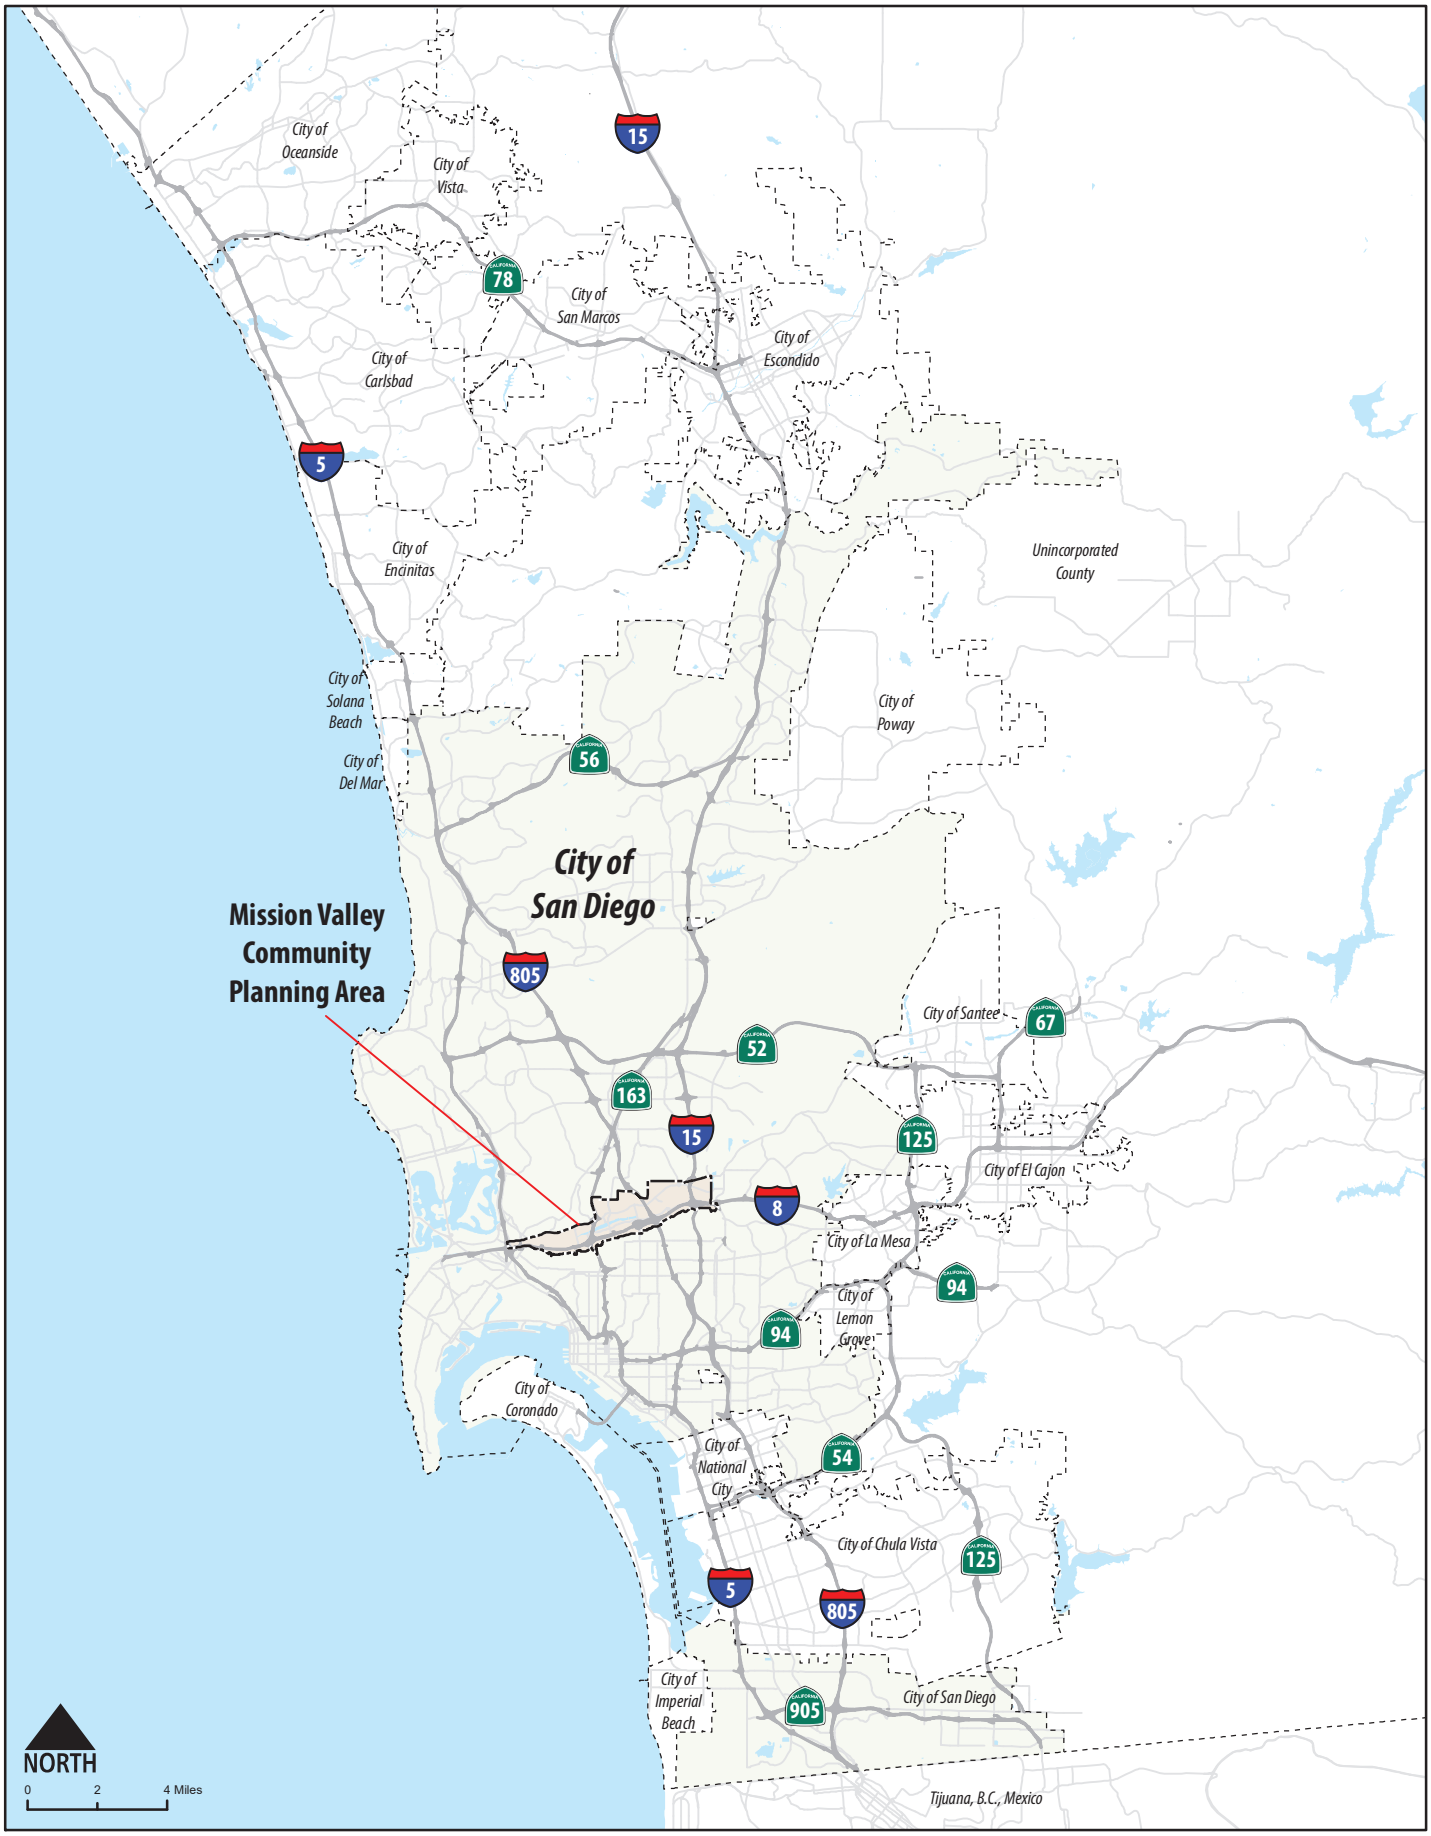
The following street names have changed since the release of the Draft TIS (January 24, 2019):

- Street "J" changed to Riverwalk Street "J"
- Levi-Cushman Street "B" changed to Rivewalk Street "U"
- Street "I" changed to Mission City Street "I"

1.0 Introduction

1.1 Purpose of the Report



This Transportation Impact Study (TIS) serves to identify and document potential traffic impacts related to buildout of the proposed Mission Valley Community Plan Update land uses and mobility alternatives, as well as to recommend improvements/mitigation measures for any identified roadway, intersection, and freeway impacts, as appropriate.

Figure 1-1 displays Mission Valley's location in the San Diego Region.

Study Scenarios

Six (6) mobility scenarios were evaluated, including four alternatives based on the Mission Valley Community Plan Update land uses (CPU land uses). The six scenarios consist of the following:

- Existing – utilized to establish the existing (Year 2015-2016) baseline traffic operations within the project study area.
- Currently Adopted Community Plan (No-Project) – represents buildout of the Mission Valley currently Adopted Community Plan land uses and roadway network.
- Four-Lane Via Las Cumbres Alternative – represents buildout of the CPU land uses and proposed roadway network with Via Las Cumbres as a four-lane roadway. Improvements resulting in the roadway network were developed in collaboration with community members, city staff, and the project consultant team. Detailed network development process and recommendations can be found in Chapter 3 of the *Mobility Technical Report*.
- Two-Lane Via Las Cumbres Alternative – represents buildout of the CPU land uses and the Four-Lane Via Las Cumbres Alternative roadway network, except the Via Las Cumbres connection between Friars Road and ~~Levi-Cushman Street "B"~~Riverwalk Street "U" is proposed to have two travel lanes, Class II buffered bicycle lanes and painted median from Friars Road to ~~Levi-Cushman Street B~~Riverwalk Street "U" (with additional lanes at intersections as needed), grade separated from the trolley and bridge over the San Diego River; plus enhancements to Fashion Valley Road to raise it to the 15-year flood level with Class IV two-way cycle track.
- Cross-Valley Connection Alternative – represents buildout of the CPU land uses and Two-lane Via Las Cumbres Alternative proposed network except a new road (~~Street "J"~~Riverwalk Street "J") connecting Friars Road to Hotel Circle South with two travel lanes, a painted median and Class II buffered bicycle lanes replaces Via Las Cumbres as the north-south connection west of Fashion Valley Road. This alternative provides for crossing under the MTS trolley tracks (in a manner similar to how Qualcomm Way and Mission Center Road cross under Friars Road), which eliminates the need for an elevated roadway within the core of the Mission Valley community. Like the Four-Lane and Two-Lane Via Las Cumbres alternatives, this alternative would require a bridge over the San Diego River, constructed to allow for the 100-year flood event.
- No-Connection Alternative – represents buildout of the proposed land uses and Four-lane Vas Cumbres Alternative roadway network, with the following two exceptions: the Fenton Parkway connection over the San Diego River to Camino del Rio North / Mission City Parkway and the Via Las Cumbres connection over the San Diego River and Interstate 8 were removed from the proposed roadway network.

Mission Valley Community Plan Update
Traffic Impact Study

CHEN RYAN

Figure 1-1
Mission Valley within the Region

All study alternatives were modeled using the calibrated SANDAG Series 13 Regional Model – Mission Valley Community Plan Update Subarea Model (the "Model"). This customized Model assumed buildout of the proposed Mission Valley land uses and the respective mobility networks for Mission Valley and Horizon Year 2050 land uses and transportation improvements for the rest of the San Diego region. Detailed modeling information and documentation can be found in Chapter 4 of the *Mobility Technical Report*.

For the purpose of traffic impact assessments, Plan-to-Ground analysis was conducted by comparing each of the future alternatives to the existing conditions.

1.2 Report Organization

The remainder of this report is organized into the following chapters:

2.0 *Analysis Methodology* – This chapter describes the methodologies and standards utilized to analyze roadway segment, intersection, freeway segment, and ramp metering traffic operation conditions.

3.0 *Existing Conditions* – This chapter describes the existing traffic network within the study area and provides traffic analysis results under the existing conditions.

4.0 *Currently Adopted Community Plan (No-Project)* – This chapter discusses the traffic operations under the currently Adopted Community Plan conditions and assesses potential traffic impacts by comparing the Adopted Community Plan to the existing conditions. Roadway and freeway segments were evaluated in determining traffic impacts associated with the currently Adopted Community Plan.

5.0 *Four-Lane Via Las Cumbres Alternative* – This chapter discusses the traffic operations under the Four-Lane Via Las Cumbres Alternative and assesses potential traffic impacts by comparing this alternative to existing conditions. Roadway segments, intersections, freeway segments, and ramp meters were evaluated in determining traffic impacts associated with the Four-Lane Via Las Cumbres Alternative. Mitigation measures for significant traffic impacts are identified, as necessary.

6.0 *Two-Lane Via Las Cumbres Alternative* –This chapter discusses the traffic operations under the Two-Lane Via Las Cumbres Alternative and assesses potential traffic impacts by comparing this alternative to existing conditions. Roadway and freeway segments, as well as intersections influenced by the Via Las Cumbres connection, were evaluated in determining traffic impacts associated with the Two-Lane Via Las Cumbres Alternative. Mitigation measures for significant traffic impacts are identified, as necessary.

7.0 *Cross-Valley Connection Alternative* – This chapter discusses the traffic operations under the Cross-Valley Connection Alternative conditions and assesses potential traffic impacts by comparing this alternative to existing conditions. Roadway and freeway segments were evaluated in determining traffic impacts associated with the Cross-Valley Connection Alternative. Mitigation measures for significant traffic impacts are identified, as necessary.

8.0 *No-Connection Alternative* – This chapter discusses the traffic operations under the No-Connection Alternative and assesses potential traffic impacts by comparing this alternative to existing conditions. Roadway and freeway segments were evaluated in determining traffic impacts associated with the No-Connection Alternative.

2.0 Analysis Methodology

This chapter describes the various methodologies utilized to analyze the transportation network within the Mission Valley Community Plan Update study area. Analysis of the vehicular systems roadways, intersections and freeways – were prepared for this study in accordance with the *City of San Diego Traffic Impact Study Guidelines* and the enhanced California Environmental Quality Act (CEQA) project review process.

2.1 Selection of the Study Area

This chapter describes the criteria utilized to identify the Community Plan Update study area. This is consistent with all recent community plan updates initiated by the City of San Diego.

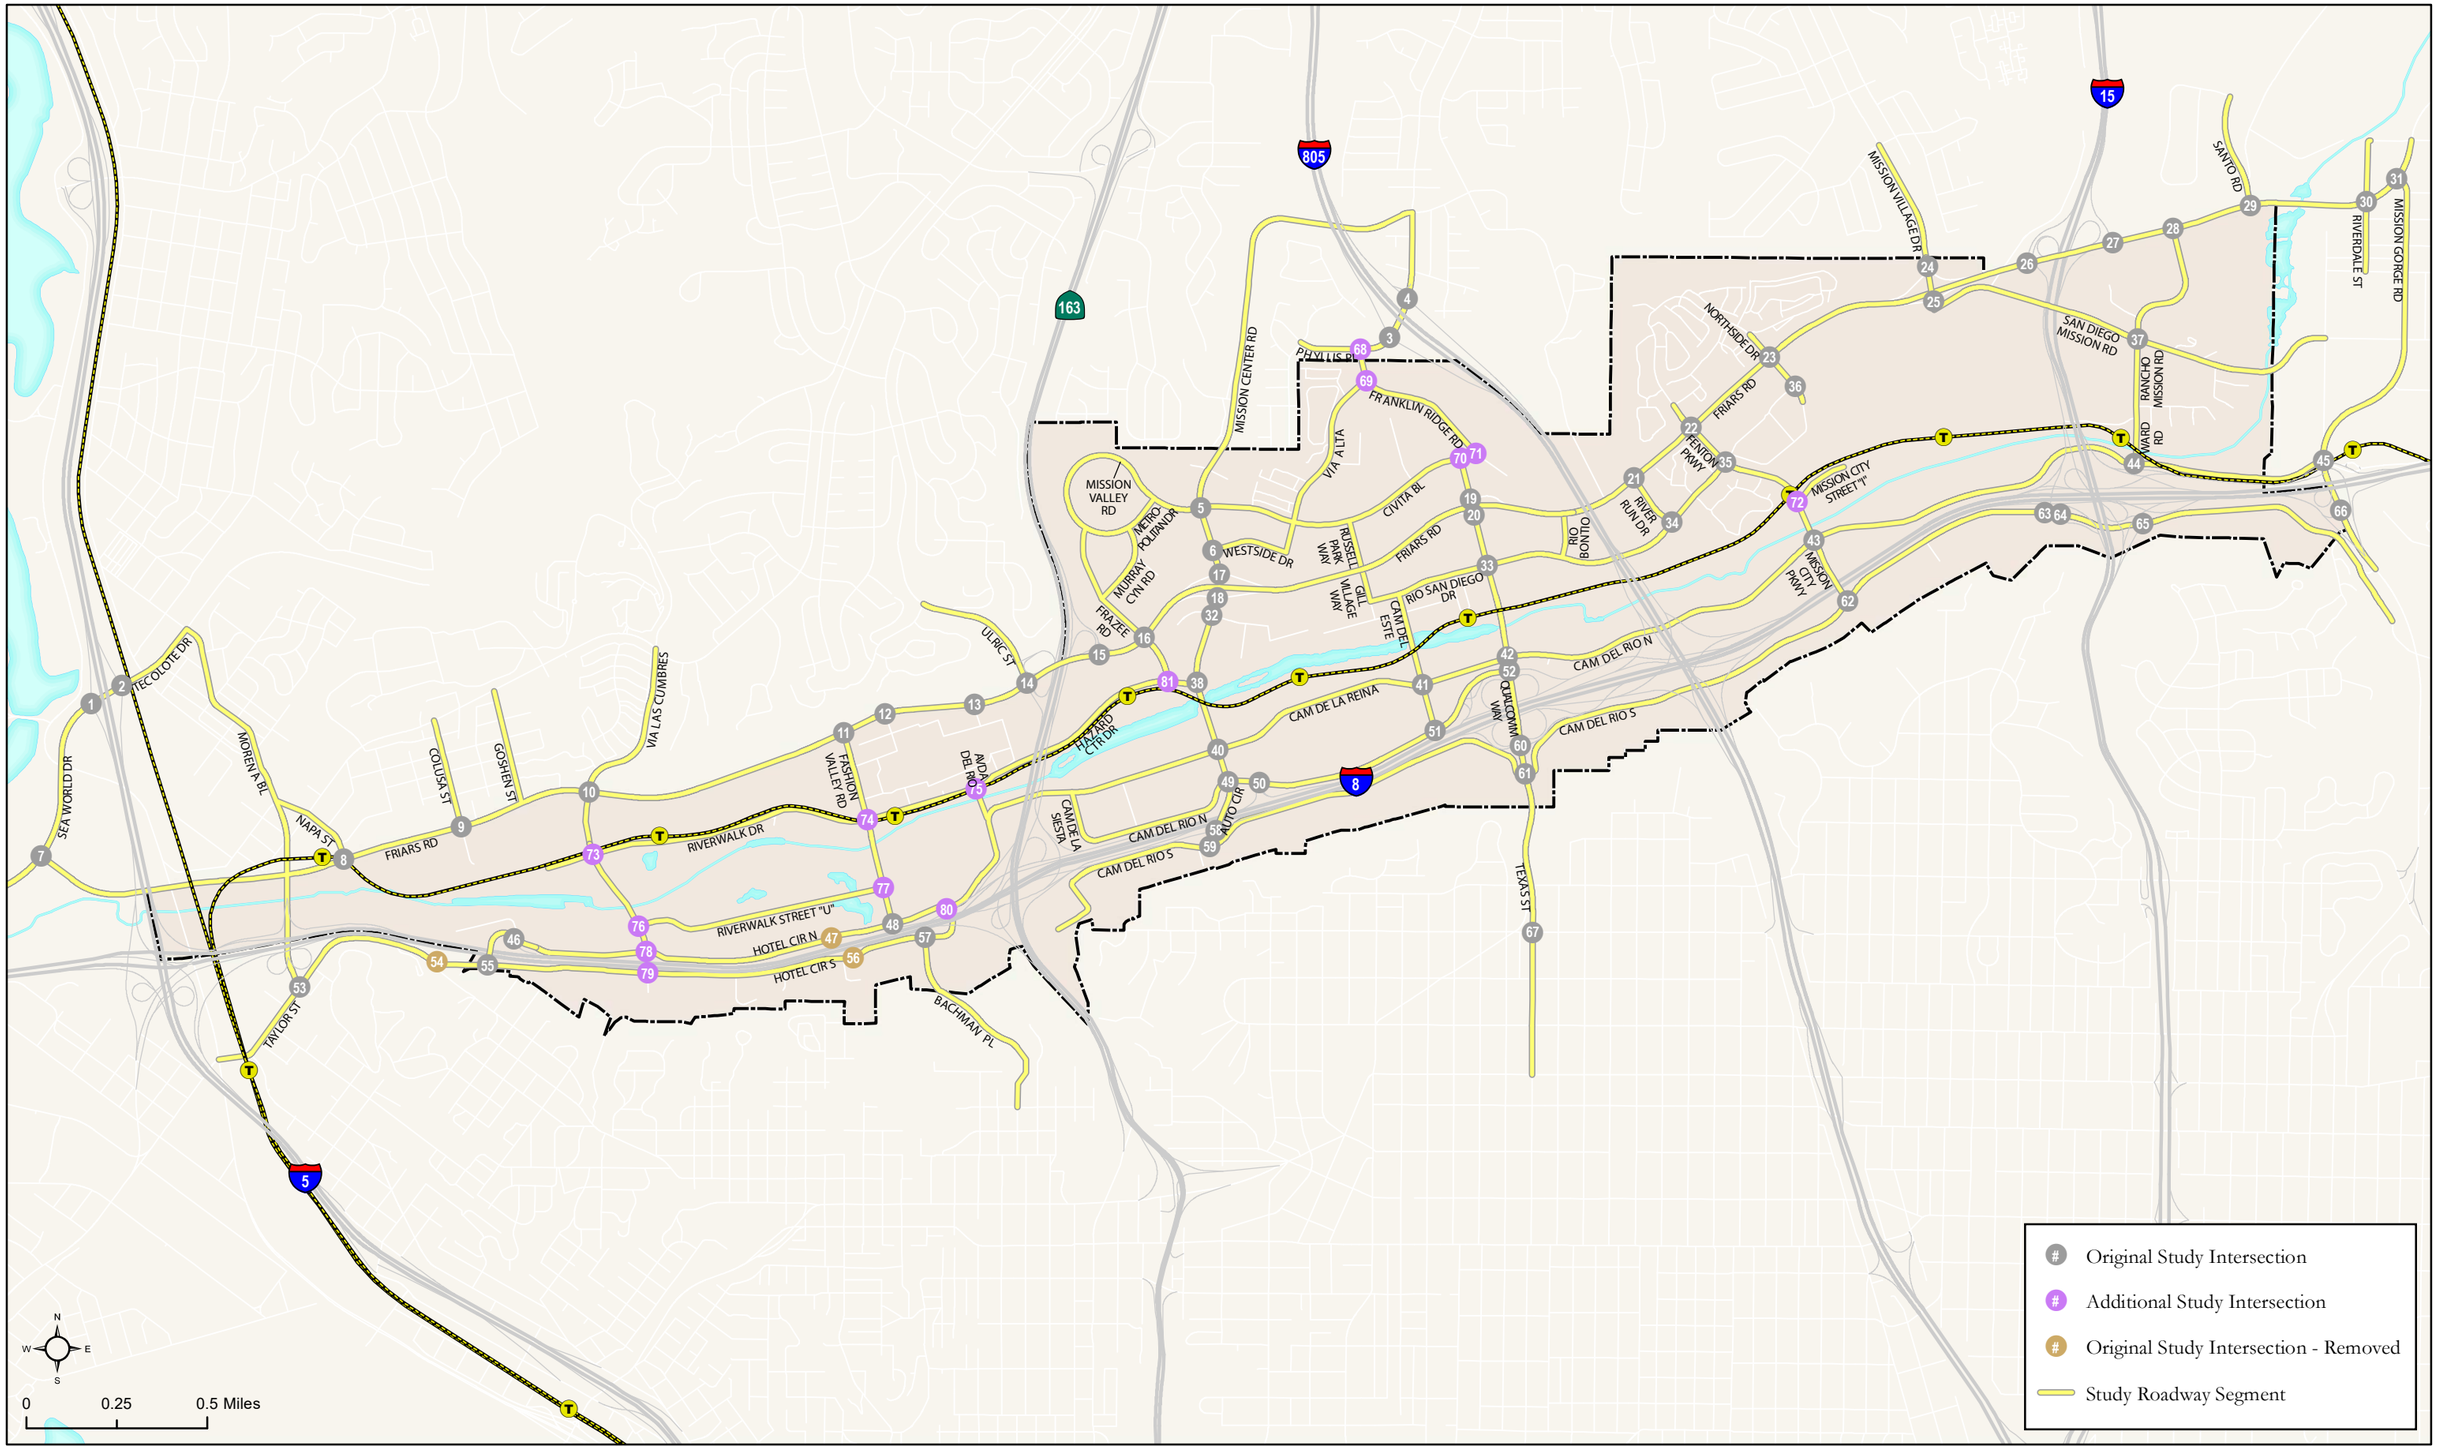
Roadway Segments

All Mobility Element classified streets (existing, planned, and proposed), and approximately one segment beyond the Community Planning area were evaluated.

