1.0 Site Description and Landscape Setting

The Southwest Village Specific Plan project (project) is located in the city of San Diego, south of State Route 905 and east of Interstate 805 (Figure 1; all figures provided with this report are compiled as Attachment 1). It is accessible from Caliente Avenue and State Route 905 and is situated south of the southern terminus of Caliente Avenue. The project is found in Township 18 South, Range 01 West and Township 19 South, Range 01 West, of the U.S. Geological Survey (USGS) 7.5-minute topographic map, Imperial Beach, California quadrangle (Figure 2; USGS 1996). The project is surrounded by residential and commercial development to the north and undeveloped land borders the site to the east, west, and south (Figure 3).

The Assessor's Parcel Numbers within the Review Area are provided in Table 1 (all tables are compiled as Attachment 2). For the purposes of this report, the Review Area is equivalent to the area of proposed development (project-level analysis area), as well as the proposed vernal pool restoration area and surrounding land to be conserved and managed by the City (see Figure 3). The Review Area encompasses approximately 549.07 acres. Also included within the Review Area are aquatic resources delineated within portions of the Candlelight and Southwind project sites that occur adjacent to or overlap with portions of the Southwest Village project-level analysis area (see Figure 3). Despite occurring within these other project sites, any aquatic resources overlapping or occurring adjacent to the Southwest Village project-level analysis area could be impacted by the Southwest Village project. The Candlelight project has obtained wetland permits addressing impacts within the area noted in Figure 3. The Southwind project is located adjacent to the Candlelight project (see Figure 3) but is currently seeking entitlements. Because these projects overlap with the Southwest Village Specific Plan project, the relevant aquatic resources (either overlapping with or occurring adjacent to the Southwest Village Specific Plan project site) delineated for those projects have been included for reference within this report. The majority of the Review Area is vegetated with non-native grassland and also supports sensitive native upland and wetland habitats.

2.0 Site Alterations, Current and Past Land Use

This Review Area consists of undeveloped land and has been altered over time by the presence of off-road activity. A review of historical aerial photographs was used to determine the land use history of the site. A 1971 aerial photograph of the Review Area showed it to be largely undisturbed with only a few dirt access roads present. Around 1981, aerial photographs showed that off-road activity had occurred in parcels in the northern portion of the Review Area and a few homesteads were also established. No past or active irrigation exists within the Review Area. By 1989, aerial photographs show parcels in the northern portion were riddled with dirt roads from off-road vehicle activity and illegal trash dumping. Additional dirt roads had been created throughout the Review Area, but the southern areas remained predominately undisturbed. The Review Area remained largely the same over the next two decades with some increase in dirt roads due to off-road vehicles, especially in the most northern parcels. In the 2000s, off-road activity increased and as a result, many areas are highly disturbed. Illegal off-roading within the Review Area continues to the present day. All portions of the Review Area are subject to regular trespassing and many areas contain trash, dumping, and/or ground disturbance.

2.1 Soils

Information on the soil types sampled in the Review Area (Figure 4) is summarized from the Soil Survey for San Diego County (U.S. Department of Agriculture [USDA] 1973), the San Diego Association of Governments' (SANDAG) 1995 geographic information system data (SANDAG 1995), and the Hydric Soils of California list obtained from the USDA Natural Resource Conservation Service (NRCS; 2023).

Eight soil types within five series are mapped within the Review Area, which include Diablo clay, 30 to 50 percent slopes, Huerhuero loam, 2 to 9 percent slopes; Linne clay loam, 9 to 30 percent slopes, Linne clay loam, 30 to 50 percent slopes, Olivenhain cobbly loam, 2 to 9 percent slopes; Olivenhain cobbly loam, 9 to 30 percent slopes; Olivenhain cobbly loam, 30 to 50 percent slopes; and Stockpen gravelly clay loam, 2 to 5 percent slopes (USDA 1973; see Figure 4). The Huerhuero loam, Olivenhain cobbly loam, and Stockpen gravelly clay loam soils series can be considered hydric soils when occurring in ponded depressions (NRCS 2023). All soil types are discussed below.

Diablo clay – This soil series on-site consists of well-drained, moderately deep to deep clays derived from soft, calcareous sandstone and shale. These soils have slopes of 2 to 50 percent. The vegetation present on these soils consists mainly of grasses. Diablo clay loam is found in the southern portion of the Review Area, south of the vernal pool restoration areas (see Figure 4).

Huerhuero loam – This soil series on-site consists of moderately well-drained loams that have a clay subsoil and were derived from sandy marine sediments. Permeability is very slow, and the runoff is slow to medium. The erosion hazard is slight to moderate. The vegetation supported on these soils is primarily non-native grassland habitat. The Huerhuero loam soil type is found within a majority of the project site, mainly on the mesa tops (see Figure 4).

Linne clay loam – This soil series consists of well-drained, moderately deep clay loams derived from soft calcareous sandstone and shale. These soils have slopes of 9 to 50 percent. A small area of Linne clay loam occurs within the land to be conserved and managed by the City, in the south-central portion of the Review Area.

Olivenhain cobbly loam – This soil series on-site consists of well-drained, moderately deep to deep cobbly loams that have a very cobbly clay subsoil. These soils have slopes of 2 to 50 percent. This soil type is formed in gravelly and cobbly alluvium. Permeability is very slow, and the runoff is slow to medium. The erosion hazard is slight to moderate. This soil type can support vegetation found within Diegan coastal sage scrub habitat including California sagebrush (*Artemisia californica*), California buckwheat (*Eriogonum fasciculatum*), and also support maritime succulent scrub habitat which includes species such as jojoba (*Simmondsia chinensis*), San Diego County viguiera (*Bahiopsis lacinata*), and laurel sumac (*Malosma laurina*). The Olivenhain cobbly loam soil type is found along the western finger of the Review Area, in the southern land to be conserved and managed by the City, and in the north-central portions of the Review Area.

Stockpen gravelly clay loam – This soil series consists of moderately well-drained, moderately deep gravelly clay loams and is mapped on marine terraces. Runoff is slow and the erosion hazard is slight. Within the soil mapping are small inclusions of Diablo soils, Huerhuero soils, and Salinas soils. The vegetation supported on these soils is primarily non-native grassland habitat and is found within a small area in the northern portion of the Review Area.

2.2 Hydrology

The Review Area contains a number of drainage features occurring along the bottom of large canyons and smaller side canyons (Figure 5). These drainages convey runoff from the surrounding upland areas, including runoff from the mesa tops. They are generally naturally occurring and contain natural bottoms. However, all are subject to human-caused disturbances, including off-road activity and trash dumping. Specifically, the drainages in the northern portion of the Review Area contain large quantities of trash. The source of the water that flows in the on-site drainages comes from natural seasonal rainfall and runoff. The flow regime of these drainages appears to be ephemeral with flows being of short duration and occurring primarily only after seasonal rainfall events.

The drainages within the northwestern finger and north-central portions of the Review Area generally flow north, then west, draining into a main channel at the bottom of Moody Canyon (see Figure 5). This main channel continues west into a culvert near Beyer Boulevard and off-site through a stormwater conveyance system, draining west and then south into the Tijuana River, a Traditional Navigable Water (TNW).

Drainages in the northeastern portion of the Review Area generally convey flow southward into the upper portions of Dillon Canyon (see Figure 5). Drainages in the east-central portion of the Review Area also flow into Dillon Canyon via Finger Canyon (see Figure 5). The main channel in Dillon Canyon empties into the larger Spring Canyon, which contains a large channel that extends through the southeastern portion of the Review Area, within the land to be conserved and managed by the City. The Spring Canyon channel crosses the United States/Mexico border just south of the Review Area

and empties into the Tijuana River, which extends west, eventually crossing back into the United States as a TNW and emptying into the Pacific Ocean.

Small drainages in the southwestern portion of the Review Area flow generally southwest through the land to be conserved and managed by the City and into an off-site storm drain. This storm drain likely conveys flow into the Tijuana River (TNW), which then empties into the Pacific Ocean. All of the on-site drainage features occur within the Tijuana River watershed, within hydrologic units 911.11 or 911.12 of the San Diego Basin Plan.

A flow line analysis prepared for this project shows the limits of the two-, five-, and ten-year storm events for the drainage channels within the area of proposed development (project-level analysis area; RICK Engineering Company 2023). A discussion of these storm event limits and comparison with the delineated non-wetland waters is provided below in Section 5.2.

Aside from the on-site drainages, the Review Area contains isolated depressions and wetlands that seasonally pond water. The source of the water for depressions is primarily from natural rainfall and local runoff from the surrounding land. The water that reaches these aquatic resource features is seasonal, and temporarily ponds within their limits. Any overflow to adjacent areas occurs locally during peak flow events via sheet flow (i.e., there are no drainage courses connecting depression/wetland features to each other or to any tributary drainages within the Review Area).

2.3 Vegetation

Sixteen vegetation communities were mapped within the Review Area: maritime succulent scrub, disturbed maritime succulent scrub, valley needlegrass grassland, Diegan coastal sage scrub, disturbed Diegan coastal sage scrub, non-native grassland, non-vegetated channel, mule fat scrub, southern willow scrub, tamarisk scrub, disturbed riparian scrub, disturbed wetland, San Diego mesa claypan vernal pool, eucalyptus woodland, disturbed land, and urban/developed land (Figure 6; Table 2).

As mentioned above, the Review Area, especially the northern portions, has been subject to a significant amount of disturbance from off-road activity and past land use. This may have affected the historical location and extent of some of the on-site depression/wetland features. The ongoing disturbance on-site may affect the vegetation, soil, and hydrology characteristics of these features. These disturbances, as well as any naturally problematic scenarios, were considered when assessing the on-site features for the presence of hydrophytic vegetation, hydric soils, and wetland hydrology, as described in Section 4.0 below.

