NATURAL RESOURCE MANAGEMENT PLAN OVERVIEW

Natural Resource Management Plans guide the protection, restoration and sustainable use of San Diego's natural resources. These plans strengthen climate preparedness, supporting cleaner watersheds, resilient habitats and natural buffers that help the region adapt to extreme heat, flooding and other climate impacts.

Natural Resource Management Plans also implement Climate Resilient SD, the City's climate adaptation plan. To learn more visit the City's Climate Resiliency Implementation Tracker – Thriving Natural Environments.

CITY OF SAN DIEGO

MSCP ANNUAL REPORT

2025

MSCP Annual Report Summary

The City of San Diego's annual report on the status of the Multiple Species Conservation Program Subarea Plan tracks the amount of habitat acreage that was either added to or removed from the City's Multi-Habitat Planning Area preserve over the past year.

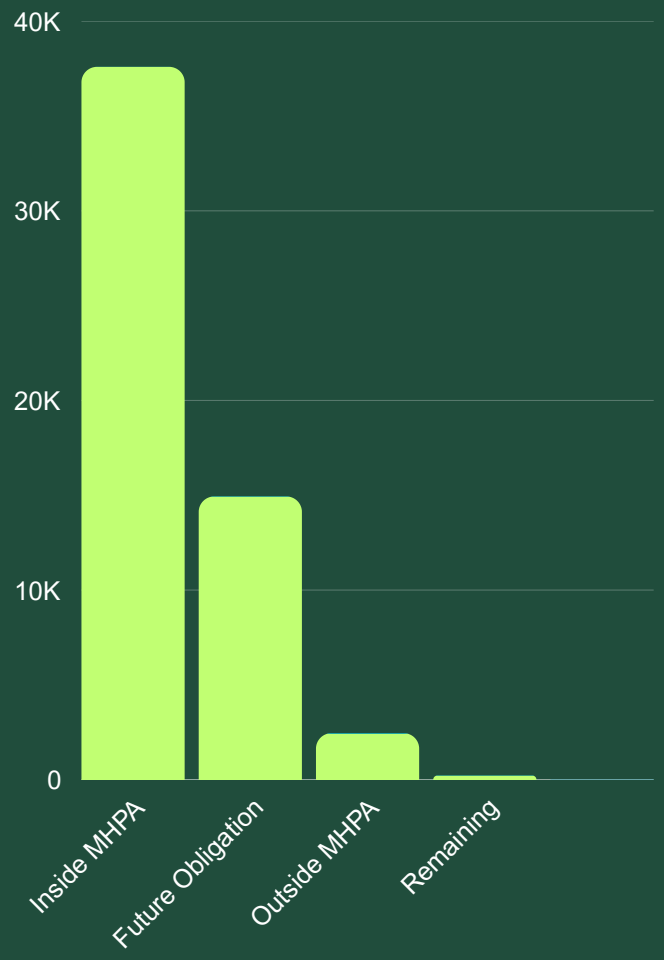
The report also details the management and monitoring activities within the preserve, restoration projects conducted within conserved lands and habitat impacts that occurred as part of both public and private development projects.

MSCP CONSERVATION GOAL

52,747 acres

- 99% conserved to date
- 69 acres added in 2025
- 52,520 acres total conserved

CONSERVATION TOTALS



VERNAL POOL HABITAT CONSERVATION ANNUAL REPORT

The Vernal Pool Habitat Conservation Plan is a habitat conservation framework designed to protect, enhance, restore, and manage vernal pool resources and associated threatened and endangered species within the plan area.

The annual report documents the City's implementation of the the plan, including habitat management and monitoring activities, ecological data, and tracking vernal pools and covered species.

Newly Discovered Pools:
Topsail - *10 pools*
Seabird Way - *39 pools*
Ocean View Hills Parkway - *9 pools*
