface (C7)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
Water Table Present? Yes _____ No X Depth (inches): _____
Saturation Present? Yes _____ No X Depth (inches): _____
(includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks, biotic crust, and water-strained leaves indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 19, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 396-WET
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55 Long: -117.02 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9-30% slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature meets the wetland criteria and is adjacent to VPHCP2336 and shares a hydrologic connection.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	
1. <u>Tamarix ramossisima</u>	60	Yes	FAC	Dominance Test worksheet: Number of Dominant Species That Are OBL, FACW, or FAC: <u>3</u> (A) Total Number of Dominant Species Across All Strata: <u>4</u> (B) Percent of Dominant Species That Are OBL, FACW, or FAC: <u>75%</u> (A/B)
2. _____

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: large rock cobbles present throughout profile. Redox features observed in multiple layers, but none meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the presence of surface soil cracks and San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 11, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: P2
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.552209 Long: -117.013946 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobby loam, 30 to 50 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: _____ (A)
2. _____				Total Number of Dominant Species Across All Strata: _____ (B)
3. _____				Percent of Dominant Species That Are OBL, FACW, or FAC: _____ (A/B)
4. _____				
	_____ = Total Cover			
Sapling/Shrub Stratum (Plot size: _____)				Prevalence Index worksheet:
1. <u>none</u>				Total % Cover of: _____ Multiply by: _____
2. _____				OBL species _____ x 1 = _____
3. _____				FACW species _____ x 2 = _____
4. _____				FAC species _____ x 3 = _____
5. _____				FACU species _____ x 4 = _____
	_____ = Total Cover			UPL species _____ x 5 = _____
				Column Totals: _____ (A) _____ (B)
				Prevalence Index = B/A = _____
Herb Stratum (Plot size: _____)				Hydrophytic Vegetation Indicators:
1. <u>Psilocarphus brevissimus</u>	1	N	FACW	<input type="checkbox"/> Dominance Test is >50%
2. <u>Festuca perennis</u>	2	N	FAC	<input type="checkbox"/> Prevalence Index is ≤3.0 ¹
3. _____				<input type="checkbox"/> Morphological Adaptations ¹ (Provide supporting data in Remarks or on a separate sheet)
4. _____				<input type="checkbox"/> Problematic Hydrophytic Vegetation ¹ (Explain)
5. _____				
6. _____				
7. _____				
8. _____				
	3 = Total Cover			
Woody Vine Stratum (Plot size: _____)				¹ Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.
1. <u>none</u>				
2. _____				
	_____ = Total Cover			
% Bare Ground in Herb Stratum <u>97</u> % Cover of Biotic Crust _____				Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. Sampled during the growing season, but vegetation cover insufficient (less than 5%) to be considered hydrophytic. It does support one vernal pool plant indicator species (Psilocarphus brevissimus)

SOIL

Sampling Point: P2

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)		Indicators for Problematic Hydric Soils³:
<input type="checkbox"/> Histosol (A1)	<input type="checkbox"/> Sandy Redox (S5)	<input type="checkbox"/> 1 cm Muck (A9) (LRR C)
<input type="checkbox"/> Histic Epipedon (A2)	<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> 2 cm Muck (A10) (LRR B)
<input type="checkbox"/> Black Histic (A3)	<input type="checkbox"/> Loamy Mucky Mineral (F1)	<input type="checkbox"/> Reduced Vertic (F18)
<input type="checkbox"/> Hydrogen Sulfide (A4)	<input type="checkbox"/> Loamy Gleyed Matrix (F2)	<input type="checkbox"/> Red Parent Material (TF2)
<input type="checkbox"/> Stratified Layers (A5) (LRR C)	<input type="checkbox"/> Depleted Matrix (F3)	<input type="checkbox"/> Other (Explain in Remarks)
<input type="checkbox"/> 1 cm Muck (A9) (LRR D)	<input type="checkbox"/> Redox Dark Surface (F6)	
<input type="checkbox"/> Depleted Below Dark Surface (A11)	<input type="checkbox"/> Depleted Dark Surface (F7)	
<input type="checkbox"/> Thick Dark Surface (A12)	<input type="checkbox"/> Redox Depressions (F8)	
<input type="checkbox"/> Sandy Mucky Mineral (S1)	<input type="checkbox"/> Vernal Pools (F9)	
<input type="checkbox"/> Sandy Gleyed Matrix (S4)		

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):	Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Type: _____			
Depth (inches): _____			