3.0 Precipitation Data and Analysis

Climate data, including precipitation totals, for the nearest recording station to the project site was gathered from the NRCS National Water and Climate Center databases. The climate data obtained are discussed below.

3.1 Climate and Growing Season

The project is located within the coastal region of southern California, in an area generally characterized as mild throughout most of the year, with hotter and drier summers and cooler and wetter winters. The majority of precipitation typically falls between December and March as somewhat frequent low- to moderate-intensity rainfall. The growing season typically lasts into early summer after winter and spring rainfall and ends in mid to late summer when little to no precipitation occurs and as temperatures increase.

3.2 Antecedent Precipitation Tool Summary

The Antecedent Precipitation Tool (APT) was used to analyze the 30-day rolling total and the 30-year normal range of precipitation data for the nearest recording weather stations to the project. Surveys within the Review Area occurred over the course of 2018 to 2023, and eight dates were chosen over this period of time to represent the six years of data. The data presented in the APT results graphics (Attachment 3) indicate that normal precipitation conditions occurred at the time of the surveys on March 15, 2018, April 11, 2019, March 17, 2021, February 9, 2022, and June 16, 2023, surveys. Slightly wetter than normal conditions occurred at the time of the August 17, 2023, survey. During the year 2020, two delineations were conducted on January 14 and March 3 in which precipitation conditions shifted from wetter to drier than normal.

These results show that minimal precipitation occurred in the vicinity of the project in the months prior to the August 17, 2023, moderate precipitation occurred to the March 15, 2018, March 3, 2020, March 17, 2021, February 9, 2022, and June 16, 2023, surveys and substantial precipitation occurred prior to the April 11, 2019, and January 14, 2020, surveys. These conditions were considered when analyzing the hydrology of the on-site features as discussed in Sections 4.0 and 5.0 below.

3.3 Wetland Hydrology and Analysis

Hydrology within the Review Area consists of wetlands, vernal pools, and drainages, all of which would be affected by substantial rain events. Multiple successive rain events would be likely to "charge" the clay soils, swelling as they reach their capacity to hold water, and may result in ponding within the vernal pools and substantial flow within the drainage channels. Surface water was observed in many of the on-site depressional features following rain events, as noted during the delineation surveys and fairy shrimp surveys conducted during the 2017/2018 wet season and 2018/2019 wet season.

As noted above, the flow regime of the on-site drainages appears to be ephemeral with flows being of short duration and occurring primarily only after seasonal rainfall events. The location and abundance of hydrology indicators within these drainages would be subject to change as a result of rainfall frequency and intensity. These factors were considered when searching for and recording hydrology indicators for these features within the Review Area.

4.0 Investigation Methods

As part of the initial studies for this project, routine waters/wetland delineations, following the guidelines provided in the Wetlands Delineation Manual (USACE 1987) the Arid West Regional Supplement (USACE 2008), was performed by RECON Environmental, Inc. biologists in 2018 in order to determine the extent of the aquatic resources present in the Review Area. Additional wetland delineation field work was conducted for the Review Area during 2019 - 2023 as new areas were added to the Review Area and additional data was collected. For reporting convenience, all aquatic resource delineation surveys conducted for this project are summarized in Table 3.

4.1 Wetland Parameters

4.1.1 Hydrophytic Vegetation

Vegetation communities comprising partially or entirely hydrophytic plant species were examined, and data for each vegetation stratum (i.e., tree, shrub, herb, and vine) were recorded on the datasheet provided in the 2008 Arid West Regional Supplement (USACE 2008). The percent absolute cover of each species present was visually estimated and recorded.

First, the wetland indicator status of each species recorded within a vegetation community was determined by using the National Wetland Plant List (USACE 2020). Dominant species with an indicator status of NI (No Indicator) or not listed in the 2020 National Wetland Plant List were evaluated as either wetland or upland indicator species based on local professional knowledge of where the species are most often observed in habitats that are characteristic in southern California.

The dominance test was then used to determine which vegetation community qualified as hydrophytic vegetation at each site. In situations where a site failed the dominance test but contained positive indicators of hydric soils and/or wetland hydrology, the prevalence index was used. The presence or absence of morphological adaptations was noted; however, none of the sampled wetland areas required an analysis of morphological adaptations to determine if the vegetation was hydrophytic.

Vegetation within the depressional features on-site is subject to temporal shifts in vegetation throughout the year in response to seasonal weather patterns, and across years in response to periods of prolonged drought. Additionally, the unauthorized off-road activity on-site may affect the plant species and distribution within the features. These factors, along with the observed vegetation at the time of sampling, were considered when determining the presence of hydrophytic vegetation within each depressional feature.

4.1.2 Hydric Soils

Sample points were selected within potential wetland areas and where the apparent boundary between wetland and upland was inferred based on changes in the composition of the vegetation and topography (see Figure 4). Soil pits were dug to a depth of at least 18 inches (unless a restrictive

layer was encountered) to determine soil color, evidence of soil saturation, depth to groundwater, and indicators of a reducing soil environment (i.e., mottling, gleying, and hydrogen sulfide odor). A Munsell Soil Color Book (2009) was used to determine soil colors, and the 2008 Arid West Regional Supplement (USACE 2008) and the Field Indicators of Hydric Soils in the United States guide (USDA 2017) was used to determine the presence of hydric soil indicators. For some depressional features, soils were sampled at a later date, after the vegetation and hydrology were assessed for each of those features. This is in part due to caution that was taken while features were ponded and may have supported fairy shrimp. This method also allowed the option to forego digging soil pits in features that lacked either hydrophytic vegetation or wetland hydrology, or both, and would not be considered wetlands, ultimately reducing the number of pits that needed to be dug. In all, 196 soil pits were dug to assess the presence of hydric soils in the on-site features.

The seasonally ponded hydrology regime of the depressional features on-site, as well as the soil compaction and disturbance that results from the unauthorized off-road activity, may result in problematic hydric soil scenarios. The level of soil disturbance for each feature, along with the soil colors and evidence of hydrophytic vegetation and hydrology, were all considered when determining if that feature meets the hydric soil criteria.

4.1.3 Wetland Hydrology

Hydrologic information for the site was obtained by conducting a pre-field review (described in Section 4.2 below), analyzing climate conditions prior to the field survey, and by directly observing hydrology indicators in the field. All portions of any potentially occurring wetlands or non-wetland waters within the Review Area were inspected for signs of hydrology as defined in the 2008 Arid West Regional Supplement (USACE 2008).

4.2 Pre-Field Review

Prior to conducting the delineations, an aerial photograph, USGS topographic maps of the site, including the 7.5-minute Imperial Beach, California quadrangle (USGS 1996; see Figure 2), USGS National Hydrography Dataset (USGS 2023), USDA soil maps of the site, and the U.S. Fish and Wildlife Service National Wetland Inventory (NWI) (U.S. Fish and Wildlife Service 2023; see Figure 5) were examined to aid in the determination of potential waters of the U.S. on-site.

4.3 On-site Wetland Investigation

Once on-site, the Review Area was examined to determine the presence of any indicators of wetlands, including wetland vegetation, hydric soils, and hydrology. Field data, including hand drawn maps and recorded global positioning system (GPS) points and lines, were later digitized/downloaded into ArcGIS. Mapped aquatic resources created using these data were analyzed in ArcGIS to provide acreages or target aquatic resource and vegetation boundaries. USACE wetland determination data forms are included as Attachment 4. For each feature sampled, one wetland determination data form was complete and labeled with that feature number (see Attachment 4). Paired upland point locations were chosen adjacent to each feature to delineate the wetland boundary. These wetland determination data forms are labeled with the feature number

followed by "UPL" and are included as Attachment 5. Photographs of the Review Area are provided in Attachment 6. Descriptions of the potential wetland vegetation communities sampled are provided below.

Portions of the Review Area support southern willow scrub, tamarisk scrub, mule fat scrub, and disturbed riparian scrub which were found to contain some areas that meet the hydrophytic vegetation standard and some areas that did not. These habitats are generally characterized by willow trees (*Salix* sp.; FACW), tamarisk (*Tamarix rammosissima*; FAC), or mule fat (*Baccharis salicifolia*; FAC) that create a canopy cover ranging from open to mostly closed. For most of these areas, an herbaceous cover within the understory is present and may contain FAC and FACW species, but may not support a predominance of FAC, FACW, or OBL species. As such, this herbaceous layer had a significant influence on whether a given sample point met the hydrophytic vegetation standard.

Mule fat scrub occurs along a few drainages within the westernmost finger of the Review Area, within the northern portion on the Candlelight property, and within the eastern edge of the Review Area within the Spring Canyon drainage (Photograph 1; see Figure 6). This vegetation community generally occurs within and adjacent to natural flood channels. Southern willow scrub occurs within the Candlelight property near the existing terminus of Caliente Avenue as small patches of habitat and within the southeastern portion of the Review Area within Spring Canyon (Photograph 2; see Figure 6). This vegetation community is dominated by arroyo willow (*Salix lasiolepis*). Disturbed riparian scrub is also mapped as small patches within the Candlelight property but is dominated by a combination of salt cedar and arroyo willow. Tamarisk scrub occurs in the land to be conserved and managed by the City within the southern portion of the Review Area adjacent to large, disturbed wetlands (Photograph 3; see Figure 6) and is dominated by salt cedar.

