E TIME OF DAY FREE OPERATION

F FLASHING OPERATION

- 1 - AB EX. DETECTORS, PULL BOXES AND CONDUITS NOT USED IN THE NEW WORK, UNLESS SHOWN OTHERWISE.
- 2 - SC AS REQUIRED TO MAINTAIN 480V (L) & SIGN ILLUM. CIRCUIT.
- 3 - RS EX. HPS 200 LUMINAIRE. ADD: EXTENDED PIPE TENON AS DETAILED ON SHEET E-(1).
- 4 - INSTALL: 180 WATT LPS LUMINAIRE. (240V BALLAST)
- 5 - INSTALL: 180 WATT LPS LUMINAIRE. (480V BALLAST)
- 6 - RS EX. SIGNALS AND MOUNTINGS AT 10 FT. (3-PV)
- 7 - REPLACE EX. PULL BOX WITH "TRAFFIC BEARING" NO. 5 PULL BOX.
- 8 - MP TYPE III SERVICE EQUIPMENT ENCLOSURE. WIRING DIAGRAM ON SHEET E-(1) LOCATED IN ROUTE 5 PLANS (2 SHEETS)
- 9 - INSTALL: PEU (SIGN TYPE).
- 10 - TERMINATING PULL BOX, NO. 6. MARKING AND LABELING AS REQUIRED BY UTILITY COMPANY.
- 11 - RC EX. SERVICE EQUIPMENT.

- A - EXISTING CONTROLLER ASSEMBLY IN TYPE "R" CABINET TO BE SALVAGED.
  - INSTALL MODEL 170 CONTROLLER ASSEMBLY, USING "PR" CABINET ADAPTER. DETAILS ON ES-4C.
  - SPLICE AS NECESSARY TO COMPLETE SIGNAL AND LIGHTING CIRCUITS.
  - INSTALL P.C.C. PADS FOR FRONT AND BACK DOORS PER ES-4B.

- B1 RELOCATE 180 WATT LPS LUMINAIRE (240 VOLT BALLAST) AND PROVIDE NEW BASE WITH ANCHOR BOLTS TO MATCH EXISTING. REPLACE OR RELOCATE IN-GROUND LIGHT POLE JUNCTION BOX
- B2 EXTEND RACEWAYS 11, 5 AND 12 TO LIGHT POLE JUNCTION BOX, PULL IN NEW CONDUCTORS AND MAKE OPERATIONAL

- (A) EX. 10 FT. I-A, INSTALL: TV - 1 - T AS SHOWN, WITH 5-SECTION (OLA) DETAILED ABOVE.
- (B) EX. 10 FT. I-A, INSTALL: TV - 1 - T, ALL ARROW LENSES (R,Y & G) AS SHOWN.
- (C) EX. TYPE 15, INSTALL: SV 1 2 - TD AS SHOWN. USE (7) FROM 16

(1) SIGNAL, PI.011 (4) LIGHTING
(2) FUTURE USE (5) FUTURE USE
(3) PEU (6) FUTURE USE

(H)	STATE-FURNISHED, MODEL 170 CONTROLLER ASSEMBLY. FOUNDATION DETAILS, ES-4B.									

4 R Y G OLA — YELLOW ARROW, GREEN ARROW

5 FIVE SECTION SIGNAL FACE POLES (F) & (G) (No Scale)

NOTES

1 - DETAIL "U", ES-6T, REQUIRED. INSTALL: STATE-FURNISHED SIGN PANEL.

2 - RS EXISTING SP-2-T PEDESTRIAN HEADS. INSTALL: NEW SP-2-T PEDESTRIAN HEADS.

3 - LEFT TURN SIGNAL FACE SHALL CONSIST OF 3-12 INCH ARROW SECTIONS (R,Y &G).

4 - INSTALL SALVAGED HPS 200 LUMINAIRE.

5 - INSTALL 5-SECTION SIGNAL FACE PER DETAIL THIS PLAN.

CONTINUED BELOW

CONDUIT NOTES

9 - 1-INCH C. 1-DLC.

10 - EXISTING 1 1/2 INCH C. WITH 2 NO.8-LIGHTING & ILLUM. SIGNS (480V).

11 - EXISTING 1-INCH C. WITH 1-dlc. RC 1-dlc. INSTALL: 1-DLC.

12 - 1 1/2 INCH C. 2 NO. 6-SIGNAL SERVICE 2 NO. 8-LIGHTING. 3 NO. 14-PEU.

13 - 1 1/2 INCH C. 4-DLC.

14 - SERVICE CONDUIT, 2-INCH C. 3 NO.6 - 120/240V SERVICE.

15 - 1-INCH C. 2-DLC.

16 - SERVICE CONDUIT, 2-INCH C. CONDUCTORS BY OTHERS.

17 - 1 1/2 INCH C. 2 NO.8-LIGHTING & ILLUM. SIGNS (480V).

18 - EXISTING 1-INCH C. WITH 1-dlc. RC 1-dlc. INSTALL: 2-DLC.

19 - EXISTING 1-INCH C. WITH 2 NO. 10-LIGHTING.

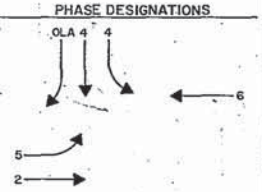
LEGEND

EV-DLC= EMERGENCY VEHICLE DETECTOR LEAD IN CABLE (FUTURE USE). TERMINATE CABLES IN GREEN SECTION ON END OF MASTARM SIGNAL HEAD. LEAVE ONE FOOT OF SLACK.

* ANGLE VISORS, SHALL BE: 12" 16"



(SETS REQUIRED: 1-LEFT & 1-RIGHT)

TYPICAL LOOP DETECTOR PLACEMENT

LIKE NUMBERED LOOPS SHALL BE CONNECTED TO THE SAME DLC.

PHASE DESIGNATIONS

EMERGENCY OPERATION: FLASH ALL PHASES RED.