Intersections

All of the ramp intersections that provide access to the community, and intersections where each street meet one of the following conditions were evaluated:

- Four or more lanes;
- 3-lanes roadways carrying more than 15,000 ADT; or
- 2-lane roadways carrying more than 10,000 ADT.



A total of 67 intersections were identified based on the criteria listed above under the existing conditions. Due to the increase in traffic volumes and new roadway connections, an additional 14 intersections were added under the future year conditions, for a total of 81 intersections. Figure 2-1 displays the location of these 81 study intersections.

Freeway Segments

All freeway segments within the Community Planning Area and one interchange beyond (approximately 25 freeway segments) were analyzed.

2.2 Level of Service Definitions

Analysis of the vehicular systems – roadways, intersections and freeways – was prepared for this study in accordance with City of San Diego Traffic Impact Study Guidelines. The vehicular analysis provides an evaluation of vehicular operations at intersections and along roadway and freeway segments. A description of the methodologies employed to evaluate vehicular travel is outlined throughout this chapter. Level of Service (LOS) is a quantitative measure representing the quality of service from the driver's perspective. LOS A represents optimal conditions for the driver, while LOS F represents the worst. Table 2.1 describes generalized definitions of vehicular LOS A through F.

Mission Valley Community Plan Update
Traffic Impact Study
CHEN RYAN

Figure 2-1
Mission Valley Project Study Area and Key Study Intersections

Table 2.1 Vehicular Level of Service Definitions

LOS	Characteristics
A	Primarily free-flow operation. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Controlled delay at the boundary intersections is minimal. The travel speed exceeds 85% of the base free-flow speed.
B	Reasonably unimpeded operation. The ability to maneuver within the traffic stream is only slightly restricted and control delay at the boundary intersections is not significant. The travel speed is between 67% and 85% of the base free-flow speed.
C	Stable operation. The ability to maneuver and change lanes at mid-segment locations may be more restricted than at LOS B. Longer queues at the boundary intersections may contribute to lower travel speeds. The travel speed is between 50% and 67% of the base free-flow speed.
D	Less stable condition in which small increases in flow may cause substantial increases in delay and decreases in travel speed. This operation may be due to adverse signal progression, high volume, or inappropriate signal timing at the boundary intersections. The travel speed is between 40% and 50% of the base free-flow speed.
E	Unstable operation and significant delay. Such operations may be due to some combination of adverse signal progression, high volume, and inappropriate signal timing at the boundary intersections. The travel speed is between 30% and 40% of the base free-flow speed.
F	Flow at extremely low speed. Congestion is likely occurring at the boundary intersections, as indicated by high delay and extensive queuing. The travel speed is 30% or less of the base free-flow speed. Also, LOS F is assigned to the subject direction of travel if the through movement at one or more boundary intersections have a volume-to-capacity ratio greater than 1.0.

Source: Highway Capacity Manual, Transportation Research Board (2010)

Roadway Segment Analysis

Roadway segment level of service standards and thresholds provided the basis for analysis of arterial roadway segment performance. The analysis of roadway segment level of service is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. Table 2.2 presents the roadway segment capacity and LOS standards utilized to analyze roadways evaluated in this report.

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway facility varies according to its physical and operational attributes. LOS D is considered acceptable for Mobility Element roadway segments in the City of San Diego.

Table 2.2 City of San Diego Roadway Segment Daily Capacity and Level of Service Standards

Roadway Functional Classification	Lanes	Level of Service				
		A	B	C	D	E
Freeway	8	60,000	84,000	120,000	140,000	150,000
Freeway	6	45,000	63,000	90,000	110,000	120,000
Freeway	4	30,000	42,000	60,000	70,000	80,000
Expressway	6	30,000	42,000	60,000	70,000	80,000
Prime Arterial	8	35,000	50,000	70,000	75,000	80,000
Prime Arterial	6	25,000	35,000	50,000	55,000	60,000
Major Arterial	7	22,500	31,500	45,000	50,000	55,000
Major Arterial	6	20,000	28,000	40,000	45,000	50,000
Major Arterial	5	17,500	24,500	35,000	40,000	45,000
Major Arterial	4	15,000	21,000	30,000	35,000	40,000
Major Arterial	3	11,250	15,750	22,500	26,250	30,000

Updated with input from City of San Diego Planning Department Mobility Staff (2017)

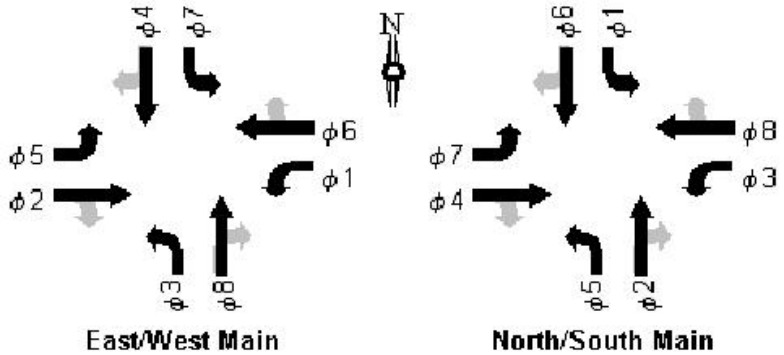
Peak Hour Intersection Level of Service Standards and Thresholds

This chapter presents the methodologies used to perform peak hour intersection capacity analysis, for both signalized and unsignalized intersections. The following assumptions were utilized in conducting all intersection level of service analyses:

- *Pedestrian Calls per Hour*: Existing pedestrian counts utilized under the existing conditions; and an assumption of 20 pedestrian calls per hour utilized for future year analyses.
- *Heavy Vehicle Factor*: A 2% heavy vehicle factor was assumed for all intersections within the study area. 2% is the standard, default heavy vehicle factor provided in HCM and Synchro 10.0 software. This number was compared to vehicle classification count data collected in support of this project, which demonstrated most segments have a heavy vehicle factor of 2% or less. Appendix A provides all roadway, intersection, and freeway-related count data, including the heavy vehicle percentage along segments where vehicle classification data was collected.
- *Peak Hour Factor*: 0.95 or obtained from existing peak hour counts, whichever is greater.

- *Signal Timing*: Obtained from existing signal timing plans (as of September 2015). Traffic signal timing and freeway ramp metering rates are included as Appendix B. All traffic signals were assumed to be optimized in future year analyses.

Signalized Intersection Analysis



The signalized intersection analysis utilized in this study conforms to the operational analysis methodology outlined in *Highway Capacity Manual (HCM) 2010*. This method defines LOS in terms of delay, or more specifically, average control delay per vehicle (seconds/vehicle).

The *HCM 2010* methodology sets 1,900 passenger-cars per hour per lane (pcphpl) as the ideal saturation flow rate at signalized intersections based upon the minimum headway that can be sustained between departing vehicles at a signalized intersection. The service saturation flow rate, which reflects the saturation flow rate specific to the study facility, is determined by adjusting the ideal saturation flow rate for lane width, on-street parking, bus stops, pedestrian volume, traffic composition (or percentage of heavy vehicles), and shared lane movements (e.g. through and right-turn movements sharing the same lane). The LOS criteria used for this technique are described in Table 2.3. The computerized analysis of intersection operations was performed utilizing the *Synchro 10.0 (2010 HCM 2010 methodology)* traffic analysis software (by Trafficware, 2018).

Table 2.3 Signalized Intersection Level of Service HCM Operational Analysis Method

Average Control Delay Per Vehicle (seconds)	Level of Service (LOS) Characteristics
≤10.0	*LOS A* occurs when the volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
10.1 – 20.0	*LOS B* occurs when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.
20.1 – 35.0	*LOS C* occurs when progression is favorable or the cycle length is moderate. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
35.1 – 55.0	*LOS D* occurs when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.
55.1 – 80.0	*LOS E* occurs when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.
>80.0	*LOS F* occurs when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Source: Highway Capacity Manual, Transportation Research Board (2010)

The HCM 2010 analysis methodology requires strict adherence to standard dual ring National Electrical Manufacturers Association (NEMA) phasing. Conflicting phase overlaps, clustered intersections, or other non-compliant phasing sequences cannot be analyzed using this method. Based upon geometry and phasing per their respective signal timing sheets, the following intersections did not adhere to standard NEMA phasing (as seen in the previous figure):

1. I-5 SB Ramps & Sea World Drive (de-facto free southbound right-turn lane)
8. Napa Street & Friars Road (exclusive pedestrian phase)
25. Friars Road EB & Mission Village Drive (cluster intersections)
42. Qualcomm Way & Camino De La Reina (cluster intersection)
52. Qualcomm Way & I-8 WB Off-Ramp (cluster intersection)
58. Mission Center Road & I-8 EB Ramps (cluster intersection with off-set signal phasing)
59. Mission Center Road & Camino Del Rio South (cluster intersection with off-set signal phasing)
63. I-15 SB Off-Ramp & Camino Del Rio South (cluster intersection)
64. I-15 SB On-Ramp & Camino Del Rio South (cluster intersection)
66. Fairmount Avenue & I-8 EB Off-Ramp (de-facto free eastbound right-turn approach and U-turn overlap)

Adjustments in geometric configuration, phasing, and signal timing were implemented in order to utilize the HCM 2010 methodology. Appendix C provides detailed information on the aforementioned adjustments.

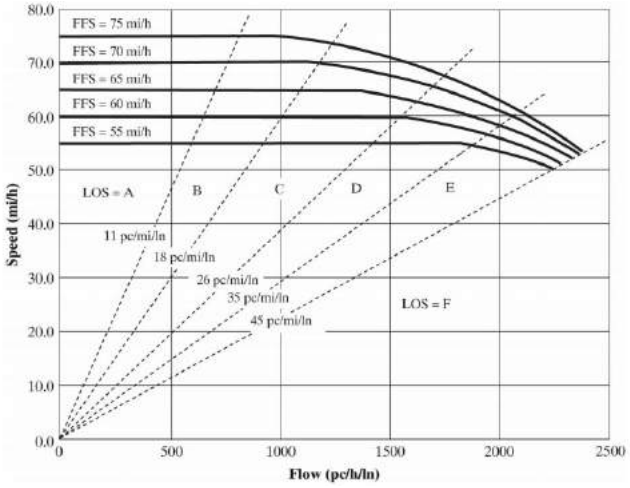
Unsignalized Intersection Analysis

Unsignalized intersections, including two-way and all-way stop controlled intersections were analyzed using the *HCM 2010* unsignalized intersection analysis methodology. The Synchro 10.0 software supports this methodology and was utilized to produce LOS results. The LOS for a side street stop controlled (SSSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. The LOS for an all-way stop controlled (AWSC) intersection is determined by the computed or measured average control delay of all movements. Table 2.4 summarizes the level of service criteria for unsignalized intersections. Consistent with City policy, LOS E was used in this study as the minimum acceptable LOS for peak hour intersection operations. Queuing analysis was also conducted at all of the study area off-ramps, congested and/or closely spaced intersections, and each metered freeway on-ramp during peak hours.

Table 2.4 Level of Service Criteria for Stop Controlled Unsignalized Intersections

Average Control Delay (sec/veh)	Level of Service (LOS)
≤10.0	A
10.1 – 15.0	B
15.1 – 25.0	C
25.1 – 35.0	D
35.1 – 50.0	E
>50.0	F

Source: Highway Capacity Manual, Transportation Research Board (2010)



Freeway/State Highway Level of Service Standards and Thresholds

Freeway LOS analysis is based upon procedures developed by Highway Capacity Manual 2010. The procedure for calculating freeway LOS involves estimating the vehicle speed (mi/h) and density/flow (pc/mi/ln).

HCS 2010 software, developed by McTrans, was used to calculate both the vehicle speed and density/flow along the study area freeway segments. The HCS 2010 software required the following inputs to complete the speed and density/flow calculations:

- AADT – Caltrans Traffic Census 2015 AADT Volumes Report
- K (peak hour percentage) – Caltrans Traffic Census 2015 AADT Volumes Report
- D (directional split) – Caltrans Traffic Census 2015 AADT Volumes Report
- $AADT_{adj}$ – Calculated using AADT and D values provided by Caltrans using the following equation:
  - $AADT_{adj} = (\frac{D}{1-D})AADT$
  - represents the direction in the opposite direction of the Peak Direction
- PHF – Assumed to be a typical value of 0.95
- P_T (% Trucks and Busses) – Caltrans Traffic Census 2015 AADT Truck Volumes Report
- P_R (% RVs) – Assumed to be 0, HCM 2010 recommends grouping RV volumes with Trucks in Buses as the value is assumed less than a 5:1 ratio
- General Terrain – Assumed to be less than 2% grade and therefore Level Terrain (HCM 2010 11-16,17)
- f_p – Driver population factor assumed one as traffic is largely commuter traffic
- E_T – Value of 1.5 as terrain is Level (HCM 2010 11-15)
- E_R – Value of 1.2 as terrain is Level (HCM 2010 11-15)
- Lane Width – Assumed 12' maximum value by Google Earth survey
- Rt-Side Lat. Clearance – Assumed 6' maximum value by Google Earth survey
- Total Ramp Density, TRD – Found in the Caltrans Traffic Census 2015 AADT Ramp Volumes Report
  - Density calculated by total number of on/off ramps in single direction within segment length plus 3 miles in both directions, divided by the total length
- Base free-flow Speed, BFFS – Assumed 75.4 mph (HCM 2010 11-11)

Using the calculated freeway speed and density/flow, the LOS is determined using the chart to the right:

Ramp Metering Analysis

Ramp metering is a means of controlling the volume of traffic entering the freeway with the goal of improving the traffic operations and flow on the freeway main lanes. Freeway ramp meter analysis estimates the peak hour queues and delays at freeway ramps by comparing existing volumes to the meter rate at the given location. The excess demand, if any, forms the basis for calculating the maximum queues and maximum delays anticipated at each location. Substantial queues and delays can form where demand significantly exceeds the meter rate. This approach assumes a static meter rate throughout the course of the peak hour. However, Caltrans has indicated that the meter rates are continually adjusted based on the level of traffic using the on-ramp. To the extent possible, the meter rate is set such that the queue length does not exceed the available storage, smooth flow on the freeway mainline is maintained, and there is no interference to arterial traffic.

If the proposed CPU would cause a metered ramp to experience 15 minutes per vehicle or higher delay and the proposed CPU increases its delay by more than 2 minutes per vehicle if the downstream freeway segment operates at LOS E, or more than 1 minute per vehicle if the downstream freeway segment operates at LOS F, this would be considered a significant impact.

2.3 Determination of Significant Impacts

This chapter outlines the thresholds for determining significant project-related impacts to roadways, intersections, and freeways in the City of San Diego. Generally, a significant impact is identified when the addition of project traffic results in a level of service LOS E or F and exceeds the allowable change shown in Table 2.6.

Table 2.6 City of San Diego Measures of Significant Project Traffic Impacts

LOS with Project	Allowable Change Due to Impact					
	Freeways		Roadway Segments		Intersections	Ramp Metering*
	V/C	Speed (mph)	V/C	Speed (mph)	Delay (sec)	Delay (min)
E	0.01	1.0	0.02	1.0	2.0	2.0
F	0.005	0.5	0.01	0.5	1.0	1.0

Source: CEQA Significance Determination Thresholds, City of San Diego Development Services Department (2016)

Note:
* For metered freeway ramps, LOS does not apply. However, ramp meter delays above 15 minutes are considered excessive.

3.0 Existing Conditions

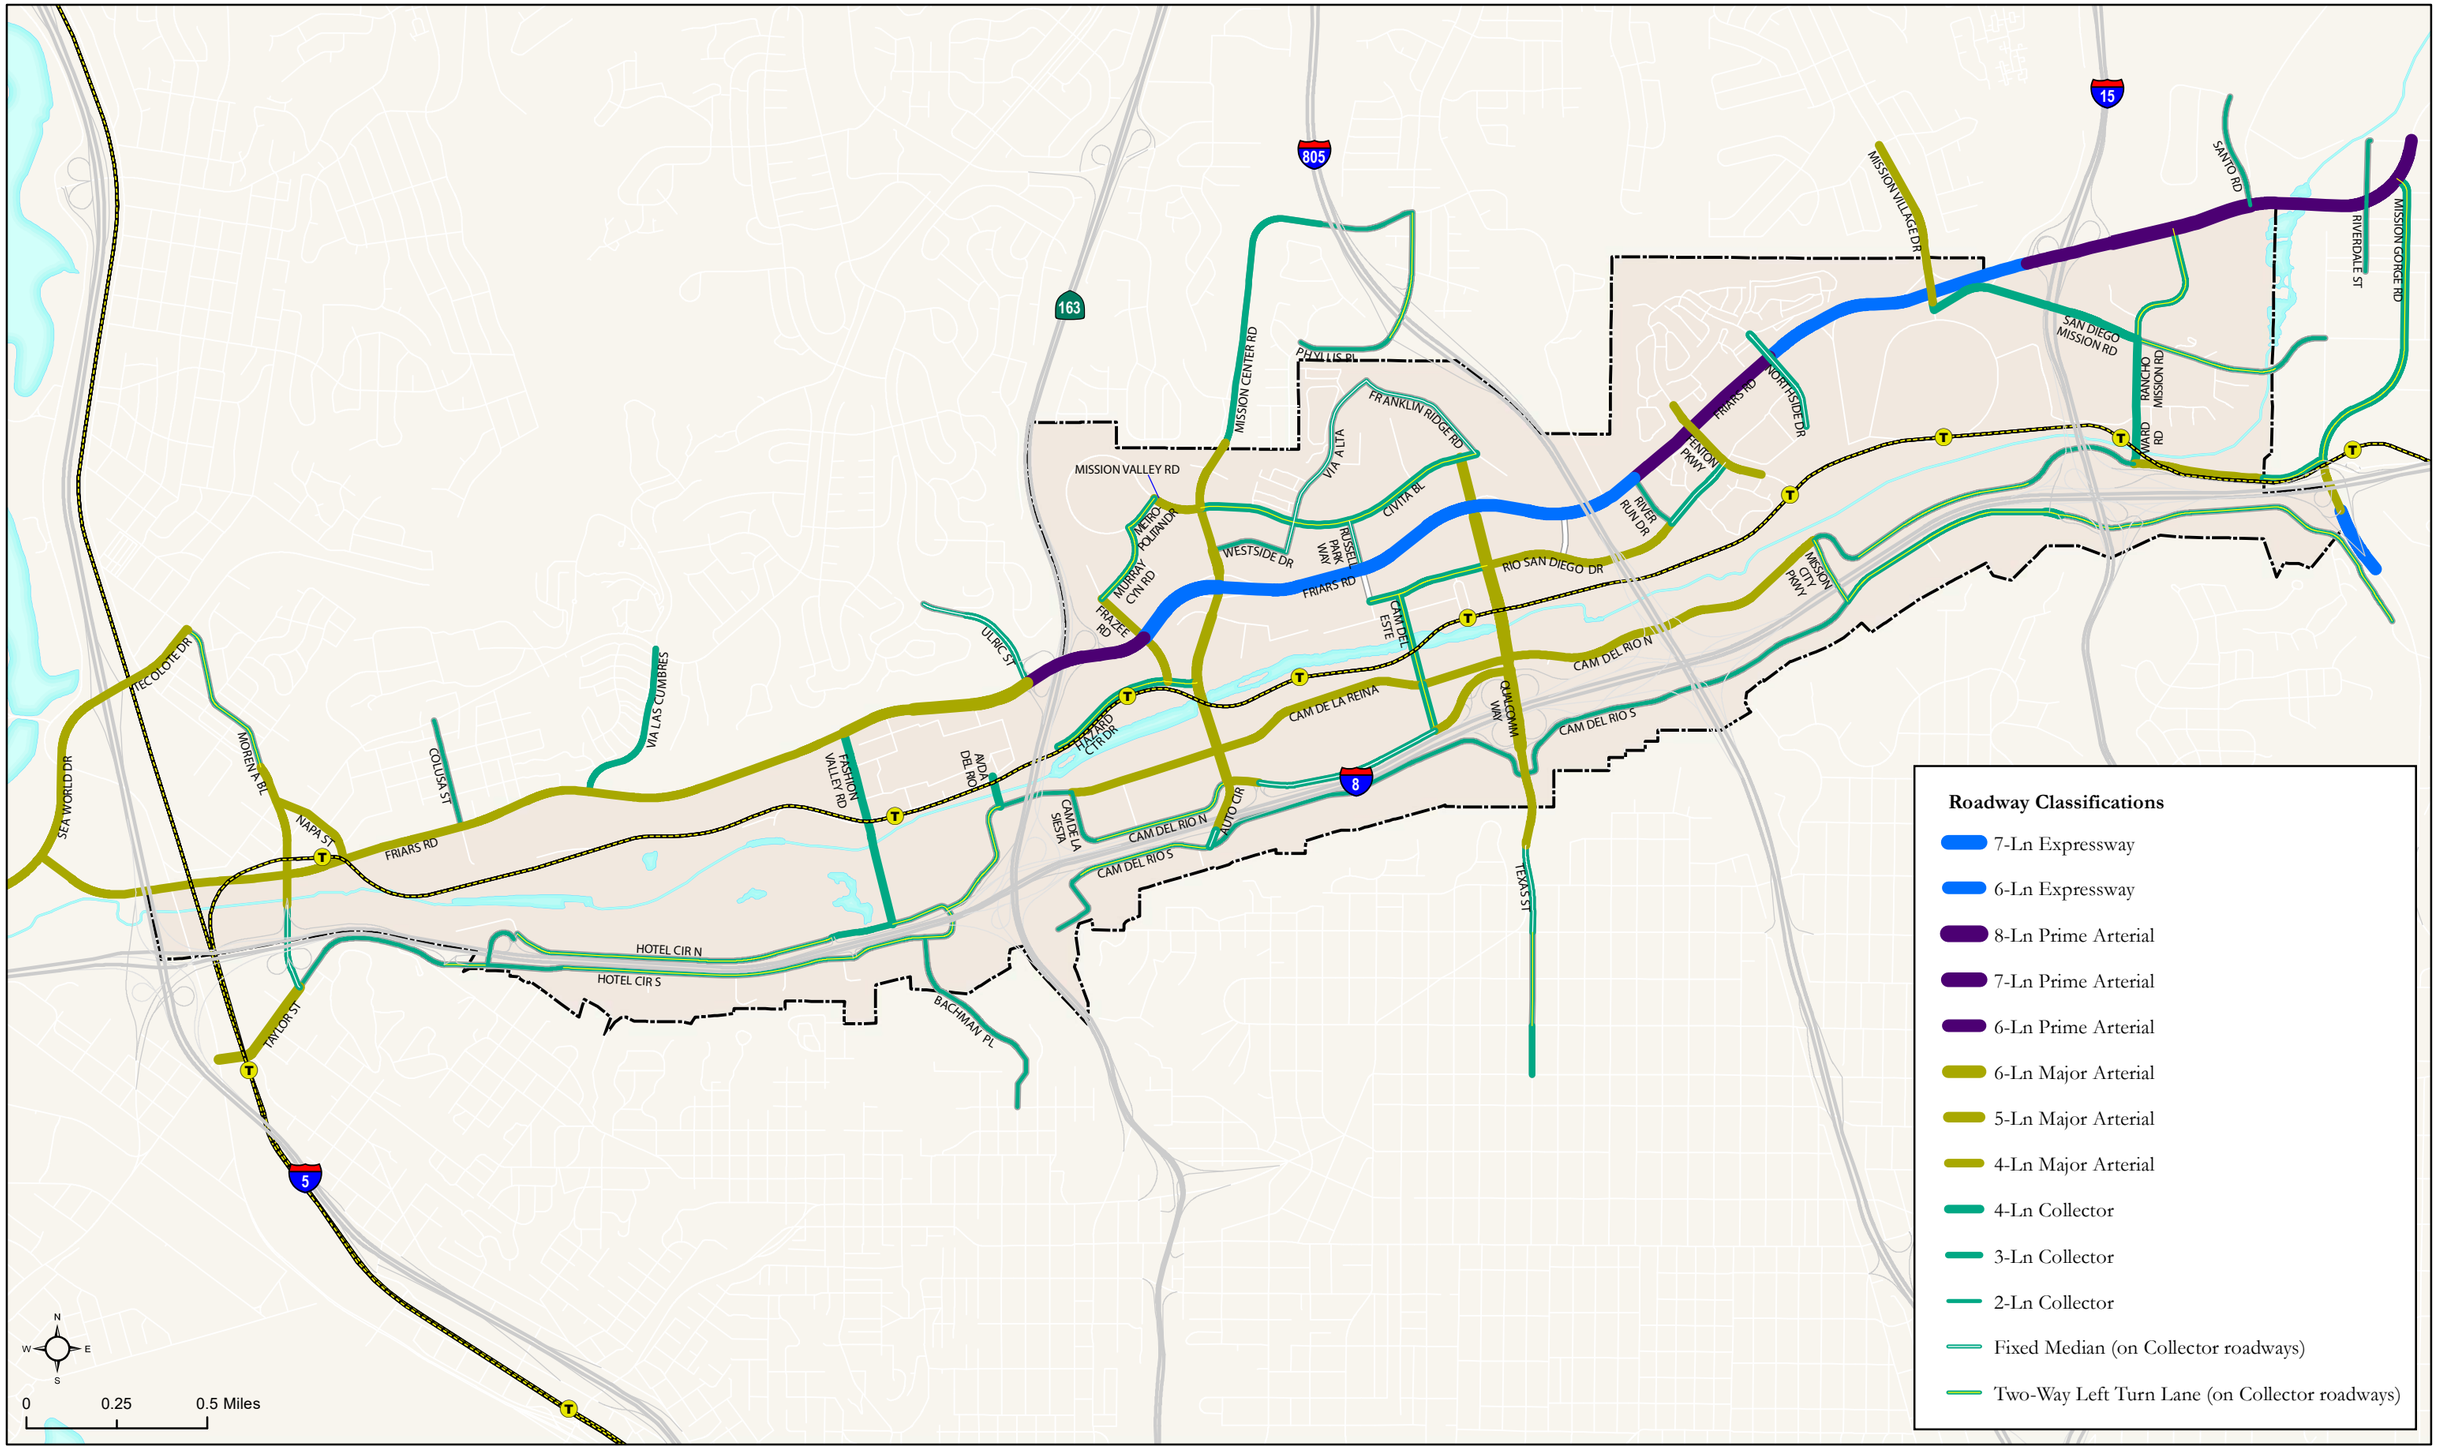
This chapter describes study area roadway segments, intersections, and freeway segments within the study area, as well as existing traffic operations. Level of service analysis results for all study area facilities under Existing Conditions are presented separately below.

