Subject: Response to Acoustical Cycle Issues for Strauss Fifth Avenue Apartments SDP, City of San Diego Project No. 451832

This letter is in response to the City of San Diego Cycle Issues letter for the residential development known as Strauss Fifth Avenue. Comments are found in the letter dated May 9, 2016, and are located in the LDR-Environmental section. These comments have been addressed in a revised version of the report, dated May 16, 2016, and this letter will reference the location of each comment response or requested changes in the revised report.

Italics are added to indicate City of San Diego staff comments.

LDR-Environmental Comments

Noise

34 EAS received "Acoustical Analysis Report for Strauss Fifth Avenue, 3534 Fifth Avenue, San Diego, California," prepared by Eilar Associates, Inc., dated January 27, 2016.

35 Project Description: Some areas of the report refer to a mixed use development, however please clarify no new mixed use development is proposed, but that the site includes an existing office building which would remain. In addition, the project now proposes 141 units instead of the 113 units as indicated in the report. Please update the project description and ensure the analysis, conclusions, and site plan addresses the currently proposed project.

RESPONSE: Section 2.1 of the report (Project Description) has been updated to state the newly proposed unit count and clarifies that no new mixed use development is proposed. This section also mentions the existing office building proposed to remain on site. All other sections of the report have been updated, as necessary, to reflect this change, and project plans in Appendix A have been replaced with current drawings. The analysis of HVAC noise impacts has also been updated in order to account for the increased number of HVAC units proposed to be located on site due to the increased unit count. Section 5.3, Figure 8, and Appendix H have been updated accordingly.

36 Page 3, Roadway Noise Sources: Please provide a space between the paragraph discussion of the Fourth and Sixth Avenues.

RESPONSE: This minor typographical error has been corrected on Page 3.

Please call if you have any questions or require additional information.

TABLE OF CONTENTS

FIGURES

APPENDICES

1.0 EXECUTIVE SUMMARY

The proposed project, Strauss Fifth Avenue, consists of the construction of a new six-story, 141-unit apartment complex. First floor and below-grade garage parking will also be provided, and an existing office building will remain on site. The project site is located at 3534 Fifth Avenue, in the City of San Diego, California.

The current and future noise environment primarily consists of traffic noise from Fourth Avenue, Fifth Avenue, Sixth Avenue, and State Route 163 (SR-163). Future noise impacts at building facades will range from 49.4 CNEL at the south-facing facade of the second floor to 65.2 CNEL at the east-facing facade of the first floor.

As per City of San Diego requirements, noise levels at residential outdoor use areas of the project site should be 65 CNEL or less. Future traffic noise impacts were calculated for common outdoor use areas for residential use. Future traffic noise impacts were calculated to be lower than 65 CNEL at all common outdoor use areas. No project design features are deemed necessary for attenuating exterior noise impacts.

The City of San Diego and State of California require interior noise levels of 45 CNEL or less in residential units. Exterior noise levels at many proposed building facades are shown to exceed 60 CNEL. Due to high exterior noise levels at building facades, an exterior-to-interior analysis was performed to determine building features necessary to reduce interior noise levels in residential units to 45 CNEL or less, as required by the State of California and the City of San Diego. Calculations show that with the proposed exterior wall assemblies, all windows and glass doors of residential units should have a minimum rating of STC 28, and mechanical ventilation should be provided in residential units. With these project design features in place, interior noise levels are expected to comply with the regulations of the City of San Diego and the State of California.

The proposed common wall assemblies and floor/ceiling assemblies are expected to meet the minimum required ratings dictated by the State of California Building Code for sound transmission class (STC) and impact insulation class (IIC) ratings as currently designed. Refer to Section 5.2.2 for more details.

Calculations show that noise levels generated by anticipated HVAC units are expected to meet the applicable nighttime noise limits at surrounding property lines, without considering potential shielding that could be provided by a parapet wall. No added project design features are deemed necessary for attenuating these mechanical noise impacts.

Noise from temporary construction activities is not expected to exceed the applicable construction noise limits of the City of San Diego at any surrounding residential property line. Construction is prohibited between the hours of 7 p.m. and 7 a.m. and on Sundays or legal holidays. Standard construction noise control methods including adhering to permissible hours of operation, maintaining equipment in proper operating condition, and placing staging areas at furthest locations from noise sensitive receivers, are expected to be sufficient for reducing noise impacts to surrounding receivers.

2.0 INTRODUCTION

This acoustical analysis report is submitted to satisfy the acoustical requirements of the City of San Diego Noise Element to the General Plan. This analysis addresses noise impacts from nearby roadway traffic to determine project features necessary to achieve compliance with the City of San Diego Noise Element to the General Plan. These regulations require exterior noise levels of 65 CNEL or less at outdoor use areas, and interior noise levels of 45 CNEL or less in residential spaces. Common wall and floor/ceiling assemblies were also evaluated to determine compliance with State of California Building Code regulations for Sound Transmission Class (STC) and Impact Insulation Class (IIC) ratings. This analysis will also address the potential permanent and temporary noise impacts caused by the project at surrounding noise-sensitive receivers, and, if needed, recommend mitigation to reduce impacts to be compliant with applicable noise limits.

All noise level or sound level values presented herein are expressed in terms of decibels, with A-weighting to approximate the hearing sensitivity of humans. Time-averaged noise levels are expressed by the symbol L_{EQ}, for a specified duration. The Community Noise Equivalent Level (CNEL) is a calculated 24-hour weighted average, where sound levels during evening hours of 7 p.m. to 10 p.m. have an added 5 dB weighting, and sound levels during nighttime hours of 10 p.m. to 7 a.m. have an added 10 dB weighting. This is similar to the Day-Night sound level, L_{DN}, which is a 24-hour average with an added 10 dB weighting on the same nighttime hours but no added weighting on the evening hours. Sound levels expressed in CNEL are always based on A-weighted decibels. These metrics are used to express noise levels for both measurement and municipal regulations, for land use guidelines, and for enforcement of noise ordinances. Further explanation can be provided upon request.

Sound pressure is the actual noise experienced by a human or registered by a sound level instrument. When sound pressure is used to describe a noise source it must specify the distance from the noise source to provide complete information. Sound power, on the other hand, is a specialized analytical method to provide information without the distance requirement, but it may be used to calculate the sound pressure at any desired distance.

2.1 Project Description

The proposed project, Strauss Fifth Avenue, consists of the construction of a new six-story, 141-unit apartment complex. First floor and below-grade parking will also be provided, and an existing office building will remain on site. No new mixed use development is proposed. Outdoor use areas for the project are provided as a common pool area and a common outdoor courtyard. For further details, please refer to the project plans, provided as Appendix A.

2.2 Project Location

The project site is located at 3534 Fifth Avenue, in the City of San Diego, California. The Assessor's Parcel Numbers (APN) for the property are 452-406-14-00, 452-406-15-00, 452-406-16-00, and 452-406-17-00. The project location is shown on the Vicinity Map, Figure 1, following this report. An Assessor's Parcel Map, Satellite Aerial Photograph, and Topographic Map of this area are also provided as Figures 2 through 4, respectively.

2.3 Applicable Noise Regulations

This acoustical analysis report is submitted to satisfy the acoustical requirements of the City of San Diego. The City of San Diego Noise Element to the General Plan requires that at a multi-family

residential land use, indoor noise levels are attenuated to 45 CNEL for residential space, and noise levels at residential outdoor use areas do not exceed 65 CNEL.

Noise sources on the project site must also be evaluated to determine their impact on neighboring receivers. The City of San Diego Municipal Code gives noise limits for residential properties based on density. The municipal code states that high density or mixed use properties have noise limits of 60 dBA between the hours of 7 a.m. and 7 p.m., 55 dBA between the hours of 7 p.m. and 10 p.m., and 50 dBA between the hours of 10 p.m. and 7 a.m. The subject property is considered high-density multi-family residential. Properties to the north, south, east, and west all include similar land uses to that which is proposed at the project site, and therefore, will be evaluated as such.

In addition, Section 59.5.0404 of the City of San Diego Municipal Code states that construction activity is prohibited between the hours of 7 p.m. and 7 a.m. and on Sundays or legal holidays. During permissible hours of operation, noise levels from construction activity must be limited to a twelve-hour average of no greater than 75 dBA at any property line zoned for residential use.

Please refer to Appendix B for pertinent sections of the San Diego Noise Element to the General Plan and the City of San Diego Municipal Code.

3.0 ENVIRONMENTAL SETTING

3.1 Existing Noise Environment

Exterior noise at the site will consist primarily of traffic noise from surrounding roadways. Noise levels from operations at the San Diego International Airport are expected to be less than significant at the project site, as the site is located well outside of the 60 CNEL noise contour for the airport. For this reason, aircraft noise has not been included in this analysis. No other noise sources are considered to be significant.

3.1.1 Roadway Noise Sources

Current (2008) and future (2035) traffic volumes are given based on information from the San Diego Association of Governments (SanDAG) Series 12 Transportation Forecast Information Center, located on the SanDAG website at http://tfic.sandag.org.

Fifth Avenue is a three-lane, one-way Collector running north to the east of the project site. The posted speed limit is 30 mph. According to SanDAG, Fifth Avenue currently carries an estimated traffic volume of approximately 14,000 Average Daily Trips (ADT) in the vicinity of the project site.

Fourth Avenue is a two-lane, one-way Light Collector running south to the west of the project site. The posted speed limit is 30 mph. According to SanDAG, Fourth Avenue currently carries an estimated traffic volume of approximately 6,600 ADT in the vicinity of the project site.

Sixth Avenue is a four-lane, two-way Major Arterial running north-south to the east of the project site. The posted speed limit is 30 mph. According to SanDAG, Sixth Avenue currently carries an estimated traffic volume of approximately 22,900 ADT in the vicinity of the project site.

State Route 163 (SR-163) is a four-lane, two-way Freeway running north-south to the east of the project site. The posted speed limit is 55 mph. According to SanDAG, SR-163 currently carries an

estimated traffic volume of approximately 49,800 ADT northbound, and approximately 59,200 southbound ADT in the vicinity of the project site.

No current or future truck percentages were available for any of the roadways in the vicinity of the project site other than State Route 163. However, based on neighboring and surrounding land use, roadway classification, our professional experience and on-site observations, a truck percentage mix of 2.0% medium and 1.0% heavy trucks was used for all roadways other than SR-163. According to traffic counts performed by the Caltrans Traffic Data Branch, the 2013 truck percentage mix on SR-163 in the vicinity of the project site is 2.17% medium and 0.83% heavy.

Current and future (See Section 3.2) traffic volumes and vehicle mixes for roadway sections near the project site are shown in Table 1. For more information, please refer to Appendix C: Traffic Noise Model (TNM) Data and Results.

Table 1. Overall Roadway Traffic Information

Roadway Name	Speed Limit (mph)	Vehicle Mix (%)		Current ADT (2008)	Future ADT (2035)
		Medium Trucks	Heavy Trucks		
Fifth Avenue	30	2.0	1.0	14,000	15,000
Fourth Avenue	30	2.0	1.0	6,600	9,300
Sixth Avenue	30	2.0	1.0	22,900	26,000
SR-163 Northbound	55	2.17	0.83	49,800	54,200
SR-163-Southbound	55	2.17	0.83	59,200	65,200

Current traffic noise contours were calculated approximately at ground level, without existing or proposed project structures, and showed that traffic noise impacts to the entire project site will range from 51.6 CNEL to 64.1 CNEL. For a graphical representation of these contours, please refer to Figure 5: Site Plan Showing Current Traffic CNEL Contours and Noise Measurement Location.

3.1.2 Measured Noise Level

An on-site inspection and traffic noise measurement was made on the morning of Tuesday, April 14, 2015. The noise measurement was made using the methodology described in Section 4.1, at approximately 30 feet west of the Fifth Avenue centerline, and 220 feet north of the Walnut Avenue centerline. Traffic volumes were recorded for automobiles, medium-size trucks, and large trucks on Fifth Avenue during the measurement period. After a continuous 10-minute sound level measurement, there was no change in the L_{EQ} and results were then recorded. The measured noise level and related weather conditions are found in Table 2.

Table 2. On-Site Noise Measurement Conditions and Results	
Date	Tuesday, April 14, 2015
Time	11:25 a.m. – 11:35 a.m.
Conditions	Clear skies, 3-5 mph wind, temperature in the high 60s with moderate humidity
Measured Noise Level	59.8 dBA L_{EQ}

3.1.3 Calculated Noise Level

Noise levels were calculated for the site using the methodology described in Section 4.1 for the location, conditions, and traffic volumes counted during the noise measurements. The calculated noise levels (L_{EQ}) were compared with the measured on-site noise level to determine if adjustments or corrections (calibration) should be applied to the traffic noise prediction model. Adjustments are intended to account for site-specific differences, such as reflection and absorption, which may be greater or lesser than accounted for in the model.

The measured noise level of 59.8 dBA L_{EQ} at approximately 30 feet west of the Fifth Avenue centerline, and 220 feet north of the Walnut Avenue centerline was compared to the calculated (modeled) noise level of 61.6 dBA L_{EQ} for the same conditions and traffic flow. As the measured and the calculated noise levels only differed by 1.8 dB, no adjustment was deemed necessary to model future noise levels for this location. Please refer to Table 3 for further evaluation. Please refer to Appendix C: Traffic Noise Model (TNM) Data and Results for more information.

Table 3. Calculated versus Measured Traffic Noise Data				
Location	**Calculated**	**Measured**	**Difference**	**Correction**
30' W of Fifth Avenue C/L and 220' N of Walnut Avenue C/L	61.6 dBA L_{EQ}	59.8 dBA L_{EQ}	1.8 dB	None Applied

3.2 Future Noise Environment

3.2.1 Transportation Noise Sources

The future on-site noise environment will be the result of the same traffic noise sources. The future (year 2035) traffic volumes for surrounding roadways were provided by SanDAG. The traffic volume of Fifth Avenue is expected to increase to approximately 15,000 ADT by the year 2035. The traffic volume of Fourth Avenue is expected to increase to approximately 9,300 ADT by the year 2035. The traffic volume of Sixth Avenue is expected to increase to approximately 26,000 ADT by the year 2035. In the vicinity of the project site, SR-163 northbound and southbound are expected to increase to 54,200 ADT and 65,200 ADT, respectively, by the year 2035.

The same truck percentages from the current traffic volumes were used for future traffic volume modeling. The roadway alignment and roadbed grade elevations are expected to remain the same for these sections of all roadways. For further roadway details and projected future ADT traffic volumes, please refer to Appendix C: Traffic Noise Model (TNM) Data and Results.

Future traffic noise contours were calculated approximately at ground level, without existing or proposed project structures, and showed that traffic noise impacts to the entire project site will range

from 52.1 CNEL to 64.4 CNEL due to the increase in traffic volumes on surrounding roadways. For a graphical representation of these contours, please refer to Figure 6: Site Plan Showing Future Traffic CNEL Contours and Noise Measurement Location.

3.2.2 HVAC Noise Sources

The primary source of noise generated on site is expected to be HVAC operational noise. Residential units and amenity spaces on the project site are expected to be serviced by small air conditioning units. According to mechanical plans, the majority of air conditioning units will be manufactured by Carrier, and will be selected from either the 25HBC or the 25HCD product line. As the sums of octave band noise levels given for some of the Carrier units were found to be slightly less than the given sound rating, the octave band noise levels were increased accordingly such that the total sum was equal to the sound rating. The resultant estimated sound power spectra for all proposed Carrier units are shown below in Table 4. Please refer to Appendix D: Manufacturer Data Sheets for additional information.

Table 4. Sound Power Level of Carrier Air Conditioning Units

Source	Sound Power Level at Octave Band Frequency (dBA)							Total (dBA)
	125	250	500	1K	2K	4K	8K	
Carrier 25HBC518	49.5	60.0	65.0	69.0	65.5	62.0	55.0	73
Carrier 25HBC524	49.5	60.5	62.5	63.5	62.0	60.0	54.5	69
Carrier 25HBC530	53.0	60.5	63.5	67.5	64.5	62.0	55.5	71
Carrier 25HCD436	56.5	59.5	65.5	67.0	64.0	63.0	56.0	72

In addition to the Carrier units proposed to serve residential units, several smaller heat pumps are also proposed at the project site to serve amenity spaces. These pieces of equipment include the Mitsubishi PUY-A12 heat pump, anticipated to generate a noise level of 46 dBA at one meter from the equipment, as well as the Fujitsu 9RLFCD heat pump, anticipated to generate approximately 49 dBA at one meter from the equipment. Although these pieces of equipment will generate less noise than the proposed Carrier units, they have been included in the overall analysis of HVAC noise. Manufacturer information for the Mitsubishi and Fujitsu units is provided in Appendix D.

No other noise sources on site are anticipated to generate a significant amount of noise at neighboring properties.

3.2.3 Temporary Construction Equipment

Construction information was provided by Mike Remensperger of Cannon Constructors South, Inc. Mr. Remensperger provided information on typical construction equipment anticipated to operate on the site during construction activity. Noise levels are shown in Table 5.

Table 5. Typical Construction Equipment Noise Levels		
Equipment Description	**Duty Cycle (%)**	**Noise Level at 50 feet (dBA)**
Excavator	40	74.3
Dump Truck	40	75.3
Drill Rig	20	73.3
Crane	16	66.3
Concrete Mixer Truck	40	76.3
Concrete Pump Truck	20	74.3

These noise levels will be incorporated into the temporary construction noise analysis for the site, provided in Section 5.3.2.

4.0 METHODOLOGY AND EQUIPMENT

4.1 Methodology

4.1.1 Field Measurement

Typically, a "one-hour" equivalent sound level measurement (L_{EQ}, A-Weighted) is recorded for at least one noise-sensitive location on the site. During the on-site noise measurement, start and end times are recorded, vehicle counts are made for cars, medium trucks (double-tires/two axles), and heavy trucks (three or more axles) for the corresponding road segment(s). Supplemental sound measurements of one hour or less in duration are often made to further describe the noise environment of the site.

For measurements of less than one hour in duration, the measurement time is long enough for a representative traffic volume to occur and the noise level (L_{EQ}) to stabilize. The vehicle counts are then converted to one-hour equivalent volumes by using the appropriate multiplier. Other field data gathered includes measuring or estimating distances, angles-of-view, slopes, elevations, roadway grades, and vehicle speeds. This data is checked against the available maps and records.

4.1.2 Roadway Noise Calculation

The Traffic Noise Model, Version 2.5 program released by the U.S. Department of Transportation is used to calculate the current future daytime average hourly noise level (HNL) contours at the project site, taking into account surrounding buildings, elevation, and additional topography. The daytime average hourly traffic volume is calculated as 0.058 times the ADT, based on the studies made by Wyle Laboratories (see reference). The HNL is equivalent to the hourly L_{EQ}, and both are converted to the CNEL by adding 2.0 decibels, as shown in the Wyle Study. Future CNEL is calculated for desired receptor locations using future road alignment, elevations, lane configurations, projected traffic volumes, estimated truck mixes, and vehicle speeds. Noise attenuation methods may be analyzed, tested, and planned with TNM, as required.

In order to determine the estimated traffic volumes of neighboring roadways (other than the section of Fifth Avenue counted) during the traffic noise measurement made on site for model calibration, the

approximate percentage of the Average Daily Trips (ADT) value for the time period in which the measurement is made is incorporated into the traffic model. These percentages have been established in a study performed by Katz-Okitsu and Associates, Traffic Engineers (see reference). For purposes of calibrating the TNM, 6.2% of the ADT values for the current environment were used in calculations (other than the section of Fifth Avenue that was manually counted) to account for traffic between the hours of 11 a.m. and 12 p.m. in the vicinity of the project site. Further explanation can be provided upon request.

4.1.3 Exterior-to-Interior Analysis

The State of California requires buildings to be designed in order to attenuate, control, and maintain average interior noise levels not greater than 45 CNEL in residential space, as formulated in the California Building Code, Section 1207.11.2 and the City of San Diego Noise Element to the General Plan. Contemporary exterior building construction is expected to achieve at least 15 decibels of exterior-to-interior noise attenuation with windows opened. As a result, exterior noise levels of more than 60 CNEL often result in interior conditions that fail to meet the 45 CNEL requirements for habitable space.