6 - AB EXISTING PULL BOX. CC EXISTING CONDUITS AND EXTEND TO NEW PULL BOX. INSTALL: NO. 5 PULL BOX, 4-FT. FROM EXISTING F/L.

7 - PEDESTRIAN BARRICADE, ES-6A. INSTALL: STATE-FURNISHED SIGN PANEL.

8 - MP TYPE III SERVICE EQUIPMENT CABINET, ES-2C & ES-2D. WIRING DIAGRAM ON SHEET E-1.

9 - RS EXISTING SERVICE EQUIPMENT. INSTALL: TYPE "H" SERVICE.

10 - EXISTING 480V, "UG". SP FOR ILLUM. SIGNS AND HIGHWAY LIGHTING LOCATED ON MOTEL WALL AT SE CORNER OF PROPERTY (N. OF ROUTE 8& W. OF PRESIDIO O.C. U-XFMR 490-52-SERVICE NO. AO.93).

11 - INSTALL NEW CONDUCTORS IN EXISTING 2-INCH C.

12 - TERMINATING PULL BOX. MARKING AND LABELING AS REQUIRED BY UTILITY COMPANY.

(16) - 1 1/2"C., 1-BDLC

(17) - 1"C., 2 #10-LTG.

(18) - SERVICE CONDUIT, 2"C., 3#4.

(F)= FUTURE USE.

TYPICAL LOOP DETECTOR PLACEMENT

LIKE NUMBERED LOOPS SHALL BE CONNECTED TO THE SAME DLC.

NOTES

1 - DETAIL "U" (ES-6T) REQUIRED. INSTALL STATE-FURNISHED SIGN PANEL.

2 - DETAIL "U" (ES-6T) NOT REQUIRED.

3 - RELOCATE LIGHTING STANDARD WITH SLIP-BASE, REMOVED FROM E-(1).

4 - TERMINATE EMERGENCY VEHICLE PREEMPTOR DETECTOR LEAD-IN CABLE(S) (EV-DLC), IN GREEN SECTION OF SIGNAL HEAD ON THE END OF THE MASTARM, IF POLE HAS MASTARM. (LEAVE 1 FOOT OF SLACK).

5 - LEFT-TURN SIGNAL FACE SHALL HAVE 3-12" ARROWS: RED, YELLOW & GREEN.

6 - SPECIAL DETECTOR HANDHOLE, (ES-5D).

7 - INSTALL PEDESTRIAN BARRICADE, (ES-6A). INSTALL STATE-FURNISHED SIGN PANEL.

8 - TYPE III SERVICE EQUIPMENT CABINET, (ES-2 C/D). WIRING DIAGRAM, SHEET E-(4).

9 - TERMINATING PULL BOX. LABELING AND MARKING AS REQUIRED BY SERVING UTILITY

(N) NEW EQUIPMENT OR POLE

(E) EXISTING EQUIPMENT OR POLE TO BE REUSED

STANDARD NOTES:

- AB – ABANDON. IF APPLIED TO CONDUIT REMOVE CONDUCTORS.
- BC – INSTALL PULLBOX IN EXISTING CONDUIT RUN.
- CB – INSTALL CONDUIT INTO EXISTING PULLBOX.
- RL – RELOCATE EQUIPMENT.
- RS – REMOVE AND SALVAGE EQUIPMENT.

CONSTRUCTION NOTES (THIS SHEET):

1. INSTALL EXISTING TYPE 170 CONTROLLER AND CABINET COMPLETE ON NEW FOUNDATION.
2. INSTALL NEW PULLBOX IN SAME LOCATION AS EXISTING PULLBOX.
3. REMOVE DISCRETE #14 SIGNAL CONDUCTOR. ADD 12/14 CABLE AS SHOWN.
4. RS EXISTING SIGNAL HEADS. FURNISH AND INSTALL PROGRAMMED VISIBILITY TYPE.

The meters normally operate in a traffic responsive mode.
There are 15 separate rates or steps between the slowest and the fastest discharge rate that depend on mainlane volumes.

Appendix C
Synchro HCM 2010
Adjustment Documentation

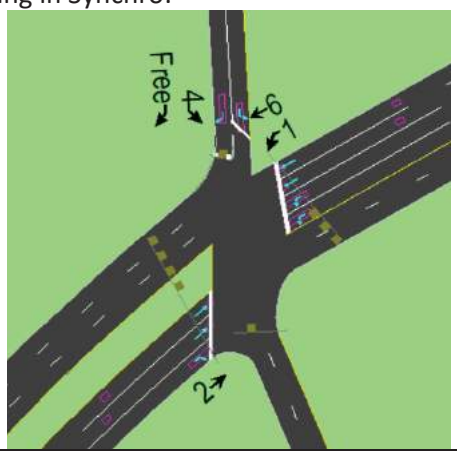
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 1: I-5 SB Ramps / Sea World Drive

Description of issue:



The southbound right-turn movement (SBR) for this intersection have a signal head that turn red whenever the eastbound pedestrian phase is activate. However due to the lack of pedestrians along this area, the pedestrian phase rarely activates. This results in the SBR acting similar to a free movement. Setting the intersection as "yield" or "permissive" results in failing LOS F during the PM peak hour, which does not reflect field conditions.

Solution:

- Set SBR to "free" to reflect field conditions

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing in Synchro:

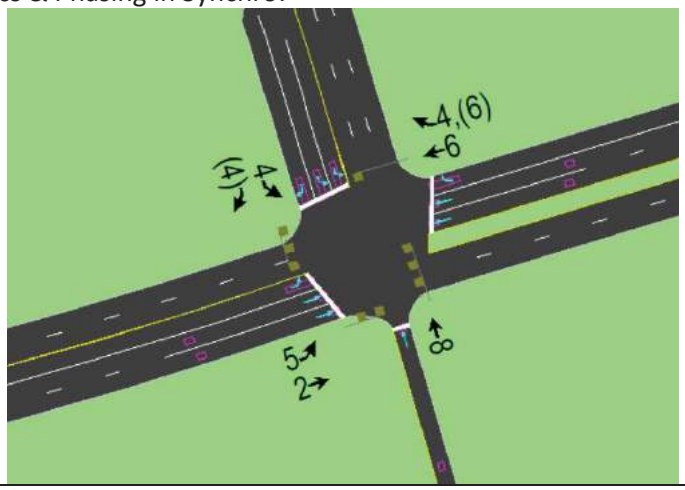
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 8: Napa Street / Friars Road

Description of issue:



The signal timing for this intersection indicates that there is an exclusive pedestrian only phase. HCM 2010 / NEMA does not support pedestrian only phase or hold phase.