3.1 Roadway Segment Analysis

Chapter 2.1 documents the selection of study area including all existing, planned, and proposed Mobility Element roads within Mission Valley, as well as roadways outside the boundary of the Mission Valley community due to their location within the sphere of influence and will be required for the environmental studies. Figure 3-1 displays the existing functional classifications of study area roadway segments. A description of each study roadway under the existing conditions is provided below and on the following pages.

East-West Roadways

Phyllis Place is a two-lane roadway with a striped median between the I-805 northbound ramps and the I-805 southbound ramps. Sidewalk is present on the north side of the roadway. A Class III bike route is provided. Parking is permitted on both sides of the roadway. Speed limits are not posted.



Sea World Drive is a four-lane roadway. Between Mission Bay Parkway and Friars Road, a raised median is present. Class II bicycle facilities are present on both sides of the roadway along this segment. Sidewalks are not present along this segment. Between Friars Road and the I-5 southbound ramps, Sea World Drive has a striped median. Sidewalks are present along the south side of the roadway. On-street parking is prohibited. Speed limits are not posted.

Tecolote Road is a four-lane roadway with a raised median. Class II bicycle facilities and sidewalks are present on both sides of the roadway. On-street parking is prohibited on both sides of Tecolote Road. Speed limits are not posted.

Mission Valley Road is a four-lane roadway with a raised median and a posted speed limit of 25 mph between Metropolitan Drive and Mission Center Road. Sidewalks and Class II bicycle facilities are present on both sides of the roadway. Parking is prohibited on both sides of the roadway. MTS routes 25 and 928 run along the roadway between Metropolitan Drive and Mission Center Road.

Civita Boulevard is a four-lane roadway with a landscaped raised median and no posted speed limit. Sidewalks, as well as Class II bicycle facilities, are present on both sides of the roadway. Parallel parking is permitted on both sides of the roadway.

Westside Drive is a two-lane undivided roadway with a posted speed limit of 25 mph. Sidewalks are present on both sides of the roadway, and no bicycle facilities are provided. Parallel and angled parking is permitted on both sides of the roadway.

Mission Valley Community Plan Update
Traffic Impact Study

CHEN RYAN

Figure 3-1
Existing Roadway Functional Classification

Friars Road is a four-lane roadway with a striped median and a posted speed limit of 55 mph between Sea World Drive and Napa Street. East of Napa Street, Friars Road becomes a four-lane roadway with a raised median and a posted speed limit of 45 mph until reaching Colusa Street. East of Colusa Street, Friars Road continues as a four-lane roadway, but its median varies between a center left-turn lane and a striped median until reaching Via Las Cumbres. East of Via Las Cumbres, Friars Road is a four-lane roadway with a center left-turn lane and a posted speed limit of 45 mph until reaching Fashion Valley Road. East of Fashion Valley Road, Friars Road transitions to a five-lane roadway with a raised median and a posted speed limit of 45 mph until reaching Avenida De Las Tiendas. East of Avenida De Las Tiendas, Friars Road transitions into a six-lane roadway with a raised median and no posted speed limit until reaching the SR-163 northbound ramps. East of the SR-163 northbound ramps, Friars Road is a six-lane roadway with a raised median and posted speed limit of 45 mph until reaching Frazee Road. East of Frazee Road, Friars Road is an eight-lane roadway with a striped median for approximately 1,500 feet, then its median transitions into a K-Rail median, and finally changes into a striped median approximately 1,600 feet before reaching Qualcomm Way. East of Qualcomm Way, Friars Road becomes a seven-lane roadway with a raised median until reaching Rio Bonito Drive, then narrowing to 6 lanes until Northside Drive. East of Northside Drive, Friars Road continues as a seven-lane roadway, and its median transitions from a raised median to a K-Rail median until reaching the I-15 southbound ramps. East of the I-15 southbound ramps, Friars Road has a striped median and a posted speed limit of 45 mph until reaching Santo Road. East of Santo Road, Friars Road is a six-lane roadway with a raised median and a posted speed limit of 45 mph until reaching its eastern terminus at Mission Gorge Road. Sidewalks are present on both sides of the roadway along the entire extent of Friars Road between Sea World Drive and Mission Gorge Road, with the exception of approximately 577 feet on each side of the road to the east of Sea World Drive, a section near Ulric Street and the SR-163 southbound ramps where sidewalks are only present along the south side of the roadway, expressway segments where sidewalks follow expressway exits, and between Mission Village Drive and the I-15 southbound ramps where sidewalks are not present. Bicycle facilities are present along Friars Road, including a two-way Cycle Track on the south side of the roadway between Sea World Drive and approximately 900 feet west of Fashion Valley Road, as well as Class II bicycle facilities intermittently present on both sides of the roadway. Parking is generally prohibited along the roadway, with some exceptions between Sea World Drive and Ulric Street/SR-163 southbound ramps. MTS bus route 14 runs along Friars Road between Rancho Mission Road and Mission Gorge Road. Additionally, several transit routes run between Fashion Valley Road and SR-163 to access the freeway, such as route 20 and 41. Route 120 runs between Fashion Valley Road and Ulric Street, and Routes 25 and 928 run between Fashion Valley Road and Frazee Road.

Mission Gorge Road is a six-lane roadway with a center left-turn lane between Friars Road and Zion Avenue. On-street parking is prohibited on both sides of the roadway. Sidewalks are present on both sides of the roadway. Class II bicycle facilities are present along the north side of the roadway.

Hazard Center Drive is a four-lane roadway. The median varies between a striped median and a raised median, with no posted speed limit, between its western terminus and Frazee Road. East of Frazee Road, Hazard Center Drive is a four-lane roadway with a raised median and no posted speed limit. Sidewalks are present on both sides of the roadway, but no bicycle facilities are provided. Parking is permitted on both sides of the roadway. This is based on 2015 conditions; Hazard Center Drive is currently under construction.

Rio San Diego Drive is a four-lane roadway with a posted speed limit of 40 mph. The roadway has a raised median between Gill Village Way and Qualcomm Way. East of Qualcomm Way, Rio San Diego Drive is a four-lane roadway with a raised median for approximately 477 feet, after which its median transitions to a center left-turn lane, then to a raised median, until reaching its eastern terminus at Fenton Parkway.

Sidewalks are present on both sides of the roadway. Class II bicycle facilities are present on both sides of the roadway between Gill Village Way and Qualcomm Way. Parking is prohibited between Gill Village Way and Qualcomm Way, but generally permitted between Qualcomm Way and Fenton Parkway.

San Diego Mission Road is a four-lane undivided roadway with a posted speed limit of 40 mph between Mission Village Drive and Rancho Mission Road. East of Rancho Mission Road, San Diego Mission Road is a two-lane roadway with a center left-turn lane and a posted speed limit of 35 mph, until reaching its eastern terminus at Fairmount Avenue. Sidewalks are present intermittently on both sides of the roadway. Class II bicycle facilities are present on both sides of the roadway east of Rancho Mission Road. Parking is intermittently permitted along San Diego Mission Road. MTS route 14 runs along this roadway between Friars Road and the southern terminus of the road, where the roadway's name changes to Ward Road.

Taylor Street is a five-lane roadway with a striped median between Pacific Highway and Morena Boulevard with a posted speed of 35 mph. Sidewalks are present on both sides of the roadway in this segment, although bicycle facilities are not present. Between Morena Boulevard and Hotel Circle South, Taylor Street reduces to a two-lane roadway with a striped median. Class II bicycle facilities are present on the south side of the road between Morena Boulevard and the I-8 eastbound ramps. There are no sidewalks present east of Morena Boulevard. On-street parking is prohibited along Taylor Street. MTS routes 44, 88 and 105 run along the roadway between the Old Town Transit Center and Morena Boulevard, whereas route 88 continues to run along Taylor Street to the roadway's terminus at Hotel Circle South.

Hotel Circle North is a two-lane roadway with a center left-turn lane and a posted speed limit of 35 mph between Hotel Circle Place and the I-8 westbound ramps. East of the I-8 westbound ramps, Hotel Circle North is a two-lane undivided roadway with a posted speed limit of 35 mph until reaching Fashion Valley Road. East of Fashion Valley Road, Hotel Circle North is a two-lane roadway with a center left-turn lane until reaching its terminus at Camino De La Reina. Sidewalks are present only on the north side of the roadway, with an exception east of Fashion Valley Road, where approximately 800 feet of sidewalk is missing. Class II bicycle facilities are present on both sides of the roadway between Hotel Circle Place and the I-8 westbound ramps. Parking is prohibited along the entire extent of the roadway. Several transit routes run along Hotel Circle North between the I-8 westbound ramps and Fashion Valley Road to access the Fashion Valley Transit Center, such as routes 20 and 120. In addition, route 88 runs along the entirety of the roadway.

Camino De La Reina is a two-lane roadway with a center left-turn lane and a posted speed limit of 25 mph between Hotel Circle North and Avenida Del Rio. East of Avenida Del Rio, Camino De La Reina continues to be a two-lane roadway with a posted speed limit of 30 mph, but transitions to a striped median for approximately 300 feet, before transitioning to a raised median before reaching Camino De La Siesta. East of Camino De La Siesta, Camino De La Reina is a four-lane roadway with a raised median and a posted speed limit of 35 mph until reaching Mission Center Road. East of Mission Center Road, Camino De La Reina is a four-lane undivided roadway for approximately 930 feet, before its median transitions to a raised median prior to reaching Park In The Valley Driveway. East of Park In The Valley Driveway, Camino De La Reina continues as a four-lane roadway with a raised median. Sidewalks are present along both sides of the roadway, although there are no bicycle facilities. On-street parking is generally permitted east of Camino De La Siesta. MTS bus route 6 runs along Camino De La Reina between Avenida Del Rio and Camino Del Este in both directions, as well as between Camino Del Este and Qualcomm Way in the eastbound direction.

Camino Del Rio North is a two-lane roadway between Camino De La Siesta and Mission Center Road. Between Mission Center Road and the I-8 westbound ramps, Camino Del Rio North becomes a four-lane

road. Between the I-8 westbound ramps and Camino Del Este, Camino Del Rio North becomes a three-lane road. Between Camino Del Este and Mission City Parkway, Camino Del Rio South becomes a four-lane roadway, before reducing to two lanes until Ward Road. Between Ward Road and Fairmount Avenue, Camino Del Rio North expands again to four lanes. Camino Del Rio South has a raised median between Camino De La Siesta and Mission City Parkway, and alternates between a striped median and a center left-turn lane between Mission City Parkway and Fairmount Avenue. A posted speed limit of 35 mph is present at the I-8 westbound ramps, with an increase to 45 mph at Qualcomm Way. On-street parking is prohibited, except between Camino De La Siesta and Mission Center Road. Sidewalks are located along the north side of the road between Camino De La Siesta and the I-8 westbound ramps, Camino Del Este and Qualcomm Way, and from approximately 800 feet east of Mission City Parkway to Fairmount Avenue. Sidewalks also exist along both sides of the road between Qualcomm Way and Mission City Parkway. Class II bicycle facilities are intermittent as well, and are present along both sides of the roadway between Qualcomm Way and Mission City Parkway, and from approximately 1,800 feet West of Ward Road to Fairmount Avenue. Class III sharrows are present between Camino Del Rio North and 1,800 feet west of Ward Road. MTS bus route 6 runs along Camino Del Rio North between Camino Del Este and Qualcomm way in the eastbound direction. MTS route 14 runs along the roadway between Ward Road and the Grantville Trolley Station. Additionally, route 18 runs along the roadway between the Grantville Trolley Station and Mission City Parkway in the westbound direction, as well as between Qualcomm Way and Mission City Parkway in the eastbound direction.

Hotel Circle South is a two-lane undivided roadway with a posted speed limit of 35 mph between the I-8 over-cross and approximately 1,270 feet to the east, where Hotel Circle South becomes a two-lane roadway with a center left-turn lane until reaching its eastern terminus at Hotel Circle North. Sidewalks are present only on the south side of the roadway, with the exception of between the I-8 over-cross and approximately 1,270 feet to the east, where sidewalks are missing. Pavement markings indicating a Class III bicycle route are present between the I-8 overpass and the I-8 westbound ramps. East of the I-8 westbound ramps, Class II bicycle facilities are present on both sides of the roadway. Parking is generally prohibited on both sides of the roadway, aside from a short segment west of the I-8 eastbound ramps. Several transit routes run along the roadway between Hotel Circle North and the I-8 eastbound ramps to access the freeway, such as routes 20 and 120. In addition, route 88 runs along the entirety of the roadway.

Camino Del Rio South is a predominantly two-lane roadway, which widens to three lanes between Mission City Parkway and the I-15 southbound off-ramp. Camino Del Rio South widens to four lanes between the I-15 southbound off-ramp and the I-15 southbound on-ramp, and narrows to two lanes between the I-15 southbound on-ramp and Fairmount Avenue. Camino Del Rio South has a center left-turn lane from approximately 1,800 feet west of Mission Center Road/Auto Circle to Mission Center Road/Auto Circle, and from Mission City Parkway ramp to Fairmount Avenue. Camino Del Rio South has a posted speed limit of 25 mph between its western terminus and approximately 1,800 feet west of Mission Center Road. There is a posted speed of 35 mph between Mission Center Road and Mission City Parkway, a posted speed of 45 mph between Mission City Parkway and the I-15 southbound off-ramp, and a posted speed of 40 mph between the I-15 southbound off-ramp and Fairmount Avenue. On-street Parking is allowed along the south side of the roadway between approximately 1,800 feet west of Mission Center Road and Texas Street, between Mission City Parkway and the I-15 southbound off-ramp, and between the I-15 southbound on-ramp and Fairmount Avenue. Sidewalks are present along the south side of the entire roadway, and are present on both sides of the roadway between the western terminus of Camino Del Rio South and approximately 1,800 feet west of Mission Center Road. Bicycle facilities are not provided, except between Mission Center Road and Texas Street, where Class II bicycle facilities are present on both sides of the roadway.

North-South Roadways

Morena Boulevard is a two-lane roadway with a center left-turn lane and a posted speed limit of 35 mph between Tecolote Road and West Morena Boulevard. Between West Morena Boulevard and the I-8 westbound off-ramps, Morena Boulevard widens to four lanes and has a raised median, with a posted speed limit of 40 mph. Morena Boulevard narrows to three lanes south of the I-8 westbound off-ramps, with two northbound lanes and one southbound lane. On-street parking is only permitted between Tecolote road and West Morena Boulevard. Sidewalks and Class II bicycle facilities are present on both sides of the roadway, although the I-5 overpass lacks bicycle facilities. MTS routes 44 and 105 run along the roadway between Taylor Street and Linda Vista Road, whereas route 105 continues along the roadway to Milton Street, north of Tecolote Road.

Napa Street is a four-lane roadway with a striped median and a posted speed limit of 25 mph. On-street parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, but there are no bicycle facilities.

Colusa Street is a two-lane roadway with a striped median and a posted speed limit of 25 MPH. On-street parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, but there are no bicycle facilities.

Via Las Cumbres is a three-lane roadway with two northbound lanes, one southbound lane, and a striped median. A speed limit is not posted in the segment studied, between Linda Vista Road and Friars Road. On-street parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, although segments are missing along the east side of the roadway. Class II bicycle facilities are present on the east side of the roadway.

Fashion Valley Road is a four-lane roadway with a striped median. A speed limit is not posted. On-street parking is not permitted. Sidewalks are present on both sides of the roadway. There are no bicycle facilities present. Fashion Valley Road is used by many transit routes to access the Fashion Valley Transit Center, including routes 20, 25, 41, 88, 120, and 928.

Bachman Place is a two-lane undivided roadway with a posted speed limit of 40 mph. Sidewalks are present along the west side of the roadway. On-street parking is permitted on the west side of the roadway only. There are no bicycle facilities present.

Avenida Del Rio is a four-lane roadway with a center left-turn lane and no posted speed limit. On-street parking is not permitted. Sidewalks are present along the along both sides of the roadway, although sections are missing along the east side. There are no bicycle facilities present. The roadway is used by MTS bus route 6 to access the Fashion Valley Transit Center.

Ulric Street is three-lane roadway with two northbound lanes and one southbound lane and a striped median between Friars Road and approximately 600 feet south of Fashion Hills Boulevard. North of that point, Ulric Street narrows to a two-lane roadway. Ulric Street has a posted speed limit of 40 mph. On-street parking is not permitted. Sidewalks are present along the west side of the roadway, and Class II bicycle facilities are present on both sides of the roadway. MTS route 120 runs along this roadway between Friars Road and Linda Vista Road.

Camino De La Siesta is a two-lane undivided roadway with a posted speed limit of 25 mph. On-street parking is generally permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, although there are no bicycle facilities present.

Metropolitan Drive is a three-lane roadway with two northbound lanes and one southbound lane. A center left-turn lane is present. There is a posted speed limit of 25 mph. On-street parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, although there are no bicycle facilities present. MTS routes 25 and 928 run along Metropolitan Drive, between Murray Canyon Road and Mission Valley Road.

Murray Canyon Road is a three-lane roadway with two northbound lanes and one southbound lane. A center left-turn lane is present. There is no posted speed limit. On-street parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway, although there are no bicycle facilities present. MTS routes 25 and 928 run along Murray Canyon Road between Frazee Road and Metropolitan Drive.

Frazee Road is a four-lane roadway with a raised median and no posted speed limit. On-street parking is intermittently permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway. There are no bicycle facilities present. MTS routes 25 and 928 runs along Frazee Road between Friars Road and Murray Canyon Road.

Mission Center Road is a two-lane roadway between Murray Ridge Road and approximately 1,200 feet west of Murray Ridge Road. The roadway expands to two northbound and one southbound lanes until approximately 950 feet north of Mission Valley Road. From Mission Valley Road to Westside Drive, Mission Center Road expands to four lanes, and again to five lanes between Westside Drive and the Friars Road westbound ramps. Mission Center Road becomes a four-lane roadway once again until Mission Center Court, and expands to five lanes between Mission Center Court and Camino Del Rio North. Posted speed limits are 45 mph between Murray Ridge Road and approximately 950 feet north of Mission Valley Road, with a reduction to 40 mph for the remainder of the roadway. There is no on-street parking permitted. Sidewalks are generally present, except between Murray Ridge Road and approximately 950 feet north of Mission Valley Road. Class II bicycle facilities are present along both sides of the roadway. MTS routes 25 and 928 run along Mission Center Road between Mission Valley Road and Murray Ridge Road.

Auto Circle begins at the southern terminus of Mission Center Road and continues to Camino Del Rio South. Auto Circle is a four-lane roadway with a striped median between Camino Del Rio South and the I-8 eastbound ramps, and a raised median south of the I-8 eastbound ramps. There is no posted speed limit along the roadway. Sidewalks are present along the west side of the roadway. Class II bicycle facilities are present between Camino Del Rio North and the I-8 eastbound ramps. On-street parking is not permitted along the roadway.

Via Alta is a two-lane roadway between Westside Drive and Franklin Ridge Road with a raised median. There is no posted speed limit. On-street parking is prohibited. Sidewalks and Class II bicycle facilities are present on both sides of the roadway.

Murray Ridge Road is a two-lane road with a center left-turn lane between Mission Center Road and the I-805 northbound ramps, and a striped median between the I-805 northbound and I-805 southbound ramps. There is a posted speed limit of 25 mph, which increases to 35 mph approximately 250 feet north of Mission

Center Road. On-street parking is allowed north of the I-805 northbound ramps. Sidewalks and Class II bicycle facilities are present along both sides of the roadway.

Russell Park Way is a two-lane roadway with a raised median. There is no posted speed limit. On-street parallel parking is permitted on the west side of the roadway. Sidewalks and Class II bicycle facilities are present on both sides of the roadway.

