			Discharge Control	
1	Eliminate illicit connections to the municipal separate storm sewer system (MS4; Hereafter, "storm drain system").	Find and abate all illicit connections to the storm drain system through properly approved procedures, permits, and protocols. SDMC §43.0306.	Illicit connections are man-made physical connections to the storm drain system that convey discharges that are not composed entirely of storm water. Illicit discharges include grey water (i.e., laundry rinse water); waste water; or irrigation water, including recycled or reclaimed water, that are effectively prohibited from being discharged to the storm drain system under SDMC \$43.0304 and \$43.0306, and Regional Water Quality Control Board, San Diego Region (RWQCB) Order No. R9-2013-0001, as amended by R9-2015-0001 (Municipal Permit or Permit). Any suspected unpermitted physical connections to the City's storm drain system shall be reported to the storm drain system system shall be removed immediately.	Illicit connections are man-m system that convey discharge Illicit discharges include grey irrigation water, including red prohibited from being dischar §43.0304 and §43.0306, and physical connections to the C City's Storm Water Division the storm drain system shall b
2	Eliminate illicit non-storm water discharges.	Non-storm water (water other than rain) shall not be discharged to the City's storm drain system. SDMC §43.0304(a). Limited exceptions may apply. SDMC §43.0305 and RWQCB, San Diego Region Order No. R9- 2013-0001, as amended by R9-2015-00001 and R9-2015-0100.	To eliminate illicit discharges, do not allow any solid or liquid material except uncontaminated storm water to enter City storm drains, curb gutters along City streets, or any other part of the City's storm drain system. Connections that convey illicit discharges to the City's storm drain system are illicit connections and shall be eliminated. Additional guidance about how to manage common types of discharges is provided in minimum BMPs 3 through 12 below. Report any suspected illicit discharges to the Storm Water Division Hotline at 619-235-1000.	To eliminate illicit discharges uncontaminated storm water streets, or any other part of th convey illicit discharges to th and shall be eliminated. No.	BMP Title	BMP Description/San Diego Municipal Code Section(s)	Residential Implementation	Industrial, Comme
6	Eliminate irrigation runoff.	Irrigation runoff to the storm drain system shall be eliminated through proper landscape maintenance and watering practices. SDMC §43.0304 & §43.0307(a).	 Irrigation runoff may contain pollutants or serve as a transport mechanism for pollutants already on the ground. Irrigation runoff entering the storm drain system is an illicit discharge. Where irrigation systems are used, regular maintenance and visual observation of the system shall be performed to prevent overspray, leaks, and other problems that result in runoff to City storm drains, curbs and gutters, or any other part of the City's storm drain system. Installing automatic rain shutoff devices or smart controllers, using micro-irrigation systems (e.g., drip irrigation), or implementing low water use landscaping may also help eliminate irrigation runoff. It is recommended to avoid runoff by using a control nozzle or similar mechanism when watering by hand. All drought and permanent water use restrictions may be more stringent than this BMP and must be followed. Check the PUD's Water Conservation Website, www.wastenowater.org, for current restrictions. 	Irrigation runoff may contain pollutants already on the grou system is an illicit discharge. Where irrigation systems are of the system shall be perform problems that result in runoff other part of the City's storm devices or smart controllers, u irrigation), or implementing 1 irrigation runoff. 9	Control air conditioning condensation discharges.	Air conditioning condensation discharges shall be controlled to prevent them from reaching City storm drains, curbs and gutters, or any other part of the City's storm drain system. SDMC §43.0307(a). Conditionally allowed non-storm water discharges are described in SDMC §43.0305.	 Air conditioning condensation discharges have been identified as a source of pollutants, including copper, based on monitoring completed by the City, and are prohibited from entering the City's storm drain system unless the following BMPs are followed in order. (1) Direct air conditioning condensation to the sanitary sewer if allowed. Contact the Development Services Department at 619-446-5000 to obtain a building permit to direct the condensation to the sanitary sewer system. (2) Direct air conditioning condensation discharges to onsite landscaped or pervious area to infiltrate or evaporate, without resulting in erosion or runoff to the storm drain system or any adjacent property. Directing discharges to landscaping close to a building foundation is not recommended. (3) If the above BMP options are not feasible AND the discharge does not contain pollutants exceeding the California Toxics Rule (CTR), air conditioning condensation may enter the City storm drain system. Condensation must be proven to contain no pollutants that contribute to CTR water quality exceedances with monitoring conducted using EPA standard protocols. 	 Air conditioning condensation pollutants, including copper, bare prohibited from entering the BMPs are followed in order. (1) Direct air conditioning Contact the Developm obtain a building permissystem. (2) Direct air conditioning pervious area to infiltr runoff to the storm dradischarges to landscap recommended. (3) If the above BMP optic contain pollutants excording condensation must be CTR water quality excording protocols.
