

UPTOWN, NORTH PARK AND GOLDEN HILL CPU

Traffic Impact Study

JUNE 2015 | DRAFT VERSION 3

Prepared By:

Kimley»»Horn

EXECUTIVE SUMMARY

This study, prepared by Kimley-Horn and Associates, Inc., evaluates the potential traffic-related impacts associated with the Uptown, North Park and Golden Hill Community Plan Updates (CPU). One preferred land use alternative was presented and analyzed as part of this study. The preferred land use alternative will be used to regulate and guide the strategic growth within the three communities. In addition to the land use alternative, a Mobility Element was prepared based on the existing roadway conditions, potential future transportation deficiencies and improvement recommendations based on an extensive input from the community stakeholders.

The analysis concluded that the land use for the **Uptown** community would have cumulative traffic related impact at the following locations:

Intersections

- Washington Street & Fourth Avenue
- Washington Street & Eighth Avenue/ SR-163 Off-Ramp
- Washington Street/ Normal Street & Campus Avenue/ Polk Avenue
- University Avenue & Sixth Avenue
- Elm Street & Sixth Avenue
- Cedar Street & Second Avenue

Segments

- First Avenue: Washington Street to University Avenue
- First Avenue: University Avenue to Robinson Avenue
- First Avenue: Robinson Avenue to Grape Street
- Fourth Avenue: Arbor Drive to Washington Street
- Fourth Avenue: Walnut Avenue to Laurel Street
- Fifth Avenue: Robinson Avenue to Walnut Avenue
- Sixth Avenue: Washington Street to University Avenue
- Sixth Avenue: University Avenue to Laurel Street
- Sixth Avenue: Laurel Street to Elm Street
- Ninth Avenue: Washington Street to University Avenue
- Campus Avenue/ Polk Avenue: Washington Street to Park Boulevard
- Cleveland Avenue: Tyler Street to Richmond Street
- Fort Stockton Drive: Sunset Boulevard to Goldfinch Street
- Grape Street: First Avenue to Third Avenue
- Grape Street: Third Avenue to Sixth Avenue
- Hawthorn Street: First Avenue to Third Avenue
- Hawthorn Street: Third Avenue to Sixth Avenue
- India Street: Washington Street to Winder Street
- India Street: Glenwood Drive to Sassafrass Street
- India Street: Sassafrass Street to Redwood Street
- Laurel Street: Columbia Street to Sixth Avenue
- Lincoln Avenue: Washington Street to Park Boulevard
- Park Boulevard: Mission Avenue to El Cajon Boulevard
- Park Boulevard: Robinson Avenue to Upas Street

- Richmond Street: Cleveland Avenue to Upas Street
- Robinson Avenue: First Avenue to Third Avenue
- Robinson Avenue: Third Avenue to Eighth Avenue
- San Diego Avenue: Hortensia Street to Pringle Street
- State Street: Laurel Street to Juniper Street
- University Avenue: Ibis Street to Fifth Avenue
- University Avenue: Sixth Avenue to Eighth Avenue
- University Avenue: Normal Street to Park Boulevard
- Washington Street: Fourth Avenue to Sixth Avenue
- Washington Street: Richmond Street to Normal Street

Freeway Mainline Segments

- I-5 NB: Old Town Avenue to Imperial Avenue
- I-5 SB: Old Town Avenue to Imperial Avenue
- I-8 WB: Hotel Circle (W) to SR-15
- I-8 EB: Hotel Circle (W) to SR-15
- SR-163 NB: I-8 to Robinson Avenue
- SR-163: SB: I-8 to I-5

Freeway Interchange Ramps

- Hancock St to I-5 SB
- Kettner Boulevard to I-5 SB
- Fifth Avenue to I-5 SB

Mitigation proposals for the impacted intersections and segments are provided in Chapter 5. In addition, it is noted that the following corridors would benefit from ITS technology:

- *Sixth Avenue*
- *University Avenue*
- *Washington Street*

The analysis concluded that the land use for the **North Park** community would have cumulative traffic related impact at the following locations:

Intersections

- Madison Avenue & Texas Street
- El Cajon Boulevard & 30th Street
- El Cajon Boulevard & I-805 SB Ramps
- University Avenue & 30th Street
- University Avenue & I-805 NB Ramps
- North Park Way/ I-805 SB Ramps & Boundary Street/33rd Street
- Upas Street & 30th Street (W)

Segments

- 30th Street: Meade Avenue to El Cajon Boulevard
- 30th Street: Howard Avenue to University Avenue
- 30th Street: North Park Way to Upas Street
- 30th Street: Upas Street to Juniper Street
- 32nd Street: University Avenue to Upas Street
- Adams Avenue: Texas Street to 30th Street
- Boundary Street: University Avenue to North Park Way
- El Cajon Boulevard: 30th Street to I-805 Ramps

- Florida Street: El Cajon Boulevard to Upas Street
- Howard Avenue: Texas Street to 32nd Street
- Madison Avenue: Texas Street to Ohio Street
- Meade Avenue: Park Boulevard to Iowa Street
- Redwood Street: 28th Street to 30th Street
- Texas Street: Adams Avenue to El Cajon Boulevard
- Texas Street: Howard Avenue to University Avenue
- University Avenue: Park Boulevard to Florida Street
- University Avenue: Texas Street to 32nd Street
- University Avenue: 32nd Street to Boundary Street
- Upas Street: Alabama Street to Pershing Road
- Upas Street: Pershing Road to 30th Street
- Utah Street: Howard Avenue to Lincoln Avenue
- Utah Street: North Park Way to Upas Street

Freeway Mainline Segments

- SR15 NB: I-805 to SR-94
- SR-15 SB: I-805 to SR-94
- I-805 NB: I-8 to SR-15
- I-805 SB: I-8 to SR-15
- SR-163 NB: I-8 to Robinson Avenue
- SR-163: SB: I-8 to I-5

Mitigation proposals for the impacted intersections and segments are provided in Chapter 5. In addition, it is noted that the following corridors would benefit from ITS technology:

- *University Avenue*
- *El Cajon Boulevard*

The analysis concluded that the land use for the **Golden Hill** community would have cumulative traffic related impact at the following locations:

Intersections

- B Street & 17th Street/ I-5 SB Off-Ramp
- SR-94 WB Ramps & Broadway
- SR-94 WB Ramp & 28th Street
- SR-94 EB Ramp & 28th Street
- F Street & 25th Street
- G Street & 25th Street

Segments

- 25th Street: Broadway to F Street
- 28th Street: Russ Boulevard to SR-94
- 30th Street: Grape Street to SR-94
- B Street: 25th Street to 28th Street
- C Street: 30th Street to 34th Street
- Fern Street: Juniper Street to A Street
- Grape Street: 30th Street to 31st Street

Freeway Mainline Segments

- SR-94 WB: 25th Street to SR-15
- SR-94 EB: 25th Street to SR-15

Mitigation proposals for the impacted intersections and segments are provided in Chapter 5.

1 INTRODUCTION

The following traffic study has been prepared to determine and evaluate the traffic impacts associated with the Uptown, North Park and Golden Hill Community Plans Updates. This evaluation assesses the impacts of the proposed Land Use and Mobility Elements.

1.1 PROJECT DESCRIPTION

One preferred land use alternative was presented and analyzed as part of this study. The preferred land use alternative will be used to regulate and guide the strategic growth within the three communities. In addition to the land use alternative, a Mobility Element was prepared based on the existing roadway conditions, potential future transportation deficiencies and improvement recommendations based on an extensive input from the community stakeholders. **Figure 1-1** depicts the location of the Uptown, North Park, and Golden Hill Communities within the regional context. **Figure 1-2** shows the overall project boundary study area for the Community Plan Update and each individual community boundary. **Tables 1-1 through 1-7** show the trip generation comparison for base year 2008, adopted community plan, and proposed Land Use plan for each of the communities. **Figures 1-3, 1-4 and 1-5** illustrate the proposed Land Use for each community.

1.2 ANALYSIS SCENARIOS

A total of two scenarios were analyzed as part of the project, which are listed below:

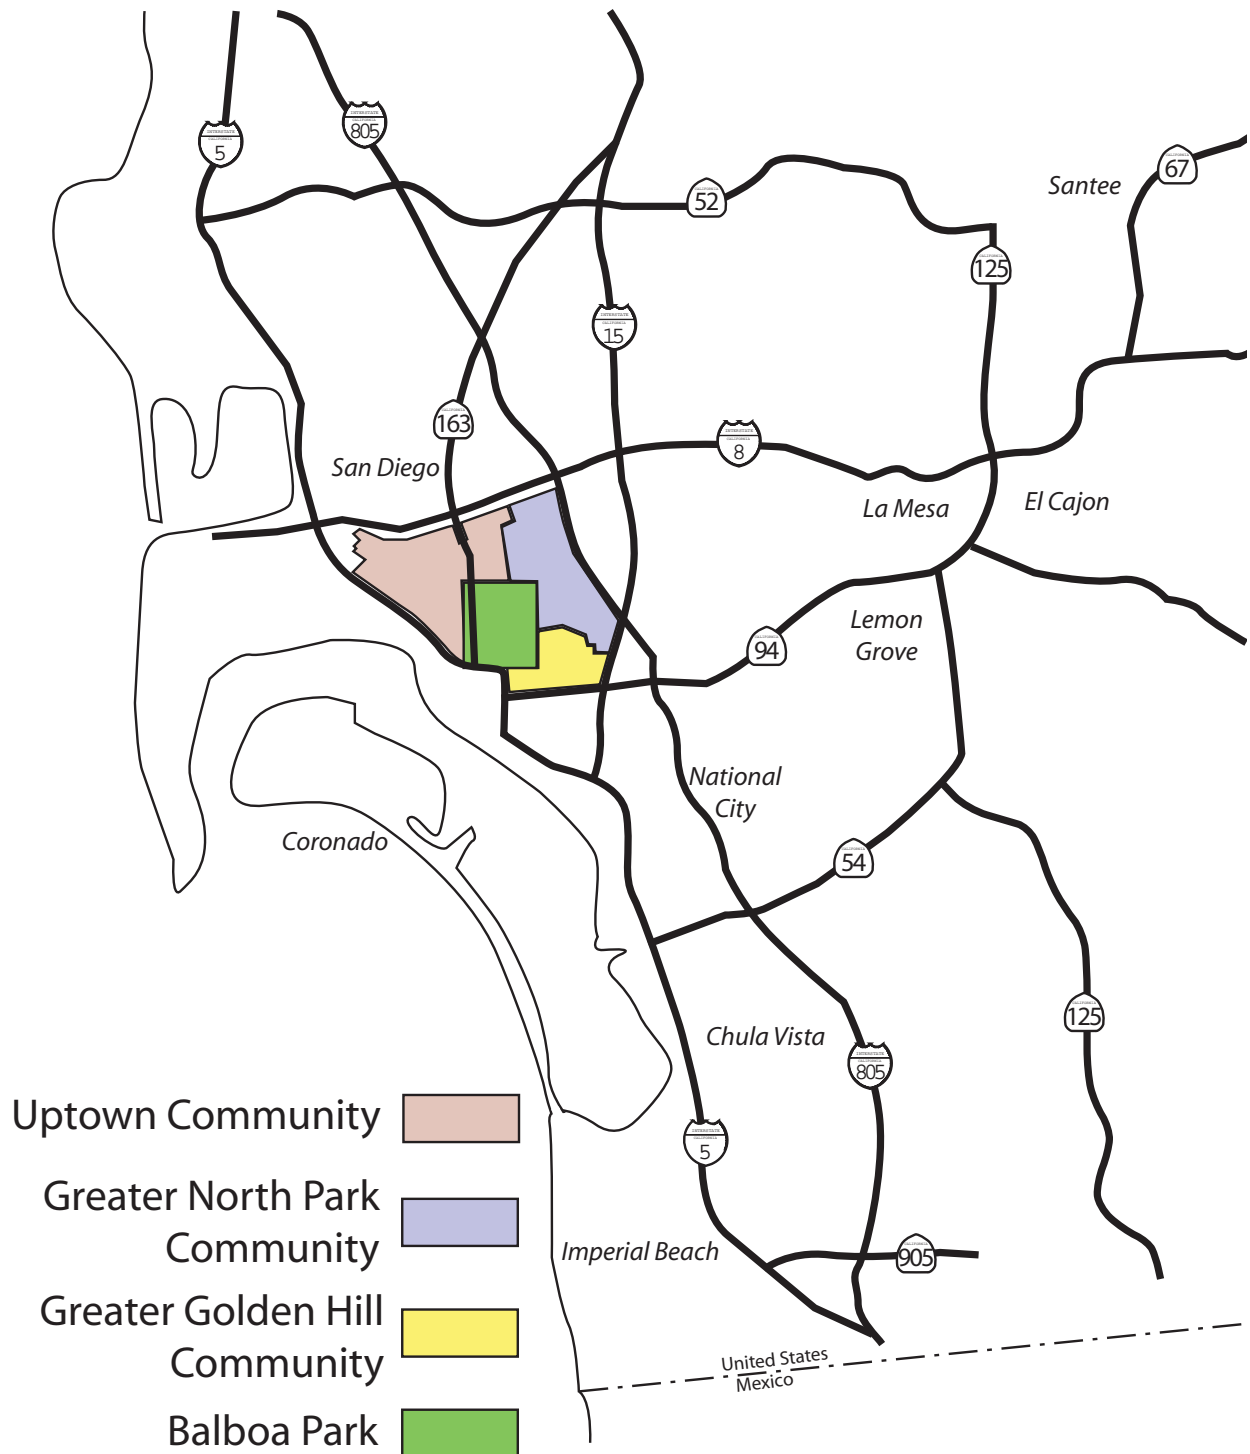

Existing Conditions

- 1) Existing Conditions: Represents the traffic conditions of the existing street network.