Camino Del Este is a four-lane roadway that alternates between a raised median, striped median, and center left-turn lane. North of Camino De La Reina, the posted speed limit is 35 mph. South of Camino De La Reina, the posted speed limit is reduced to 25 mph. On-street parking is only permitted south of Camino De La Reina. Sidewalks are present along both sides of the roadway. Class II bicycle lanes are present north of Camino De La Reina. MTS bus route 6 runs along Camino Del Este between Camino De La Reina and Camino Del Rio North in the northbound direction.

Franklin Ridge Road is a future roadway that will provide north-south travel as a modified two-lane road with a center median. The roadway will be classified as a two-lane major street. It will begin at the eastern terminus of Civita Boulevard and run northerly to connect with Via Alta. Parking will be prohibited on both sides of Franklin Ridge Road, and it is planned to have Class II bike lanes.

Qualcomm Way is a two-lane roadway between the Friars Road westbound ramps and the Friars Road eastbound ramps. Qualcomm Way widens to six lanes between the Friars Road eastbound ramps and Camino Del Rio North. South of Camino Del Rio North, Qualcomm Way narrows to five lanes, before narrowing again to four lanes through the Camino Del Rio South, where the roadway changes names to Texas Street. Qualcomm Way is generally an undivided roadway, with a center left-turn lane between the Friars Road eastbound ramps and Friars Road westbound ramps, a raised median between the Friars Road westbound ramps and Rio San Diego Drive, and a striped median between Rio San Diego Drive and Camino Del Rio North. Qualcomm Way has no posted speed limits, and has intermittent on-street parking, generally between the Friars Road eastbound ramps and Rio San Diego Drive. Sidewalks are generally present, except for the east side of the roadway between Camino De La Reina and Camino Del Rio South. Class II bicycle lanes are generally present, except south of Camino De La Reina, where an unsigned paved shoulder is intermittently present. MTS bus route 6 runs along Qualcomm Way between Camino De La Reina and the roadway's southern terminus at Camino Del Rio South, where the roadway changes its name to Texas Street. In addition, MTS route 18 runs along the roadway between Camino Del Rio North and Camino Del Rio South.

Texas Street is a four-lane roadway between Camino Del Rio South and approximately 1,400 feet north of Madison Avenue, where the roadway narrows to three lanes. Between that point and Madison Avenue, there are two southbound and one northbound lanes. Between Madison Avenue and Meade Avenue, Texas Street narrows to a two-lane roadway, before widening again to a three-lane roadway, with two southbound lanes and one northbound lane, between Meade Avenue and El Cajon Boulevard. Texas Street has a raised median between Camino Del Rio South and Madison Avenue, a center left-turn lane between Madison Avenue and Meade Avenue, and is an undivided roadway south of Meade Avenue. There are no posted speed limits along the roadway. There is no on-street parking permitted north of Madison Avenue. Sidewalks are generally present throughout the roadway, but are missing from the east side of the roadway between Camino Del Rio South and approximately 1,400 feet north of Madison Avenue. Class II bicycle facilities lanes are available between Madison Avenue. MTS bus route 6 runs along Texas Street from the roadway's northern terminus at Camino Del Rio South to El Cajon Boulevard.

River Run Drive is a two-lane undivided roadway with no posted speed limit. On-street parking is permitted. Sidewalks are present throughout the roadway, however, there are no bicycle facilities present.

Fenton Parkway is a four-lane roadway. A raised median is present through all segments of Fenton Parkway. Speed limits are not posted along the roadway. On-street parking is not permitted, and sidewalks are present along the entire roadway. Class II bicycle facilities are generally present, except between the Portofino Apartments driveway and Friars Road.

Mission City Parkway is a two-lane undivided roadway with a posted speed limit of 35 mph. On-street parking is not permitted. Sidewalks are present along the roadway, although they switch sides halfway through the roadway. There are no bicycle facilities. MTS Route 18 runs along the entirety of the roadway.

Northside Drive is a four-lane roadway between the Portofino Apartments driveway and the Fenton Marketplace Driveway. South of the Fenton Marketplace Driveway, Northside Drive becomes a three-lane roadway, with two northbound lanes and one southbound lane. A raised median is present through all segments of Northside Drive. Speed limits are not posted along the roadway. On-street parking is permitted south of the Fenton Marketplace Driveway, as well as between Friars Road and the Fenton Marketplace Driveway, where a small segment of 15-minute parking exists. Sidewalks are present along the entire roadway. There are no Class II bicycle facilities.

Mission Village Drive is a four-lane roadway with a raised median between Ronda Avenue and the Friars Road westbound ramps. South of Friars Road, Mission Village Drive is an undivided roadway. There is a posted speed limit of 45 mph between Ronda Avenue and Friars Road. On-street parking is not permitted. Sidewalks are present along both sides of the roadway, and Class II bicycle facilities are present north of Friars Road.

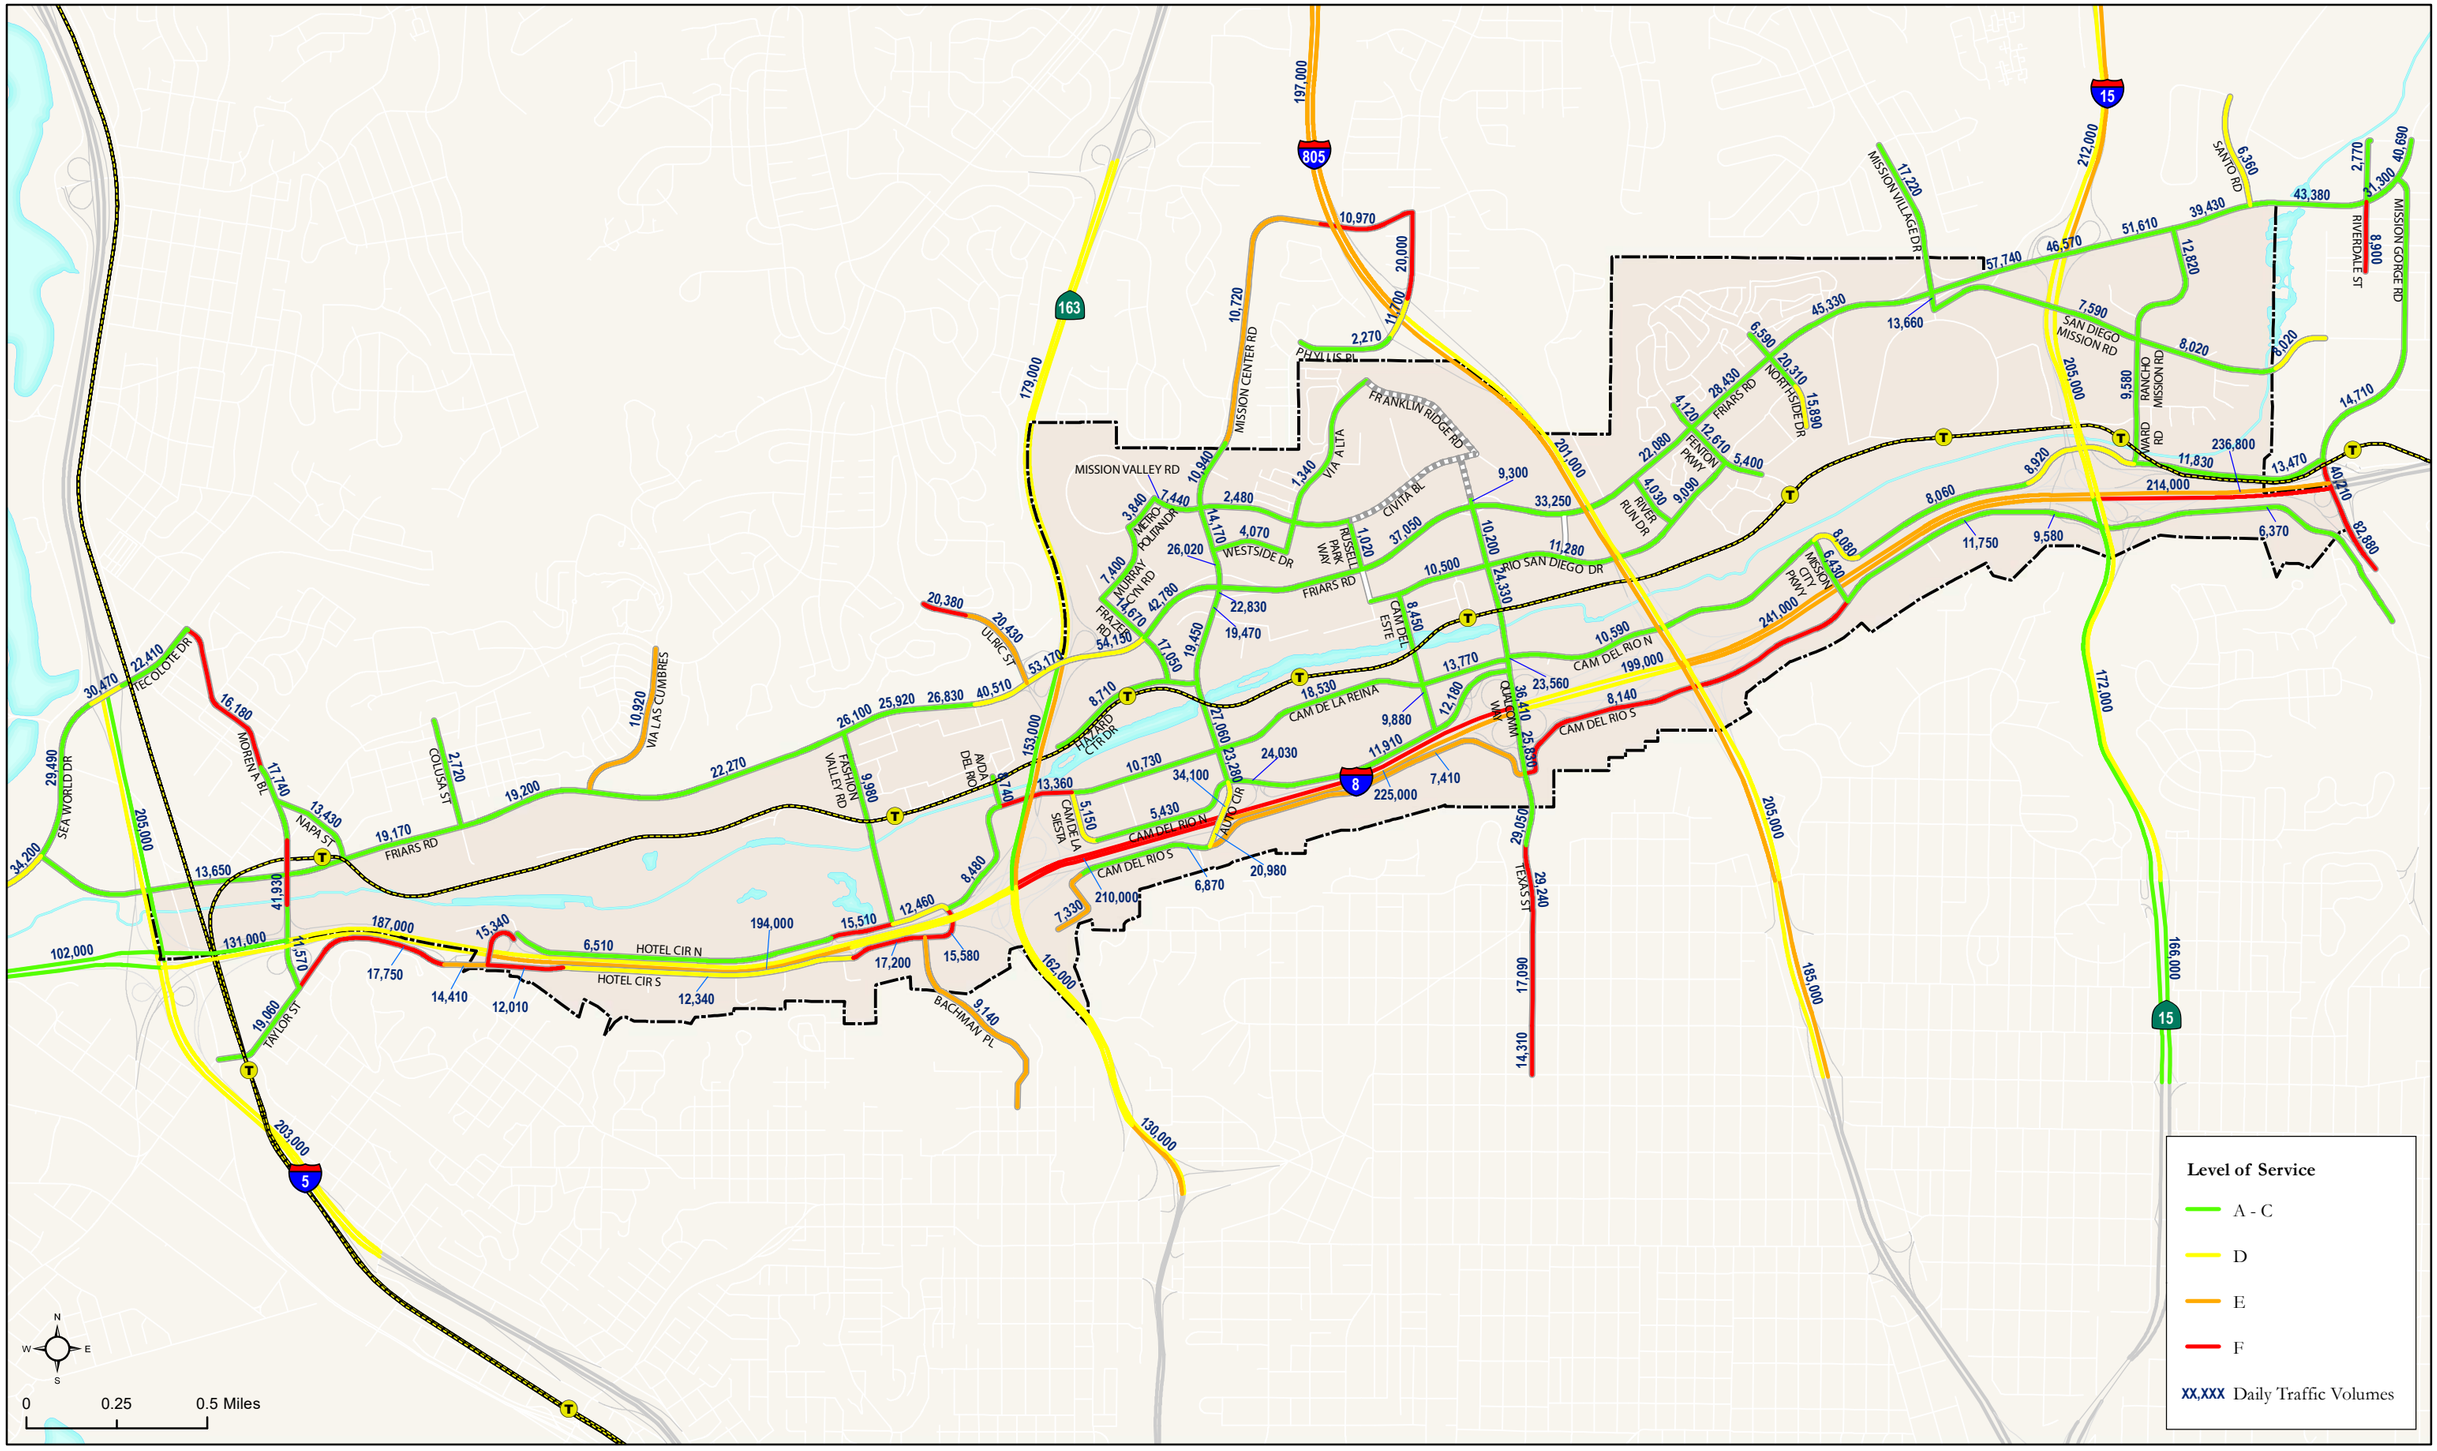
Rancho Mission Road is a three-lane road with one southbound lane, two northbound lanes, and a center left-turn lane between Friars Road and San Diego Mission Road. There is a posted speed limit of 35 mph between Friars Road and San Diego Mission Road. On-street parking is permitted on both sides of the roadway. Sidewalks are present between Friars Road and San Diego Mission Road. Class II bicycle lanes are generally present, although there are no bicycle facilities between San Diego Mission Road and Camino Del Rio North.

Ward Road is a four-lane undivided roadway with no posted speed limit. On-street parking is permitted along both sides of the roadway. Sidewalks are present along both sides of the roadway. There are no bicycle facilities present. MTS bus route 14 runs along Ward Road between Camino Del Rio North and the northern terminus of the roadway, where the roadway name changes to Rancho Mission Road.

Santo Road is a two-lane roadway with a raised median and no posted speed limit. On-street parking is permitted along both sides of the roadway. Sidewalks are present along both sides of the roadway. There are no bicycle facilities present.

Riverdale Street is a two-lane undivided roadway with no posted speed limit. On-street parking is permitted along both sides of the roadway. Sidewalks are present along both sides of the roadway. There are no bicycle facilities present.

Mission Gorge Road is a four-lane roadway with a center left-turn lane and a posted speed limit of 30 mph. On-street parking is generally permitted along both sides of the roadway. Sidewalks are present along both



sides of the roadway. There are no bicycle facilities present. MTS bus route 13 runs along Mission Gorge Road between Zion Avenue and Mission Gorge Place in both directions, as well as between Mission Gorge Place and the roadway's southern terminus at Fairmount Avenue, in the northbound direction.

Fairmount Avenue is a four-lane roadway with a raised median between the Camino Del Rio North/I-8 westbound off-ramp and the I-8 eastbound off-ramp. Between the I-8 eastbound off-ramp and Camino Del Rio South, Fairmount Avenue widens to a five-lane roadway with three southbound lanes and two northbound lanes and a raised median. Speed limits are not posted. On-street parking is not permitted. Sidewalks are present along the east side of the roadway only. Bicycle facilities are generally present, including Class II bike lanes between the I-8 westbound off-ramp and the I-8 eastbound off-ramp, and a Class I bike path south of the I-8 eastbound off-ramp along the east side of the roadway between the I-8 eastbound off-ramp and Camino Del Rio South. MTS bus route 13 runs along the roadway in both directions from the southern community boundary to Camino Del Rio North, as well as in the northbound direction between Camino Del Rio North and Mission Gorge Road. Additionally, MTS route 18 accesses Fairmount Avenue at Camino Del Rio South, running south to Montezuma Road, and north to the Grantville Trolley Station.

Figure 3-2 displays existing average daily traffic volumes for the study roadway segments, along with the current LOS. Table 3.1 displays existing roadway segment ADT and LOS for the Mission Valley community. As discussed, Appendix A contains the roadway daily traffic counts utilized in this report.

As shown, 26 study segments currently operate at a substandard level of service (LOS E or F), including the following:

- Taylor Street, between Morena Boulevard and I-8 EB Ramps (LOS F)
- Taylor Street, between I-8 EB Ramps and Hotel Circle South (LOS E)
- Hotel Circle North, between Hotel Circle South and Hotel Circle Place (LOS F)
- Hotel Circle North, between I-8 WB Ramps and Fashion Valley Road (LOS F)
- Camino De La Reina, between Avenida Del Rio and Camino De La Siesta (LOS F)
- Hotel Circle South, between Hotel Circle North and 1200 Feet East of Hotel Circle North (LOS F)
- Hotel Circle South, between I-8 EB Ramps and Bachman Place (LOS F)
- Hotel Circle South, between Bachman Place and Hotel Circle North (LOS F)
- Camino Del Rio South, between Western Terminus and 1800 Feet west of Mission Center Road (LOS E)
- Camino Del Rio South, between Mission Center Road and Texas Street (LOS E)
- Camino Del Rio South, between Texas Street and Mission City Parkway (LOS F)
- Morena Boulevard, between Tecolote Road and West Morena Boulevard (LOS F)
- Morena Boulevard, between Linda Vista Road and I-8 WB Off-Ramp (LOS F)
- Via Las Cumbres, between Linda Vista Road and Friars Road (LOS E)
- Bachman Place, between Hotel Circle South and southern community boundary (LOS E)
- Ulric Street, between Fashion Hills Boulevard and 600 Feet South of Fashion Hills Boulevard (LOS F)
- Ulric Street, between 600 Feet South of Fashion Hills Boulevard and Friars Road (LOS E)
- Mission Center Road, between Murray Ridge Road and 1200 Feet West of Murray Ridge Road (LOS F)
- Mission Center Road, between 1200 Feet West of Murray Ridge Road and 950 Feet North of Mission Valley Road (LOS E)
- Murray Ridge Road, between Mission Center Road and I-805 NB Ramps (LOS F)
- Texas Street, between 1400 Feet North of Madison Ave and Madison Avenue (LOS F)
- Texas Street, between Madison Avenue and Meade Ave, (LOS F)
- Texas Street, between Meade Ave and El Cajon Boulevard (LOS F)
- Riverdale Street, between Friars Road and Vandever Avenue (LOS F)
- Fairmount Avenue, between Camino Del Rio North/I-8 WB Off-Ramp and I-8 EB Off-Ramp (LOS F)
- Fairmount Avenue, between I-8 EB Off-Ramp and Camino Del Rio South (LOS F)

