

## Miramar Reservoir Recreation Facilities Project

The Miramar Reservoir Recreational Facilities project includes improvements to the existing recreational facilities, including the floating docks, timber walkway, and three fishing piers at Miramar Reservoir due to anticipated increased water levels associated with the City’s Pure Water Program. The City-owned Miramar Reservoir is a component of the Pure Water Program, as it will serve as the storage location for advanced purified water from the North City Pure Water Facility.

### About Pure Water San Diego

Pure Water San Diego is the City of San Diego’s advanced water purification program that will provide nearly half of San Diego’s water supply locally by 2035 and significantly reduce treated discharges from the Point Loma Wastewater Treatment Plant. Pure Water San Diego will use proven water purification technology to clean recycled water to produce safe, high-quality drinking water. The phased, multi-year program offers a cost-effective investment for San Diego’s water and wastewater needs. San Diegans are getting dual value from this investment — reliable, sustainable drinking water and avoided wastewater costs.

For Phase 1 of the Pure Water San Diego Program, advanced purified water from the North City Pure Water Facility will be stored in Miramar Reservoir before being blended at the Miramar Drinking Water Treatment Plant and distributed to the community.

For more project information, please visit [phase1.purewatersd.org](http://phase1.purewatersd.org) or call 833-MIR-PWSD (833-882-7973) and a project team member will return your call within one business day. Please submit your email address via [purewatersd.org](http://purewatersd.org) or email [purewatersd@sandiego.gov](mailto:purewatersd@sandiego.gov) to be added to the distribution list for electronic notifications.

## Project Overview

The Miramar Reservoir Recreational Facilities project includes improvements to the existing recreational facilities at Miramar Reservoir for ADA accessibility and for the future increased water level. The project is located in the Scripps Ranch community. The project includes several components:

- Retrofitting components of the accessible boat and courtesy docks
- Removing the aluminum brows that connect the floating docks and piers to land, and removing and replacing the floating fishing piers and docks
- Improving concrete walkways adjacent to the timber walkway and removing a portion of the timber walkway closest to the water
- Extending columns to raise the height of the timber walkway to the accessible boat dock
- Extending columns to raise the height of the docks for the East, West and Natalie fishing piers
- Constructing an ADA accessible path and guard rail system at the West fishing pier
- Constructing an ADA accessible parking area at the West fishing pier
- Installing bollards in the parking area at the East fishing pier
- Paved walkways and a concrete sidewalk from the main parking lot to the docks
- Installing signage and restriping within the East and West fishing piers

### PROJECT SCHEDULE

- Construction: Fall 2026 through Summer 2027
- Anticipated construction days are Monday to Friday, and anticipated construction hours are 8:30 a.m. to 3:30 p.m.\*

## **i** WHAT TO EXPECT DURING CONSTRUCTION

During construction, the project team is committed to minimizing inconveniences and impacts, and to ensuring a safe environment for residents and recreational users. Safety for the public and construction crews is important; please follow all posted signage and directions from construction crews.

Demolition and removal of existing recreational facilities and construction of new walkways, floating docks and piers will include temporary construction-related noise. In addition, construction vehicles and supplies will require use of the main parking lot at Miramar Reservoir.

Fishing and use of the access road at Miramar Reservoir will remain available during construction. The boat ramp will need to be closed temporarily for specific activities when crews are working in the immediate ramp area or when the floating fishing piers need to be removed from the water at the ramp. There will also be interruptions in access to docks, piers and walkways as these facilities are retrofitted. When scheduled, these timeframes will be communicated in advance.

The project team will protect the water quality at Miramar Reservoir by using best management practices for the prevention of stormwater pollution during construction. The water level at Miramar Reservoir is expected to increase incrementally in early 2027 and gradually increase for approximately 6 to 12 months. The expected water level increase is about 4 feet.

## Anticipated Budget

The project's planning, design and construction budget is \$4.29 million.\*

\*Project schedule and budget are subject to change.

## How to Stay Informed

The City of San Diego is committed to providing San Diegans with up-to-date project information. Construction notices will be distributed to properties around Miramar Reservoir before construction and current notices will be available online and in the informational kiosk literature boxes in each parking lot at the reservoir.
