

2026 Community Review

Regarding the SDPD 2025 Annual Surveillance Report

TRUST SD Coalition

What lens does TRUST use to analyze **community-led surveillance oversight?**

Transparent

Responsible

**Note: Flock and Ubicquia “ALPR”
and “Smart Streetlights”
technology are not covered in this
presentation due to a higher
number of issues noted while
reviewing those technologies.**

Callyo

**Callyo's
features are
poorly
described.**

**PAB has
previously
requested
changes.**

**Callyo was
used 40,210
times in 2025.**

**Data sharing
with outside
police,
unspecified.**

**Risk of data
sharing for
purposes of
immigration
enforcement.**

**Other places
require
warrant, why
not in San
Diego?**

Callyo

“The PAB recommends that Council consider a potential court order requirement prior to use of intrusive technology such as Callyo to safeguard against misuse.” (2024)

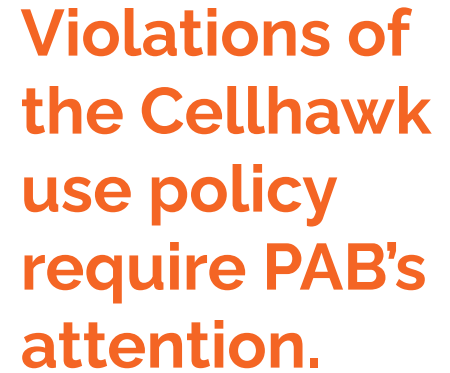

Cellhawk

**Cellhawk's
uses are also
poorly
described.**

**Cellhawk is
capable of
intensive
tracking.**

**Violations of
the Cellhawk
use policy
require PAB's
attention.**

Cellhawk

“Can ingest call detail records, or CDRs, which track cellular contact between devices on behalf of mobile service providers, showing who is talking to whom. It can also handle cellular location records, created when phones connect to various towers as their owners move around.”

Drones

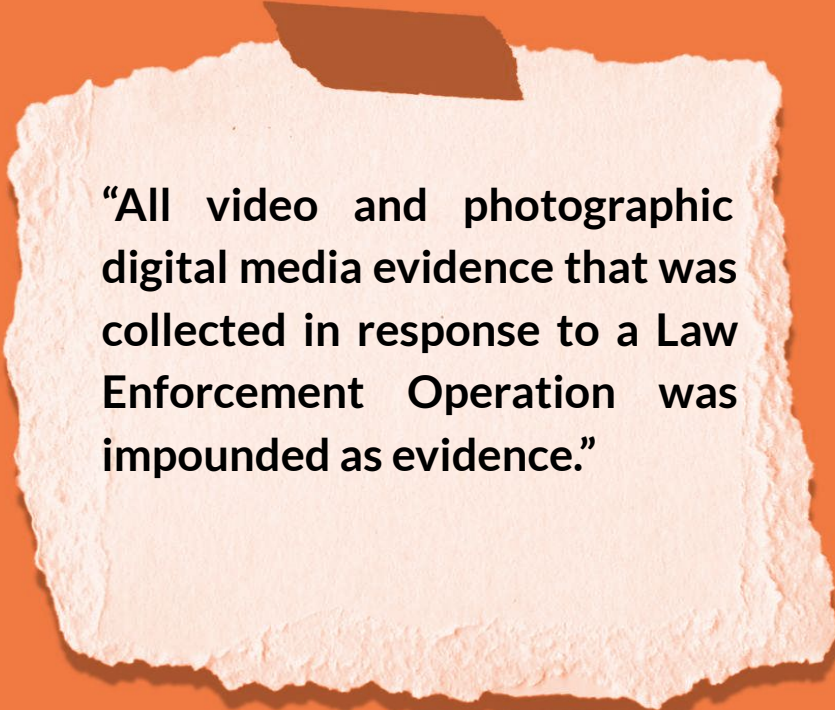

**Drones used
6x to monitor
First
Amendment
activity.**

**Police
drones are
poorly
identified,
adding fear.**

**Drone
footage may
be withheld
improperly.**

“All video and photographic digital media evidence that was collected in response to a Law Enforcement Operation was impounded as evidence.”

**Many drones
are now
banned by
the FCC.**

**Drones are
weapons of
war.**

**Drone use
should be more
carefully
regulated by
the City of San
Diego.**

CLEAR and TLOxp

**CP Clear and
TLO are not
the same
products**

**SDPD failed
audits of
both
systems**

**Major
functionality
changes to
CLEAR in
2025**

CLEAR and TLOxp

“The violations include 22 of the 40 sampled users not providing a reference ID in accordance with Department standards, totaling 1,191 searches.”

“The violations include 22 of the 40 sampled users not providing a reference ID in accordance with Department standards, totaling 2,112 searches.”

Questions we are asking:

Are San Diego's surveillance technologies run Transparently and Responsibly?

What will the PAB do to support the goal of increasing community safety when surveillance is used?

Are technologies that are failing oversight review held accountable or allowed to continue?