Future Year Conditions

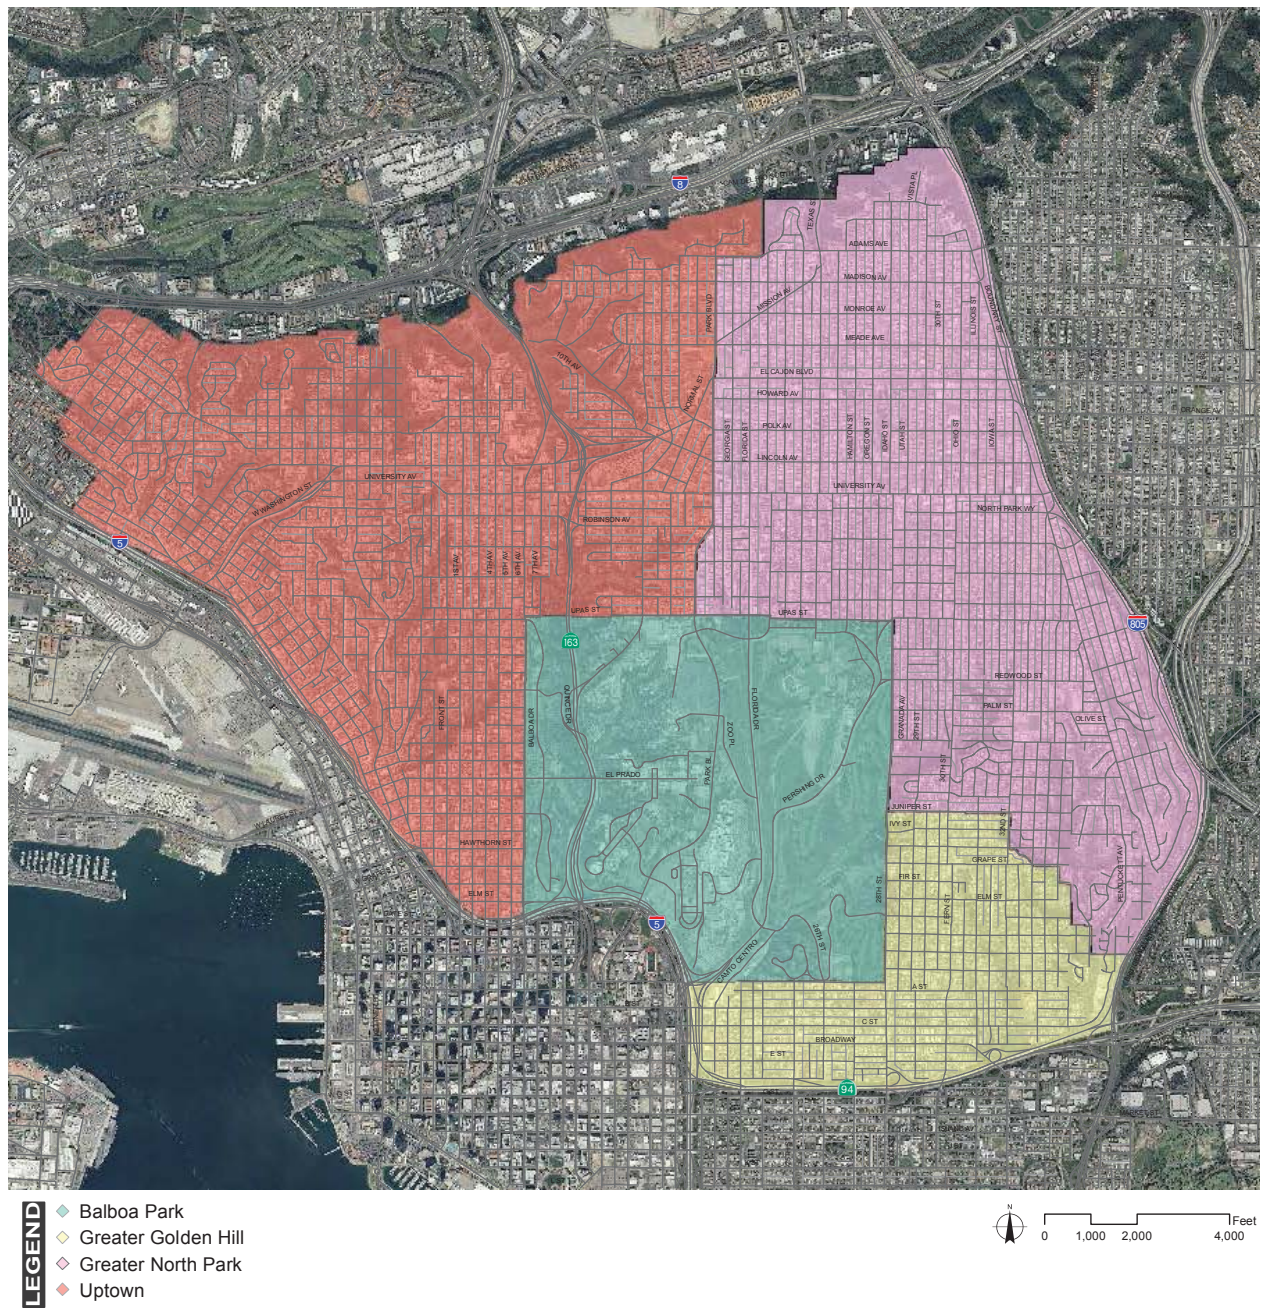

- 2) Future Year Conditions: Represents the traffic conditions of the street network assumed to be in place under Buildout conditions with the implementation of the land use changes per the Land Use Element of each plan.

2 METHODOLOGY

The following section describes the methodology used to determine study intersections, perform capacity analysis, and determine significant impacts.

2.1 STUDY INTERSECTIONS

Intersections within the project boundary were selected to be studied based on several factors, which included the following:

- Existing circulation element roadways intersecting with other existing circulation element roadways where both roadways function or are classified as a collector or higher
- Intersections that provide access to/from freeways
- Anticipated circulation element roadways intersecting with other existing and/or anticipated circulation element roadway where both roadways function or are classified as a collector or higher
- Key intersections where both intersecting streets meet one of the following conditions:
 - 4-lanes (or greater)
 - 3-lanes and carries over 15,000 ADT
 - 2-lanes and carries over 10,000 ADT
- Additional intersections which the community has expressed concerns

Based on the criteria listed above, a total of 53 intersections have been selected for analyses (30 intersections are located within Uptown; 11 within North Park; and 12 within Golden Hill) and are shown in **Table 2-1**. **Figure 2-1** displays the location of each of the study intersections

Table 2-1 Study Intersections: Uptown

Intersection	Traffic Control
1 Washington St & Hancock St	Traffic Signal
2 Washington St & San Diego Ave	Traffic Signal
3 Washington St & India St	Traffic Signal
4 Washington St & Fourth Ave	Traffic Signal
5 Washington St & Fifth Ave	Traffic Signal
6 Washington St & Eighth Ave/SR-163 Off-Ramp (Caltrans)	Traffic Signal
7 Washington St & Richmond St/SR-163 On-Ramp (Caltrans)	Traffic Signal
8 Washington St/Normal St & Campus Ave/Polk Ave	Traffic Signal
9 Normal St/El Cajon Blvd & Park Blvd	Traffic Signal
10 University Ave & Fourth Ave	Traffic Signal
11 University Ave & Fifth Ave	Traffic Signal
12 University Ave & Sixth Ave	Traffic Signal
13 University Ave & Tenth St	Traffic Signal
14 University Ave & Normal St	Traffic Signal

15	University Ave & Park Blvd	Traffic Signal
16	Robinson Ave & Fourth Ave	Traffic Signal
17	Robinson Ave & Fifth Ave	Traffic Signal
18	Robinson Ave & Sixth Ave	Traffic Signal
19	Vine St & India St	Traffic Signal
20	Sassafras St & Kettner Blvd	Traffic Signal
21	Sassafras St & India St	Traffic Signal
22	Laurel St & India St/ I-5 NB On-Ramp	Traffic Signal
23	Laurel St & Fourth Ave	Traffic Signal
24	Laurel St & Fifth Ave	Traffic Signal
25	Laurel St & Sixth Ave	Traffic Signal
26	Hawthorn St & Brant St	Two-way stop controlled
27	Grape St & State St	Traffic Signal
28	Elm St & First Ave	Traffic Signal
29	Elm St & Sixth Ave	Traffic Signal
30	Cedar St & Second Ave	Two-way stop controlled

As shown in the table, 28 of the 30 intersections evaluated in the Uptown community are signalized while 2 intersections are unsignalized with vehicles required to stop on two legs of the intersection. The majority of the intersections include at least one of the major roadways within the community, which are Washington Street, University Avenue, Robinson Avenue, Upas Street, and Laurel Street.

Table 2-1.2 Study Intersections: North Park

	Intersection	Traffic Control
31	Madison Ave & Texas St	Traffic Signal
32	El Cajon Blvd & Texas St	Traffic Signal
33	El Cajon Blvd & 30th St	Traffic Signal
34	El Cajon Blvd & I-805 SB Ramps	Traffic Signal
35	El Cajon Blvd & I-805 NB Ramps	Traffic Signal
36	University Ave & Texas St	Traffic Signal
37	University Ave & 30th St	Traffic Signal
38	University Ave & Boundary St	Traffic Signal
39	University Ave & I-805 NB Ramps	Traffic Signal
40	North Park Way/I-805 SB Ramps & Boundary St/33rd St	All-way stop controlled
41	Upas St & 30th St (W)	All-way stop controlled

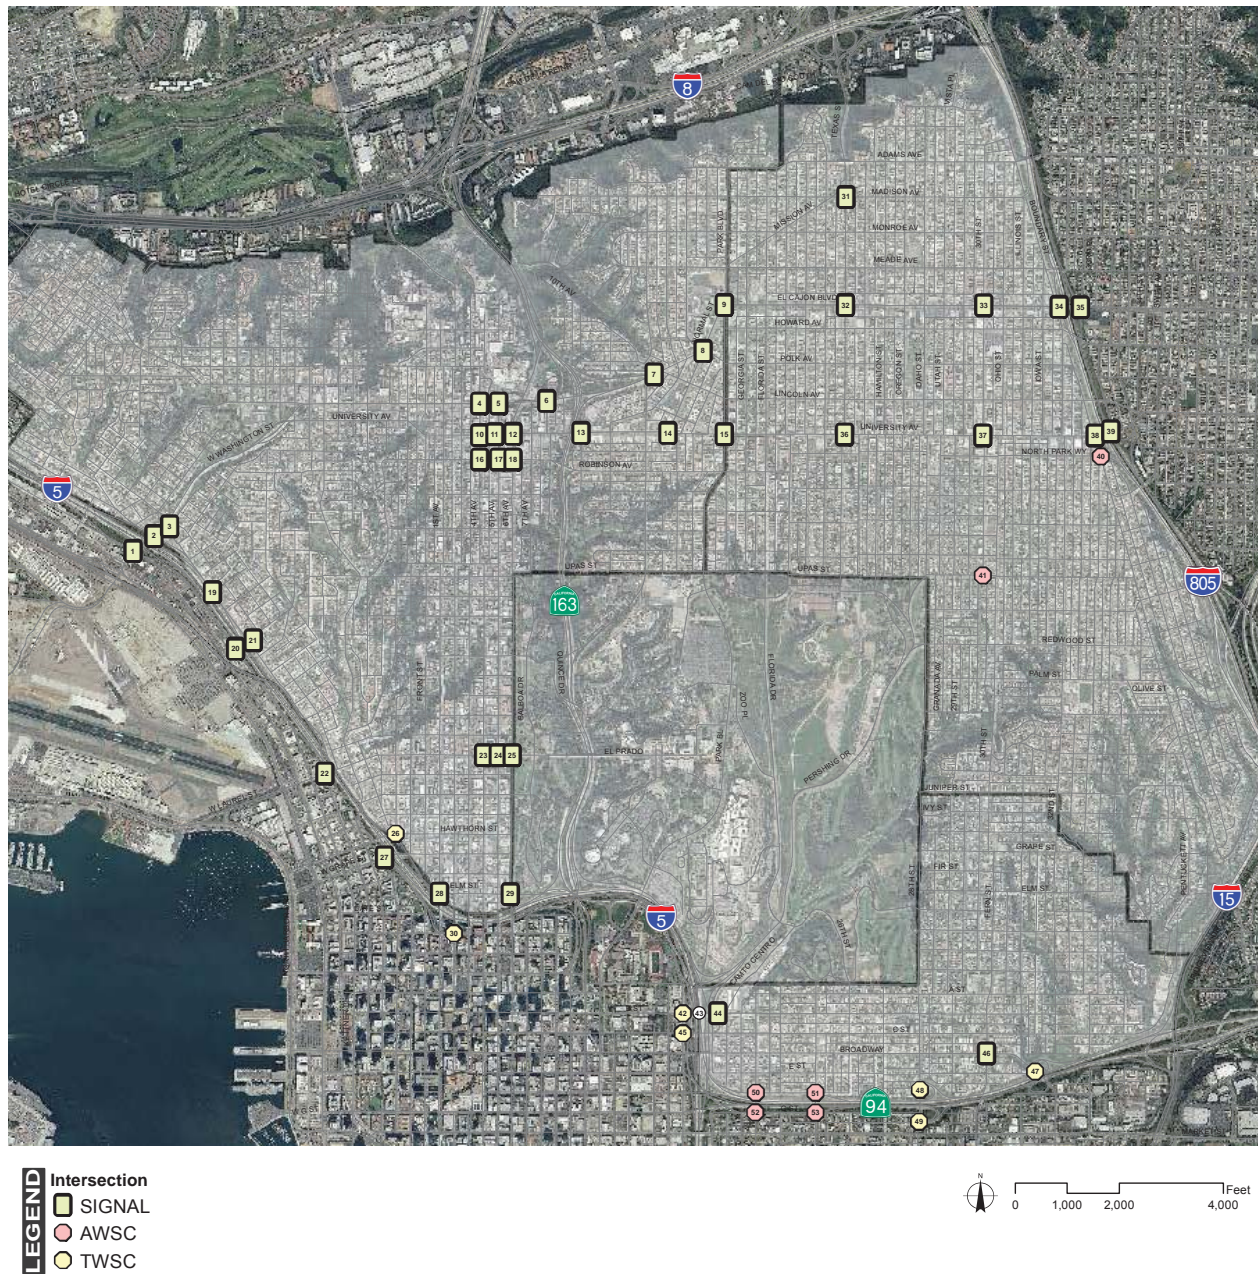

As shown in the table, 9 of the 11 intersections evaluated in the North Park community are signalized while 2 intersections are all-way stop controlled unsignalized. The majority of the intersections include at least one of the major roadways within the community, which are El Cajon Boulevard, University Avenue, and Upas Street.

Table 2-1.3 Study Intersections: Golden Hill

	Intersection	Traffic Control
42	B St & 17th St/I-5 SB Off-Ramp	One-way stop controlled
43	B St & I-5 NB Off-Ramp	None
44	B St & 19th St/I-5 NB On-Ramp	Traffic Signal
45	C St & 17 St	One-way stop controlled
46	Broadway & 30th St	Traffic Signal
47	SR-94 WB Ramps & Broadway	One-way stop controlled
48	SR-94 WB Ramps & 28th St	Two-way stop controlled
49	SR-94 EB Ramps & 28th St	One-way stop controlled
50	F St & 22nd St	All-way stop controlled
51	F St & 25th St	All-way stop controlled
52	G St & 22nd St	All-way stop controlled
53	G St & 25th St	All-way stop controlled

As shown in the table, only 2 of the 12 intersections evaluated in the Golden Hill community are signalized while the other 10 intersections are unsignalized. The intersection of B Street and I-5 Northbound Off-Ramp has no conflicting movements and therefore does not require any traffic control.

FIGURE 2-1

Study Intersections

2.2 ANALYSIS PROCESS

The analysis process includes determining the a.m. and p.m. peak-hour operations at the study intersections, freeway segments and freeway ramps, and operations daily along the roadway segments. Intersections were measured and quantified using the Synchro traffic analysis software package. Results will be compared to the City's thresholds to determine if the project has any significant traffic impacts.

2.2.1 ANALYSIS SOFTWARE

To analyze the operations of both signalized and unsignalized intersections, Synchro 8.0 (Trafficware) was used for the analysis. Synchro 8.0 uses the methodologies outlined in the 2000 Highway Capacity Manual (HCM). The existing intersection peak-hour factor (PHF) was used for Existing and Near Term scenarios. A PHF of 0.92 was used for Future Year conditions to account for the unknown change in traffic patterns.

Existing traffic signal timing parameters were provided by the City of San Diego and Caltrans and are included in **Appendix A**.

2.2.2 SIGNALIZED AND UNSIGNALIZED INTERSECTIONS

The 2010 Highway Capacity Manual (HCM) published by the Transportation Research Board establishes a system whereby highway facilities are rated for their ability to process traffic volumes. The terminology "level of service" is used to provide a "qualitative" evaluation based on certain "quantitative" calculations, which are related to empirical values.

Level of service (LOS) for signalized intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and loss of travel time. Specifically, LOS criteria are stated in terms of the average control delay per vehicle for the peak 15-minute period within the hour analyzed. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay. The level of service for unsignalized intersections is determined by the computed or measured control delay and is defined for each minor movement. The criteria for the various levels of service designations for signalized and unsignalized intersections are given in **Table 2-2**.

Within the City of San Diego, all signalized and unsignalized intersections are considered deficient if they operate at LOS E or F.