Analysis for the interior noise levels requires consideration of:

- Number of unique assemblies in the wall (doors, window/wall mount air conditioners, sliding glass doors, and windows)
- Size, number of units, and sound transmission data for each assembly type
- Length of sound impacted wall(s)
- Depth of sound impacted room
- Height of exterior wall of sound impacted room
- Exterior noise level at wall assembly or assemblies of sound impacted room

The Composite Sound Transmission data is developed for the exterior wall(s) and the calculated noise exposure is converted to octave band sound pressure levels (SPL) for a typical traffic type noise. The reduction in room noise due to absorption is calculated and subtracted from the interior octave noise levels, and the octave band noise levels are logarithmically summed to yield the overall interior room noise level. When interior noise levels exceed 45 CNEL in residential space, the noise reduction achieved by each element is reviewed to determine which changes will achieve the most cost-effective compliance. Windows are usually the first to be reviewed, followed by exterior doors, and then exterior walls.

4.1.4 Sound Transmission Class (STC) Ratings

Sound Transmission Class (STC) is a single number rating calculated in accordance with ASTM E413, using third-octave values of sound transmission loss. It provides an estimate of the sound performance of a partition, window, or door in sound insulation problems.

Modeling of exterior wall assemblies is accomplished using INSUL Version 8.0, which is a model-based computer program, developed by Marshall Day Acoustics for predicting the sound insulation of walls, floors, ceilings and windows. It is acoustically based on theoretical models that require only minimal material information that can make reasonable estimates of the sound transmission loss (TL), STC and IIC for use in sound insulation calculations; such as the design of common party walls and multiple family floor-ceiling assemblies, etc. INSUL can be used to quickly evaluate new materials or systems or investigate the effects of changes to existing designs. It models individual materials using the simple mass law and coincidence frequency approach and can model more complex assembly partitions, as well. It has evolved over several versions into an easy to use tool and has refined the

theoretical models by continued comparison with laboratory tests to provide acceptable accuracy for a wide range of constructions. INSUL model performance comparisons with laboratory test data show that the model generally predicts the performance of a given assembly within 3 STC points.

4.1.5 Cadna Noise Modeling Software

Modeling of the outdoor noise environment is accomplished using Cadna Version 4.5, which is a model-based computer program developed by DataKustik for predicting noise impacts in a wide variety of conditions. Cadna (Computer Aided Noise Abatement) assists in the calculation, presentation, assessment, and mitigation of noise exposure. It allows for the input of project information such as noise source data, barriers, structures, and topography to create a detailed CAD model and uses the most up-to-date calculation standards to predict outdoor noise impacts.

4.1.6 Acoustical Formulas and Calculations

The following acoustical formulas and calculations have also been used in the preparation of this report.

Decibel Addition

To determine the combined logarithmic noise level of two known noise source levels, the values are converted to the base values, added together, and then converted back to the final logarithmic value, using the following formula:

$$L_C = 10\log(10^{L1/10} + 10^{L2/10} + \ldots 10^{LN/10})$$

where L_C = the combined noise level (dB), and
L_N = the individual noise sources (dB).

This procedure is also valid when used successively for each added noise source beyond the first two. The reverse procedure can be used to estimate the contribution of one source when the contribution of another concurrent source is known and the combined noise level is known. These methods can be used for L_{EQ} or other metrics (such as L_{DN} or CNEL), as long as the same metric is used for all components.

Attenuation Due To Distance

Attenuation due to distance is calculated by the equation:

$$SPL_2 = SPL_1 - 20\log(\frac{D_2}{D_1})$$

where SPL_1 = Known sound pressure level at known distance,
SPL_2 = Calculated sound pressure level at distance,
D_1 = Distance from source to location of known sound pressure level, and
D_2 = Distance from source to location of calculated sound pressure level.

This is identical to the more commonly used reference of 6 dB reduction for every doubling of distance. This equation does not take into account reduction in noise due to atmospheric absorption.

Hourly L_{EQ} Summation

To determine the hourly average noise levels (L_{EQ}) when the noise is created for less than the full hour, convert the logarithm values to the base energy value, multiply by the percentage of the hour that the noise occurs, and then convert the sum back to a logarithmic value. This is done with the following formula:

$$L_{EQ} = 10\log(P_H \times 10^{L_P/10})$$

where P_H = the percent or fraction of the hour noise is created, and
L_P = the partial hour noise level (dB).

Sound Power to Sound Pressure

To convert sound power levels to sound pressure levels, the following formula is used:

$$SPL = SWL - 20\log(D) - 0.5$$

where: SPL= Calculated sound pressure level at distance, and
D = Distance from source to location of calculated sound pressure level.

4.2 Measurement Equipment

Some or all of the following equipment was used at the site to measure existing noise levels:

- Larson Davis Model LxT Type 1 Integrating Sound Level Meter, Serial #4085
- Larson Davis Model CA250 Type 1 Calibrator, Serial #2106
- Tripod, and windscreen

The sound level meter was field-calibrated immediately prior to the noise measurement and checked afterward, to ensure accuracy. All sound level measurements conducted and presented in this report, in accordance with the regulations, were made with a sound level meter that conforms to the American National Standards Institute specifications for sound level meters (ANSI S1.4). All instruments are maintained with National Bureau of Standards traceable calibration, per the manufacturers' standards.

5.0 NOISE IMPACTS

5.1 Exterior

5.1.1 Noise Impacts to Outdoor Use Areas

As per the City of San Diego Noise Element to the General Plan, noise impacts at outdoor use areas of multi-family land uses should not exceed 65 CNEL. Future traffic noise impacts have been addressed for determining exterior noise levels in these locations. The common outdoor use areas for residential use consist of a second floor courtyard/barbecue area, and a second floor pool area. These areas were evaluated to determine if noise levels exceed 65 CNEL in the future noise environment. Future noise level impacts at common outdoor use areas are shown in Table 6, and receiver locations are shown in Figure 7.

Table 6. Future Noise Levels at Common Outdoor Use Areas			
Receiver	**Floor**	**Location**	**Exterior Noise Level (CNEL)**
CY-2	2	Courtyard/ BBQ Area	56.7
Pool	2	Pool Area	47.6

As shown above, noise levels at the proposed common outdoor use areas are not expected to exceed 65 CNEL in the future noise environment, as adequate noise shielding is provided by the proposed building structures. These noise levels meet City of San Diego noise regulations as currently designed, and therefore, no additional project design features are deemed necessary to attenuate exterior noise impacts. Receiver locations are shown in Figure 7.

5.1.2 Noise Impacts at Building Facades

Future traffic noise impacts were also calculated at building facades and showed that noise levels will range from 49.4 CNEL at the south-facing facade of the second floor to 65.2 CNEL at the east-facing facade of the first floor. Noise levels are shown in Table 7, and receiver locations are shown in Figure 7.

Table 7. Future Noise Levels at Building Facades							
Receiver	**Floor**	**Facade Location**	**Exterior Noise Level (CNEL)**	**Receiver**	**Floor**	**Facade Location**	**Exterior Noise Level (CNEL)**
F1	1	East	65.2	F29	4	West	53.2
F2	1	East	65.2	F30	4	West	52.7

5.2 Interior

5.2.1 Transportation Noise Sources

The State of California and the City of San Diego require buildings to be designed in order to attenuate, control, and maintain interior noise levels not greater than 45 CNEL in habitable space, as formulated in the City of San Diego Noise Element to the General Plan and the California Building Code, Section 1207.11.2. Contemporary exterior building construction is expected to achieve at least 15 decibels of exterior-to-interior noise attenuation with windows opened. As a result, exterior noise levels of more than 60 CNEL often result in interior conditions that fail to meet the 45 CNEL requirements for habitable space.

Exterior noise levels at many of the calculated receiver points on the proposed building facades exceed 60 CNEL, as shown in Table 7. Due to the elevated exterior noise levels at these building facades, an exterior-to-interior noise analysis was conducted for each unit type. The proposed exterior wall assembly was evaluated to have an STC rating of 57, and was incorporated into the interior noise analysis as such. More information is provided in Appendix E: Sound Insulation Prediction Results.

Table 8 below shows the results of the exterior-to-interior noise analysis for worst-case units of each type, with acoustical recommendations made therein. For more information, please refer to Appendix F: Exterior-to-Interior Noise Analysis.

Table 8. Future Interior Noise Levels in Worst-Case / Representative Units						
Unit	**Room**	**Maximum Exterior Facade Impact (CNEL)**	**Minimum STC Rating for Windows and Glass Doors**	**Interior CNEL (windows open)**	**Interior CNEL (windows closed)**	**Mechanical Ventilation**
Unit 101	Living/Dining	65.1	28	55.8	35.0	Required
Unit 102	Bedroom	65.1	28	56.4	31.8	Required
	Living/Dining	65.2	28	53.8	35.0	Required
Unit 103	Bedroom	65.2	28	52.9	28.4	Required
	Living/Dining	65.2	28	54.6	34.4	Required
Unit 104	Bedroom	65.2	28	55.2	30.7	Required
	Living/Dining	65.2	28	54.5	35.6	Required
Unit 201	Bedroom	64.7	28	57.2	32.6	Required
	Living/Dining	64.7	28	55.3	36.4	Required
Unit 202	Bedroom 2	64.7	28	56.6	32.0	Required
	Living/Dining	64.7	28	55.3	36.5	Required
Unit 218	Bedroom 2	64.7	28	55.8	31.2	Required
	Living/Dining	64.7	28	55.2	34.7	Required
Unit 219	Bedroom	64.7	28	55.6	31.0	Required
	Living/Dining	64.7	28	55.8	36.9	Required
Unit 302	Bedroom 2	64.4	28	56.8	32.1	Required
	Living/Dining	64.4	28	55.9	36.0	Required
Unit 303	Living/Dining	64.4	28	53.7	34.8	Required
Unit 304	Master Bedroom	64.4	28	56.5	32.0	Required

Representative calculations show that the exterior windows and glass doors of every unit should have the minimum rating of STC 28. As the units evaluated above represent units with the highest noise exposure, all other units are expected to comply with interior noise level requirements with the same configuration recommended above.

Calculations show that units will not comply with the City of San Diego and State of California interior noise regulations with windows and doors open; hence, mechanical ventilation will be required in these units. In units where the noise levels are shown to comply without mechanical ventilation, it is still recommended to install a mechanical ventilation system, for tenant comfort. The mechanical ventilation system shall meet the criteria of the California Mechanical Code, including the capability to provide appropriate ventilation rates. The ventilation system shall not compromise the sound insulation capability of the exterior wall or be dependent on ventilation through windows.

Exterior door installation should include all-around weather-tight door stop seals and an improved threshold closure system. The additional hardware will improve the doors' overall sound reduction properties. The transmission loss (TL) of an exterior door without weather-tight seals is largely a factor of sound leakage, particularly at the bottom of the door if excessive clearance is allowed for air transfer. By equipping exterior doors with all-around weather-tight seals and an airtight threshold closure at the bottom, a loss of up to 10 STC points can be prevented. Manufacturers of these products include such companies as Pemko and Reese. Manufacturer sheets are provided in Appendix G: Recommended Products.

Additionally, it is imperative to seal and caulk between the rough opening and the finished door frame for all doors by applying an acoustically resilient, non-skinning butyl caulking compound. The same recommendation applies to any other penetrations, cracks, or gaps through the assembly. Sealant application should be as generous as needed to ensure effective sound barrier isolation. The OSI Green Series Draft and Acoustical Sound Sealant and the Pecora AC-20 FTR Sealant are products specifically designed for this purpose. Please see Appendix G: Recommended Products.

The proposed residential units were analyzed for future exterior noise impacts from roadway traffic. With the proposed exterior wall assemblies, window/glass door configurations specified above, and mechanical ventilation in units, all interior residential space is expected to comply with City of San Diego and California Building Code noise requirements.

5.2.2 Unit-to-Unit Noise Transmission

Another source of noise that may affect residential units in multi-family buildings is unit-to-unit noise transmission. The California State Building Code requires that the Sound Transmission Class (STC) rating of common wall assemblies separating residential units from one another, or from common space such as corridors, stairways, or other such service spaces, have a minimum laboratory rating of STC 50. The same STC requirement applies for floor/ceiling assemblies, and an added requirement dictates that the Impact Insulation Class (IIC) rating of the floor/ceiling assembly is a minimum laboratory rating of IIC 50. Detailed calculations and laboratory tests for the assemblies evaluated below are provided in Appendix E: Sound Insulation Prediction Results.

Wall Assemblies

Assembly DM-2 – Unit Demising Wall – 1 Hour Rated (Wood Stud)

On the second through sixth floors, where residential units share a common wall, the following assembly is proposed:

- Single layer of 5/8-inch thick Type X gypsum board
- Double row of 2x4 wood studs on separate plates spaced one inch apart, 16 inches o.c.
- Fiberglass insulation in both stud cavities
- Single layer of 5/8-inch thick Type X gypsum board

This assembly was tested at Riverbank Acoustical Laboratories (RAL-TL75-83) and shown to achieve an STC 57. The assembly is listed in the California Office of Noise Control Catalog of STC and IIC Ratings for Wall and Floor/Ceiling Assemblies under the section number 1.2.4.1.5.4. No changes are required to meet the standards of the California Building Code.

Assembly DX-1 – Unit Demising Wall – 1 Hour Rated (Metal Stud)

On the first floor, where residential units share a common wall, the following assembly is proposed:

- Single layer of 5/8-inch thick Type X gypsum board
- Double row of 3-5/8-inch metal studs on separate plates spaced one inch apart, 16 inches o.c.
- Fiberglass insulation in both stud cavities
- Single layer of 5/8-inch thick Type X gypsum board

This assembly is the same as Assembly DM-2, the only difference being the use of metal studs instead of wood studs. This is not expected to affect the overall rating of the assembly, as the type of studs used in double stud walls does not have as great an effect on the rating of the STC rating of the assembly as for single stud wall assemblies. Additionally, as metal studs perform better in single stud wall assemblies, the above assembly may perform slightly better than the same assembly would with wood studs. Using INSUL, the calculated STC rating of the above assembly using either wood or metal studs is STC 58 in both cases. This compares well with the laboratory rating of STC 57 for the wood framed assembly (RAL-TL75-83). No changes are required to meet the standards of the California Building Code.

Assembly FC-1 – Corridor Wall – 1 Hour Rated (Wood Stud)

On the second through sixth floors, where residential units share a wall with an interior corridor, the following assembly is proposed:

- Single layer of 5/8-inch thick Type X gypsum board
- Plywood sheathing
- Single row of 2x4 wood studs, 16 inches o.c.
- Fiberglass insulation in cavity
- Single layer of 5/8-inch thick Type X gypsum board on resilient channels

A similar assembly was tested by the National Research Council of Canada (NRC #66) and shown to achieve an STC rating of 50. The assembly is listed in the California Office of Noise Control Catalog of STC and IIC Ratings for Wall and Floor/Ceiling Assemblies under the section number 1.2.2.5.5.2. Although the tested assembly includes two layers of gypsum board on one side, it does not include any plywood sheathing, which is expected to provide a similar acoustical performance. A calculation of the proposed assembly was performed in INSUL and shown to achieve an STC 53. No changes are required to meet the standards of the California Building Code; however, if there are areas where the layer of plywood will not be incorporated into the wall assembly, the absence of plywood should be compensated for by a layer of 5/8-inch gypsum board to maintain the STC rating.

Assembly DS-1 – Corridor Wall – 1 Hour Rated (Metal Stud)

In some locations where residential units are adjacent to a corridor on the first floor, the following assembly is proposed:

- Double layer of 5/8-inch thick Type X gypsum board
- Single row of 6-inch metal studs, 16 inches o.c.
- Fiberglass insulation in cavity
- Single layer of 5/8-inch thick Type X gypsum board on resilient channels

A similar assembly was tested by the National Research Council of Canada (NRC #TL-94-023) and shown to achieve an STC rating of 54. The tested assembly includes 1/2-inch thick gypsum board versus the 5/8-inch thick gypsum board used in the proposed assembly, which is expected to improve the acoustical performance of the assembly. The tested assembly also includes 3 5/8-inch metal studs, whereas the proposed assembly includes 6-inch metal studs, which is expected to improve the acoustical performance of the proposed assembly. A calculation of the proposed assembly was performed in INSUL and shown to achieve an STC rating of 60. No changes are required to meet the standards of the California Building Code.

Assembly FR-2 – Corridor Wall – 2 Hour Rated (Metal Stud)

In some locations where residential units are adjacent to a corridor on the first floor, the following assembly is proposed:

- Double layer of 5/8-inch thick Type X gypsum board
- Single row of 3-5/8-inch, 25 gauge metal studs, 16 inches o.c.
- Fiberglass insulation in cavity
- Double layer of 5/8-inch thick Type X gypsum board

This assembly was tested by the National Research Council of Canada (NRC #TL-93-332) and shown to achieve an STC rating of 55. No changes are required to meet the standards of the California Building Code.

Assembly FD-1 – Demising Wall – 3 Hour Rated Wall

FD-1 is a three-hour rated demising wall. No specific sound test was available for this exact configuration; however, a sound rating has been estimated based on similar assemblies found within the California Catalog of STC and IIC Ratings. Assembly OC-10FC is constructed as follows:

- Single layer of 5/8-inch thick Type X gypsum board
- Single row of 2-inch by 4-inch wood studs
- 3.5-inch thick insulation in stud cavity
- Single layer of 5/8-inch thick Type X gypsum board
- 1-inch wide air space
- Single layer of 5/8-inch thick Type X gypsum board
- Single row of 2-inch by 4-inch wood studs
- 3.5-inch thick insulation in stud cavity
- Single layer of 5/8-inch thick Type X gypsum board

This assembly was tested and shown to have an STC rating of 44. Assembly OCF W-15-77 is constructed as follows:

- Single layer of 5/8-inch thick Type X gypsum board
- Single row of 2-inch by 4-inch wood studs
- 3.5-inch thick insulation in stud cavity
- Single layer of 5/8-inch thick Type X gypsum board
- 1-inch wide air space
- Single layer of 1/4-inch thick gypsum board
- Single layer of 5/8-inch thick Type X gypsum board
- Single row of 2-inch by 4-inch wood studs
- 3.5-inch thick insulation in stud cavity

- Single layer of 5/8-inch thick Type X gypsum board

This assembly was tested and shown to have an STC rating of 45. Both of the assemblies listed above are similar to FD-1 as they consist of a "quadruple leaf" assembly, with multiple air spaces between layers of material; however, FD-1 contains a row of steel studs within the center cavity (as opposed to the air space found in the assemblies listed above). Unlike the tested assemblies, FD-1 provides a 1/4-inch air space between each row of wood studs and the center steel stud assembly. FD-1 also contains additional layers of gypsum board within the center of the assembly that have an increased thickness from those shown in the assemblies listed above. Assembly OCF W-15-77 and OC-10FC differ only in that the former incorporates an additional layer of 1/4-inch thick gypsum board within the center of the assembly, which results in a 1 point increase in the STC rating. Using this same logic, it can be assumed that the addition of a 3/4-inch layer of gypsum board would increase the overall rating by two points, due to the increased thickness. As FD-1 incorporates four layers of 3/4-inch gypsum board within the center of the cavity, as opposed to two layers of 5/8-inch thick gypsum board in OC-10FC, 4 points will be assumed to be gained from the rating shown Assembly OC-10FC. In addition, double shear paneling is required in nearly every location FD-1 is specified, which means that a layer of plywood will be incorporated on each side of the assembly. The increased mass from each layer of plywood is also likely to add 1 STC point to the assembly, resulting in a total increase of 2 points from the proposed two layers of plywood on the assembly. Although the steel studs within the center cavity eliminate the decoupling shown within the tested assemblies listed above, the air spaces between the wood stud rows and the center assembly are expected to make up for this difference, as they provide decoupling. With this reasoning, the STC rating of FD-1 is anticipated to be approximately STC 50, complying with the California State Building Code requirement.

In the event that shear paneling is not needed on both sides of the assembly, the absence of the plywood layer(s) should be compensated for by either substituting a layer of 5/8-inch gypsum board in place of the plywood, or installing the plywood anyway, regardless of the need for shear. Either of these methods should be sufficient for maintaining the STC 50 rating.