Portions of the Review Area support San Diego mesa claypan vernal pools and disturbed wetlands which occur as small depressions throughout the Review Area (see Figure 6). For the purposes of vegetation mapping, disturbed wetlands have been mapped in depressions that met all three wetland criteria and San Diego mesa claypan vernal pools have been mapped in any depressional feature containing at least one vernal pool indicator plant (USACE 1997). The vernal pool plant indicator species observed include the obligate (OBL) wetland indicator species, adobe popcorn-flower (*Plagiobothrys acanthocarpus*), water pygmyweed (*Crassula aquatica*), and flowering-quillwort (*Triglochin scilloides*; Photograph 4); the facultative-wet (FACW) indicator species, dwarf woollyheads (*Psilocarphus brevissimus*; Photograph 5) and prairie plantain (*Plantago elongata*; Photograph 6); and facultative-upland (FACU) species such as alkali-mallow (*Malvella leprosa*). Depressional features that are not vernal pools and did not meet the three wetland criteria have been lumped into the surrounding upland vegetation community (typically disturbed habitat or non-native grassland) for the purposes of vegetation mapping.

Within the on-site depressional features, the abundance of hydrophytic species varied, resulting in some meeting the hydrophytic vegetation standard, and some not. Hydrophytic vegetation observed includes a dominance of the OBL species, hyssop loosestrife (*Lythrum hyssopifolium*), along with many facultative wet, facultative (FAC), and/or facultative upland species, such as dwarf pepper grass (*Lepidium latipes*; FACW), rye grass (*Festuca perenne*; FAC), Mediterranean barley (*Hordeum marinum*; FAC), and soft chess (*Bromus hordeaceus*; FACU). Because the features meeting the

wetland criteria are mostly dominated by non-natives, they are considered disturbed wetlands (Photograph 7). However, those that met the wetland criteria and contain a vernal pool indicator plant species (USACE 1997) are considered vernal pool wetlands.

As mentioned above, the site contains factors that could result in problematic hydrophytic vegetation scenarios. The level of disturbance, recent and long-term climatic conditions, and observed plant species and distribution within the depressional features was considered when assessing each for the presence of hydrophytic vegetation. Most portions of the site have undergone historic disturbance and the site supports mostly non-native plant species. However, these non-natives, notably the hydrophytic species hyssop loosestrife, Mediterranean barley, and to some degree, rye grass, as well as the lack of upland non-natives, including oats (*Avena* sp.) and bromes (*Bromus* sp.), were found to provide a fairly consistent indication of wetlands on-site, especially when observing their distribution over multiple surveys between 2018 and 2023, which included both years of above average and below average rainfall.

Features that did not meet the wetland criteria but still support a vernal pool indicator plant species (USACE 1997) are referred to as vernal pool basins. Those features that did not meet the wetland criteria and do not contain a vernal pool indicator plant species have been mapped as seasonal basins if they were found to support fairy shrimp, or road ruts if not. These distinctions are discussed further in the Other Features Considered section (Section 5.4) below.

4.4 On-site Non-wetland Waters Investigation

4.4.1 Ordinary High Water Mark Investigation

The lateral extent of the ordinary high water mark (OHWM) was delineated along the various drainages in the Review Area using the observed hydrology indicators in accordance with *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (Lichvar and McColley 2008). The OHWM data forms are included as Attachment 7. Indicators observed and used to determine the extent of the OHWM include a change in vegetation, a break in slope, change in sediment texture, drift and sediment deposits, drainage patterns, and the presence of bed and bank (Photograph 8). The distribution and abundance of observed indicators varied between the on-site drainages, with the larger features, such as the moderate-sized drainage channels in Moody Canyon and Spring Canyon, generally containing more frequent and diverse indicators.

The streamflow duration was also assessed for drainages within the project-level analysis area using the observed streamflow duration indicators in accordance with the *User Manual for a Beta Streamflow Duration Assessment Method (SDAM) for the Arid West of the United States* (Mazor et al. 2021). Drainage C occurs within the Candlelight property which has already obtained wetland permits addressing impacts within the area. Therefore, Drainage C is not included in the discussion below. Drainages H(b), I, K(b), N, and S occur in the Specific Plan boundary, which is analyzed at a program-level; therefore, these drainages are not included in the project-level discussion below.

The SDAM surveys were conducted on August 18 and 20, 2021, and the SDAM data forms are included as Attachment 8. Each drainage was searched for indicators used to determine the

streamflow duration, including presence of hydrophytic plant species; aquatic macroinvertebrates; *Ephemeroptera*, *Plecoptera*, or *Trichoptera* (EPT) taxa; algae; fish; and observed hydrology. At the time of the surveys, all of the drainages within the project-level analysis area were found to mostly lack plant species with a wetland indicator of FACW or wetter, aquatic macroinvertebrates, EPT taxa, algae, or fish. Additionally, the drainage channels lacked surface flow, sub-surface flow, and isolated pools at the time of the surveys. According to the observed conditions during these surveys and observations made during other biological and wetland delineation surveys conducted on-site, each of these drainages was classified as having an ephemeral flow regime.

4.4.2 Flow-Line Investigation

In order to understand the jurisdictional boundaries of the waters of the state, a hydraulic flow-line analysis was conducted to model the boundaries of the 2-, 5-, and 10-year flow limits (RICK Engineering Company 2023). According to the revised California Water Boards Policy for Discharges of Dredged or Fill Material to Waters of the State of April 6, 2021, the definition of waters of the state is broader than both the former federal definition and the new Sackett-based federal definition. The current definition of waters of the state broadly includes “any surface water or groundwater, including saline waters, within the boundaries of the state”, meaning that the wetlands have a continuous surface connection such that they are indistinguishable from otherwise jurisdictional waters. Hence, the jurisdictional authority over waters of the state could potentially reach beyond the federal definition of waters of the U.S. as identified by the OHWM delineation. For this reason, the flow line model aims to depict the potential extent of waters of the state. Because the flow line analysis is based on a model and not real-time hydrological observations, the presence of wetland indicator plants was also used to delineate the potential extent of waters of the state.

The methods for the flow line analysis included using a detailed Hydrologic Engineering Center’s – River Analysis System hydraulic model of each drainage course and a desktop review of available hydrologic calculations to estimate anticipated flow rates during the subject storm events. Other readily available tools were utilized, such as the USGS publicly available StreamStats tool, and National Oceanic and Atmospheric Administration Atlas 14 rainfall data to estimate point precipitation frequency. Additional details on these methods can be found in the project’s flow line analysis (RICK Engineering Company 2023).

5.0 Description of All Wetlands and Other Non-wetland Waters

The aquatic resources delineated within the Review Area include wetlands, riparian, and non-wetland waters and total 11.41 acres. Specifically, wetlands include those areas of wetland scrub habitats (mule fat scrub, southern willow scrub, and disturbed riparian scrub), disturbed wetlands, and vernal pool wetlands that met the three wetland criteria. A summary of the aquatic resources and location of these resources in relation to the Review Area boundaries are provided in Table 4 and on Figure 7, respectively. Where the Candlelight and Southwind properties overlap this project’s Review Area (see Figure 3), the delineation results from those properties has been included in the analyses below. For consistency between projects, those features have retained their identification labels for this report,

including a "C" in front of those features identified during the Candlelight delineations and an "SW" for those features identified during the Southwind delineations (see Figure 7 and Table 4). The Candlelight project has obtained wetland permits addressing impacts within the area noted in Figure 3 pursuant to Regional Water Quality Control Board Clean Water Act Section 401 Water Quality Certification No. R9-2023-0080 issued March 13, 2023, and CDFW Streambed Alteration Agreement Notification #1600-2016-0206-R5 issued January 24, 2022. However, because the regulatory permitting for Southwind is still pending, copies of the OHWM and wetland determination data forms for features delineated under that project are not included with this report.

For the purposes of the discussion below, each separate drainage channel within the Review Area has been labeled with a letter. A total of 20 ephemeral drainages were mapped during field visits conducted between 2018 and 2023, labeled Drainages A through S (see Figure 7 and Table 4). Small tributaries to Drainages G, H, and K have been labeled as G(b), H(b), and K(b), respectively. Drainage C occurs mostly within the Candlelight property and maintains the label of Drainage C where it occurs within the Candlelight property (see Figure 7 and Table 2).

Additionally, 327 depression features were identified within the Review Area (see Figure 7 and Table 4). All depressional features were labeled using numbers in the order they were surveyed, except the existing labels that were kept for the City of San Diego Vernal Pool Habitat Conservation Plan features. Again, "C" and "SW" were used to label those that were delineated as part of the Candlelight and Southwind projects, respectively. Figure 7 also depicts some features that occur outside but adjacent to the Review Area for reference. Due to shifting project boundaries during period of on-site surveys (2018 – 2023), these features outside the Review Area may have been sampled during the delineation and/or other biological surveys (fairy shrimp, vegetation mapping, rare plants, etc.), but are not considered in the analysis.

5.1 Wetlands

Delineated wetland areas include portions of the areas mapped as southern willow scrub, mule fat scrub, and disturbed riparian scrub along Drainage C within the northern portion of the Review Area in the Candlelight property. Specifically, these were mapped as five distinct features C-A, C-B, C-E, C-J, and C-I. These wetlands dominated by scrub habitat total 0.44 acre. The remaining areas of southern willow scrub, mule fat scrub, and tamarisk scrub in other portions of the Review Area did not meet all three wetland criteria and have been mapped as riparian habitat (see Section 5.3 below). Delineated wetlands also include those vernal pool wetland and disturbed wetland features that met all three wetland criteria, as discussed below.

5.1.1 Vernal Pool Wetlands

Of the 327 depression features mapped within the Review Area, a total of 135 met all three wetland criteria and contain a vernal pool indicator plant species. These features are therefore considered vernal pool wetlands (see Photographs 5, 9, and 10), totaling 1.53 acres within the Review Area. The source of the water for these features is seasonal and primarily from natural rainfall and local runoff from the surrounding land. Although they may locally overflow as sheet flow, they have no direct

connectivity, via drainage courses or otherwise, between each other or to any tributary drainages within the Review Area.