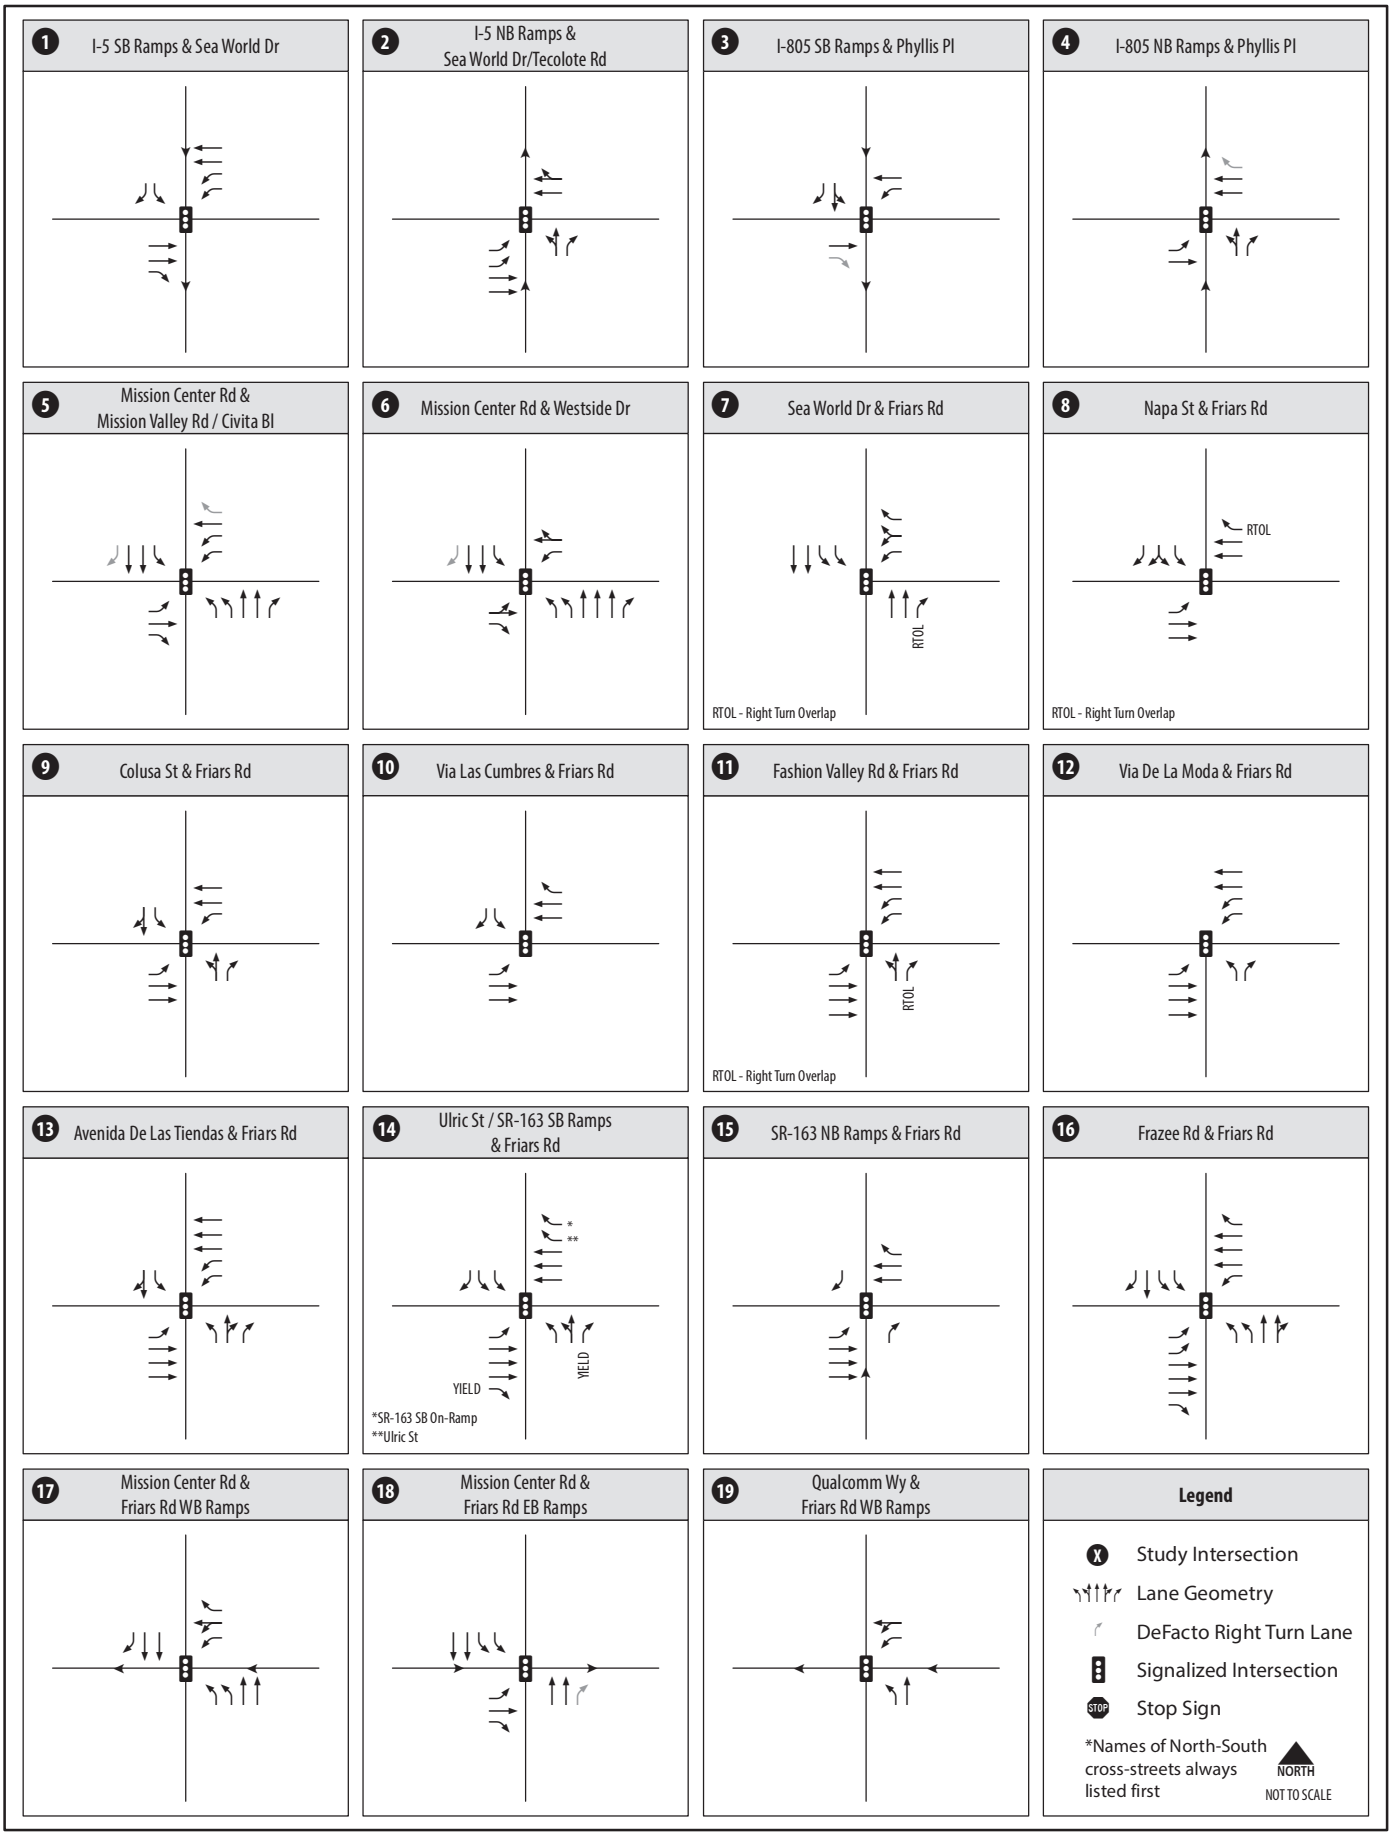
Source: Pacific Technical Data, Accurate Video Counts, City of San Diego

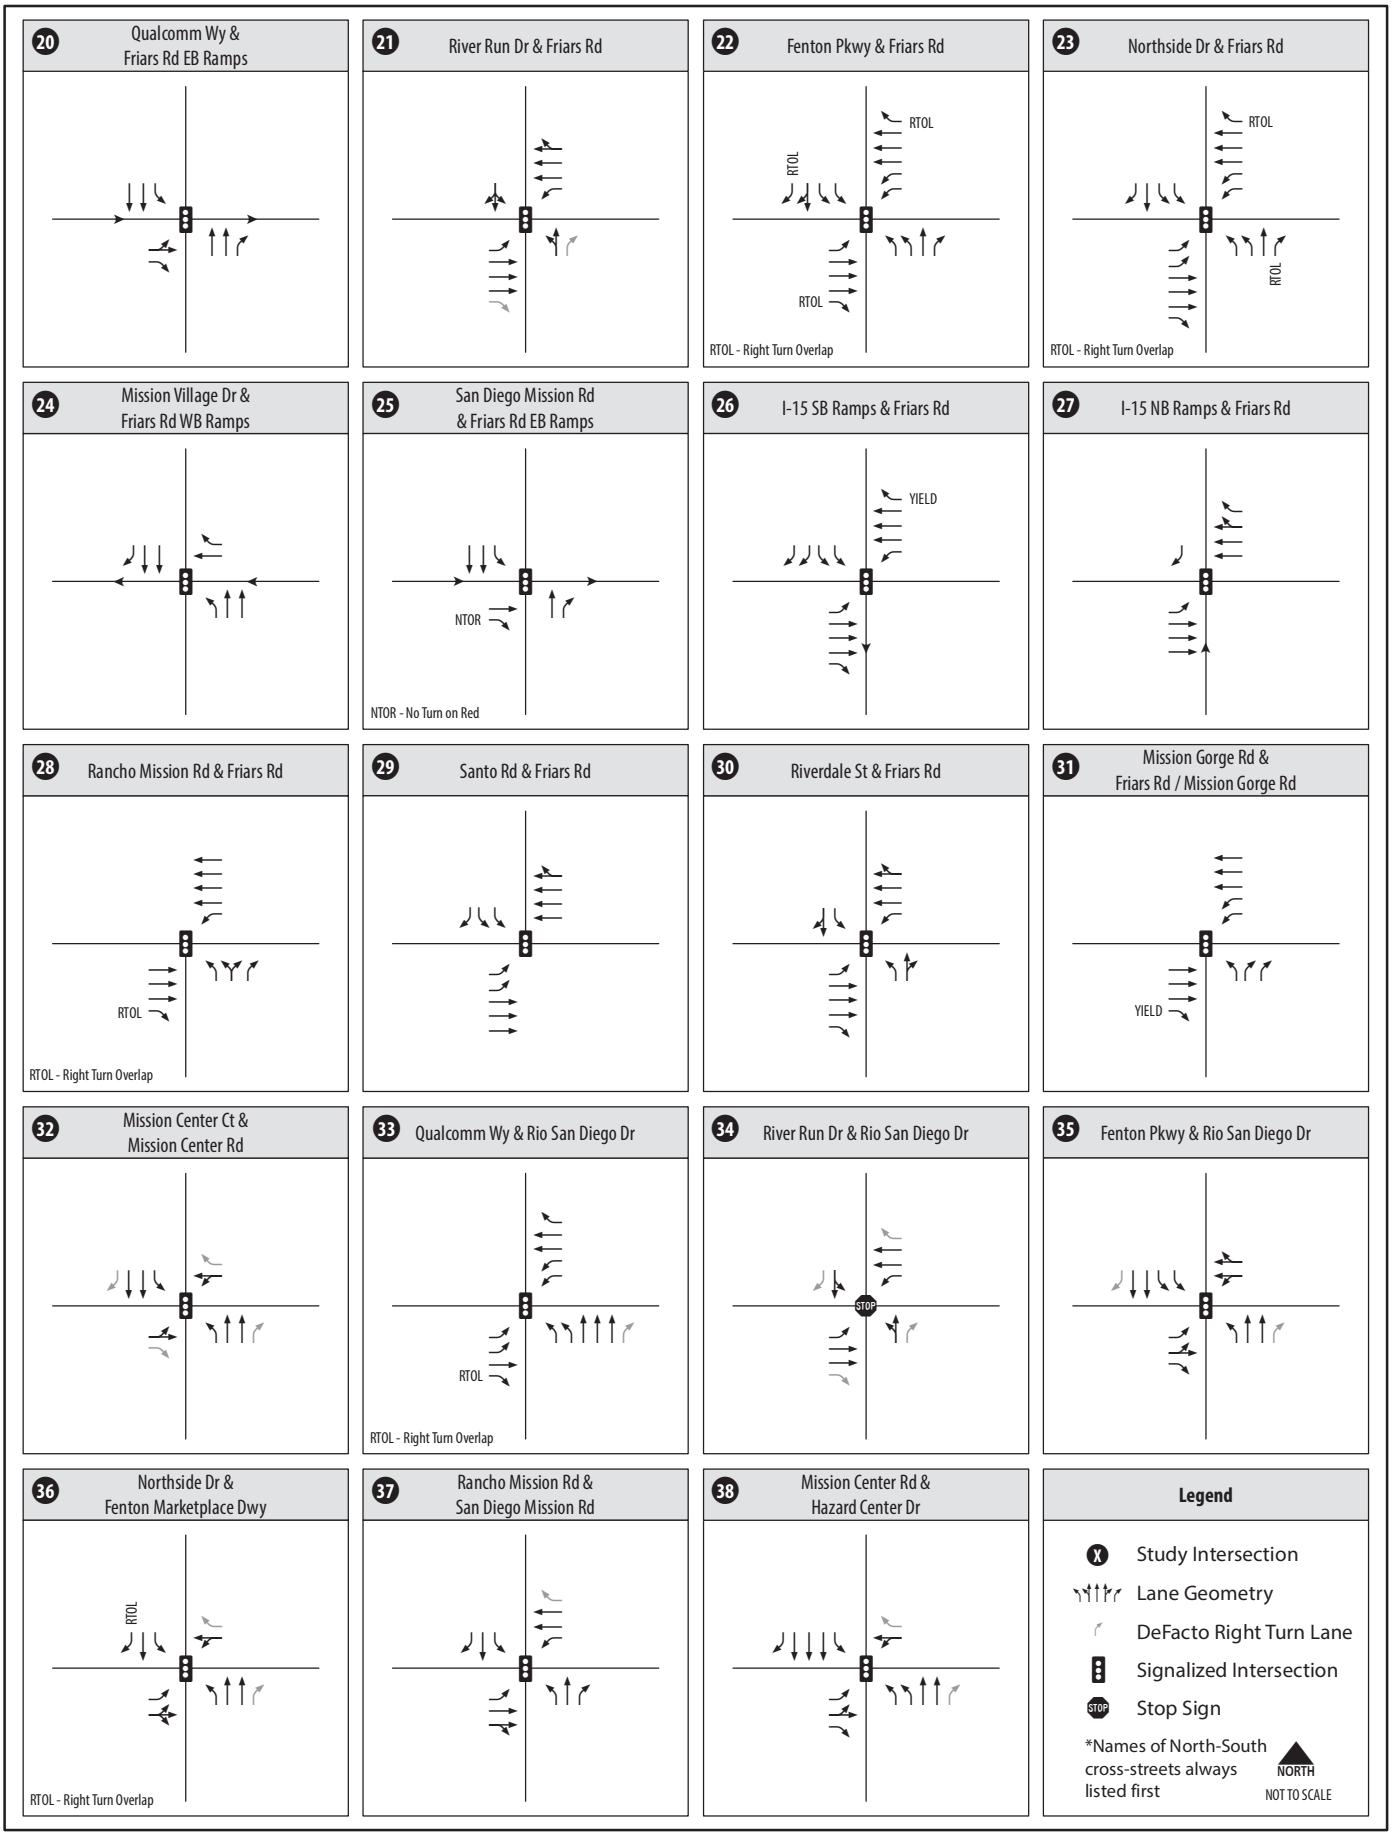
Notes:
Bold letter indicated substandard LOS E and F.
PTD = Pacific Technical Data. AVC = Accurate Video Counts.
RM = Raised Median. SM = Striped Median. TWLTL = Two-Way Left-Turn Lane. Turn pocket(s) may be considered in place of TWLTL. NFP = No Fronting Property.



3.2 Intersection Analysis

As described in Chapter 2.1, a total of sixty-seven (67) study intersections were analyzed as part of the existing conditions assessment. Figure 3-3 displays existing intersection geometries. Figure 3-4a displays the AM/PM peak hour turning movements for all 67 study intersections, while Figure 3-4b displays the midday turning movements at selected locations. Intersection counts utilized in this report are provided in Appendix A, while intersection level of service calculation worksheets are provided in Appendix D.

The intersection analysis results are presented in Figure 3-5a for all 67 study intersections, during the AM and PM peak hours. Figure 3-5b presents the midday peak hour intersection level of service for 23 study intersections. Table 3.2 identifies the traffic control, provides the intersection level of service results and the average intersection delay for AM and PM peak hours for all study intersections. Table 3.2 also provides mid-day peak hour results for 23 of the study intersections where midday data was collected.



The following 13 intersections were found to operate at substandard (LOS E or F) levels of service during the AM, PM and/or midday peak hour:

- #2 I-5 NB Ramps and Sea World Drive/Tecolote Road – AM LOS E
- #5 Mission Center Road and Mission Valley Road/Civita Boulevard – PM LOS E
- #16 Frazee Road and Friars Road – PM LOS E
- #23 Northside Drive and Friars Road – PM LOS E
- #26 I-15 SB Ramps and Friars Road – PM LOS E
- #45 Fairmount Avenue/Camino Del Rio North and I-8 WB Off-Ramp – PM LOS E
- #47 I-8 WB Ramps/Handlery Hotel Driveway and Hotel Circle North (E) – AM/PM LOS E
- #55 Hotel Circle North and Taylor Street/Hotel Circle South – PM LOS E
- #56 I-8 EB Ramps and Hotel Circle South – PM LOS F
- #58 Mission Center Road and I-8 EB Ramps – PM LOS E
- #59 Mission Center Road and Camino Del Rio South – PM LOS F; Midday LOS E
- #61 Texas Street and Camino Del Rio South – AM/PM LOS E
- #67 Texas Street and Madison Avenue – AM LOS E

3.3 Freeway Segment Analysis

Five freeways run adjacent to or traverse Mission Valley, carrying significant traffic volumes while providing regional mobility. A description of each freeway is provided, within the Mission Valley study area context, followed by an operational analysis of freeway segments.

Interstate 5

Interstate 5 (I-5) is a north-south facility connecting San Diego County to the US-Mexico International Border to the south and Orange County to the north. The freeway is maintained and operated by Caltrans. I-5 has eight to nine mixed-flow/general purpose lanes (4 northbound lanes, 4-5 southbound lanes) and two to three auxiliary lanes (1 northbound lane, 1-2 southbound lanes) within the study area. Access within Mission Valley is provided by the I-8 interchange, however, I-5 is accessible just outside the community via Sea World Drive/Tecolote Road, Camino Del Rio West, Old Town Avenue. In 2015, I-5 accommodated between 203,000 and 205,000 ADT along segments adjacent to Mission Valley. Heavy vehicle traffic was estimated to account for 3.4% to 4.1% of total daily traffic.

State Route 163

State Route 163 (SR-163) is a north-south facility running from Interstate 15, north of State Route 52, to downtown San Diego. The freeway is maintained and operated by Caltrans. SR-163 varies from five to nine mixed-flow/general purpose lanes (3-5 northbound lanes, 2-4 southbound lanes) and zero to three auxiliary lanes (0-1 northbound lanes, 0-2 southbound lanes) within the study area. Access within Mission Valley is provided at Friars Road and the I-8 interchange. Genesee Avenue and Washington Street provide access to SR-163 just outside of the community. In 2015, SR-163 accommodated between 130,000 and 179,000 ADT along segments adjacent to Mission Valley. Heavy vehicle traffic was estimated to account for 3.0% to 3.7% of total daily traffic.

Interstate 805

Interstate 805 (I-805) is a north-south facility splitting from I-5 in Sorrento Valley and running parallel to I-5 to just north of the US-Mexico International Border, where the freeways merge back together. The freeway is maintained and operated by Caltrans. I-805 has nine to ten mixed-flow/general purpose lanes (4-5 northbound lanes, 4-6 southbound lanes) and zero to two auxiliary lanes (0-1 northbound lanes, 0-2 southbound lanes) within the study area. I-805 is accessible via the I-8 interchange within Mission Valley, and at Phyllis Place/Murray Ridge Road and Adams Avenue just outside of the community. In 2015, I-805 carried between 185,000 and 205,000 ADT along segments adjacent to Mission Valley. Heavy vehicle traffic was estimated to account for 6.5% of total daily traffic.

Interstate 15

Interstate 15 (I-15) is a north-south facility connecting San Diego County to Riverside County to the north and terminating in the Barrio Logan community, near I-5, to the south. South of I-8, I-15 becomes State Route 15 (SR-15). The freeway is maintained and operated by Caltrans. The freeway is comprised of seven to nine mixed-flow/general purpose lanes (3-4 northbound lanes, 3-5 southbound lanes) and zero to four auxiliary lanes (1-2 northbound, 0-3 southbound) within the study area. Access within Mission Valley is provided at Friars Road, the I-8 interchange, Camino Del Rio North, and Camino Del Rio South, with Adams Aero Drive and Adams Avenue providing access just outside of the community. In 2015, I-15 accommodated between 166,000 and 212,000 ADT along segments adjacent to Mission Valley. Heavy vehicle traffic was estimated to account for 2.2% to 5.0% of total daily traffic.

Interstate 8

Interstate 8 (I-8) is an east-west facility connecting Mission Valley to I-5 and the coastal communities to the west and La Mesa, El Cajon and eventually Imperial County to the east. The freeway is maintained and operated by Caltrans. Adjacent to Mission Valley I-8 varies from four to nine mixed-flow/general purpose lanes (2-5 westbound lanes, 2-5 eastbound lanes) and zero to four auxiliary lanes (0-2 westbound lanes, 0-2 eastbound lanes) adjacent to the community. Access within and adjacent to Mission Valley is provided at the I-5 interchange, Morena Boulevard, Taylor Street, Hotel Circle North (multiple access points), Hotel Circle South (multiple access points), SR-163 interchange, Mission Center Road, Camino Del Rio North, Qualcomm Way, I-805 interchange, Camino Del Rio South, and the I-15 interchange. In 2015, I-8 accommodated between 12,000 and 241,000 ADT along segments adjacent to Mission Valley. Heavy vehicle traffic was estimated to account for 1.0% to 3.5% of total daily traffic.

Tables 3.3a and 3.3b present freeway characteristics and the AM/PM level of service analysis results for segments within the vicinity of Mission Valley community plan update study area. Data was obtained from Caltrans and is representative of year 2015 and is provided in Appendix A.

As shown, the following 27 directional freeway segments operate at a substandard level of service E/F:

- EB I-8, I-5 Interchange to Morena Boulevard (PM – LOS E)
- EB I-8, Morena Boulevard to Taylor Street (PM – LOS F)
- EB I-8, Taylor Street to Hotel Circle (PM – LOS E)
- EB I-8, SR-163 Interchange to Mission Center Road (PM – LOS F)
- WB I-8, SR-163 Interchange to Mission Center Road (AM – LOS E)
- EB I-8, Mission Center Road to Qualcomm Way / Texas Street (PM – LOS F)
- WB I-8, Mission Center Road to Qualcomm Way / Texas Street (AM – LOS F)
- EB I-8, Qualcomm Way / Texas Street to I-805 Interchange (PM – LOS F)
- WB I-8, Qualcomm Way / Texas Street to I-805 Interchange (AM – LOS E)
- EB I-8, I-805 Interchange to I-15 Interchange (PM – LOS E)
- EB I-8, I-15 Interchange to Fairmount Avenue (PM – LOS F)
- SB I-5, Sea World Drive / Tecolote Road to I-8 Interchange (AM – LOS F)
- NB I-5, I-8 Interchange to Old Town Avenue (AM – LOS E)
- SB I-5, I-8 Interchange to Old Town Avenue (AM – LOS F)
- SB SR-163, Genesee Avenue to Friars Road (PM – LOS E)
- NB SR-163, Friars Road to I-8 Interchange (PM – LOS E)
- NB SR-163, I-8 Interchange to 6th Avenue (PM – LOS E)
- SB SR-163, 6th Avenue to Washington Street (AM & PM – LOS F)
- NB I-805, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (AM – LOS F)
- SB I-805, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (PM – LOS F)
- SB I-805, Murray Ridge Road / Phyllis Place to I-8 Interchange (PM – LOS F)
- NB I-805, I-8 Interchange to Adams Avenue (AM – LOS F)
- SB I-805, I-8 Interchange to Adams Avenue (PM – LOS E)
- NB I-805, Adams Avenue to El Cajon Boulevard (AM – LOS E)
- SB I-805, Adams Avenue to El Cajon Boulevard (PM – LOS F)
- NB I-15, Aero Drive to Friars Road (AM – LOS F)
- SB I-15, Aero Drive to Friars Road (PM – LOS E)

3.4 Freeway Ramp Metering Analysis

Table 3.4 presents the ramp metering analysis results for freeway ramp locations where metering is in place for either the AM or PM peak period. As previously mentioned, ramp meter rates were obtained from Caltrans District 11, and are provided along with traffic signal timing information in Appendix B. As shown in Table 3.4, none of the ramp meters within the study communities experience delays in excess of 15 minutes.

