

NEW ALADS-Sponsored Body Scan Program

Body Scan International

Included in your Anthem Blue Cross Medical Plan

What is the Body Scan Program?

Enrolled ALADS plan members and one adult dependent (Spouse/DP) may receive a preventive full body MRI or CT scan every 24 months, up to a maximum reimbursement of \$2,000. **Please note**, any unused amounts do not rollover and enrolled participants cannot have Medicare as their primary insurance.

Where can I get scanned?

1. Freedom to Choose

Members can get a body scan at any licensed preventive full body MRI/CT scan vendor and submit a claim for a maximum reimbursement of \$2,000 every 24 months. Access services from any licensed provider you choose - including those outside the state of California!

2. Body Scan International (BSI)

Members have the option to get their CT scan with the BSI Mobile Telemedicine Van, which travels to numerous locations, and includes a virtual physician consultation to discuss your scan result. Simply call (877) BSI-5577 or visit www.bodyscanintl.com to schedule an appointment.

How are claims paid?

Scans obtained through any CT/MRI scan vendor are covered up to a maximum of \$2,000; members are responsible for submitting a claim for reimbursement and covering any remaining balances. Please email the ALADS Benefit Service Center at claims@aladbsc.com for assistance with processing your claim.

Please note, members are responsible for the difference if your scan costs more than the maximum reimbursable amount.

Scans obtained through Body Scan International are no upfront cost to ALADS plan members and spouses/domestic partners enrolled in an ALADS-sponsored Anthem Blue Cross Medical plan.

What isn't the Body Scan Benefit?

- A replacement for an annual physical
- A replacement for a mammogram
- A replacement for a PSA test
- A follow-up for individuals with metastatic disease
- A Measurement of Blood Flow
- A visualization of the colon and small intestine
- A visualization of gallstones without calcification
- A visualization of the ovaries (dependent on the individual anatomy of the patient)
- A resource for the detection for very early prostate abnormalities

Please note, certain benefits may be subject to taxability as determined by the employer and are subject to change.