Although hydrologically isolated, the jurisdictional delineation concluded that these vernal pool wetland features support a predominance of hydrophytic vegetation, either passing the Dominance Test or the Prevalence Index. Wetland hydrology indicators commonly observed in vernal pool wetlands included surface soil cracks and a biotic crust comprised of algae (see Attachment 4). A few depressions were observed as having surface water and/or saturated soils during the surveys. The known presence of aquatic invertebrates (e.g., fairy shrimp) was also an indicator of wetland hydrology in some of the depressions.

Hydric soil indicators observed within these features included a depleted matrix, redox dark surface, vernal pools, or redox depressions (Photographs 11 and 12). For some features that contained only OBL or FACW dominant species (as long as at least one dominant was OBL), hydric soils were presumed present per the Wetlands Delineation Manual (USACE 1987). Some vernal pool wetland features were determined to have problematic hydric soils. Although either no or insufficient redox features were observed, hydric soils are considered problematic due to the presence of hydrophytic vegetation and wetland hydrology. These vernal pool features are seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance. However, the presence of abundant hydrophytic vegetation and strong hydrology indicators is sufficient to assume the presence of hydric soils, despite the lack of observed indicators.

5.1.2 Disturbed Wetlands

Of the 327 depression features mapped within the Review Area, a total of 20 met all three wetland criteria but do not contain a vernal pool indicator plant species. These features are therefore considered isolated disturbed wetlands (Photograph 13), totaling 1.03 acres within the Review Area. As with the vernal pool wetlands, the source of the water for these features is seasonal and from natural rainfall, with no direct downstream connectivity.

These features were all found to support a predominance of hydrophytic vegetation and contained hydrology indicators similar to those vernal pool wetlands described above. Additional hydrology indicators observed included: water marks, water-stained leaves, oxidized rhizospheres along living roots, and non-riverine drift deposits. Hydric soil indicators observed within these features included a depleted matrix, redox dark surface, or problematic hydric soils.

5.2 Non-wetland Waters

The Review Area contains 20 ephemeral drainages mapped as non-wetland waters (see Photographs 8 and 14, Figure 7, and Table 4). Five ephemeral drainages, Drainages A, B, B(b), D, and E, occur in the north-central portion of the Review Area, located in the upper portions of canyons that are tributary to Moody Canyon (see Figure 7). Drainages P and Q are located along the western finger of the project site (Beyer Boulevard extension area) and are also tributary to Moody Canyon. These seven drainages generally flow west or north into the main channel that flows west through the bottom of Moody Canyon. This channel enters the westernmost portion of the Review Area as

Drainage O, which drains west into a culvert near Beyer Boulevard and eventually into the Pacific Ocean, a TNW.

Four ephemeral drainages, Drainages F, G, G(b), and C, occur within the northeastern portions of the Review Area (Central Avenue and Caliente Avenue extensions). The flows from these ephemeral drainages are conveyed southward off-site into the upper part of Dillon Canyon. In the east-central portion of the Review Area, Drainage H(b) flows southeast into Drainage H, which flows northeast through Finger Canyon and offsite into Dillon Canyon. Dillon Canyon is a side canyon to Spring Canyon, which contains a drainage channel that flows south and enters the southeastern portion of the Review Area as Drainage S. Drainage S continues to flow off-site and southwest through Spring Canyon, draining southward across the international border via a stormwater conveyance facility and into Mexico where flows enter the Tijuana River and then into the Pacific Ocean.

Drainage T drains a small watershed area in the south-central portion of the Review Area. It flows southeast toward the southern boundary of the Review Area and empties into a culvert and the stormwater conveyance facility at the downstream end of Drainage S.

Drainages I, K, and K(b) occur at the edge of the west-central portion of the Review Area, occurring on steep slopes and extending generally southwest and off-site (see Figure 7). Review of aerial photography shows that these drainages appear to continue flowing southwest and eventually drain into a storm drain system that likely empties into the Tijuana River.

Drainage M begins in the south-central portion of the Review Area and flows southwest into Drainage N, which continues south, southwest, and west through the mitigation parcels in the southern portion of the Review Area, eventually draining into an offsite storm drain (see Figure 7). This storm drain eventually conveys flow into the Tijuana River, which then empties into the Pacific Ocean.

5.2.1 Ordinary High Water Mark Indicators

The source of the water that flows in the ephemeral drainages on-site comes from natural seasonal rainfall. The flow regime of these drainages is ephemeral with flows being of short duration and occurring primarily only after seasonal rainfall events. Indicators observed and used to determine the extent of the OHWM include a change in vegetation, a break in slope, change in sediment texture, drift and sediment deposits, drainage patterns, and the presence of bed and bank (see Attachment 3). The distribution and abundance of observed indicators varied between the on-site features, with the larger drainages, such as Drainage S and Drainage O, generally containing more frequent and diverse indicators.

Dominant plant species documented at the sample locations along the ephemeral drainage courses included the upland species ripgut grass (*Bromus diandrus*; UPL), redstem filaree (*Erodium cicutarium*; UPL), and Italian thistle (*Carduus pycnocephalus*; UPL). Facultative and facultative upland species such as miner's lettuce (*Claytonia perfoliata*; FAC), shining peppergrass (*Lepidium nitidum*; FAC), Russian thistle (*Salsola tragus*; FACU), and California pellitory (*Parietaria hespera*; FACU) were also present within the drainages. Ripgut grass was the most common vegetation observed along the drainages.

5.2.2 Hydraulic Indicators

The results of the storm event flow analysis are also depicted along each of the drainages within the area of proposed development (project-level analysis area) on Figure 7. A comparison of the OHWM and 2-year flow lines for each drainage is provided below and in Table 5. The discussion below also addresses adjustments to the mapping of on-site non-wetland waters as it pertains to the State Water Resources Control Board (SWRCB) waters of the state definition. Drainage C occurs within the Candlelight property which has already obtained wetland permits addressing impacts within the area. Therefore, Drainage C is not included in the discussion below. Drainages H(b), I, K(b), N, and S are also not included in the discussion below because they do not occur within the project-level analysis area.

The 2-year flow line for Drainage O includes low floodplain terraces outside of the active channel (outside the OHWM). The OHWM averages approximately 3 feet in width while the floodplain terraces along this drainage average approximately 100 feet in width and supports patches of mule fat scrub vegetation (see Photograph 1) mapped as riparian areas on Figure 7, labeled as O-1, O-2, and O-3. Based on the presence of hydrophytic vegetation within the 2-year flood area of Drainage O, it is anticipated that the waters of the state would include these patches of mule fat scrub within its jurisdiction (see Figure 7).

The OHWM of Drainage A averages approximately 1.5 feet in width while the areas mapped within the 2-year flow lines average approximately 15 feet in width. Although the 2-year flow line area is significantly wider, it support mostly upland non-native grasses with scattered lemonade berry (*Rhus integrifolia*; UPL; Photograph 15) and lacks hydrophytic vegetation. As such, it is anticipated that the jurisdiction of waters of the state would only include those areas mapped within the OHWM for Drainage A.

The width of the delineated OHWM along Drainages B(b) and H average between 2.5 and 3.5 feet, while their respective areas mapped within the 2-year flow lines average between 7.5 and 11 feet in width. These 2-year flow areas support slopes containing a mixture of upland non-native grasses and scattered coastal sage scrub shrub species (Photographs 16 and 17). These 2-year flow line areas do not support hydrophytic species or species indicative of a floodplain. As such, it is anticipated that the jurisdiction of waters of the state would only include those areas mapped within the OHWM for Drainages B(b) and H.

The width of the delineated OHWM along Drainage B averages 3 feet while the area within the 2-year flow lines averages approximately 14 feet in width and supports sloped areas mostly containing non-native upland grasses and fennel (*Foeniculum vulgare*; UPL; Photograph 18). This 2-year flow line area does not support hydrophytic species or species indicative of a floodplain. As such, it is anticipated that the jurisdiction of waters of the state would only include those areas mapped within the OHWM for Drainage B.

The width of the delineated OHWM along Drainages D and E average between 2 and 2.5 feet, while their respective areas mapped within the 2-year flow lines average between 8 and 10 feet in width. These adjacent areas support slopes containing a mixture of upland coastal sage scrub shrub species (Photographs 19 and 20). They do not support hydrophytic species or species indicative of a

floodplain. As such, it is anticipated that the jurisdiction of waters of the state would only include those areas mapped within the OHWM for Drainages D and E.

The width of the delineated OHWM along both Drainages F and G(b) average 1.5 feet each and these drainages occur approximately 10 feet away and parallel to each other. However, the 2-year flow lines are mapped as combined for these two drainages within an area averaging approximately 3 feet in width and supporting slopes containing a mixture of upland coastal sage scrub shrub species (Photographs 21 and 22). This 2-year flow line area does not support hydrophytic species or species indicative of a floodplain. As such, it is anticipated that the jurisdiction of waters of the state would only include those areas mapped within the OHWM for Drainages F and G(b).

The width of the delineated OHWM along Drainage G averages 4 feet and mostly matches the width and extent of areas mapped within the 2-year flow lines upslope of this drainage's confluence with Drainage G(b). A small patch of mule fat scrub occurs just outside the 2-year flow lines at this confluence and two additional patches occur within the 2-year flow lines downstream. Because all three of these patches are likely hydrologically associated to the drainage, it is anticipated that the waters of the state would extend to include these areas mule fat scrub habitat (see Figure 7). The width of the OHWM of Drainage G is narrower than the 2-year flow lines in the vicinity of its confluence with Drainage F. However, downstream from the confluence with Drainage F, the OHWM widens, mostly matching the width of the 2-year flow lines (see Figure 7).