Table 3.4 Existing Freeway Ramp Metering Analysis

Location	Peak Hour	Total Demand [1] (veh/hr)	SOV Demand[2]	Meter Rate [3] (veh/hr)	Excess Demand [4] (veh/hr)	Delay [5] (min)	Queue [6] (ft)

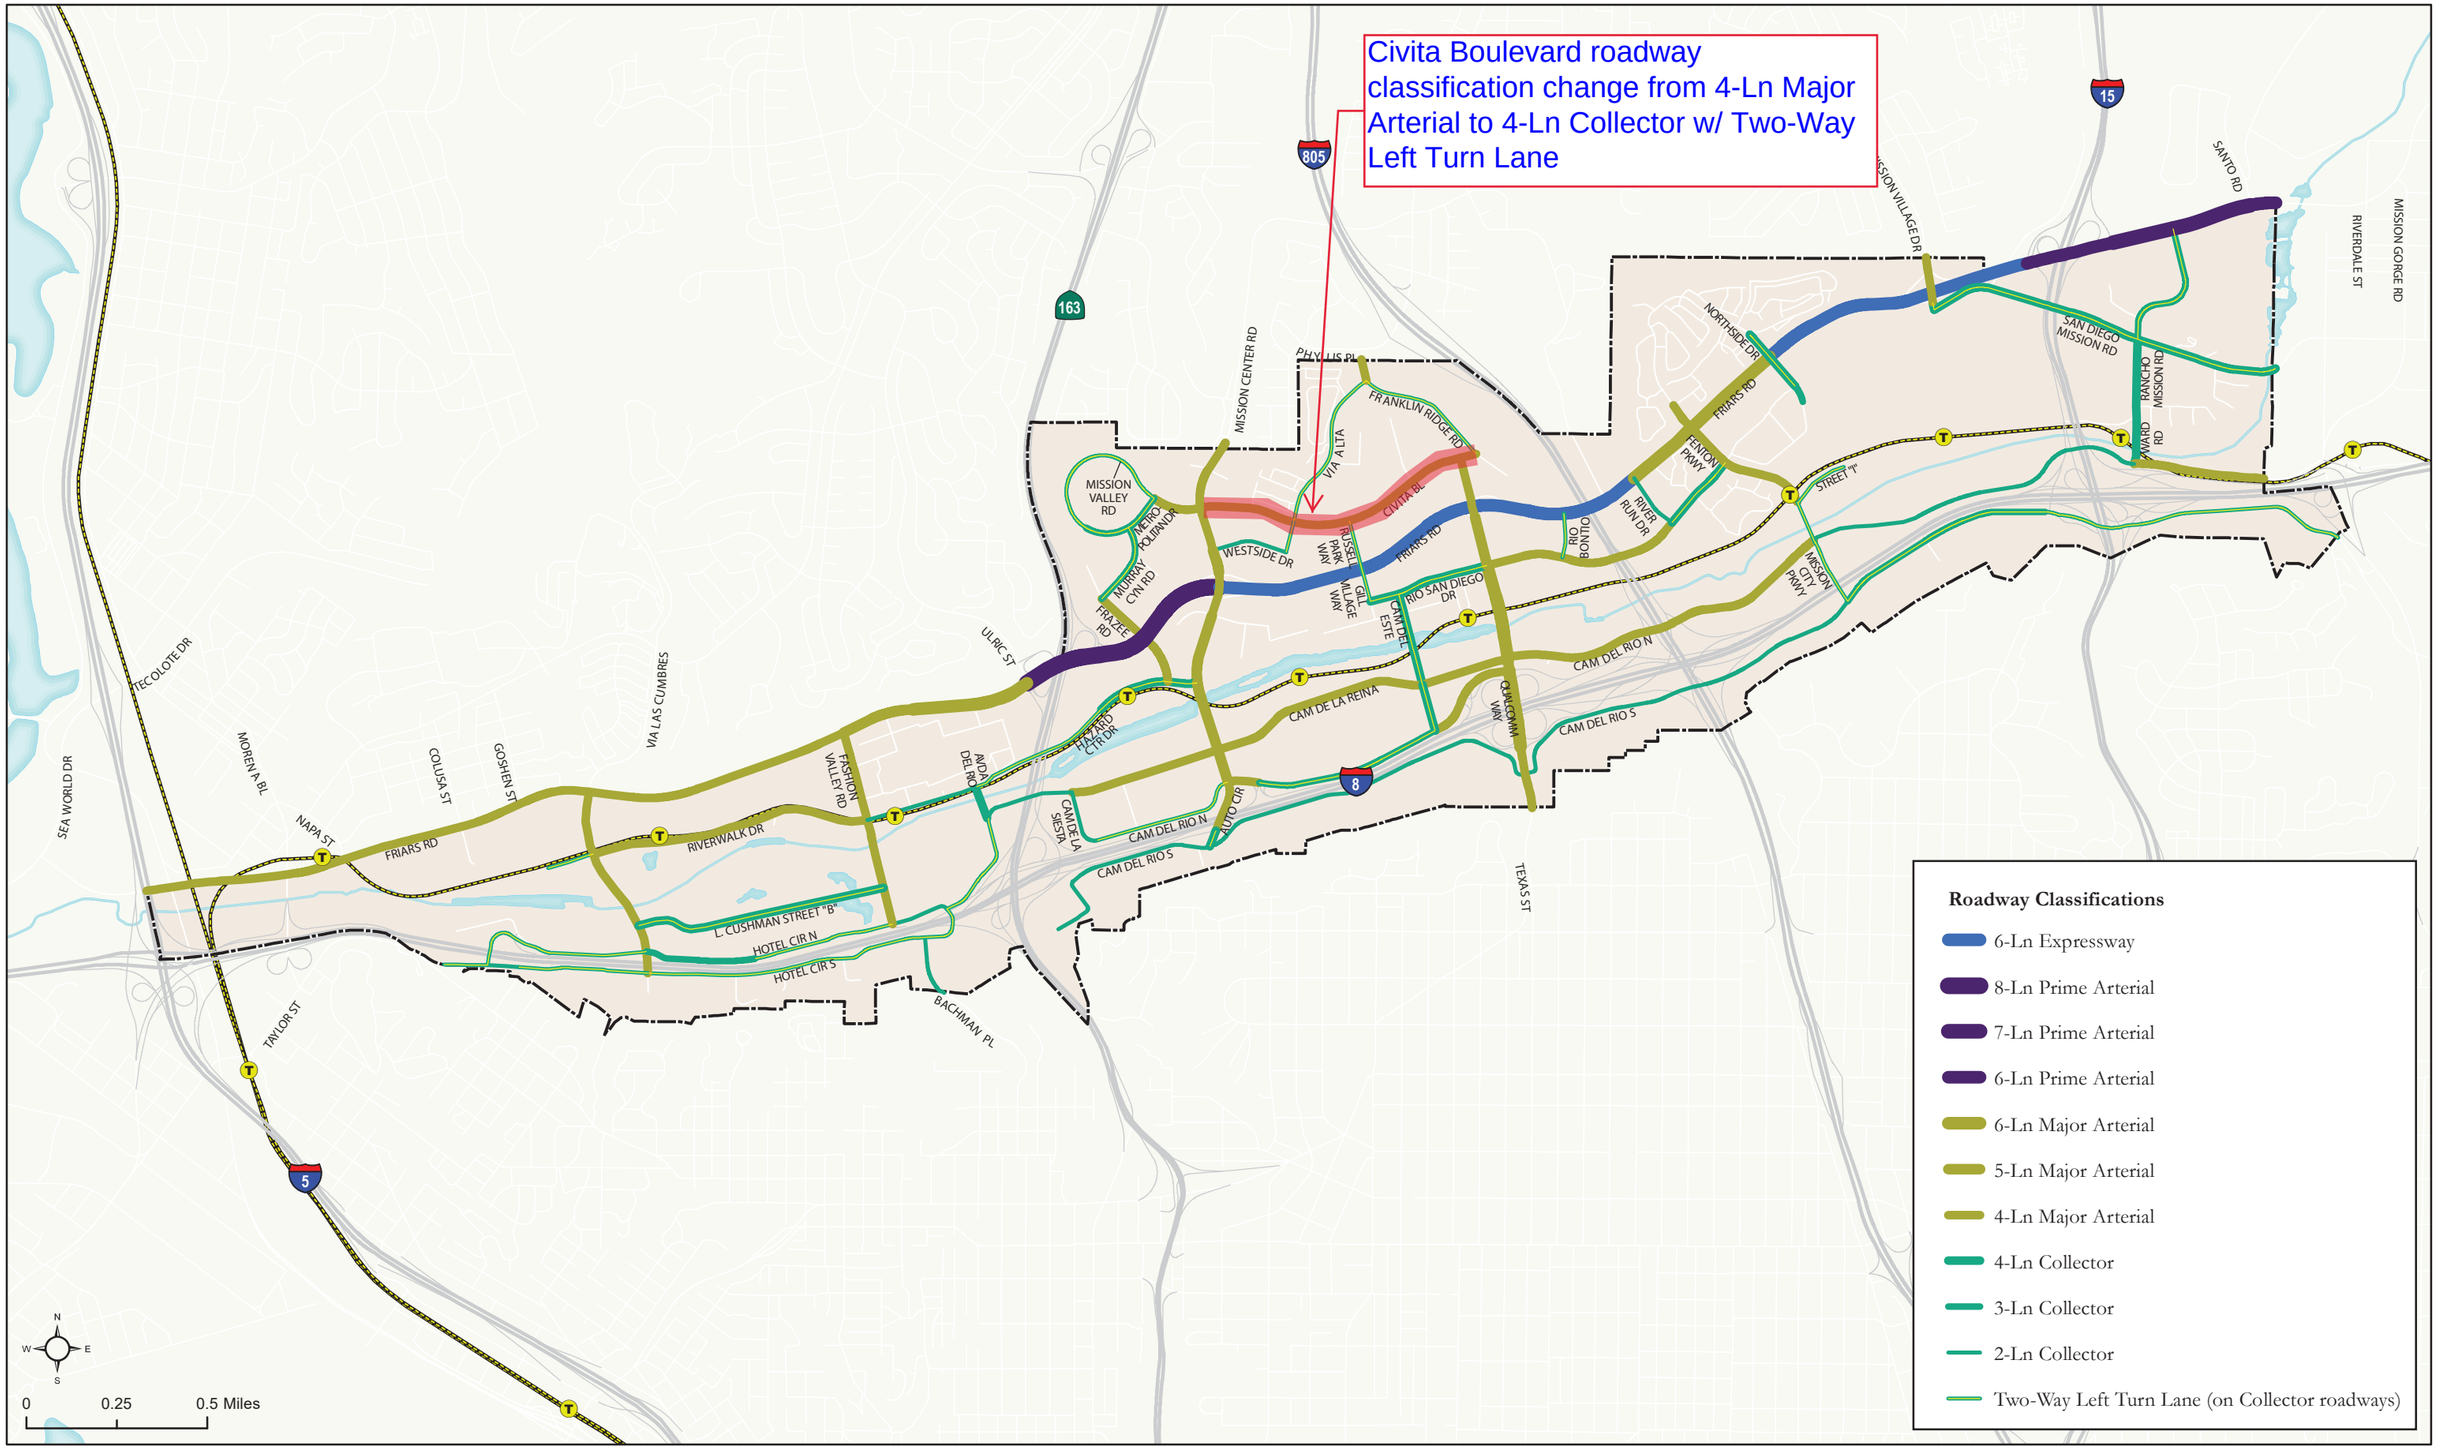
Source: Caltrans Ramp Metering Data (2015)

Notes:
SOV = Single Occupancy Vehicle.
[1] Total Demand is the peak hour demand for both SOV and HOV lanes expected to use the on-ramp.
[2] SOV Demand = (Total Demand) – (HOV Demand).
[3] Meter Rate is the peak hour capacity expected to be processed through the ramp meter per lane. This value was obtained from Caltrans. The average between the "high" and "low" meter rate was used for this analysis.
[4] Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.
[5] Delay = (Excess Demand / Meter Rate) X 60 min/hr.
[6] Queue = (Excess Demand) X 29 ft/veh. SOV volumes were used in the calculation of Queue. A zero represents no excess queue. It is important to note the on-ramps queues could also occur as a result of freeway congestion as the lack freeway capacity could limit the number of vehicles that can merge onto the freeway.
*HOV demand was obtained from Caltrans Performance Measurements System (PeMS).

4.0 Adopted Community Plan (No-Project)

This chapter discusses the traffic operations under the currently Adopted Community Plan (ACP) conditions and assesses potential traffic impacts by comparing the Adopted Community Plan to the existing conditions. Roadway and freeway segments were evaluated in determining traffic impacts associated with the currently Adopted Community Plan. Since this is not an alternative for possible adoption, intersection-level analysis was not conducted and mitigation measures were also not provided.

4.1 Roadway Segment Analysis



Roadway classification assumptions were largely based on the currently adopted Community Plan *Horizon Year Recommended Street Classification (*Figure 13 and page 83 of the *1985 Mission Valley Community Plan)*. Exceptions were made based on high level feasibility reviewed of the adopted plan classification, these facilities include:

- Friars Road, between Colusa Street and Via Las Cumbres - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial
- Friars Road, between Via Las Cumbres and Fashion Valley Road - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial
- Friars Road, between Fashion Valley Road and Via De La Moda - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Friars Road, between Via De La Moda and Fashion Valley Driveway - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Friars Road, between River Run Drive and Fenton Parkway - 1985 ACP: 6-Ln Expressway; Assumed: 6-Ln Major Arterial
- Friars Road, between Fenton Parkway and Northside Drive - 1985 ACP: 6-Ln Expressway; Assumed: 6-Ln Major Arterial
- Friars Road, between I-15 NB Ramps and Rancho Mission Road - 1985 ACP: 8-Ln Prime Arterial; Assumed: 7-Ln Prime Arterial
- Friars Road, between Rancho Mission Road and Santo Road - 1985 ACP: 8-Ln Prime Arterial; Assumed: 7-Ln Prime Arterial
- Hazard Center Drive, between Avenida Del Rio and Hazard Center W. Driveway - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- San Diego Mission Road, between Friars Road EB Ramps and Rancho Mission Road - 1985 ACP: 4-Ln Major Arterial; Assumed: 4-Ln Collector w/o TWLTL
- Hotel Circle North, between Hotel Circle South and Fashion Valley Road - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector No Fronting Property
- Hotel Circle North, between Fashion Valley Road and I-8 WB Off-Ramp - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Hotel Circle North, between Via Las Cumbres and I-8 WB On-Ramp - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Hotel Circle North, between I-8 WB On-Ramp and Hotel Circle South - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Camino De La Reina, between Hotel Circle North and Avenida Del Rio - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector w/ TWLTL
- Camino De La Reina, between Avenida Del Rio and Camino De La Siesta - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector No Fronting Property

- Camino Del Rio North, between Camino De La Siesta and Mission Center Road - 1985 ACP: 3-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Camino Del Rio North, between I-8 WB Ramps and Camino Del Este - 1985 ACP: 4-Ln Collector; Assumed: 3-Ln Collector w/ RM
- Camino Del Rio North, between Mission City Parkway and 800 Feet East of Mission City Parkway - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector No Fronting Property
- Camino Del Rio North, between 800 Feet East of Mission City Parkway and 1800 Feet West of Ward Road - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector w/ TWLTL
- Camino Del Rio North, between 1800 Feet West of Ward Road and Ward Road - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector No Fronting Property
- Camino Del Rio North, between 1000 Feet West of Fairmount Avenue and Fairmount Avenue - 1985 ACP: 4-Ln Major Arterial; Assumed: 4-Ln Collector w/ TWLTL
- Hotel Circle South, between Taylor Street and I-8 EB Off-Ramp - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector No Fronting Property
- Hotel Circle South, between I-8 EB Off-Ramp and Via Las Cumbres - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Hotel Circle South, between Via Las Cumbres and I-8 EB On-Ramp - 1985 ACP: 3-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Hotel Circle South, between I-8 EB On-Ramp and Hotel Circle North - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Camino Del Rio South, between 1800 Feet west of Mission Center Road and Mission Center Road - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/o TWLTL
- Camino Del Rio South, between Mission Center Road and Texas Street - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/o TWLTL
- Camino Del Rio South, between Texas Street and Mission City Parkway - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/o TWLTL
- Camino Del Rio South, between Mission City Parkway and I-15 SB Offramp - 1985 ACP: 4-Ln Collector; Assumed: 3-Ln Collector w/ TWLTL
- Camino Del Rio South, between I-15 SB Offramp and I-15 SB Onramp - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Camino Del Rio South, between I-15 SB Onramp and Fairmount Avenue - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/ TWLTL
- Colusa Street, between Friars Road and Riverwalk Drive - 1985 ACP: 4-Ln Collector; Assumed: Removed
- Metropolitan Drive, between Mission Valley Road and Murray Canyon Road - 1985 ACP: 2-Ln Collector; Assumed: 3-Ln Collector w/ TWLTL
- Murray Canyon Road, between Metropolitan Drive and Frazee Road - 1985 ACP: 4-Ln Collector; Assumed: 3-Ln Collector w/ TWLTL
- Frazee Road, between Murray Canyon Road and Friars Road - 1985 ACP: 4-Ln Collector; Assumed: 4-Ln Major Arterial
- Mission Center Road, between Murray Ridge Road and 1200 Feet West of Murray Ridge Road - 1985 ACP: 4-Ln Collector; Assumed: 2-Ln Collector w/o TWLTL
- Mission Center Road, between 1200 Feet West of Murray Ridge Road and 950 Feet North of Mission Valley Road - 1985 ACP: 4-Ln Collector; Assumed: 3-Ln Collector
- Mission Center Road, between Mission Valley Road and Westside Drive - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial

- Mission Center Road, between Westside Drive and Friars Road WB Ramps - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Mission Center Road, between Friars Road WB Ramps and Friars Road EB Ramps - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial
- Mission Center Road, between Friars Road EB Ramps and Mission Center Court - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial
- Mission Center Road, between Mission Center Court and Hazard Center Drive - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Mission Center Road, between Hazard Center Drive and Camino De La Reina - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Mission Center Road, between Camino De La Reina and Camino Del Rio North - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Auto Circle, between Camino Del Rio North and I-8 EB Ramps - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Major Arterial
- Auto Circle, between I-8 EB Ramps and Camino Del Rio South - 1985 ACP: 6-Ln Major Arterial; Assumed: 4-Ln Collector w/ RM
- Qualcomm Way, between Friars Road EB Ramps and Rio San Diego Drive - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Qualcomm Way, between Camino Del Rio North and I-8 WB Ramps - 1985 ACP: 6-Ln Major Arterial; Assumed: 5-Ln Major Arterial
- Fenton Parkway, between Portofino Driveway and Friars Road - 1985 ACP: 4-Ln Collector; Assumed: 4-Lane Major Arterial
- Mission City Parkway, between Camino Del Rio North and Camino Del Rio South - 1985 ACP: 4-Ln Major Arterial; Assumed: 2-Ln Collector w/ No Fronting Property
- Northside Drive, between Friars Road and Fenton Marketplace Driveway - 1985 ACP: 4-Ln Primary Arterial; Assumed: 4-Ln Collector w/ RM
- Northside Drive, between Fenton Marketplace Driveway and Lowe's Frontage Road - 1985 ACP: 4-Ln Primary Arterial; Assumed: 3-Ln Collector w/ RM
- Rancho Mission Road, between Friars Road and San Diego Mission Road - 1985 ACP: 4-Ln Collector; Assumed: 3-Ln Collector w/ TWLTL
- Riverwalk Drive, between Friars Road and Colusa Street - 1985 ACP: 4-Ln Major Arterial; Assumed: Removed
- Riverwalk Drive, between Colusa Street and Via Las Cumbres - 1985 ACP: 4-Ln Major Arterial; Assumed: Local Collector
- Riverwalk Drive, between Fashion Valley Road and Avenida Del Rio - 1985 ACP: 4-Ln Collector w/ TWLTL; Assumed: 2-Ln Collector w/ Commercial Fronting