Solution:

- A dummy northbound connection was created and assign phase 8 (split phasing) to mimic the pedestrian only phase.

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing in Synchro:

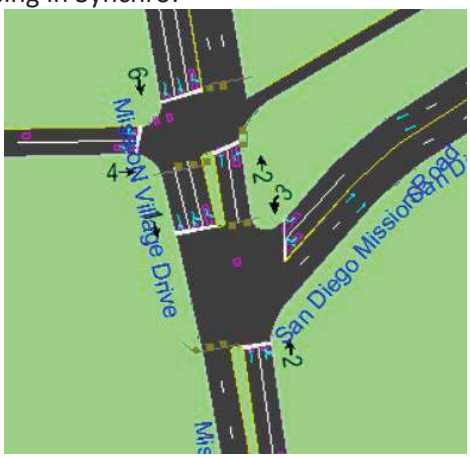
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 25: Friars Road EB / Mission Village Drive

Description of issue:



This actuated-uncoordinated intersection is clustered with the intersection of Mission Village Drive / San Diego Mission Road. HCM 2010 / NEMA does not allow clustered intersections.

Solution:

- The two intersections were "unclustered" and optimized together so that they have the same cycle length and their off-set mimics the clustered effect.

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing in Synchro:

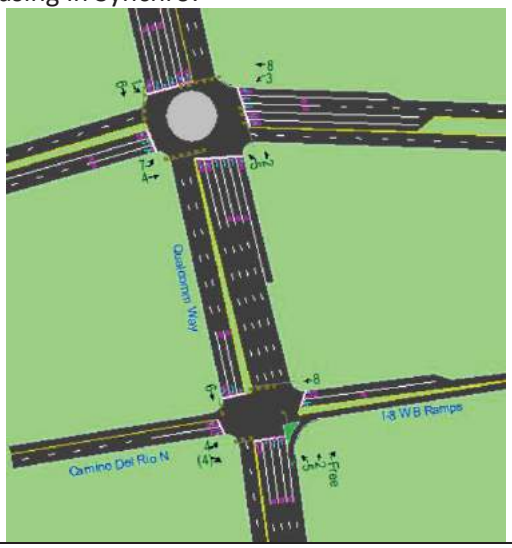
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 42: Qualcomm Way & Camino De La Reina and Intersection 52: Qualcomm Way & I-8 WB Off-Ramp

Description of issue:



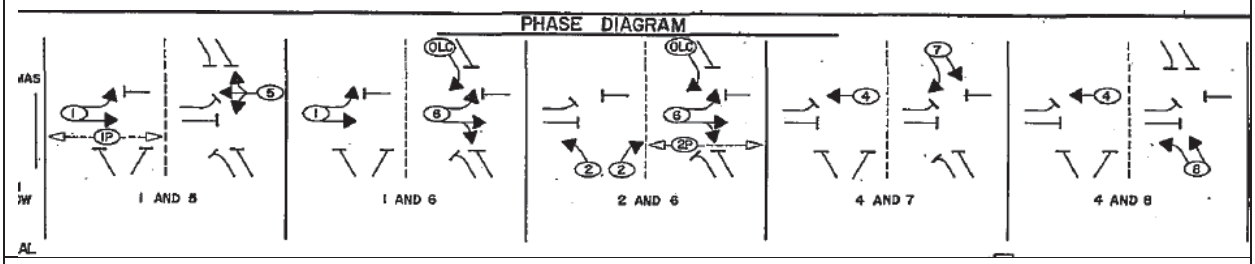
The intersection of Qualcomm Way & Camino De La Reina is clustered with the intersection of Qualcomm Way & I-8 WB Off-Ramp. Both intersections are under the jurisdiction of the City of San Diego.

Solution:

- The two intersections were "unclustered" and optimized together so that they have the same cycle length and their off-set mimics the clustered effect.

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing in Synchro:



Project: Mission Valley Community Plan Update

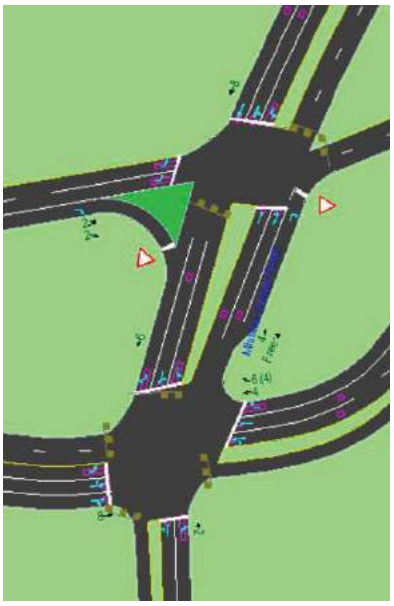
Analyst: Phuong Nguyen, PE

Signal timing phasing (see below for geometrics):

Intersection 58: Mission Center Road & I-8 EB Ramps and Mission Center Road & Camino Del Rio South

Description of issue:

The intersection of Mission Center Road & I-8 EB Ramps is clustered with the intersection of Mission Center Road & Camino Del Rio South. Both intersections are under the jurisdiction of Caltrans.



Solution:

- The two intersections were "unclustered" and optimized together so that they have the same cycle length and their off-set mimic the clustered effect.
- Intersection phasing at each intersection were set so that they act in conjunction with each other, mimicking the phasing diagram provides above.