<u>Floor/Ceiling Assemblies</u>

UL Floor-Ceiling 1Hr

Where residential units are share a floor/ceiling assembly, the following assembly is proposed:

- Laminate Flooring
- 1 1/2-inch light weight gypsum topping
- Acoustimat II underlayment
- 3/4-inch plywood sheathing
- 11 7/8-inch wood TJI joists
- Fiberglass insulation in cavity
- Double layer of 5/8-inch thick Type X gypsum board on resilient channels

A similar assembly was tested for airborne sound transmission at Intertek Acoustical Laboratories (Repot No. 100336557CRT-001g), with 1-inch Gypcrete, 2x10 joists, a single layer of gypsum board, and no floor covering. The tested assembly achieved an STC 53. According to a study published by the National Research Council of Canada entitled *"Summary report for Consortium on Fire Resistance and Sound Insulation of Floors: Sound Transmission and Impact Insulation Data",* published in January 2005, which examined the acoustical performance of various floor/ceiling types, "No statistically significant dependence on joist type (wood, I-joist, trusses or steel C-joists) was found in the regression analysis." It is therefore concluded that the use of TJI joists as opposed to solid

wood joists will have a minimal effect on the STC or IIC rating. The additional thickness of gypsum topping is expected to have a minimal impact on the STC rating and the additional layer of gypsum board on the ceiling would result in a higher STC rating. For this reason, the STC rating of the assembly is estimated to be greater than STC 53, and therefore, no changes are required to meet the standards of the California Building Code.

A similar assembly was tested for impact sound transmission at Intertek Acoustical Laboratories (100336557CRT-001l), with 1-inch Gypcrete, a single layer of gypsum board, and floating engineered hardwood flooring. The tested assembly achieved an IIC 53. The use of laminate flooring versus the engineered hardwood flooring installed during the test is not anticipated to effect the IIC rating of the assembly, as these materials have similar characteristics, and are both installed as floating floors. The increased thickness of gypsum topping is expected to have a minimal impact on the IIC rating and the additional layer of gypsum board on the ceiling would result in a similar or higher IIC rating. For this reason, the IIC rating of the assembly is estimated to be IIC 53 or greater, and therefore, no changes are required to meet the standards of the California Building Code.

Limitations

Actual STC and IIC ratings achieved are determined by the quality of construction and attention to details in the installation of assemblies. Please be advised that this endorsement is strictly contingent upon observance of proper installation procedures. It is imperative that attention be paid to details such as the proper installation of resilient channels and/or clips and the isolation of the floor/ceiling assembly from the wall to prevent vibration through the structure.

All cracks or gaps must be sealed with an acoustical sealant, such as the OSI Green Series or Pecora sealants (see Appendix G). With these conditions met, the assemblies detailed above should meet minimum building code standards for controlling sound and impact transmission.

5.3 Project-Related Noise Impacts on Surrounding Property Lines

5.3.1 HVAC Noise

Anticipated HVAC noise levels have been calculated using Cadna at surrounding noise-sensitive receivers, considering noise limits detailed in Section 2.3. Calculations take into account the proposed building on which HVAC units will be roof-mounted, as well as the existing commercial building proposed to remain on site. Receivers have been placed at five feet above grade at all surrounding property lines and at 15 feet above grade at the south, east, and west property lines to account for second-story receivers in these locations. There are no noise-sensitive receivers with multi-story buildings at the north property line. Calculations assume that all HVAC units will be operational for 100 percent of the time during all hours of the day, for a worst-case analysis, although actual operation would be expected to be intermittent and less frequent during the more sensitive nighttime hours.

Results of the analysis are shown in Table 9. More information is provided in Appendix H: Cadna Analysis Data and Results, and a graphical representation of evaluated source/receiver locations is shown in Figure 8.

Table 9. Mechanical Equipment Noise Levels at Surrounding Receivers			
Receiver	**Location**	**Noise Limit (dBA)**	**Equipment Noise Level (dBA)**
R-1	North Property Line	50	31.7
R-2	South Property Line (Across Walnut)	50	24.1
R-3	East Property Line (Across 5th)	50	30.2
R-4	West Property Line (Across Alley)	50	32.6
R-5	South Property, 2nd Story	50	28.6
R-6	East Property, 2nd Story	50	31.6
R-7	West Property, 2nd Story	50	33.3

As shown above, noise levels from proposed HVAC equipment on site are expected to meet the applicable nighttime noise limits set by the City of San Diego without the implementation of added project design features. This evaluation is considered to be representative of actual HVAC noise generated on site, although noise levels may be further reduced due to the presence of parapet walls on the building.

5.3.2 Temporary Construction Noise

A schedule of construction activity was evaluated to determine potential temporary noise impacts to the surrounding residentially zoned receivers, per City of San Diego Municipal Code requirements. The nearest residential or mixed use properties are located to the north, east, and west of the project site. Any other potentially noise-sensitive receivers are located at a greater distance from construction activity and therefore, would be exposed to lesser noise impacts due to distance attenuation and shielding provided by intervening structures. This includes any residential or mixed use property to the south of the project site, which will be located at a greater distance from construction activity and will also receive shielding from the existing commercial building to remain in place on the project site.

The anticipated construction schedule was provided by Mike Remensperger of Cannon Constructors South, Inc. According to Mr. Remensperger, the project will be constructed over the course of a 20-month period. A summary of construction activity is shown in Table 10.

Table 10. Anticipated Construction Activity		
Scope of Work	**Duration**	**Anticipated Large Equipment**
Site Mobilization/Demolition	1 month	Excavator, Dump Trucks
Excavation/Shoring	3 months	Excavator, Drill Rig, Dump Trucks
Concrete	4 months	Crane, Concrete Mixer Trucks, Concrete Pump Truck
Framing	7 months	Crane
Interior Finishes	5 months	None (hand tools only)

Noise levels were calculated at the nearest receivers to the north, east, and west. Construction noise sources were placed near the center of the work area (excluding the existing commercial building) to evaluate typical impacts to the surrounding receivers as equipment moves around the property. Noise calculations consider typical duty cycles of equipment, to account for periods of activity and inactivity on the site.

Noise levels for each stage of construction are shown in Table 11. Detailed calculations can be found in Appendix I, and a graphical representation of noise source and receiver locations is provided as Figure 9.

Table 11. Temporary Construction Noise Levels at Nearest Occupied Properties				
Stage	**Equipment Used**	**Receiver**	**Approximate Distance (ft)**	**Average Noise Level of Equipment (dBA)**
Site Mobilization/ Demolition	Excavator, Dump Trucks	North (CR1)	128	67.6
		East (CR2)	142	66.7
		West (CR3)	85	71.2
Excavation/ Shoring	Excavator, Drill Rig, Dump Trucks	North (CR1)	128	68.1
		East (CR2)	142	67.2
		West (CR3)	85	71.6
Concrete	Crane, Concrete Mixer Trucks, Concrete Pump Truck	North (CR1)	128	67.9
		East (CR2)	142	67.0
		West (CR3)	85	71.4
Framing	Crane	North (CR1)	128	50.2
		East (CR2)	142	49.3
		West (CR3)	85	53.7

It is determined that construction noise levels associated with this project will not create a significant impact at any surrounding property line with activity limited to the daytime hours of 7 a.m. to 7 p.m., as noise levels are expected to remain below 75 dBA at all surrounding noise-sensitive property lines.

Although noise levels are shown to be in compliance with the construction noise limit of 75 dBA, the following measures should still be practiced as a courtesy to residential neighbors.

1. Staging areas should be placed as far from occupied receivers as possible on the project site to limit any additional unnecessary noise exposure at sensitive receivers.

2. Place stationary equipment in locations that will have a lesser noise impact on nearby sensitive receivers.

3. Turn off equipment when not in use.

4. Limit the use of enunciators or public address systems, except for emergency notifications.

5. Equipment used in construction should be maintained in proper operating condition, and all loads should be properly secured, to prevent rattling and banging.

6. Schedule work to avoid simultaneous construction activities that both generate high noise levels.

7. Use equipment with effective mufflers.

8. Minimize the use of backup alarms.

With work limited to daytime hours permissible by the City of San Diego and adherence to the general good practice construction noise control techniques, temporary construction noise is expected to remain in compliance with City of San Diego noise limits.

6.0 CONCLUSION

Traffic noise levels at common outdoor use areas are expected to remain below 65 CNEL in the future noise environment and are therefore anticipated to meet City of San Diego noise regulations as currently designed.

Due to high exterior noise levels at building facades, an exterior-to-interior analysis was performed to determine building features necessary to reduce interior noise levels in residential units to 45 CNEL or less, as required by the State of California and the City of San Diego. As shown above, with the proposed exterior wall assemblies, all windows and glass doors on residential units should have a minimum rating of STC 28, and mechanical ventilation should be provided in residential units. With these project design features in place, interior noise levels are expected to comply with City of San Diego noise regulations.

Additionally, the proposed common wall assemblies and floor/ceiling assemblies are expected to meet State of California Building Code requirements for acoustical isolation as designed, provided proper installation procedures are followed.

Calculations show that noise levels generated by anticipated HVAC units are expected to meet the applicable nighttime noise limits at surrounding property lines, without considering potential shielding that could be provided by a parapet wall. No added project design features are deemed necessary for attenuating these mechanical noise impacts.

Noise from temporary construction activities is not expected to exceed the applicable construction noise limits of the City of San Diego at any surrounding residential property line. Construction is prohibited between the hours of 7 p.m. and 7 a.m. and on Sundays or legal holidays. Standard construction noise control methods including adhering to permissible hours of operation, maintaining equipment in proper operating condition, and placing staging areas at furthest locations from noise sensitive receivers, are expected to be sufficient for reducing noise impacts to surrounding receivers.

7.0 CERTIFICATION

All recommendations for noise control are based on the best information available at the time our consulting services are provided. However, as there are many factors involved in sound and impact transmission, and Eilar Associates has no control over the construction, workmanship or materials, Eilar Associates is specifically not liable for final results of any recommendations or implementation of the recommendations.

The findings and recommendations of this acoustical analysis report are based on the information available and are a true and factual analysis of the potential acoustical issues associated with Strauss Fifth Avenue, to be located in the City of San Diego, California. This report was prepared by Jonathan Brothers and Amy Hool.

Jonathan Brothers, Senior Acoustical Consultant

Amy Lynn Hool

PLAN CHECK NOTES

Fire Protection - Submittals/Permits

1. DEFERRED APPROVALS: COMPLETE PLANS AND SPECIFICATIONS FOR FIRE ALARM SYSTEMS, FIRE-EXTINGUISHING SYSTEMS, INCLUDING AUTOMATIC SPRINKLERS AND STANDPIPE SYSTEMS AND OTHER SPECIAL FIRE EXTINGUISHING SYSTEMS AND RELATED APPURTENANCES SHALL BE SUBMITTED TO CITY OF SAN DIEGO FOR REVIEW AND APPROVAL PRIOR TO INSTALLATION PER CFC 901.2

2. DEFERRED APPROVALS: PLANS FOR ALL FIXED FIRE PROTECTION EQUIPMENT SHALL BE SUBMITTED BY THE INSTALLING CONTRACTOR. SUCH PLANS SHALL BE APPROVED BY FIRE PLAN CHECK / THE FIRE CODE OFFICIAL PRIOR TO INSTALLATIONS.

3. PERMITS: ALL REQUIRED APPROVALS MUST BE OBTAINED FROM FIRE PLAN CHECK BEFORE THE BUILDING IS OCCUPIED. (FOR STATE PROJECTS ONLY) CONTRACTOR SHALL SECURE APPROVALS REQUIRED BY THE CALIFORNIA STATE FIRE MARSHAL PRIOR TO OCCUPYING THE BUILDING.

4. FIRE SAFETY DURING CONSTRUCTION: BUILDINGS UNDERGOING CONSTRUCTION, ALTERATION OR DEMOLITION SHALL COMPLY WITH IFC 1401.1 AND 1413.

5. EMERGENCY PLANS: SHALL BE SUBMITTED TO THE FIRE CODE OFFICIAL FOR REVIEW AND APPROVAL PRIOR TO OCCUPANCY. COMPLETE PLANS AND SPECIFICATIONS FOR THE OPERATION OF THE ELEVATORS UNDER FIRE OR OTHER EMERGENCY CONDITIONS SHALL BE SUBMITTED TO FIRE CODE OFFICIAL FOR REVIEW AND APPROVAL PRIOR TO INSTALLATION.

Fire Protection - Fire Department Access

1. ADDRESS: BUILDING NUMBER OR ADDRESS SHALL BE PROVIDED IN A POSITION AS TO BE PLAINLY LEGIBLE AND VISIBLE FROM THE STREET OR ROAD FRONTING THE PROPERTY. NUMBERS SHALL CONTRAST WITH THEIR BACKGROUND, MINIMUM 12"H BY 1 1/2" STROKE NUMBERS.

2. ACCESS ROADS: APPROVED FIRE DEPARTMENT ACCESS WAYS SHALL BE PROVIDED.

3. FIRE PROTECTION: FIRE PROTECTION, INCLUDING FIRE APPARATUS ACCESS ROADS AND WATER SUPPLIES FOR FIRE PROTECTION, SHALL BE INSTALLED AND MADE SERVICEABLE PRIOR TO AND DURING TIME OF CONSTRUCTION.

4. FIRE HYDRANTS: FIRE HYDRANTS SHALL COMPLY WITH FIRE DEPARTMENT REQUIREMENTS FOR ON-SITE FIRE HYDRANTS.

5. REFLECTIVE MARKERS: FIRE HYDRANT LOCATIONS SHALL BE IDENTIFIED BY THE INSTALLATION OF REFLECTIVE MARKERS.

6. KEY BOX: PROVIDE AN APPROVED KEY (KNOX) BOX IN AN APPROVED LOCATION.

7. IDENTIFICATION: ROOMS CONTAINING SPRINKLER RISERS AND VALVES, OR OTHER FIRE DETECTION, SUPPRESSION OR CONTROL ELEMENTS SHALL BE IDENTIFIED BY APPROVED SIGNS CONSTRUCTED OF DURABLE MATERIALS, PERMANENTLY INSTALLED AND READILY VISIBLE.

Fire Protection - Portable Fire Extinguishers

1. LOCATION AND CLASSIFICATION OF EXTINGUISHERS SHALL BE IN ACCORDANCE WITH CFC 906 AND CALIFORNIA CODE OF REGULATIONS (CCR), TILE 19.

2. 2-A:10-B:C: AT LEAST ONE FIRE EXTINGUISHER WITH A MINIMUM RATING OF 2A-10BC SHALL BE PROVIDED WITHIN 75' MAXIMUM TRAVEL DISTANCE FOR EACH 6000 SQ. FT. OR PORTION THEREOF ON EACH FLOOR.

3. 4-A:60-B:C: AT LEAST ONE FIRE EXTINGUISHER WITH A MINIMUM RATING OF 4A-60BC SHALL BE PROVIDED OUTSIDE EACH MECHANICAL, ELECTRICAL, OR BOILER ROOM.

4. COOKING GREASE FIRES: A PORTABLE FIRE EXTINGUISHER LISTED AND LABELED FOR CLASS K FIRES COMPATIBLE WITH THE AUTOMATIC FIRE EXTINGUISHING SYSTEM AGENT SHALL BE INSTALLED WITHIN 30 FEET OF COMMERCIAL FOOD HEAT PROCESSING EQUIPMENT.

5. DURING CONSTRUCTION: AT LEAST ONE EXTINGUISHER SHALL BE PROVIDED ON EACH FLOOR LEVEL AT EACH STAIRWAY, IN ALL STORAGE AND CONSTRUCTION SHEDS, IN LOCATIONS WHERE FLAMMABLE OR COMBUSTIBLE LIQUIDS ARE STORED OR USED, AND WHERE OTHER SPECIAL HAZARDS ARE PRESENT PER CFC SECTION 3315.

Fire Protection - Fire Alarm Systems

1. INSTALLATION: FIRE ALARM SYSTEMS SHALL BE INSTALLED IN COMPLIANCE WITH CFC 907 AND NFPA 72. VISUAL AND AUDIBLE ALARMS WILL COMPLY WITH THE PROVISIONS OF NFPA-72G.

2. MONITORING: MONITORING OF SPRINKLER SYSTEM SHALL BE PER CFC 903.4.1

3. SUPERVISION: WHEN SERVING MORE THAN 20 SPRINKLER HEADS, AUTOMATIC SPRINKLER SYSTEMS SHALL BE SUPERVISED BY AN APPROVED, CENTRAL, PROPRIETARY OR REMOTE STATION SERVICE, OR SHALL BE PROVIDED WITH A LOCAL ALARM WHICH WILL GIVE AN AUDIBLE SIGNAL AT A CONSTANTLY ATTENDED LOCATION.

4. SMOKE DETECTORS: DWELLING UNITS, CONGREGATE RESIDENCES AND HOTEL OR LODGING HOUSE GUEST ROOMS THAT ARE USED FOR SLEEPING PURPOSES SHALL BE PROVIDED WITH SMOKE DETECTORS.

Fire Protection - Automatic Sprinkler Systems

1. DEFERRED APPROVALS: ALL AREAS OF THE PROPOSED BUILDING AREA TO BE PROTECTED BY AUTOMATIC FIRE SPRINKLERS/ COMBINATION STANDPIPES, PER LOCAL REQUIREMENTS AND APPLICABLE STANDARDS OF NFPA AND CBC. PLANS FOR ALL FIXED FIRE PROTECTION SYSTEMS TO BE REVIEWED AND APPROVED BY THE FIRE CODE OFFICIAL BEFORE INSTALLATION OF ANY SUCH SYSTEM(S).

2. STANDPIPES: STANDPIPE SYSTEM SHALL COMPLY WITH CFC 905 AND NFPA 14. CONNECTIONS FOR STANDPIPE SUPPLY MUST BE AHEAD OF ANY BUILDING CONTROL VALVE. PROVIDE ALL TEST VALVES AND PRESSURE GAUGES AT HIGHEST POINT ON STANDPIPE.

3. INSTALLATION: THE INSTALLATION OF AUTOMATIC FIRE SPRINKLER SYSTEMS SHALL COMPLY WITH CFC 903.3, AND NFPA 13. ALL VALVES CONTROLLING THE WATER SUPPLY FOR AUTOMATIC SPRINKLER SYSTEMS AND WATER FLOW SWITCHES ON ALL SPRINKLER SYSTEMS SHALL BE ELECTRICALLY SUPERVISED WHERE THE NUMBER OF SPRINKLER HEADS IS 20 OR MORE.

4. AUDIBLE ALARM: AN APPROVED AUDIBLE SPRINKLER FLOW ALARM SHALL BE PROVIDED ON THE EXTERIOR OF THE BUILDING IN AN APPROVED LOCATION. AN APPROVED AUDIBLE SPRINKLER FLOW ALARM TO ALERT THE OCCUPANTS SHALL BE PROVIDED IN THE INTERIOR OF THE BUILDING IN A NORMALLY OCCUPIED LOCATION.

5. DURING CONSTRUCTION: IN BUILDINGS THAT REQUIRE STANDPIPES, STANDPIPES SHALL BE PROVIDED DURING CONSTRUCTION WHEN THE HEIGHT REACHES 40' ABOVE THE LOWEST LEVEL OF FIRE DEPARTMENT VEHICLE ACCESS. A FIRE DEPARTMENT CONNECTION SHALL BE NO MORE THAN 100' FROM AVAILABLE FIRE DEPARTMENT VEHICLE ACCESS ROADWAYS PER CFC SECTIONS 3310 & 3313.

Fire Protection - Fire-Resistant Construction

1. DECORATIVE MATERIALS: ALL DECORATIVE MATERIALS SHALL BE MAINTAINED IN A FLAME RETARDANT CONDITION. ANY DECORATION USED IN PUBLIC AREA SHALL BE NON-COMBUSTIBLE OR FLAMEPROOFED IN AN APPROVED MANNER. (EXAMPLE: DRAPES, CURTAINS, SHADES, HANGINGS, ETC.)

2. FINISHES INTERIOR WALL & CEILING FINISH FLAME-SPREAD RATING SHALL BE AS REQUIRED PER: (CBC TABLE 803.9).

CLASS A FLAME-SPREAD INDEX 0-25
CLASS B FLAME-SPREAD INDEX 26-75
CLASS C FLAME-SPREAD INDEX 76-200

3. JOINTS JOINTS INSTALLED IN OR BETWEEN FIRE RESISTIVE WALLS, FIRE-RESISTIVE FLOOR OR FLOOR-CEILING ASSEMBLIES AND FIRE-RESISTIVE ROOF OR ROOF-CEILINGS SHALL BE PROTECTED BY AN APPROVED FIRE-RESISTIVE JOINT SYSTEM.