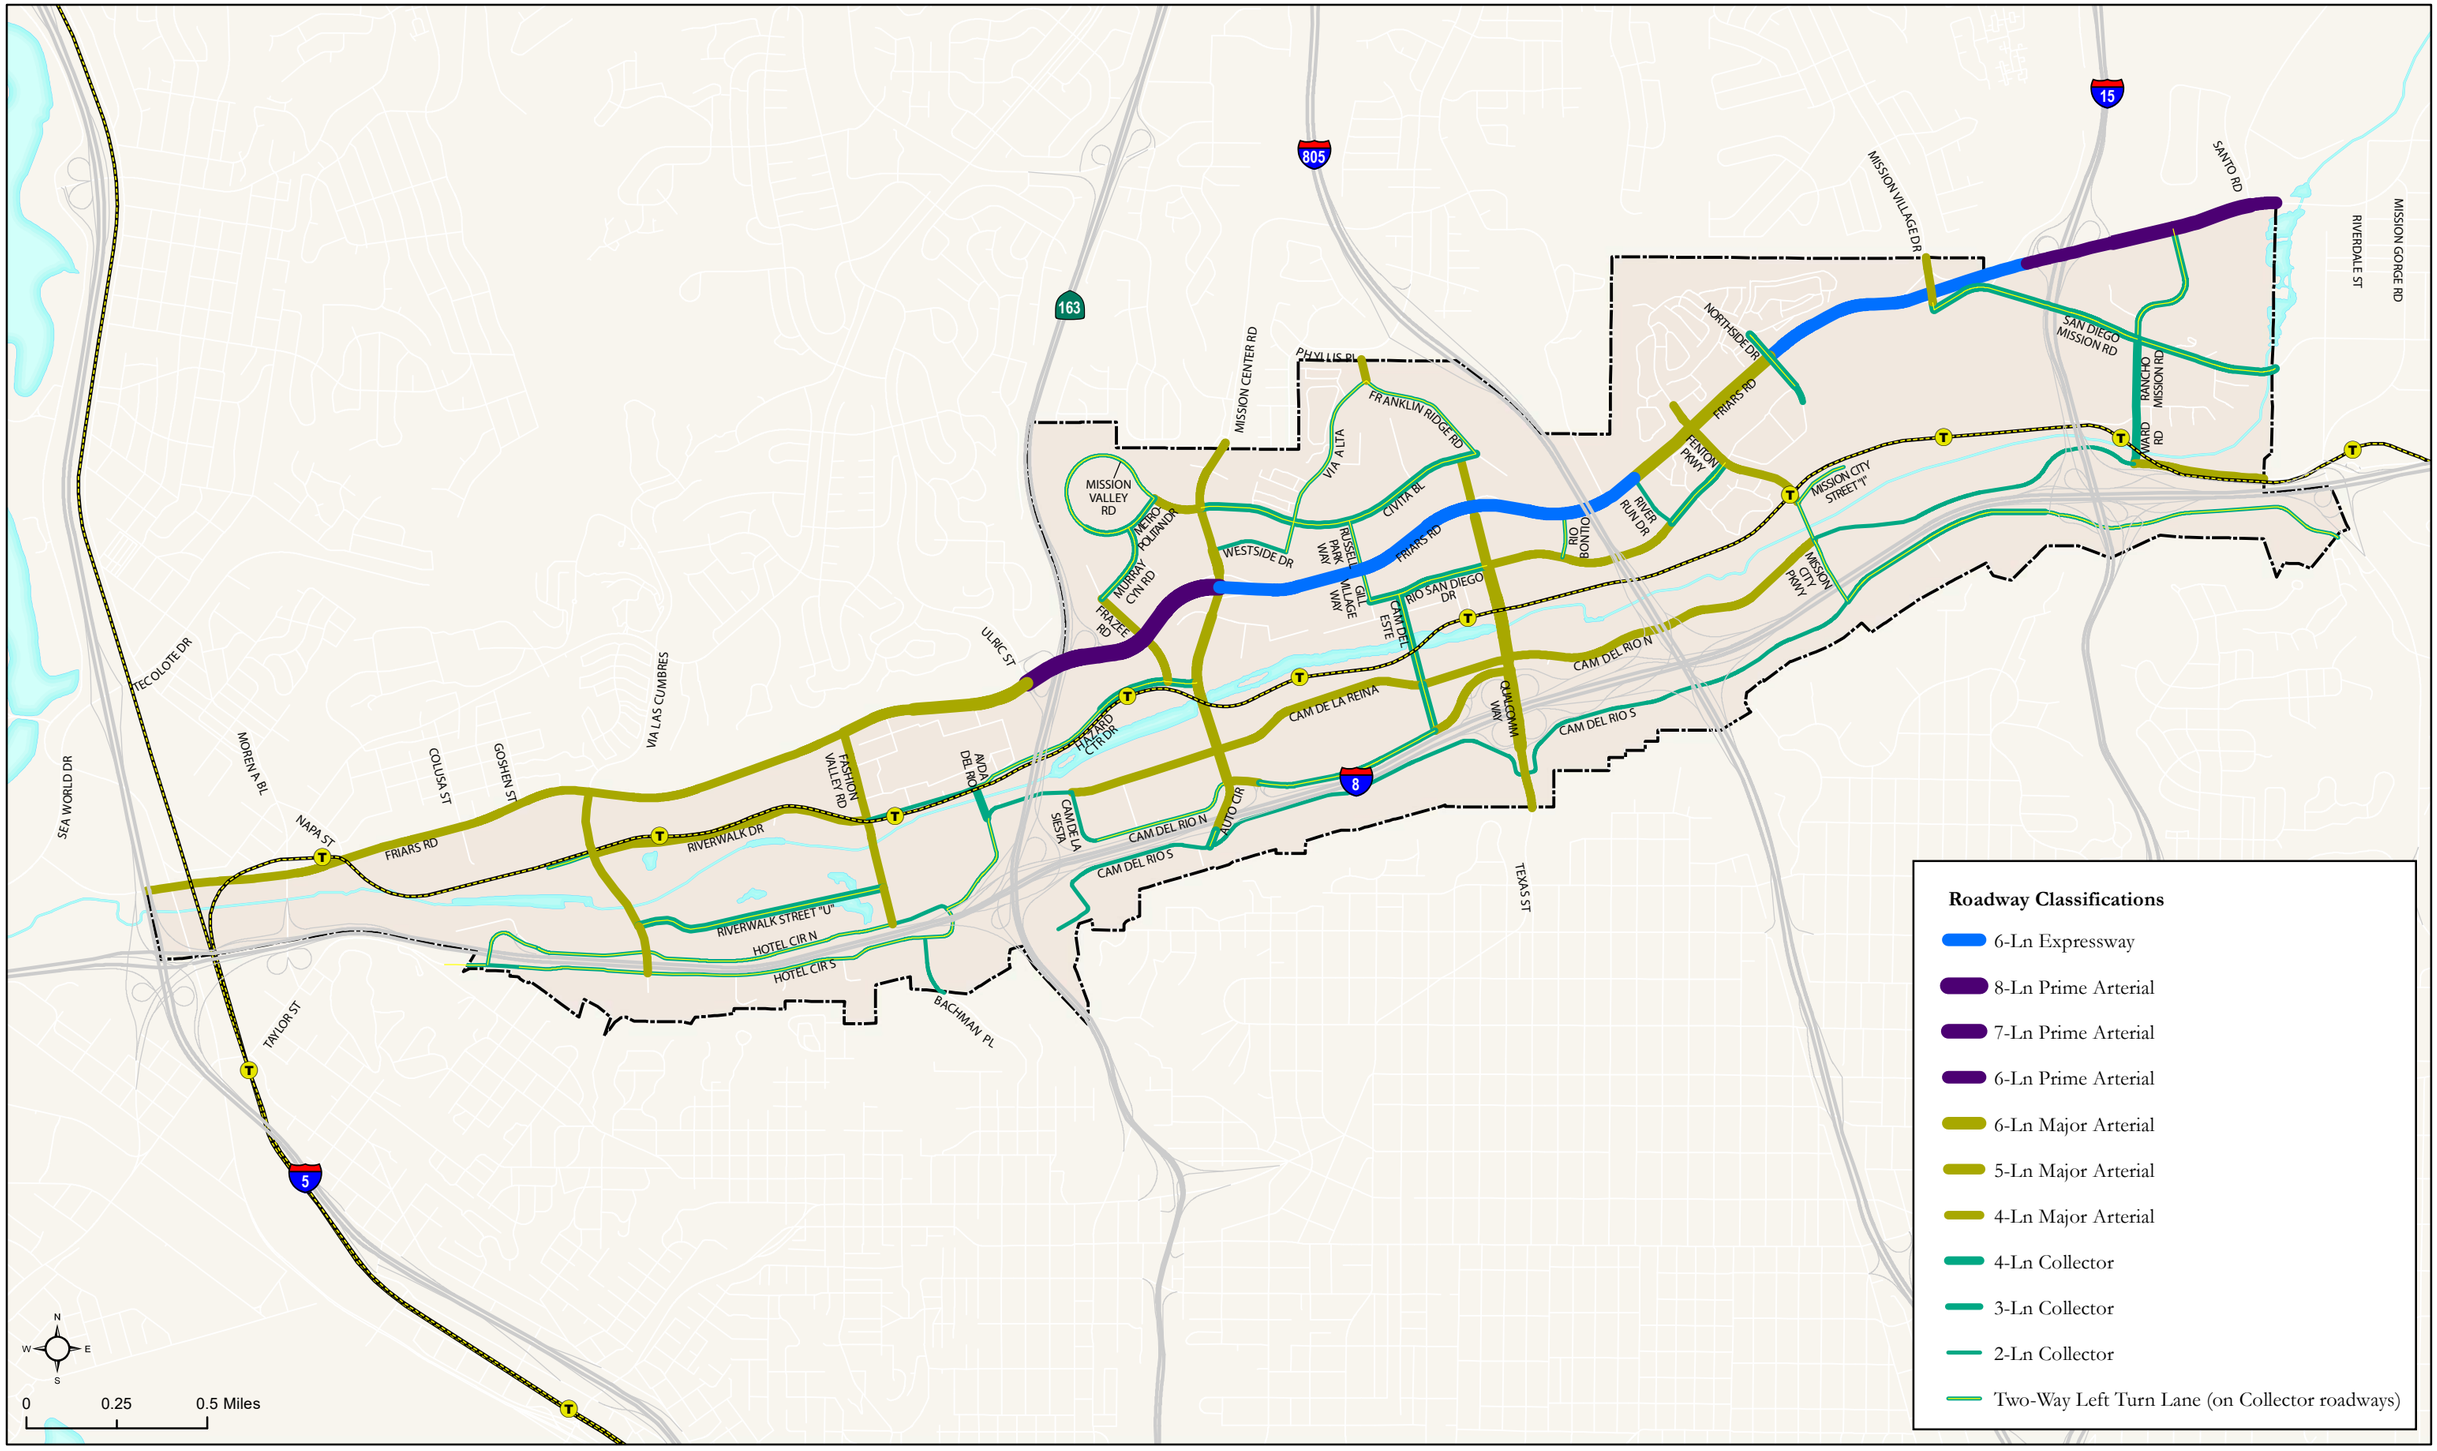


Figure 4-1 displays the roadway classification for the Adopted Community Plan scenario; while Figure 4-2 and Table 4.1 illustrate both forecasted ADT volumes and associated roadway LOS. Table 4.1 also identifies any potential traffic impacts associated with the Adopted Community Plan when comparing to the existing conditions.

Notes:
Bold letter indicates substandard LOS E or F.
RM = Raised Median.
SM = Striped Median.
TWLTL = Two-Way Left-Turn Lane. Turn pocket(s) may be considered in place of TWLTL~~.~~
NFP = No Fronting Property.
[1] Capacity for a 7-Ln Prime Arterial is calculated assuming that each additional lane above a 6-Ln Arterial adds 5,000 ADT for LOS A, 7,500 ADT for LOS B and 10,000 ADT for LOS C, D, and E.

As shown in Table 4.1, based on the criteria documented in Section 2.3, the Adopted Community Plan will result in a LOS of E or F along the following 46 roadway segments, and have a significant traffic impact to the following 44 roadway segments in **bold**, when comparing to the existing conditions (Adopted Plan-to-Ground):

- **Sea World Drive, Mission Bay Parkway to Friars Road (LOS F, Δ in V/C 0.298)**
- **Sea World Drive, Friars Road to I-5 SB Ramps (LOS E, Δ in V/C 0.188)**
- **Friars Road, Avenida De Las Tiendas to Ulric Street/SR-163 SB Ramps (LOS F, Δ in V/C 0.264)**
- **Friars Road, Mission Village Drive to I-15 SB Ramps (LOS E, Δ in V/C 0.162)**
- **Friars Road, I-15 SB Ramps to I-15 NB Ramps (LOS F, Δ in V/C 0.379)**
- **Friars Road, I-15 NB Ramps to Rancho Mission Road (LOS F, Δ in V/C 0.294)**
- **Friars Road, Santo Road to Riverdale Street (LOS F, Δ in V/C 0.379)**
- Taylor Street, Morena Boulevard to I-8 EB Ramps (LOS E, Δ in V/C -0.808) – not impacted
- **Taylor Street, I-8 EB Ramps to Hotel Circle South (LOS F, Δ in V/C 0.072)**
- **Hotel Circle North, Hotel Circle South to Fashion Valley Road (LOS F, Δ in V/C 0.199)**
- **Camino De La Reina, Avenida Del Rio to Camino De La Siesta (LOS F, Δ in V/C 0.434)**
- **Hotel Circle South, Via Las Cumbres to I-8 EB On-Ramp (LOS F, Δ in V/C 0.53)**
- Hotel Circle South, I-8 EB On-Ramp to Bachman Place (LOS F, Δ in V/C -0.113) – not impacted
- **Hotel Circle South, Bachman Place to Hotel Circle North/Camino De La Reina (LOS F, Δ in V/C 0.075)**
- **Camino Del Rio South, Western Terminus to Mission Center Road (LOS F, Δ in V/C 0.322)**
- **Camino Del Rio South, Mission Center Road to Texas Street (LOS F, Δ in V/C 0.211)**
- **Camino Del Rio South, Texas Street to Mission City Parkway (LOS F, Δ in V/C 0.257)**
- **Camino Del Rio South, I-15 SB Off-Ramp to I-15 NB On-Ramp (LOS F, Δ in V/C 0.801)**
- **Morena Boulevard, Tecolote Road to West Morena Boulevard (LOS F, Δ in V/C 0.208)**
- **Colusa Street, Linda Vista Road to Friars Road (LOS E, Δ in V/C 0.524)**

- Riverwalk Drive, Fashion Valley Road to Avenida Del Rio (LOS F, Δ in V/C 1.725)
- Goshen St, Gaines St to Friars Rd (LOS E, Δ in V/C 0.950)

4.2 Freeway Segment Analysis

Freeway improvements within the Mission Valley study area under the Adopted Community Plan scenario are assumed to be the same as those identified in Chapter 4, derived from the Revenue Constrained scenario of SANDAG's *San Diego Forward: The Regional Plan* (2015), the currently adopted regional transportation plan, and are anticipated to be implemented by 2050.

Tables 4.2a and 4.2b present the AM and PM peak hour freeway segment analysis results, respectively, as well as any potential traffic impacts associated with the Adopted Community Plan when comparing to the existing conditions. HCS freeway segment analysis worksheets are provided in Appendix E.

Table 4.2a Freeway Segment Level of Service Results – Adopted Community Plan AM Peak Hour

Notes:
Bold letter indicates LOS E or F.
[1] M = Mainline; A = Auxiliary Lane.
[2] D = Directional Split.
[3] K = Peak Hour %.
[4] Heavy Vehicle Factor.
* Freeway volumes exceed HCS analysis capacity.

As shown in the tables, the following 38 directional mainline freeway segments are projected to operate at LOS E or F. Based on the significant impact criteria outlined in Chapter 2, implementation of the Adopted Community Plan would result in a significant impact on 35 of those directional segments, as is depicted in **bold**:

- **I-8 EB, I-5 Interchange to Morena Boulevard (AM - LOS E, Δ Speed -11.6; PM - LOS F, Δ Speed -24.0)**
- **I-8 EB, Morena Boulevard to Taylor Street (PM - LOS F, Δ Speed -13.2)**
- **I-8 EB, Taylor Street to Hotel Circle (AM - LOS E, Δ Speed -9.7; PM - LOS F, Δ Speed -13.9)**
- **I-8 WB, Taylor Street to Hotel Circle (AM - LOS F, Δ Speed -9.4)**
- **I-8 EB, Hotel Circle to SR-163 Interchange (PM - LOS E, Δ Speed -5.6)**
- I-8 EB, SR-163 Interchange to Mission Center Road (PM - LOS F, Δ Speed 1.2) – not impacted
- I-8 WB, SR-163 Interchange to Mission Center Road (AM - LOS E, Δ Speed 0.8) – not impacted
- **I-8 EB, Mission Center Road to Qualcomm Way / Texas Street (AM - LOS F, Δ Speed -13.4; PM - LOS F, Δ Speed -17.5)**
- **I-8 WB, Mission Center Road to Qualcomm Way / Texas Street (AM - LOS F, Δ Speed -11.7; PM - LOS E, Δ Speed -3.7)**
- I-8 EB, Qualcomm Way / Texas Street to I-805 Interchange (PM - LOS E, Δ Speed 4.7) – not impacted
- **I-8 EB, I-805 Interchange to I-15 Interchange (PM - LOS F, Δ Speed -10.5)**
- **I-8 WB, I-805 Interchange to I-15 Interchange (AM - LOS E, Δ Speed -7.0)**
- **I-8 EB, I-15 Interchange to Fairmount Ave (AM - LOS E, Δ Speed -11.5; PM - LOS F, Δ Speed -19.6)**
- **I-8 WB, I-15 Interchange to Fairmount Ave (AM - LOS E, Δ Speed -6.8)**
- **I-5 NB, SeaWorld Drive / Tecolote Road to I-8 Interchange (AM - LOS E, Δ Speed -8.9)**
- **I-5 NB, I-8 Interchange to Old Town Avenue (AM - LOS F, Δ Speed -23.5; PM - LOS F, Δ Speed -20.3)**
- **I-5 SB, I-8 Interchange to Old Town Avenue (PM - LOS E, Δ Speed -7.6)**
- **SR-163 NB, Genesee Avenue to Friars Road (AM - LOS F, Δ Speed -15.6)**
- **SR-163 SB, Genesee Avenue to Friars Road (AM - LOS E, Δ Speed -8.5; PM - LOS F, Δ Speed -21.4)**
- **SR-163 NB, Friars Road to I-8 Interchange (AM - LOS F, Δ Speed -30.2; PM - LOS F, Δ Speed -26.9)**
- **SR-163 NB, I-8 Interchange to 6th Avenue (AM - LOS F, Δ Speed -28.3; PM - LOS F, Δ Speed -23.6)**
- **SR-163 SB, I-8 Interchange to 6th Avenue (AM - LOS E, Δ Speed -9.7; PM - LOS E, Δ Speed -8.6)**
- **SR-163 NB, 6th Avenue to Washington Street (AM - LOS F, Δ Speed -16.9; PM - LOS F, Δ Speed -15.6)**
- **SR-163 SB, 6th Avenue to Washington Street (AM - LOS F, Δ Speed -39.1; PM - LOS F, Δ Speed -42.7)**
- **I-805 NB, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (AM - LOS F, Δ Speed -41.3)**
- **I-805 SB, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (PM - LOS F, Δ Speed -41.3)**
- **I-805 NB, Murray Ridge Road / Phyllis Place to I-8 Interchange (AM - LOS F, Δ Speed -18.5)**
- **I-805 SB, Murray Ridge Road / Phyllis Place to I-8 Interchange (PM - LOS F, Δ Speed -41.6)**
- **I-805 NB, I-8 Interchange to Adams Avenue (AM - LOS F, Δ Speed -29.9)**
- **I-805 SB, I-8 Interchange to Adams Avenue (PM - LOS F, Δ Speed -21.5)**
- **I-805 NB, Adams Avenue to El Cajon Boulevard (AM - LOS F, Δ Speed -21.4)**
- **I-805 SB, Adams Avenue to El Cajon Boulevard (PM - LOS F, Δ Speed -25.7)**
- **I-15 NB, Aero Drive to Friars Road (AM - LOS F, Δ Speed -35.5; PM - LOS E, Δ Speed -10.5)**
- **I-15 SB, Aero Drive to Friars Road (PM - LOS F, Δ Speed -22.5)**
- **I-15 NB, Friars Road to I-8 (AM - LOS E, Δ Speed -8.5; PM - LOS E, Δ Speed -11.9)**

- I-15 SB, Friars Road to I-8 (AM - LOS F, Δ Speed -13.3; PM - LOS E, Δ Speed -10.4)
- I-15 NB, I-8 to Adams Avenue (AM - LOS F, Δ Speed -12.1; PM - LOS F, Δ Speed -18.8)
- I-15 NB, Adams Avenue to El Cajon Boulevard (AM - LOS E, Δ Speed -10.0; PM - LOS F, Δ Speed -15.7)

5.0 Four-Lane Via Las Cumbres Alternative

This chapter discusses the traffic operations under the Four-Lane Via Las Cumbres Alternative conditions and assesses potential traffic impacts by comparing this alternative to existing conditions. Roadway segments, intersections, freeway segments, and ramp meters were evaluated to determining associated traffic impacts. Mitigation measures for significant traffic impacts are identified, as necessary.

The Four-Lane Via Las Cumbres Alternative forecast traffic volumes were developed from the calibrated SANDAG Series 13 Regional Model – Mission Valley Community Plan Update Subarea Model (the "Model"). This customized Model assumed buildout of the CPU land uses and Four-Lane Via Las Cumbres Alternative mobility network for Mission Valley and Horizon Year 2050 land uses and transportation improvements for the rest of the San Diego region. Detailed modeling information and documentation can be found in Chapter 4 of the *Mobility Technical Report*. Final Forecast Model Results for Year 2050, including manual adjustments, are provided in Appendix F.

5.1 Roadway Segment Analysis

A list of Four-Lane Via Las Cumbres Alternative proposed roadway improvements, new roadways, intersection improvements, new intersections, and freeway improvements are presented throughout this chapter. These improvements are predominantly based on the future year traffic volumes that are projected under buildout of the CPU land uses and to accommodate the multimodal improvements.

Roadway Modifications

- *Fashion Valley Road, from Friars Road to Hotel Circle North* – Widen the roadway to the west as redevelopment occurs from a 4-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Major Arterial. The roadway widening would also be used to accommodate a Class IV Cycle Track (two-way) along the west side of the roadway.
- *Bachman Place, from Hotel Circle South to the Southern Community Boundary* – Widen this roadway to improve from a 2-Lane Collector to a 4-Lane Collector with Two-Way Left-Turn Lane. Left-turn pockets may be provided at intersection and driveway locations in lieu of a continuous two-way left-turn lane. The widening would also provide for Class II Bike Lanes.
- *Hotel Circle North and Hotel Circle South* – The full length of these two roadways will be transformed from 2-Lane Collector (with two-way left-turn lane) roadways into a one-way couplet with two lanes, running in a counterclockwise direction. The roadways would be classified as 2-Lane Collector (One-Way). The planned Class IV Cycle Track (two-way) would be accommodated through restriping within the existing roadway width along the land use side of each roadway.
- *Friars Road, from Ulric Street/SR-163 SB Ramps to Mission Center Road* – Consistent with the SR-163 Interchange Project, improve this section from a 5-/6-Lane Major Arterial to an 8-Lane Prime Arterial, which would require limiting future driveway access. The existing Class II Bike Lanes would be maintained from Ulric Street/SR-163 SB Ramps to Frazee Road. The planned Class IV Cycle Tracks (one-way) would be accommodated between Frazee Road and Mission Center Road through lane restriping.
- *Rio San Diego Drive, from River Run Drive to Fenton Parkway* – This segment would be restriped from a 4-Lane Collector to a 2-Lane Collector while maintaining the left-turn pockets. The additional right-of-way would be restriped to accommodate the planned Class II Bike Lanes with buffers between the vehicular travel lane and parking lane. On-street parking would be retained.

- *Camino Del Rio North, from Mission City Parkway to Ward Road* – This segment would be reconstructed to better align with Camino Del Rio North west of Mission City Parkway. The roadway would be classified as a 2-Lane Collector without Two-Way Left-Turn Lane. Class II Bike Lanes would be accommodated/maintained along this segment.
- *Camino Del Rio North, from 1000' West of Fairmount Avenue to the Eastern Community Boundary* – Reclassify this segment from a 4-Lane Major Arterial to a 4-Lane Collector with Two-Way Left-Turn Lane. No infrastructure changes would be required.
- *San Diego Mission Road, from Mission Village Drive to Rancho Mission Road* – Widen the roadway with redevelopment to improve this segment from a 4-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane with Two-Way Left-Turn Lane and Class II Bike Lanes. Left-turn pockets may be provided at intersection and driveway locations in lieu of a continuous two-way left-turn lane.
- *San Diego Mission Road, between Rancho Mission Road and Fairmount Avenue* – Widen and restripe this section from a 2-Lane Collector to a 4-Lane Collector with Two-Way Left-Turn lane. Left-turn pockets may be provided at intersection and driveway locations in lieu of a continuous two-way left-turn lane. The existing Class II Bike Lanes would be retained.
- *Camino Del Rio South, between the western terminus and Mission City Parkway* – Restripe this section of Camino Del Rio South from a 2-Lane Collector and 2-Lane Collector with Two-Way Left-Turn Lane to accommodate bicycle lanes. Left-turn pockets may be provided at driveway locations as needed in lieu of a continuous two-way left-turn lane. On-street parking would be removed in some locations to facilitate implementation of the two-way left-turn lane or left-turn pockets, and Class II Bike Lanes.
- *Metropolitan Drive, from Mission Valley Road to Frazee Road* – Restripe this roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 2-Lane Collector without Two-Way Left-Turn Lane to accommodate Class II Bike Lanes. On-street parking would be retained.
- *Mission Valley Road, from Frazee Road to Metropolitan Drive (clockwise)* - Restripe this roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 2-Lane Collector without Two-Way Left-Turn Lane to accommodate Class II Bike Lanes. On-street parking would be retained.
- *Murray Canyon Road, from Frazee Road to Metropolitan Drive* – Restripe this roadway from a 3-Lane Collector with Two-Way Left-Turn Lane to a 2-Lane Collector without Two-Way Left-Turn Lane to accommodate buffered Class II Bike Lanes. On-street parking would be retained.
- *Rancho Mission Road/Ward Road, between Friars Road and Camino Del Rio North* – The full extent of this roadway will be restriped to a 2-Lane Collector with Two-Way Left-Turn Lane to provide for Class IV Cycle Tracks (one-way) in each direction. Left-turn pockets may be provided at intersection and driveway locations in lieu of a continuous two-way left-turn lane. On-street parking would be largely maintained.

<u>Roadway Extensions and New Roadways</u>

To provide better connectivity throughout the Mission Valley community and provide additional access to potential new developments within the existing "super blocks," the Four-Lane Via Las Cumbres Alternative proposes the following roadway extensions and new roadways:

- *Via Las Cumbres* – Via Las Cumbres would be extended from Friars Road to Hotel Circle South as a 4-lane Major Arterial, including grade separation of the trolley tracks, bridges over San Diego River and I-8.

  This extension would connect to the reconfigured Hotel Circle North and South couplet with reconfigured Interstate 8 on-/off-ramps. The benefits of this connection are further discussed in the Connectivity Assessment Paper provided in Appendix G. Class IV Cycle Tracks (one-way) would be provided along the roadway.

- *Frazee Road* – Extend Frazee Road northwards from Murray Canyon Road to Mission Valley Road/Metropolitan Drive. The extension would be constructed as a 2-Lane Collector without Two-Way Left-Turn Lane (No Fronting Property) and would accommodate the planned Class II Bike Lanes.

- *Franklin Ridge Road* – Extend Franklin Ridge Road north from Via Alta to Phyllis Place. This extension would be constructed as a 4-Lane Major Arterial.