Table 2-2 Level of Service (LOS) Criteria for Intersections

LOS	Signalized (Control Delay) (sec/veh) ^(a)	Unsignalized (Control Delay) (sec/veh) ^(b)	Description
A	≤10.0	≤10.0	Operations with very low delay and most vehicles do not stop.
B	>10.0 and ≤20.0	>10.0 and ≤15.0	Operations with good progression but with some restricted movement.
C	>20.0 and ≤35.0	>15.0 and ≤25.0	Operations where a significant number of vehicles are stopping with some backup and light congestion.
D	>35.0 and ≤55.0	>25.0 and ≤35.0	Operations where congestion is noticeable, longer delays occur, and many vehicles stop. The proportion of vehicles not stopping declines.
E	>55.0 and ≤80.0	>35.0 and ≤50.0	Operations where there is significant delay, extensive queuing, and poor progression.
F	>80.0	>50.0	Operations that are unacceptable to most drivers, when the arrival rates exceed the capacity of the intersection.

2.2.3 ROADWAY SEGMENTS

In order to determine the impacts on the study area roadway segments, **Table 2-3** has been developed by the City of San Diego and is used as a reference. The segment traffic volumes under LOS E as shown in this table are considered at capacity because at LOS E the v/c Ratio is equal to 1.0.

Table 2-3 City of San Diego Roadway Segment Capacity and Level of Service

Road Class	Lanes	A	B	C	D	E
Freeway	8	60,000	84,000	120,000	140,000	150,000
Freeway	6	45,000	63,000	90,000	110,000	120,000
Freeway	4	30,000	42,000	60,000	70,000	80,000
Expressway	6	30,000	42,000	60,000	70,000	80,000

Major Arterial (one-way)	2	10,000	13,000	17,500	20,000	22,500
Collector (two-way)	4	10,000	14,000	20,000	25,000	30,000
Collector (No center lane)	4	5,000	7,000	10,000	13,000	15,000
(Continuous left-turn lane)	2					
Collector (No fronting property)	2	4,000	5,500	7,500	9,000	10,000
Collector (two-way)	3	7,500	10,500	15,000	17,500	20,000
Collector (no center turn lane)	3	4,000	5,500	7,500	10,000	11,500
Collector (Commercial/Industrial fronting)	2	2,500	3,500	5,000	6,500	8,000
Collector (Multi-family)	2	2,500	3,500	5,000	6,500	8,000
Collector (one-way)	3	11,000	14,000	19,000	22,500	26,000
Collector (one-way with one lane dedicated for bike facility)	3	7,500	9,500	12,500	15,000	17,500
Collector (one-way)	2	7,500	9,500	12,500	15,000	17,500
Collector (one-way)	1	2,500	3,500	5,000	6,250	7,500
Sub-Collector (Single family)	2	–	–	2,200	–	–

Notes:

The volumes and the average daily level of service listed above are only intended as a general planning guideline. Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors. Capacities for any classification not identified in the sources noted below were developed based on interpolation from similar classifications.

Sources: City of San Diego Traffic Impact Study Manual, Table 2, Page 8, July 1998.

City of San Diego Planning Department Mobility Section

2.2.4 FREEWAY SEGMENTS

In order to determine the impacts on the study area freeway segments, **Table 2-4** has been developed by Caltrans District 11 and is used as a reference. The procedure involves comparing the peak-hour volume of the mainline freeway segment to the theoretical capacity of the segment, which results in a v/c ratio. The calculated v/c ratio is then compared to the accepted ranges of v/c ratio values corresponding to the respective LOS.

Table 2-4 LOS Criteria For Freeway Segment Analysis

LOS	v/c Ratio	Congestion/Delay	Traffic Description
A	<0.41	None	Free Flow
B	0.41 – 0.62	None	Free to stable flow, light to moderate volumes
C	0.63 – 0.80	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted
D	0.81 – 0.92	Minimal to substantial	Approaches unstable flow, heavy volumes, and very limited freedom to maneuver
E	0.93 – 1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor
F₀	1.01 – 1.25	Considerable 0-1 hour delay	Operations that are unacceptable to most drivers, when the arrival rates exceed the capacity of the intersection
F₁	1.26 – 1.35	Severe 1-2 hour delay	Forced flow, heavy congestion, long queues form behind breakdown points, stop and go
F₃	1.36 – 1.45	Very severe 2-3 hour delay	Extremely heavy congestion, very long queues
F₄	>1.46	Extremely severe 3+ hour delay	Gridlock
Notes: Based on the 1992 Caltrans guidelines.			

2.2.5 FREEWAY RAMP METERING

Ramp metering is a means of controlling the volume of traffic entering the freeway with the goal of improving the traffic operations and flow on the freeway main lanes. Freeway ramp meter analysis estimates the peak hour queues and delays at freeway ramps by comparing existing volumes to the meter rate at the given location. The excess demand, if any, forms the basis for calculating the maximum queues and maximum delays anticipated at each location. Substantial queues and delays can form where demand significantly exceeds the meter rate. This approach assumes a static meter rate throughout the course of the peak hour. However, Caltrans has indicated that the meter rates are continually adjusted based on the level of traffic using the on-ramp. To the extent possible, the meter rate is set such that the queue length does not exceed the available storage, smooth flows on the freeway mainline is maintained, and there is no interference to arterial traffic.

2.3 SIGNIFICANCE DETERMINATION

The City of San Diego and Caltrans have developed acceptable threshold standards to determine the significance of project impacts to intersections, roadway segments, freeway segments, and freeway ramp metering. At intersections, the measurement of effectiveness (MOE) is based on allowable increases in delay. Along roadway segments and freeway segments, the MOE is based on allowable increases in the volume-to-capacity (v/c) ratio. At a freeway ramp meter, the MOE is based on allowable increases in delay, measured in minutes.

LOS F is not acceptable for any approach leg except for side streets on an interconnected arterial system. If vehicle trips from a project cause an intersection approach leg to operate at LOS F, except in the cases of side streets on an interconnected arterial system, this would be considered a significant project traffic impact that requires mitigation. At intersections that are expected to operate at LOS E or F without the project, the allowable increase in delay is two seconds at LOS E and one second at LOS F with the addition of the project. If vehicle trips from a project cause the delay at an intersection to increase by more than the allowable threshold, this would be considered a significant project impact that requires mitigation. Also, if the project causes an intersection that was operating at an acceptable LOS to operate at LOS E or F, this would be considered a significant project impact that requires mitigation.

For roadway segments that are forecasted to operate at LOS E or F with the project, the allowable increase in v/c ratio is 0.02 at LOS E and 0.01 at LOS F. If vehicle trips from a project cause the v/c ratio to increase by more than the allowable threshold, this would be considered a significant project traffic impact that requires mitigation. Also, if the project causes a street segment that was operating at an acceptable LOS to operate at LOS E or F, this would be considered a significant impact that requires mitigation.

Where the roadway segment operates at LOS E or F, if the intersections at the ends of the segment are calculated to operate at an acceptable LOS with the project; and a peak hour HCM arterial analysis for the same segment shows that the segment operates at an acceptable LOS with the project; then the project impacts are determined to be less than significant and no mitigation is required. If analysis shows either the intersections or segment under the peak hour HCM analysis do not operate acceptably, the project impacts are considered significant and unmitigated, requiring the adoption of findings of infeasibility and a statement of over-riding considerations before the project may be approved.

In certain instances mitigation may not be required even if a roadway segment operates at LOS E or LOS F. In such cases the following three conditions must all be met:

1. The roadway is built to its ultimate classification per the community plan;
2. The intersections on both ends of the failing segment operate at an acceptable LOS; and
3. An HCM arterial analysis indicates an acceptable LOS on the segment.

For freeway segments that are forecasted to operate at LOS E or F with the project, the allowable increase in v/c ratio is 0.01 at LOS E and 0.005 at LOS F. If vehicle trips from a project cause the v/c ratio to increase by more than the allowable threshold, this would be considered a significant project traffic impact that requires mitigation. Also, if the project causes a freeway segment that was operating at an acceptable LOS to operate at LOS E or F, this would be considered a significant impact that requires mitigation.

If vehicle trips from a project cause a metered ramp with a delay of 15 minutes per vehicle or higher to increase its delay by more than 2 minutes per vehicle, this would be considered a significant project traffic impact that requires mitigation if the freeway segment operates at LOS E or F.

Two classes of impacts are measured for significance: Direct Impacts and Cumulative Impacts. Direct traffic impacts are those projected to occur at the time the proposed study development becomes operational. During this time, other developments not presently operational but which are anticipated to be operational during the Near Term scenario are included. Cumulative traffic impacts are those projected to occur at some point after the proposed study development becomes operational, such as during subsequent phases

of the project, and when additional proposed developments in the area become operational (short-term cumulative) or when the affected community plan area reaches full planned build out (long-term cumulative). The project applicant would be responsible for mitigating direct impacts by improving operation to better than pre-project conditions. The project applicant would provide their fair share contribution toward installing improvements to mitigate cumulative impacts. A fair share contribution is based on the project's proportionate traffic contribution to future increased traffic volumes on a facility.

Table 2-5 shows the criteria for determining levels of significance for the different facilities in the study area.

Table 2-5 Significance Criteria For Facilities in Study Area

Facility	Measures of Effectiveness (MOE)	Significance Threshold ^(a)
Intersection	Seconds of Delay	>2.0 seconds at LOS E or >1.0 second at LOS F
Roadway Segment	ADT, v/c Ratio	>0.02 at LOS E, or >0.01 at LOS F
Freeway Segment	v/c Ratio	>0.01 at LOS E, or >0.005 at LOS F
Freeway Ramp Meter	Minutes of delay per vehicle	>2.0 minutes for freeway segments operating at LOS E, and > 1.0 minutes for freeway segments operating at LOS F. The criteria only apply for ramp meters where the delay without project is 15 minutes or higher.
<p>Notes: If a project adds any increment of delay to cause the operations of an intersection to go from LOS D to either LOS E or LOS F, then the project is considered to cause a significant impact.</p> <p>Source: City of San Diego Significance Determination Thresholds, page 72, January 2011.</p> <p>(a) Significance threshold applies only when the type of facility operates at LOS E or F.</p>		

3 EXISTING CONDITIONS

This section summarizes the existing roadway circulation network, daily and peak-hour traffic volumes, and operations at the study intersections and roadway and freeway segments.

3.1 ROAD NETWORK

The following section provides a description of the existing study streets within the communities. Ultimate roadway classifications are taken from the Uptown Community Plan, last updated February 1988, the North Park Community Plan, last updated November 1986, and the Golden Hill Community Plan, last updated June 1990. The portions of the roadways described are intended to reflect the areas within the given community, and may not reflect the entirety of the roadway. Functional classifications are based on field observations performed during preparation of this report. **Figures 3-1, 3-2, and 3-3** illustrate the existing roadway classifications for each of the three communities. **Appendix B** provides the existing intersection geometrics used in this study. The City of San Diego Bicycle Master Plan (City BMP) proposes several bicycle facilities in these communities as noted in the roadway descriptions below.

UPTOWN

First Avenue functions as a north-south, 2-lane collector with a curb to curb width of 50 feet between I-5 and Arbor Avenue. It is two-way for the majority of its length between Grape Street and Washington Street, and one-way northbound otherwise. First Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street for the entire length of the street. The posted speed limit is 30 mph. Access to I-5 northbound is provided at the intersection of First Avenue and Elm Street. The ultimate adopted community plan street classification for First Avenue is a 3-lane collector. The City BMP proposes First Avenue as a Class III (Bike Route) facility between downtown and Lewis Street, with the option of a Class II (Bike Lanes) between Upas Street and Washington Street.

Fourth Avenue functions as a north-south roadway varying between a 2-lane collector and a 3-lane collector. It is a one-way southbound 3-lane collector with a curb to curb width of 50 feet between I-5 and Walnut Avenue, a one-way southbound 2-lane collector with a curb to curb width of 45 feet between Walnut Avenue and Washington Street, and a two-way, 2-lane collector with a curb to curb width of 50 feet north of Washington Street. It is currently functioning at its adopted plan ultimate classification. Fourth Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph. It is currently classified as a Class III bicycle route south of Juniper Street and has a striped enhanced Class II (buffered bicycle lane) between Elm Street and Laurel Street. The City BMP identifies Fourth Avenue as a Class III (Bike Route) facility between downtown and Upas Street, as a Class II (Bike Lanes) facility between Upas Street and Washington Street, and a Class III facility between Washington Street and Lewis Street.

Fifth Avenue functions as a one-way northbound 3-lane collector with a curb to curb width of 50 feet between I-5 and Washington Street. It is currently functioning at its adopted plan ultimate classification. Fifth Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph. It is classified as a Class III bicycle route south of Laurel Street and has a striped enhanced Class II (buffered bicycle lane) between Elm Street and Laurel Street. The City BMP identifies Fifth Avenue as a Class II (Bike Lanes) facility between downtown and Washington Street, with the option of a Class III (Bike Route) between University Avenue and Washington Street.

Sixth Avenue functions as a north-south 4-lane collector with no center lane and a curb to curb width of 60 feet between I-5 and University Avenue, and provides access to SR-163 north of University Avenue. From Washington Street to University Avenue, it functions as a 3-lane collector with a curb to curb width of 65 feet. It is currently functioning at its adopted plan ultimate classification. Sixth Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. Balboa Park runs along the east side of Sixth Avenue. The posted speed limit is 30 mph, and it is classified as a Class III bicycle route south of Upas Street. The City BMP proposes Sixth Avenue as a Class II (Bike Lanes) facility between downtown and Upas Street.

Ninth Avenue is a short two-way, north-south roadway with a curb to curb width of 50 feet between University Avenue and Washington Street with a SR-163 southbound off-ramp connection. Ninth Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Campus Avenue functions as a north-south 2-lane collector with a curb to curb width of 50 feet between Washington Street and Madison Avenue. It is currently functioning at its adopted plan ultimate classification. Campus Avenue is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the west side of the street between Madison Avenue and Monroe Avenue and between Van Buren Avenue and Tyler Avenue. Parallel parking is available along the other sections. The posted speed limit is 25 mph.

Cleveland Avenue functions as a 2-lane collector with bike lanes, parallel parking, and sidewalks on both sides of the street with a curb to curb width of 50 feet between Washington Street and Madison Avenue. South of Washington Street, no bike lanes are provided but parallel parking and sidewalks continue to line the street on both sides. It is currently functioning at its adopted plan ultimate classification. The posted speed limit is 25 mph. The City BMP proposes Cleveland Avenue as a Class II (Bike Lanes) facility between Madison Avenue and Richmond Street.

Curlew Street functions as a 2-lane collector with a curb to curb width of 40 feet between Reynard Way and Robinson Avenue. It is currently functioning at its adopted plan ultimate classification. Curlew Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes the entirety of Curlew Street as a Class III (Bike Route) facility.

Elm Street functions as a two-way 3-lane collector with a curb to curb width of 50 feet from First Avenue to Second Avenue, a one-way westbound 2-lane collector with a curb to curb width of 50 feet from Second Avenue to Third Avenue, and a 3-lane collector with a curb to curb width of 50 feet between Third Avenue and Sixth Avenue. It is bounded by an I-5 northbound off-ramp on the east and a northbound I-5 on-ramp on the west. It is currently functioning at its adopted plan ultimate classification. Elm Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Fort Stockton Drive functions as a 2-lane collector with a curb to curb width of 40 feet between Ampudia Street and Eagle Street. It is currently functioning at its adopted plan ultimate classification. Fort Stockton Drive is lined with sidewalks and curbs with parallel parking available on both sides of the street. Bike lanes are provided on Fort Stockton Drive between Witherby Street and Hermosa Way. The posted speed limit is 25 mph.

Front Street is not continuous through the Uptown community with breaks between Washington Street and University Avenue, Robinson Avenue and Brookes Avenue, Spruce Street and Maple Street, and Fir Street and Date Street. For areas south of Washington Street, Front Street is a two-lane roadway with parking allowed that serves residential areas and is not studied in this report. However, the portion of Front Street

north of Washington Street provides access to UCSD Medical Center and is a key circulation roadway that is included in the study. This portion of Front Street functions as a north-south two-way 2-lane collector with a curb to curb width of 40 feet between Dickinson Street and Arbor Drive, a one-way southbound 2-lane collector with a curb to curb width of 40 feet between Arbor Drive and Lewis Street, and a one-way southbound 3-lane collector with a curb to curb width of 50 feet between Lewis Street and Washington Street. Its adopted plan ultimate classification is a 3-lane collector between Arbor Drive and Washington Street. The posted speed limit is 25 mph. Front Street is lined with sidewalks and curbs with parallel parking available on both sides of the street.

