1.0 Introduction

1.1 Purpose of the Report

This Transportation Impact Study (TIS) serves to identify and document potential traffic impacts related to the buildout of the Preferred Plan alternative of the Midway-Pacific Highway and Old Town Community Plan Updates, as well as to recommend improvements/mitigation measures for any identified roadway, intersection and/or freeway impacts. This technical report also provides vehicle miles traveled (VMT) for the Existing conditions and buildout of the Community Plan Updates and compares these to the projected 2035 VMT per person and average trip length for the entire Region.

Figure 1-1 displays the project study area for both the Midway-Pacific Highway Corridor and Old Town communities. This report identifies significant traffic impacts and potential mitigation measures associated with the implementation of the Preferred Plan for the Midway-Pacific Highway and Old Town Community Plan Updates and is intended to support the Environmental Impact Report (EIR).

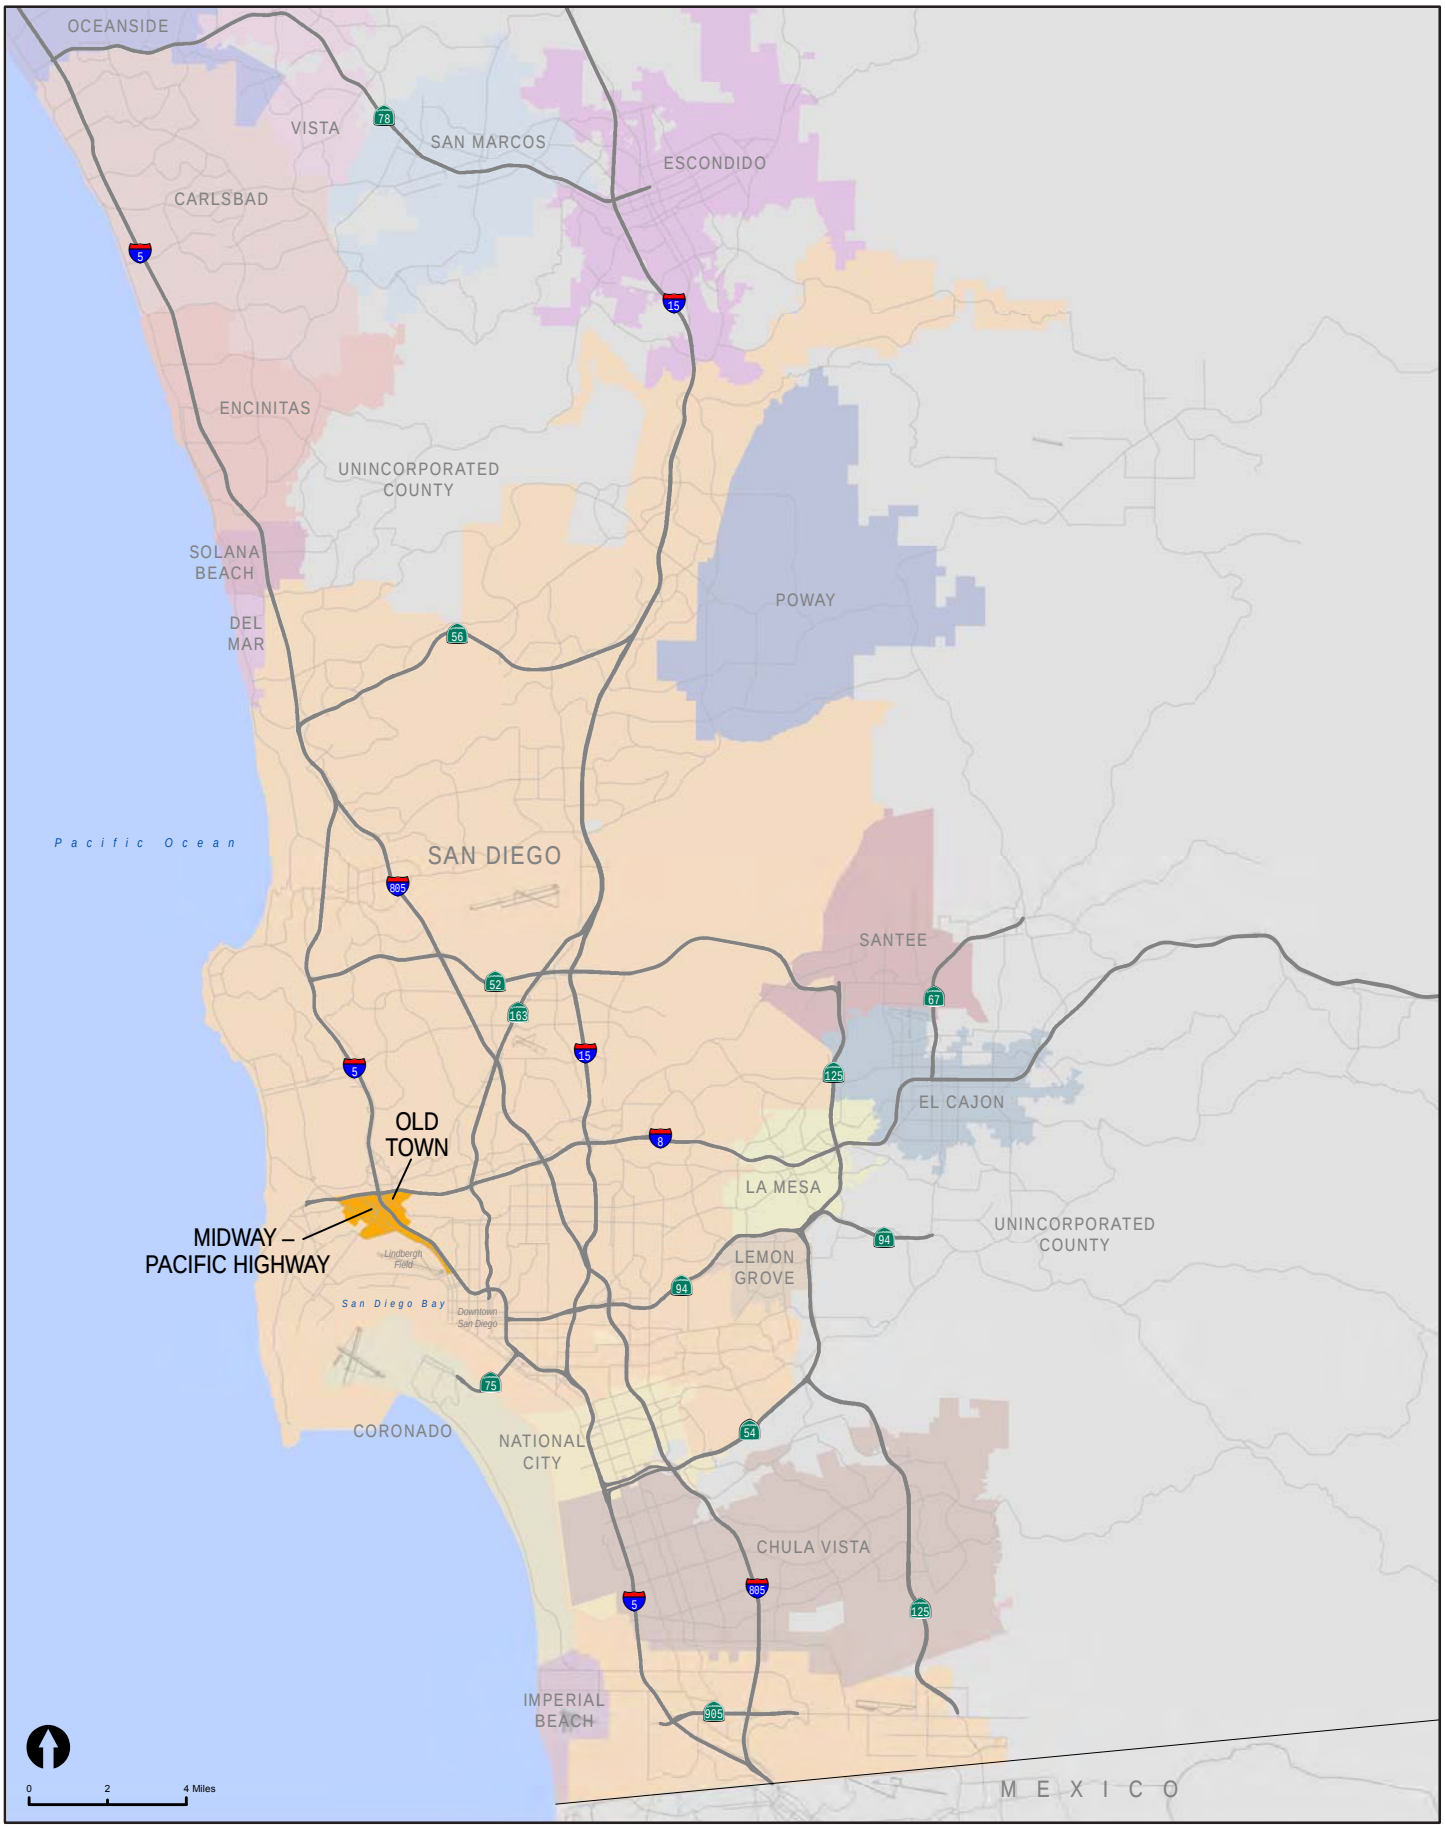
Study Scenarios

Two (2) scenarios were evaluated for this Mobility Element Update transportation impact study, including:

- Existing Conditions – utilized to establish the existing base line traffic operations within the project study area.
- Preferred Plan – represents the preferred land use plan and proposed roadway network. Improvements resulting in the preferred plan roadway network were developed in collaboration between community members, City staff, and the project consultant team. Initially, the mobility issues and needs identified in the Existing Conditions Report were compared to the mobility issues and needs identified in other on-going or recent planning efforts. The Preferred Plan was modeled using the calibrated SANDAG Series 12 Regional Model. This customized model assumed buildout of the Preferred Plan Community Plan land uses and adopted Year 2035 land uses outside of the study communities for regional growth.

1.2 Report Organization

Following this introductory chapter, the report is organized into the following chapters:



2.0 *Analysis Methodology* – This chapter describes the methodologies and standards utilized to analyze roadway, intersection, and freeway segment and freeway ramp meter traffic conditions.

3.0 *Existing Conditions* - This chapter describes the existing traffic network within the study area and provides analysis results for existing traffic conditions.

4.0 *Preferred Plan* – This chapter assesses the potential traffic impacts of the Preferred Plan by comparing the Preferred Plan to the Existing Conditions. Trip generation, VMT, roadway segments and intersection peak hour operations, as well as freeway segments and ramp meters were evaluated. Mitigation measures for significant impacts identified, if feasible.

5.0 *Adopted Plan* – This chapter is included for informational purposes and includes a description and high-level analysis of the currently adopted plan for both the Midway-Pacific Highway Corridor and Old Town communities. No impact analyses were conducted for this scenario.

6.0 *Summary* – This chapter summarizes the analysis and impact findings outlined in chapters three through five.

Midway-Pacific Highway and Old Town Community Plan Update

CHEN RYAN

Figure 1-1
Midway-Pacific Highway and Old Town within the Region

2.0 Analysis Methodology

This chapter describes the various methodologies utilized to analyze the mobility network within the Midway-Pacific Highway and Old Town communities. Analysis of the vehicular systems – roadways, intersections and freeways – were prepared for this study in accordance with the *City of San Diego Traffic Impact Study Guidelines,* SANTEC/ITE Guidelines, and the enhanced California Environmental Quality Act (CEQA) project review process.

2.1 Selection of the Study Area

This section describes the process used to identify roadway segments and intersections for analysis.

2.1.1 Roadway Segments

Roadway segments were evaluated if one or more of the following circumstances applied:

- The roadway segment is an existing or planned circulation element roadway as identified in the Midway-Pacific Highway Corridor Community Plan and Local Coastal Program Land Use Plan (1991), or the Old Town San Diego Community Plan (1987).
- The roadway segment provides freeway access to/from the Midway-Pacific Highway or Old Town communities.
- The roadway segment is located outside of either study community; however, it may influence or impact the flow of transportation within either of the communities.

2.1.2 Intersections

Intersections were evaluated if one or more of the following circumstances applied:

- The intersection is comprised of a circulation element roadway intersecting with another circulation element roadway. This includes existing and future/planned circulation element roadways as identified in the Midway-Pacific Highway Corridor Community Plan and Local Coastal Program Land Use Plan (1991), or the Old Town San Diego Community Plan (1987).
- The intersection is at a freeway ramp interchange located within the Midway-Pacific Highway or Old Town communities or is a major gateway to either community.
- The intersection is a major intersection located outside of either community, however, it may influence or impact the flow of transportation within the communities.
- The intersection meets criteria used in previous studies, whereby both streets meet one of the following:
    - 4 lanes or greater
    - 3 lanes and carries over 15,000 ADT
    - 2 lanes and carries over 10,000 ADT
- Intersections at freeway access ramps.
- Significant intersections where travel time analysis is performed.

A total of 59 intersections were identified based on the criteria listed above, which include 11 intersections located outside the study communities. These intersections were added to the study area because of their proximity to the communities, and the likelihood that changes within the communities could directly affect traffic in/out of the communities. Figure 2-1 displays the location of the 59 study intersections and roadway segments.

2.2 Level of Service Definition

Vehicular level of service (LOS) is a quantitative measure that represents quality of service for the driver. These conditions are generally described in terms of such factors as speed, travel time, freedom to maneuver, comfort, convenience, and safety. LOS A represents the best operating conditions from a driver's perspective, while LOS F represents the worst. Table 2-1 describes generalized definitions of auto LOS A through F.