Remarks: The sampled area is unvegetated and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (2 or more required)
Primary Indicators (minimum of one required; check all that apply)	
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Water Marks (B1) (Riverine)
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Sediment Deposits (B2) (Riverine)
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Drift Deposits (B3) (Riverine)
<input type="checkbox"/> Water Marks (B1) (Nonriverine)	<input type="checkbox"/> Drainage Patterns (B10)
<input type="checkbox"/> Sediment Deposits (B2) (Nonriverine)	<input type="checkbox"/> Dry-Season Water Table (C2)
<input type="checkbox"/> Drift Deposits (B3) (Nonriverine)	<input type="checkbox"/> Thin Muck Surface (C7)
<input checked="" type="checkbox"/> Surface Soil Cracks (B6)	<input type="checkbox"/> Crayfish Burrows (C8)
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)
<input type="checkbox"/> Water-Stained Leaves (B9)	<input type="checkbox"/> Shallow Aquitard (D3)
<input type="checkbox"/> Salt Crust (B11)	<input type="checkbox"/> FAC-Neutral Test (D5)
<input checked="" type="checkbox"/> Biotic Crust (B12)	
<input checked="" type="checkbox"/> Aquatic Invertebrates (B13)	
<input type="checkbox"/> Hydrogen Sulfide Odor (C1)

2. _____				
= Total Cover				
% Bare Ground in Herb Stratum <u>76</u> % Cover of Biotic Crust _____				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support one vernal pool plant indicator species (Psilocarphus brevissimus). Leaf litter is present in basin.

SOIL

Sampling Point: P5/HCP 1192

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the presence of surface soil cracks, biotic crusts, and San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 11, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: P6_VPHCP 263
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.552206 Long: -117.011206 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

<p>Restrictive Layer (if present):</p> <p>Type: _____</p> <p>Depth (inches): _____</p>	<p>Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p>
---	---

Remarks: cobbles mixed throughout soil profile. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, presence of surface soil cracks and San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: P12
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.54951414880 Long: -117.01407944400 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A)

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: April 11, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: P15
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.554230 Long: 117.014028 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Depressional

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>None</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>2</u> (A) Total Number of Dominant Species Across All Strata: <u>2</u> (B) Percent of Dominant Species That Are OBL, FACW, or FAC: <u>100</u> (A/B)
2. _____

% Bare Ground in Herb Stratum <u>0</u>		% Cover of Biotic Crust <u>0</u>		Hydrophytic Vegetation Indicators: <input checked="" type="checkbox"/> Dominance Test is >50% <input type="checkbox"/> Prevalence Index is ≤3.0 ¹ <input type="checkbox"/> Morphological Adaptations ¹ (Provide supporting data in Remarks or on a separate sheet) <input type="checkbox"/> Problematic Hydrophytic Vegetation ¹ (Explain) ¹ Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.
Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support two vernal pool plant indicator species (Plagiobothrys acanthocarpus and Psilocarphus brevissimus). Leaf litter is present in basin.

SOIL

Sampling Point: P15

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		
0-3	10YR 4/2	100					sandy clay	
4-18	10YR 3/2	100					sandy clay	

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR C)
- 1 cm Muck (A9) (LRR D)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (LRR C)
- 2 cm Muck (A10) (LRR B)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) (Nonriverine)
 - Sediment Deposits (B2) (Nonriverine)
 - Drift Deposits (B3) (Nonriverine)
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) (Riverine)
- Sediment Deposits (B2) (Riverine)
- Drift Deposits (B3) (Riverine)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, the presence of surface soil cracks and San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 11, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: P17
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.552231 Long: -117.013878 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobby loam, 30 to 50 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	
Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	

Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

VEGETATION – Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: indicators of wetland hydrology observed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/17/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: VPHCP278
 Investigator(s): Beth Procsal, Gerry Scheid Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5525727168 Long: -117.018529913 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: Freshwater Emergent Wetland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The vegetation at the sample site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: VPHCP 1223
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.553383 Long: -117.022863 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Restrictive Layer (if present): Type: <u>shovel refusal</u> Depth (inches): <u>10</u>	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	--

Remarks: Redox observed within top layer in insufficient amount. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Secondary Indicators (2 or more required)

- Water Marks (B1) (Riverine)
- Sediment Deposits (B2) (Riverine)
- Drift Deposits (B3) (Riverine)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2.27.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: VPHCP1651
 Investigator(s): Beth Proscal, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.55214 Long: -117.01840 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