10	Eliminate pumped groundwater, foundation and footing drain discharges.	Pumped groundwater, including water from crawl space pumps is prohibited unless a separate National Pollutant Discharge Elimination System (NPDES) Permit has been obtained to cover the discharge, or the RWQCB has determined in writing that no permit is needed. Discharges from foundation and footing drains that are at or below the groundwater table are also prohibited, unless covered by an NPDES permit, or if the RWQCB has determined in writing that no permit is needed. SDMC §43.0304 & 43.0305(b).	Examples of acceptable methods to discharge uncontaminated groundwater include discharging to the sanitary sewer system or discharging to the storm drain system after obtaining an individual NPDES permit from the RWQCB. The RWQCB can be contacted at 619-516-1990. If a sanitary sewer discharge is desired, contact the PUD at 619-654-4100 to determine whether the discharge is allowed and applicable permitting requirements. 	Material Storage and Handling				
18	Provide and maintain secondary containment to catch spills when storing potential liquid pollutants in outdoor areas.	Effective secondary containment shall be provided and maintained for all containers of liquid stored in outdoor areas to prevent leaks or spills from discharging pollutants to the storm drain system. Containers shall be kept in good condition and securely closed when not in use. Secondary containment shall also be provided for all liquids during transport to prevent spills due to leaks or punctures. SDMC §43.0307(a).	Secondary containment shall be used for liquid storage in outdoor areas. Secondary containment consists of a container, curb or leak-proof structure outside of the primary container, designed to prevent accidental releases of materials from the storage area. To maintain the effectiveness of secondary containment, regularly remove and appropriately dispose of spills, precipitation, or other liquids that accumulate in the secondary containment. Provide liquid storage containers with covers to prevent precipitation from accumulating in or causing overflows from the secondary containment. Materials stored indoors away from entrances/exits such that any leaks do not travel outside in the event of a spill, do not require secondary containment. If evidence of spills due to inadequate containment is observed, the City enforcement official may specify a minimum required containment capacity. Other applicable regulations may apply to the use of secondary containment, especially for hazardous materials, which are regulated by the County of San Diego Department of Environmental Health at 858-505-6880. See BMPs 19 and 20 for additional information.	Secondary containment shall Secondary containment consi outside of the primary contain materials from the storage are containment, regularly remove precipitation, or other liquids Provide liquid storage contain accumulating in or causing of Materials stored indoors and require secondary containment If evidence of spills due to in enforcement official may spe Other applicable regulations especially for hazardous mate Diego Department of Environ and 20 for additional information	
19	Properly store and dispose of hazardous substances.	Hazardous materials and wastes shall be stored, managed, and disposed in accordance with federal, state, and local laws and regulations. Hazardous materials and wastes shall also be stored such that they will not come into contact with storm water or other non-storm water flows, if leaks or spills occur. SDMC §43.0307(a).	Proper storage and disposal of all hazardous materials and wastes is required. City of San Diego residents may contact the Household Hazardous Waste Transfer Facility regarding proper disposal; call 858-694-7000 to set up an appointment. Additional information is available at http://www.sandiego.gov/environmental- services/miramar/hhwtransfac.shtml	Proper storage and disposal of Hazardous materials and was additionally regulated by the Environmental Health. 20	Cover, contain, and/or elevate materials stored outside that may become a source of pollutants in storm water or non-storm water.	Materials stored outdoors shall be covered, contained, and/or elevated to prevent storm water and non-storm water from contacting and transporting materials and pollutants to the storm drain system. SDMC §43.0307(a).	 When runoff from precipitation, irrigation, or water from other sources moves along the ground it can pick up pollutants and convey them to the storm drain system. Covering, containing, and/or elevating materials off of the ground prevents pollutants from contaminating storm water by preventing run-on from directly contacting materials, and by preventing materials from being transported by water or wind. Some examples of cover include roofs, awnings, and tarps. Where coverage is not feasible or is cost prohibitive, alternative approaches such as installing berms around the stored materials, directing runoff to pervious areas, or installing treatment devices may be allowed. Outdoor materials that are not a potential source of pollutants do not require coverage. Elevate materials off the ground using pallets or other shelving and do not store them in the path of storm water run-off. Note that installing structural coverage will usually require obtaining permits from the City prior to installation. To determine applicable regulations and whether a permit would be required, contact the Development Services Department at 619-446-5000. 24	Implement controls to prevent pollution from exposed outdoor work areas.	Activities that may generate pollutants shall be conducted in covered, contained areas. When these activities are conducted outside, the work areas shall be cleaned at least once a day to prevent pollutant accumulation, and the activities shall not be conducted when it is raining. Work areas that are not covered and contained shall also be located such that runoff flowing through the work areas is minimized. Work areas shall be designed such that concentrated flows are not directed through the work areas. SDMC §43.0307(a).	 This BMP applies to all activities conducted outdoors that may generate pollutants. Some common examples are loading/unloading areas, waste disposal, vehicle or equipment repair, cutting, grinding, sanding, painting, processing of wood, plastics, metals, and concrete. Outdoor activities often generate debris or waste liquids that have an increased risk of outdoor spills. In order to avoid contaminating storm water runoff, the following precautions shall be taken as appropriate: (1) move activities indoors; (2) cover areas where outdoor activities are performed, including building canopies; (3) protect areas where outdoor activities are performed from runoff from upstream areas, including building berms; (4) prevent spills or by-products from escaping contained areas; (5) do not conduct outdoor activities that may generate pollutants when it is raining; (6) protect storm drain inlets and ensure adequate spill response materials are readily available; and, (7) thoroughly clean outdoor work areas at least daily to remove accumulated sediment, debris, oil and grease, particulate matter, and other pollutants. 	 This BMP applies to all activit pollutants. Some common exdisposal, vehicle or equipment processing of wood, plastics, generate debris or waste liquid.