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing:

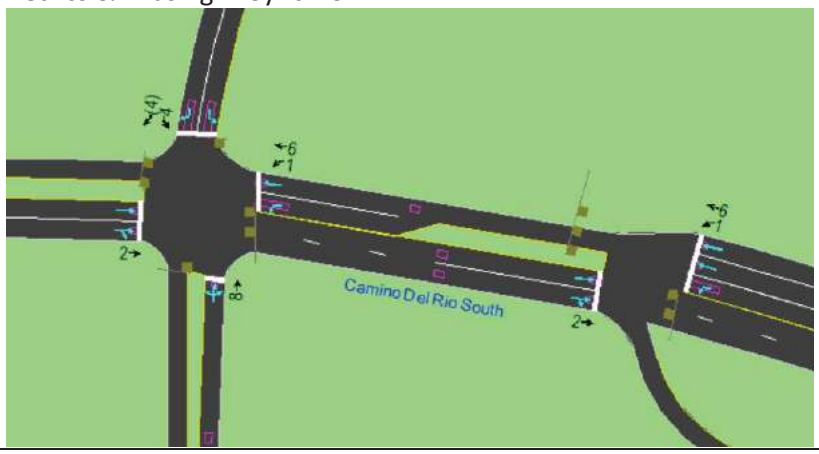
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 63: I-15 SB Off-Ramp & Camino Del Rio South and I-15 SB On-Ramp & Camino Del Rio South

Description of issue:



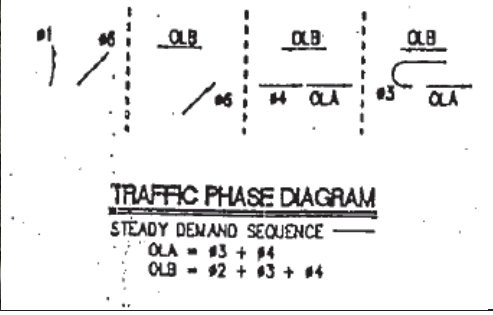
The intersection of I-15 SB Off-Ramp & Camino Del Rio South is clustered with the intersection of I-15 SB On-Ramp & Camino Del Rio South. Both intersections are under the jurisdiction of Caltrans.

Solution:

- The two intersections were "unclustered" and optimized together so that they have the same cycle length and their off-set mimic the clustered effect.

Date of confirmation from Trafficware: 5/2016

Intersection Geometrics & Phasing in Synchro:



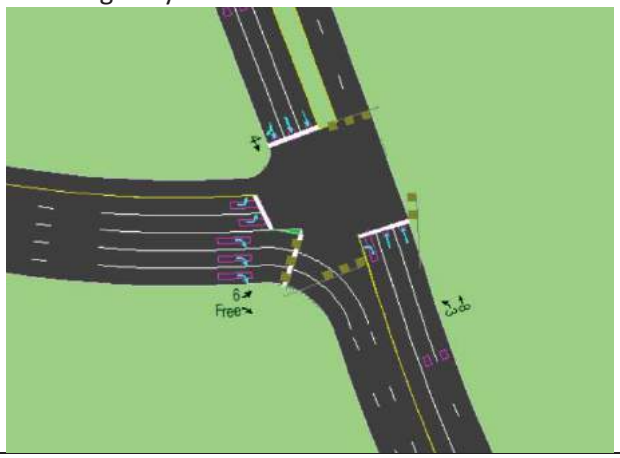
Project: Mission Valley Community Plan Update

Analyst: Phuong Nguyen, PE

Existing Geometrics:

Intersection 63: Fairmount Avenue & I-8 EB Off-Ramp

Description of issue:



The EBR movement at this intersection overlap with the NBT movement, the NB U-turn movement is protective and operate concurrently with the NBT movement. The NBT and SBT movement operate concurrently, except for when the EBR movement is overlapping with the NBT movement (the SBT movement stop at this point). The EBL movement is protective and operate independently of the other phases.

Solution:

- The NB U-turn movement was converted and assumed to be operating as a protective left turn movement.
- The EBR movement is converted to a free phase, as field observation show that this phase were allocated the majority of the time and operate similar to a "free" phase.
- Final intersection delay were compared to field observation to make sure that the result mimic field condition.