The width of the delineated OHWM along Drainages K, M, P, and Q average 2, 3, 1, and 2 feet, respectively, and these drainages mostly match the widths of the respective areas mapped within their 2-year flow lines (see Photographs 14 and 24 through 26). The existing OHWM mapping for these drainages is anticipated to accurately reflect the waters of the state jurisdiction along these features. It is anticipated that the potential extent of SWRCB waters of the state described in this section matches those areas likely to be considered CDFW waters of the state as well.

5.3 Riparian

Areas mapped as riparian total 5.89 acres within the Review Area (see Figure 7 and Table 4). These riparian areas occur as southern willow scrub, mule fat scrub, and tamarisk scrub where these vegetation communities extend outside of the OHWM delineated for these non-wetland water areas (see Photographs 1 – 3 and Figures 7.9 and 7.35-7.37). Specifically, a total of 10 small riparian areas occur along the on-site drainages and are labeled according to the drainages along which they occur. Three of these areas occur in the western portion of the survey area along Drainage O (features O-1, O-2, and O-3; see Figure 7-9), three occur in the northern portion of the survey area along Drainage G (features G-1, G-2, and G-3), and four occur in the southeastern portion of the survey area along Drainage S (features S-1, S-2, S-3, and S-4) (see Figures 7.35-7.37 and Table 4). Of these 10 features, five (O-1, S-1, S-2, S-3, and S-4) meet the hydrophytic vegetation criteria (see Attachment 4). This riparian mapping includes small areas of canopy extending beyond non-wetland water boundaries, as well as riparian vegetation rooted within a low terrace adjacent to non-wetland water areas. The riparian areas lack the wetland hydrology and hydric soil indicators required to meet the USACE definition of a wetland.

5.4 Other Features Considered

As described above, features that did not meet the wetland criteria but still support a vernal pool indicator plant species (USACE 1997) are referred to as vernal pool basins (Photograph 27). Those features that did not meet all three of the wetland criteria and do not contain a vernal pool indicator plant species have been mapped as seasonal basins if they were found to support fairy shrimp, or road ruts if not.

6.0 Deviation from National Wetland Inventory

The results of this analysis vary significantly from those classified in the NWI (see Figure 5). Some of the delineated features have been recorded in the NWI, but vary slightly in their exact location or characteristics, while many delineated features are not recorded in the NWI. For instance, Drainage O, which occurs within the westernmost portion of the Review Area in Moody Canyon, is mapped in the NWI as an intermittent drainage channel. However, it appeared to support more of an ephemeral flow regime during the surveys. Additionally, the NWI does not include the mule fat scrub riparian habitat that occurs along Drainage O within the Review Area. Drainages A, B, C, D, E, G, H, I, M, N, and S are mapped in the NWI, but not B(b), F, G(b), H(b), J, K, K(b), P, or Q.

Only a small number of the depression features delineated in the Review Area are included in the NWI. For instance, vernal pool wetland #54 occurs within the west-central portion of the Review Area and has been recorded as freshwater emergent wetland in the NWI. However, vernal pool wetlands #55 – 58 and 114, which occur nearby, have not been recorded in the NWI.

7.0 Mapping Method

The maps of the delineated aquatic resources within the Review Areas are based on the above analysis (see Figure 7). The boundaries of the majority of aquatic resources were obtained from a combination of GPS data collected in the field, aerial photography, and recent topographic survey data. Geographic information system mapping software (ArcMap) was used to produce the graphical maps contained in this report.

8.0 Results and Conclusions

Wetlands, non-wetland waters, and riparian areas were delineated within Review Area and include those scrub wetland/riparian habitats described above (mule fat scrub, southern willow scrub, tamarisk scrub, disturbed riparian scrub), depressional features meeting the wetland criteria and mapped as either disturbed wetlands or vernal pool wetlands, and ephemeral drainages occurring throughout the Review Area. These features total 11.41 acres and 16,555 linear feet (see Table 4).