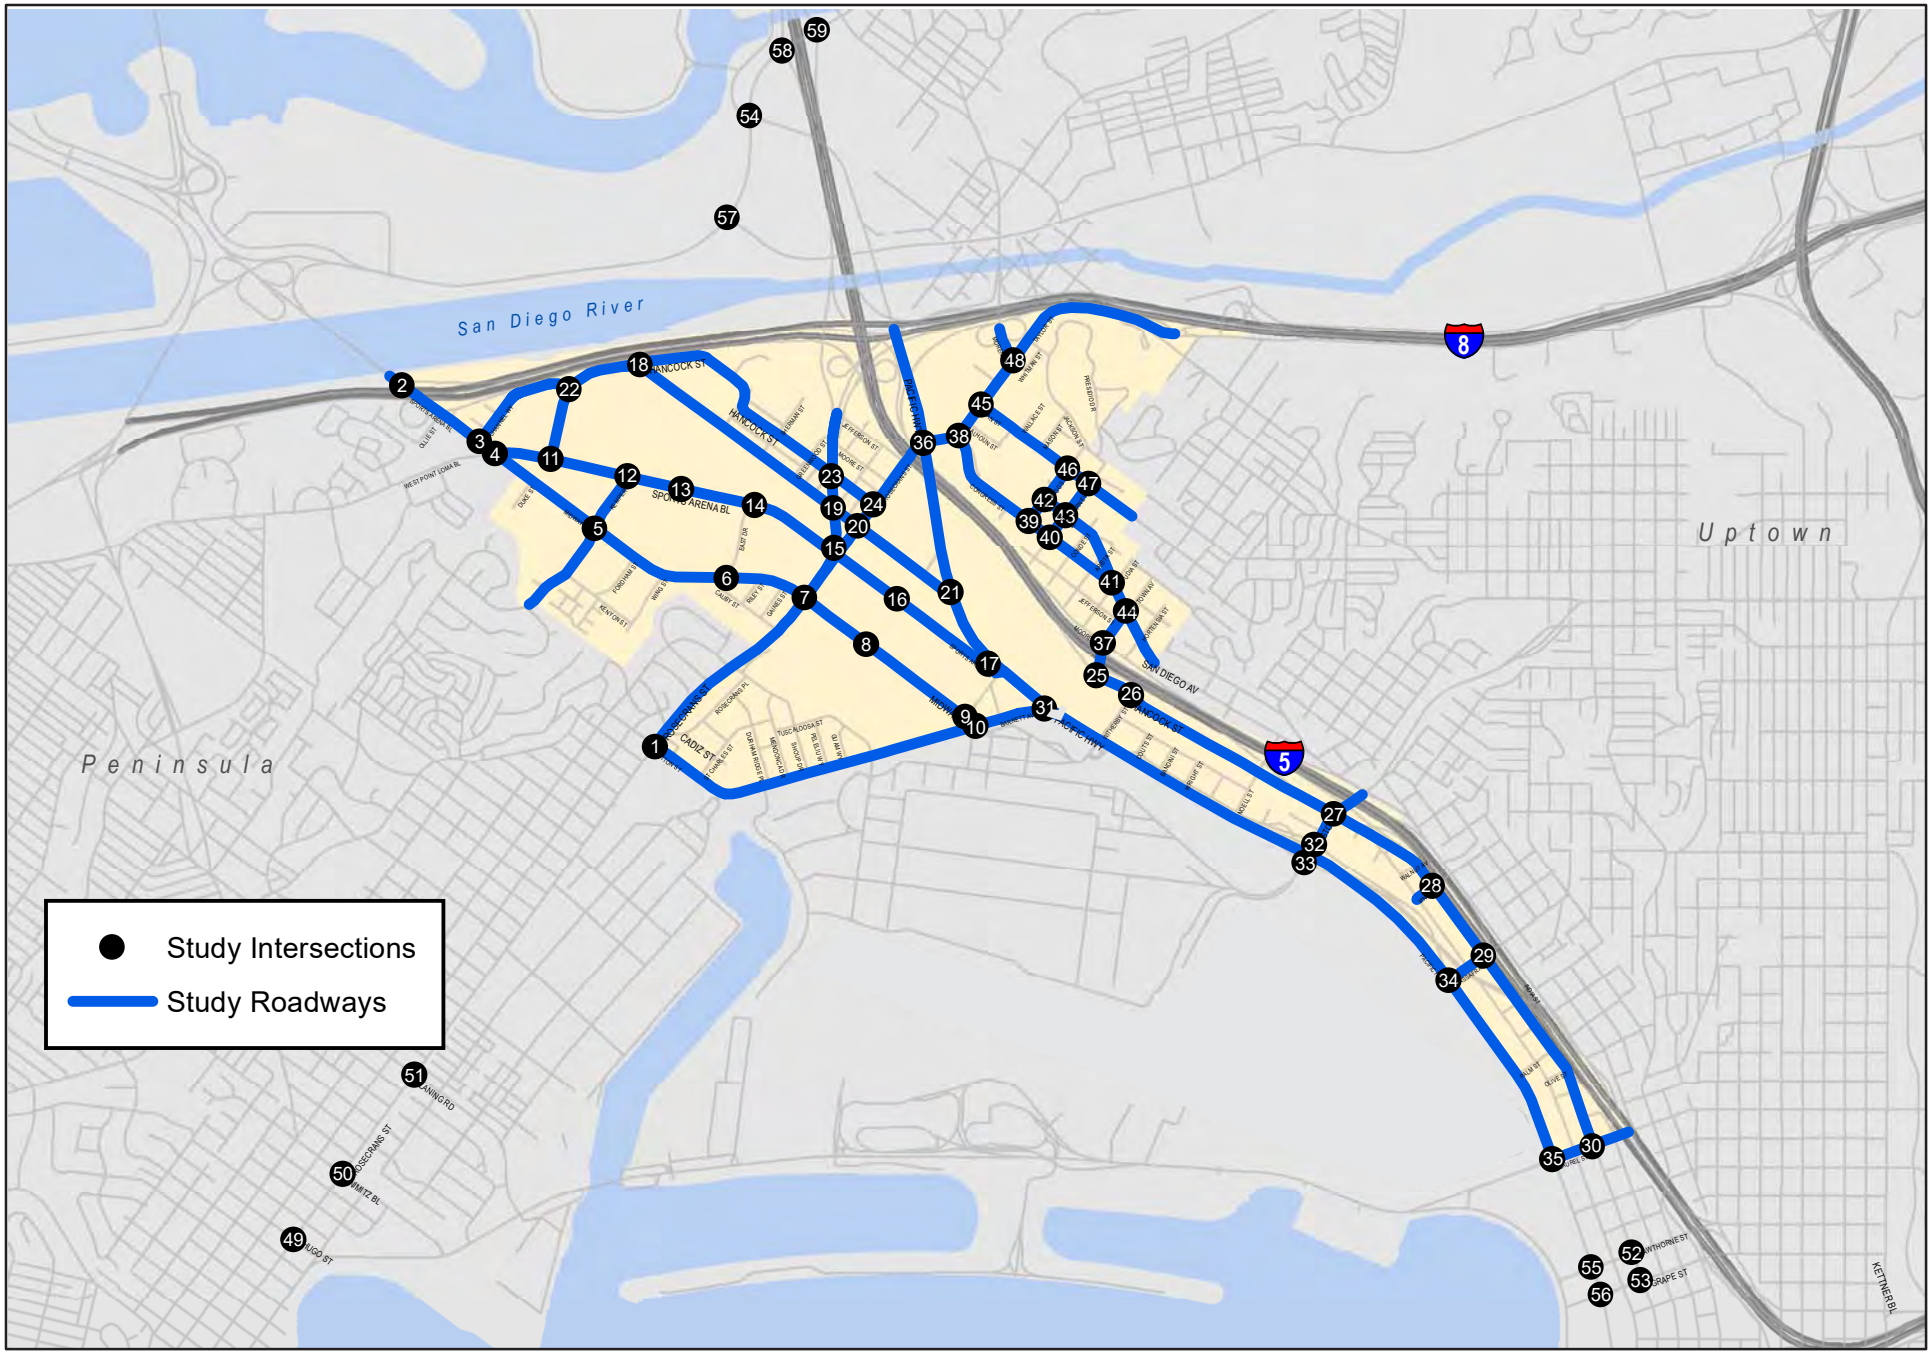


Table 2-1 Vehicular Level of Service Definitions

LOS	Characteristics
A	Primarily free-flow operation. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Controlled delay at the boundary intersections is minimal. The travel speed exceeds 85% of the base free-flow speed.
B	Reasonably unimpeded operation. The ability to maneuver within the traffic stream is only slightly restricted and control delay at the boundary intersections is not significant. The travel speed is between 67% and 85% of the base free-flow speed.
C	Stable operation. The ability to maneuver and change lanes at mid-segment locations may be more restricted than at LOS B. Longer queues at the boundary intersections may contribute to lower travel speeds. The travel speed is between 50% and 67% of the base free-flow speed.
D	Less stable condition in which small increases in flow may cause substantial increases in delay and decreases in travel speed. This operation may be due to adverse signal progression, high volume, or inappropriate signal timing at the boundary intersections. The travel speed is between 40% and 50% of the base free-flow speed.
E	Unstable operation and significant delay. Such operations may be due to some combination of adverse signal progression, high volume, and inappropriate signal timing at the boundary intersections. The travel speed is between 30% and 40% of the base free-flow speed.
F	Flow at extremely low speed. Congestion is likely occurring at the boundary intersections, as indicated by high delay and extensive queuing. The travel speed is 30% or less of the base free-flow speed. Also, LOS F is assigned to the subject direction of travel if the through movement at one or more boundary intersections has a volume-to-capacity ratio greater than 1.0.

2.2.1 Roadway Segment Level of Service Standards and Thresholds

Roadway segment level of service standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment level of service is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecasted Average Daily Traffic (ADT) volumes. Table 2-2 presents the roadway segment capacity and LOS standards utilized to analyze roadways in this report.

Midway-Pacific Highway and
Old Town Community Plan Update

Source: City of San Diego Traffic Impact Study Manual (1998);
Updated with input from City of San Diego Planning Department Mobility Staff (2017)

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway facility varies according to its physical and operational attributes. LOS D is considered acceptable for Mobility Element roadway segments in the City of San Diego. Often, a roadway segment that is analyzed to be LOS E or F based on theoretical capacity is found to operate acceptably in practice. In such cases, HCM arterial analysis may be conducted and utilized (or intersection analysis, if arterial analysis is not applicable) to provide a more accurate indication of LOS.

2.2.2 Peak Hour Intersection Level of Service Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analysis, for both signalized and unsignalized intersections. The following assumptions were utilized in conducting all intersection level of service analyses:

- Pedestrian Calls per Hour: Based on existing pedestrian counts.
- Heavy Vehicle Factor: A 2% heavy vehicle factor was assumed for all study area.
- Peak Hour Factor: Based on existing peak hour counts.
- Existing Conditions Signal Timing: Based on existing signal timing plans (as of November 2012).

Signalized Intersection Analysis

The signalized intersection analysis utilized in this study conforms to the operational analysis methodology outlined in *2000 Highway Capacity Manual (HCM), Transportation Research Board Special Report 209*. This method defines LOS in terms of delay, or more specifically, average control delay per vehicle (sec/veh).

The *2000 HCM* methodology sets 1,900 passenger-cars per hour per lane (pcphpl) as the ideal saturation flow rate at signalized intersections, based upon the minimum headway that can be sustained between departing vehicles at a signalized intersection. The service saturation flow rate, which reflects the saturation flow rate specific to the study facility, is determined by adjusting the ideal saturation flow rate for lane width, on-street parking, bus stops, pedestrian volume, traffic composition (or percentage of heavy vehicles), and shared lane movements (e.g. through and right-turn movements sharing the same lane). The level of service criteria used for this technique is described in Table 2-3. The computerized analysis of intersection operations was performed utilizing the *Synchro 9.0 (2000 HCM methodology)* traffic analysis software (by Trafficware, 2011).

Table 2-3 Signalized Intersection Level of Service Highway Capacity Manual Operational Analysis Method

Average Control Delay Per Vehicle (seconds)	Level of Service (LOS) Characteristics
≤10.0	*LOS A* occurs when the volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
10.1 – 20.0	*LOS B* occurs when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.
20.1 – 35.0	*LOS C* occurs when progression is favorable or the cycle length is moderate. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
35.1 – 55.0	*LOS D* occurs when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.
55.1 – 80.0	*LOS E* occurs when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.
>80.0	*LOS F* occurs when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Source: Highway Capacity Manual, Transportation Research Board Special Report 209 (2000)

Unsignalized Intersection Analysis

Unsignalized intersections, including two-way and all-way stop controlled intersections, were analyzed using the *2000 HCM* unsignalized intersection analysis methodology. The Synchro 8.0 software supports this methodology and was utilized to produce LOS results. The LOS for a two-way stop controlled (TWSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. The LOS for an all-way stop controlled (AWSC) intersection is determined by the computed or

measured average control delay of all movements. Table 2-4 summarizes the level of service criteria for unsignalized intersections.

Table 2-4 Level of Service Criteria for Stop Controlled Unsignalized Intersections

Average Control Delay (sec/veh)	Level of Service (LOS)
≤10.0	A
10.1 – 15.0	B
15.1 – 25.0	C
25.1 – 35.0	D
35.1 – 50.0	E
>50.0	F

Source: Highway Capacity Manual (2000)

The City of San Diego considers LOS D or better during the AM and PM peak hours to be acceptable intersection LOS.

2.2.3 Freeway/State Highway Level of Service Standards and Thresholds

Freeway LOS analysis is based upon procedures developed by Caltrans District 11. The procedure for calculating freeway LOS involves estimating a peak hour volume to capacity (V/C) ratio. Peak hour volumes are estimated from the application of design hour ("K"), directional ("D") and truck ("T") factors to Average Daily Traffic (ADT) volumes. The base capacities were assumed to be 2,350 passenger-cars per hour per main lane (pc/h/ln) and 1,410 pc/h/ln for auxiliary lanes. A 0.95 peak-hour factor (PHF) is utilized for this analysis.

The resulting V/C ratio is then compared to acceptable ranges of V/C values corresponding to the various levels of service for each facility classification, as shown in Table 2-5. The corresponding level of service represents an approximation of existing or anticipated future freeway operating conditions in the peak direction of travel during the peak hour. LOS D or better is used in this study as the threshold for acceptable freeway operations based upon Caltrans and the SANDAG Regional Growth Management Strategy (RGMS) requirements.

2.2.4 Ramp Metering Analysis

Ramp metering is a means of controlling the volume of traffic entering the freeway with the goal of improving freeway main lane traffic operations and flow. Freeway ramp meter analyses estimate peak hour queues and delays at freeway ramps by comparing existing volumes to the meter rate at the given location.

Meter rates, which represent the number of vehicles permitted through the signal, onto the ramp and freeway, were obtained from Caltrans for use in the analysis. Ramp metering analyses to calculate delays at study area freeway ramps were conducted following the procedures outlined in the *City of San Diego Traffic Impact Study Manual (1998)*.

Table 2-5 Caltrans District 11 Freeway Segment Level of Service Definitions

LOS	V/C	Congestion/Delay	Traffic Description
Used for freeways, expressways and conventional highways			
"A"	<0.41	None	Free flow.
"B"	0.42-0.62	None	Free to stable flow, light to moderate volumes.
"C"	0.63-0.79	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
"D"	0.80-0.92	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
"E"	0.93-1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor.
Used for conventional highways			
"F"	>1.00	Considerable	Forced or breakdown flow. Delay measured in average travel speed (MPH). Signalized segments experience delays >60.0 seconds/vehicle.
Used for freeways and expressways			
"F0"	1.01–1.25	Considerable (0-1 hour delay)	Forced flow, heavy congestion, long queues form behind breakdown points, stop and go.
"F1"	1.26-1.35	Severe (1-2 hour delay)	Very heavy congestion, very long queues.
"F2"	1.36-1.45	Very severe (2-3 hour delay)	Extremely heavy congestion, longer queues, more numerous breakdown points, longer stop periods.
"F3"	>1.46	Extremely severe (3+ hours of delay)	Gridlock.

2.2.5 Determination of Significant Impacts

This section outlines the thresholds for determining significant project-related impacts to roadways, intersections, and freeways in the City of San Diego. Generally, a significant impact is identified when the addition of project traffic results in a level of service dropping from LOS D or better to substandard LOS E or F. Table 2-6 summarizes the significant impact thresholds for facilities operating at a substandard level of service with and without the project. These thresholds, as applied to roadway segments, are based upon an acceptable increase in the (V/C) ratio.

Table 2-6 City of San Diego Measures of Significant Project Traffic Impacts

LOS with Project	Allowable Change Due to Impact					
	Freeways		Roadway Segments		Intersections	Ramp Metering*
	V/C	Speed (mph)	V/C	Speed (mph)	Delay (sec)	Delay (min)
E	0.01	1.0	0.02	1.0	2.0	2.0
F	0.005	0.5	0.01	0.5	1.0	1.0

Source: CEQA Significance Determination Thresholds, City of San Diego Development Services Department (2007)

Note:
* For metered freeway ramps, LOS does not apply. However, ramp meter delays above 15 minutes are considered excessive.

3.0 Existing Conditions

This section describes study area intersections, roadways and freeway segments, as well as existing peak hour intersection traffic volumes, and daily roadway and freeway traffic volumes. A Vehicle Miles Traveled (VMT) comparison is also presented. Level of service analysis results for all study area facilities under Existing Conditions are presented separately below.

3.1 Vehicle Miles Traveled

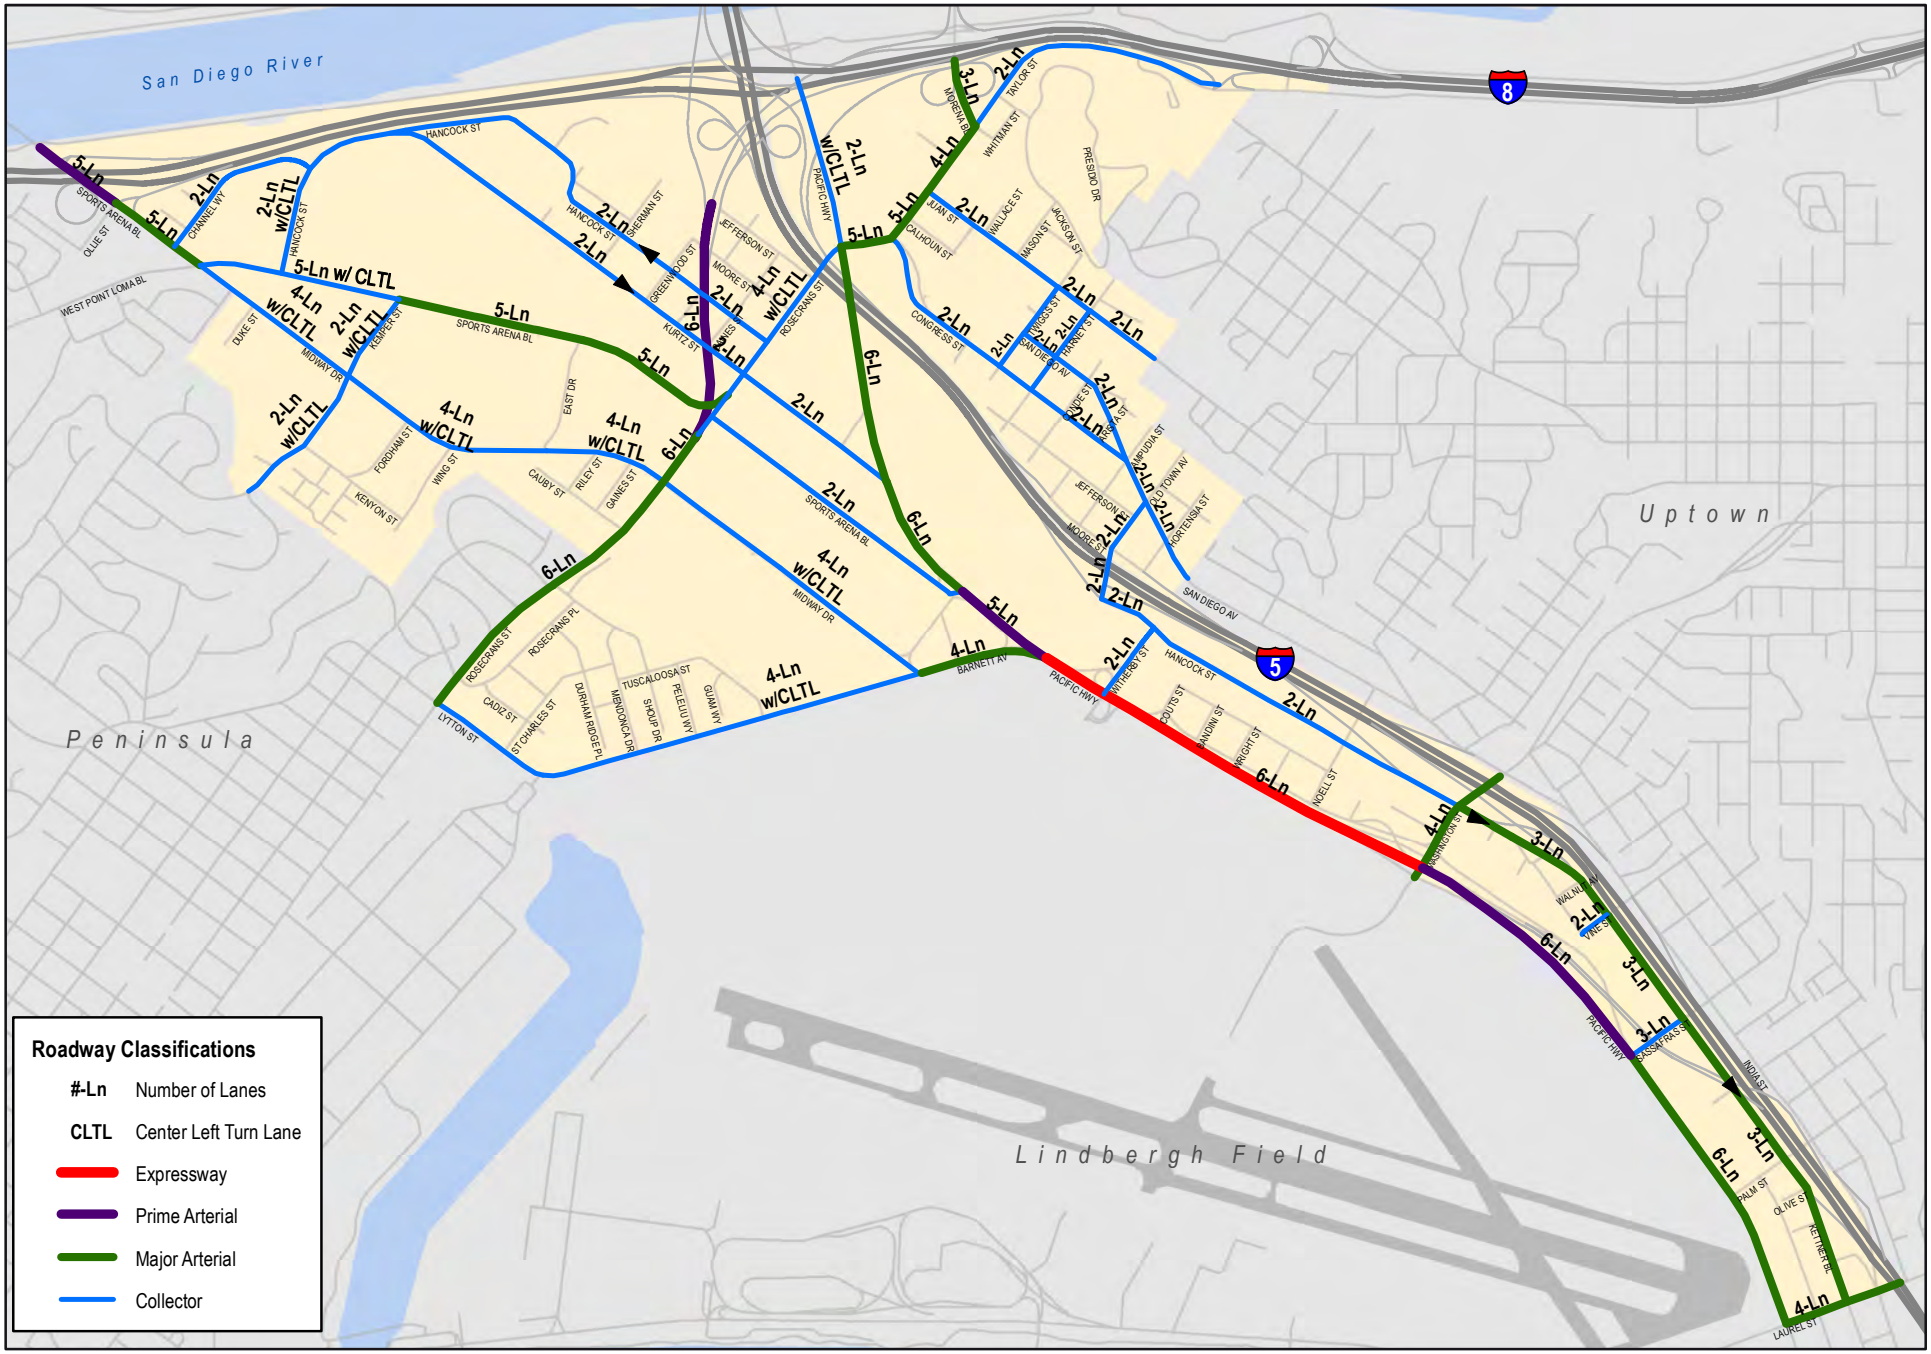
The VMT generated within the communities were estimated using the SANDAG Series 12 Base Year 2008 models. VMT is the total number of miles driven by all vehicle trips generated within the Midway-Pacific Highway and Old Town communities, including trips to/from and within the community. Table 3-1 displays the total VMT generated within the Midway-Pacific Highway and Old Town communities and the average trip length under both the Base Year conditions. VMT calculations for the Midway-Pacific Highway and Old Town communities are included as Appendix A.

As shown, the Midway-Pacific Highway community, when compared to the San Diego Region, has shorter average trip length, but a much greater daily VMT by population rate under the Base Year condition (Average Trip Length of 2.5 miles vs. 5.2 miles; VMT of 156 miles vs. 27 miles, respectively).

The Old Town community, when compared to the San Diego Region, has shorter average trip length, but a much greater daily VMT by population rate under the Base Year condition (Average Trip Length of 2.6 miles vs. 5.2 miles; VMT of 182 miles vs. 27 miles, respectively).

Table 3-1 Vehicle Miles Traveled (VMT) Comparison Existing Conditions

Measure	Midway-Pacific Highway	Old Town	San Diego Region
	Base Year	Base Year	Base Year
Total VMT (miles)	730,121	151,300	85,182,063
Total # of Auto Trips	294,796	57,989	16,458,692
Average Trip Length[1] (miles)	2.5	2.6	5.2
Population	4,670	830	3,130,717
Daily VMT by Population (miles)	156	182	27



Source: SANDAG (2017); Chen Ryan Associates (2017)

Note:

[1]Average trip length is estimated by dividing the total VMT by the total # of auto trips.

3.2 Roadway Segment Analysis

Chapter 2 documents the selection of study area roadway segments and study intersections. The roadway network is comprised of regional facilities such as I-5 and I-8, as well as numerous arterials and local streets. Roadways outside the boundary of the Midway-Pacific Highway and Old Town communities were included in this assessment due to their location within the sphere of influence and will be required for the environmental studies. Figure 3-1 displays the functional classification for study area roadway segments. Table 3-2 provides a description of the study area roadway segments.

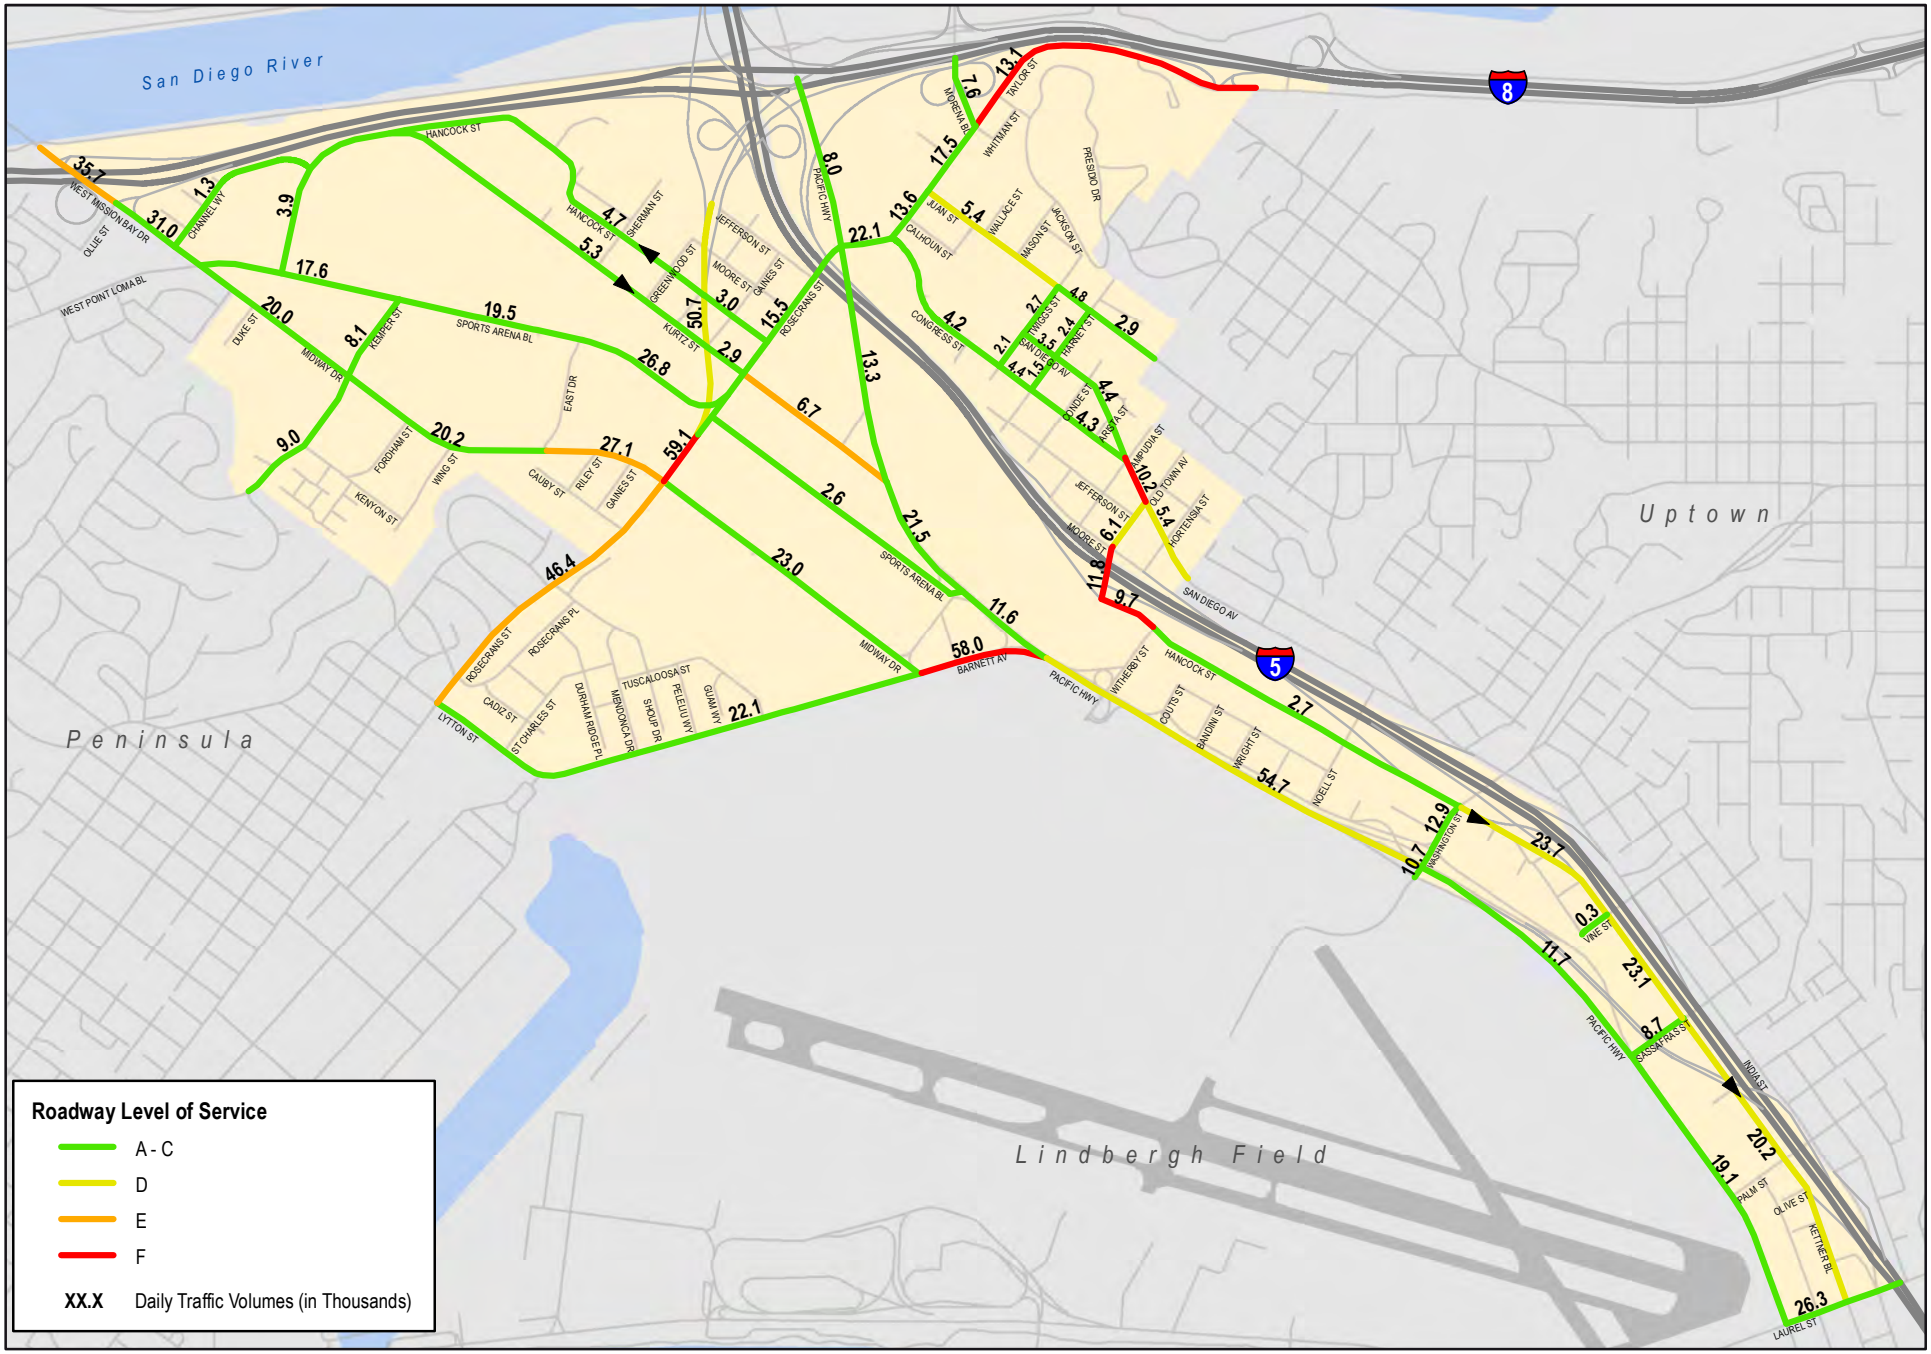
Source: Midway-Pacific Highway Corridor & Old Town Existing Conditions Mobility Report, Fehr & Peers (September, 2012)

Figure 3-2 displays existing average daily traffic volumes for the study roadway segments, along with the current LOS. Table 3-3 displays existing roadway segment ADT and LOS for the Midway-Pacific Highway and Old Town San Diego communities. Appendix B contains the average daily traffic counts utilized in this report.

It should be noted that the existing conditions report was completed in November 2012; therefore, the traffic counts conducted to evaluate Existing conditions were collected in year 2012 as well. To ensure the counts used to evaluate existing conditions are still relevant to current conditions, a sampling of the 2012 counts were validated with recently conducted counts (collected in 2015 and 2016). Through the validation process limited growth was observed in the traffic volumes between year 2012 and year 2015/2016 conditions. Therefore, the counts used to evaluate existing conditions would still be considered valid.



As shown in Table 3-2, the following nine (9) roadway segments operate at LOS E or F under Existing Conditions:

Midway/Pacific Highway Corridor

- Midway Drive, between East Drive and Rosecrans Street (LOS E)
- Kurtz Street, between Rosecrans Street and Pacific Highway (LOS E)
- Hancock Street, between Old Town Avenue and Witherby Street (LOS F)
- Rosecrans Street between Lytton Street and Midway Drive (LOS E)
- Rosecrans Street, between Midway Drive and Sports Arena Boulevard (LOS F)
- Barnett Avenue, between Midway Drive and Pacific Highway (LOS F)

Old Town

- San Diego Avenue, between Ampudia Street and Old Town Avenue (LOS F)
- Taylor Street, between Morena Blvd and I-8 EB Ramps (LOS F)
- Old Town Avenue, Hancock Street to Moore Street (LOS F)

3.3 Intersection Analysis

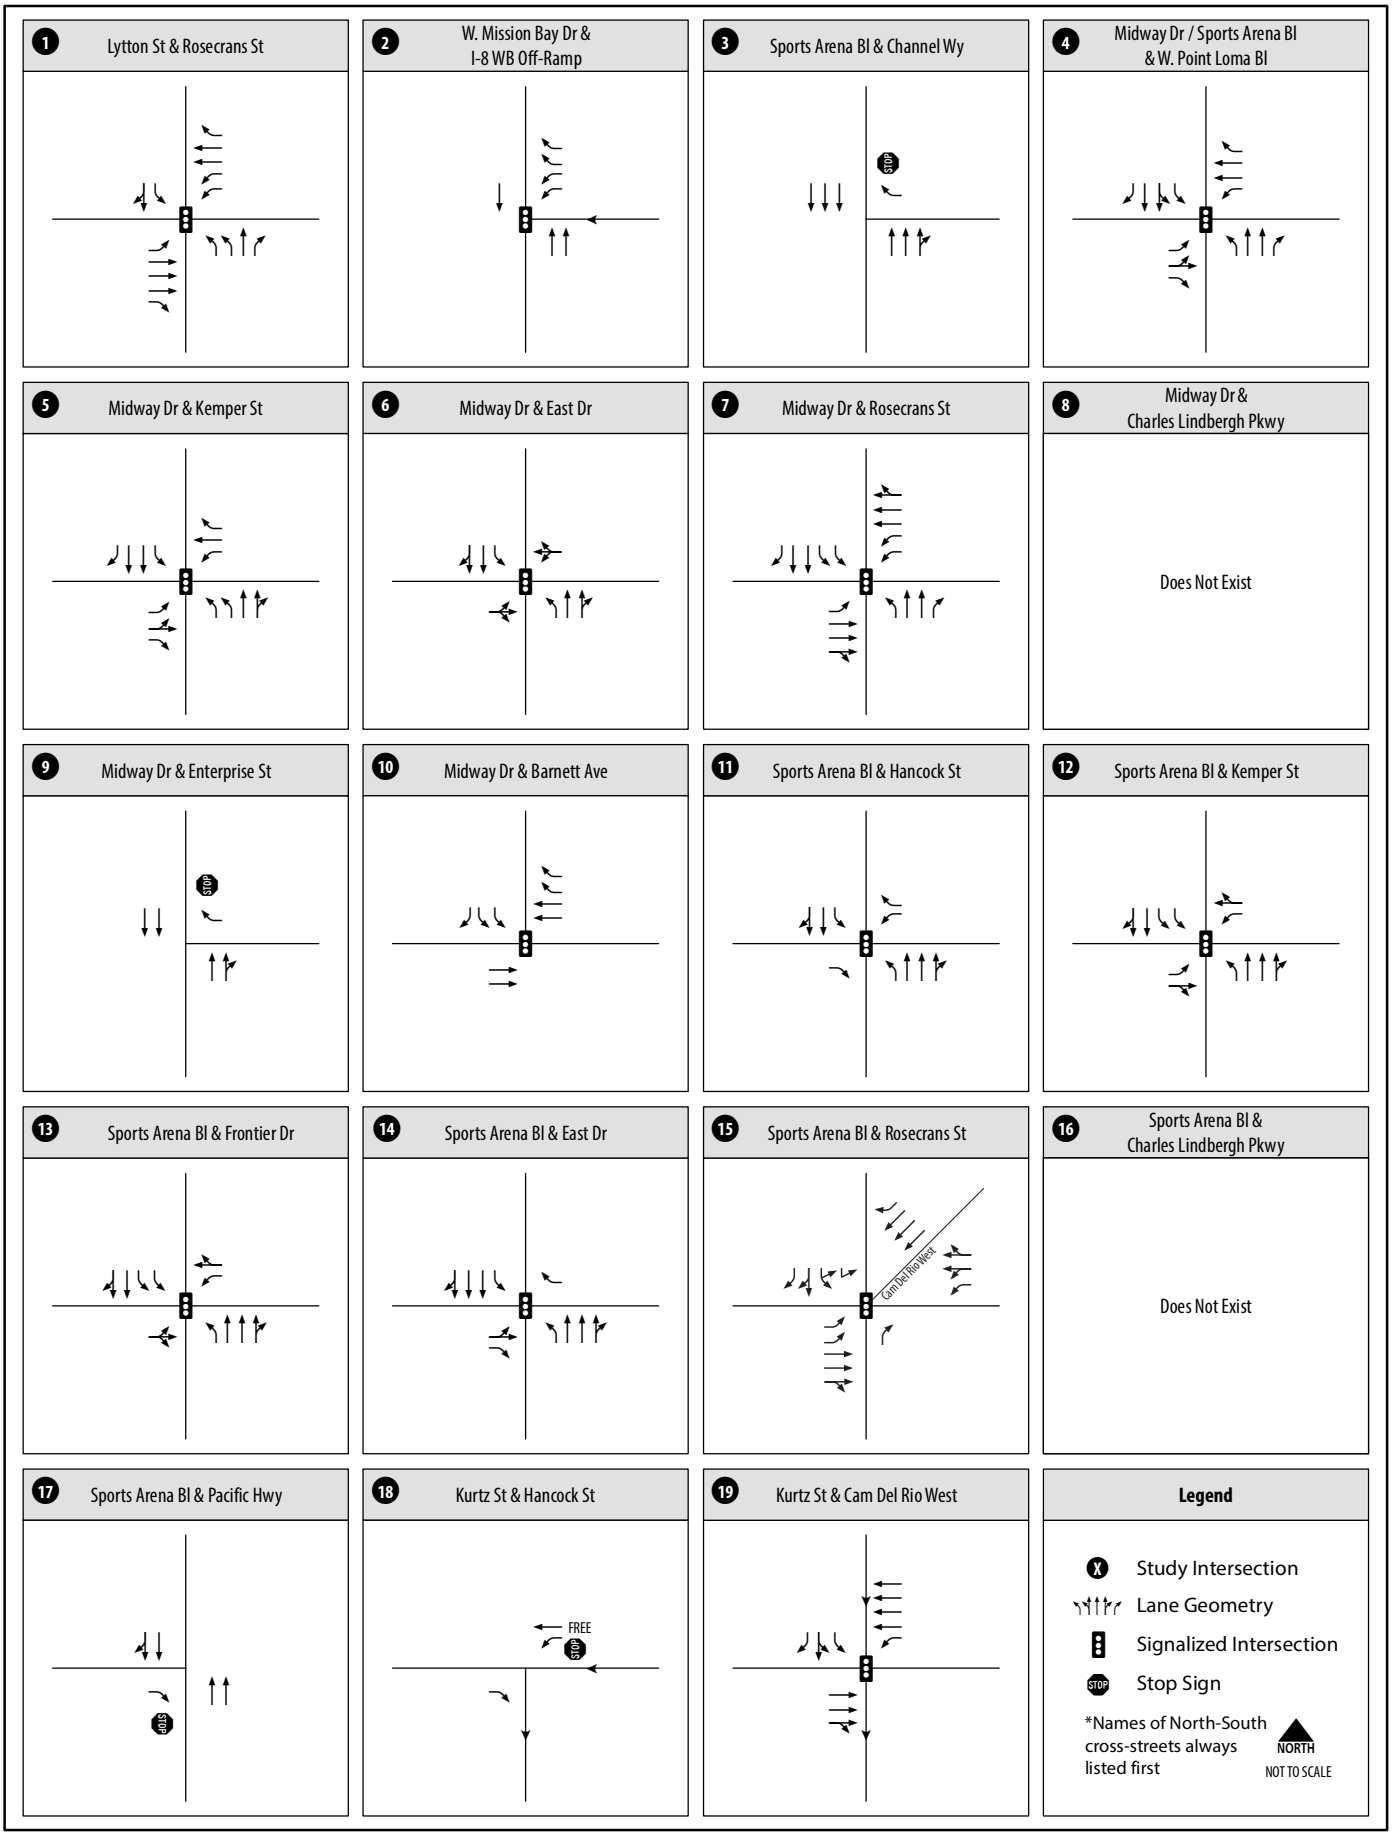
As described in Chapter 2, a total of fifty-nine (59) study intersections were analyzed as part of the Existing Conditions assessment, including thirty-five (35) intersections located within Midway-Pacific Highway, thirteen (13) intersections located within Old Town, and eleven (11) intersections in adjacent communities.

Figure 3-3 displays current intersection geometries, while Figure 3-4 shows existing AM and PM peak period turning movements. The study area intersection traffic counts are provided in Appendix D.

Table 3-4 displays the existing AM and PM peak hour LOS analysis results for the key study area intersections. LOS analyses were conducted using the methodologies described in Chapter 2.0. Intersection LOS calculation worksheets for Existing Conditions are provided in Appendix E. As shown, the following four (4) study intersections currently operate at LOS E or F:

Midway-Pacific Highway

- Lytton Street & Rosecrans Street (LOS E – AM peak hour)
- West Mission Bay Drive & I-8 WB Off-Ramp (LOS E – PM peak hour)



Old Town

- Pacific Highway & Taylor Street (LOS E – AM peak hour)

Intersections Outside of Study Communities

- Lowell Street/Nimitz Boulevard & Rosecrans Street (LOS E – PM peak hour)

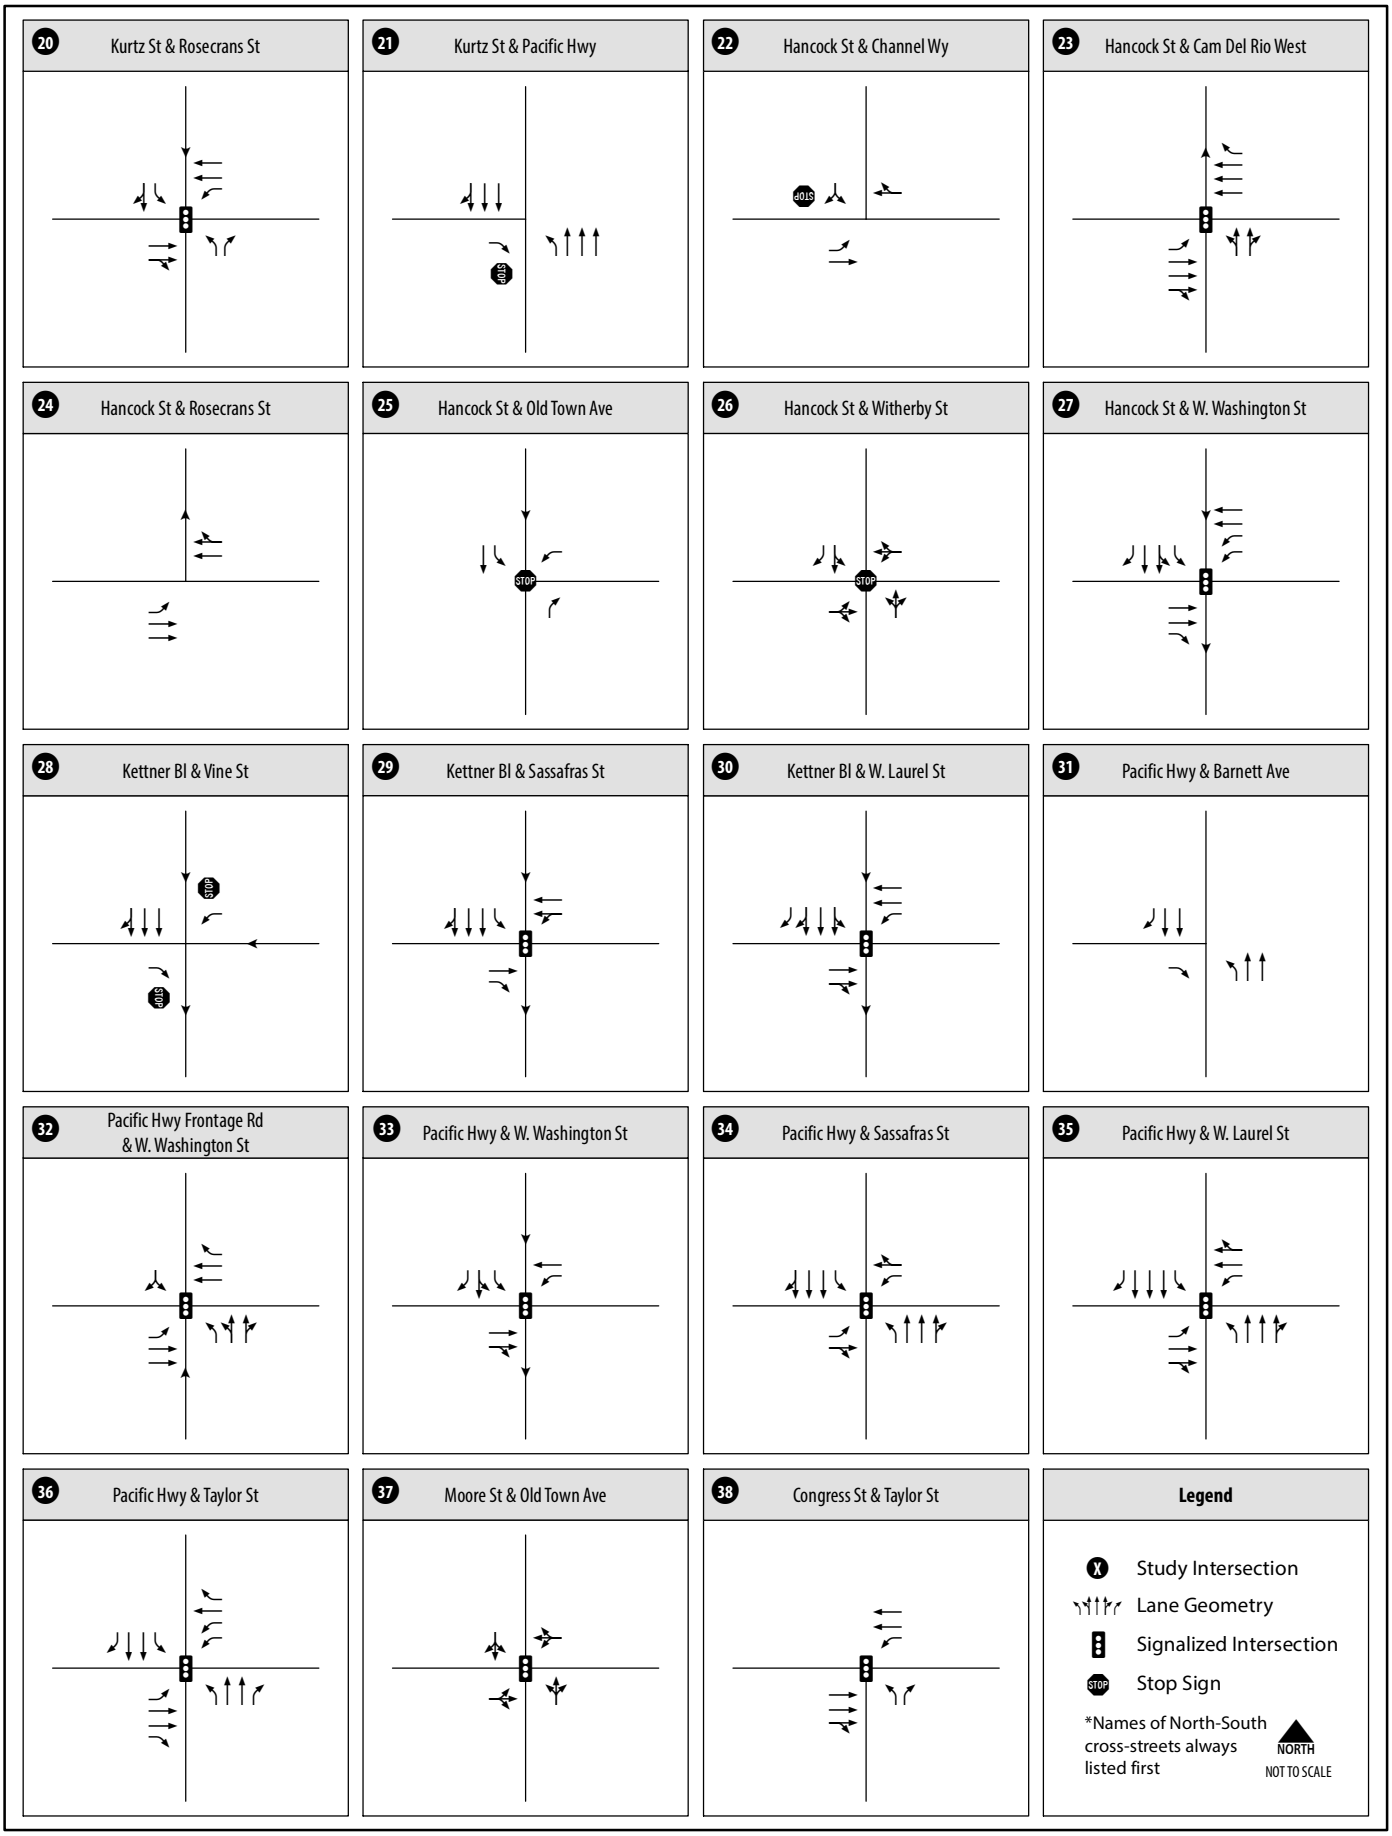


Figure 3-5 graphically displays the existing AM and PM peak hour intersection LOS results.

Figure 3-5
Existing AM/PM Peak Hour Intersection LOS Results

3.4 Freeway Segment Analysis

Two regional corridors run adjacent to the Midway-Pacific Highway and Old Town communities, providing regional access to and from the communities.

Interstate 5 (I-5) is a north-south freeway that traverses the United States from the Mexican to the Canadian border through the states of California, Oregon, and Washington. Within California, I-5 connects the major metropolitan areas of San Diego, Los Angeles, Sacramento and the eastern portion of the San Francisco Bay Area. I-5 bisects the two study communities and can be accessed via the following roadway interchanges:

Midway-Pacific Highway

- Camino Del Rio West (NB on & SB off only)
- Pacific Highway (SB on & NB off only)
- Washington Street
- Palm Street (SB on only)
- Sassafras Street (NB & SB off only)

Old Town

- Old Town Avenue

Interstate 8 (I-8) is an east-west freeway that extends from the western coast of San Diego to central Arizona. I-8 runs just north of the study communities, with access provided via the following roadway interchanges:

Midway-Pacific Highway

- West Mission Bay Drive (EB & WB off only)
- Camino Del Rio West (EB on & WB off only)

Old Town

- Taylor Street

Table 3-5 displays freeway segment LOS analysis results for key freeway segments in the vicinity of the Midway-Pacific Highway and Old Town communities. Caltrans freeway volume worksheets are provided in Appendix F.

As shown, all key freeway segments are currently operating at LOS D or better with the exception of the following three (3) segments:

- I-5 NB, between Sea World Drive and I-8 (LOS E: PM Peak Period)
- I-5 SB, between I-8 and Old Town Avenue (LOS E: PM Peak Period)
- I-5 NB, between Old Town Avenue and Washington Street (LOS E: PM Peak Period)

Source: Midway-Pacific Highway Corridor & Old Town Existing Conditions Mobility Report, Fehr & Peers (September, 2012)

As shown in Table 3-6, the following ramp meters within the study communities experience delays in excess of 15 minutes:

- I-8 EB / Sports Arena Boulevard (PM Peak) – 51.8 minute delay and 12,267 feet of queue
- I-5 SB / Sea World Drive (PM Peak) – 39.6 minute delay and 6,090 feet of queue

4.0 Preferred Plan

This chapter assess the potential traffic impacts of the Preferred Plan by comparing Preferred Plan conditions to Existing Conditions. Evaluations are provided for vehicle miles traveled (VMT), roadway segment and intersection peak hour operations, and freeway segment and ramp meter operations.

The Preferred Plan forecast traffic volumes were developed utilizing the SANDAG Series 12 Preferred Plan Future Year 2035. The modeling methodology and assumptions are provided in Chapter 5 of the Midway-Pacific Highway and Old Town Community Plan Update Mobility Report. Final SANDAG Series 12 Forecast Model Results for Year 2035, including manual adjustments, are provided in Appendix F.

4.1 Vehicle Miles Traveled

The vehicle miles traveled (VMT) within the communities were estimated using the SANDAG Series 12 Preferred Plan Future Year 2035 and Base Year models. VMT is the total number of miles driven by all vehicle trips generated within the Midway-Pacific Highway and Old Town communities, including trips to, from, and within the communities. Table 4-1A and Table 4-1B display the total VMT generated and average trip length within the Midway-Pacific Highway and Old Town communities, respectively, under both Preferred Plan and Base Year conditions. The results for the San Diego region are also presented in the tables for comparison purposes. VMT calculations are provided as Appendix G.

Table 4-1A Vehicle Miles Traveled Comparison – Midway-Pacific Highway Community

Measure	Community Planning Area				San Diego Region			
	Base Year	Preferred Plan	Δ in Value	Δ in %	Base Year	Year 2035	Δ in Value	Δ in %
Total VMT (miles)	730,121	881,487	151,366	20.7%	85,182,063	108,962,049	23,779,986	27.9%
Total # of Auto Trips	294,796	324,927	30,131	10.2%	16,458,692	20,183,171	3,724,479	22.6%
Average Trip Length[1] (miles)	2.5	2.7	0.2	9.5%	5.2	5.4	0.2	3.7%
Population	4,670	23,630	18,960	406.0%	3,130,717	4,035,834	905,117	28.9%
Daily VMT by Population (miles)	156	37	-119	-76.1%	27	27	0	-1.5%

Source: Chen Ryan Associates (May 2017)

Note:
1. Average trip length is estimated by dividing the total VMT by the total # of auto trips.

As shown, under implementation of the Preferred Plan the number of new auto trips and total VMT generated within the Midway-Pacific Highway community is only anticipated to experience minimal growth (based on the regional averages). With the implementation of the Preferred Plan infrastructure and land uses, the average vehicular trip length is anticipated to increase by 9.5%. However, with the significant population increase anticipated within the community, the daily VMT by population is anticipated to drop dramatically (-76.1%).

Table 4-1B Vehicle Miles Traveled Comparison – Old Town Community

Measure	Community Planning Area				San Diego Region			
	Base Year	Preferred Plan	Δ in Value	Δ in %	Base Year	Year 2035	Δ in Value	Δ in %
Total VMT (miles)	151,300	171,492	20,192	13.3%	85,182,063	108,962,049	23,779,986	27.9%
Total # of Auto Trips	57,989	59,792	1,803	3.1%	16,458,692	20,183,171	3,724,479	22.6%
Average Trip Length[1] (miles)	2.6	2.9	0.3	9.9%	5.2	5.4	0.2	3.7%
Population	830	2,430	1,600	192.8%	3,130,717	4,035,834	905,117	28.9%
Daily VMT by Population (miles)	182	71	-112	-61.3%	27	27	0	-1.5%

Source: Chen Ryan Associates (May 2017)

Note:

1. Average trip length is estimated by dividing the total VMT by the total # of auto trips.

As shown, under implementation of the Preferred Plan the number of new auto trips and total VMT generated within the Old Town community is only anticipated to experience average growth (based on the region. With the implementation of the Preferred Plan infrastructure and land uses the average vehicular trip length is anticipated to increase by 9.9%. However, the anticipated population increase within the community results in an overall decrease in the daily VMT by population (-61.3%).

4.2 Roadway Segment Analysis

The majority of roadways within the Midway-Pacific Highway and Old Town communities will remain unchanged from existing conditions, however, the Preferred Plan includes roadway improvements and new roadway segments intended to accommodate anticipated future traffic demands. Table 4-2 identifies the proposed roadway segment modifications, including new roadways, in the Midway-Pacific Highway community.

Due to the historic nature of the Old Town community, the Preferred Plan does not propose any roadway widenings or other roadway capacity improvements. However, San Diego Avenue, between Twiggs Street and Conde Street, has a large curb-to-curb width (50 feet) for a standard two-lane collector roadway (typically 40 feet wide). Therefore, in order to better utilize the curb-to-curb right-of-way, it is recommended that the parallel parking on the east side of the roadway be converted to angled parking. The recommended improvement will not affect the capacity of the roadway and will increase the already constrained parking capacity within the Old Town community.

Table 4-2 Summary of Roadway Improvements

CHEN RYAN

Figure 4-2
Daily Roadway Segment Traffic Volumes and LOS - Preferred Plan Conditions

Based on the criteria documented in Chapter 2, the following roadway segments will have a significant impact under buildout of the Preferred Plan:

Midway-Pacific Highway Community

- Kettner Boulevard, between Washington Street and Vine Street (LOS F, ΔVC 0.38)
- Kettner Boulevard, between Vine Street and Sassafras Street (LOS F, ΔVC 0.40)
- Kettner Boulevard, between Sassafras Street and Laurel Street (LOS F, ΔVC 0.54)
- Frontier Drive, between Sports Arena Boulevard and Kurtz Street (New Road)
- Greenwood Street, between Sports Arena Boulevard and Kurtz Street (New Road)
- Camino Del Rio West, between Rosecrans Street and the I-5/I-8 Ramps (LOS F, ΔVC 0.30)
- Sassafras Street, between Pacific Highway and Kettner Boulevard (LOS F, ΔVC 1.11)

Old Town Community

- Congress Street between Taylor Street and Twiggs Street (LOS E, ΔVC 0.41)
- San Diego Avenue, between Ampudia St and Old Town Avenue (LOS F, ΔVC 0.26)
- San Diego Avenue, between Old Town Avenue and Hortensia Street (LOS E, ΔVC 0.18)
- Juan Street, between Taylor Street and Twiggs Street (LOS E, ΔVC 0.20)
- Juan Street, between Twiggs Street and Harney Street (LOS E, ΔVC 0.24)
- Taylor Street, between Morena Boulevard and I-8 Ramps (LOS F, ΔVC 0.26)
- Old Town Avenue, between Hancock Street and Moore Street (LOS F, ΔVC 0.06)
- Old Town Avenue, between Moore Street and San Diego Avenue (LOS E, ΔVC 0.08)

4.3 Intersection Analysis

AM and PM peak hour intersection LOS analyses were conducted under Preferred Plan and Existing Conditions. The following intersection improvements were assumed under buildout of the Preferred Plan:

Rosecrans Street / Sports Arena Boulevard / Camino Del Rio West:

- Remove the southbound free right-turn movement from Camino Del Rio West onto Sports Arena Boulevard and replace it with an exclusive right-turn lane.
- Allow southbound movements to continue on Sports Arena Boulevard through the intersection. It should be noted that you would still not be able to access the southern leg of Sports Arena Boulevard from westbound Rosecrans Street or southwest bound Camino del Rio West.

Sports Arena Boulevard / Pacific Highway:

- Move intersection approximately 500 feet to the north.
- Re-align Sports Arena Boulevard to create a right-angle with Pacific Highway.
- Signalize the intersection.
- Provide an exclusive eastbound left-turn lane from Sports Arena Boulevard onto Pacific Highway.
- Provide an exclusive northbound left-turn lane from Pacific Highway onto Sports Arena Boulevard.

Sports Arena Boulevard / West Point Loma Boulevard / Midway Drive

- Remove the westbound free right-turn movement from Sports Arena Boulevard onto Sports Arena Boulevard. The right-of-way will be used to extend the curb and create a curb bulb-out to reduce the pedestrian crossing distance. Right-turn movements will be permitted from the outside through lane.

- Square up and control the northbound free right-turn movement from Midway Drive onto Sports Arena Boulevard with the intersection.

West Washington Street / Pacific Highway

- Further analyze operations at this intersection to determine if additional improvements would be beneficial.

Congress Street / San Diego Avenue / Ampudia Street:

- Convert intersection to all-way stop control
- Implement bulb-outs on all legs of the intersection
- Widen the sidewalks along the north side of San Diego Avenue

Seven new intersections are recommended for the Midway-Pacific Highway community. Additionally, the roadway network was evaluated to identify intersection locations, both existing and new intersections, that would benefit from the implementation of a roundabout or signalization. A summary of recommended intersection improvements are displayed in Table 4-4. It is not known at this time if the implementation of roundabout will be feasible at any or all intersections. A roundabout feasibility analysis will need to be performed once the new intersections and roadways are designed. Therefore, to be conservative the analysis assumed that all new intersections would be signalized, unless otherwise noted. However, it is recommended that a roundabout be implemented in lieu of a signal at all new intersections, where feasible.

With the exception of the intersection of Congress Street / San Diego Avenue, / Ampudia Street, no other operational intersection improvements were identified for the Old Town community. Traffic signal warrants were conducted at the intersections where signalization is recommended. Figure 4C-103 (CA) of the California Manual on Uniform Traffic Control Devices (MUTCD) 2012 Edition was utilized for the signal warrant. All intersections where signalization is recommended met the warrants. Signal warrant worksheets are provided in Appendix H of the Mobility Report.

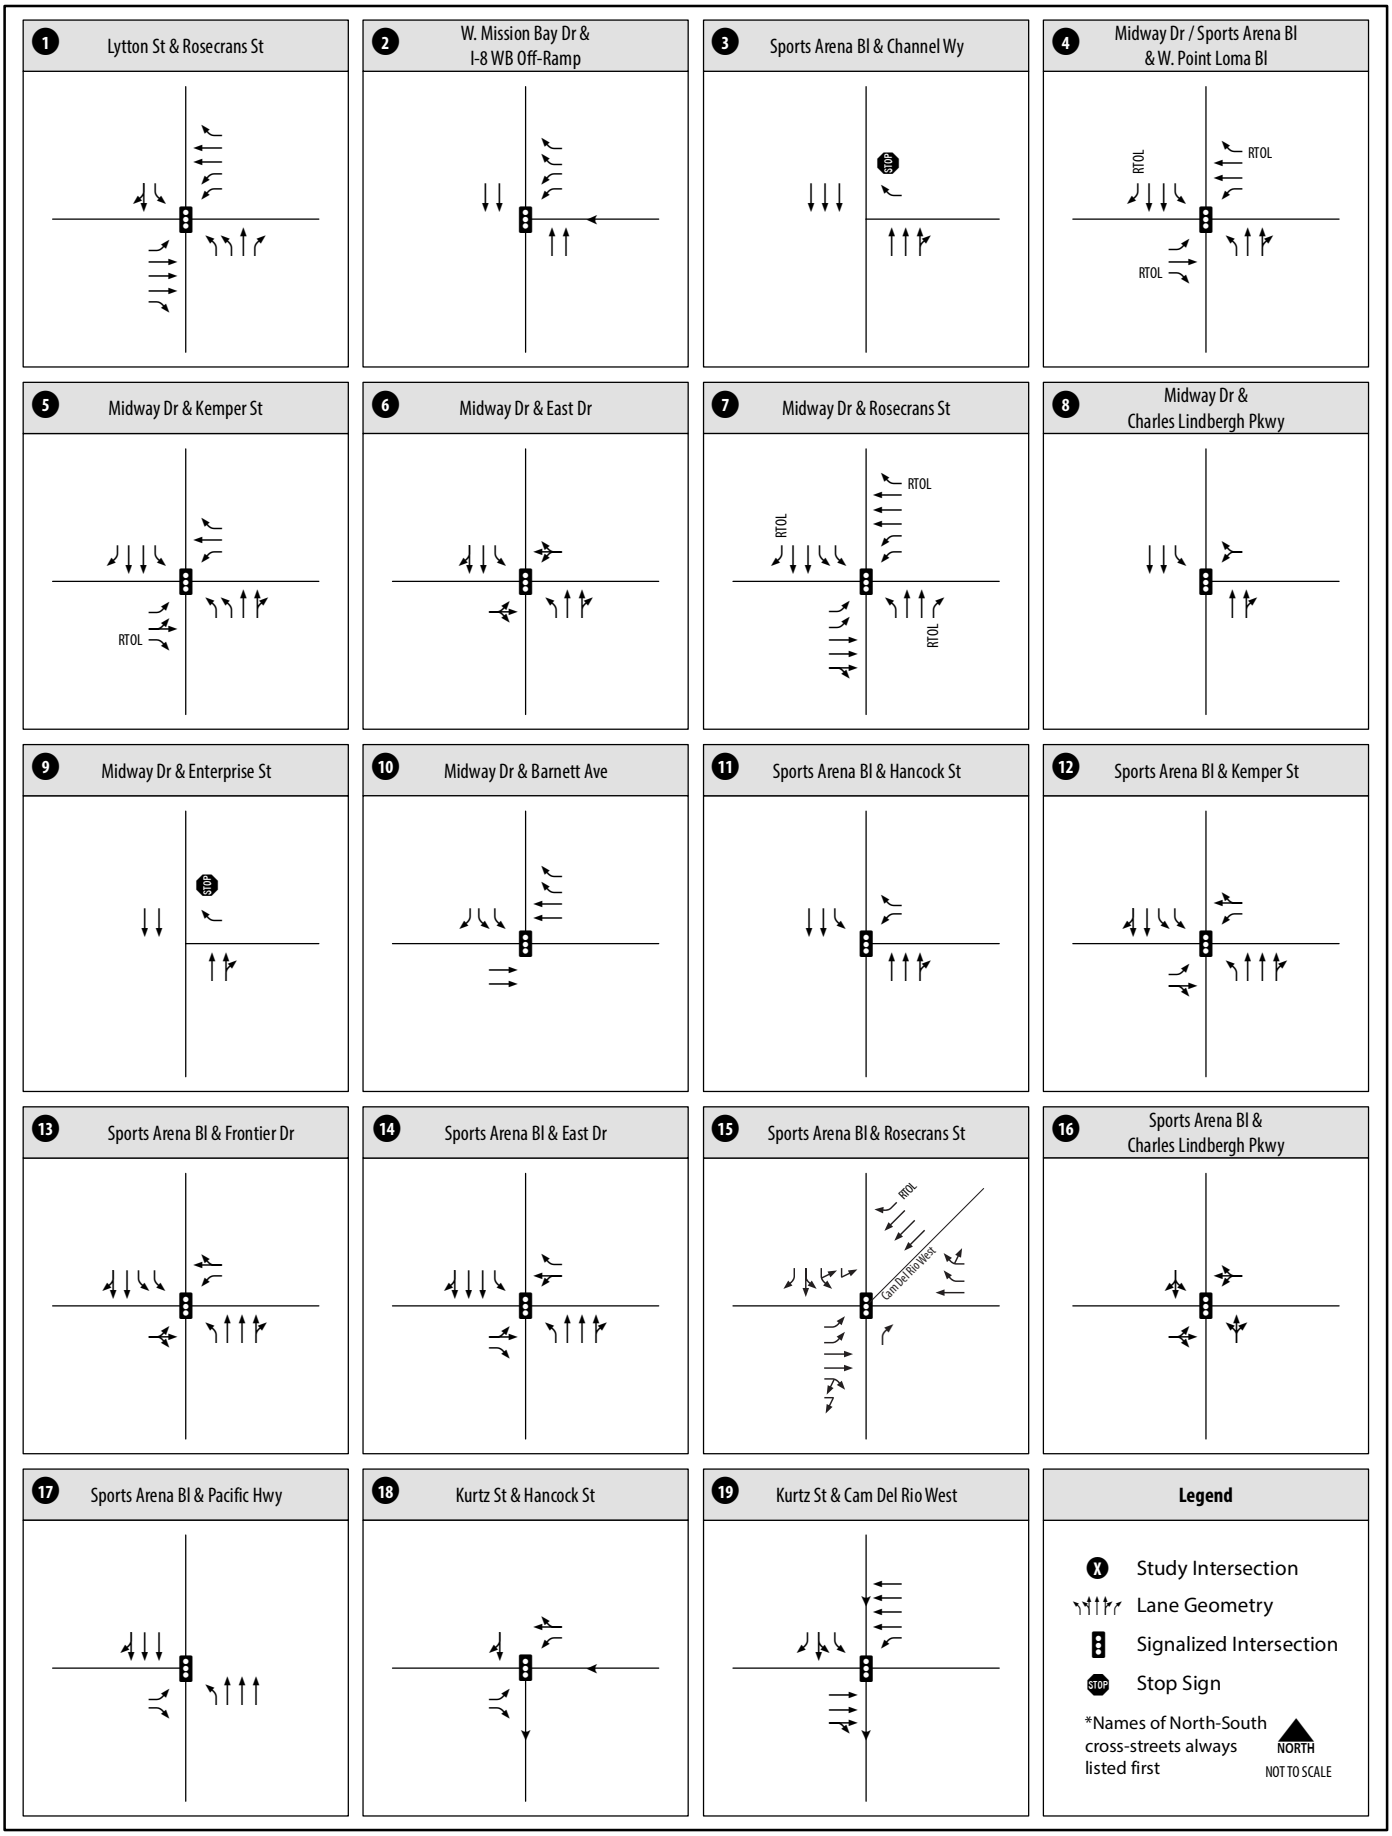

Table 4-4 Summary of Intersection Improvements

No.	Intersection	Improvement	Control
8	Midway Drive / Charles Lindbergh Parkway	New intersection	Roundabout/Signalized
12	Kemper Street / Sports Arena Boulevard	Add north leg	Signalized
13	Sports Arena Boulevard / Frontier Drive	Add north leg	Signalized
14	Sports Arena Boulevard / Greenwood Street	Add north leg	Signalized
16	Sports Arena Boulevard / Charles Lindbergh Parkway	New intersection	Roundabout/Signalized
17	Sports Arena Boulevard / Pacific Highway	Relocate intersection and signalize	Signalized
18	Kurtz Street / Hancock Street	Add south leg and signalize	Signalized
21	Kurtz Street / Pacific Highway	Signalize	Signalized
61	Kurtz Street / Frontier Drive	New intersection	Roundabout/SSSC
62	Kurtz Street / Greenwood Street	Add south leg and signalize	Signalized
63	Kurtz Street / Charles Lindbergh Parkway	New intersection	Roundabout/Signalized
64	Barnett Avenue / Dutch Flats Parkway	New intersection	Roundabout/Signalized
65	Midway Drive / Dutch Flats Parkway	New intersection	Roundabout/Signalized
66	Sports Arena Boulevard / Dutch Flats Parkway	New intersection	Roundabout/Signalized
N/A	Hancock Street / Greenwood Street	Signalize	Signalized

The proposed intersection geometrics and forecast AM/PM peak hour turning movement volumes under Preferred Plan buildout conditions are provided in Figure 4-3 and Figure 4-4, respectively.

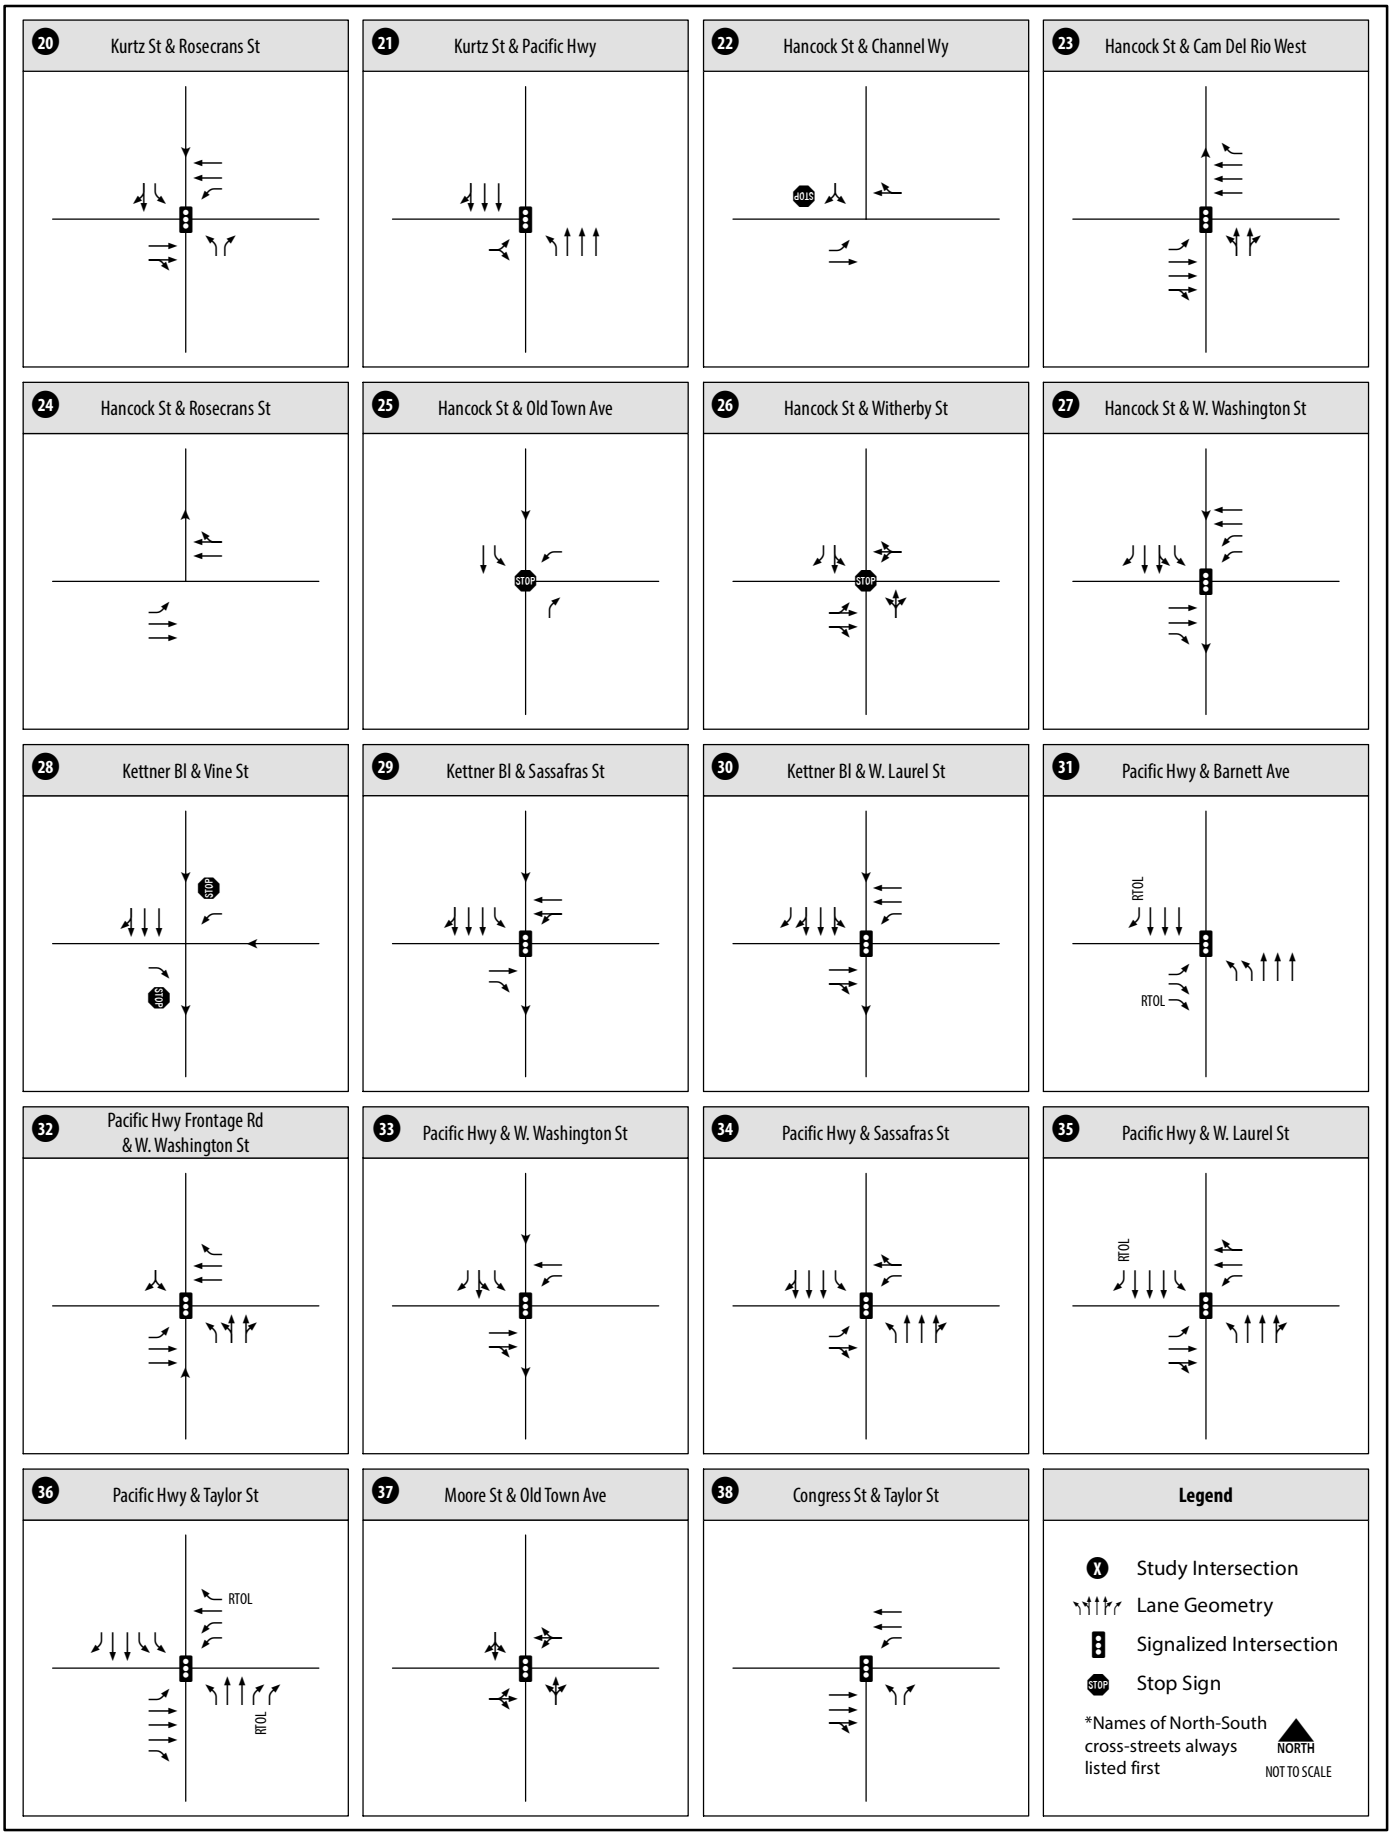

Table 4-5 displays intersection level of service and average vehicle delay results for study area intersections under Preferred Plan and Existing Conditions. Level of service calculation worksheets are provided in Appendix I.

Source: Chen Ryan Associates (May 2017)

Note:
Bold letter indicates LOS E or F.
[1] Significant Impact
[2] Single Side Stop Controlled
[3] All Way Stop Controlled

Based on the significant impact criterial outlined in section 2.2.5, implementation of the Preferred Plan would result in a significant impact at the following intersections:

Midway-Pacific Highway Community

1. Lytton Street and Rosecrans Street (LOS F: AM Peak Hour and LOS E PM Peak Hour)
2. Sports Arena Boulevard / West Mission Bay and I-8 WB Off-Ramp (LOS E: PM Peak Hour)
4. Midway Drive / West Point Loma Drive and Sports Arena Boulevard (LOS E: PM Peak Hour)
7. Midway Drive and Rosecrans Street (LOS E: PM Peak Hour)
27. Hancock Street and Washington Street (LOS E: PM Peak Hour)
30. Kettner Boulevard and Laurel Street (LOS F: PM Peak Hour)
34. Pacific Highway and Sassafras Street (LOS E: PM Peak Hour)
35. Pacific Highway and Laurel Street (LOS F: AM and PM Peak Hours)

Old Town Community

37. Moore Street and Old Town Street (LOS F: PM Peak Hour)

Outside of the Community

50. Nimitz Boulevard / Lowell Street and Rosecrans Street (LOS E: AM Peak Hour and LOS F: PM Peak Hour)

It is important to note that three of the ten intersections listed above currently experience LOS E or F during the AM and/or PM peak period under existing conditions. Additionally, two intersections experiencing LOS E or F under existing conditions will be improved to a satisfactory LOS through implementation of the Preferred Plan.

4.4 Freeway Segment Analysis

Neither the Revenue Constrained Alternative of SANDAG's *San Diego Forward Plan* (October 2015) nor the Preferred Plan recommend freeway improvements within the project study area.

Table 4-6A and Table 4-6B display freeway segment analysis results within the project study area for the AM and PM peak hours, respectively.

Based on the significant impact criterial outlined in section 2.2.5, implementation of the Preferred Plan would result in a significant impact at the following freeway segments:

- I-8 EB, between Morena Boulevard and Hotel Circle Drive (LOS F: PM Peak Hour)
- I-5 NB, between Clairemont Drive and Sea World Drive (LOS E: AM & PM Peak Hours)
- I-5 SB, between Clairemont Drive and Sea World Drive (LOS E: PM Peak Hour)
- I-5 NB, between Sea World Drive and I-8 (LOS E: AM Peak Hour, LOS F PM Peak Hour)
- I-5 SB, between I-8 and Old Town Avenue (LOS F: PM Peak Hour)
- I-5 NB, between Old Town Avenue and Washington Street (LOS E: AM Peak Hour and LOS F: PM Peak Hour)
- I-5 SB, between Washington Street and Pacific Highway (LOS F: PM Peak Hour)
- I-5 SB, between Laurel Street and Hawthorne Avenue (LOS E: PM Peak Hour)

Source: Chen Ryan Associates, Inc. (May 2017)

Based on the significance criteria outlined in Section 2.2.5, implementation of the preferred Plan would result in a significant impact to the I-5 SB / Sea World Dive ramp during the PM peak hour.

4.6 Significant Impacts and Mitigation Measures

This section identifies recommended mitigation measures for intersection and roadway facilities that would be significantly impacted through implementation of the Preferred Plan.

4.6.1 Roadway Mitigation Measures

Midway-Pacific Highway Community

Kettner Boulevard, between Washington Street and Vine Street (LOS F) – Widening the roadway from a 3-Lane Major (One-Way) Arterial to a 4-Lane Major (One-Way) Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Since Preferred Plan maintains existing travel lanes (3), parking (on the west side of the roadway), and a proposed Class II Buffered Bicycle Lane through restriping there will not be enough right-of-way on Kettner Boulevard to accommodate additional lane, maintain existing features, and proposed improvements. For these reasons this improvement project is not identified in the Midway Pacific Highway IFS.*

Kettner Boulevard, between Vine Street and Sassafras Street (LOS F) – Widening the roadway from a 3-Lane Major (One-Way) Arterial to a 4-Lane Major (One-Way) Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Since Preferred Plan maintains existing travel lanes (3), parking (on the west side of the roadway), and a proposed Class II Buffered Bicycle Lane through restriping there will not be enough right-of-way on Kettner Boulevard to accommodate additional lane, maintain existing*

features, and proposed improvements. For these reasons this improvement project is not identified in the Midway Pacific Highway IFS.

Kettner Boulevard, between Sassafras Street and Laurel Street (LOS F) – Widening the roadway from a 3-Lane Major (One-Way) Arterial to a 4-Lane Major (One-Way) Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Since Preferred Plan maintains existing travel lanes (3), parking (on the west side of the roadway), and a proposed Class II Buffered Bicycle Lane through restriping there will not be enough right-of-way on Kettner Boulevard to accommodate additional lane, maintain existing features, and proposed improvements. For these reasons this improvement project is not identified in the Midway Pacific Highway IFS.*

Greenwood Street, between Sports Arena Boulevard and Kurtz Street (LOS E) – Improving from a 2-Lane Collector to a 2-Lane Collector with a Center Left Turn-Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, due to implementation of this improvement not being in conformance with General Plan, and Community Plan Update Goals and Policies for walkable neighborhoods and to right-of-way constraints, this improvement project is not identified in the Midway Pacific Highway IFS.*

Frontier Drive, between Sports Arena Boulevard and Kurtz Street (LOS E) – Improving from a 2-Lane Collector with a Center Left Turn-Lane to a 4-Lane Collector with a Center Left Turn-Lane would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Implementing Frontier Drive as a 4-Lane Collector with Continuous Left-Turn Lane will create longer crossing distances within a residential area and potentially could act as a barrier for pedestrians. Implementation of this improvement would not be in conformance with General Plan, and Community Plan Update Goals and Policies for walkable neighborhoods. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

Camino Del Rio West, between Rosecrans Street and the I-5/I-8 Ramps (LOS F) – Improving this roadway from a 6-Lane Prime Arterial to a 6-Lane Expressway would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *This improvement would require grade separating all intersections along this segment of the roadway which is not consistent with the General Plan & Community Plan Update Goals and Policies for walkable neighborhoods. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

Sassafras Street, between Pacific Highway and Kettner Boulevard (LOS F) - Widening the roadway from a 3-Lane Collector to a 4-Lane Collector with Center Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way available along this segment of Sassafras Street to accommodate a fourth travel lane. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

<u>Old Town Community</u>

Congress Street between Taylor Street and Twiggs Street (LOS E) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this*

roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Congress Street to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 26 regular parking spaces and 13 loading/taxi parking spaces would need to be removed in order to accommodate this mitigation measure. Finally, this mitigation measure would be in conflict with the Community Plan, which proposed balancing all travel modes through an enhanced active transportation environment. Therefore, this improvement project is not identified in the Old Town IFS.

San Diego Avenue, between Ampudia St and Old Town Avenue (LOS F) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of San Diego Avenue to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 5 regular parking spaces would need to be removed in order to accommodate this mitigation measure. Therefore, this improvement project is not identified in the Old Town IFS.*

San Diego Avenue, between Old Town Avenue and Hortensia Street (LOS E) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of San Diego Avenue to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 9 regular parking spaces would need to be removed in order to accommodate this mitigation measure. Therefore, this improvement project is not identified in the Old Town IFS.*

Juan Street, between Taylor Street and Twiggs Street (LOS E) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Juan Street to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 48 regular parking spaces and 4 loading parking spaces would need to be removed in order to accommodate this mitigation measure. Therefore, this improvement project is not identified in the Old Town IFS.*

Juan Street, between Twiggs Street and Harney Street (LOS E) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Juan Street to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 11 regular parking spaces*

would need to be removed in order to accommodate this mitigation measure. Therefore, this improvement project is not identified in the Old Town IFS.

Taylor Street, between Morena Boulevard and I-8 Ramps (LOS F) - Widening the roadway from a 2-Lane Collector to a 4-Lane Major Arterial would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this improvement. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Taylor Street to accommodate two additional through lanes and a center median while maintaining a Class II bicycle facility. Therefore, this improvement project is not identified in the Old Town IFS.*

Old Town Avenue, between Hancock Street and Moore Street (LOS F) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Old Town Avenue to accommodate a center left-turn lane while maintaining right-of-way for the proposed Class II bicycle lanes. Therefore, this improvement project is not identified in the Old Town IFS.*

Old Town Avenue, between Moore Street and San Diego Avenue (LOS E) - Widening the roadway from a 2-Lane Collector to a 2-Lane Collector with Center Left-Turn Lane would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *Due to the historic nature of the Old Town Community, the Preferred Plan does not propose any road widenings or significant capacity improvements; therefore, widening this roadway would not be in conformance with the Community Plan Goals and Policies. Additionally, there is not enough right-of-way available along this segment of Old Town Avenue to accommodate a center left-turn lane and maintain existing features such as on-street parking, sidewalks, etc. Up to 18 regular parking spaces and 1 loading parking space would need to be removed in order to accommodate this mitigation measure. Finally, a Class II bicycle facility is proposed along this segment. Therefore, this improvement project is not identified in the Old Town IFS.*

4.6.2 Intersection Mitigation Measures

<u>Midway-Pacific Highway Community</u>

1. *Lytton Street and Rosecrans Street (LOS F: AM Peak Hour and LOS E PM Peak Hour)* – The westbound through movement, as well as the southbound left-turn and through movements are projected to be over capacity, under implementation of the Preferred Plan. Implementing the following improvements would allow the intersection to operate at LOS D or better during both peak hours.

    - Add a second southbound left-turn lane from Lytton Street to eastbound Rosecrans Street
    - Add an additional westbound through movement lane on Rosecrans Street (three total)
    - Implement right-turn overlap (RTOL) phases at all legs of the intersection

The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is currently not enough right-of-way on Rosecrans Street to accommodate a third westbound through lane. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

Partial Mitigation: If the second southbound left-turn lane from Lytton Street to eastbound Rosecrans Street and RTOL phases at all legs are implemented (feasible improvements) the overall intersection delay would be reduced to the following:

AM: LOS E
PM: LOS D

Implementation of this improvement will partially mitigate the traffic related impact at the intersection. *This improvement project is identified in the Midway Pacific Highway IFS.*

2. *Sports Arena Boulevard / West Mission Bay and I-8 WB Off-Ramp (LOS E: PM Peak Hour)* – The westbound right-turn movement, from I-8 WB to northbound West Mission Bay Drive, is projected to be over capacity during the PM peak hour, under the implementation of the Preferred Plan. Providing a third exclusive westbound right-turn lane would improve the intersection operations to LOS D. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *The Preferred Plan is consistent with the CIP Project #S00871: W. Mission Bay Drive Bridge Over San Diego River, which was reviewed by City and Caltrans staff. Further mitigations, beyond what is recommended as part of this CIP project would be inconsistent with Community Plan Policies and Goals for multimodal facilities*. *Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

Partial Mitigation: None recommended.

4. *Midway Drive / West Point Loma Boulevard and Sports Arena Boulevard (LOS E: PM Peak Hour)* – All four left-turn movements at this intersection are projected to be over capacity during the PM peak hour. Providing dual-left turn lanes on Midway Drive in the northbound direction, on Sports Arena Boulevard in the southbound direction, and on West Point Loma Boulevard in the eastbound direction would improve intersection operations to LOS D during the PM peak hour. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way within the intersection to accommodate any of the additional left-turn lanes considering the proposed multi-use urban trails along Midway Drive and Sports Arena Boulevard, and in-road bicycle facilities. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

Partial Mitigation: None recommended.

7. *Midway Drive and Rosecrans Street* (LOS E: PM Peak Hour) – Rosecrans Street is projected to operate at LOS E during the PM peak hours, under implementation of the Preferred Plan. Widening the eastbound and westbound approaches of Rosecrans Street to include a fourth through lane would improve the intersection operations to LOS D. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way to widen Rosecrans Street to eight lanes through the intersection*

considering the proposed multi-use urban path improvements. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.

Partial Mitigation: None recommended, limited to no right-of-way is anticipated to be available with proposed Multi-Use Urban Path improvements.

27. *Hancock Street and Washington Street (LOS E: PM Peak Hour)* – The southbound Hancock Street to westbound Washington Street right-turn movement is projected to be over capacity during the PM peak hour, under the implementation of the Preferred Plan. Restriping the southbound approach to include a second southbound right-turn lane would allow the intersection to operate at LOS C during the PM Peak Hour. This improvement is feasible but may require additional engineering study. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *This improvement would require the removal of on-street parking, which is heavily utilized by the businesses and restaurants in this area. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

    Partial Mitigation: None recommended.

30. *Kettner Boulevard and Laurel Street (LOS F: PM Peak Hour)* – The eastbound through movement on Laurel Street is projected to be over capacity during the PM peak hour, under implementation of the Preferred Plan. Widening the eastbound Laurel Street approach of the intersection to include a third through lane would improve the intersection operations to LOS D. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way to widen the eastbound Laurel Street approach to three lanes. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

    Partial Mitigation: None recommended.

34. *Pacific Highway and Sassafras Street (LOS E: PM Peak Hour)* – The southbound Pacific Highway to eastbound Sassafras Street left-turn movement is projected to be over capacity during the PM peak hour, under the implementation of the Preferred Plan. Adding a second southbound left-turn lane would allow the intersection to operate at LOS D during the PM peak hour. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way to widen the southbound approach of Pacific Hwy to include a second left-turn lane. Therefore, this improvement project is not identified in the Midway Pacific Highway IFS.*

    Partial Mitigation: None recommended.

35. *Pacific Highway and Laurel Street (LOS F: AM and PM Peak Hours)* – Laurel Street is projected to be over capacity during both peak hours, under implementation of the Preferred Plan. Widening the eastbound and westbound approaches to include a second eastbound left-turn lane and a third through lane in each direction along Laurel Street, as well as widening the northbound approach of Pacific Highway to include a second northbound left-turn lane and exclusive right-turn lane would improve the intersection operations to LOS D. The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way on Laurel Street to widen to three lanes in each direction. Also,*

there is not enough right-of-way on northbound Pacific Highway with the improvements of the cycle track, multi-use urban path. Therefore, *this improvement project is not identified in the Midway Pacific Highway IFS.*

Partial Mitigation: None recommended.

Old Town Community

37. Moore Street and Old Town Avenue (LOS F: PM Peak Hour) – The eastbound and westbound approaches along Old Town Avenue are projected to be over capacity during the PM peak hour, under implementation of the Preferred Plan. Implementation of the following improvements would allow the intersection to operate at LOS D during the PM peak hour.

- Implement exclusive eastbound and westbound left-turn lanes on the Old Town Avenue approaches of the intersection.
- Convert the eastbound/westbound signal phasing from permitted to protected phasing.

The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *The eastbound approach on the Old Town Avenue bridge is not wide enough to accommodate an eastbound left-turn lane. Therefore, this improvement project is not identified in the Old Town IFS.*

Partial Mitigation: None recommended.

Outside of the Community

50. *Nimitz Boulevard / Lowell Street and Rosecrans Street (LOS E: AM Peak Hour and LOS F: PM Peak Hour*) – Both the eastbound Rosecrans Street through movement, and the eastbound Rosecrans Street to northbound Nimitz Boulevard left-turn movement are anticipated to be over capacity for both peak hours, under implementation of Preferred Plan. Widening the Rosecrans Street eastbound and westbound approaches of the intersection to include a third through lane, and providing an additional eastbound left-turn lane from Rosecrans Street to Nimitz Boulevard would improve the intersection operations to LOS D or better during both the AM and PM peak hours.

The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *There is not enough right-of-way on Rosecrans Street to widen to six lanes. Therefore, this improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

Partial Mitigation: None recommended.

Table 4-8 provides a comparison of Preferred Plan operations at the impacted intersections, with and without mitigation measures.

Table 4-8 Impacted Intersection Level of Service with Mitigation Measures

Notes:
Bold letter indicates LOS E or F.

4.6.3 Freeway Segment Mitigation Measures

I-8 EB, between Morena Boulevard and Hotel Circle Drive (LOS F: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 NB, between Clairemont Drive and Sea World Drive (LOS E: AM & PM Peak Hours) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 SB, between Clairemont Drive and Sea World Drive (LOS E: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 NB, between Sea World Drive and I-8 (LOS E: AM Peak Hour, LOS F PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 SB, between I-8 and Old Town Avenue (LOS F: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 NB, between Old Town Avenue and Washington Street (LOS E: AM Peak Hour and LOS F: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 SB, between Washington Street and Pacific Highway (LOS F: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

I-5 SB, between Laurel Street and Hawthorne Avenue (LOS E: PM Peak Hour) – SANDAG's 2050 San Diego Forward: The Regional Plan (RTP) Revenue Constrained Managed Lanes and Highway Network identifies the construction of a managed lane along this segment. This improvement is anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvement and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the Revenue Constrained Network. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

4.6.4 Ramp Meter Mitigation Measures

I-5 SB / Sea World Drive Ramp (PM Peak Hour) – Ramp meter delays would decrease to less than 15 minutes if the ramp flow rate is increased from 444 cars per hour to 555 cars per hour. Increased ramp meter flow rates can be achieved by either reducing the ramp meter cycle length or providing additional travel lanes on the ramp.

The identified significant traffic related impact to this ramp would be fully mitigated with the implementation of this improvement. *This improvement project is not identified in the either the Midway Pacific Highway or Old Town IFS.*

5.0 Adopted Community Plan (No Project)

This chapter provides a comparison of the buildout of the currently Adopted Community plan or the No Project scenario analysis results to the Existing Conditions. As stated, the Midway-Pacific Highway Corridor Community Plan and Local Coastal Program Land Use Plan was adopted in 1991, and the Old Town San Diego Community Plan was adopted in 1987. Since the land uses and roadway network proposed by the Preferred Plan (or an alternative) would supersede the Adopted Community Plan, only a trip generation and VMT generation comparison was conducted for the Adopted Community Plan (No Project) scenario.

5.1 Vehicle Miles Traveled

The VMT generated within the community was estimated using the SANDAG Series 12 Future Year 2035 models. VMT is the total number of miles driven by all vehicle trips generated within the Midway Pacific Highway Corridor and communities, including trips to/from and within the community. Table 5-1A and Table 5-1B displays the total VMT generated within the Midway-Pacific Highway Corridor and Old Town communities, respectively, as well as the average trip length under Base Year, and Adopted Plan conditions. VMT calculations for the both communities are provided in Appendix J.

Table 5-1A Vehicle Miles Traveled Comparison – Midway-Pacific Highway Community – Adopted Plan

Measure	Community Planning Area				San Diego Region			
	Base Year	Buildout	Δ in Value	Δ in %	Base Year	Year 2035	Δ in Value	Δ in %
Total VMT (miles)	730,121	832,025	101,904	14.0%	85,182,063	108,485,008	23,302,945	27.4%
Total # of Auto Trips	294,796	311,502	16,706	5.7%	16,458,692	20,183,171	3,724,479	22.6%
Average Trip Length[1] (miles)	2.5	2.7	0.2	7.8%	5.2	5.4	0.2	3.7%
Population	4,672	11,775	7,103	152.0%	3,130,717	4,035,834	905,117	28.9%
Daily VMT by Population (miles)	156	71	-86	-54.8%	27	27	0	-1.5%

Source: Chen Ryan Associates (May 2017)

Note:

1. Average trip length is estimated by dividing the total VMT by the total # of auto trips.

As shown, under implementation of the Adopted Plan the number of new auto trips and total VMT generated within the Midway-Pacific Highway community is only anticipated to experience minimal growth (based on the regional averages). With the implementation of the Adopted Plan infrastructure and land uses, the average vehicular trip length is anticipated to increase by 7.8%. However, with the significant population increase anticipated within the community, the daily VMT by population is anticipated to drop dramatically (-54.8%).

Table 5-1B Vehicle Miles Traveled Comparison – Old Town – Adopted Plan

Measure	Community Planning Area				San Diego Region			
	Base Year	Buildout	Δ in Value	Δ in %	Base Year	Year 2035	Δ in Value	Δ in %
Total VMT (miles)	151,300	171,581	20,281	13.4%	85,182,063	108,485,008	23,302,945	27.4%
Total # of Auto Trips	57,989	58,192	203	0.4%	16,458,692	20,183,171	3,724,479	22.6%
Average Trip Length[1] (miles)	2.6	2.9	0.3	13.0%	5.2	5.4	0.2	3.7%
Population	834	985	151	18.1%	3,130,717	4,035,834	905,117	28.9%
Daily VMT by Population (miles)	181	174	-7	-4.0%	27	27	0	-1.5%

Source: Chen Ryan Associates (May 2017)

Note:

1. Average trip length is estimated by dividing the total VMT by the total # of auto trips.

As shown, under implementation of the Adopted Plan the number of new auto trips and total VMT generated within the Old Town community is only anticipated to experience average growth (based on the region). With the implementation of the Adopted Plan infrastructure and land uses the average vehicular trip length is anticipated to increase by 13.0%. However, with the population increase anticipated within the community, the daily VMT by population is anticipated to decrease (-4.0%).

Talbot Street	Northwest of Rosecrans St.	Collector	2	8,000	5,950	0.74	D

(1) LOS E Capacity has been estimated based on results of the Highway Capacity Manual Urban Street Methodology.
(2) Since a published standard capacity for a 2-Lane Major does not exist, capacity is assumed to be half of a 4-Lane Major.
