

Recycled Water System Notification Update

Dear Customers,

This is an update to the Notification sent last week. The Public Utilities Department has been working on delivering recycled water to the 550 Pressure Zone. The temporary connection will be in service and delivering recycled water by Wednesday, March 25, in the afternoon. We will send an update once the emergency has been repaired. Thank you for your patience as we work on this complex repair.

In the meantime, we request your assistance by minimizing irrigation. For those with a Dual Plumb and Cooling Tower system, it is recommended to switch over to potable water.

For more information, please call Hudson McIntock (619) 527-7680. Additional information on the Recycled Water Program and other important water infrastructure projects is available online at www.sandiego.gov/water.