<p>Restrictive Layer (if present):</p> <p>Type: _____</p> <p>Depth (inches): _____</p>	<p>Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p>
---	---

Remarks: No redox observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug and the presence of San Diego fairy shrimp was assumed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/17/2021
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: VPHCP1755
 Investigator(s): Beth Procsal, Gerry Scheid Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5460208115 Long: -117.023413675 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: Freshwater Emergent Wetland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

Water Table Present?	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes <input checked="" type="radio"/> No <input type="radio"/>	Depth (inches):	<u>0</u>

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Surface water, evidence of surface soil cracks, biotic crust, and aquatic invertebrates were all present at the time of the delineation, which indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes X No _____

Remarks: Depleted matrix observed.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) **(Nonriverine)**
- Sediment Deposits (B2) **(Nonriverine)**
- Drift Deposits (B3) **(Nonriverine)**
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and the presence of hydrophytic vegetation indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/9/2022
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: VPHCP2336
 Investigator(s): Beth Procsal, Andy Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.547932 Long: -117.018973 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: Freshwater Emergent Wetland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (2 or more required)
Primary Indicators (any one indicator is sufficient)	
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Water Marks (B1) (Riverine)
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Sediment Deposits (B2) (Riverine)
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Drift Deposits (B3) (Riverine)
<input type="checkbox"/> Water Marks (B1) (Nonriverine)	<input type="checkbox"/> Drainage Patterns (B10)
<input type="checkbox"/> Sediment Deposits (B2) (Nonriverine)	<input type="checkbox"/> Dry-Season Water Table (C2)
<input type="checkbox"/> Drift Deposits (B3) (Nonriverine)	<input type="checkbox"/> Thin Muck Surface (C7)
<input type="checkbox"/> Surface Soil Cracks (B6)	<input type="checkbox"/> Crayfish Burrows (C8)
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)
<input type="checkbox"/> Water-Stained Leaves (B9)	<input type="checkbox"/> Shallow Aquitard (D3)
<input type="checkbox"/> Salt Crust (B11)	<input type="checkbox"/> FAC-Neutral Test (D5)
<input checked="" type="checkbox"/> Biotic Crust (B12)	
<input type="checkbox"/> Aquatic Invertebrates (B13)	
<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	
<input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3)	
<input type="checkbox"/> Presence of Reduced Iron (C4)	
<input type="checkbox"/> Recent Iron Reduction in Plowed Soils (C6)	
<input type="checkbox"/> Other (Explain in Remarks)	

Field Observations:

Surface Water Present?	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>
Water Table Present?	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	
Saturation Present? (includes capillary fringe)	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of a biotic crust indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: VPHCP 3145
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.558649 Long: -117.019151 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) **(Nonriverine)**
- Sediment Deposits (B2) **(Nonriverine)**
- Drift Deposits (B3) **(Nonriverine)**
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3.26.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 3152
 Investigator(s): JR Sundberg, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5584504738 Long: -117.018503279 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of saturation and water marks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Channel is 1 foot wide and 6 inches deep

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/13/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: G(1)
 Investigator(s): JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): none Slope (%): 0-2
 Subregion (LRR): C Lat: 32.55935 Long: -117.01771 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 30 to 50 percent slopes NWI classification: R4SBC riverine

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Sample point along Drainage G, just downstream from confluence with G(b). Coastal sage scrub on low terrace, similar landscape position to nearby potential wetlands	

VEGETATION – Use scientific names of plants.

- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: No soil indicators present.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes X No _____ Depth (inches): 12
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Creek is 5 feet from sample point, surfacr water was from last rain on 2/10/20.

Saturation Present? (includes capillary fringe)	Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Sample area located upstream from a culvert and ephemeral drainage. The culvert may partially slow the flow during rain events increasing sediment deposition artificially. Despite conducting the survey within a week of significant rainfall, the soil was not saturated. Ephemeral channel qualifies as a non-wetland water based on the ordinary high water mark.

SOIL

Sampling Point: S-1

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		
0-14	10YR 3/3	100	-	-	-	-	sandy loam	

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)

- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: No hydric soil indicators observed.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes _____ No X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Weak hydrology indicator, indicating a larger flood event and nothing frequent.

ATTACHMENT 5

Wetland Determination Data Forms (Upland Points)

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 6/27/23
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 12-UPL
 Investigator(s): Andrew Smisek, Chris Thomson Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa Local relief (concave, convex, none): none Slope (%): 0
 Subregion (LRR): C Lat: 32.55893 Long: -117.01911 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2-9% slopes NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Paired sample point for feature #12.	

