Utilities Undergrounding Program Master Plan

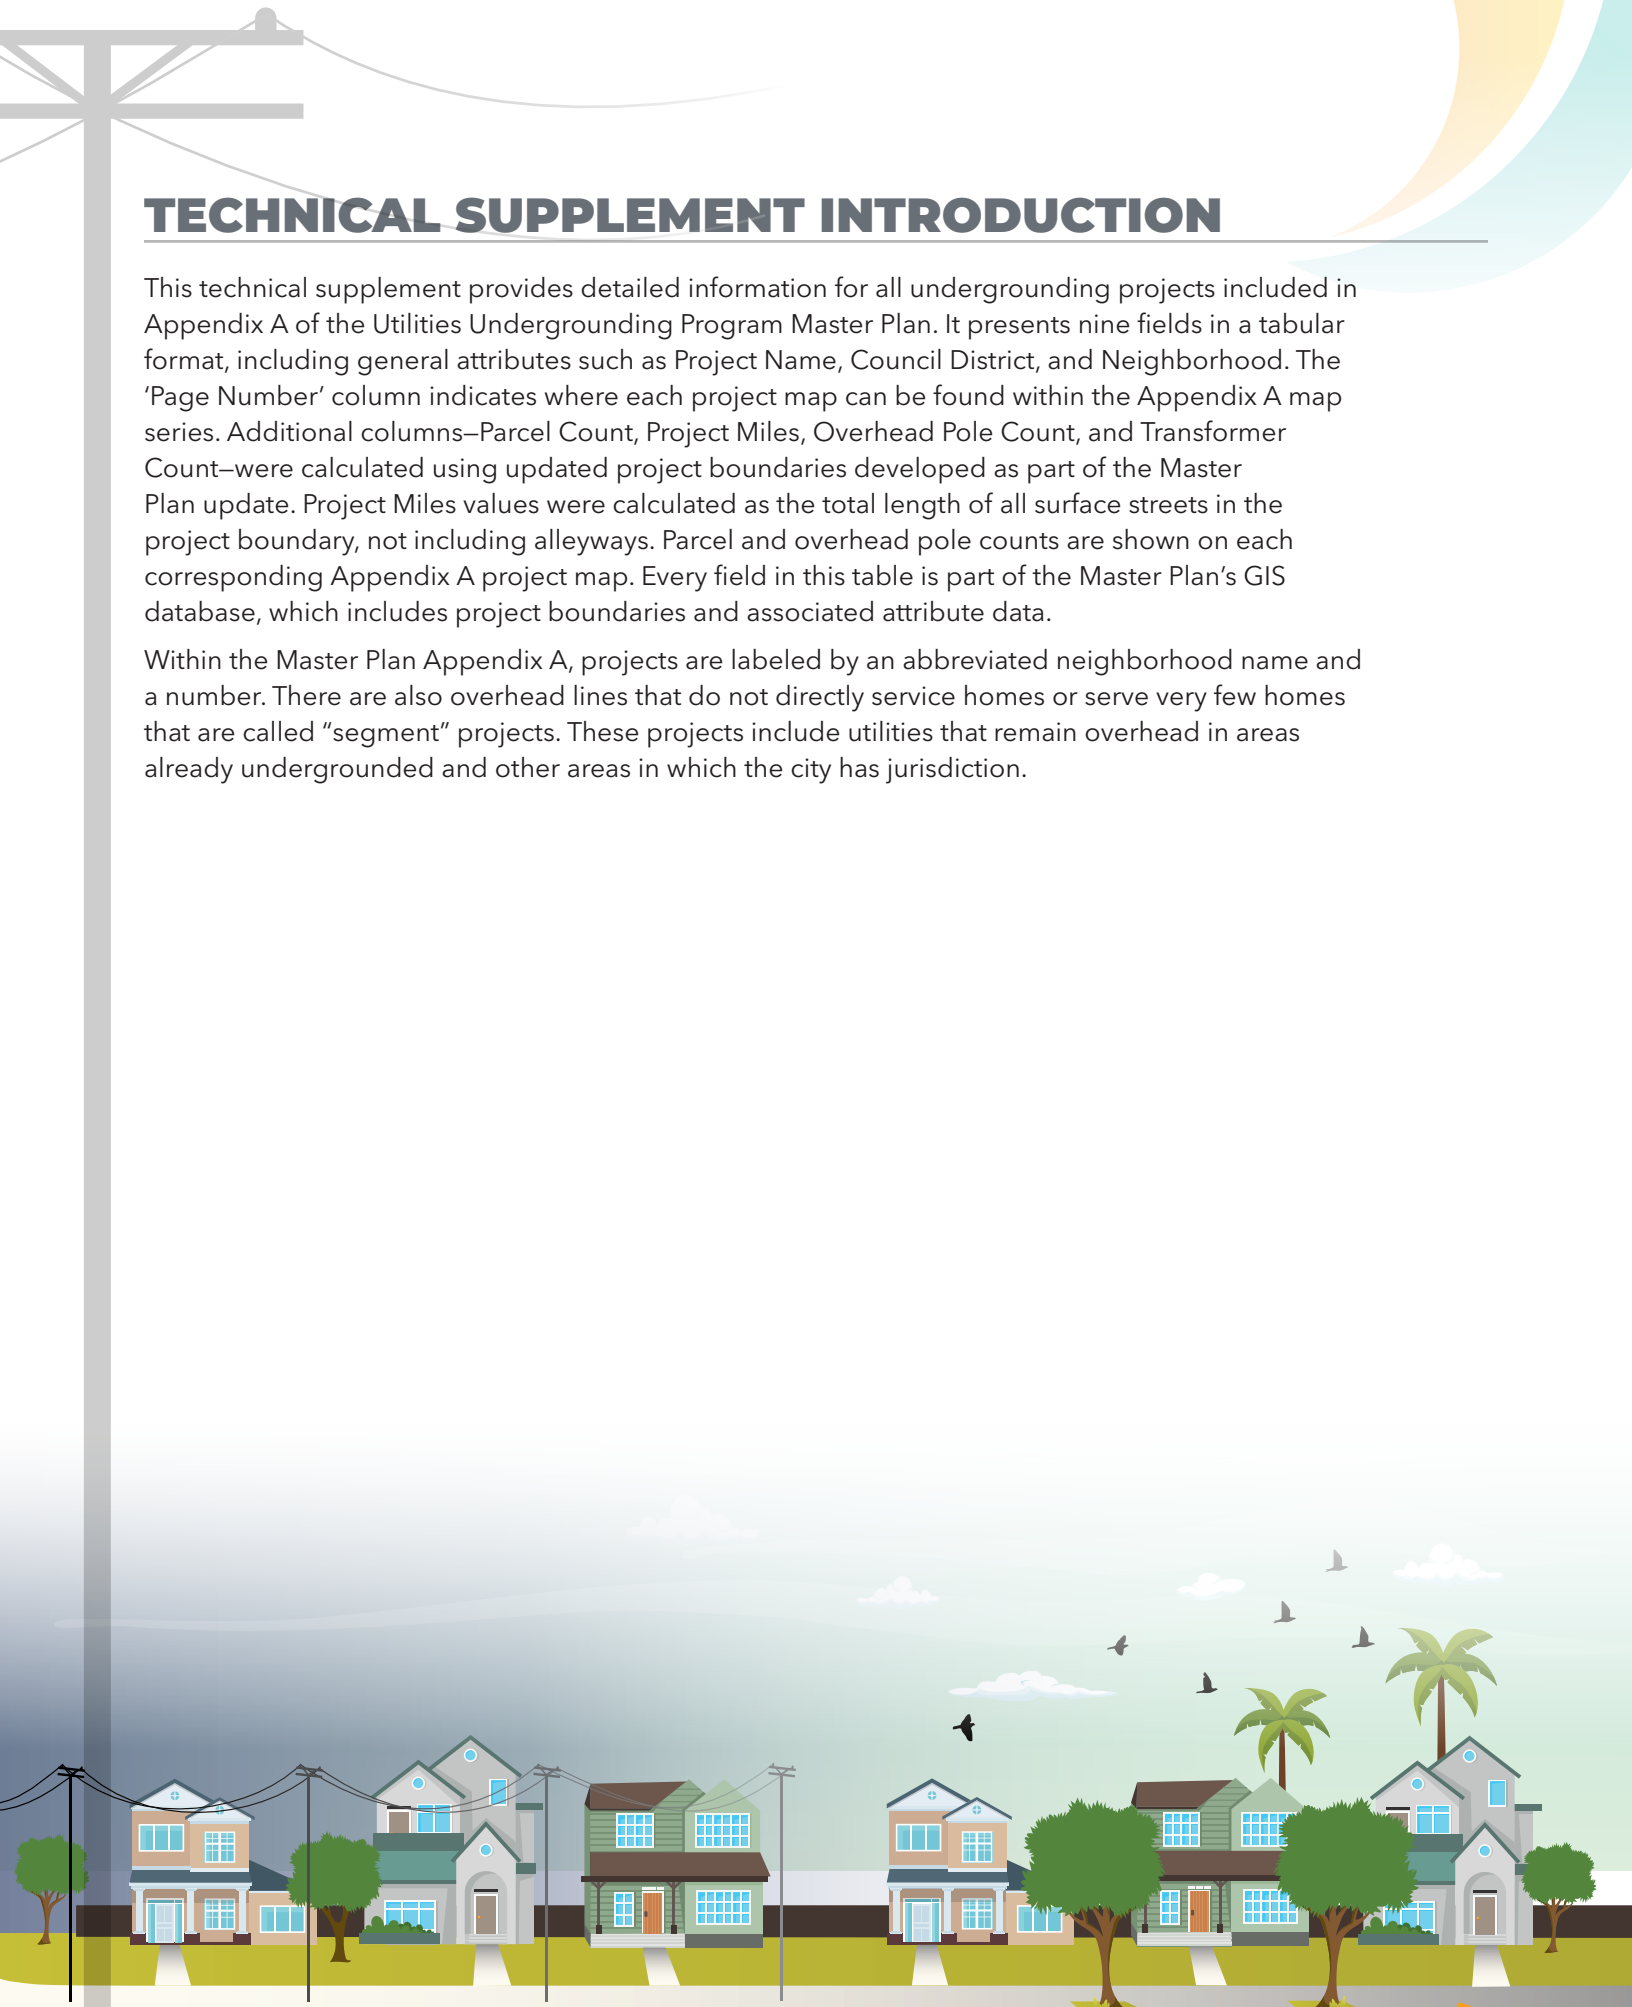

# TECHNICAL SUPPLEMENT

March 2026

# TECHNICAL SUPPLEMENT INTRODUCTION

This technical supplement provides detailed information for all undergrounding projects included in Appendix A of the Utilities Undergrounding Program Master Plan. It presents nine fields in a tabular format, including general attributes such as Project Name, Council District, and Neighborhood. The 'Page Number' column indicates where each project map can be found within the Appendix A map series. Additional columns—Parcel Count, Project Miles, Overhead Pole Count, and Transformer Count—were calculated using updated project boundaries developed as part of the Master Plan update. Project Miles values were calculated as the total length of all surface streets in the project boundary, not including alleyways. Parcel and overhead pole counts are shown on each corresponding Appendix A project map. Every field in this table is part of the Master Plan's GIS database, which includes project boundaries and associated attribute data.

Within the Master Plan Appendix A, projects are labeled by an abbreviated neighborhood name and a number. There are also overhead lines that do not directly service homes or serve very few homes that are called "segment" projects. These projects include utilities that remain overhead in areas already undergrounded and other areas in which the city has jurisdiction.