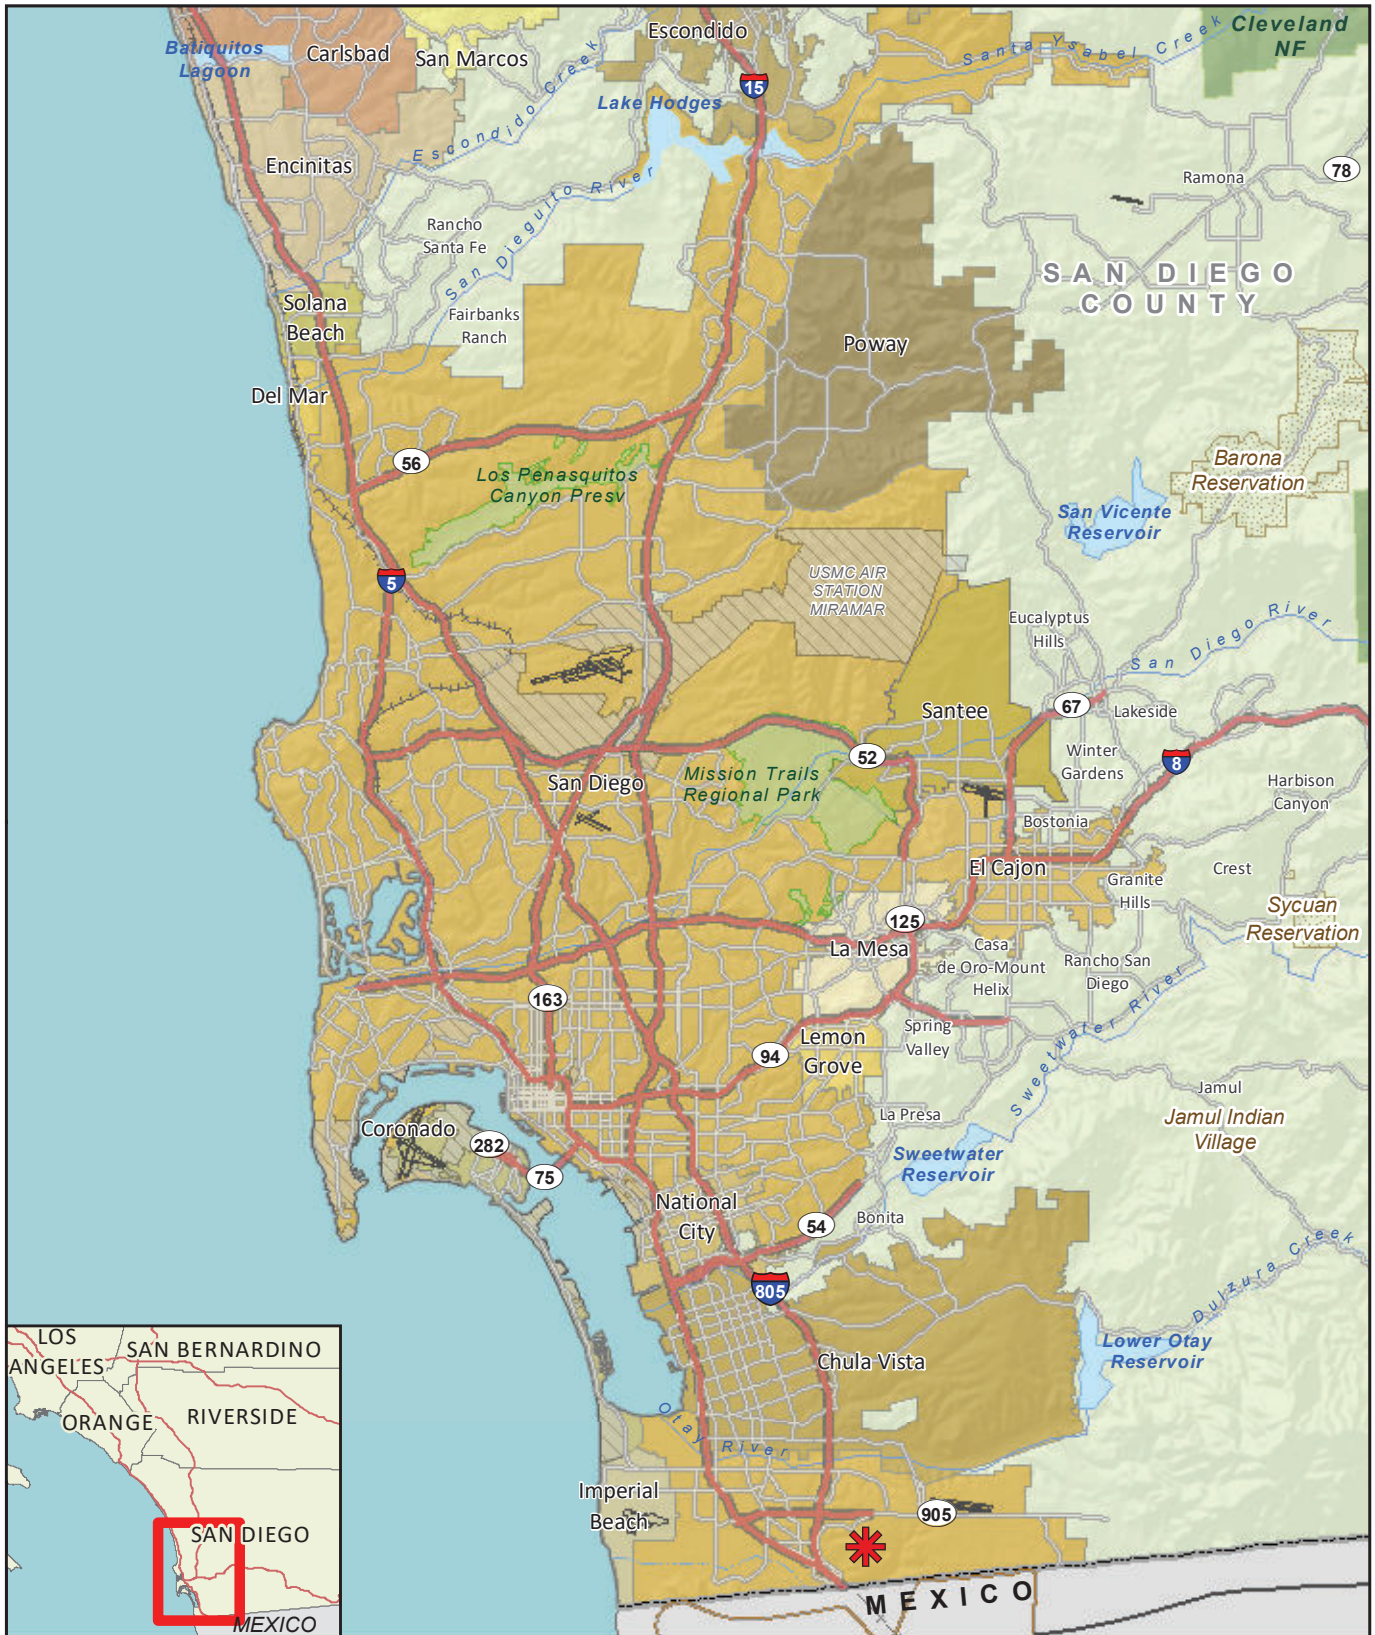

9.0 Disclaimer Statement

This report describes the results of aquatic resource delineations conducted within the Review Area, which totals approximately 549.07 acres. It was prepared in accordance with the Minimum Standards for Acceptance of Aquatic Resources Delineation Reports (USACE 2017). The jurisdictional waters delineation is used to identify and map the potential extent of the federal jurisdictional waters of the U.S. The purpose of this study was to identify and map the limits of any aquatic water features on the property to provide necessary background information for analysis by USACE in making a jurisdictional determination. USACE will review the content of this report and ultimately make a determination of federal jurisdiction for any waters of the U.S. that may be present in the Review Area. References used in the preparation of this report are included below in Attachment 9.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 19, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 2
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55942 Long: -117.02221 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Hydrophytic Vegetation Indicators: <input type="checkbox"/> Dominance Test is >50% <input type="checkbox"/> Prevalence Index is ≤3.0 ¹ <input type="checkbox"/> Morphological Adaptations ¹ (Provide supporting data in Remarks or on a separate sheet) <input type="checkbox"/> Problematic Hydrophytic Vegetation ¹ (Explain)																				
¹ Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.																				
Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>																				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. The sample area does not support a predominance of hydrophytic vegetation, but does support one vernal pool plant indicator species (Psilocarphus brevissimus).

SOIL

Sampling Point: 2

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)

- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Evidence of surface water present at the time of the delineation indicates that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 10
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55905 Long: -117.01913 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to the presence of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

<input type="checkbox"/> Vernal Pools (F9)	

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: Sparse redox features in upper 4 inches. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 17-WET
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55891 Long: -117.01916 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

<input type="checkbox"/> Presence of Reduced Iron (C4)	
<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	
<input type="checkbox"/> Thin Muck Surface (C7)	
<input type="checkbox"/> Other (Explain in Remarks)	

Field Observations:	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Surface Water Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____	
Water Table Present? Yes <input type="checkbox"/> No <input type="checkbox"/> Depth (inches): _____	
Saturation Present? Yes <input type="checkbox"/> No <input type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 20-WET
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55891 Long: -117.01925 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: fc City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 21
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55899 Long: -117.019300 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.	

VEGETATION – Use scientific names of plants.

Hydrophytic Vegetation Indicators:
 _____ Dominance Test is >50%
 Prevalence Index is ≤3.0¹
 _____ Morphological Adaptations¹ (Provide supporting data in Remarks or on a separate sheet)
 _____ Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes No

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. The sample area supports a predominance of hydrophytic vegetation, as well as three vernal pool plant indicator species (*Psilocarphus brevissimus*, *Plagiobothrys acanthocarpus*, and *Plantago elongata*).

---	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Field Observations:
 Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 30
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55862 Long: -117.01879 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 33
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55854 Long: -117.01886 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 40
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55818 Long: -117.01861 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) **(Nonriverine)**
- Sediment Deposits (B2) **(Nonriverine)**
- Drift Deposits (B3) **(Nonriverine)**
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 43
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55796 Long: -117.01857 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: No soil pit was dug. Per the 1987 delineation manual, hydric soils can be assumed when a wetland is dominated by OBL and FACW species only.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) **(Nonriverine)**
- Sediment Deposits (B2) **(Nonriverine)**
- Drift Deposits (B3) **(Nonriverine)**
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

---	---

Field Observations: Surface Water Present? Yes _____ No <u>X</u> Depth (inches): _____ Water Table Present? Yes _____ No _____ Depth (inches): _____ Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No _____
--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 6, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 53
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55643 Long: -117.02687 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A)

---	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Sampling Point: 59

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1) Sandy Redox (S5)
- Histic Epipedon (A2) Stripped Matrix (S6)
- Black Histic (A3) Loamy Mucky Mineral (F1)
- Hydrogen Sulfide (A4) Loamy Gleyed Matrix (F2)
- Stratified Layers (A5) (**LRR C**) Depleted Matrix (F3)
- 1 cm Muck (A9) (**LRR D**) Redox Dark Surface (F6)
- Depleted Below Dark Surface (A11) Depleted Dark Surface (F7)
- Thick Dark Surface (A12) Redox Depressions (F8)
- Sandy Mucky Mineral (S1) Vernal Pools (F9)
- Sandy Gleyed Matrix (S4)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (**LRR C**)
- 2 cm Muck (A10) (**LRR B**)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

Secondary Indicators (2 or more required)

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) (**Nonriverine**)
- Sediment Deposits (B2) (**Nonriverine**)
- Drift Deposits (B3) (**Nonriverine**)
- X Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

- Water Marks (B1) (**Riverine**)
- Sediment Deposits (B2) (**Riverine**)
- Drift Deposits (B3) (**Riverine**)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 6, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 60
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55488 Long: -117.02417 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a	
Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks, biotic crusts, and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

<u>Primary Indicators (minimum of one required; check all that apply)</u> <input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> High Water Table (A2) <input checked="" type="checkbox"/> Biotic Crust (B12) <input type="checkbox"/> Saturation (A3) <input checked="" type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Water Marks (B1) (Nonriverine) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Sediment Deposits (B2) (Nonriverine) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Drift Deposits (B3) (Nonriverine) <input type="checkbox"/> Presence of Reduced Iron (C4) <input checked="" type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Water-Stained Leaves (B9) <input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Water Marks (B1) (Riverine) <input type="checkbox"/> Sediment Deposits (B2) (Riverine) <input type="checkbox"/> Drift Deposits (B3) (Riverine) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> FAC-Neutral Test (D5)

Field Observations: Surface Water Present? Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____ Water Table Present? Yes _____ No _____ Depth (inches): _____ Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____
---	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks, biotic crusts, and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 6, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 65
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55483 Long: -117.02403 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:	
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC:	<u>0</u> (A)

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: Redox features observed in top 1 inch, insufficient to meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 6, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 68
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55468 Long: -117.02359 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (**LRR C**)
- 2 cm Muck (A10) (**LRR B**)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes X No _____

Remarks: depleted matrix observed

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) (**Nonriverine**)
 - Sediment Deposits (B2) (**Nonriverine**)
 - Drift Deposits (B3) (**Nonriverine**)
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) (**Riverine**)
- Sediment Deposits (B2) (**Riverine**)
- Drift Deposits (B3) (**Riverine**)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 6, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 75
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55490 Long: -117.02284 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

---	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Evidence of surface water present at the time of the delineation indicates that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 78
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55884 Long: -117.01886 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Field Observations:	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Surface Water Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____	
Water Table Present? Yes <input type="checkbox"/> No <input type="checkbox"/> Depth (inches): _____	
Saturation Present? Yes <input type="checkbox"/> No <input type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds a water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 81
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55857 Long: -117.01870 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: Redox features (oxidized rizosphere) present at 0-2" do not meet hydric soil criteria. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>2</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>2</u> (B)
3. _____				Percent of Dominant Species That Are OBL, FACW, or FAC: <u>100</u> (A/B)

7. <u>Erodium botrys</u>	1	N	FACU	
8. _____				
	11 = Total Cover			
Woody Vine Stratum (Plot size: _____)				
1. <u>none</u>				
2. _____				
	0 = Total Cover			
% Bare Ground in Herb Stratum <u>91</u>	% Cover of Biotic Crust <u>0</u>			Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support four vernal pool plant indicator species (Psilocarphus brevissimus, Plagiobothrys acanthocarpus, Plantago elongata and Crassula aquatica).

SOIL

Sampling Point: 84

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (**LRR C**)
- 1 cm Muck (A9) (**LRR D**)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (**LRR C**)
- 2 cm Muck (A10) (**LRR B**)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: No soil pit was dug. Per the 1987 delineation manual, hydric soils can be assumed when a wetland is dominated by OBL and FACW species only.

HYDROLOGY

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Hydrophytic Vegetation Indicators: <input type="checkbox"/> Dominance Test is >50% <input type="checkbox"/> Prevalence Index is ≤3.0 ¹ <input type="checkbox"/> Morphological Adaptations ¹ (Provide supporting data in Remarks or on a separate sheet) <input type="checkbox"/> Problematic Hydrophytic Vegetation ¹ (Explain)				
¹ Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.				
Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. The sample area does not support a predominance of hydrophytic vegetation. It does support two vernal pool plant indicator species (Psilocarphus brevissimus and Plagiobothrys acanthocarpus).