4. THROUGH PENETRATIONS: THROUGH PENETRATIONS OF FIRE-RESISTIVE WALLS, FLOOR-CEILINGS AND ROOF-CEILINGS SHALL BE PROTECTED BY AN APPROVED PENETRATION FIRESTOP SYSTEM

5. MEMBRANE PENETRATIONS: MEMBRANE PROTECTION IS NOT REQUIRED AT STEEL ELECTRICAL BOXES WHERE NOT EXCEEDING 16 SQUARE INCHES IN AREA AND IF THE AGGREGATE AREA OF SEVERAL SUCH OPENINGS DOES NOT EXCEED 100 SQUARE INCHES FOR EVERY 100 SQUARE FEET OF WALL OR CEILING AREA, AND WHERE BOXES ARE SEPARATED BY A HORIZONTAL DISTANCE OF 24 INCHES WHEN ON OPPOSITE SIDES OF A WALL. ELECTRICAL PANELS MAY NOT BE PLACED WITHIN A ONE HOUR CORRIDOR. ELECTRICAL PANELS MAY NOT OCCUR WITHIN THE FIRE RESISTIVE ENVELOPE OF STAIR ENCLOSURES.

6. FIRE DAMPERS FIRE DAMPERS OR DOORS SHALL BE PROVIDED AND INSTALLED PER CBC 716 WHERE AIR DUCTS PENETRATE FIRE RATED WALLS OR CEILINGS AT AREA OR OCCUPANCY SEPARATION WALL, HORIZONTAL EXIT WALLS, OR SHAFT ENCLOSURES. FIRE/SMOKE DAMPERS REQUIRED AND TO BE INSTALLED PER CBC 716 AT DUCTED AND UNDUCTED PENETRATIONS INTO FIRE-RATED CORRIDOR WALLS, OCCUPANCY SEPARATION WALLS, AND SHAFT ENCLOSURES. WHERE DUCTS HAVE OPENINGS INTO THE CORRIDOR. ACCESS OPENING ONE OR TWO-HOUR RATED ASSEMBLY TO BE APPROVED BY FIRE CODE OFFICIAL.

7. FIRE DAMPERS FIRE AND / OR SMOKE DAMPER ASSEMBLIES, INCLUDING SLEEVES, AND INSTALLATION PROCEDURES SHALL BE APPROVED BY THE BUILDING INSPECTOR PRIOR TO INSTALLATION. FIRE DAMPERS SHALL BE APPROVED BY THE FIRE CODE OFFICIAL AND INSTALLED IN COMPLIANCE WITH TITLE 24 CCR AND IN STRICT ACCORDANCE WITH THE MANUFACTURER'S PRINTED INSTRUCTIONS. THE MANUFACTURER'S INSTALLATION INSTRUCTIONS SHALL BE AVAILABLE ON SITE FOR REVIEW BY INSPECTION AUTHORITIES.

8. HAZARDOUS MATERIALS: NO HAZARDOUS MATERIALS TO BE STORED AND/OR USED WITHIN THE BUILDING WHICH EXCEED THE QUANTITIES LISTED IN CBC TABLES 414.2.2 and 414.2.5

Means of Egress

1. SWING: EXIT DOORS SHALL SWING IN THE DIRECTION OF EXIT TRAVEL WHEN SERVING 50 OR MORE PERSONS.

2. LOCKING DEVICES: EXIT DOORS SHALL BE OPENABLE FROM THE INSIDE, WITHOUT THE USE OF A KEY OR ANY SPECIAL KNOWLEDGE OR EFFORT. ALL LOCKING DEVICES SHALL BE OF AN APPROVED TYPE.

3. PANIC HARDWARE: EXIT AND EXIT-ACCESS DOORS SERVING GROUP A , E OCCUPANCIES HAVING AN OCCUPANT LOAD OF 50 OR MORE AND ANY GROUP H OCCUPANCY SHALL NOT BE PROVIDED WITH A LATCH OR LOCK UNLESS IT IS PANIC HARDWARE.

4. CORRIDOR WIDTH: THE WIDTH OF CORRIDORS SHALL NOT BE LESS THAN 44" WHEN SERVING AN OCCUPANT LOAD OF 50 OR MORE CORRIDORS SERVING AND OCCUPANT LOAD OF LESS THAN 50 SHALL NOT BE LESS THAN 36". THE REQUIRED WIDTH OF CORRIDORS SHALL BE UNOBSTRUCTED.

5. CORRIDOR DOORS: ALL EXIT-ACCESS DOORWAYS AND DOORWAYS FROM UNOCCUPIED AREAS TO A CORRIDOR SHALL BE PROTECTED BY TIGHT-FITTING SMOKE- AND DRAFT-CONTROL ASSEMBLIES HAVING A FIRE-PROTECTION RATING OF NOT LESS THAN 20 MINUTES. THE DOOR AND FRAME SHALL BEAR AN APPROVED LABEL FOLLOWED BY THE LETTER 'S'. DOORS TO BE SELF-CLOSING OR AUTOMATIC CLOSING.

6. EXIT CONTINUITY: EXITS SHALL PROVIDE A CONTINUOUS AND UNOBSTRUCTED MEANS OF EGRESS TO A PUBLIC WAY. THE EGRESS PATH SHALL REMAIN FREE AND CLEAR OF ALL OBSTRUCTIONS AT ALL TIMES. NO STORAGE IS PERMITTED IN ANY EGRESS PATHS.

7. POSTING OF ROOM CAPACITY: ANY ROOM OR SPACE THAT IS AN ASSEMBLY, DINING, DRINKING OCCUPANCY OR SIMILAR WHERE FIXED SEATS ARE NOT INSTALLED SHALL HAVE THE MAXIMUM CAPACITY OF THE ROOM POSTED IN A CONSPICUOUS PLACE ON AN APPROVED SIGN NEAR THE MAIN EXIT OR EXIT-ACCESS DOORWAY FROM THE ROOM.

8. EXIT SIGN LOCATIONS: THE PATH OF EXIT TRAVEL TO AND WITHIN EXITS IN A BUILDING SHALL BE IDENTIFIED BY EXIT SIGNS. EXIT SIGNS SHALL BE READILY VISIBLE FROM ANY DIRECTION OF APPROACH. EXIT SIGNS SHALL BE LOCATED TO CLEARLY INDICATE THE DIRECTION OF EGRESS TRAVEL. NO POINT SHALL BE MORE THAN 100 FEET FROM THE NEAREST VISIBLE SIGN.

9. EXIT SIGN GRAPHICS: EXIT SIGNS SHALL HAVE THE WORD "EXIT" ON THE SIGN IN 6" HIGH BLOCK CAPITAL LETTERS AND 3/4 INCH WIDE ON HIGH CONTRASTING BACKGROUND.

10. EXIT SIGN ILLUMINATION: EXIT SIGNS SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED. WHEN THE FACE IS ILLUMINATED FROM AN EXTERNAL SOURCE, IT SHALL HAVE AN INTENSITY OF NOT LESS THAN 5 FOOTCANDLES FROM EITHER TWO ELECTRIC LAMPS. INTERNALLY ILLUMINATED SIGNS SHALL PROVIDE EQUIVALENT LUMINANCE.

11. EXIT SIGN POWER SOURCE: EXIT SIGNS SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED AT ALL TIMES AND SHALL BE CONNECTED TO AN EMERGENCY POWER SYSTEM (BATTERIES, UNIT EQUIPMENT OR AN ON-SITE GENERATOR) THAT WILL AUTOMATICALLY ILLUMINATE THE EXIT SIGNS FOR A DURATION OF NOT LESS THAN 90 MINUTES.

12. MEANS OF EGRESS ILLUMINATION: THE MEANS OF EGRESS, INCLUDING THE EXIT DISCHARGE, WILL BE ILLUMINATED TO A LEVEL OF NOT LESS THAN 1 FOOT CANDLE AT THE WALKING SURFACE AT ALL TIMES THE BUILDING SPACE SERVED BY THE MEANS OF EGRESS IS OCCURED.

13. LOW-LEVEL EXIT SIGNS: APPROVED LOW-LEVEL EXIT SIGNS SHALL BE PROVIDED IN ALL CORRIDORS SERVING GROUP A, E, I, AND R-1 OCCUPANCIES.

APPLICABLE CODES & STANDARDS

APPLICABLE STATE CODES:
1. 2013 CALIFORNIA BUILDING STANDARDS ADMINISTRATIVE CODE C.C.R. TITLE 24 PART 1

2. NFPA 14, 2010 STANDPIPE SYSTEMS AND HOSE SYSTEMS
3. NFPA 17, 2009 DRY CHEMICAL EXTINGUISHING SYSTEMS
4. NFPA 20, 2010 STATIONARY PUMPS FOR FIRE PROTECTION
5. NFPA 22, 2008 WATER TANKS FOR PRIVATE FIRE PROTECTION
6. NFPA 24, 2010 PRIVATE FIRE SERVICE MAINS
7. NFPA 72, 2010 NATIONAL FIRE ALARM CODE
8. NFPA 2001, 2008 CLEAN AGENT FIRE EXTINGUISHING SYSTEMS

FEDERAL ACTS:
1. 2010 ADA STANDARDS FOR ACCESSIBLE DESIGN

DEFERRED SUBMITTALS

1. SUBMITTAL DOCUMENTS FOR DEFERRED SUBMITTAL ITEMS SHALL BE SUBMITTED TO THE ARCHITECT OR ENGINEER OF RECORD WHO SHALL REVIEW THEM AND FORWARD THEM TO THE BUILDING OFFICIAL WITH A NOTATION INDICATING THAT THE DEFERRED SUBMITTAL DOCUMENTS HAVE BEEN REVIEWED AND THAT THEY HAVE BEEN FOUND TO BE IN GENERAL CONFORMANCE WITH THE DESIGN OF THE BUILDING.

2. DEFERRED SUBMITTAL DOCUMENTS IN ADDITION TO THE SEAL OF THE RESPONSIBLE ENGINEER, SHALL BEAR THE SHOP DRAWING APPROVAL STAMPS OF THE ARCHITECT OF RECORD AND THE GENERAL CONTRACTOR ON ALL SHEETS OF PLANS AND ON COVER OF CALCULATIONS.

3. SUBMITTAL DOCUMENTS FOR DEFERRED SUBMITTAL ITEMS SHALL BE SUBMITTED IN A TIMELY MANNER THAT ALLOWS FOR A MINIMUM OF 30 WORKING DAYS FOR INITIAL PLAN REVIEW TURNAROUND. ALL COMMENTS RELATED TO THE DEFERRED SUBMITTAL MUST BE ADDRESSED TO THE SATISFACTION OF THE BUILDING OFFICIAL PRIOR TO APPROVAL OF THE SUBMITTED ITEMS.

4. DEFERRED SUBMITTAL ITEMS SHALL NOT BE FABRICATED / INSTALLED UNTIL THEIR DESIGN AND SUBMITTAL DOCUMENTS HAVE BEEN APPROVED BY THE BUILDING OFFICIAL.

5. PROVIDE TWO COPIES OF DEFERRED SUBMITTAL DOCUMENTS FOR FINAL APPROVAL.

DEFERRED ITEMS:
1. AUTOMATIC FIRE SPRINKLER SYSTEM
2. FIRE ALARM SYSTEM
3. GLASS AND METAL GUARDRAILING
4. FIREPROOFING
5. EXTERIOR STOREFRONT SYSTEMS
6. WINDOW WASHING EQUIPMENT
7. ELEVATOR GUIDE RAILS AND SUPPORT BRACKETS
8. PUBLIC SWIMMING POOLS, JACUZZI, POOL FENCING
9. SOLAR PV PANELS

DEFERRED APPROVAL DECLARATION

A. TO THE BEST OF MY KNOWLEDGE, C.B.C. ACCESS REGULATIONS HAVE BEEN FULLY MET ON THESE IT IS UNDERSTOOD THAT PLANS FOR THIS PROJECT HAVE, AT THIS TIME, BEEN REVIEWED FOR COMPLIANCE WITH ALL APPLICABLE STATE AND CITY REGULATIONS, AND THAT THE PROJECT AS A WHOLE HAS BEEN APPROVED BY THE CITY, WITH THE EXCEPTION OF THE DEFERRED ITEMS LISTED.

B. I/WE UNDERSTAND THAT I WILL NOT BE AUTHORIZED ANY INSPECTION OF THE DEFERRED ITEMS PROPOSED PRIOR TO THE SUBMITTAL AND APPROVAL OF THE PLANS AND/OR CALCULATIONS FOR THOSE DEFERRED ITEMS.

C. WE THE RESPONSIBLE ARCHITECT/ENGINEER AND CONTRACTOR, ARE AWARE OF CONSTRUCTION PROCEEDING UNDER THE CONDITIONS ABOVE AND AGREE TO SUCH PROCEDURE

OWNER: ______________________

ARCHITECT: ______________________

SPECIAL INSTRUCTIONS

NOTICE TO THE APPLICANT/OWNER/OWNER'S AGENT/ARCHITECT OR ENGINEER OF RECORD: BY USING THIS PERMITTED SET OF DRAWINGS FOR CONSTRUCTION/INSTALLATION OF THE WORK SPECIFIED HEREIN, YOU AGREE TO COMPLY WITH THE REQUIREMENTS OF THE CITY OF SAN DIEGO FOR SPECIAL INSPECTIONS, STRUCTURAL OBSERVATIONS, CONSTRUCTION MATERIAL TESTING AND OFF-SITE FABRICATION OF BUILDING COMPONENTS, CONTAINED IN THE STATEMENT OF SPECIAL INSPECTIONS AND, AS REQUIRED BY THE CALIFORNIA CONSTRUCTION CODES.

NOTICE TO THE CONTRACTOR/BUILDER/INSTALLER/SUB-CONTRACTOR/OWNER-BUILDER: BY USING THIS PERMITTED CONSTRUCTION DRAWINGS FOR CONSTRUCTION/INSTALLATION OF THE WORK SPECIFIED HEREIN, YOU ACKNOWLEDGE AND ARE AWARE OF THE REQUIREMENTS CONTAINED IN THE STATEMENT OF SPECIAL INSPECTIONS. YOU AGREE TO COMPLY WITH THE REQUIREMENTS OF THE CITY OF SAN DIEGO FOR SPECIAL INSPECTIONS, STRUCTURAL OBSERVATIONS, CONSTRUCTION MATERIAL TESTING AND OFF-SITE FABRICATION OF BUILDING COMPONENTS, CONTAINED IN THE STATEMENT OF SPECIAL INSPECTIONS AND, AS REQUIRED BY THE CALIFORNIA CONSTRUCTION CODES.

MULTI-FAMILY HOUSING REQUIREMENTS

COVERED DWELLING UNITS INCLUDES:		METHOD OF COMPLIANCE	
		ONE BATHROOM	ALL BATHROOMS
UNIT NUMBERS:	141	o	

PRE-CONSTRUCTION MEETING:
A MANDATORY PRE-CONSTRUCTION MEETING SHALL BE SCHEDULED WITH A SENIOR STRUCTURAL INSPECTOR BY CALLING FIELD INSPECTION SERVICES AT (858) 492-5070.

ARCHITECT OF RECORD DECLARATION

A. TO THE BEST OF MY KNOWLEDGE, CBC ACCESS REGULATIONS HAVE BEEN FULLY MET ON THESE DRAWINGS. THE ARCHITECT OF RECORD (OR AUTHORIZED REPRESENTATIVE) WILL PARTICIPATE IN A MANDATORY PRE-CONSTRUCTION MEETING FOCUSING ON ACCESS COMPLIANCE.

B. TO THE BEST OF MY KNOWLEDGE, THE FINAL COPY OF THE PLANS REFLECTS RESOLUTION OF ALL THE PLAN CHECK ISSUES THAT HAVE BEEN PREVIOUSLY EVALUATED AND SIGNED-OFF DURING THE COURSE OF PLAN RECHECK.

SIGNATURE: ______________________
DATE: ______________________

1. AN APPROVED CARBON MONOXIDE ALARM SHALL BE INSTALLED IN DWELLING UNITS AND IN SLEEPING UNITS WITHIN WHICH FUEL-BURNING APPLIANCES ARE INSTALLED; AND IN DWELLING UNITS THAT HAVE ATTACHED GARAGES.

2. FOR NEW CONSTRUCTION REQUIRED CARBON MONOXIDE ALARMS SHALL RECEIVE THEIR PRIMARY POWER FROM THE BUILDING WIRING WHERE SUCH WIRING IS SERVED FROM A COMMERCIAL SOURCE AND SHALL BE EQUIPPED WITH A BATTERY BACK-UP. ALARM WIRING SHALL BE DIRECTLY CONNECTED TO PERMANENT BUILDING WIRING WITHOUT A DISCONNECTING SWITCH OTHER THAN AS REQUIRED FOR OVER CORRECT PROTECTION.

3. SINGLE- AND MULTI-STATION CARBON MONOXIDE ALARMS SHALL BE LISTED PER UL 2034. CARBON MONOXIDE DETECTORS SHALL BE LISTED PER UL 2075. CARBON MONOXIDE ALARMS AND CARBON MONOXIDE DETECTORS SHALL BE INSTALLED IN ACCORDANCE WITH THIS CODE, THE CURRENT EDITION OF NFPA 720 "STANDARD FOR THE INSTALLATION OF CARBON MONOXIDE (CO) DETECTION AND WARNING EQUIPMENT" AND THE MANUFACTURER'S INSTALLATION INSTRUCTIONS OTHER CARBON MONOXIDE ALARM AND DETECTION DEVICES AS RECOGNIZED IN NFPA 720 ARE ALSO ACCEPTABLE.

4. WHERE MORE THAN ONE SMOKE ALARM IS REQUIRED TO BE INSTALLED WITHIN AN INDIVIDUAL DWELLING UNIT OR SLEEPING UNIT IN GROUP R-1, R-2, R-3, R-3.1 OR R-4, THE SMOKE ALARMS SHALL BE INTERCONNECTED IN SUCH A MANNER THAT THE ACTIVATION OF ONE ALARM WILL ACTIVATE ALL OF THE ALARMS IN THE INDIVIDUAL UNIT. THE ALARM SHALL BE CLEARLY AUDIBLE IN ALL BEDROOMS OVER BACKGROUND NOISE LEVELS WITH ALL INTERVENING DOORS CLOSED.

NOTE TO PLAN CHECKER: REFER TO ELECTRICAL DRAWINGS FOR ALL CARBON MONOXIDE AND SMOKE ALARM DETECTOR LOCATIONS SHOWN ON PLANS.

5. PRIVATELY FUNDED BUILDINGS PROVIDING ASSIGNED DWELLING TENANT PARKING, ON AN ACCESSIBLE ROUTE SHALL BE PROVIDED FOR AT LEAST 2 PERCENT OF THE COVERED DWELLING UNITS, BUT NOT LESS THAN ONE. SIGNAGE IS NOT REQUIRED FOR ASSIGNED PARKING.

6. REFLECTIVE WARNING SIGNS SHALL BE INSTALLED AT TRANSITIONS FROM THE 8'-2" TO LOWER CEILING HEIGHTS IN VEHICULAR PASSAGE WAYS IN THE SAME PARKING LEVEL.

VERY HIGH FIRE SEVERITY ZONE NOTES

1. THE PROPOSED STRUCTURE IS LOCATED ON A LOT THAT IS IN A VERY HIGH FIRE SEVERITY ZONE. THE MATERIALS AND METHODS OF CONSTRUCTION USED FOR THE STRUCTURE, INCLUDING ATTACHED ACCESSORY STRUCTURES SHALL BE IN ACCORDANCE WITH CHAPTER 7A, AS ADOPTED AND AMENDED BY THE CITY OF SAN DIEGO [SDMC 145.0707(B)]

2. ROOF GUTTERS SHALL BE PROVIDED WITH THE MEANS TO PREVENT THE ACCUMULATION OF LEAVES AND DEBRIS IN THE GUTTER. ALL ROOF GUTTERS AND DOWNSPOUTS SHALL BE CONSTRUCTED OF NON-COMBUSTIBLE MATERIALS [CBC 705A.4]

3. DRIP EDGE FLASHING USED AT THE FREE EDGES OF ROOFING MATERIALS SHALL BE NON-COMBUSTIBLE [CBC 705A.4.1]

4. VALLEY FLASHING SHALL NOT BE LESS THAN 0.019-INCH (NO. 26 GALVANIZED SHEET GAUGE) CORROSION-RESISTANT METAL INSTALLED OVER A MINIMUM 36-INCH-WIDE UNDERLAYMENT CONSISTING OF ONE LAYER OF NO. 72 ASTM CAP SHEET RUNNING OVER THE FULL LENGTH OF THE VALLEY [CBC 705A.3]

5. GLAZING FRAMED MADE OF VINYLE MATERIALS SHALL HAVE WELDED CORNERS, METAL REINFORCEMENT IN THE INTERLOCK AREA, AND BE CERTIFIED TO THE MOST CURRENT EDITION OF ANSI / AAMA / NWWDA 101/I.S.2 STRUCTURAL REQUIREMENTS [CBC 708A.2.2.1]

PROJECT DATA

PROJECT DESCRIPTION: NEW CONSTRUCTION OF FIVE FLOORS OF APARTMENTS (TYPE III-A CONSTRUCTION) OVER TWO FLOORS OF APARTMENTS AND PARKING AT GRADE (TYPE I-A CONSTRUCTION). EXISTING OFFICE BUILDING AT SOUTH END OF SITE TO REMAIN AND A LANDSCAPED AREA WILL BE CREATED BETWEEN BOTH BUILDINGS. A PRIVATELY FUNDED PROJECT. SIX (6) VERY LOW INCOME UNITS WILL BE PROVIDED WITHIN THE 141 PROPOSED APARTMENT UNITS.

ADDRESS / LOCATION: PROPOSED BUILDING: 3534 FIFTH AVENUE, SAN DIEGO, CA 92103
EXISTING BUILDING: 3500 FIFTH AVENUE, SAN DIEGO, CA 92103

ASSESSOR'S PARCEL NO.: 452-406-1400, 452-406-1500, 452-406-1600 AND 452-406-1700

LEGAL DESCRIPTION: LOTS 11-17 OF LOMA GRANDE, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO MAP THEREOF NO. 692 FILED AT THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, NOVEMBER 23, 1891.

HISTORICAL RESOURCE INFORMATION: PTS NO. 405719- PRELIMINARY REVIEW OF THE EXISTING BUILDING LOCATED AT 3534 DETERMINED THE BUILDING DID NOT MEET HRB DESIGNATION CRITERIA. THE BUILDING WILL BE DEMOLISHED UNDER A SEPARATE DEMOLITION PERMIT.

ADDITIONAL PLAN CHECK NOTES

1. DUMPSTERS AND TRASH CONTAINERS EXCEEDING 1.5 CUBIC YARDS SHALL NOT BE STORED IN BUILDINGS OR PLACED WITHIN 5 FEET OF COMBUSTIBLE WALLS, OPENINGS OR COMBUSTIBLE ROOF EAVE TINES UNLESS PROTECTED BY AN APPROVED SPRINKLER SYSTEM OR LOCATED IN A TYPE I OR IIA STRUCTURE SEPARATED BY 10 FEET FROM OTHER STRUCTS. CONTAINERS LARGER THAN 1 CUBIC YARD SHALL BE OF NON- OR LIMITED-COMBUSTIBLE MATERIALS OR SIMILARLY PROTECTED PR SEPARATED PER CFC 304.3.

2. BUILDINGS UNDERGOING CONSTRUCTION, ALTERATION, OR DEMOLITION SHALL CONFORM TO CFC CHAPTER 33 WELDING, CUTTING AND OTHER HOT WORK.

3. WALL, FLOOR AND CEILING FINISHES AND MATERIALS SHALL NOT EXCEED THE INTERIOR FINISH CLASSIFICATIONS IN CBC TABLE 803.9 AND SHALL MEET THE FLAME PROPAGATION PERFORMANCE CRITERIA OF THE CALIFORNIA CODE OF REGULATIONS, TITLE 19 DIVISION 1. DECORATIVE MATERIALS SHALL BE PROPERLY TREATED BY A PRODUCT OR PROCESS APPROVED BY THE STATE FIRE MARSHAL WITH APPROPRIATE DOCUMENTATION PROVIDED TO THE CITY OF SAN DIEGO.

4. ADDRESS IDENTIFICATION SHALL BE PROVIDED FOR ALL NEW AND EXISTING BUILDINGS IN A LOCATION THAT IS PLAINLY VISIBLE AND LEGIBLE FROM THE STREET OR ROAD FRONTING THE PROPERTY. WHERE ACCESS IS BY WAY OF A PRIVATE ROAD AND THE BUILDING ADDRESS CANNOT BE VIEWED FROM THE PUBLIC WAY, AN APPROVED SIGN OR MEANS SHALL BE USED TO IDENTIFY THE STRUCTURE. PREMISES IDENTIFICATION SHALL CONFORM TO CBC SECTION 501.2

PROJECT NORTH

ACCESSIBILITY LEGEND

ACCESSIBLE PATH OF TRAVEL PER CBC 11B
PATH OF TRAVEL (POT) AS INDICATED IS A BARRIER FREE ACCESS ROUTE WITHOUT ANY ABRUPT VERTICAL CHANGES EXCEEDING 1/2" BEVELED AT 50 MAXIMUM SLOPE. EXCEPT THAT VERTICAL CHANGES DO NOT EXCEED 1/4" VERTICAL AND AT LEAST 48" WIDE, SURFACE IS SLIP RESISTANT (MEDIUM BROOM FINISH WITH AMPLITUDE OF 1/16" TO 1/8"), STABLE, FIRM, AND SMOOTH. CROSS SLOPE DOES NOT EXCEED 2% AND SLOPE IN THE DIRECTION OF TRAVEL IS NO MORE THAN 5% UNLESS OTHERWISE INDICATED. POT SHALL BE MAINTAINED FREE OF OVERHANGING OBSTRUCTIONS TO 80" MINIMUM AND PROTRUDING OBJECTS GREATER THAN 4" PROJECTION FROM A WALL AND ABOVE 27" AND LESS THAN 80". CONTRACTOR TO VERIFY THAT THERE ARE NO BARRIERS IN THE POT, AND THE POT COMPLIES WITH CBC 11B-402, 403.

ACCESSIBLE PARKING SPACE PER CBC 11B-502

ACCESSIBLE CURB RAMP W/ 12" GROOVED BORDER AND DETECTABLE WARNING SURFACE PER CBC 11B-406

ACCESSIBLE BUILDING ENTRANCE - PROVIDE INTERNATIONAL SYMBOL OF ACCESSIBILITY ENTRANCE SIGN (9"x9" DECAL MOUNTED BETWEEN 4'-0" TO 5'-0" A.F.F., CENTERED ON SINGLE DOORS, CENTERED ON RIGHT PANEL OF DOUBLE DOORS) PER CBC 11B-404

NOTES

1. SEE SHEET T0.6 FOR OCCUPANCY AND EXITING SUMMARY FOR LEVEL 1.
2. EXISTING WEBSTER BUILDING, 3500 FIFTH AVENUE. TO REMAIN ON SITE. PARKING FOR BUILDING WILL BE PROVIDED IN PROPOSED BUILDING.
3. FOR GRADING, PUBLIC IMPROVEMENT, POST CONSTRUCTION BMP AND CONSTRUCTION BMPE APPROVALS, SEE DRAWING NO. 38764-D, SWMDCMA Approval 1525640 AND SWPPP Filed Under PTS 423650.
4. GRADE PLANE CALCULATION:
   $\frac{288'-1" + 291'-0" + 294'-6" + 287'-7"}{4} = 290'-9\ 1/2"$
5. SUBTERRANEAN GARAGES ENCROACHMENTS SHALL EXTEND 5 FEET BELOW THE TOP OF THE SIDEWALK AND SHALL NOT BE LOCATED WITHIN 5 FEET FROM THE CURB FACE, EXCEPT TO ACCOMMODATE ACCESS HATCHES TO UNDERGROUND VAULTS. SUCH HATCHES SHALL BE LOCATED TO NOT INTERFERE WITH STREET TREE PLANTING.
6. NO ACCESS GATE SHALL SWING OPEN INTO THE PUBLIC RIGHT OF WAY.

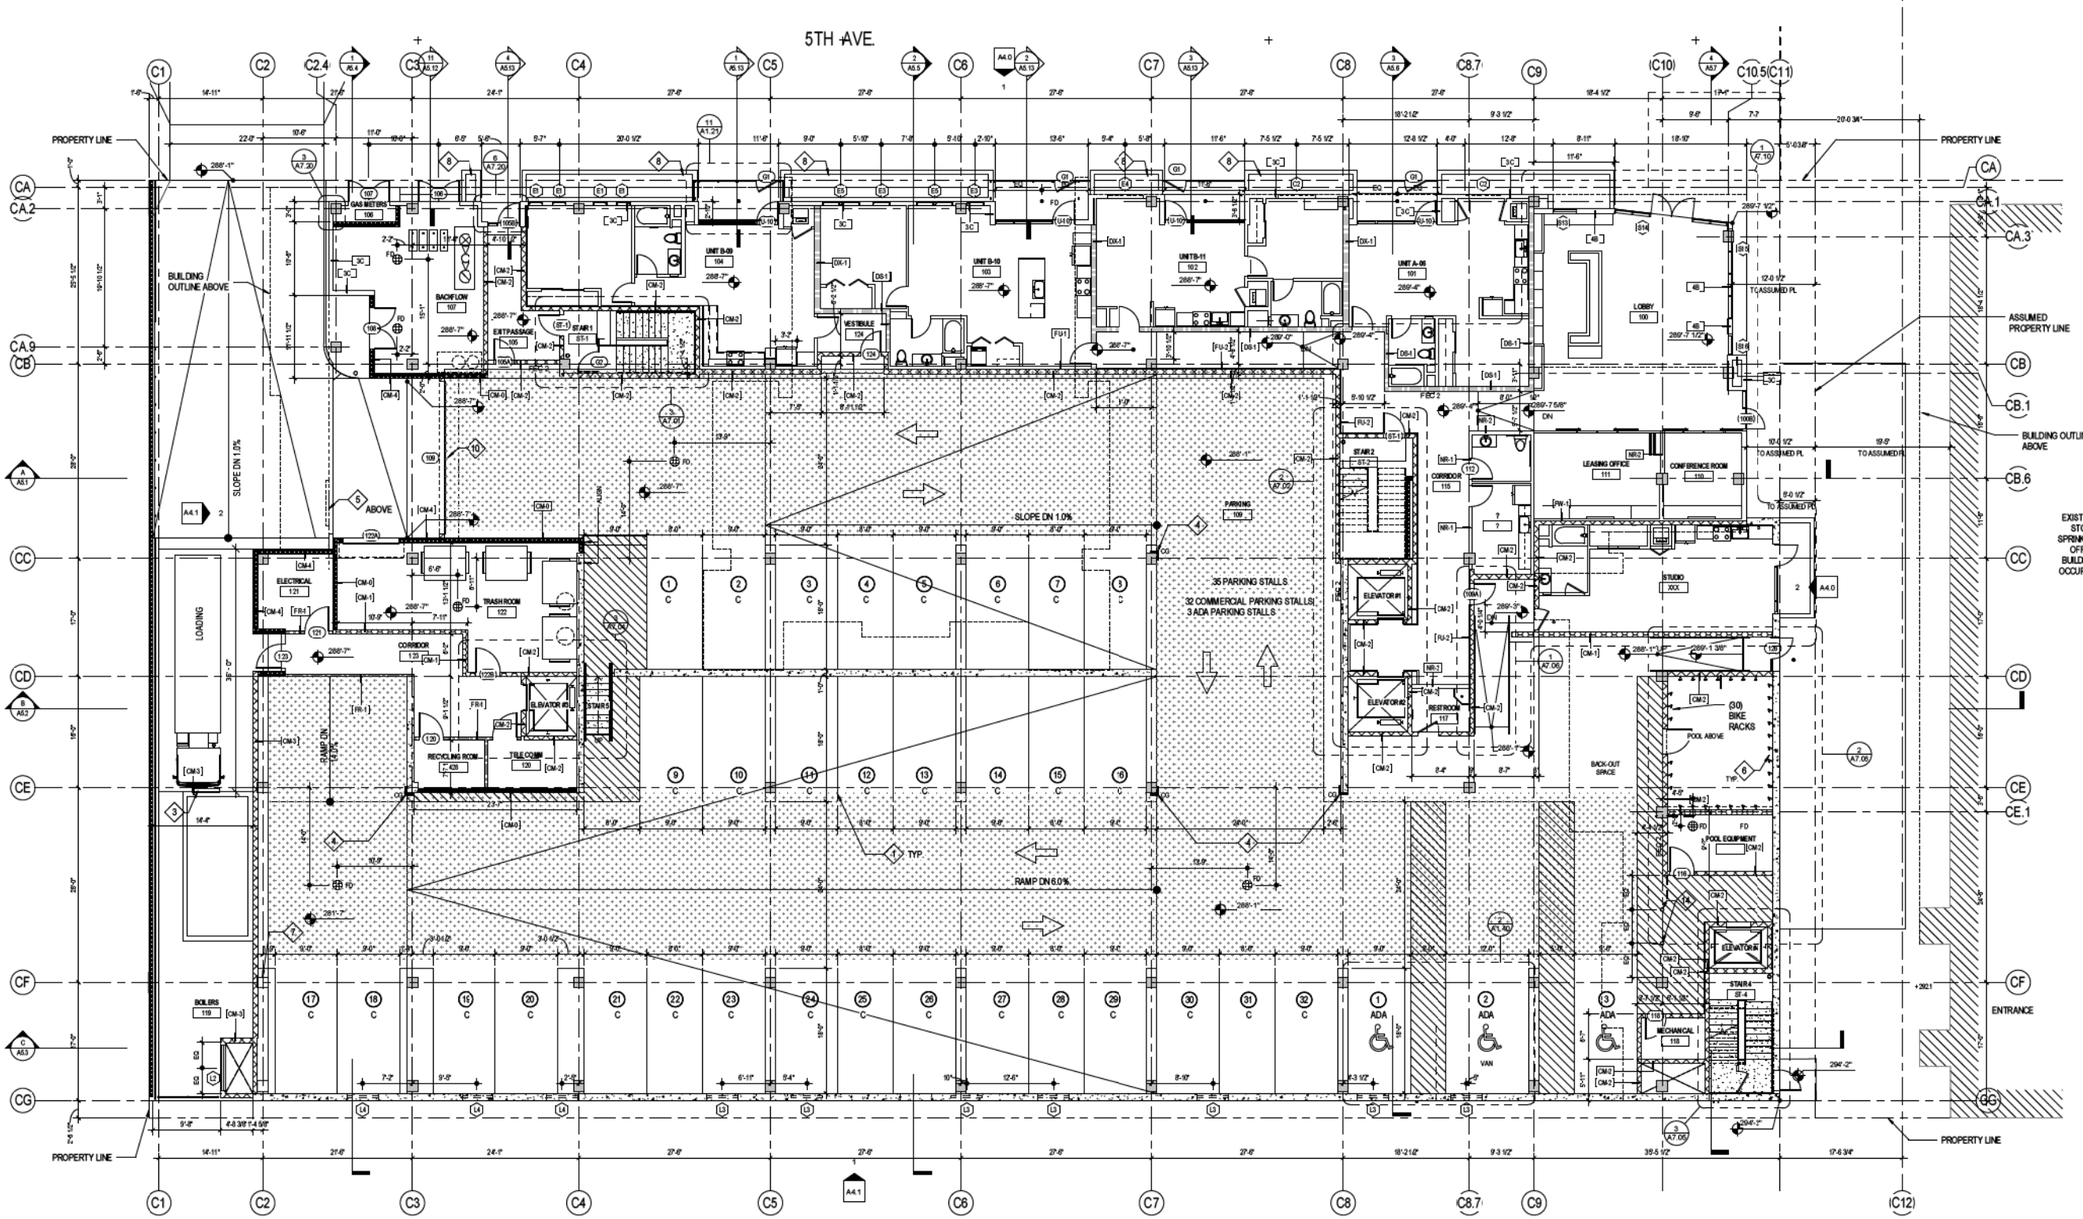
ARCHITECTURAL AND ACCESSIBILITY SITE PLAN

DRAWING NO:

A1.1



1 LEVEL 1
SCALE: 1/8" = 1'-0"

0 2 4 8 16' 24' N

FLOOR PLAN GENERAL NOTES

1. DIMENSIONS: ALL DIMENSIONS ARE TO FINISH FACE, CENTER OF WALL, COLUMN GRID LINES, OR FACE OF CONCRETE AND CMU WALLS (NOMINAL) U.O.N. WINDOW AND DOOR LOCATIONS ARE DIMENSIONED TO ROUGH OPENING. ALL "HOLD" OR "CLR" DIMENSIONS MUST BE MAINTAINED.
2. DOOR LOCATION: ALL DOORS, HINGE SIDE, SHALL BE LOCATED 4" FROM ADJACENT PERPENDICULAR WALL, U.O.N.
3. ALIGNMENT: WHERE NEW PARTITIONS ARE TO ALIGN WITH EXISTING PARTITIONS, REMOVE EXISTING CORNER BEAD(S), ALIGN, TAPE, AND SPACKLE WITH NEW PARTITION.
4. PENETRATIONS: PENETRATIONS OF FIRE-RESISTIVE WALLS, FLOOR-CEILINGS, AND ROOF-CEILINGS SHALL BE PROTECTED BY AN APPROVED PENETRATION FIRESTOP SYSTEM INSTALLED AS TESTED IN ACCORDANCE WITH ASTM E 119 OR UL 263 AND SHALL HAVE AN F RATING (AND A T RATING AT FLOORS ONLY) OF NOT LESS THAN THE REQUIRED RATING OF THE WALL OR FLOOR PENETRATED. PENETRATIONS OF ACOUSTICAL WALLS FOR PIPES, DUCTS, AND OUTLETS SHALL BE SEALED WITH AN ACOUSTICAL SEALANT.
5. WALL BACKING: BLOCKING OR BACKING SHALL BE PROVIDED IN PARTITIONS AS REQUIRED FOR WALL ATTACHED ITEMS. PROVIDE 6" HIGH, 18 GA. BACKING FOR CABINETRY, SHELVING, MARKER BOARDS, CHAIR RAILS, GRAB BARS, SHOWER SEATS, HANDRAILS, FIXTURES, EQUIPMENT, FURNISHINGS AND OTHER ITEMS AS REQUIRED. ALL WOOD BLOCKING, GROUNDS, ROUGH BUCKS AND MISCELLANEOUS BLOCKING SHALL BE FIRE RETARDANT TREATED IN ACCORDANCE WITH FIRE CODES.
6. WALL ACCESS PANELS: PROVIDE ACCESS PANELS AS REQUIRED PER APPLICABLE CODES FOR MAINTENANCE ACCESS TO INSTALLED MEP EQUIPMENT. PROVIDE STAINLESS STEEL AT CERAMIC TILE LOCATIONS. COORDINATE TYPES AND LOCATIONS OF WALL ACCESS PANELS WITH CJ PRIOR TO INSTALLATION.
7. RETURN AIR WALL OPENINGS: PROVIDE RETURN AIR WALL OPENINGS ABOVE CEILING AS PER MECHANICAL DRAWINGS. REFER TO MECHANICAL DRAWINGS FOR SOUND BOOTS AT ACOUSTICAL WALL LOCATIONS AND FIRE/SMOKE DAMPERS AT ALL RR RATED WALLS

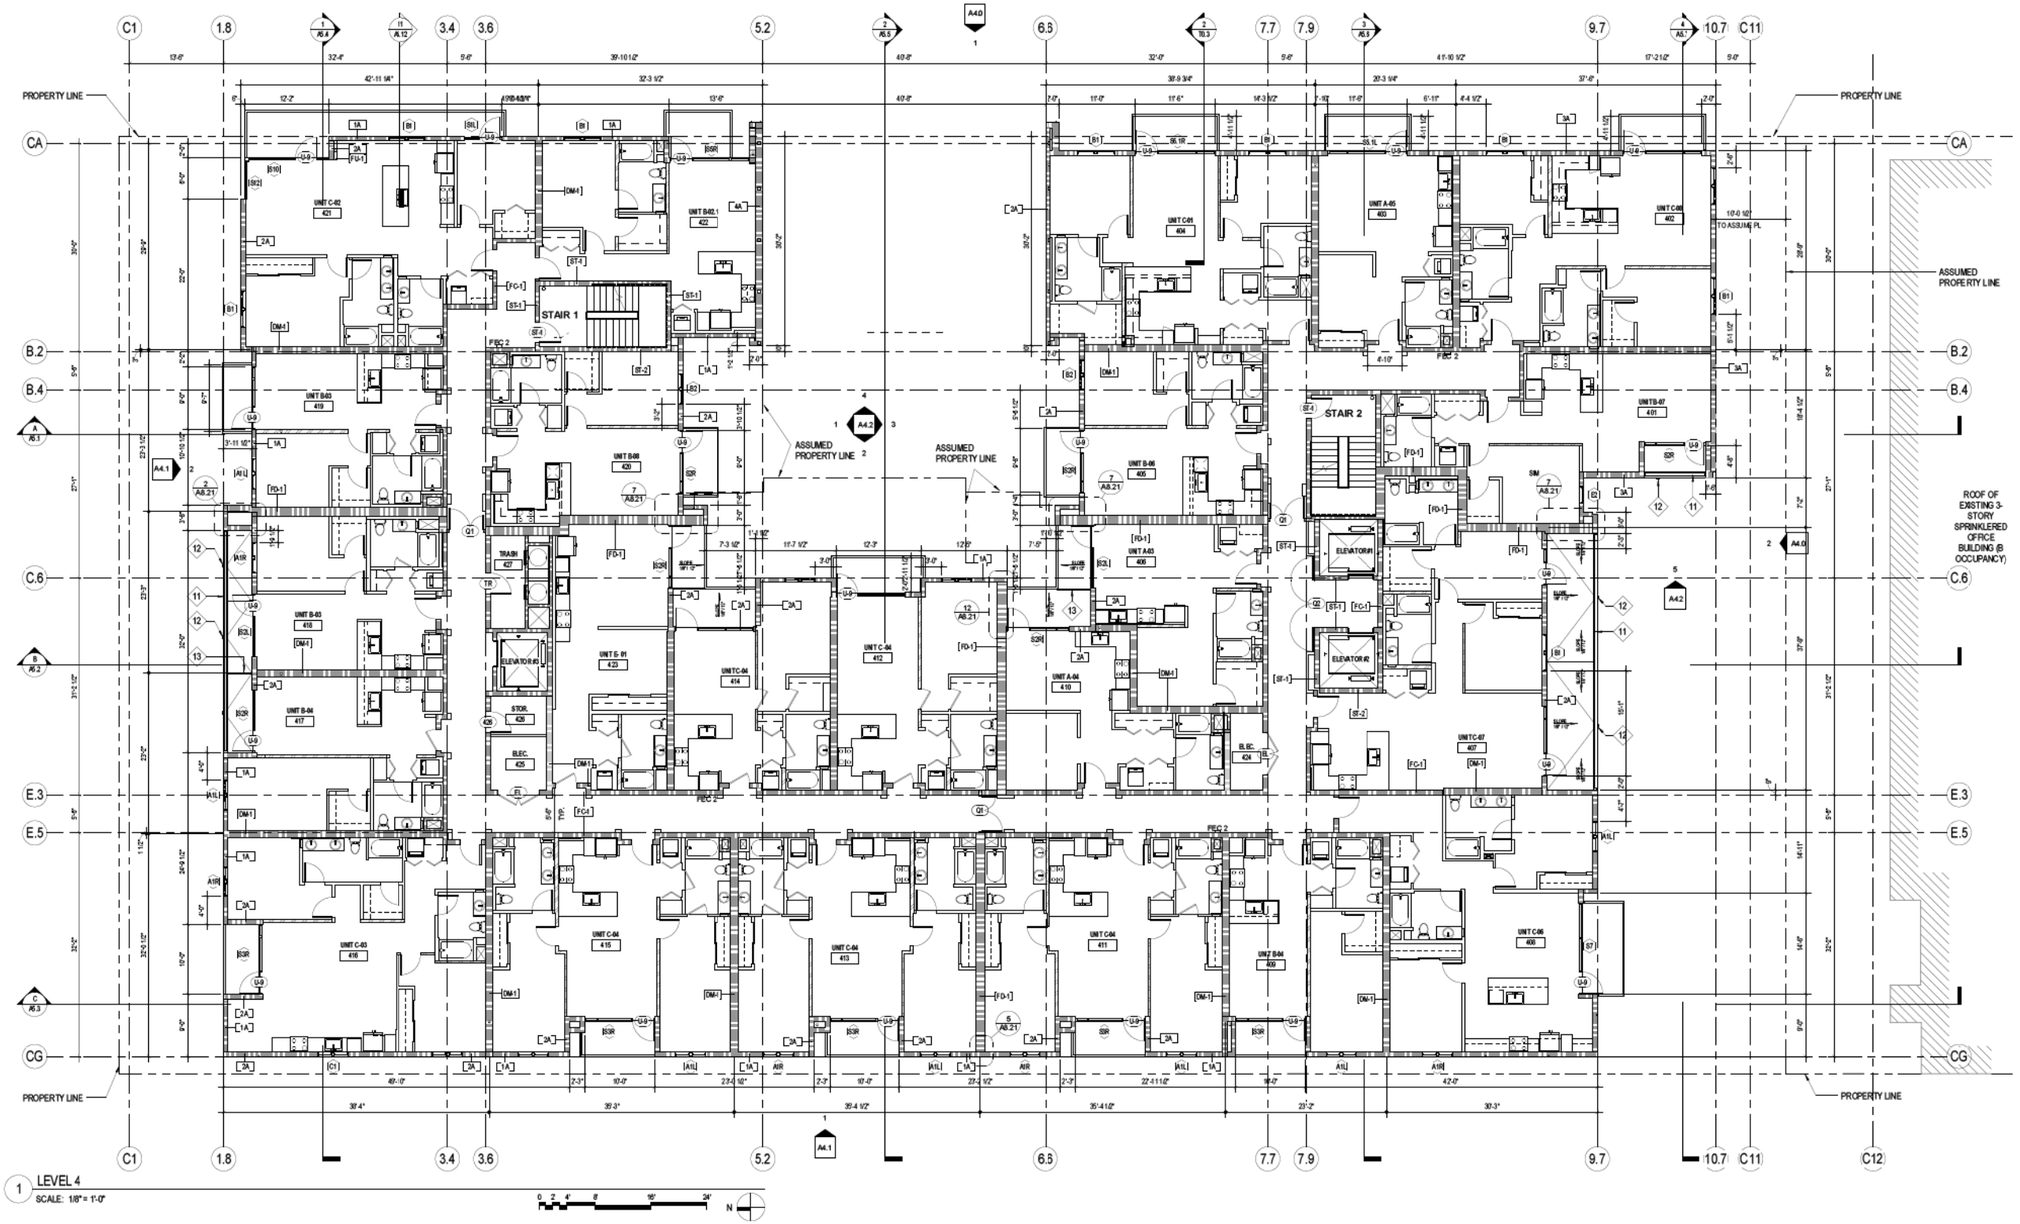
TITLE: FLOOR PLAN LEVEL 3
DRAWING NO: A2.3



1 LEVEL 4
SCALE: 1/8" = 1'-0"

0 2 4' 8' 16' 24'

FLOOR PLAN GENERAL NOTES

1. DIMENSIONS: ALL DIMENSIONS ARE TO FINISH FACE, CENTER OF WALL, COLUMN GRID LINES, OR FACE OF CONCRETE AND CMU WALLS (NOMINAL) U.O.N. WINDOW AND DOOR LOCATIONS ARE DIMENSIONED TO ROUGH OPENING. ALL "HOLD" OR "CLR" DIMENSIONS MUST BE MAINTAINED.
2. DOOR LOCATION: ALL DOORS, HINGE SIDE, SHALL BE LOCATED 4" FROM ADJACENT PERPENDICULAR WALL, U.O.N.
3. ALIGNMENT: WHERE NEW PARTITIONS ARE TO ALIGN WITH EXISTING PARTITIONS, REMOVE EXISTING CORNER BEADS, ALIGN, TAPE, AND SKIM COAT WITH NEW PARTITION.
4. PENETRATIONS: PENETRATIONS OF FIRE-RESISTIVE WALLS, FLOOR-CEILINGS, AND ROOF-CEILINGS SHALL BE PROTECTED BY AN APPROVED PENETRATION FIRESTOP SYSTEM INSTALLED AS TESTED IN ACCORDANCE WITH ASTME 119 OR UL 263 AND SHALL HAVE AN F RATING AND A T RATING AT FLOORS ONLY OF NOT LESS THAN THE REQUIRED RATING OF THE WALL OR FLOOR PENETRATED. PENETRATIONS OF ACOUSTICAL WALLS FOR PIPES, DUCTS, AND OUTLETS SHALL BE SEALED WITH AN ACOUSTICAL SEALANT.
5. WALL BACKING: BLOCKING OR BACKING SHALL BE PROVIDED IN PARTITIONS AS REQUIRED FOR WALL ATTACHED ITEMS. PROVIDE 6" HIGH, 18 GA. BACKING FOR CABINETRY, SHELVING, MARKER BOARDS, CHAIR RAILS, GRAB BARS, SHOWER SEATS, HANDRAILS, FIXTURES, EQUIPMENT, FURNISHINGS AND OTHER ITEMS AS REQUIRED. ALL WOOD BLOCKING, GROUNDS, ROUGH BUCKS AND MISCELLANEOUS BLOCKING SHALL BE FIRE RETARDANT TREATED IN ACCORDANCE WITH FIRE CODES.
6. WALL ACCESS PANELS: PROVIDE ACCESS PANELS AS REQUIRED PER APPLICABLE CODES FOR MAINTENANCE ACCESS TO INSTALLED MEP EQUIPMENT. PROVIDE STAINLESS STEEL AT CERAMIC TILE LOCATIONS. COORDINATE TYPES AND LOCATIONS OF WALL ACCESS PANELS WITH GC PRIOR TO INSTALLATION.
7. RETURN AIR WALL OPENINGS: PROVIDE RETURN AIR WALL OPENINGS ABOVE CEILINGS AS PER MECHANICAL DRAWINGS. REFER TO MECHANICAL DRAWINGS FOR SOUND BOOTS AT ACOUSTICAL WALL LOCATIONS AND FIRE/SMOKE DAMPERS AT ALL FIRE-RATED WALLS.
8. ALL ABOVE GRADE BALCONY ENCROACHMENTS INTO FIFTH AVENUE RIGHT OF WAY SHALL BE NO GREATER THAN A FOUR FOOT HORIZONTAL ENCROACHMENT. NO ABOVE GRADE ENCROACHMENTS WILL BE HABITAL LIVING SPACE.
9. NO ACCESS GATE SHALL SWING OPEN INTO THE PUBLIC RIGHT OF WAY.

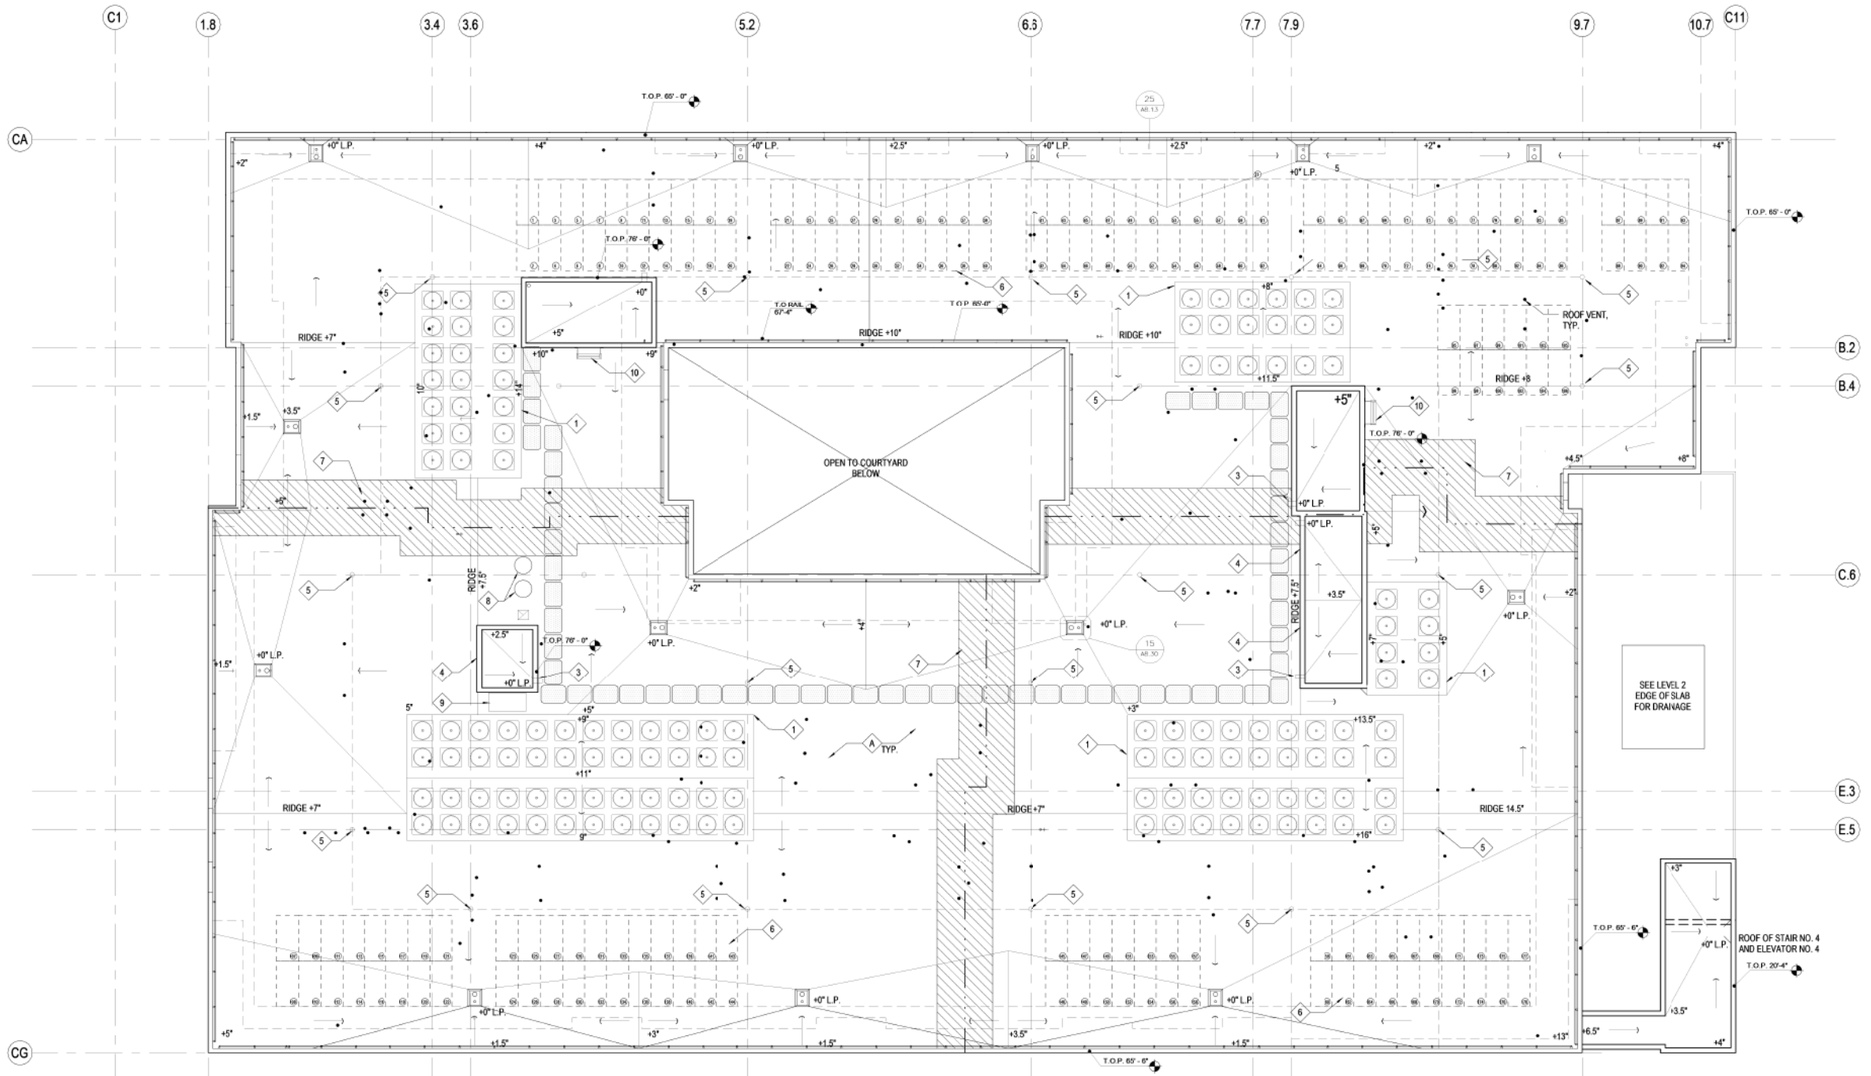
TITLE: FLOOR PLAN LEVEL 7
DRAWING NO: A2.7
25 OF 38



1 ROOF PLAN
SCALE: 1/8" = 1'-0"

0 2' 4' 8' 16' 24' N

ROOF PLAN GENERAL NOTES

FIRE CLASSIFICATION:
CLASS A LISTED AND IDENTIFIED BY AN APPROVED TESTING AGENCY (CBC 1505)

ROOF INSULATION:
R-30 BATT INSULATION BELOW ROOF PLYWOOD SHEATHING. SEE 12/A8.02 FOR ROOF ASSEMBLY

ROOF SLOPE:
TYPICAL ROOF SLOPE IS 1/4"/FT MINIMUM, 1/8"/FT AT CRICKETS.

TOP OF PARAPET:
TYPICAL TOP OF PARAPET HEIGHT IS +65'-0" U.O.N.

FLASHING LOCATIONS:
AT THE JUNCTURE OF THE ROOF AND VERTICAL SURFACES, PARAPETS, ROOF EDGES, ROOF PENETRATIONS, ETC., FLASHING AND COUNTERFLASHING SHALL BE PROVIDED PER THE ROOF MANUFACTURER'S RECOMMENDATIONS AND, WHEN OF METAL, SHALL NOT BE LESS THAN NO. 26 GALVANIZED SHEET GAGE CORROSION-RESISTANT METAL (CBC 1503.) ALL ROOF FLASHINGS SHALL CONFORM TO SMACNA AND NRCA STANDARDS. FLASHING AND COUNTERFLASHING SHALL BE PAINTED U.O.N.

OVERFLOW DRAINS AND SCUPPERS:
WHERE ROOF DRAINS ARE REQUIRED, OVERFLOW DRAINS HAVING THE SAME SIZE AS THE ROOF DRAINS SHALL BE INSTALLED WITH THE WATER INLET FLOW LINE LOCATED 2 INCHES ABOVE THE LOW POINT OF THE ROOF. OR OVERFLOW SCUPPERS HAVING THREE TIMES THE SIZE OF THE ROOF DRAINS AND HAVING A MINIMUM OPENING HEIGHT OF 4 INCHES MAY BE INSTALLED IN THE ADJACENT PARAPET WALLS WITH THE INLET FLOW LINE LOCATED 2 INCHES ABOVE THE LOW POINT OF THE ADJACENT ROOF. OVERFLOW DRAINS SHALL DISCHARGE TO AN APPROVED LOCATION AND SHALL NOT BE CONNECTED TO ROOF DRAIN LINES

OVER PUBLIC PROPERTY:
ROOF DRAINAGE WATER FROM A BUILDING SHALL NOT BE PERMITTED TO FLOW OVER PUBLIC PROPERTY

MAINTENANCE ACCESS:
ACCESS SHALL BE PROVIDED TO ALL MECHANICAL EQUIPMENT LOCATED ON THE ROOF AS REQUIRED BY THE MECHANICAL CODE

COORDINATION:
CONTRACTOR SHALL VERIFY LOCATIONS AND COORDINATE SIZES FOR ALL ROOF OPENINGS, CURBS, CONCRETE PADS, AND ATTACHMENT REQUIREMENTS W/ MANUFACTURER FOR ACTUAL MECHANICAL EQUIPMENT SUBMITTED

ROOF ASSEMBLY TYPES

		DETAIL	SPEC SECTION
A	SINGLE PLY ROOFING OVER PLYWOOD SHEATHING ON TJI WITH (R-30 MINIMUM) BATT INSULATION BELOW SHEATHING. SEE SPECIFICATIONS.	12/A8.02	DIV.07

SOLAR READY AREA CALCULATION

UNOCCUPIED ROOF AREA: 26,535 SF
MINIMUM SOLAR ZONE- 15% OF ROOF AREA: 3,980 SF
APPROXIMATE PANEL SIZE: 20.7 SF
MINIMUM PANELS REQUIRED 178

APPENDIX B

Pertinent Sections of the City of San Diego Noise Element to the General Plan and Municipal Code

Noise Element

NE-A.2. Assure the appropriateness of proposed developments relative to existing and future noise levels by consulting the guidelines for noise-compatible land use (shown on Table NE-3) to minimize the effects on noise-sensitive land uses.

NE-A.3. Limit future residential and other noise-sensitive land uses in areas exposed to high levels of noise.

NE-A.4. Require an acoustical study consistent with Acoustical Study Guidelines (Table NE-4) for proposed developments in areas where the existing or future noise level exceeds or would exceed the "compatible" noise level thresholds as indicated on the Land Use - Noise Compatibility Guidelines (Table NE-3), so that noise mitigation measures can be included in the project design to meet the noise guidelines.

NE-A.5. Prepare noise studies to address existing and future noise levels from noise sources that are specific to a community when updating community plans.

TABLE NE-3 Land Use - Noise Compatibility Guidelines

Land Use Category	Exterior Noise Exposure (dBA CNEL)				
	60	65	70	75	
Parks and Recreational					
Parks, Active and Passive Recreation					
Outdoor Spectator Sports, Golf Courses; Water Recreational Facilities; Indoor Recreation Facilities					
Agricultural

Industrial					
Heavy Manufacturing; Light Manufacturing; Marine Industry; Trucking & Transportation Terminals; Mining & Extractive Industries					
Research & Development				**50**	

	Compatible	**Indoor Uses**	Standard construction methods should attenuate exterior noise to an acceptable indoor noise level. Refer to Section I.
		Outdoor Uses	Activities associated with the land use may be carried out.
45, 50	**Conditionally Compatible**	**Indoor Uses**	Building structure must attenuate exterior noise to the indoor noise level indicated by the number (45 or 50) for occupied areas. Refer to Section I.
		Outdoor Uses	Feasible noise mitigation techniques should be analyzed and incorporated t make the outdoor activities acceptable. Refer to Section I.
	Incompatible	**Indoor Uses**	New construction should not be undertaken.
		Outdoor Uses	Severe noise interference makes outdoor activities unacceptable.

TABLE NE-4 Acoustical Study Guidelines

An acoustical study should include, but is not limited to the following analysis:
Provide noise level measurements to describe existing local conditions and the predominant noise sources.
Measure existing single event noise levels (SENEL, SEL, or Time Above) within airport influence areas.
Estimate existing and projected noise levels (CNEL) and compare them to levels on Table NE-3. For parks, may consider motor vehicle traffic noise measurements during the one-hour period where the worst-case traffic noise levels are expected to occur from dawn to dusk at a park.
Recommend appropriate mitigation measures to achieve acceptable noise levels on Table NE-3.
Estimate noise exposure levels with recommended mitigation measures.
Describe a post-project assessment to evaluate the effectiveness of the proposed mitigation measures.

B. Motor Vehicle Traffic Noise

Goal

- Minimal excessive motor vehicle traffic noise on residential and other noise-sensitive land uses.

Discussion

Motor vehicle traffic noise is a major contributor of noise within the City. Excessive noise levels along arterial roads, interstate freeways, and state highways affect much of the urban environment. Traffic noise level is dependent upon traffic volume, speed, flow, vehicle mix, pavement type and condition, the use of barriers, as well as distance to the receptor.

Local roadway design features and traffic management and calming techniques can minimize noise from traffic speed and frequent vehicle acceleration and deceleration, and innovative roadway paving material can further reduce traffic noise. Vehicles equipped with a properly functioning muffler system help to limit excessive exhaust noise. Future use of hybrid transit buses could help to reduce noise along mixed-use transit corridors.

At higher speeds, typically on freeways, highways and primary arterials, the noise from tire/pavement interaction can be greater than from vehicle exhaust and engine noise. The use of lower noise paving surfaces can reduce tire/pavement interaction noise. For noise-sensitive land uses adjacent to freeways and highways, these uses should be buffered from excessive noise levels by intervening, less sensitive, industrial-commercial uses or shielded by sound walls or landscaped berms. The City can, however, influence daily traffic volumes and reduce peak-hour

Article 9.5: Noise Abatement and Control

Division 4: Limits

("Noise Level Limits, Standards and Control"
added 9–18–1973 by O–11122 N.S.)
(Retitled to "Limits" on 9–22–1976 by O–11916 N.S.)

§59.5.0401 Sound Level Limits

(a) It shall be unlawful for any person to cause noise by any means to the extent that the one–hour average sound level exceeds the applicable limit given in the following table, at any location in the City of San Diego on or beyond the boundaries of the property on which the noise is produced. The noise subject to these limits is that part of the total noise at the specified location that is due solely to the action of said person.

TABLE OF APPLICABLE LIMITS

Land Use	Time of Day	One-Hour Average Sound Level (decibels)
1. Single Family Residential	7 a.m. to 7 p.m. 7 p.m. to 10 p.m. 10 p.m. to 7 a.m.	50 45 40
2. Multi-Family Residential (Up to a maximum density of 1/2000)	7 a.m. to 7 p.m. 7 p.m. to 10 p.m. 10 p.m. to 7 a.m.	55 50 45
3. All other Residential	7 a.m. to 7 p.m. 7 p.m. to 10 p.m. 10 p.m. to 7 a.m.	60 55 50
4. Commercial	7 a.m. to 7 p.m. 7 p.m. to 10 p.m. 10 p.m. to 7 a.m.	65 60 60
5. Industrial or Agricultural	any time	75

(b) The sound level limit at a location on a boundary between two zoning districts is the arithmetic mean of the respective limits for the two districts. Permissible construction noise level limits shall be governed by Sections 59.5.0404 of this article.

(c) Fixed–location public utility distribution or transmission facilities located on or adjacent to a property line shall be subject to the noise level limits of Part A. of this section, measured at or beyond six feet from the boundary of the easement upon which the equipment is located.

(d) This section does not apply to firework displays authorized by permit from the Fire Department.

(e) This section does not apply to noise generated by helicopters at heliports or helistops authorized by a conditional use permit, nor to any roller coaster operated on City–owned parkland.

(Amended 9–11–1989 by O–17337 N.S.)
(Amended 11-28-2005 by O-19446 N.S.; effective 2-9-2006.)

§59.5.0402 Motor Vehicles

(a) Off–Highway

(1) Except as otherwise provided for in this article, it shall be unlawful to operate any motor vehicle of any type on any site, other than on a public street or highway as defined in the California Vehicle Code, in any manner so as to cause noise in excess of those noise levels permitted for on– highway motor vehicles as specified in the table for "45 mile– per–hour or less speed limits" contained in Section 23130 of the California Vehicle Code, and as corrected for distances set forth in subsection A.2. below.

(2) Corrections

The maximum noise level as the off–highway vehicle passes may be measured at a distance of other than fifty (50) feet from the center line of travel, provided the measurement is further adjusted by adding algebraically the applicable correction as follows:

Distance (Feet)	Correction (decibels)
25	-6
28	-5
32	-4
35	-3
40	-2
45	-1
50 (preferred distance)	0
56	+1
63	+2
70	+3
80	+4
90	+5
100	+6

(3) A measured noise level thus corrected shall be deemed in violation of this section if it exceeds the applicable noise–level limit as specified above.

(b) Nothing in this section shall apply to authorized emergency vehicles when being used in emergency situations, including the blowing of sirens and/or horns.

("Motor Vehicles" renumbered from Sec. 59.5.0403 on 9–22–1976 by O–11916 N.S.)

§59.5.0403 Watercraft

Violations for excessive noise of watercraft operating in waters under the jurisdiction of The City of San Diego shall be prosecuted under applicable provisions of the California Harbors and Navigation Code. Permits issued by The City of San Diego for the operation of watercraft not in compliance with noise criteria of the Harbors and Navigation Code shall be reviewed and approved by the Administrator prior to issuance.

("Watercraft" renumbered from Sec. 59.5.0407 and amended 9–22–1976 by O–11916 N.S.)

§59.5.0404 Construction Noise

(a) It shall be unlawful for any person, between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays as specified in Section 21.04 of the San Diego Municipal Code, with exception of Columbus Day and Washington's Birthday, or on Sundays, to erect, construct, demolish, excavate for, alter or repair any building or structure in such a manner as to create disturbing, excessive or offensive noise unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administrator. In granting such permit, the Administrator shall consider whether the construction noise in the vicinity of the proposed work site would be less objectionable at night than during the daytime because of different population densities or different neighboring activities; whether obstruction and interference with traffic particularly on streets of major importance, would be less objectionable at night than during the daytime; whether the type of work to be performed emits noises at such a low level as to not cause significant disturbances in the vicinity of the work site; the character and nature of the neighborhood of the proposed work site; whether great economic hardship would occur if the work were spread over a longer time; whether proposed night work is in the general public interest; and he shall prescribe such conditions, working times, types of construction equipment to be used, and permissible noise levels as he deems to be required in the public interest.

(b) Except as provided in subsection C. hereof, it shall be unlawful for any person, including The City of San Diego, to conduct any construction activity so as to cause, at or beyond the property lines of any property zoned residential, an average sound level greater than 75 decibels during the 12–hour period from 7:00 a.m. to 7:00 p.m.

(c) The provisions of subsection B. of this section shall not apply to construction equipment used in connection with emergency work, provided the Administrator is notified within 48 hours after commencement of work.

(Amended 1–3–1984 by O–16100 N.S.)

§59.5.0406 Refuse Vehicles and Parking Lot Sweepers

No person shall operate or permit to be operated a refuse compacting, processing, or collection vehicle between the hours of 7:00 p.m. to 6:00 a.m. or a parking lot sweeper between the hours of 7:00 p.m. to 7:00 a.m. in any residential area unless a permit has been applied for and granted by the Administrator.

("Refuse Vehicles" added 9–18–1973 by O–11122 N.S.; amended 9–22–1976 by O–11916 N.S.)

(Amended 6-9-2010 by O-19960 N.S.; effective 7-9-2010.)

Eilar Associates, Inc.
JB
28 July 2015
TNM 2.5
Calculated with TNM 2.5

RESULTS: SOUND LEVELS
PROJECT/CONTRACT: B50405N1
RUN: Current
BARRIER DESIGN: INPUT HEIGHTS
ATMOSPHERICS: 68 deg F, 50% RH

Average pavement type shall be used unless a State highway agency substantiates the use of a different type with approval of FHWA.

Manufacturer Data Sheets

25HBC5
Comfort 15 Heat Pump with Puron® Refrigerant 1–1/2 to 5 Nominal Tons

Carrier
turn to the experts

Product Data

Puron™
the environmentally sound refrigerant

Carrier heat pumps with Puron® refrigerant provide a collection of features unmatched by any other family of equipment. The 25HBC has been designed utilizing Carrier's Puron refrigerant. The environmentally sound refrigerant allows consumers to make a responsible decision in the protection of the earth's ozone layer.

This product has been designed and manufactured to meet Energy Star® criteria for energy efficiency when matched with appropriate coil components. Refer to the combination ratings in the Product Data for system combinations that meet Energy Star® guidelines.

NOTE: Ratings contained in this document are subject to change at any time. Always refer to the AHRI directory (www.ahridirectory.org) for the most up-to-date ratings information.

INDUSTRY LEADING FEATURES / BENEFITS

Efficiency

- 15 SEER/ 12.5 EER / 8.0 – 9.0 HSPF
- Microtube Technology™ refrigeration system
- Indoor air quality accessories available

Sound

- Sound level as low as 69 dBA
- Sound levels as low as 68 dBA with accessory sound blanket

Comfort

- System supports Edge® Thermidistat™ or standard thermostat controls

Reliability

- Puron® refrigerant – environmentally sound, won't deplete the ozone layer and low lifetime service cost.
- Scroll compressor
- Internal pressure relief valve
- Internal thermal overload
- High pressure switch
- Loss of charge switch
- Filter drier
- Balanced refrigeration system for maximum reliability

Durability

WeatherArmor™ protection package:

- Solid, durable sheet metal construction
- Dense wire coil guard standard
- Baked-on powder paint

Applications

- Long-line – up to 250 feet (76.20 m) total equivalent length, up to 200 feet (60.96 m) condenser above evaporator, or up to 80 ft. (24.38 m) evaporator above condenser (See Longline Guide for more information.)
- Low ambient cooling (down to -20°F/-28.9°C) with accessory kit

* Permissible limits of the voltage range at which the unit will operate satisfactorily

† If wire is applied at ambient greater than 30°C, consult table 310–16 of the NEC (NFPA 70). The ampacity of non–metallic–sheathed cable (NM), trade name ROMEX, shall be that of 60°C conditions, per the NEC (NFPA 70) Article 336–26. If other than uncoated (no–plated), 60 or 75°C insulation, copper wire (solid wire for 10 AWG or smaller, stranded wire for larger than 10 AWG) is used, consult applicable tables of the NEC (NFPA 70).

‡ Length shown is as measured 1 way along wire path between unit and service panel for voltage drop not to exceed 2%.

** Time–Delay fuse.

FLA – Full Load Amps

LRA – Locked Rotor Amps

MCA – Minimum Circuit Amps

RLA – Rated Load Amps

NOTE: Control circuit is 24–V on all units and requires external power source. Copper wire must be used from service disconnect to unit.
All motors/compressors contain internal overload protection.
Complies with 2007 requirements of ASHRAE Standards 90.1

Mr.SLIM®
Split-ductless A/C and Heat Pumps

SUBMITTAL DATA: PLA-A12AA & PUY-A12NHA

12,000 Btu/h CEILING CASSETTE AIR-CONDITIONING SYSTEM

Job Name: Location: Date:

Purchaser: Engineer:

Submitted to: For ☐ Reference ☐ Approval ☐ Construction

Unit Designation: Schedule No.:

GENERAL FEATURES

- Limited Warranty – One year on parts and defects, six years on compressor
- Compact, side discharge outdoor unit
- Quiet operation – indoor and outdoor units
- Auto-restart following a power outage
- Self-check function – onboard diagnostics
- Advanced microprocessor control
- Built-in drain lift mechanism for condensate removal
- Zone control
- Hard-wired, wall-mounted, remote controller (PAR-21MAA)
- 2, 3, or 4 way air flow selection / 6" round or 4 X 14" rectangular branch duct connection
- 4" ventilation air inlet
- Washable filter

OPTIONAL FEATURES

- Multi-function casement
- High efficiency filter element
- Air outlet shutter plate(s)
- Wireless Remote Controller kit
- M-Net adapter
- Wind Baffle
- Air outlet guide

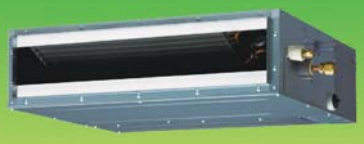
INVERTER

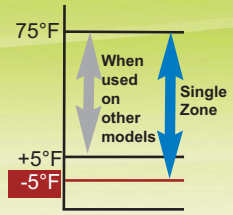
Compact Ducts

SYSTEMS 9RLFCD, 12RLFCD, 18RLFCD



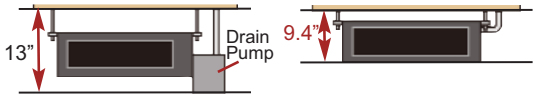
High Performance Heating

Heating capacity at low outdoor temperatures is achieved by adopting a large heat exchanger and a high capacity compressor. Systems operate down to -5°F.



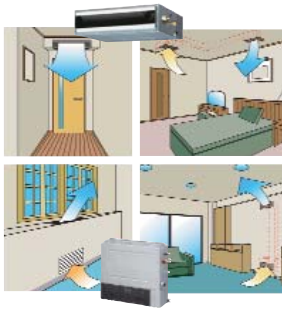
Compact Duct

Built-in drain pump allows for installation of compact duct unit in smaller spaces than traditional units.



Flexible Installation

Horizontal or vertical*.



*Internal drain pump will not operate when the unit is mounted in a vertical configuration.

Standard Features

- Wired Remote Control
- Dry Mode
- Weekly Timer
- Auto Mode
- Quiet Mode
- Auto Restart/Reset
- Built In Condensate Pump
- Fresh Air Intake

Optional Accessories

- Backlit Wired Remote Control UTY-RVNUM
- Wireless Remote and Receiver Unit UTY-LRHUM

Field Supplied Filters

Filters are sized to keep velocities and static pressure loss low. This will insure sufficient static pressure is available for ductwork, fittings and supply and return grilles. Alternative filter sizes with equivalent face areas can be used.

REPORT

3933 US ROUTE 11 CORTLAND, NEW YORK 13045

Order No. 100336557 Date: June 24, 2011

REPORT NO. 100336557CRT-001g

**SOUND TRANSMISSION LOSS TEST
AND CLASSIFICATION OF MAXXON GYPSUM UNDERLAYMENT
OVER A SOUND CONTROL MAT
ON A WOOD JOIST FLOOR/CEILING ASSEMBLY**

**MAXXON CORPORATION
920 HAMEL ROAD, P. O. BOX 253
HAMEL, MN 55340-9610**

INTRODUCTION

This report gives the results of a Sound Transmission Loss Test and Classification of Maxxon Gypsum Underlayment over a Sound Control Mat on a wood joist floor/ceiling assembly. The floor/ceiling assembly was supplied and installed by Intertek. The gypsum topping and the acoustical mat underlayment were supplied and installed by a representative of Maxxon Corporation. The sample appeared to be in a new, unused condition.

AUTHORIZATION

Signed Quote No. 500285443.

TEST METHOD

The specimen was tested in general accordance with the American Society for Testing and Materials designation ASTM E90-09, "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements", and classified in accordance with the American Society for Testing and Materials designation ASTM E413-04, “Classification for Rating Sound Insulation". The size of the source room for the measurements is smaller than the minimum recommended of 125m^3. This leads to slightly elevated uncertainties in the measurement data at low frequencies and does not allow microphones to be placed in full accordance with section A.2.

GENERAL

The sound-insulating property of a partition element is expressed in terms of the sound transmission loss. The procedure for determining this quantity is to mount (and perimeter seal) the test specimen as a partition between two reverberation rooms. Sound is introduced in one of the rooms (the source room) and measurements are made of the noise reduction between source room and receiving room. The rooms are so arranged and constructed that the only significant sound transmission between them is through the test specimen.

The purpose of the Sound Transmission Class (STC) is to provide a single figure rating that can be used for comparing the sound-insulating properties of partition elements used for general building design purposes. The higher the rating (STC) the greater the sound insulating properties of the partition.

DESCRIPTION OF THE FLOOR/CEILING ASSEMBLY

The test floor is a 100 sq. ft. opening that forms the horizontal separation of the two rooms, one directly above the other. The materials used in the assembly from top to bottom are:

- Nominal 1 inch thick Maxxon Gypsum Underlayment (poured March 10, 2011)
- Acousti-Mat II Sound Control Mat
- 5/8 inch thick T & G OSB nailed 6 inches on perimeter and 12 inches in field and glued to the joists using OSI PL400 adhesive
- 10 inch high nominal 2 X 10 lumber joists spaced 16 inches on center.
- R-11 unfaced batt insulation installed in the top of the cavities
- Dietrich RC Deluxe (dog bone) resilient channels spaced 24 inches on center
- One layer of 5/8 inch thick Type “X” gypsum board fastened to the channels with 1 inch screws 12 inches on center. Joint compound was applied at screw holes and joints.