Date of confirmation from Trafficware: 5/2016

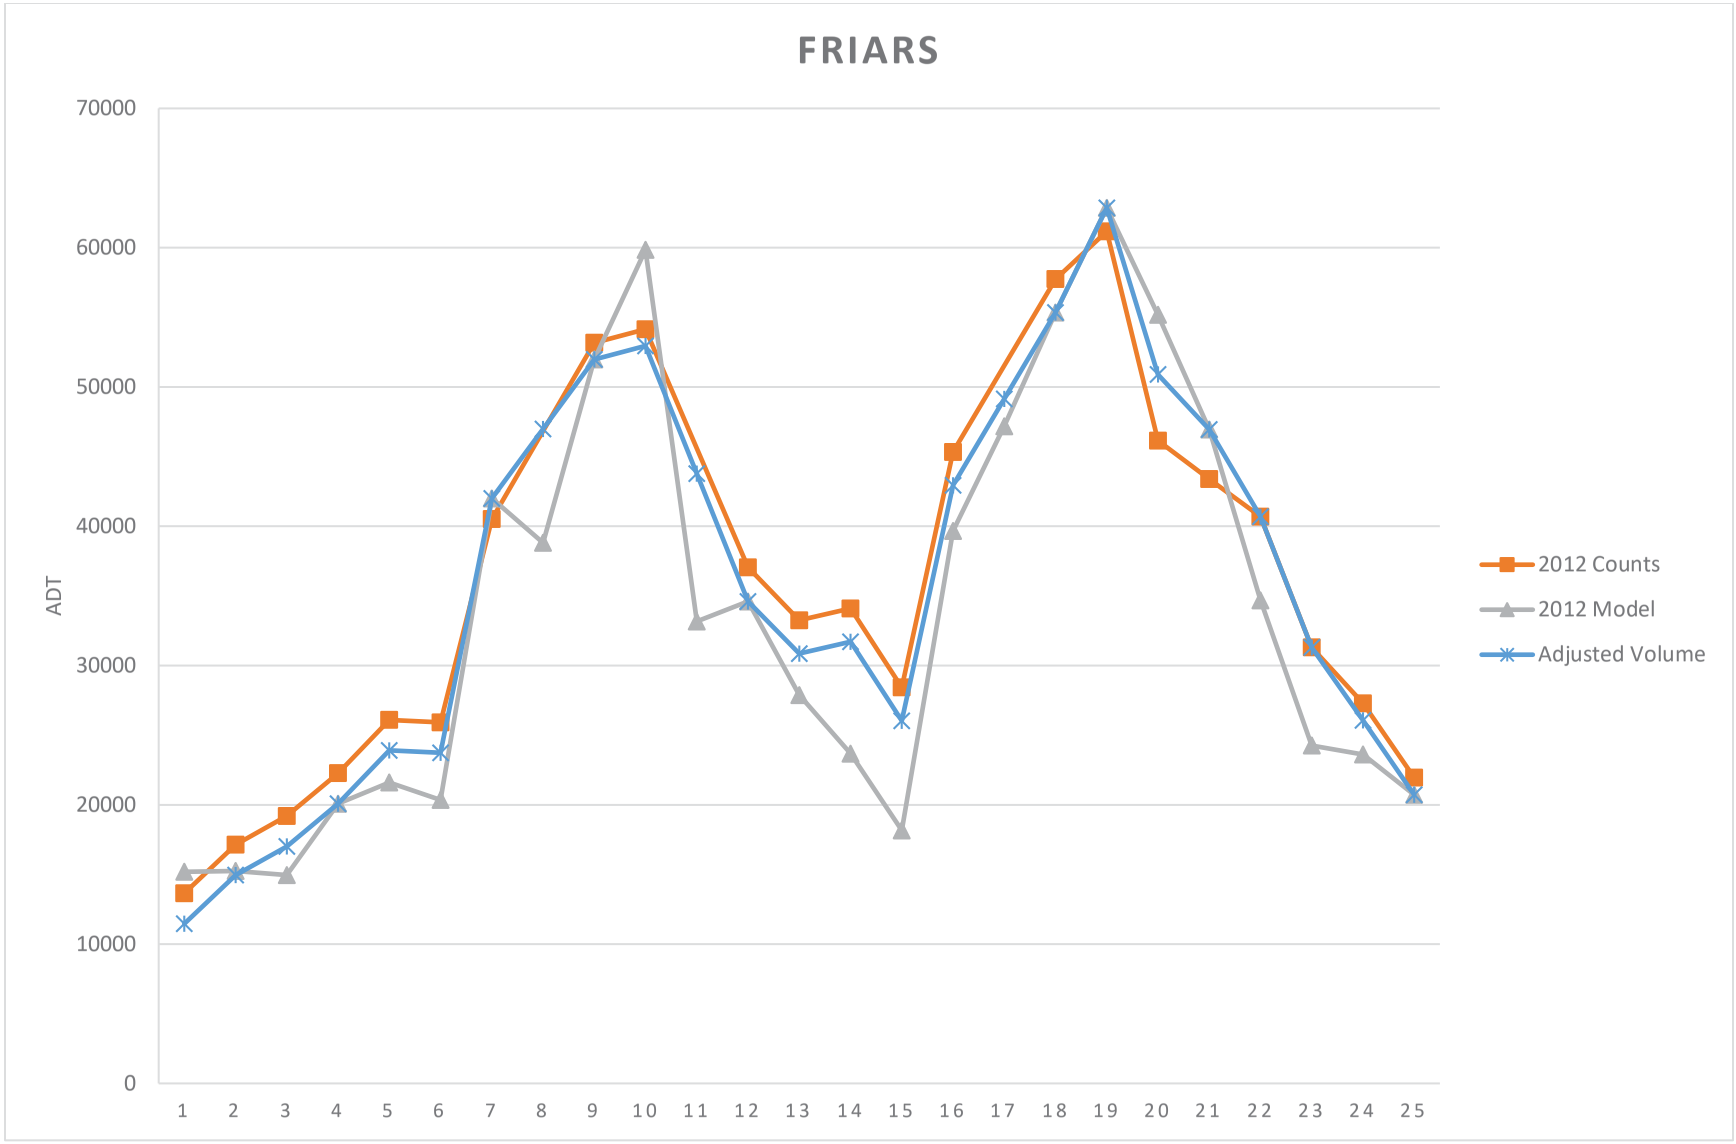
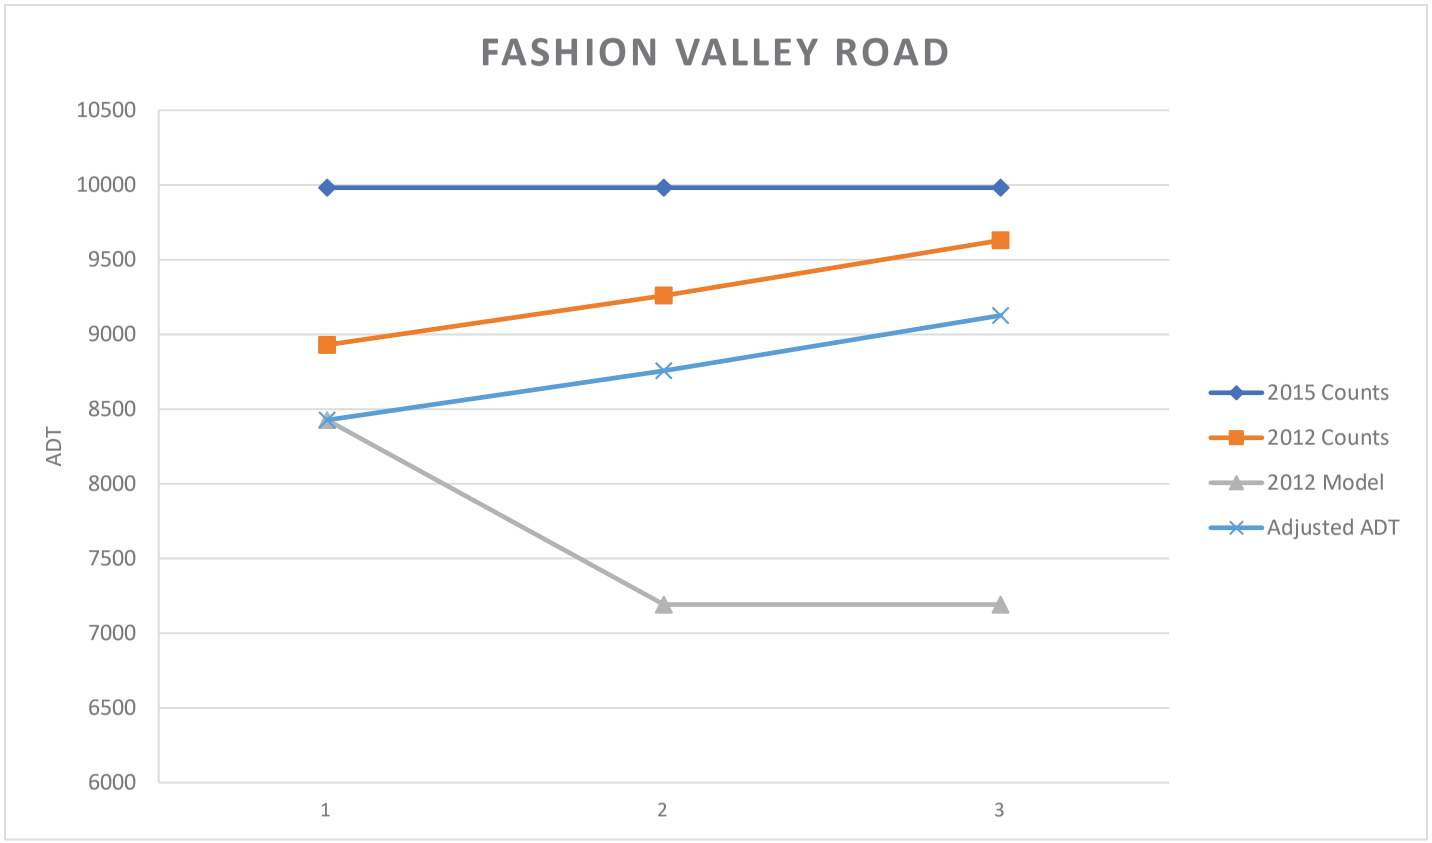
Modeling Documentation & Model Outputs