SOIL

Sampling Point: 90

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)							
Depth (inches)	Matrix		Redox Features			Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)

- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 19, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 91
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55943 Long: -117.01904 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 94
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55945 Long: -117.01904 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>1</u> (B)
3. _____				Percent of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A/B)
4. _____

Water Table Present?	Yes _____ No _____	Depth (inches): _____	
Saturation Present?	Yes _____ No _____	Depth (inches): _____	
(includes capillary fringe)			

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

% Bare Ground in Herb Stratum <u>94</u>	% Cover of Biotic Crust <u>0</u>			Hydrophytic Vegetation Present?	
				Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. The vernal pool does not predominately support hydrophytic vegetation. It does support one vernal pool plant indicator species (Plantago elongata).

SOIL

Sampling Point: 97

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)

- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 99
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55922 Long: -117.01897 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 102
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55888 Long: -117.01900 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: redox features observed below 12 in, but soils do not meet hydric soil indicators. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Remarks: no hydric soil indicators observed; organic matter found throughout soil profile due to shrink/swell cracks (color = 10YR 2/2). However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 105
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55853 Long: -117.01868 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

- ___ Dry-Season Water Table (C2)
- ___ Thin Muck Surface (C7)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
Water Table Present? Yes _____ No _____ Depth (inches): _____
Saturation Present? Yes _____ No _____ Depth (inches): _____
(includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports hydrophytic vegetation. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 108
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55949 Long: -117.01899 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Type: _____ Depth (inches): _____	

Remarks: The first 1" of soil has redox features 1% (oxidized rizosphere), but this does not meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____

Water Table Present? Yes _____ No X Depth (inches): _____

Saturation Present? Yes _____ No X Depth (inches): _____

(includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 4, 2018
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 115
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55835 Long: -117.01874 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No _____ Depth (inches): _____
 Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the presence of surface soil cracks and San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Field Observations: Surface Water Present? Yes _____ No <u>X</u> Depth (inches): _____ Water Table Present? Yes _____ No _____ Depth (inches): _____ Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No _____
---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 118
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.555228 Long: -117.023736 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support two vernal pool plant indicator species (Plagiobothrys acanthocarpus and Plantago elongata). Leaf litter is present in basin.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks, biotic crusts, and immature fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 123 HCP3150
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.558565 Long: -117.018741 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, the evidence of surface soil cracks indicate that the area supports wetland hydrology. Additional fairy shrimp surveys were conducted in 2019/2020 wet season for pools that had immature fairy shrimp, and mature San Diego fairy shrimp were identified. Water table level and saturation are not known as a soil pit was not dug.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of biotic crusts indicate that the area ponds water and supports wetland hydrology

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 126
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55439119030 Long: -117.02281730200 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 131
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55806 Long: -117.01916 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Field Observations: Surface Water Present? Yes _____ No <u>X</u> Depth (inches): _____ Water Table Present? Yes _____ No _____ Depth (inches): _____ Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No _____
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a	
Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.	

WETLAND DETERMINATION DATA FORM – Arid West Region

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and presence of San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 152
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55868 Long: -117.01908 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Field Observations: Surface Water Present? Yes _____ No <u> X </u> Depth (inches): _____ Water Table Present? Yes _____ No _____ Depth (inches): _____ Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	Wetland Hydrology Present? Yes <u> X </u> No _____
--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

---	---

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

---	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the presence of surface soil cracks, biotic crusts, and San Diego fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 155
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55849 Long: -117.01857 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of immature fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: redox observed in top layer (0-1"), but insufficient to meet hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance. Organic matter observed throughout.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 166
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55891 Long: -117.01857 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of ponding indicates that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and immature fairy shrimp indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 172/HCP 3418
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55861270600 Long: -117.01882511700 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: Freshwater Emergent Wetland

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Field Observations:	Wetland Hydrology Present?
Surface Water Present? Yes _____ No <u>X</u> Depth (inches): _____	Yes <u>X</u> No _____
Water Table Present? Yes _____ No _____ Depth (inches): _____	
Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 176
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55933888290 Long: -117.01930648600 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:	
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A)

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts observed.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 29, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 183
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.554522 Long: -117.023231 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>4</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>5</u> (B)

Restrictive Layer (if present): Type: <u>cobble</u> Depth (inches): <u>12</u>	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 4/11/2019
 Applicant/Owner: Tri Point Homes State: CA Sampling Point: 190
 Investigator(s): Beth Procsal, JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.55444 Long: -117.02275 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) (LRR C)
- 2 cm Muck (A10) (LRR B)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) (Nonriverine)
 - Sediment Deposits (B2) (Nonriverine)
 - Drift Deposits (B3) (Nonriverine)
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) (Riverine)
- Sediment Deposits (B2) (Riverine)
- Drift Deposits (B3) (Riverine)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No Depth (inches): _____
 Water Table Present? Yes _____ No Depth (inches): _____
 Saturation Present? Yes _____ No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and dried aquatic invertebrates indicate that the area supports wetland hydrology.

Primary Indicators (minimum of one required; check all that apply)	
<input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> High Water Table (A2) <input checked="" type="checkbox"/> Biotic Crust (B12) <input type="checkbox"/> Saturation (A3) <input type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Water Marks (B1) (Nonriverine) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Sediment Deposits (B2) (Nonriverine) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Drift Deposits (B3) (Nonriverine) <input type="checkbox"/> Presence of Reduced Iron (C4) <input checked="" type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Water-Stained Leaves (B9) <input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Water Marks (B1) (Riverine) <input type="checkbox"/> Sediment Deposits (B2) (Riverine) <input type="checkbox"/> Drift Deposits (B3) (Riverine) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____

Water Table Present? Yes _____ No _____ Depth (inches): _____

Saturation Present? Yes _____ No _____ Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 193
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.553393 Long: -117.022964 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a		
Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.		

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 196
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.553006 Long: -117.022848 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: March 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 199
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.55203594850 Long: -117.02214618600 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>2</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>6</u> (B)
3. _____				Percent of Dominant Species That Are OBL, FACW, or FAC: <u>0</u> (A/B)
4. _____				
			= Total Cover

7. _____				
8. _____				
	<u>8</u>		= Total Cover	
Woody Vine Stratum (Plot size: _____)				
1. <u>none</u>				Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
2. _____				
			= Total Cover	
% Bare Ground in Herb Stratum <u>95</u> % Cover of Biotic Crust _____				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. While the sample area does not support a predominance of hydrophytic vegetation, it does support two vernal pool plant indicator species (Plagiobothrys acanthocarpus and Psilocarphus brevissimus).

SOIL

Sampling Point: 199

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type ¹	Loc ²		

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

<input type="checkbox"/> Histosol (A1)	<input type="checkbox"/> Sandy Redox (S5)	<input type="checkbox"/> 1 cm Muck (A9) (LRR C)
<input type="checkbox"/> Histic Epipedon (A2)	<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> 2 cm Muck (A10) (LRR B)
<input type="checkbox"/> Black Histic (A3)	<input type="checkbox"/> Loamy Mucky Mineral (F1)	<input type="checkbox"/> Reduced Vertic (F18)
<input type="checkbox"/> Hydrogen Sulfide (A4)	<input type="checkbox"/> Loamy Gleyed Matrix (F2)	<input type="checkbox"/> Red Parent Material (TF2)
<input type="checkbox"/> Stratified Layers (A5) (LRR C)	<input type="checkbox"/> Depleted Matrix (F3)	<input type="checkbox"/> Other (Explain in Remarks)
<input type="checkbox"/> 1 cm Muck (A9) (LRR D)	<input type="checkbox"/> Redox Dark Surface (F6)	
<input type="checkbox"/> Depleted Below Dark Surface (A11)	<input type="checkbox"/> Depleted Dark Surface (F7)	
<input type="checkbox"/> Thick Dark Surface (A12)	<input type="checkbox"/> Redox Depressions (F8)	
<input type="checkbox"/> Sandy Mucky Mineral (S1)	<input type="checkbox"/> Vernal Pools (F9)	
<input type="checkbox"/> Sandy Gleyed Matrix (S4)		

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes _____ No X

Remarks: The sampled area supports a predominance of upland vegetation and does not meet the hydrophytic vegetation standard to be considered a wetland. Therefore, no soil pit was dug and hydric soils are not considered to be present.

HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (2 or more required)
Primary Indicators (minimum of one required; check all that apply)

<input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3)	
<input type="checkbox"/> Presence of Reduced Iron (C4)	
<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	
<input type="checkbox"/> Thin Muck Surface (C7)	
<input type="checkbox"/> Other (Explain in Remarks)	

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____

Water Table Present? Yes _____ No X Depth (inches): _____

Saturation Present? Yes _____ No X Depth (inches): _____
(includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 202
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.552359 Long: -117.020708 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.	

VEGETATION – Use scientific names of plants.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	---

Remarks: no hydric soil indicators observed; large pebbles throughout. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

¹Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. ²Location: PL=Pore Lining, RC=Root Channel, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) **(LRR C)**
- 1 cm Muck (A9) **(LRR D)**
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- Vernal Pools (F9)

Indicators for Problematic Hydric Soils³:

- 1 cm Muck (A9) **(LRR C)**
- 2 cm Muck (A10) **(LRR B)**
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: redox observed in second layer, but insufficient amount to meet hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Wetland Hydrology Indicators:

- Primary Indicators (minimum of one required; check all that apply)
- Surface Water (A1)
 - High Water Table (A2)
 - Saturation (A3)
 - Water Marks (B1) **(Nonriverine)**
 - Sediment Deposits (B2) **(Nonriverine)**
 - Drift Deposits (B3) **(Nonriverine)**
 - Surface Soil Cracks (B6)
 - Inundation Visible on Aerial Imagery (B7)
 - Water-Stained Leaves (B9)
 - Salt Crust (B11)
 - Biotic Crust (B12)
 - Aquatic Invertebrates (B13)
 - Hydrogen Sulfide Odor (C1)
 - Oxidized Rhizospheres along Living Roots (C3)
 - Presence of Reduced Iron (C4)
 - Recent Iron Reduction in Tilled Soils (C6)
 - Thin Muck Surface (C7)
 - Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 206
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.550441 Long: -117.017843 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

--	--

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crusts indicate that the area ponds water and supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan City/County: San Diego, CA Sampling Date: April 23, 2019
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 209
 Investigator(s): Beth Procsal, Jamie Sue McBee Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): LRR-C Lat: 32.549652 Long: -117.017107 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Yes No Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? Yes (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:
1. <u>none</u>				Number of Dominant Species That Are OBL, FACW, or FAC: <u>1</u> (A)
2. _____				Total Number of Dominant Species Across All Strata: <u>1</u> (B)
3. _____				Percent of Dominant Species That Are OBL, FACW, or FAC: <u>100</u> (A/B)
4. _____				
			= Total Cover	
Sapling/Shrub Stratum (Plot size: _____)				Prevalence Index worksheet:
1. <u>none</u>				Total % Cover of: _____ Multiply by: _____

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3.26.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 212
 Investigator(s): JR Sundberg, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.559058874 Long: -117.018131299 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 30 to 50 percent slopes NWI classification: None
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

---	---

Remarks: Cobble mixed with soil. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 227
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5542548451 Long: -117.014326309 Datum: NAD 83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology.