Grape Street functions as a one-way eastbound, 3-lane collector with a curb to curb width of 50 feet between I-5 and First Avenue, and as a two-way, 2-lane collector with a curb to curb width of 50 feet between First Avenue and Sixth Avenue. Its adopted plan ultimate classification is a 3-lane collector between First Avenue and Sixth Avenue. Grape Street is lined with sidewalks and curbs. Angle parking is available on the north side of the street between First Avenue and Fourth Avenue, on both sides of the street between Fourth Avenue and Fifth Avenue, and on the south side between Fifth Avenue and Sixth Avenue. The posted speed limit is 25 mph. The City BMP proposes Grape Street as a Class III (Bike Route) facility between First Avenue and Sixth Avenue.

Hawthorn Street functions as a one-way westbound 3-lane collector with a curb to curb width of 50 feet from Brant Street to First Avenue and a two-way, 2-lane collector with a curb to curb width of 50 feet from First Avenue to Sixth Avenue. Its adopted plan ultimate classification is a 3-lane collector for its entirety. Hawthorn Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the north side of the street between Third Avenue and Sixth Avenue. Parallel Parking is available along the other sections. Access is provided to I-5 northbound from Hawthorn Street. The posted speed limit is 30 mph. The City BMP proposes Hawthorn Street as a Class III (Bike Route) facility between First Avenue and Sixth Avenue.

India Street functions as a one-way northbound collector with a varying classification between 2 lanes and 3 lanes and between two-way and one-way between I-5 to San Diego Avenue. North of San Diego Avenue, India Street is a two-way, 2-lane collector until it terminates at Washington Street. India Street is lined with sidewalks and curbs with parallel parking available on the east side of the street only. It runs parallel to I-5, providing access to I-5 northbound at San Diego Avenue. The posted speed limit is 35 mph. The City BMP proposes India Street as a Class II (Bike Lanes) facility between Laurel Street and Washington Street.

Juan Street functions as a 2-lane collector with a curb to curb width of 35 feet between Witherby Street and the community boundary, providing access into the Old Town community. Juan Street was not included in the adopted community plan future classifications. Juan Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph. The City BMP proposes Juan Street as a Class III (Bike Route) facility between Sunset Boulevard and Taylor Street in the Old Town community.

Laurel Street functions as an east-west 4-lane collector with a curb to curb width of 50 feet between I-5 and Union Street, as a 2-lane collector with a two-way left-turn lane with a curb to curb width of 50 feet between Union Street and Sixth Avenue. East of Sixth Avenue, Laurel Street enters Balboa Park and changes name to El Prado. Its adopted plan ultimate classification is a 2-lane collector. Laurel Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes Laurel Street as a Class III (Bike Route) facility between Reynard Way and Sixth Avenue, joining with the existing bike route in Balboa Park to the east.

Lewis Street functions as an east-west 2-lane collector with a curb to curb width of 50 feet between Fort Stockton Drive and Hawk Street, and a one-way, 2-lane eastbound collector with a curb to curb width of 35 feet between Front Street and Fourth Avenue. Natural terrain severs Lewis Street between Goldfinch Street and Albatross Street. It is currently functioning at its adopted plan ultimate classification. Bike lanes are provided between Fort Stockton Drive and Ibis Street. Lewis Street is lined with sidewalks and curbs with parallel parking available on both sides of the street between Fort Stockton Drive and Ibis Street. Angle parking is available on the south side of the street between Ibis Street and Hawk Street. The posted speed limit is 25 mph.

Normal Street functions as a 4-lane major arterial with a curb to curb width of 110 feet between University Avenue and Washington Street, and as a 6-lane major arterial with a curb to curb width of 110 feet between Washington Street and Park Boulevard/El Cajon Boulevard. It is currently functioning at its adopted plan ultimate classification. Normal Street is lined with sidewalks and curbs on both sides of the street, with angled parking available on both sides of the street between University Avenue and Washington Street. The posted speed limit is 30 mph. The City BMP proposes Normal Street as a Class II (Bike Lanes) facility between Washington Street and El Cajon Boulevard.

Park Boulevard changes cross-sections multiple times throughout the study area. It functions as a north-south 2-lane collector with a two-way left-turn lane and a curb to curb width of 65 feet between Upas Street and Cypress Avenue, a 3-lane collector (2 northbound, 1 southbound) with a curb to curb width of 65 feet between Cypress Avenue and Essex Street, a 4-lane major with a curb to curb width of 110 feet between Essex Street and Normal Street/El Cajon Boulevard, a 3-lane collector with a curb to curb width of 50 feet between Normal Street/El Cajon Boulevard and Meade Avenue, and a 2-lane collector with a continuous two-way left-turn lane and a curb to curb width of 50 feet between Meade Avenue and Adams Avenue. Its adopted plan ultimate classification is to be a 4-lane major between Upas Street and Washington Street. Park Boulevard is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on both sides of the street between Normal Street and University Avenue. Parallel parking is along the other sections. The posted speed limit is 35 mph between Upas Street and Washington Street, and 30 mph north of Washington Street. Park Boulevard serves as the community boundary between Uptown and North Park. Beyond these communities, it continues into Balboa Park providing access to the attractions within the park including the San Diego Zoo. Park Boulevard is classified as a Class III bicycle facility. The City BMP proposes Park Boulevard as a Class II (Bike Lanes) facility between Adams Avenue and Upas Street, and throughout Balboa Park, with the option of keeping Class III (Bike Route) facilities between Upas Street and El Cajon Boulevard/Normal Street and north of Madison Avenue.

Reynard Way functions as a 2-lane collector with a continuous left-turn lane and a curb to curb width of 55 feet between Torrance Street and Maple Street. Reynard Way becomes Goldfinch Street north of Torrance Street and becomes State Street south of Maple Street. The posted speed limit is 30 mph. It is currently functioning at its adopted plan ultimate classification. Reynard Way is lined with sidewalks and curbs on both sides of the street. The City BMP proposes the entirety of Reynard Way as a Class III (Bike Route) facility.

Richmond Street functions as a north-south 2-lane collector with a curb to curb width of 50 feet between Upas Street and Washington Street. Its adopted plan ultimate classification is to be a 3-lane collector between Cleveland Avenue and Robinson Avenue, and a 2-lane collector between Robinson Avenue and Upas Street. Richmond Street is lined with sidewalks and curbs with parallel parking allowed on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes Richmond Street as a Class II (Bike Lanes) facility between Upas Street and Cleveland Avenue.

Robinson Avenue functions as an east-west 2-lane collector with a curb to curb width of 35 feet between Curlew Street and Park Boulevard. Between Vermont Street and Park Boulevard, Robinson Avenue functions as a 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet. It is currently functioning at its adopted plan ultimate classification. Robinson Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. Parking is not available between 5th Avenue and 7th Avenue. It provides access to and from SR-163 between Eighth Avenue and Tenth Avenue. The posted speed limit is 25 mph between Curlew Street and Tenth Avenue and 30 mph between Tenth Avenue and Park Boulevard. The City BMP proposes Robinson Avenue as Class III (Bike Route) facility between First Avenue and Park Boulevard, and continuing east of Park Boulevard as a Bicycle Boulevard facility providing connection to Alabama Street.

San Diego Avenue functions as a 2-lane collector with a curb to curb width of 50 feet between India Street and the community boundary, with one segment between McKee Street and Washington Street that functions as a 3-lane collector with a curb to curb width of 50 feet. The roadway is one-way northbound between California Street and India Street. This roadway provides a connection to the Old Town community. It is currently functioning at its adopted plan ultimate classification. San Diego Avenue is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the east side of the street between Washington Street and India Street. Parallel parking is along the other sections. The posted speed limit is 35 mph. The City BMP proposes San Diego Avenue as a Class II (Bike Lanes) facility between India Street and Congress Street.

State Street functions as a 2-lane collector with a curb to curb width of 50 feet between Juniper Street and Laurel Street. It was not included in the future classifications. State Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes State Street as a Class III (Bike Route) facility between Laurel Street and downtown.

Sunset Boulevard functions as an east-west 2-lane collector with bike lanes and a curb to curb width of 50 feet between Witherby Street and Fort Stockton Drive. It is lined with sidewalks and curbs with parallel parking available on both sides of the street. It is currently functioning at its adopted plan ultimate classification. The posted speed limit is 25 mph.

University Avenue functions as an east-west 2-lane collector with a curb to curb width of 45 feet between Washington Street and Fifth Avenue, as a 4-lane collector between Fifth Avenue and Eighth Avenue (varying between with and without a center lane), as a 4-lane major between Vermont Street and Normal Street, and a 4-lane collector between Normal Street and Park Boulevard. University Avenue has a curb to curb width of 60 feet between Fifth Avenue and Tenth Avenue, 110 feet between Tenth Avenue and Normal Street, and 50 feet between Normal Street and Park Boulevard. It is currently functioning at its adopted plan ultimate classification. University Avenue is lined with sidewalks and curbs on both sides of the street. Angle parking is available on both sides of the street between Vermont Street and Normal Street. Parallel parking is available along the other sections between Fifth Avenue and Park Boulevard. The posted speed limit is 25 mph between Washington Street and Park Boulevard. It is classified as a Class III bicycle facility between Goldfinch Street and Third Avenue. The City BMP proposes University Avenue as a Class II (Bike Lanes) facility east of First Avenue beyond the community boundaries, with the option of a Class III (Bike Route) facility between Fifth Avenue and Florida Street.

Upas Street functions as an east-west 2-lane collector with a curb to curb width of 50 feet between Front Street and Sixth Avenue, and provides access to Balboa Park. Upas Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. It is classified as

a Class III bicycle facility east of Third Avenue. The City BMP proposes Upas Street as a Class III (Bike Route) facility between First Avenue and Third Avenue as well.

Washington Street functions as an east-west 4-lane major with a curb to curb width of 80 feet between I-5 and Richmond Street, and as a 6-lane major between Richmond Street and Normal Street. It is currently functioning at its adopted plan ultimate classification. Washington Street does not have sidewalks or curbs between I-5 and Hawk Street, and between SR-163 and Lincoln Avenue. It is lined with sidewalks and curbs on both sides of the street throughout the rest of the segment. Parallel parking is available on select segments between Hawk Street and Park Boulevard. The posted speed limit is 45 mph between I-5 and Hawk Street, and 35 mph from Hawk Street to Park Boulevard. It is classified as a Class II (Bike Lanes) facility between University Avenue and India Street. The City BMP proposes the entirety of Washington Street as a Class II (Bike Lanes) facility.

NORTH PARK

30th Street functions as a north-south 2-lane collector with a curb to curb width of 50 feet between Juniper Street and Upas Street and a 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Upas Street and Adams Avenue. It is currently functioning at its adopted plan ultimate classification. 30th Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes the entirety of 30th Street as either a Class II (Bike Lanes) or Class III (Bike Route) facility. 30th Street is the main roadway connecting the North Park community with the Golden Hill community.

32nd Street functions as a north-south 2-lane collector with a curb to curb width of 45 feet between Juniper Street and Howard Avenue. Its adopted plan ultimate classification is a 3-lane collector between Landis Street and Lincoln Avenue and a 2-lane collector for the remaining portions. 32nd Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Adams Avenue functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Park Boulevard and I-805. It is currently functioning at its adopted plan ultimate classification. 32nd Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the north side of the street from Mission Cliff Drive to Park Boulevard. Parallel parking is available along the other sections, The posted speed limit is 25 mph. The City BMP proposes Adams Avenue as either a Class II (Bike Lanes) or Class III (Bike Route) facility between Park Boulevard and communities east of North Park.

Boundary Street functions as a 2-lane collector with a curb to curb width of 40 feet between Maple Street and Myrtle Avenue and a one-way southbound 1-lane collector with a curb to curb width of 25 feet between Myrtle Avenue and North Park Way, with I-805 off-ramps at North Park Way. Boundary Street is lined with sidewalks and curbs with parallel parking available on both sides of the street for this portion. North of North Park Way, Boundary Street parallels I-805 as a 2-lane collector and provides sidewalk and curb on the west side of the street only. The posted speed limit is 25 mph. It is currently functioning at its adopted plan ultimate classification. The City BMP proposes Boundary Street as either a Class II (Bike Lanes) or Class III (Bike Route) facility between Lincoln Avenue and Landis Street and as a Class III facility from Landis Street to its southern terminus where a Class I (Bike Path) is proposed to provide connections with C Street and Ash Street.

Commonwealth Avenue is a short segment functioning as a 2-lane collector with a curb to curb width of 35 feet between Boundary Street and Juniper Street. It is currently functioning at its adopted plan ultimate

classification. Commonwealth Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes Commonwealth Avenue as a Class III (Bike Route) facility between Boundary Street and Juniper Street.

El Cajon Boulevard functions as an east-west 6-lane major between Park Boulevard and I-805. It is currently functioning at its adopted plan ultimate classification. El Cajon Boulevard provides access to I-805 northbound and southbound. It is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 35 mph. The City BMP proposes El Cajon Boulevard as a Class II (Bike Lanes) facility between Park Boulevard and east to adjacent communities, with the option of a Class III (Bike Route) between Park Boulevard and Utah Street.

Florida Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between Upas Street and El Cajon Boulevard. It is currently functioning at its adopted plan ultimate classification. Florida Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. It continues south into Balboa Park and changes name to Florida Drive. The posted speed limit is 25 mph. The City BMP proposes Florida Street as a Class II (Bike Lanes) facility between Upas Street and University Avenue, and as a Class III (Bike Route) facility between University Avenue and Adams Avenue.

Howard Avenue functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Park Boulevard and 32nd Street. It is currently functioning at its adopted plan ultimate classification. Howard Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. It continues east over I-805 and changes name to Orange Avenue. The posted speed limit is 25 mph and it is currently a designated Class III (Bike Route) facility. The City BMP proposes Howard Avenue as a dedicated Bicycle Boulevard between Georgia Street and east beyond the community boundary.

Juniper Street functions as an east-west 2-lane collector with a curb to curb width of 50 feet between 29th Street and Pentuckett Avenue. It is currently functioning at its adopted plan ultimate classification. Juniper Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the north side of the street west of 30th Street. Parallel parking is available along the other sections. The posted speed limit is 25 mph. The City BMP proposes Juniper Street as a Class III (Bike Route) between 30th Street and Commonwealth Avenue.

Landis Street functions as a 2-lane collector with a curb to curb width of 50 feet between Boundary Street and Nile Street and provides access across I-805. Its adopted plan ultimate classification is a 3-lane collector for this section. Landis Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes Landis Street as a Bicycle Boulevard between Alabama Street and Utah Street, as a Class III (Bike Route) facility between Utah Street and Boundary Street, joining the existing bike lanes east of Boundary Street.

Lincoln Avenue functions as an east-west 2-lane collector with a curb to curb width of 50 feet between Washington Street and Utah Street, and a 2-lane collector with a continuous two-way left-turn lane and a curb to curb width of 50 feet between Utah Street and I-805. Its adopted plan ultimate classification would be changing the section between Utah Street and I-805 into a two-way couplet system with University Avenue. Lincoln Avenue is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the north side of the street between Hamilton Street and Idaho Street. Parallel parking is available along the other sections. The posted speed limit is 25 mph west of 30th Street and 30 mph east of 30th Street. The City BMP proposes Lincoln Avenue as a Class II (Bike Lanes) facility between its western terminus and Park Boulevard, and as a Class III (Bike Route) facility between Park Boulevard and University Avenue with an option of a Class II (Bike Lanes) facility between 30th Street and Boundary Street.