VEGETATION – Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: No wetland hydrology indicators observed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 6/27/23
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 124-UPL
 Investigator(s): Andrew Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa Local relief (concave, convex, none): none Slope (%): 0
 Subregion (LRR): C Lat: 32.55859 Long: -117.01864 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2-9% slopes NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Paired sample point for feature #124.	

VEGETATION – Use scientific names of plants.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 6/20/23
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 202-UPL
 Investigator(s): Andrew Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa Local relief (concave, convex, none): none Slope (%): 3
 Subregion (LRR): C Lat: 32.55238 Long: -117.02079 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2-9% slopes NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Paired sample point for feature #202.	

VEGETATION – Use scientific names of plants.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/27/23
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 211-UPL
 Investigator(s): Andrew Smisek Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa Local relief (concave, convex, none): none Slope (%): 0
 Subregion (LRR): C Lat: 32.55915 Long: -117.01879 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2-9% slopes NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Paired sample point for feature #211.	

VEGETATION – Use scientific names of plants.

---	---

- Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:**
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 5. Identify the OHW M and record the indicators. Record the OHW M position via:

<input type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:

Wentworth Size Classes

 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 5. Identify the OHWM and record the indicators. Record the OHWM position via:

OHWM

GPS point: _____

Indicators:

- | | |
|--|---|
| <input checked="" type="checkbox"/> Change in average sediment texture | <input checked="" type="checkbox"/> Break in bank slope |
| <input checked="" type="checkbox"/> Change in vegetation species | <input type="checkbox"/> Other: _____ |
| <input checked="" type="checkbox"/> Change in vegetation cover | <input type="checkbox"/> Other: _____ |

Comments:

OHWM occurs at the outer edge of the low-flow channels, between which is a change in vegetation, a change in sediment texture, and other OHWM indicators. The OHWM occurs at a break in slope.

Floodplain unit: Low-Flow Channel Active Floodplain Low Terrace

GPS point: collected using sub-meter GPS

Characteristics of the floodplain unit:

Average sediment texture: cobble

Total veg cover: 40 % Tree: 0 % Shrub: 40 % Herb: 0 %

Community successional stage:

- | | |
|---|--|
| <input type="checkbox"/> NA | <input checked="" type="checkbox"/> Mid (herbaceous, shrubs, saplings) |
| <input type="checkbox"/> Early (herbaceous & seedlings) | <input type="checkbox"/> Late (herbaceous, shrubs, mature trees) |

Indicators:

- | | |
|--|---|
| <input type="checkbox"/> Mudcracks | <input type="checkbox"/> Soil development |
| <input type="checkbox"/> Ripples | <input type="checkbox"/> Surface relief |
| <input checked="" type="checkbox"/> Drift and/or debris | <input type="checkbox"/> Other: _____ |
| <input checked="" type="checkbox"/> Presence of bed and bank | <input type="checkbox"/> Other: _____ |
| <input type="checkbox"/> Benches | <input type="checkbox"/> Other: _____ |

Comments:

Two low-flow channels run parallel to each other here, each containing obvious break in slope and mostly cobble within channel. Some sediment sorting/deposits and drift deposits observed.

Project ID: 8868

Cross section ID: G-5

Date: 17 Jan 2024 Time: 1300

Floodplain unit: Low-Flow Channel Active Floodplain Low Terrace

GPS point: _____

Characteristics of the floodplain unit:

Average sediment texture: cobble and sandy loam

Total veg cover: 80 % Tree: 0 % Shrub: 70 % Herb: 10 %

Community successional stage:

- NA Mid (herbaceous, shrubs, saplings)
- Early (herbaceous & seedlings) Late (herbaceous, shrubs, mature trees)

Indicators:

- Mudcracks Soil development
- Ripples Surface relief
- Drift and/or debris Other: change in vegetation
- Presence of bed and bank Other: change in sediment
- Benches Other: _____

Comments:

Southern OHWM occurs at outer edge of southern low-flow channel and northern OHWM occurs at outer edge of northern low-flow channel. These low-flows and the area between comprise the active floodplain as the area between supports baccharis-dominated veg and sandy-loam soils. This is a change in veg and soil compared to areas outside the active floodplain, which support upland CSS species and developed loamy soil.