Field Observations:			
Surface Water Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Water Table Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____		
Saturation Present? (includes capillary fringe) Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____		
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:			

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks, biotic crust, and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 228
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5542708629 Long: -117.015570618 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

Hydrophytic Vegetation Indicators:
 Dominance Test is >50%
 Prevalence Index is ≤3.0¹
 Morphological Adaptations¹ (Provide supporting data in Remarks or on a separate sheet)
 Problematic Hydrophytic Vegetation¹ (Explain)
¹Indicators of hydric soil and wetland hydrology must be present.

Hydrophytic Vegetation Present? Yes No

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support four vernal pool plant indicator species (Psilocarphus brevissimus, Lilaea scilloides, Plantago elongata, and Plagiobothrys acanthocarpus).

 Other (Explain in Remarks)

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

Hydric Soil Present? Yes _____ No X

Remarks: no hydric soils indicators observed

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) (**Nonriverine**)
- Sediment Deposits (B2) (**Nonriverine**)
- Drift Deposits (B3) (**Nonriverine**)
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) (**Riverine**)
- Sediment Deposits (B2) (**Riverine**)
- Drift Deposits (B3) (**Riverine**)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____
 Water Table Present? Yes _____ No X Depth (inches): _____
 Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 233
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5520770401 Long: -117.015332601 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 30 to 50 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology.

 (includes capillary fringe)

Wetland Hydrology Present? Yes _____ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3.26.20
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 242
 Investigator(s): JR Sundberg, Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5499657092 Long: -117.019485375 Datum: NAD83
 Soil Map Unit Name: Olivenhain cobbly loam, 9 to 30 percent slopes NWI classification: None
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: redox observed; however, hydric soil indicator not met. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

- Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: shovel refusal
 Depth (inches): 10

Hydric Soil Present? Yes No

Remarks: Some redox features observed, but insufficient to meet a hydric soil indicator. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1) **(Nonriverine)**
- Sediment Deposits (B2) **(Nonriverine)**
- Drift Deposits (B3) **(Nonriverine)**
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)

- Salt Crust (B11)
- Biotic Crust (B12)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water Marks (B1) **(Riverine)**
- Sediment Deposits (B2) **(Riverine)**
- Drift Deposits (B3) **(Riverine)**
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Thin Muck Surface (C7)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes No Depth (inches): _____
 Water Table Present? Yes No Depth (inches): _____
 Saturation Present? Yes No Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of a biotic crust indicate that the area supports wetland hydrology.

---	--

Field Observations:

Surface Water Present? Yes _____ No X Depth (inches): _____

Water Table Present? Yes _____ No X Depth (inches): _____

Saturation Present? Yes _____ No X Depth (inches): _____
 (includes capillary fringe)

Wetland Hydrology Present? Yes X No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 251
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5543600385 Long: -117.025669293 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>			
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and does not meet the wetland criteria.					

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____
--	--

Remarks: No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

Water Table Present? Yes _____ No _____ Depth (inches): _____	
Saturation Present? Yes _____ No _____ Depth (inches): _____ (includes capillary fringe)	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Although no surface water was present at the time of the delineation, the pool did retain water over the rainy season and fairy shrimp surveys were conducted within this pool. Therefore, evidence of surface soil cracks and the presence of San Diego fairy shrimp indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 259
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.551988317 Long: -117.01839292 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input type="radio"/> No <input checked="" type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input type="radio"/> No <input checked="" type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year. +

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology. +

HYDROLOGY

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present): Type: <u>shovel refusal</u> Depth (inches): <u>8</u>	Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
---	---

Remarks: compacted soils with lots of rock/cobble. No redox features observed. However, hydric soils are assumed here as problematic due to strong indicators of hydrophytic vegetation and wetland hydrology. This feature is a vernal pool that is seasonally ponded and may lack hydric soil indicators due to limited saturation depth, saline conditions, or other factors, which may include human-caused disturbance.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Evidence of surface soil cracks, biotic crust, and aquatic invertebrates were all present at the time of the delineation, indicating that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 261
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.552285 Long: -117.01840 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. This feature was sampled during the growing season and meets the wetland criteria.	

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet:

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 264
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5525686268 Long: -117.018402883 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

---	---

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: n/a

Remarks: Surface water was present at the time of the delineation, and the presence of hydrophytic vegetation; both indicating that the area supports wetland hydrology.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 264
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5525686268 Long: -117.018402883 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

--	---	---

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 269
 Investigator(s): Beth Procsal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.5537532793 Long: -117.018505922 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present): Type: _____ Depth (inches): _____	Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 3/3/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 276
 Investigator(s): Beth Procsal and JR Sundberg Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.55339362680 Long: -117.02292347000 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.

Hydrophytic Vegetation Indicators: <input checked="" type="checkbox"/> Dominance Test is >50% <input checked="" type="checkbox"/> Prevalence Index is ≤3.0 ¹ <input type="checkbox"/> Morphological Adaptations ¹ (Provide supporting data in Remarks or on a separate sheet) <input type="checkbox"/> Problematic Hydrophytic Vegetation ¹ (Explain)																				
¹ Indicators of hydric soil and wetland hydrology must be present.																				
Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>																				

Remarks: Sample area is a vernal pool that receives runoff from a relatively small local micro-watershed. In addition to the vernal pool consisting predominately of hydrophytic vegetation, it does support two vernal pool plant indicator species (*Psilocarphus brevissimus* and *Plagiobothrys acanthocarpus*).

SOIL

Sampling Point: 276

⁴Indicators of hydrophytic vegetation and wetland hydrology must be present.

Restrictive Layer (if present):
 Type: _____
 Depth (inches): _____

Hydric Soil Present? Yes No

Remarks: Huerhuero loam soil series is on the Hydric Soils of San Diego County list obtained from the Natural Resource Conservation Service (NRCS; 2020). No soil pit was dug due to the sample point being a potential vernal pool and may support a listed fairy shrimp species. Hydric soils were assumed to be present due to the presence of hydrophytic vegetation and wetland hydrology.

HYDROLOGY

Wetland Hydrology Indicators:		<u>Secondary Indicators (2 or more required)</u>
Primary Indicators (any one indicator is sufficient)		<input type="checkbox"/> Water Marks (B1) (Riverine) <input type="checkbox"/> Sediment Deposits (B2) (Riverine) <input type="checkbox"/> Drift Deposits (B3) (Riverine) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> FAC-Neutral Test (D5)
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Salt Crust (B11)	
<input type="checkbox"/> High Water Table (A2)	<input checked="" type="checkbox"/> Biotic Crust (B12)	
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Aquatic Invertebrates (B13)	
<input type="checkbox"/> Water Marks (B1) (Nonriverine)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	
<input type="checkbox"/> Sediment Deposits (B2) (Nonriverine)	<input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3)	
<input type="checkbox"/> Drift Deposits (B3) (Nonriverine)	<input type="checkbox"/> Presence of Reduced Iron (C4)	
<input checked="" type="checkbox"/> Surface Soil Cracks (B6)	<input type="checkbox"/> Recent Iron Reduction in Plowed Soils (C6)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)	<input type="checkbox"/> Other (Explain in Remarks)	
<input type="checkbox"/> Water-Stained Leaves (B9)		
Field Observations:		Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>
Surface Water Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	
Water Table Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	
Saturation Present? (includes capillary fringe) Yes <input type="radio"/> No <input checked="" type="radio"/>	Depth (inches): _____	
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		

Remarks: Although no surface water was present at the time of the delineation, evidence of surface soil cracks and biotic crust indicate that the area supports wetland hydrology. Water table level and saturation are not known as a soil pit was not dug due to the fact that protocol fairy shrimp surveys were being conducted concurrently.

WETLAND DETERMINATION DATA FORM - Arid West Region

Project/Site: Southwest Village Specific Plan Project City/County: San Diego Sampling Date: 2/27/2020
 Applicant/Owner: Pardee Homes State: CA Sampling Point: 277
 Investigator(s): Beth Proscal and Raquel Atik Section, Township, Range: Section 31, T18S R01W
 Landform (hillslope, terrace, etc.): mesa top Local relief (concave, convex, none): concave Slope (%): 0-2
 Subregion (LRR): C - Mediterranean California Lat: 32.552817906 Long: -117.018486607 Datum: NAD83
 Soil Map Unit Name: Huerhuero loam, 2 to 9 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/> Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Remarks: The majority of the vegetation on the site has been disturbed due to past land uses. The natural hydrology of the area, in general, has been altered due to off-road activity. The vegetation and hydrology of the seasonal depressions/vernal pools are problematic due to the seasonality of their presence with hydrology restricted to the winter and vegetation to the late winter and early spring months each year.