Madison Avenue functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Park Boulevard and Texas Street and as a 2-lane collector with a curb to curb width of 50 feet between Texas Street and Boundary Street. Its adopted plan ultimate classification is a 2-lane collector for the entirety of the roadway. Madison Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Meade Avenue functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Cleveland Avenue and I-805, except between Campus Avenue and Park Boulevard where it is a 2-lane collector with a curb to curb width of 50 feet. Its adopted plan ultimate classification would be changing the section between Utah Street and I-805 into a two-way couplet system with University Avenue. Meade Avenue is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the south side of the street between North Avenue and Park Boulevard. Parallel parking is available along the other sections. The posted speed limit is 25 mph west of 30th Street and 30 mph east of 30th Street. The City BMP proposes Meade Avenue as a dedicated Bicycle Boulevard between Maryland Street and the community boundary to the east.

Mission Avenue runs diagonally through the grid network and functions as a one-way 2-lane collector with a curb to curb width of 50 feet between Park Boulevard and Texas Street. It is currently functioning at its adopted plan ultimate classification. Mission Avenue is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the north side of the street between Mississippi Avenue and Louisiana Street. Parallel parking is available along the other sections. The posted speed limit is 25 mph.

Monroe Avenue functions as an east-west 2-lane collector with a curb to curb width of 50 feet between Maryland Street and Ohio Street. Its adopted plan ultimate classification would be a 3-lane collector with a two-way left-turn lane. Monroe Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Nile Street functions as a 2-lane collector with a curb to curb width of 50 feet between Thorn Street and Landis Street. It is currently functioning at its adopted plan ultimate classification. Nile Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

North Park Way functions as an east-west 2-lane collector between Utah Street and Boundary Street. North Park Way has a curb to curb width of 50 feet between Utah Street and Ray Street and 40 feet between Ray Street and Boundary Street. It is currently functioning at its adopted plan ultimate classification. North Park Way is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on both sides of the street west of 30th Street. Parallel parking is available along the other sections. The posted speed limit is 25 mph.

Pentuckett Avenue functions as a north-south 2-lane collector with a curb to curb width of 40 feet between Juniper Street and the south end of the road near SR-15. It is currently functioning at its adopted plan ultimate classification. Pentuckett Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Redwood Street functions as an east-west 2-lane collector with a curb to curb width of 40 feet between Pershing Drive and Boundary Street. It is currently functioning at its adopted plan ultimate classification. Redwood Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

Texas Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between Upas Street and University Avenue, a 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between University Avenue and Mission Avenue, and transitioning to a 3-lane major with a curb to curb width of 60 feet between Mission Avenue and I-8. Its adopted plan ultimate classification would change it to a 4-lane major from El Cajon Boulevard to I-8. Texas Street is lined with sidewalks and curbs with parallel parking available on both sides of the street between Upas Street and Madison Street. From Madison Street to I-8, Texas Street runs through a canyon area; bike lanes are provided on both sides and sidewalk is provided on the west side. The posted speed limit is 25 mph between Upas Street and Madison Avenue, and 40 mph between Madison Avenue and I-8. The City BMP proposes the entirety of Texas Street as a Class II (Bike Lanes).

University Avenue functions as an east-west 4-lane collector with no center lane and a curb to curb width of 50 feet between Park Boulevard and Boundary Street, except between 30th Street and 32nd Street where it is a 3-lane collector (2 eastbound, 1 westbound) with a curb to curb width of 50 feet. Its adopted plan ultimate classification would be changing the section between Utah Street and I-805 into a two-way couplet system with Lincoln Avenue. University Avenue is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph between Park Boulevard and Utah Street and 25 mph between Utah Street and Boundary Street. The City BMP proposes University Avenue as a Class II (Bike Lanes) facility for all segments within the community boundaries with the option of a Class III (Bike Route) between Park Boulevard and Florida Street.

Upas Street functions as an east-west 2-lane collector with a curb to curb width of 40 feet between Alabama Street and Pershing Drive and between 30th Street and Boundary Street, and as a 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between Pershing Drive and 30th Street. It is currently functioning at its adopted plan ultimate classification. No sidewalks or curb are provided on the south side. East of Pershing Drive, Upas Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. Between Alabama Street and Pershing Drive, Upas Street borders Balboa Park to the north. Upas Street is classified as a Class III bicycle facility. The City BMP proposes Upas Street as a Class II (Bike Lanes) facility between Alabama Street and 30th Street with the option of a Class III (Bike Route) facility between Alabama Street and Pershing Avenue. Upas Street west of Morley Field Drive and 30th Street, and as a Class III facility between 30th Street and Boundary Street.

Utah Street functions as a north-south 2-lane collector with bike lanes and a curb to curb width of 50 feet between Upas Street and Copley Avenue, with a 3-lane section between Lincoln Avenue and University Avenue. Its adopted plan ultimate classification is a 3-lane collector. Utah Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the west side of the street between North Park Way and Gunn Street. Parallel parking is available along the other sections. The posted speed limit is 25 mph along Utah Street, except between University Avenue and El Cajon Boulevard where it increased to 30 mph.

GOLDEN HILL

25th Street functions as a north-south 4-lane collector with a curb to curb width of 60 feet between SR-94 and B Street, and a 2-lane collector with a center turn lane and a curb to curb width of 60 feet between B Street and Russ Boulevard. It is currently functioning at its adopted plan ultimate classification. 25th Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. 25th Street provides access to SR-94 eastbound and also connects with Balboa Park to the north. The City BMP proposes 25th Street as a Class III (Bike Route) facility between Balboa Park and downtown with the option of a Class II (Bike Lanes) facility between Broadway and Market Street.

26th Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between F Street and Russ Boulevard. It is currently functioning at its adopted plan ultimate classification. 26th Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

28th Street functions as a north-south 2-lane collector with a curb to curb width of 50 feet between SR-94 and Russ Boulevard. Its adopted plan ultimate classification is a 3-lane collector between SR-94 and B Street. 28th Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the east side of the street between A Street and B Street and on the west side of the street between C Street and Broadway. Parallel parking is available along other sections. The posted speed limit is 30 mph. 28th Street provides access to SR-94 eastbound and westbound. North of A Street, 28th Street serves as the eastern boundary of Balboa Park. 28th Street is classified as a Class III (Bike Route) facility south of Broadway. The City BMP proposes Class II (Bike Lane) between Broadway and SR-94, extending the 28th Street Class III (Bike Route) facility from Broadway north to Beech Street, and Class I (Bike Path) north of Beech Street.

30th Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between SR-94 and A Street where it changes name to Fern Street. 30th street picks up again offset one block to the west as a 2-lane collector with a curb to curb width of 50 feet. Its adopted plan ultimate classification has 30th Street as a 3-lane collector between SR-94 and C Street. It is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the west side of the street between Newton Avenue and National Avenue, between Greely Avenue and Ocean View Boulevard, and between Grape Street and Hawthorn Street. Parallel parking is available along other sections. The posted speed limit is 30 mph. 30th Street is classified as a Class III bicycle facility. The City BMP proposes 30th Street as either a Class II (Bike Lanes) or Class III (Bike Route) facility north of Upas Street and a Class Iii (Bike Route) south of Upass Street. 30th Street and Fern Street is the main roadway connecting the Golden Hill community with the North Park community.

31st Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between B Street and Cedar Street and between Grape Street and Juniper Street, and as a one-way southbound 1-lane collector with a curb to curb width of 25 feet between Grape Street and Cedar Street. It is currently functioning at its adopted plan ultimate classification. 31st Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph.

B Street functions as an east-west 4-lane collector with no center lane and a curb to curb width of 50 feet between I-5 and 20th Street, and as a 2-lane collector with a curb to curb width of 50 feet between 20th Street and 32nd Street. It is currently functioning at its adopted plan ultimate classification. B Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph. The City BMP proposes B Street as a Class III (Bike Route) facility between 19th Street and Fern Street and as a Class II (Bike Lanes) facility west of 19th Street. B Street provides access to I-5 and downtown San Diego.

Beech Street functions as an east-west 2-lane collector with a curb to curb width of 50 feet between 28th Street and Fern Street. It is currently functioning at its adopted plan ultimate classification. Beech Street is lined with sidewalks and curbs with parking available on both sides of the street. Angle parking is available on the south side of the street between Dale Street and 30th Street. Parallel parking is available along other sections. The posted speed limit is 30 mph. The City BMP proposes Beech Street as a Class III (Bike Route) facility between 28th Street and Edgemont Street.

Broadway functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between 19th Street and 29th Street, and as a 2-lane collector with a curb to curb width of 50 feet east of 29th Street with widening by the SR-94 ramps. Its adopted plan ultimate classification would be a 4-lane major for the portion east of 30th Street. Broadway is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. Broadway provides access to SR-94 and downtown San Diego. Broadway is classified as a Class III bicycle facility. The City BMP proposes Broadway Street as potentially being a Class II (Bike Lanes) facility between 19th Street and 22nd Street and between 28th Street and SR-94.

C Street functions as an east-west 2-lane collector with a two-way left-turn lane and a curb to curb width of 50 feet between I-5 and 29th Street, and as a 2-lane collector with a curb to curb width of 50 feet between 29th Street and Delevan Drive. Its adopted plan ultimate classification is a 2-lane collector. C Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph. The City BMP proposes C Street as a Class III (Bike Route) facility between 19th Street and Delevan Drive.

Cedar Street functions as an east-west 2-lane collector between Fern Street and Gregory Street. Cedar Street has a curb to curb width of 40 feet between Fern Street and Edgemont Street and 40 feet between Edgemont Street and Gregory Street. It is currently functioning at its adopted plan ultimate classification. The segment between 32nd Street and Gregory Street is not identified in the future classifications. Cedar Street is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 30 mph.

Fern Street functions as a north-south 2-lane collector with a curb to curb width of 40 feet between C Street and Juniper Street. Its adopted plan ultimate classification has Fern Street as a 3-lane collector between C Street and A Street. It is lined with sidewalks and curbs with parallel parking available on both sides of the street. The posted speed limit is 25 mph. The City BMP proposes Fern Street as a Class III (Bike Route) north of B Street, a Class II (Bike Lanes) between B Street and SR-94 with the option of a Class III (Bike Route) facility between Broadway and SR-94.

Grape Street functions as an east-west 2-lane collector between 28th Street and Marlton Drive. Grape Street has a curb to curb width of 50 feet between 28th Street and 31st Street and 40 feet between 31st Street and Marlton Drive. It is currently functioning at its adopted plan ultimate classification. Grape Street is lined with sidewalks and curbs with parking available on both sides of the street. The posted speed limit is 25 mph.

FREEWAYS

Interstate 5 is a significant north-south interstate that traverses the United States from the Mexico border to the Canadian border through the states of California, Oregon, and Washington. Within California, I-5 connects the following major metropolitan areas: San Diego, Los Angeles, Sacramento, and the eastern portion of the San Francisco Bay Area. I-5 can be directly accessed from the Uptown and Golden Hill communities and provides access to I-8, SR-163, and SR-94 within the vicinity of the study area.

Interstate 8 is a significant east-west interstate that traverses from the western coast of San Diego to central Arizona. I-8 runs just north of the study communities, with direct access from Texas Street. I-8 provides connections with I-5, SR-163, and I-805 within the vicinity of the study area.

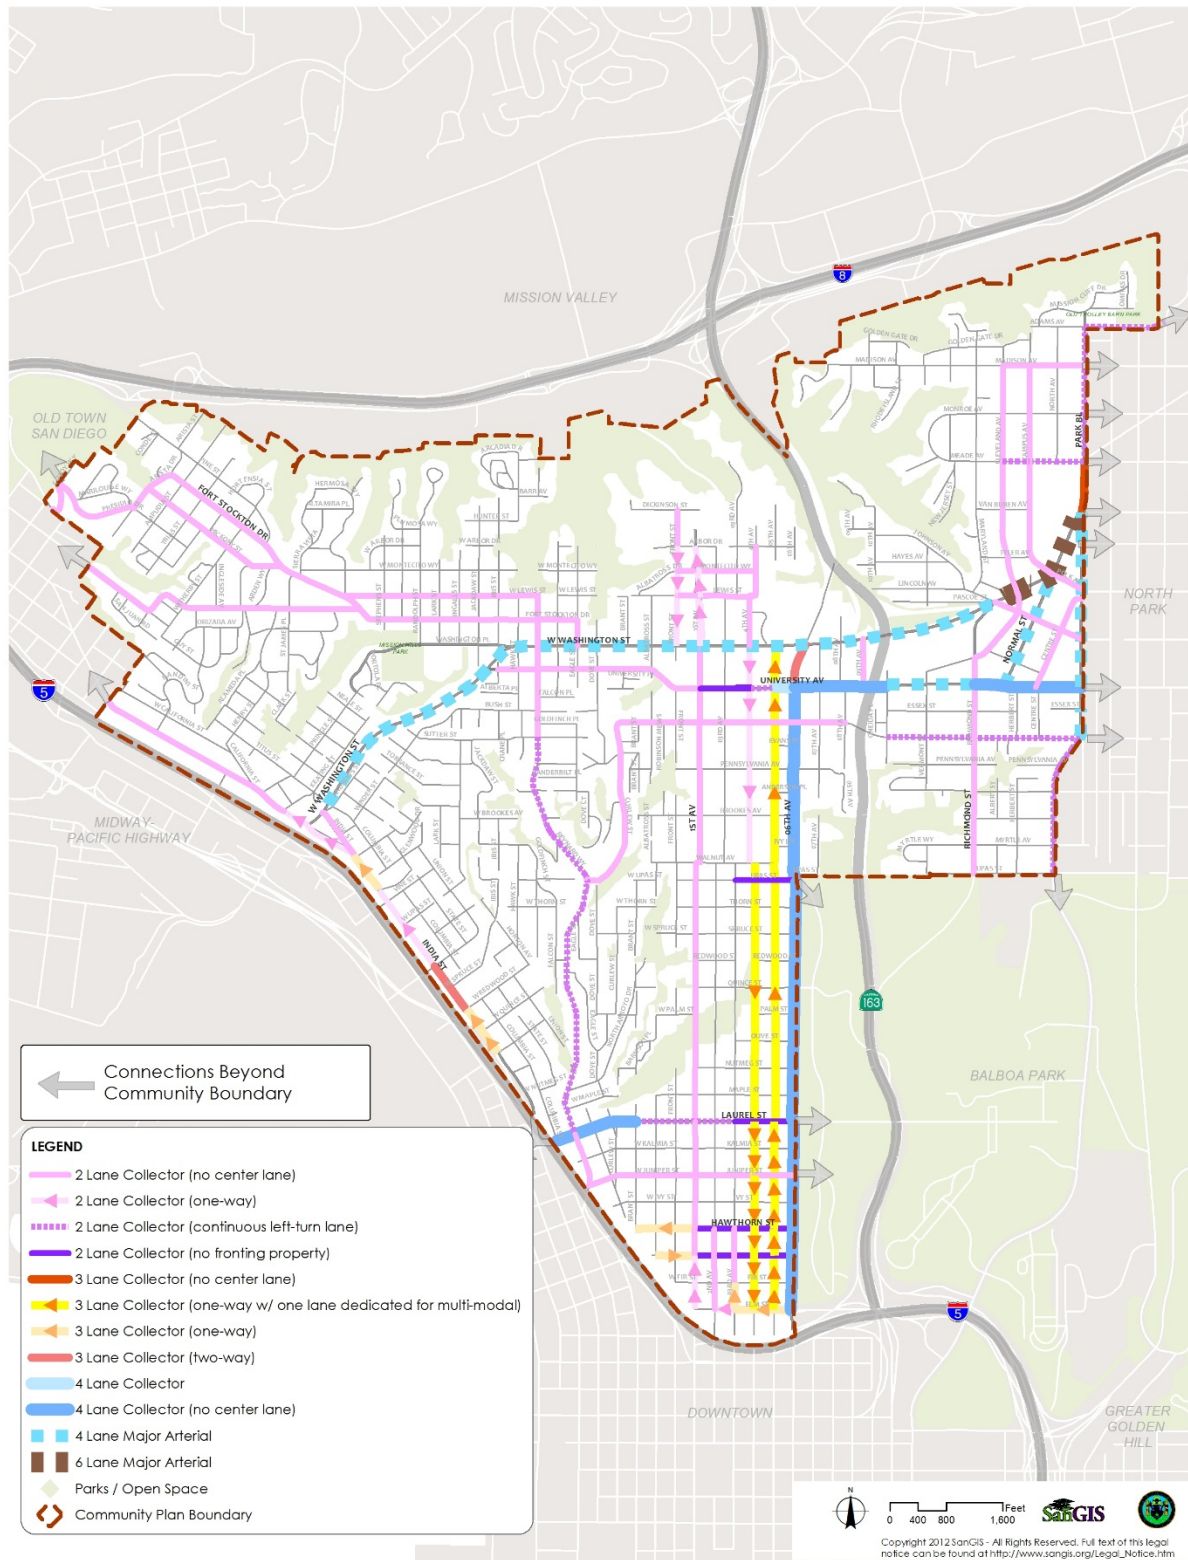

State Route 15 / Interstate 15 is a significant north-south interstate that traverses from San Diego to Salt Lake City through the states of California, Nevada, and Utah. SR-15 can be accessed by SR-94 and I-805, but direct access is not provided from within the vicinity of the study area.

Interstate 805 is largely contained within the San Diego metropolitan area. Termini are both located along Interstate 5, one near the Mexico border and the other near the Torrey Pines State Reserve and the University of California at San Diego. I-805 can be directly accessed from the North Park community and provides connections with I-8, SR-94 and SR-15 within the vicinity of the study area.

State Route 94 connects San Diego with the rural areas east of San Diego. Termini are located at downtown San Diego and at I-8 near the community of Boulevard in southeastern San Diego County. SR-94 can be directly accessed from the Golden Hill community and provides connections with I-5, SR-15 and I-805 within the vicinity of the study area.

State Route 163 is contained within the San Diego metropolitan area. Termini are located along Interstate 5 near Balboa Park, and along I-15 near Miramar. SR-163 can be directly accessed from the Uptown and North Park communities and provides connections with I-8 and I-5 within the vicinity of the study area.

3.2 TRAFFIC VOLUMES

The peak-hour intersection turning movements and roadway segment traffic data were obtained from several sources. Prior to data collection and in coordination with the City, the count data was compared against adjacent segments with more recent count data, if applicable, and volumes in the City's traffic model. At locations where volumes were determined to not be reasonable, whether new development has occurred or older count data was not similar enough to more recent count information in the area, new counts were obtained as part of the data collection process for this project. Where appropriate, traffic counts from previous studies were utilized, including the Hillcrest Mobility Study and University Avenue Mobility Plan. The City of San Diego also provided counts that they had performed in 2007 to calibrate their traffic planning model. The rest of the locations were counted by True Count in 2010 or were obtained through the latest City of San Diego traffic count database (2010).

In accordance with the City of San Diego *Traffic Impact Study Manual* (1998), traffic counts should be no greater than two years old. Therefore, since the counts were gathered between 2006 and 2010, validation was required to determine if the counts still represent current traffic conditions for this report. Consequently, the roadway segment ADT counts were compared to current (i.e., Year 2012 and 2013) City of San Diego and Caltrans machine counts available for the Cluster communities and adjacent freeway ramp facilities to determine if the counts included were still valid. It was concluded that traffic volumes for all three communities stayed within a 10-percent fluctuation and the volume counts originally collected were still valid for use. Thus, although count dates may not be consistent, the volumes provide a good representation of volumes for existing conditions for a planning level study.

The existing traffic volume data is contained in **Appendix C**. Since the count data was obtained more than two years ago, justification that the count data is still applicable is also provided in the appendix.

Figures 3-4, 3-5, 3-6, and 3-7 display the existing peak-hour traffic volumes at the study intersections for each community. **Figures 3-8, 3-9 and 3-10** illustrate the existing ADT volumes along the roadway segments in the study area for each community.

3.3 INTERSECTION ANALYSIS

Tables 3-1, 3-2 and 3-3 display the LOS analysis results for the study intersections under Existing Conditions. As shown in the table and figures, all intersections currently operate at LOS D or better during both peak periods, except for the following intersections:

UPTOWN

- Washington Street & Eighth Ave/SR-163 Off-Ramp (LOS F – p.m. peak)

At the intersection of Washington Street and SR-163, the eastbound through volumes are over 2,100 during the p.m. peak period. The existing two eastbound lanes do not have the capacity to adequately handle this demand.

NORTH PARK

- Madison Avenue & Texas Street (LOS E – a.m. peak)
- El Cajon Boulevard & Texas Street (LOS F – p.m. peak)
- El Cajon Boulevard & I-805 SB Ramps (LOS F – p.m. peak)
- University Avenue & Texas Street (LOS E – p.m. peak)

At the intersection of Madison Avenue and Texas Street, there are 307 vehicles making the eastbound left turn movement from Madison Avenue to Texas Street in the a.m. peak, which is above the capacity of the single left turn lane that is provided.

At the intersection of El Cajon Boulevard and Texas Street, the southbound movement does not have adequate time to pass all the vehicles through the intersection given the existing timing plan. The southbound movement is split phased.

At the intersection of El Cajon Boulevard and I-805 SB Ramps, the poor LOS is primarily caused by the southbound right turn movement having to merge with traffic on El Cajon Boulevard. The southbound right turn movement has 793 vehicles during the p.m. peak trying to merge into the closest of three lanes that are carrying 943 westbound through vehicles. Delays at the merge point can affect the speeds on the ramp and the overall intersection operations.

At the intersection of University Avenue and Texas Street there is a pedestrian-only phase and split phasing for the northbound and southbound movements. There is a good amount of vehicles coming from all directions at this intersection and the timing cannot keep the delays down for every movement, especially when pedestrians are using the intersection frequently as well.

GOLDEN HILL

- B Street & 17th St/I-5 SB Off-Ramp (LOS F – a.m. peak)
- SR-94 WB Ramps & Broadway (LOS F – both peaks)
- SR-94 WB Ramps & 28th Street (LOS E – a.m. peak, LOS F – p.m. peak)
- SR-94 EB Ramps & 28th Street (LOS F – p.m. peak)

At the intersection of B Street and I-5 Southbound Off-Ramp, vehicles looking to go through the intersection in the southbound direction have trouble finding gaps in traffic. During the a.m. peak, there are 1,159 vehicles in the westbound direction that the southbound through movement has to cross. Gaps are created briefly when the upstream traffic signal changes phases, but it does not provide enough gaps for all the vehicles to cross.

At the intersection of SR-94 Westbound Ramps and Broadway, the westbound left-turn movement from the off-ramp is stop-controlled while Broadway has free movements. These left turning vehicles have to wait for gaps in traffic along Broadway. Due to the volumes on Broadway, gaps are not provided often enough to operate at an adequate LOS during either peak-hour.

At the intersections of SR-94 Westbound Ramps and 28th Street and SR-94 Eastbound Ramps and 28th Street, the westbound left-turn movements from the off-ramps are stop-controlled while 28th Street has free movements. These left turning vehicles have to wait for gaps in traffic along 28th Street. Due to the volume on 28th Street, gaps are not provided often enough to operate at an adequate LOS during either peak-hour.

Appendix D contains the LOS calculation worksheets.

Notes: Bold values indicate intersections operating at LOS E or F. ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds. (a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a one-way or two-way stop-controlled intersection, delay refers to the worst movement. (b) LOS calculations are based on the methodology outlined in the 2000 <i>Highway Capacity Manual</i> and performed using Synchro 7.0

Notes: Bold values indicate intersections operating at LOS E or F. ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds. (a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a one-way or two-way stop-controlled intersection, delay refers to the worst movement. (b) LOS calculations are based on the methodology outlined in the <i>2000 Highway Capacity Manual</i> and performed using Synchro 7.0

3.4 ROADWAY SEGMENT ANALYSIS

Tables 3-4 through 3-10 display the roadway segments analysis under Existing Conditions for a typical weekday. As shown in the table, based on planning-level analysis using ADT volumes, it is estimated that all roadway segments function at an acceptable LOS D or better in the study area, except for the following segments. The segments listed below have volumes near or above their existing capacity, resulting in periods of congestion.

UPTOWN

- First Avenue between Washington Avenue and University Avenue (LOS E)
- First Avenue between University Avenue and Robinson Avenue (LOS F)
- First Avenue between Robinson Avenue and Pennsylvania Avenue (LOS E)
- First Avenue between Pennsylvania Avenue and Walnut Avenue (LOS E)
- First Avenue between Laurel Street and Hawthorn Street (LOS E)
- Fourth Avenue between Arbor Drive and Washington Avenue (LOS F)
- Sixth Avenue between University Avenue and Robinson Avenue (LOS F)
- Sixth Avenue between Robinson Avenue and Upas Street (LOS F)
- Sixth Avenue between Upas Street and Laurel Street (LOS F)
- Cleveland Avenue between Lincoln Street and Richmond Street (LOS E)
- Fort Stockton Drive between Hawk Street and Goldfinch Street (LOS F)
- India Street between Glenwood Drive and Sassafras Street (LOS F)
- India Street between Sassafras Street and Redwood Street (LOS E)
- Laurel Street between Columbia Street and Union Street (LOS E)
- Lincoln Avenue between Washington Street and Park Boulevard (LOS F)
- Park Boulevard between Adams Avenue and Mission Avenue (LOS E)
- Park Boulevard between Mission Avenue and El Cajon Boulevard (LOS F)
- Richmond Street between Cleveland Avenue and University Avenue (LOS E)
- Robinson Avenue between Third Avenue and Eighth Avenue (LOS F)
- University Avenue between Ibis Street and Albatross Street (LOS F)
- University Avenue between Albatross Street and First Avenue (LOS F)
- University Avenue between First Avenue and Fourth Avenue (LOS F)
- University Avenue between Fourth Avenue and Fifth Avenue (LOS F)
- University Avenue between Sixth Avenue and Eighth Avenue (LOS F)
- University Avenue between Normal Street and Park Boulevard (LOS F)
- Washington Street between Fifth Avenue and Sixth Avenue (LOS E)
- Washington Street between Sixth Avenue and Richmond Street (LOS F)

NORTH PARK

- 30th Street between Upas Street and Redwood Street (LOS F)
- 30th Street between Redwood Street and Juniper Street (LOS F)
- 32nd Street between Myrtle Avenue and Upas Street (LOS E)
- Adams Avenue between 30th Street and West Mountain View Drive (LOS F)
- Boundary Street between University Avenue and North Park Way (LOS F)
- El Cajon Boulevard between Illinois Street and I-805 Ramps (LOS E)
- Texas Street between Adams Avenue and Mission Avenue (LOS E)
- Texas Street between Mission Avenue and El Cajon Boulevard (LOS F)
- University Avenue between Park Boulevard and Florida Street (LOS F)
- University Avenue between Florida Street and Texas Street (LOS F)

- University Avenue between Texas Street and Oregon Street (LOS F)
- University Avenue between Oregon Street and Utah Street (LOS F)
- University Avenue between Utah Street and 30th Street (LOS F)
- University Avenue between 30th Street and Illinois Street (LOS F)
- University Avenue between Illinois Street and Iowa Street (LOS F)
- University Avenue between Iowa Street and 32nd Street (LOS F)
- University Avenue between 32nd Street and Boundary Street (LOS F)
- Upas Street between Alabama Street and Texas Street (LOS E)
- Upas Street between Texas Street and Pershing Road (LOS E)

GOLDEN HILL

- 26th Street between Russ Boulevard and B Street (LOS F)
- 28th Street between C Street and Broadway (LOS F)
- 28th Street between Broadway and SR-94 (LOS F)
- 30th Street between A Street and Broadway (LOS F)
- Broadway between 30th Street and SR-94 (LOS F)
- Fern Street between Juniper Street and Grape Street (LOS F)
- Fern Street between Grape Street and A Street (LOS F)

Notes:					
Bold values indicate roadway segments operating at LOS E or F.					
Capacity for non-standard roadway classifications were provided by City of San Diego staff.					
(a) The v/c Ratio is calculated by dividing the ADT volume by each respective roadway segment's capacity.					

3.5 FREEWAY SEGMENT ANALYSIS

Freeway volumes were obtained from Caltrans and reflect the latest volumes that had been collected at the time of this report. **Tables 3-11 through 3-14** display the LOS analysis results for the study freeway segments under Existing Conditions. As shown in the table, the freeway segments surrounding the Uptown, North Park, and Golden Hill communities all have volumes that exceed the capacity during peak hours. In general, the failing segments are those that move traffic away from the cluster communities in the morning and towards the cluster communities in the afternoon.

Interstate 5 shows LOS E or F in the northbound direction at each of the segments except between Washington Street and Pacific Highway during the a.m. peak. In the p.m. peak, LOS E or F occurs from First Avenue to Sixth Avenue and from SR-163 to SR-94, both in the southbound direction.

Interstate 8 shows LOS E or F at each of the study segments in both peak periods. The failing LOS shows up in the westbound direction during the a.m. peak and in the eastbound direction during the p.m. peak.

State Route 15 shows LOS E in the southbound direction during both the a.m. and p.m. peaks between I-805 and SR-94.

Interstate 805 shows LOS E or F in one direction each of the segments in the a.m. peak. From I-8 to Adams Avenue, the deficient direction is northbound, and for segments from El Cajon Boulevard to SR-15, the deficient direction is southbound. During the p.m. peak, the deficient segments are southbound from I-8 to Adams Avenue and northbound from El Cajon Boulevard to University Avenue.

State Route 94 shows LOS E or F in the westbound direction during the a.m. peak and in the eastbound direction in the p.m. peak.

State Route 163 shows LOS E or F in the southbound direction from Washington Street to I-5 during the a.m. peak and in the northbound direction from I-5 to Washington Street during the p.m. peak. In addition, the segment of SR-163 from Quince Drive to I-5 in the southbound direction is LOS F in the p.m. peak.

3.6 FREEWAY RAMP METERING ANALYSIS

Ramp volumes were obtained from the intersection turning movements when applicable, or from Caltrans' latest volumes that had been collected at the time of this report. **Table 3-15** displays the queuing analysis results for the ramps in the study area that are currently metered. The table compares the peak hour demand at the on-ramp with the current meter rate. As shown in the table, the meter rate adequately controls the expected demand without excess queuing, except at the following locations:

- Washington Street to I-5 Northbound, a.m. peak (1.4 minute average delay)
- Washington Street to I-5 Northbound, p.m. peak (2.3 minute average delay)
- India Street to I-5 Northbound, p.m. peak (4.2 minute average delay)
- Hancock Street to I-5 Southbound, p.m. peak (7.7 minute average delay)
- Fifth Avenue to I-5 Southbound, p.m. peak (5.5 minute average delay)

Appendix E contains the ramp meter information provided by Caltrans.

Notes:									
Bold values indicate freeway segments operating at LOS E or F.									
M=Main Lane; A= Auxiliary Lane.									
(a) The capacity is calculated as 2,000 ADT per main lane and 1,200 ADT per auxiliary lane									
(b) Traffic volumes provided by Caltrans (2008)									
(c) Peak-hour volume calculated by: (2-way Peak-Hour Volume)*(D)

4 FUTURE COMMUNITY BUILDOUT CONDITIONS

This section provides a description of future community buildout conditions.

4.1 ROAD NETWORK

One roadway network change was assumed to take place under the Future Year scenario: 25th Street is changing from a 4-lane collector (no center lane) to a 2-lane collector with a continuous two-way left-turn lane between Broadway and C Street. This change is under construction at the time of this report. No other roadway network changes were assumed.

4.2 TRAFFIC VOLUMES

The projections of land use intensities were developed using GIS analysis techniques by the City of San Diego's Planning Department staff. Allowable uses, floor-to-area ratios, residential densities, allowable heights, and space for parking were all considered when determining the reasonably expected land use plan alternatives.

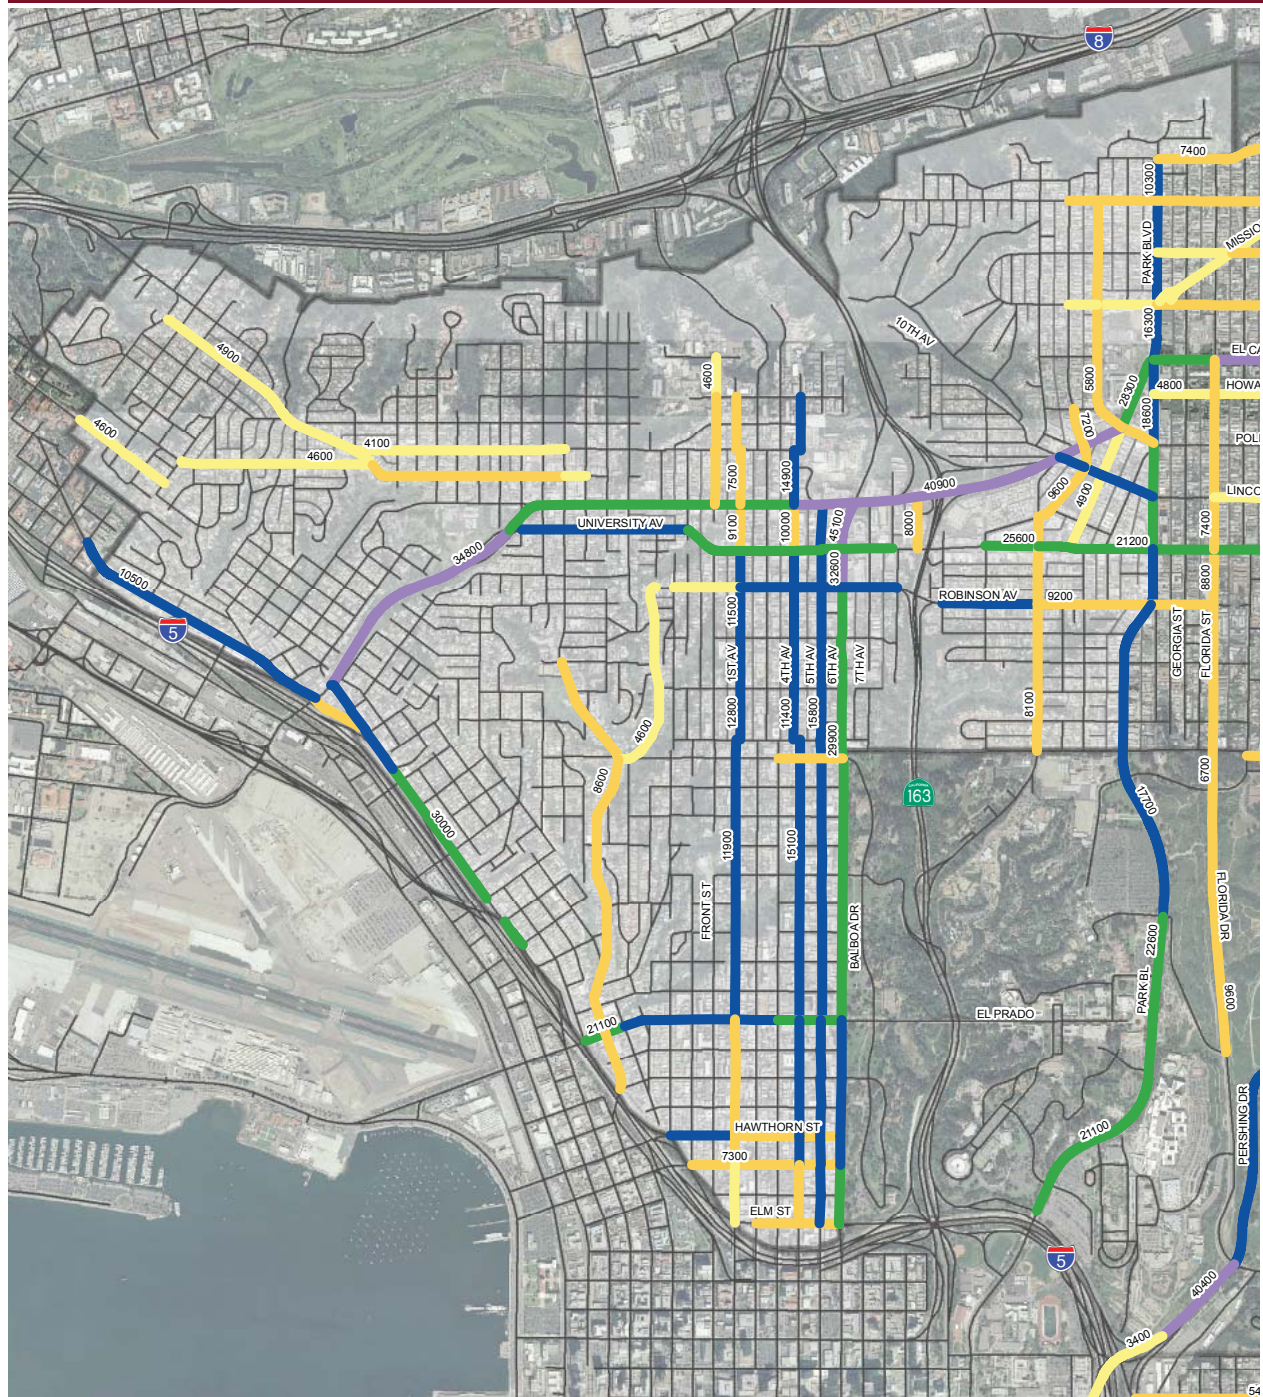

Model Adjustments

In the process of calibrating the existing model, it was concluded that several post model adjustments were needed for the forecasted Year 2035 traffic model volumes to make them consistent with existing vehicular counts and expected overall traffic patterns within the three communities.

- For roadway segments where the difference between the calibrated existing 2008 model and the actual count exceeded 10% or 2,000 daily vehicles, the difference was subtracted or added to the Year 2035 forecast model to adjust the future volume based on the discrepancy noted between base year model volumes and count data. For roadway segments that have existing daily volumes less than 5,000, no adjustments were applied to the future model volumes.

The post model adjustment details for the Future Year scenario are included in **Appendix F**. The resulting daily traffic volumes for Future Year are presented in **Figures 4-1, 4-2, and 4-3**.

Turning Movement Volume Forecasts

Future Year peak hour turning movements at the study area intersections were developed using methodologies from National Cooperative Highway Research Program (NCHRP) 255 – Highway Traffic Data for Urbanized Area Project Planning and Design, Chapter 8. NCHRP Report 255 is a compilation of the best techniques that are currently being used in urban areas to forecast future traffic volumes. These techniques were identified through a survey of state and local agencies with follow-up field visits to obtain detailed information on procedural steps and typical applications. The method used to forecast the future turning movement volumes for the Uptown, North Park, and Golden Hill Community Plans evaluation is the NCHRP's "Directional Volume Forecast". For this method, existing and future daily traffic volumes, existing peak hour turning movements, and projected peak hour "K" and directional "D" factors are used to calculate future year turning movements. Existing daily segment traffic volumes and peak hour intersection turning movements were counted in the field. Future Year daily traffic volumes were obtained from the forecast model forecast. Using the "Directional Volume Forecast" technique, the existing turning movements at each study area intersection were factored based on increases in daily approach traffic and existing K and D factors. Each respective movement was derived using an iterative approach that balances the inflows and outflows for each approach. The supporting worksheets for calculating Future Year volumes are included in **Appendix G**. Resulting peak hour intersection turning movements are presented in **Figures 4-4, 4-5, 4-6 and 4-7**.

Future Year Proposed Land Use Peak-Hour Intersection Volumes: Golden Hill

4.3 INTERSECTION ANALYSIS

Tables 4-1, 4-2, and 4-3 display the LOS analysis results for the study intersections using their existing lane configuration and the future peak-hour traffic volumes. As shown in the table, the Uptown CPU would have a cumulative traffic related impact at 6 of the 30 study intersections, the North Park CPU would have a cumulative traffic related impact at 7 of the 11 study area intersection, and the Golden Hill CPU would have a cumulative traffic related impact at 6 of the 12 study area intersections.

Appendix D contains the peak-hour intersections LOS calculation worksheets.

4.4 ROADWAY SEGMENT ANALYSIS

Tables 4-4 through 4-10 display the LOS analysis results for the roadway segments using their existing roadway classification and the future peak-hour traffic volumes. As shown in the tables, the Uptown CPU would have a cumulative traffic related impact on 52 of the 105 roadway segments within the study area, the North Park CPU would have a cumulative traffic related impact on 39 of the 95 study area roadway segments, and the Golden Hill CPU would have a cumulative traffic related impact on 13 of the 32 study area roadway segments.

4.5 FREEWAY SEGMENT ANALYSIS

Tables 4-11 and 4-12 display the LOS analysis results for the freeway segments using their existing freeway configuration and the future peak-hour traffic volumes. As shown in the tables, the traffic generated by the land use changes associated with the Uptown, North Park and Golden Hill would have a cumulative traffic related impact along all 18 freeway segments within the study area.

4.6 FREEWAY RAMP METERING ANALYSIS

Table 4-13 displays the analysis results for the ramp meters using their existing configuration and meter rate and the future peak-hour traffic volumes. As shown in the tables, the traffic generated by the land use changes associated with the Uptown, North Park and Golden Hill would have a cumulative traffic related impact at 3 ramp meters within the study area.

Notes:

Bold values indicate intersections operating at LOS E or F.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a one-way or two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the 2000 *Highway Capacity Manual* and performed using Synchro 8

Notes:

1) Meter rate is the assumed peak hour capacity expected to be processed through the ramp meter (using Caltrans fast rate)

2) Demand is the peak hour demand using the on-ramp

5 SIGNIFICANCE OF IMPACTS AND MITIGATION MEASURES

This chapter addresses the project impacts for each of the three communities based on a comparison between the Future Year conditions and the Existing conditions. Per the City's significance thresholds and the analysis methodology presented in this report, the following cumulative impacts to intersections and roadway segments were determined:

5.1 UPTOWN

5.1.1 SIGNIFICANCE OF IMPACTS

INTERSECTIONS

- Washington Street & Fourth Avenue
- Washington Street & Eighth Avenue/ SR-163 Off-Ramp
- Washington Street/ Normal Street & Campus Avenue/ Polk Avenue
- University Avenue & Sixth Avenue
- Elm Street & Sixth Avenue
- Cedar Street & Second Avenue

SEGMENTS

- First Avenue: Washington Street to University Avenue
- First Avenue: University Avenue to Robinson Avenue
- First Avenue: Robinson Avenue to Grape Street
- Fourth Avenue: Arbor Drive to Washington Street
- Fourth Avenue: Walnut Avenue to Laurel Street
- Fifth Avenue: Robinson Avenue to Walnut Avenue
- Sixth Avenue: Washington Street to University Avenue
- Sixth Avenue: University Avenue to Laurel Street
- Sixth Avenue: Laurel Street to Elm Street
- Ninth Avenue: Washington Street to University Avenue
- Campus Avenue/ Polk Avenue: Washington Street to Park Boulevard
- Cleveland Avenue: Tyler Street to Richmond Street
- Fort Stockton Drive: Sunset Boulevard to Goldfinch Street
- Grape Street: First Avenue to Third Avenue
- Grape Street: Third Avenue to Sixth Avenue
- Hawthorn Street: First Avenue to Third Avenue
- Hawthorn Street: Third Avenue to Sixth Avenue
- India Street: Washington Street to Winder Street
- India Street: Glenwood Drive to Sassafrass Street
- India Street: Sassafrass Street to Redwood Street
- Laurel Street: Columbia Street to Sixth Avenue
- Lincoln Avenue: Washington Street to Park Boulevard
- Park Boulevard: Mission Avenue to El Cajon Boulevard
- Park Boulevard: Robinson Avenue to Upas Street
- Richmond Street: Cleveland Avenue to Upas Street
- Robinson Avenue: First Avenue to Third Avenue

- Robinson Avenue: Third Avenue to Eighth Avenue
- San Diego Avenue: Hortensia Street to Pringle Street
- State Street: Laurel Street to Juniper Street
- University Avenue: Ibis Street to Fifth Avenue
- University Avenue: Sixth Avenue to Eighth Avenue
- University Avenue: Normal Street to Park Boulevard
- Washington Street: Fourth Avenue to Sixth Avenue
- Washington Street: Richmond Street to Normal Street

5.1.2 MITIGATION MEASURES

INTERSECTIONS

- **Washington Street & Fourth Avenue:** Widen Fourth Avenue in the southbound direction to add a second left-turn lane. Restripe the southbound approach to be two left-turn lanes, one through lane, and one right-turn lane. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **Washington Street & Eighth Avenue/ SR-163 Off-Ramp:** Widen Washington Street in the eastbound direction to four lanes and the eastbound direction to three lanes. Widen the SR-163 Off-ramp to two lanes. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **Washington Street/ Normal Street & Campus Avenue/ Polk Avenue:** Widen Washington Street in the northeast direction to add an exclusive right-turn lane. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue & Sixth Avenue:** Widen 6th Avenue in the southbound to add a second left-turn lane. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **Elm Street & Sixth Avenue:** Widen Elm Street in the westbound direction to add second right-turn lane. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Uptown Impact Fee Study (IFS).
- **Cedar Street & Second Avenue:** Install a traffic signal at this intersection. Uptown CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.

SEGMENTS

- **First Avenue from Washington Street to University Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **First Avenue from University Avenue to Robinson Avenue:** Widen the roadway to a 4 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

- **First Avenue from Robinson Avenue to Laurel Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **First Avenue from Laurel Street to Hawthorn Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Uptown IFS.
- **First Avenue from Hawthorn Street to Grape Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fourth Avenue from Arbor Drive to Washington Street:** Widen the roadway to a 4 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fourth Avenue from Walnut Avenue to Laurel Street:** Restore the roadway to a 3 lane one-way collector for vehicles and remove the dedicated multi-modal lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fifth Avenue from Robinson Avenue to Walnut Avenue:** Restore the roadway to a 3 lane one-way collector for vehicles and remove the dedicated multi-modal lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Sixth Avenue from Washington Street to University Avenue:** Widen the roadway to a 6 lane prime arterial. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Sixth Avenue from University Avenue to Laurel Street:** Widen the roadway to a 4 lane major arterial. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Sixth Avenue from Laurel Street to Elm Street:** Widen the roadway to a 4 lane collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Ninth Avenue from Washington Street to University Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Campus Avenue/ Polk Avenue from Washington Street to Park Boulevard:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Cleveland Avenue from Tyler Street to Richmond Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fort Stockton Drive from Sunset Boulevard to Goldfinch Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

- **Grape Street from First Avenue to Sixth Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Hawthorn Street from First Avenue to Sixth Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **India Street from Washington Street to Winder Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **India Street from Glenwood Drive to Sassafrass Street:** Widen the roadway to a 4 lane one-way collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **India Street from Sassafrass Street to Redwood Street:** Widen the roadway to a 3 lane one-way collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Laurel Street from Columbia Street to Sixth Avenue:** Widen the roadway to a 4 lane collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Lincoln Avenue from Washington Street to Park Boulevard:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Park Boulevard from Mission Avenue to El Cajon Boulevard:** Widen the roadway to a 4 lane one-way collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Park Boulevard from Robinson Avenue to Upas Street:** Widen the roadway to a 4 lane one-way collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Richmond Street from Cleveland Avenue to Robinson Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Uptown IFS.
- **Richmond Street from Robinson Avenue to Upas Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Robinson Avenue from First Avenue to Third Ave:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Robinson Avenue from Third to Eighth Avenue:** Widen the roadway to a 4 lane collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

- **San Diego Avenue from Hortensia Street to Pringle Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **State Street from Laurel Street to Juniper Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Uptown IFS.
- **University Avenue from Ibis Street to Fifth Avenue:** Widen the roadway to a 4 lane collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue from Sixth Avenue to Eighth Avenue:** Widen the roadway to a 4 lane major arterial and install a raised median. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue from Normal Street to Park Boulevard:** Widen the roadway to a 4 lane collector. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Washington Street from Fourth Avenue to Sixth Avenue:** Widen the roadway to a 6 lane major arterial. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Washington Street from Richmond Street to Normal Street:** Restripe the roadway to a 6 lane prime arterial and remove on-street parking. Uptown CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

CORRIDORS

Intelligent Transportation Systems (ITS) is the application of technology to transportation systems to maximize efficiency of services. Applying ITS technology to a corridor can improve capacity and operations along the individual segments within the corridor. In the Uptown community, the following corridors would benefit from ITS technology integration:

- Sixth Avenue
- University Avenue
- Washington Avenue

TRANSPORTATION DEMAND MANAGEMENT

Transportation Demand Management (TDM) combines marketing and incentive programs to reduce dependence on automobiles. TDM measures within the Uptown community should be encouraged and supported to help prevent or minimize congestion and parking issues.

5.2 NORTH PARK

5.2.1 SIGNIFICANCE OF IMPACTS

INTERSECTIONS

- Madison Avenue & Texas Street
- El Cajon Boulevard & 30th Street
- El Cajon Boulevard & I-805 SB Ramps
- University Avenue & 30th Street
- University Avenue & I-805 NB Ramps
- North Park Way/ I-805 SB Ramps & Boundary Street/33rd Street
- Upas Street & 30th Street (W)

SEGMENTS

- 30th Street: Meade Avenue to El Cajon Boulevard
- 30th Street: Howard Avenue to University Avenue
- 30th Street: North Park Way to Upas Street
- 30th Street: Upas Street to Juniper Street
- 32nd Street: University Avenue to Upas Street
- Adams Avenue: Texas Street to 30th Street
- Boundary Street: University Avenue to North Park Way
- El Cajon Boulevard: 30th Street to I-805 Ramps
- Florida Street: El Cajon Boulevard to Upas Street
- Howard Avenue: Texas Street to 32nd Street
- Madison Avenue: Texas Street to Ohio Street
- Meade Avenue: Park Boulevard to Iowa Street
- Redwood Street: 28th Street to 30th Street
- Texas Street: Adams Avenue to El Cajon Boulevard
- Texas Street: Howard Avenue to University Avenue
- University Avenue: Park Boulevard to Florida Street
- University Avenue: Texas Street to 32nd Street
- University Avenue: 32nd Street to Boundary Street
- Upas Street: Alabama Street to Pershing Road
- Upas Street: Pershing Road to 30th Street
- Utah Street: Howard Avenue to Lincoln Avenue
- Utah Street: North Park Way to Upas Street

5.2.2 MITIGATION MEASURES

INTERSECTIONS

- **Madison Avenue & Texas Street:** Widen Texas Street in the northbound direction to add a second through lane. Widen Madison Avenue in the westbound direction to add a second right-turn lane. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **El Cajon Boulevard & 30th Street:** Restripe 30th Street in the southbound direction to add a second left-turn lane and remove parking. Restripe El Cajon Boulevard in the westbound direction

to add a second WB left-turn lane and remove parking. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.

- **El Cajon Boulevard & I-805 SB Ramps:** Widen the I-805 SB off-ramp to add a second right-turn lane. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue & 30th Street:** Restripe 30th street in the southbound direction to add a second through lane and remove parking. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue & I-805 NB Ramps:** Widen University Avenue in the eastbound direction to add an exclusive right-turn lane. Widen University Avenue in the westbound direction to add a shared through right-turn lane. Restripe and reconstruct medians on the I-805 northbound ramps to have dual left-turn lanes and an exclusive through lane and right-turn lane. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **North Park Way/ I-805 SB Ramps & Boundary Street/33rd Street:** Signalize intersection and add a second left-turn lane in the southbound direction on Boundary Street. Widen the I-805 southbound on-ramp to add an additional receiving lane. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.
- **Upas Street & 30th Street (W):** Restripe Upas Street in the westbound direction to add an exclusive right-turn lane. North Park CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure.

SEGMENTS

- **30th Street from Meade Avenue to El Cajon Boulevard:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **30th Street from Howard Avenue to University Avenue:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **30th Street from North Park Way to Upas Street:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **30th Street from Upas Street to Juniper Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **32nd Street from University Avenue to Upas Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Adams Avenue from Texas Street to 30th Street:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

- **Boundary Street from University Avenue to North Park Way:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the North Park Impact Fee Study (IFS).
- **El Cajon Boulevard from 30th Street to I-805 Ramps:** Widen the roadway to an 8 lane major arterial. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Florida Street from El Cajon Boulevard to Upas Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Howard Avenue from Texas Street to 32nd Street:** Remove proposed bicycle boulevard and provide a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Madison Avenue from Texas Street to Ohio Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the North Park Impact Fee Study (IFS).
- **Meade Avenue from Park Boulevard to Iowa Street:** Remove proposed bicycle boulevard and provide a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Redwood Street from 28th Street to 30th Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Texas Street from Adams Avenue to El Cajon Boulevard:** Widen the roadway to a 6 lane major arterial. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. However, partial mitigation has been proposed with the construction of a 4 lane collector with continuous center left-turn lane between Madison Avenue and El Cajon Boulevard.
- **Texas Street from Howard Avenue to University Avenue:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue from Park Boulevard to Florida Street:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue from Texas Street to 32nd Street:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **University Avenue from 32nd Street to Boundary Street:** Widen the roadway to a 4 lane major arterial and add a raised median. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

- **Upas Street from Alabama Street to Pershing Road:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Upas Street: Pershing Road to 30th Street:** Widen the roadway to a 4 lane collector. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Utah Street from Howard Avenue to Lincoln Avenue:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Utah Street from North Park Way to Upas Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. North Park CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

CORRIDORS

Intelligent Transportation Systems (ITS) is the application of technology to transportation systems to maximize efficiency of services. Applying ITS technology to a corridor can improve capacity and operations along the individual segments within the corridor. In the North Park community, the following corridors would benefit from ITS technology integration:

- University Avenue
- El Cajon Boulevard

TRANSPORTATION DEMAND MANAGEMENT

Transportation Demand Management (TDM) combines marketing and incentive programs to reduce dependence on automobiles. TDM measures within the North Park community should be encouraged and supported to help prevent or minimize congestion and parking issues.

5.3 GOLDEN HILL

5.3.1 SIGNIFICANCE OF IMPACTS

INTERSECTIONS

- B Street & 17th Street/ I-5 SB Off-Ramp
- SR-94 WB Ramps & Broadway
- SR-94 WB Ramp & 28th Street
- SR-94 EB Ramp & 28th Street
- F Street & 25th Street
- G Street & 25th Street

SEGMENTS

- 25th Street: Broadway to F Street
- 28th Street: Russ Boulevard to SR-94
- 30th Street: Grape Street to SR-94

- B Street: 25th Street to 28th Street
- C Street: 30th Street to 34th Street
- Fern Street: Juniper Street to A Street
- Grape Street: 30th Street to 31st Street

5.3.2 MITIGATION MEASURES

INTERSECTIONS

- **B Street & 17th Street/ I-5 SB Off-Ramp:** Install traffic signal control at the intersection. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Golden Hill Impact Fee Study (IFS).
- **SR-94 WB Ramps & Broadway:** Install traffic signal control at the intersection. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. However, signal warrants are not met for the signalization of this location. This improvement will be placed on the watch list for future signalization in the Golden Hill IFS.
- **SR-94 WB Ramps & 28th Street:** Install traffic signal control at the intersection. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Golden Hill IFS.
- **SR-94 EB Ramps & 28th Street:** Install traffic signal control at the intersection. Restripe the southbound approach to have an exclusive left-turn lane and a through lane. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified in the Golden Hill IFS.
- **F Street & 25th Street:** Install traffic signal control at the intersection. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. However, signal warrants are not met for the signalization of this location. This improvement will be placed on the watch list for future signalization in the Golden Hill IFS.
- **G Street & 25th Street:** Install traffic signal control at the intersection. Golden Hill CPU significant traffic impact to this intersection would be fully mitigated with the implementation of this mitigation measure. However, signal warrants are not met for the signalization of this location. This improvement will be placed on the watch list for future signalization in the Golden Hill IFS.

SEGMENTS

- **25th Street from Broadway to F Street:** Widen the roadway to a 4 lane collector. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **28th Street from Russ Boulevard to Broadway:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **28th Street from Broadway to SR-94:** Widen the roadway to a 4 lane collector. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation

of this mitigation measure. However, partial mitigation is proposed at this location with the widening of the roadway to a two lane collector with continuous left-turn lane. This improvement project is identified on the Golden Hill IFS.

- **30th Street from Grape Street to Ash Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **30th Street from A Street to Broadway:** Widen the roadway to a 4 lane collector. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. However, partial mitigation is proposed at this location with the widening of the roadway to a two lane collector with continuous left-turn lane. This improvement project is identified on the Golden Hill IFS.
- **30th Street from Broadway to SR-94:** Widen roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. This improvement project is identified on the Golden Hill IFS.
- **B Street from 25th Street to 28th Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **C Street from 30th Street to 34th Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fern Street from Juniper Street to Grape Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Fern Street from Grape Street to A Street:** Widen the roadway to a 4 lane collector. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.
- **Grape Street from 30th Street to 31st Street:** Restripe the roadway to a 2 lane collector with continuous left-turn lane. Golden Hill CPU significant traffic impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure.

TRANSPORTATION DEMAND MANAGEMENT

Transportation Demand Management (TDM) combines marketing and incentive programs to reduce dependence on automobiles. TDM measures within the Golden Hill community should be encouraged and supported to help prevent or minimize congestion and parking issues.

5.4 FREEWAYS

As shown in Chapter 4, the evaluated CPU land uses would have a cumulative traffic related impact at the following mainline freeway segments:

5.4.1 SIGNIFICANCE OF IMPACTS

MAINLINE SEGMENTS

- I-5 NB: Old Town Avenue to Imperial Avenue
- I-5 SB: Old Town Avenue to Imperial Avenue
- I-8 WB: Hotel Circle (W) to SR-15
- I-8 EB: Hotel Circle (W) to SR-15
- SR-15 NB: I-805 to SR-94
- SR-15 SB: I-805 to SR-94
- I-805 NB: I-8 to SR-15
- I-805 SB: I-8 to SR-15
- SR-94 WB: 25th Street to SR-15
- SR-94 EB: 25th Street to SR-15
- SR-163 NB: I-8 to Robinson Avenue
- SR-163: SB: I-8 to I-5

INTERCHANGE RAMPS

- Hancock St to I-5 SB
- Kettner Boulevard to I-5 SB
- Fifth Avenue to I-5 SB

5.4.2 MITIGATION MEASURES

MAINLINE SEGMENTS

- **I-5 NB from Old Town Avenue to Imperial Avenue:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-5 between Old Town Avenue and Imperial Avenue. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **I-5 SB from Old Town Avenue to Imperial Avenue:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-5 between Old Town Avenue and Imperial Avenue. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **I-8 WB from Hotel Circle (W) to SR-15:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-8 between Hotel Circle (W) and SR-15. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **I-8 EB from Hotel Circle (W) to SR-15:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-8 between Hotel Circle (W) and SR-15. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **SR-15 NB from I-805 to SR-94:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along SR-15 between I-805 and SR-94. This project is expected to be constructed by year 2035. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lane.

- **SR-15 SB from I-805 to SR-94:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along SR-15 between I-805 and SR-94. This project is expected to be constructed by year 2035. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lane.
- **I-805 NB from I-8 to SR-15:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along I-805 between I-8 and SR-15. This project is expected to be constructed by year 2030. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lane.
- **I-805 SB from I-8 to SR-15:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along I-805 between I-8 and SR-15. This project is expected to be constructed by year 2030. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lane.
- **SR-94 WB from 25th Street to SR-15:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along SR-94 between 25th Street and SR-15. This project is expected to be constructed by year 2020. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lanes.
- **SR-94 EB from 25th Street to SR-15:** SANDAG's 2050 Revenue Constrained RTP proposes the construction of managed lanes along SR-94 between 25th Street and SR-15. This project is expected to be constructed by year 2020. This measure provides partial mitigation since it reduces the traffic demand on the freeway general purpose lane.
- **SR-163 NB from I-8 to Robinson Avenue:** No improvements are identified for this state route segment in SANDAG's 2050 RTP.
- **SR-163: SB from I-8 to I-5:** No improvements are identified for this state route segment in SANDAG's 2050 RTP.

INTERCHANGE RAMPS

- **Hancock St On-Ramp to I-5 SB:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-5 between SR-15 and I-8. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **Kettner Boulevard On-Ramp to I-5 SB:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-5 between SR-15 and I-8. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.
- **Fifth Avenue to On-Ramp I-5 SB:** SANDAG's 2050 Revenue Constrained RTP includes operational improvements along I-5 between SR-15 and I-8. This project is expected to be constructed by year 2050. This measure provides partial mitigation since it improves freeway operation in the vicinity of the project.

6 POST-MITIGATION ANALYSIS

This section provides a description of the future community buildout conditions with the implementation of the traffic mitigation measures described in Chapter 5.

6.1 INTERSECTION ANALYSIS

Table 6-1 displays the LOS analysis results for the study intersections within the study area after the implementation of the mitigation measures described in Chapter 5. As shown in the table, the mitigation measures described in Chapter 5 would restore operations to LOS D or better during both peak hours at all locations. As discussed in Chapter 5, mitigations are recommended by the CPU at one location within Uptown and all six locations within Golden Hill.

Appendix D contains the peak-hour intersections LOS calculation worksheets.

6.2 ROADWAY SEGMENT ANALYSIS

Tables 6-2 through 6-7 displays the LOS analysis results for the study roadway segments within the study area after the implementation of the mitigation measures described in Chapter 5. As shown in the table, the mitigation measures described in Chapter 5 would restore operations to LOS D or better at all locations. As discussed in Chapter 5, mitigations are recommended by the CPU along three roadways within Uptown, one roadway within North Park and two roadways within Golden Hill.

6.3 FREEWAY SEGMENT AND RAMP METER ANALYSIS

The improvements identified in SANDAG's Regional Transportation Plan would improve operations along the freeway segments and ramps; however, to what extent is still undetermined. As these are future improvements that will be defined more over time, no post mitigation analysis was performed as part of these planning efforts. Using the RTP as the instrument to implement freeway improvements, it can be determined that none of the freeway impacts would be fully mitigated by the CPU.

Table 6-1 Post Mitigation Summary of Intersection Analysis

INTERSECTIONS	PEAK HOUR	FUTURE YEAR		POST-MITIGATION	
		DELAY (a)	Future Year LOS (b)	DELAY (a)	LOS (b)

Notes:

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b)LOS calculations are based on the methodology outlined in the 2000 Highway Capacity Manual and performed using Synchro 8

Table 6-2 Post Mitigation Summary of Roadway Segment Analysis

ROADWAY SEGMENT	FUTURE YEAR ADT	ROADWAY FUNCTIONAL CLASSIFICATION		LOS E CAPACITY	V/C RATIO (a)	LOS
First Ave						
Washington St to University Ave	9,100	Future Year	2 Lane Collector (No center lane)	8,000	1.138	F

		Post Mitigation	4 Lane Collector	30,000	0.677	D

Notes:

Capacity for non-standard roadway classifications were provided by City of San Diego staff.

(a) The v/c Ratio is calculated by dividing the ADT volume by each respective roadway segment's capacity.