Roadway Adjustment

Model Adjustment was conducted using the following steps for corridors adjustment. Corridor adjustment calculations are provided below.



Model Ajdustment Steps:

1. Identify key segment where the Base Year 2012 counts are within +/- 10% of the model projected volume. These locations are consider to be key locations and no adjustment is needed.
2. Calculate the change in Base Year 2012 volume between the key location and adjacent location.
3. Add or subtract the change calculate in Step 2 to the key location in Step 1 to arrive at the adjusted model volume.
4. Subtract adjusted model volume from unadjusted model volume to arrive at the adjustment factor. This factor is refer to as “adj” in the tables below
5. Repeat the process above for all segments
6. Review trendline to ensure that adjusted model volume follow the same trend as the Base Year 2012 counts
7. Consider additional adjustment as needed, depending on results in Step 6
8. Extract adjustment ADT (calculated from Step 4) and apply them to all future scenarios
9. Repeat Step 1 to 8 for all corridor that needs adjustment

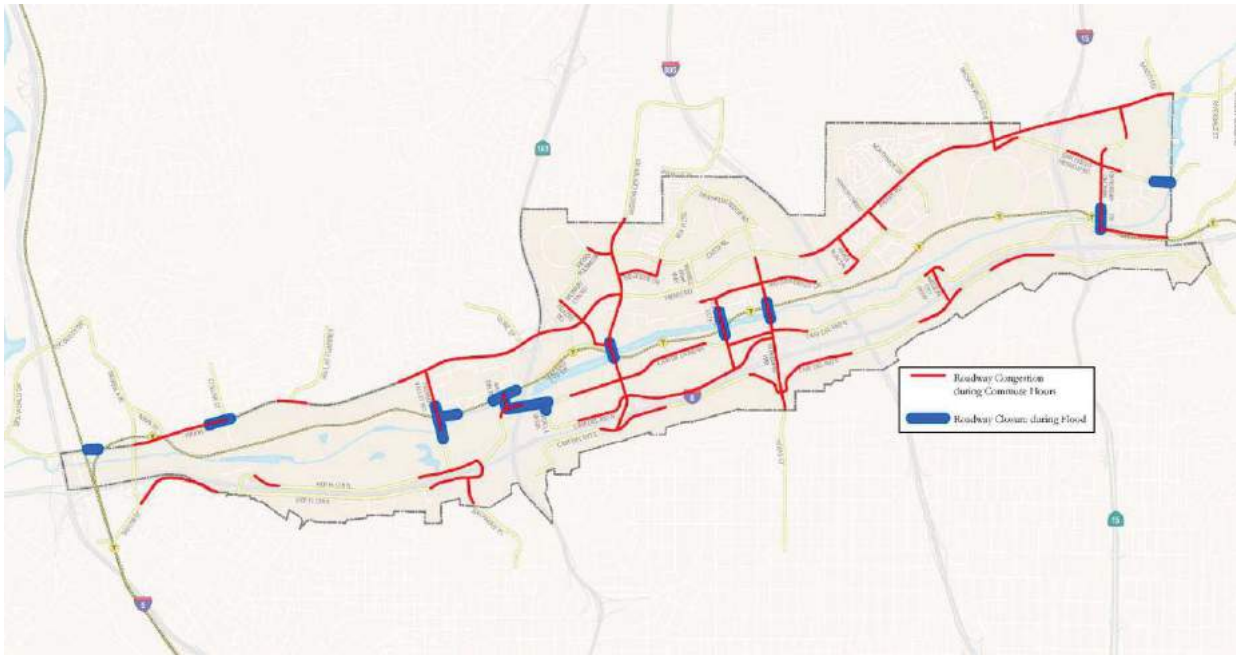
Appendix G
Connectivity Assessment Paper

Assessment of Need for Missing Roadway Connections for the Mission Valley Community Plan Update

Issue: The Fenton Parkway connection over the San Diego River (to Camino del Rio North and Mission City Parkway), the Via Las Cumbres (VLC) roadway connection between Friars Road and Hotel Circle North and South, and the VLC interchange with I-8, are included in the adopted Mission Valley Community Plan and the Levi-Cushman Specific Plan. Analysis was conducted to determine whether these connections and interchange (modified version based on Caltrans Phase 2 Concept) should be recommended for inclusion in the Mission Valley Community Plan Update (MV CPU).