Floodplain unit: Low-Flow Channel Active Floodplain Low Terrace

GPS point: _____

Characteristics of the floodplain unit:

Average sediment texture: _____

Total veg cover: 70 % Tree: 0 % Shrub: 65 % Herb: 5 %

Community successional stage:

- NA Mid (herbaceous, shrubs, saplings)
- Early (herbaceous & seedlings) Late (herbaceous, shrubs, mature trees)

Indicators:

- Mudcracks Soil development
- Ripples Surface relief
- Drift and/or debris Other: _____
- Presence of bed and bank Other: _____
- Benches Other: _____

Comments:

Low terrace outside active floodplain supports mature CSS dominated by upland species, such as ARTCAL and RHUINT. This is a change in veg from the baccharis-dominated area within the active floodplain. The low terrace also supports developed loamy soil with no sand or sediment deposits.

--	---

Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?	Location Details: <i>32.55173, -117.02438</i> Projection: <i>State Plane</i> Datum: <i>NAD83</i> Coordinates:
--	--

Potential anthropogenic influences on the channel system:
None

Brief site description:
Upper reach of ephemeral drainage near starting knick point.

Checklist of resources (if available):

<input checked="" type="checkbox"/> Aerial photography Dates: <input type="checkbox"/> Topographic maps <input type="checkbox"/> Geologic maps <input checked="" type="checkbox"/> Vegetation maps <input checked="" type="checkbox"/> Soils maps <input type="checkbox"/> Rainfall/precipitation maps <input type="checkbox"/> Existing delineation(s) for site <input checked="" type="checkbox"/> Global positioning system (GPS) <input type="checkbox"/> Other studies	<input type="checkbox"/> Stream gage data Gage number: Period of record: <input type="checkbox"/> History of recent effective discharges <input type="checkbox"/> Results of flood frequency analysis <input type="checkbox"/> Most recent shift-adjusted rating <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event
--	---

Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:

<input checked="" type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:

Potential anthropogenic influences on the channel system:
None

Brief site description:
Lower reach of tributary drainage to Stream M, near confluence.

Checklist of resources (if available):

<input checked="" type="checkbox"/> Aerial photography Dates: <input type="checkbox"/> Topographic maps <input type="checkbox"/> Geologic maps <input checked="" type="checkbox"/> Vegetation maps <input checked="" type="checkbox"/> Soils maps <input type="checkbox"/> Rainfall/precipitation maps <input type="checkbox"/> Existing delineation(s) for site <input checked="" type="checkbox"/> Global positioning system (GPS) <input type="checkbox"/> Other studies	<input type="checkbox"/> Stream gage data Gage number: Period of record: <input type="checkbox"/> History of recent effective discharges <input type="checkbox"/> Results of flood frequency analysis <input type="checkbox"/> Most recent shift-adjusted rating <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event
--	---

Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:

<input checked="" type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:

Arid West Ephemeral and Intermittent Streams OTHM Datasheet

Project: <i>Southwest Village</i> Project Number: <i>8P68</i> Stream: <i>Q; Point Q-1</i> Investigator(s): <i>B. Prosser, J. Sundberg</i>	Date: <i>Feb. 18, 2020</i> Time: <i>1:00pm</i> Town: <i>San Diego</i> State: <i>CA</i> Photo begin file#: Photo end file#:
--	--

Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?	Location Details: <i>32.55883, -117.02861</i> Projection: <i>State Plane</i> Datum: <i>NAD 83</i> Coordinates:
--	---

Potential anthropogenic influences on the channel system:
Some erosion on mesa above.

Brief site description:
North Flaming side canyon to Moody Canyon

Checklist of resources (if available):

<input checked="" type="checkbox"/> Aerial photography Dates: <input checked="" type="checkbox"/> Topographic maps <input type="checkbox"/> Geologic maps <input type="checkbox"/> Vegetation maps <input checked="" type="checkbox"/> Soils maps <input type="checkbox"/> Rainfall/precipitation maps <input type="checkbox"/> Existing delineation(s) for site <input checked="" type="checkbox"/> Global positioning system (GPS) <input type="checkbox"/> Other studies	<input type="checkbox"/> Stream gage data Gage number: Period of record: <input type="checkbox"/> History of recent effective discharges <input type="checkbox"/> Results of flood frequency analysis <input type="checkbox"/> Most recent shift-adjusted rating <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event
--	---

- Procedure for identifying and characterizing the floodplain units to assist in identifying the OTHM:**
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 5. Identify the OTHM and record the indicators. Record the OTHM position via:

<input checked="" type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:
