

INDIVIDUAL HISTORIC ASSESSMENT REPORT

Site Name/Facility: Nestor Creek Channel, Map No. 134 in PEIR

Date: June 16, 2010

Archaeologist Name: Mary Robbins-Wade and John Meriwether, Affinis

Native American Monitor Name: Gabe Kitchen, Red Tail Monitoring and Research

• **Instructions:** This form must be completed for each target facility following the completion of the Individual Maintenance Plan (IMP) report form and prior to any work being conducted in the facility. Attach additional sheets if needed.

Site Conditions:

Map No. 134 consists of two concrete-lined channel segments. There is no soil present within the channels, however there is open soil adjacent to the south bank of the southern segment. This open area is not within the project boundaries and would not be subject to impacts. The location of the channel is shown in Figures 1 and 2. Figure 3 is an aerial photograph of the channel showing the proposed extent of impacts.

Survey Methods:

Affinis Archaeologist, John Meriwether, and Gabe Kitchen of Red Tail Monitoring and Research (Native American monitor) visited the project area on May 13, 2010. Both channels were completely concrete-lined, and neither could be directly accessed.

Record Search Results:

Affinis obtained a records search from the South Coastal Information Center (SCIC) at San Diego State University in September 2007, in conjunction with the cultural resources study for the PEIR. Affinis checked records at SCIC on May 12, 2010 to confirm that no additional resources had been recorded in the vicinity of the project area subsequent to the earlier records search. Affinis also contacted the Native American Heritage Commission (NAHC) for a search of their Sacred Lands Files. Tribes and individuals identified by the NAHC were contacted regarding the project.

One archaeological site has been recorded within ½ mile of the project area. CA-SDI-56 was recorded by N.C. Nelson in the early part of the twentieth century as “traces of a camp site” visible in a plowed field. The site record has never been updated, and the site probably no longer exists.

The NAHC has no record of Native American cultural resources in their Sacred Lands file within ½ mile of the project. No responses were received from the Native American community regarding the project.

Archaeological Survey Results:

No archaeological resources were found during the current survey. Given the narrow and steep-sided nature of the channel, no archaeological resources would be anticipated in the channel itself. The channel and surrounding areas are completely developed, and there does

not appear to be any potential for archaeological material.

Is there a moderate or high potential for archaeological resources to occur in or adjacent to the impact area: Yes No

What, if any, PEIR mitigation measures are applicable?
PEIR Mitigation Measure 4.4.1 (preparation of the IHA).

What, if any, other measures are required?
No additional mitigation measures are required.

Additional Comments or Recommendations:
None.