Conclusion: Based on the information below, staff recommends that the Via Las Cumbres roadway connection over the San Diego River and the VLC/I-8 interchange via Hotel Circle North/South (HCN/S) one-way couplet (per Caltrans Phase 2 Draft Concept), and the Fenton Parkway connection across the San Diego River, be included in the MV CPU to support the draft Plan's growth in Mission Valley.

Context: Steep slopes, the San Diego River, five freeways, and the San Diego Trolley form barriers to connectivity within as well as to and from Mission Valley. This has resulted in a planned street network that consists of fewer and wider streets and intersections to accommodate the movement of people and goods, and less distributed/more concentrated traffic flows, making many of these streets and intersections barriers in and of themselves, especially for transit users, cyclists and pedestrians.

Analysis:

Flooding

During recurring flooding events in Mission Valley every street crossing the San Diego River (seven) and some roadways adjacent to the River (three) become impassable.

The only ways to travel across the San Diego River in Mission Valley during these events are via SR 163 and I-15. Since pedestrians and cyclists cannot use the freeway, they are unable to cross the river during flooding events.

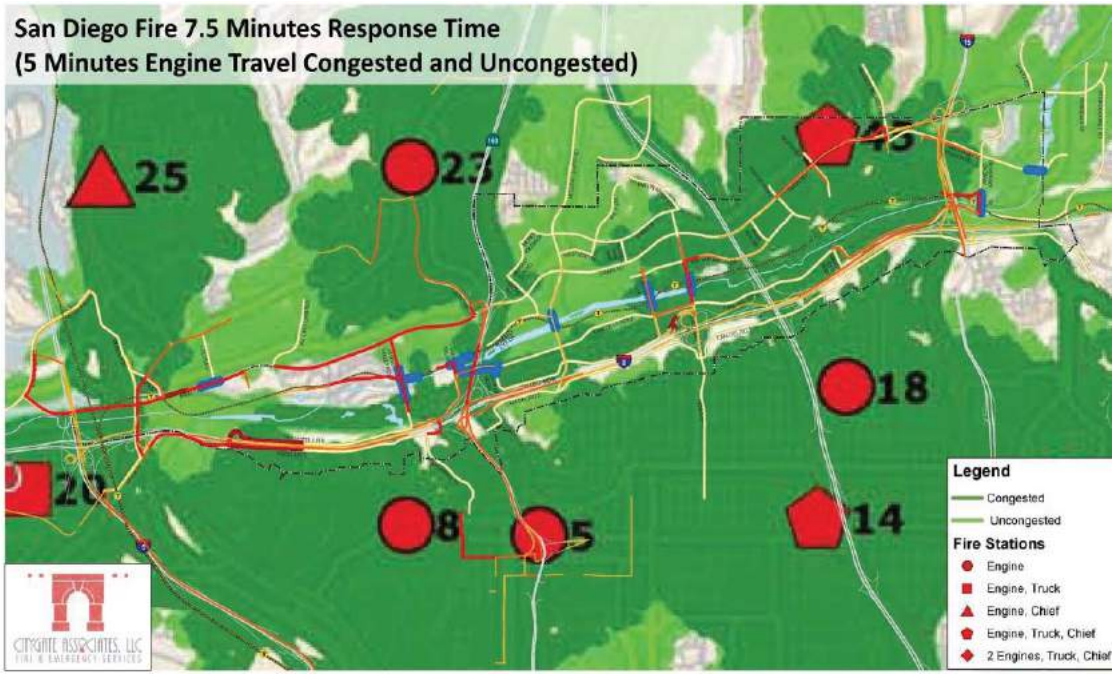
Following are the surface streets that close due to flooding:

- Fashion Valley Road across river
- Riverwalk Drive (behind Fashion Valley Mall) adjacent to river
- Avenida del Rio across river
- Camino de la Reina from just west of Avenida del Rio to just east of Camino de la Siesta
- Mission Center Road across river
- Camino del Este across river
- Qualcomm Way across river
- Ward Road across river
- San Diego Mission Road across river
- Friars Road from west of Colusa to just east of Colusa Street