RESULTS OF MEASUREMENTS

1/3 Octave Band Center Frequency Hz	Sound Transmission Loss in dB Test #1
80	24
100	30
125	33
160	38
200	38
250	42
315	44
400	48
500	50
630	54
800	55
1000	59
1250	61
1600	62
2000	63
2500	67
3150	71
4000	75
5000	77
Sound Transmission Class	53

PRECISION

For the Intertek flooring test facility, the 95% confidence interval ΔTL, is as follows:

Range of One-Third Octave Bands	Transmission Loss 95% Confidence Uncertainty, dB
125 and 200	<4
250 and 315	<2
400 - 4000	<1.5

Test #1

REPORT NO. 100336557CRT-001I

IMPACT SOUND TRANSMISSION TEST AND CLASSIFICATION OF ENGINEERED HARDWOOD OVER MAXXON GYPSUM UNDERLAYMENT OVER A SOUND CONTROL MAT ON A WOOD JOIST FLOOR/CEILING ASSEMBLY

RENDERED TO

MAXXON CORPORATION
920 HAMEL ROAD, P. O. BOX 253
HAMEL, MN 55340-9610

INTRODUCTION

This report gives the results of an Impact Sound Transmission Loss Test and Classification of Engineered Hardwood over Maxxon Gypsum Underlayment over a Sound Control Mat on a wood joist floor/ceiling assembly. The floor/ceiling assembly was supplied and installed by Intertek. The gypsum topping and the acoustical mat underlayment were supplied and installed by a representative of Maxxon Corporation. The sample appeared to be in a new, unused condition.

AUTHORIZATION

Signed Quote No. 500285443.

TEST METHOD

The specimen was tested in accordance with the American Society for Testing and Materials designation ASTM E492-09, “Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine”. It was classified in accordance with ASTM E989-2006, entitled, “Standard Classification for Determination of Impact Insulation Class (IIC)”.

GENERAL

The method is designed to measure the impact sound transmission performance of a floor-ceiling assembly, in a controlled laboratory environment. A standard tapping machine (Bruel & Kjaer Type 3207) was placed at four positions on a test floor that forms the horizontal separation between two rooms, one directly above the other. The data obtained was normalized to a reference room absorption of 10 square meters in accordance with the test method.

The standard also prescribes a single-figure classification rating called “Impact Insulation Class, IIC” which can be used by architects, builders and code authorities for acoustical design purposes in building construction.

The IIC is obtained by matching a standard reference contour to the plotted normalized one-third octave band sound pressure levels at each test frequency. The greater the IIC rating, the lower the impact sound transmission through the floor-ceiling assembly

DESCRIPTION OF THE FLOOR/CEILING ASSEMBLY

The test floor is a 100 sq. ft. opening that forms the horizontal separation of the two rooms, one directly above the other. The materials used in the assembly from top to bottom are:

- Nominal 1 inch thick Maxxon Gypsum Underlayment (poured March 10, 2011)
- Acousti-Mat II Sound Control Mat
- 5/8 inch thick T & G OSB nailed 6 inches on perimeter and 12 inches in field and glued to the joists using OSI PL400 adhesive
- 10 inch high nominal 2 X 10 lumber joists spaced 16 inches on center.
- R-11 unfaced batt insulation installed in the top of the cavities
- Dietrich RC Deluxe (dog bone) resilient channels spaced 24 inches on center
- One layer of 5/8 inch thick Type “X” gypsum board fastened to the channels with 1 inch screws 12 inches on center. Joint compound was applied at screw holes and joints.

Test #1 – Mannington Engineered Hardwood (1/2 inch thick, 5 inch wide random length planks) over 2 mm thick foam underlayment

RESULTS OF TEST

The data obtained in the room below the panel normalized to A_o = 10 square meters, is as follows:

1/3 Octave Band Center Frequency Hz	1/3 Octave Band Sound Pressure Level dB re 0.0002 Microbar
	Test #1
100	67
125	64
160	62
200	62
250	60
315	59
400	58
500	57
630	52
800	47
1000	42
1250	38
1600	36
2000	35
2500	30
3150	22
Impact Insulation Class (IIC)	53

The 95% uncertainty level for each tapping machine location is less than 3 dB for the 1/3 octave bands centered in the range from 100 to 400 Hz and less than 2.5 dB for the bands centered in the range from 500 to 3150 Hz.

For the floor/ceiling construction, the 95% uncertainty limits (ΔL_n) for the normalized sound pressure levels were determined to be less than 2 dB for the 1/3 octave bands centered in the range from 100 to 3500.

PEMKO
ASSA ABLOY

ASSA ABLOY, the global leader in door opening solutions

PEMKO Acoustic Seal Sets:

Making a Sound Difference

Indoor environments like conference rooms, auditoriums and classrooms benefit from a reduction in noise infiltrating from adjacent spaces. Acoustic products such as doors, frames and gasketing reduce the amount of noise traveling between spaces and can help meet specific STC requirements.

PEMKO Acoustic Seal Sets help create quieter environments by sealing the space between door and frame. PEMKO's acoustic gasketing, door bottoms and thresholds make it easy to meet the STC rating required of any opening. Each set has been tested together to determine its sound reduction when used with an STC rated door, taking the guesswork out of selecting products.

In addition, PEMKO acoustic gasketing and inserts have achieved GREENGUARD Gold certification for low chemical emissions.

Features	Benefits
Lab-tested sealing solutions	Superior acoustic performance
Complete solution in a kit	Easy to select and order correct product
Meets ANSI Standard S12.60-2002	Contributes to LEED® credits
Use with any STC Rated Doors	Helps meet the rating requirement for the opening
PEMKO gasketing & inserts have achieved GREENGUARD Gold Certification	Low chemical emissions into indoor air

Applications

- Education
- Healthcare
- Hospitality

PEMKO Acoustic Seal Sets

PEMKO makes ordering the appropriate acoustic components easier by supplying them in sets. These product combinations are lab tested and have known decibel drops when used with Sound Transmission Class (STC) doors.

To determine the appropriate Acoustic Seal Set for your opening, locate the column in the chart which includes the sealed-in-place rating of the STC rated door being used. Next review the decibel drop numbers to find the seal set(s) that will result in the desired operable STC rating.

Each PEMKO Acoustic Seal Set includes gasketing, a door bottom or threshold and a complete set of installation instructions. The instructions show the proper installation location for each component for the best acoustic performance.

Item Number	Sealed-In-Place Door STC rating				
	58 to 54	53 to 49	48 to 46	45 to 43	<42
PEMKOSTCSET-1A Alternate Kits: 1B, 1C, 1D, 1E		-2	-2	-1	0
PEMKOSTCSET-2C	-3	-2	-2	-1	0
PEMKOSTCSET-2D Alternate Kits 2A, 2B	-3	-2	-1	-1	0
PEMKOSTCSET-2E	-2	-2	-1	-1	0
PEMKOSTCSET-3A		-2	-1		0
PEMKOSTCSET-3D		-2	-1		0
PEMKOSTCSET-3E	-2		-1		-1

Note: A seal set cannot increase the sealed-in-place rating; a zero drop is the best performance any seal set can provide.

TECHNICAL DATA

DRAFT & ACOUSTICAL
SOUND SEALANT

OSI® Greenseries™ Draft & Acoustical Sound Sealant is a non-flammable, latex-based sealant specially designed to reduce sound transmissions and drafts in all types of wall systems where a sound-rated assembly is required. Its primary function is to achieve and maintain the specific STC (Sound Transmission Class) value of the system designed.

The paintable sealant remains flexible and adheres firmly to wood, metal studs, concrete, gypsum board and most other building materials. The easy-to-use sealant cleans up easily with soap and water.

FEATURES
- Permanently flexible
- Easy application and cleanup
- UL Classification – R9732; UL 723
- Easy water cleanup
- Low VOC, compliant formula
- Will not harden, crack or separate
- Non-staining & non-migrating
- High degree of adhesive and cohesive strength.

USES
Greenseries™ Draft & Acoustical was developed primarily for commercial construction utilizing light weight cavity walls and floor systems. Draft & Acoustical Sealant is used successfully in office buildings, hotels, apartment complexes, and other types of commercial & residential construction.

PHYSICAL PROPERTIES

Type	Synthetic Latex Rubber
Color	White
Solids by weight	75%
Toxicity	Toxic only if swallowed. Refer to MSDS.
Flammability	Nonflammable
Flash Point	200°F. TCC (minimum amount of solvent present)
Tooling/Open Time	15 minutes
Tack Free Time	30 minutes
Cure Time	2-7 days
Application Temperature	40°F minimum
Service Temperature	-5°F - 170°F
Freeze-Thaw Stability	3 cycles. Unaffected by freezing after curing
Shelf Life	1 year from date made at 75°F
Sag or Slump	Nil (ASTM D2202)
VOC Level	22g/l or <1% by wt.
Shore "A" Hardness	45 +/-5 (Cured 30 days @ room temp.)
Clean-up	Water and soap before curing
Accelerated Weathering	No cracks, discoloration or chalking: 1000 hrs. in Xenon Arc Weatherometer

---

The sealant is used for exposed and unexposed applications at perimeter joints, floor and ceiling runners, cut outs in gypsum board, veneer plaster systems and other areas where a sound rated assembly is required. The sealant can also be applied or buttered around all electrical boxes and outlets, cold air returns, heating and air conditioning ducts, and other utility equipment penetrating wall surfaces for increased acoustical performance. Also works well for sealing sill and and base plates in residential construction.

SPECIFICATIONS
- UL Classified – 48S9 (R9732). Tested in accordance with and conforms to UL 723: U.B.C. Standard No. 42-1 Class I.
- ASTM E84: Surface Burning Characteristics of Building Materials.
- ASTM E90-85: Laboratory Measurement of Airborne-Sound Transmission Loss of Building Materials.
- ASTM D217: Testing Standard for Consistency.
- ASTM C919-79: Standard Practice for Use of Sealants in Acoustical Applications.
- SCAQMD Rule 1168 V.O.C.; CARB; and BAAQMD compliant
- GREENGUARD Certified
- Meets LEEDS requirements

LIMITATIONS
- Keep from freezing
- Do not use below 40°F. (5°C.).
- Not recommended for use on mirrors or underwater applications.
- Not recommended for exterior use.

PACKAGING
28 oz. cartridges – 12 per case (Item No. GS79928)

STORAGE
Store at 70°F. +/- 5° (21°C) for long shelf life and easy application. Do not store below 40°F. (5°C.).

COVERAGE
3/8" round bead size: approx. 40 lin. ft. per 28 oz. cartridge.
¼" round bead size: Approx. 89 lin. ft. / 28oz cartridge.

PERFORMANCE CHARACTERISTICS

1. Underwriters Laboratories Inc. Classified 48S9 (R9732) UL 723: Sealant tested for surface burning characteristics

	Applied to organic Reinforced Cement Board*
Flame Spread	5
Smoke Development	5

*Tested as applied in two 1/2in. beads, 8in. on center. The sealant covered 5.6 percent of the exposed sample area.

2. ASTM E90-85: STC Value – Effect of sealing the opening on a test wall partition.

APPLICATION PROCEEDURES

All surfaces must be clean and free of dust, dirt, oil, moisture and other foreign substances which could interfere with the bond of the sealant.

DIRECTIONS

1. Cut spout on tube to desired bead size (3/8" round bead recommended) and puncture seal inside spout.
2. Sealant should be applied as specified in the sound-rated system being installed (either wood or metal studs)

A. Bottom & Top Runners: Apply a continuous 3/8" round bead of sealant on runners before setting gypsum board. Gypsum board shall be set into sealant to form complete contact with adjacent materials. Fill joint on top runners to complete seal. Repeat procedure for double layer applications.

B. Cut-Outs and Perimeter Joints. Backs of electrical boxes, pipes, duct systems and other types of utility equipment penetrating wall surfaces shall be buttered with sealant. Seal all joints at perimeter edges including abutting surfaces and corner joints.

3. Maximum joint size should not exceed ⅝" x ½".
4. Clean tools and excess sealant immediately after application with soap and water.
5. If necessary, sealant can be painted as applicable to meet project requirements after 24 hours.

CAUTION! CONTAINS ETHYLENE GLYCOL , MINERAL SPIRITS and crystalline silica. Avoid eye contact. Do not take internally. If swallowed, may cause abdominal discomfort. Use with adequate ventilation. Refer to MSDS.

WARNING: This product contains a chemical known to the State of California to cause cancer.

KEEP OUT OF REACH OF CHILDREN

FIRST AID

Eye Contact: In case of eye contact, flush with clean water for at least 15 minutes. Skin Contact: Wash skin thoroughly with soap and water. Ingestion: DO NOT induce vomiting. Seek medical attention. If dizziness occurs, remove to fresh air.

NOTICE TO PURCHASER

Henkel Corporation warrants this product when used according to directions. If not satisfied with the product's performance when used as directed, return sales receipt and used container to Henkel Corporation, 32150 Just Imagine Drive, Avon OH, 44011 for product replacement or refund. User shall determine suitability of product for use and assumes all risk.

QUESTIONS?

For commercial use or other questions pertaining to this product, call Henkel Technical Service at 800-321-0253 M-F, 9am – 4pm. or visit our website at www.greenseries.com.

Test partition consisted of metal studs 24" O.C. with double layer gypsum board, Fire code "C" and attached with screws on both sides. Inside of partition was filled with sound insulation. Partition system was erected and shimmed out 4.75 mm (0.1875in.) at top, bottom and edges.

Results: Sound Transmission Class Value

1. Un-sealed partition – Arrows show sound travel around or through partitions.
   a. STC=15
2. Single bead of sealant used at top and bottom runners only – both sides of partition system.
   a. STC=24

Metal Stud Partition Door/Window frame in a hollow partition

3. Single bead of sealant used at top, bottom and perimeter joints – both sides of system.
   a. STC=45
4. Double bead of sealant used at top, bottom and perimeter joints – both sides of system.
   a. STC=55

OSI® GreenSeries™ Draft & Acoustical Sound Sealant is currently under going tested by GREENGUARD.
The GREENGUARD INDOOR AIR QUALITY CERTIFIED Mark is a registered certification mark used under license through the GREENGUARD Environmental Institute.

AC-20 FTR®

(Fire & Temperature Rated) Acoustical & Insulation Sealant

Specification Data Sheet

PECORA CORPORATION

BASIC USES

• AC-20 FTR® fire-rated systems are suitable for applications in schools, hospitals, churches, high-rise office buildings and hotels, prisons, sports arenas, and other public-use buildings to ensure a safe and orderly evacuation in the event of a fire.

2. MANUFACTURER

Pecora Corporation
165 Wambold Road
Harleysville, PA 19438

Phone: 215-723-6051
800-523-6688
Fax: 215-721-0286
Website: www.pecora.com

3. PRODUCT DESCRIPTION

AC-20 FTR® is a unique acrylic latex sealant that is UL® Classified in firestopping systems for expansion joints and through penetrations. When properly installed, these systems effectively contain fire, smoke, toxic fumes, and water within a given area surrounded by firewalls for a two, three, or four hour period, depending on the design specifications.

Other Uses: Excellent adhesive, flexibility and durability qualities make AC-20 FTR® ideal for insulating and weatherproofing around windows, doors, panels, siding, duct work, base plates, etc. It is compatible with all common building materials including specialties such as polystyrene, polyurethane, cork, vinyl, foamed and fibrous glass.

Used as an acoustical sealant, AC-20 FTR® reduces sound transmission in partition systems to achieve specific STC values by sealing spaces around cut-outs and at perimeters of partitions. The sealant cures to a tough rubber to form a long-lasting acoustical seal.

PACKAGING

• 30 fl. oz. (.887 liter) fiber cartridges
• 5-gallon (18.9 liter) pails

COLOR

• White, Beige-Gray
Special colors available in 250-gallon (946 liter) batches.

4. TECHNICAL DATA

Applicable Standards: ASTM C-834-86 specification for latex sealing compounds.

Fire Rated System: Two-hour Fire and Temperature Rated wall and floor joint systems up to 7" (178mm) wide and four-hour systems up to 4" wide can be designed with AC-20 FTR® in conjunction with Ultra Block fire blocking material in fire-rated walls and floors. Reference: ANSI/UL 263, ASTM E-119, NFPA No. 251.

UL CLASSIFIED

UNDERWRITERS LABORATORIES INC.® CLASSIFIED JOINT TREATMENT MATERIALS FIRE RESISTANCE CLASSIFICATION

DESIGNS J900H (FFS 0006) &U900 "O" (WWS 0010), J900Z (FFS 2002), U900Z-009 (WWS 2008), J900Z-007 (FFS 1010), U900Z-015 (WWS 1012)

AC-20 FTR® in conjunction with Ultra Block® achieves a 2-hour fire rating when sealing around steel or copper pipe and electrical metallic tubing or steel conduit in through penetration systems. Reference: ANSI/UL 1479, ASTM E-814.

FILL, VOID OR CAVITY MATERIALS CLASSIFIED BY UNDERWRITERS LABORATORIES INC. FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEM NO. CAJ 1093

In addition to its fire-blocking value, Ultra Block® is very efficient acoustically, having a noise reduction coefficient of .75 and sound transmission coefficient of .5 (Ultra Block® is a registered trademark of Backer Rod Mfg. and Supply Co., Denver, CO, USA.)

5. INSTALLATION

Surface Preparation: Surfaces must be free of all contamination. Sealant may be applied to damp, porous surfaces. No priming is required.

Application: Refer to Pecora Firestopping Manual 07270 and UL Fire Resistance Directory for installation details on fire-rated joint and through penetration systems. For insulating and weatherproofing purposes, fill all window, door, and panel perimeter joints using a resilient backer rod to control sealant depth to 1/2" (13mm) maximum. For best results, protect sealant from excessive low temperatures and apply above 40°F (4°C). For acoustical purposes, apply continuous

TYPICAL PHYSICAL PROPERTIES

Test Property	Value	Procedure
Modulus @ 100% (psi)	15-20	ASTM D412
Ultimate Tensile (psi)	30-40	ASTM D412
Ultimate Elongation (%)	400-500	ASTM D412
Movement Capability (%)	±7 1/2	ASTM D412
VOC Content	31 g/L	

beads of sealant to seal perimeters of all sound-rated partitions. Apply sealant in the angles formed by metal components or base-layer panels and abutting surfaces. Apply sealant around all openings formed for outlets; electrical, telephone, light fixtures, etc.

Tooling: Tool material flush with surfaces to allow for expected shrinkage and insure good contact and adhesion to the substrate.

Cleaning: Remove excess material with water or a damp cloth before it cures. Sealant may be painted within 30 minutes after application with a good grade of latex paint.

Shelf Life: AC-20 FTR® has a shelf life well in excess of one year when stored in unopened containers below 80° F (27°C).

Precautions: AC-20 FTR® is non-flammable, non-toxic, non-irritating and environmentally safe. However, do not take internally. Refer to Material Safety Data Sheet for additional information.

Ultra Block® is a non-carcinogenic processed continuous filament textile glass fiber that may cause skin, eye and respiratory irritation. When applying, wear long sleeves, gloves, cap, goggles or safety glasses and NIOSH/MSHA-approved dust respirator. After use bathe with soap and warm water. Wash clothes separately and rinse after use. Refer to Material Safety Data Sheet for additional information.

FOR PROFESSIONAL USE ONLY.
KEEP OUT OF THE REACH OF CHILDREN.

6. AVAILABILITY AND COST

Pecora products are available from our stocking distributors in all major cities. For the name and telephone number of your nearest representative call one of our locations listed below or visit our website at www.pecora.com.

7. WARRANTY

Pecora Corporation warrants its products to be free of defects. Under this warranty, we will provide, at no charge, replacement materials for, or refund the purchase price of, any product proven to be defective when installed in accordance with our published recommendations and in applications considered by us as suitable from this product. This warranty in lieu of any and all other warranties expressed or implied, and in no case will Pecora be liable for incidental or consequential damages.

8. MAINTENANCE

If the sealant is damaged and the bond is intact, cut out the damaged area and recaulk. No primer is required. If the bond has been affected, remove the sealant, clean and prepare the joint in accordance with instructions under "Installation".

9. TECHNICAL SERVICES

Pecora representatives are available to assist you in selecting an appropriate product and to provide on-site application instructions or to conduct jobsite inspections. For further assistance call our Technical Service Department at 800-523-6688.

APPENDIX I

Temporary Construction Noise Calculations

Noise Attenuation by Distance Calculation

Job: Strauss 5th Ave
Job #: B50405N2
Date: 1/27/2016
Source: Excavator
Receiver: North (CR1)

Noise Source

Noise Level (dBA) 74.3 at 50 feet

Distances

Source Elevation 0 feet at 5 feet above grade
Receiver Elevation: 0 feet at 5 feet above grade
Source to Receiver Distance: 128 feet

Path Calculation

Source to Receiver Direct Path Distance: **128** feet

Sound Pressure Level **66.1** at 128 feet
Hours of Use: **8**
Duty Cycle (%): **40**
Level During 8 Hour day: **62.2**

Summation

Number of Sources: 2
