

# District Deviations Based on 2020 Census Data

The following map is based on the California Statewide Database 2020 Census data as described in the previous slide. This map simply provides a rough estimate of which districts *might* need to grow in size, and which *might* need to shrink in order to get closer to the ideal one-ninth size.

How would you draw the new City Council districts? To submit your input and to draw your ideal community boundaries, please go to: <https://bit.ly/sdmapping>. If you have questions or need translation services, please email [redistricting2020@saniego.gov](mailto:redistricting2020@saniego.gov) (3) three business days in advance.