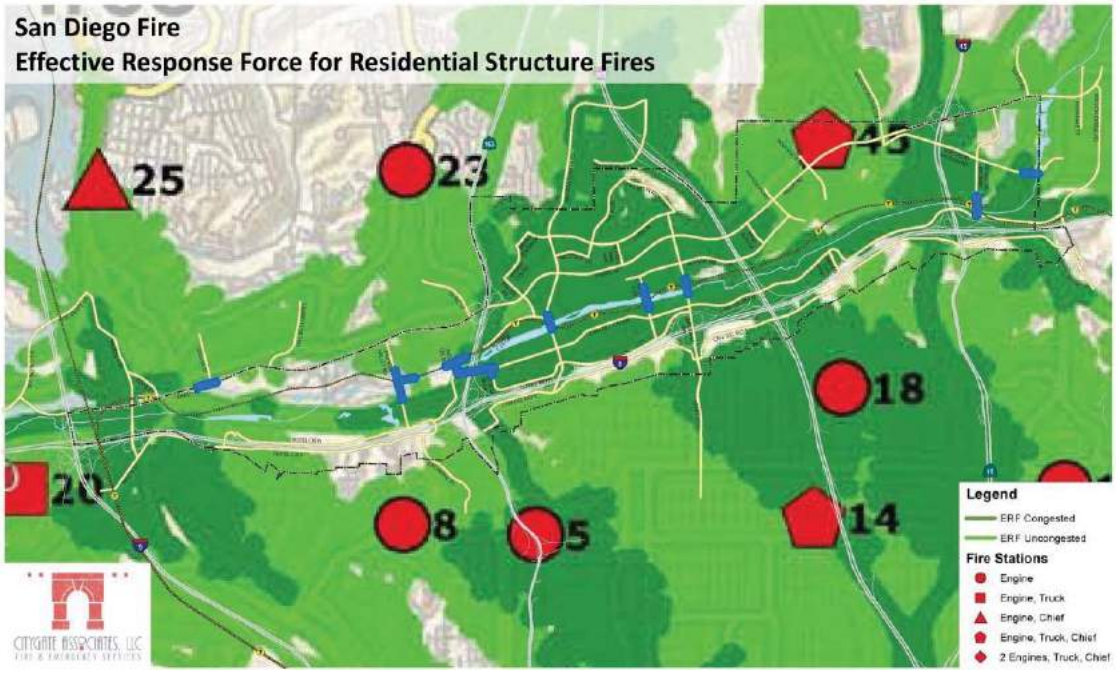
Following are transit services that are rerouted and impacted/delayed due to flooding:

- Significant flooding at Fashion Valley Road and Fashion Valley Transit Center has required transit operations to relocate to the Mission Valley Center Transit Station affecting all transit routes that utilize the Fashion Valley Transit Center. Flooding-related closures of the Fashion Valley Transit Center impact Routes 1, 6, 20, 25, 41, 88, 120, and 928, and may also require Sycuan Green Line service to bypass the station.
    - Route 6 normally uses Avenida Del Rio and the Fashion Valley Transit Center.
    - Routes 1, 88, and 120 normally use Fashion Valley Road to access the Fashion Valley Transit Center.
    - Route 14 normally uses Ward Road to access the Mission San Diego and Grantville Trolley Stations.

- Transit services not rerouted but impacted/delayed due to flooding:
    - Transit routes that are not rerouted during a flooding event are affected by increased traffic and congestion along their routes caused by the other rerouted vehicular traffic.



Emergency response concerns during flooding



- Emergency response during flooding events (for both flood-related emergencies/rescues and non-flood-related emergencies) is significantly hampered by a lack of north-south connectivity in the community.
- See below for general Public Safety and Emergency Response considerations, which are more critical during flooding events, due to the extensive street closures that occur.

<u>Public Safety and Emergency Response considerations</u>

- Citygate Report (2017) does not specifically call out any gaps in Mission Valley in their 2017 analysis however, the Map Atlas shows gaps in coverage within Mission Valley, specifically in:
    - Map 3b 5 Minute Engine Travel Congested and Uncongested (Pg. 17) – There is an apparent gap around the Riverwalk Golf Course (See map inserted below.);
    - Map 4b ISO 1.5 Mile Travel Distance – There are gaps at the Riverwalk Golf Course and central Mission Valley around Mission Center Road (See map inserted below.); and
    - Several other maps show some gap in coverage in the Riverwalk Golf Course.
- Connections would provide improved police, fire-rescue, lifeguard/swift-water rescue, and ambulance emergency response times.
- Connections would provide improved emergency transport times to hospitals.
- Connections would reduce the risk that an area of the community will become inaccessible if all or a part of a roadway is blocked.
- Connections would allow fire stations to serve a greater area; especially important when multiple stations are responding to incidents and/or covering for stations that are busy.

- Connections would provide multiple approach route options for emergency response and alternate routes for diverting traffic during emergencies that close road(s); important because there are often multiple responders to an incident who need to gain access from different directions to the area and stage.
- Connections would improve access to UCSD Medical Center.

Additional notes on public safety – emergency/disaster planning, response and recovery:

- The most frequently recurring hazard is flooding which has repeatedly closed every surface street that crosses the San Diego River in Mission Valley.

- Much of Mission Valley is in the very high fire hazard severity zone and is identified as a High Potential area for liquefaction in the Seismic Safety Study. (Links: VHFHSZ, Seismic Safety Study)
- Potential for multiple co-occurring incidents is greater, such as freeway/transportation incident on limited number of facilities during evacuation and/or disaster response.
- Climate change adaptation and resilience considerations.

Vehicular Traffic Capacity and Operations

- Connections provide more direct travel between destinations.
- Connections decrease travel distance/out-of-direction travel.
- Connections distribute traffic and reduce volumes on streets and at intersections.
- Connections provide safety benefits of reduced conflicts at intersections.
- Connections provide more route options/redundancy/resiliency during incidents, construction and maintenance activity.
- Connections better connect adjacent communities – Linda Vista, Old Town, and Uptown to MV and each other.

Via Las Cumbres connection over San Diego River and Interchange with I-8 via Hotel Circle North and South one-way reconfiguration in Mission Valley

Projected Via Las Cumbres Average Daily Traffic (ADT) Volumes:

- 19,400 ADT over San Diego River;
- 23,200 ADT from Street B to HCN; and
- 30,300 ADT between Hotel Circle North and South.

Forecast Diverted Traffic Volumes without VLC & I-8/HCN/S Interchange			
Freeway or Roadway Segment	VLC IN Unadjusted ADT	VLC OUT Unadjusted ADT	Delta ADT
SR 163 Southbound	71,700	75,000	3,300
Friars Road west of SR 163	50,300	52,300	2,000
Friars Road east of Napa	18,900	23,700	4,800

Mission Center Road	24,300	25,100	700

Active Transportation, Transit

- Connections provide for a higher quality environment for pedestrians and cyclists.
- Connections allow pedestrians and cyclists to cross the river during a flooding event.
- Connections reduce traffic congestion on transit routes which improves the reliability of bus services in Mission Valley and other areas.
- Connections provide additional options for transit connectivity and improved bus routing.
- Connections improve access to one existing and two planned trolley stations for pedestrians, cyclists, shuttles, buses, and vehicles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