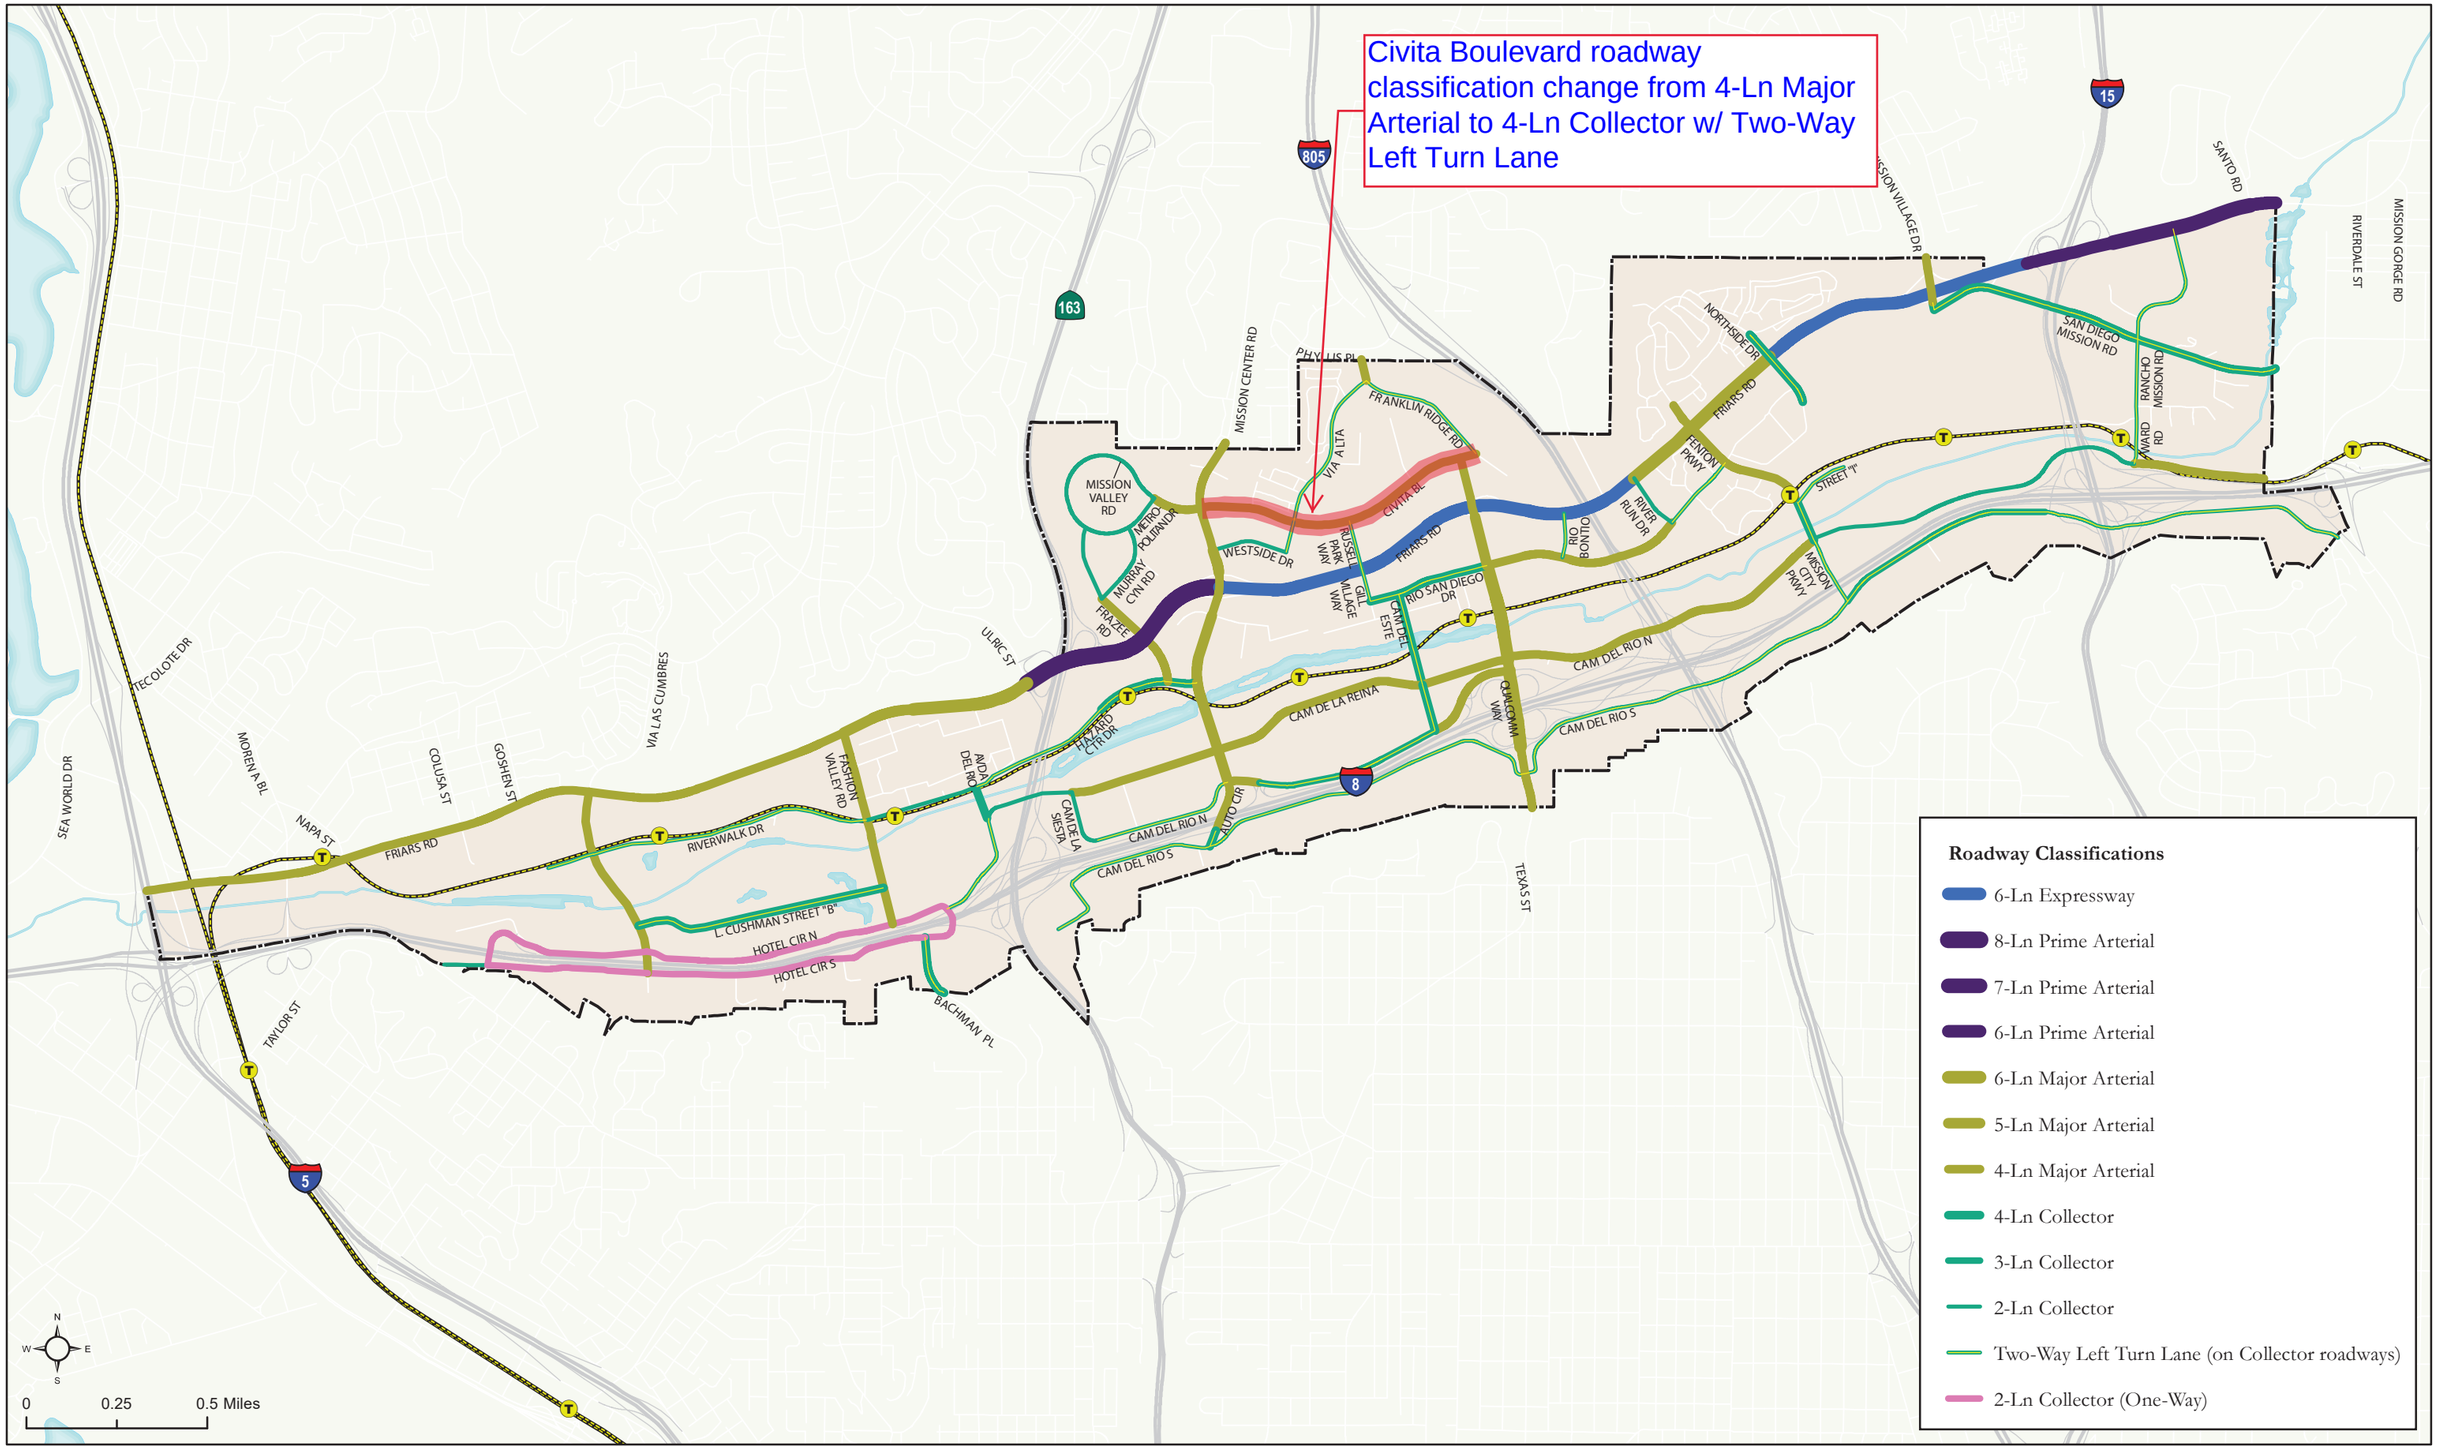
- *Qualcomm Way* – Since completion of the Existing Conditions Report, Qualcomm Way, from Civita Boulevard to WB Friars Road on-/off-ramps has been constructed as a 4-Lane Major Arterial, including Class II Bike Lanes.

- *Fenton Parkway* – Extend Fenton Parkway south from the existing southern terminus to Camino Del Rio North as a 4-Lane Collector with turn lanes as needed, including grade separation and bridge over the San Diego River. The benefits of this connection are further discussed in the Connectivity Assessment Paper provided in Appendix G. Class II Bike Lanes would be provided along the Fenton Parkway extension.

- *Riverwalk Drive* – Extend Riverwalk Drive from Fashion Valley Road to west of Via Las Cumbres. This extension would be constructed as a 2-Lane Collector with Two-Way Left-Turn Lane, following the existing Riverwalk Drive alignment and continuing along the south side of the Trolley line. Class II Bike Lanes would be provided along the extension.

- ~~*Levi Cushman Street "B"*~~*Riverwalk Street "U"* – ~~Levi Cushman Street "B"~~Riverwalk Street "U" would be an east-west running roadway, spanning from Fashion Valley Road in the east to the new Via Las Cumbres extension to the west. This roadway would be constructed as a 4-Lane Collector with Two-Way Left-Turn Lane. A Class IV Cycle Track (two-way) would be provided along the new roadway.

- *Hazard Center Drive* – Hazard Center Drive would be extended west from the western terminus to Avenida Del Rio. This extension would be constructed as a 2-Lane Collector with Two-Way Left-Turn Lane or left turn pockets as appropriate.



- ~~*New Street "I"*~~*Mission City Street "I"* – ~~New Street "I"~~Mission City Street "I" would be an east-west running roadway, from Fenton Parkway connecting to the future development on the stadium site. This roadway would be constructed as a 2-Lane Collector with Two-Way Left-Turn Lane. Class II Bike Lanes would be provided along the new roadway.

- *Avenida Del Rio, between Fashion Valley Mall Parking Lot and Camino de La Reina* – This segment would be shifted westward to align with the north-south portion of Camino De La Reina and the Fashion Valley Mall Parking Lot Driveway and would maintain the 4-Lane Collector without Two-Way Left-Turn Lane classification. A Class IV Cycle Track (two-way) would be provided along the realigned roadway.

It should be noted that implementation of these new roadway segments may necessitate additional right-of-way and/or require the redevelopment of adjacent properties. All roadways would be designed in accordance with the *City of San Diego Street Design Manual* and their corresponding classification.

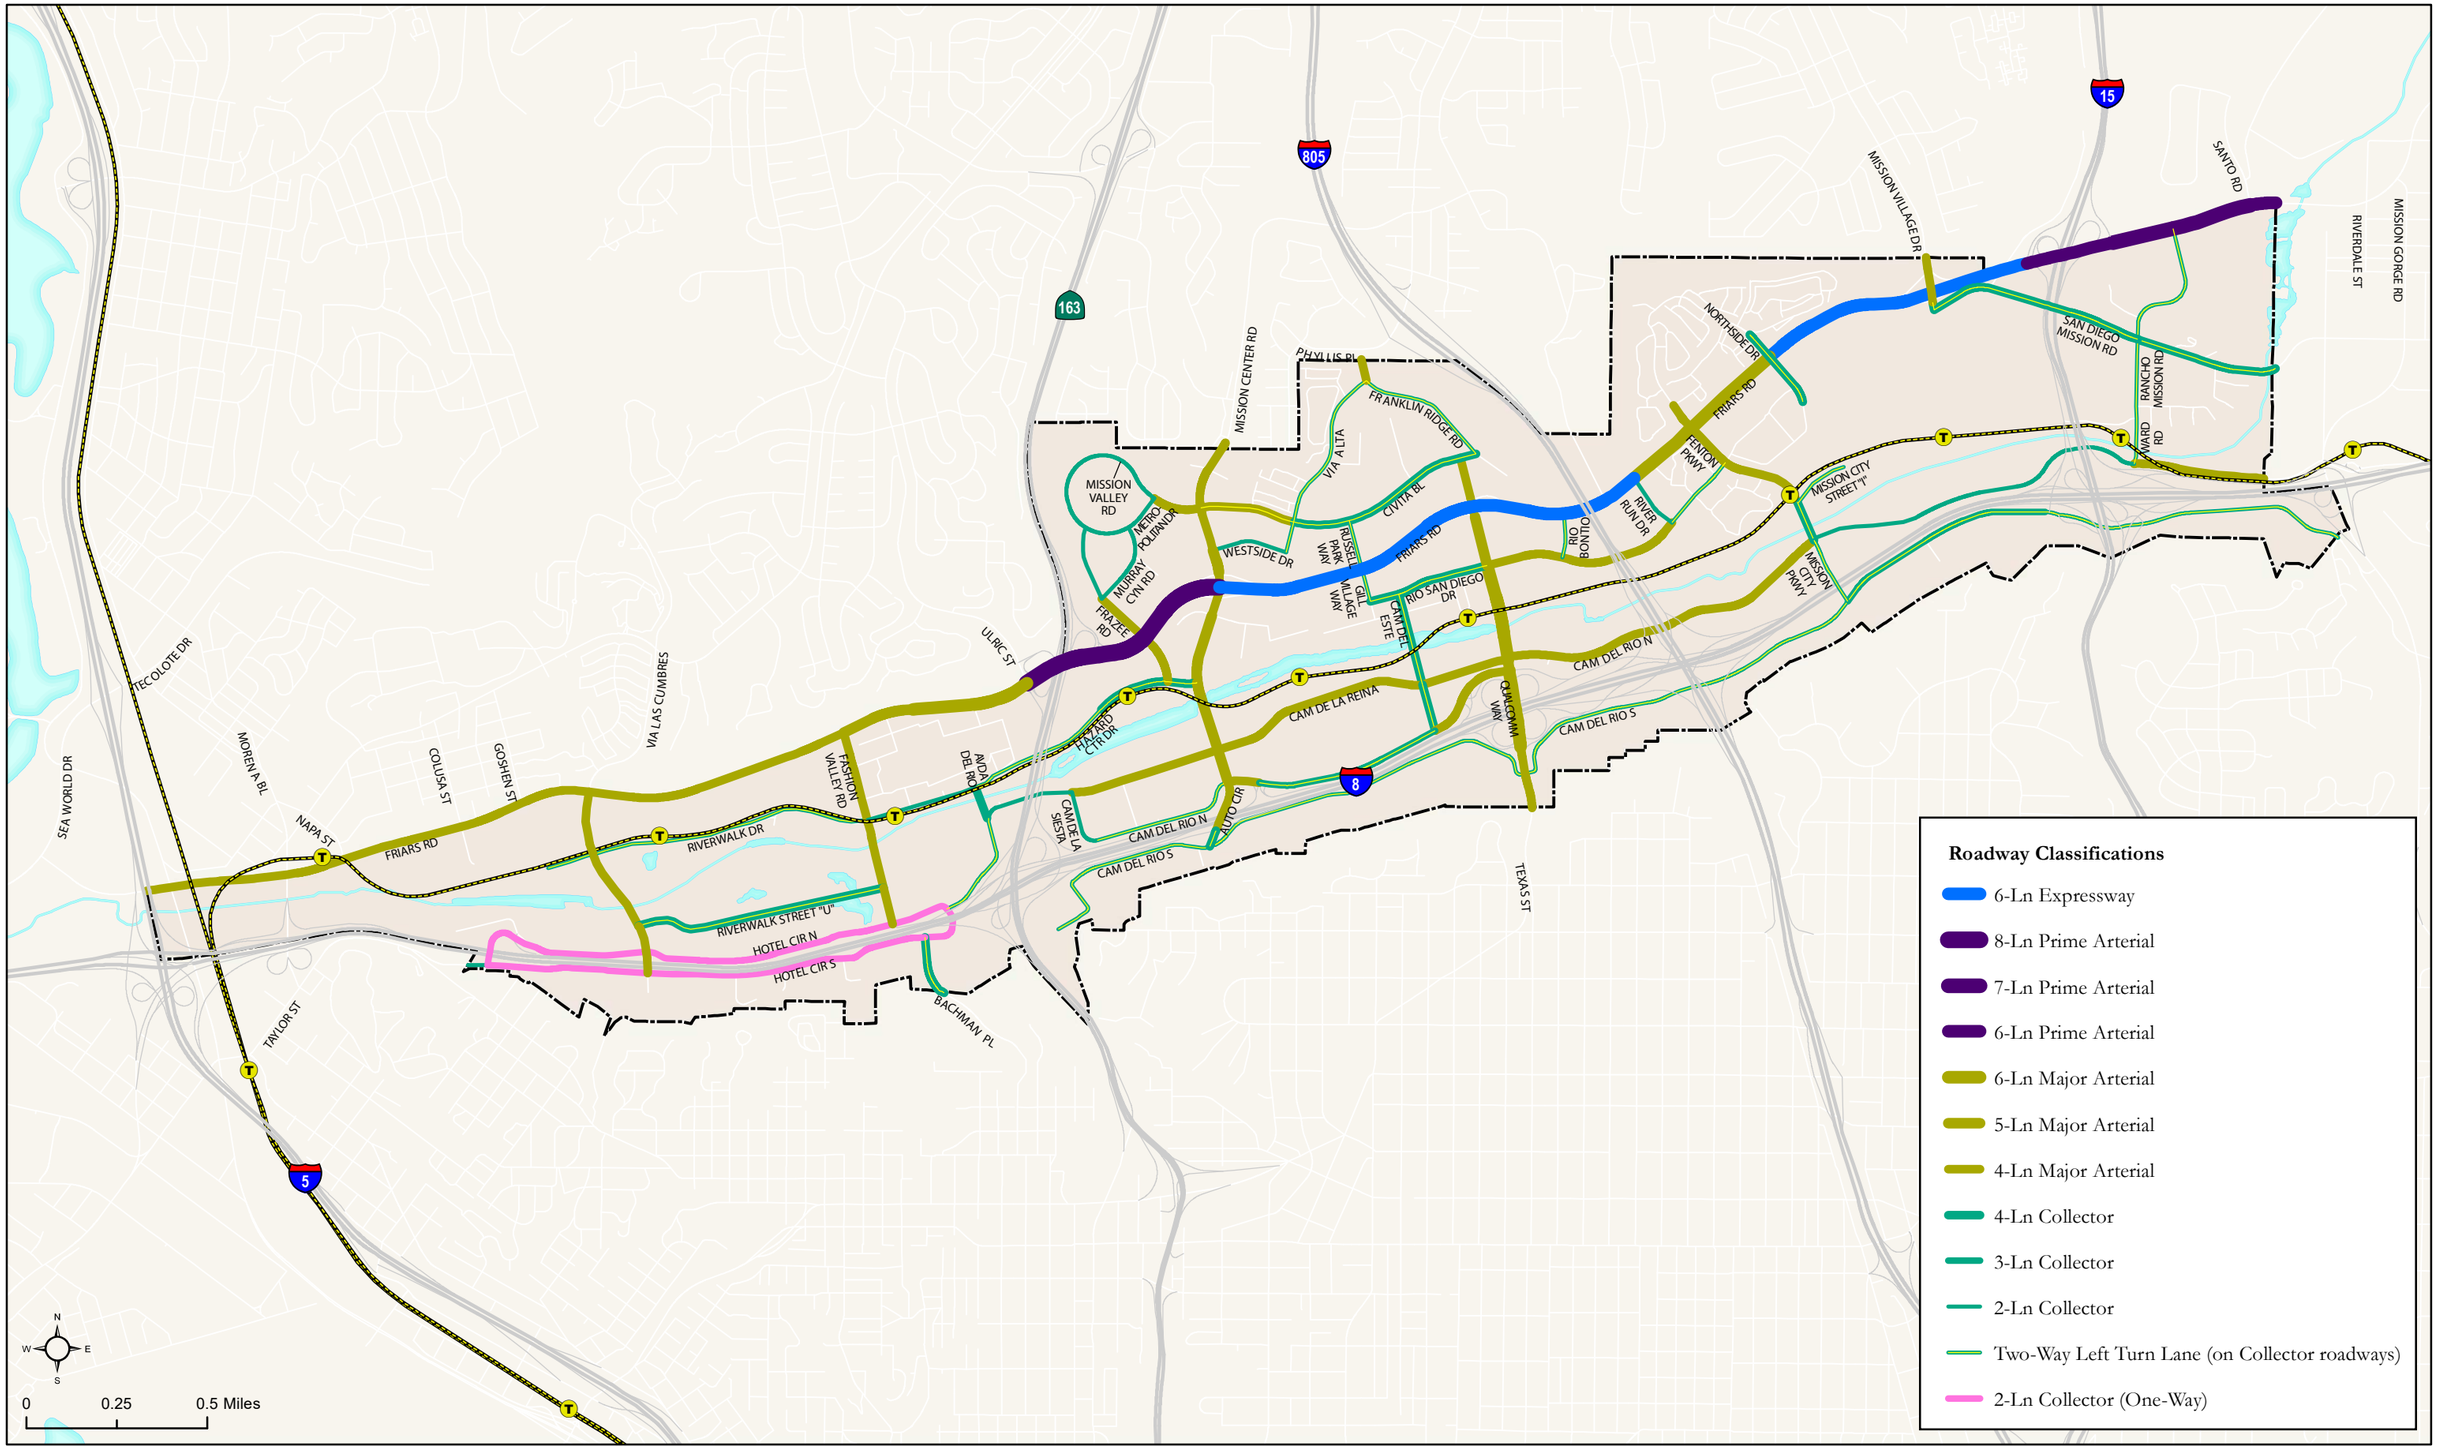


Figure 5-1 displays the Four-Lane Via Las Cumbres Alternative roadway classifications. A summary of the roadway modifications is presented in Table 5.1.

Figure 5-2 and Table 5.2 display the projected ADT volumes and associated roadway LOS under Four-Lane Via Las Cumbres Alternative conditions. Table 5.2 also identifies any potential traffic impacts associated with the Four-Lane Via Las Cumbres Alternative when comparing to existing conditions.

New Roadways			
Via Las Cumbres	Friars Road to Hotel Circle South	*Does not exist*	4-Ln Major Arterial
Frazee Road	Mission Valley Road/Metropolitan Drive to Murray Canyon Road	*Does not exist*	2-Ln Collector w/o TWLTL
Franklin Ridge Road	Phyllis Place to Via Alta	*Does not exist*	4-Ln Major Arterial
Qualcomm Way	Civita Boulevard to Friars Road WB Ramps	*Does not exist*	4-Ln Major Arterial (Implemented)
Fenton Parkway	~~New Street "I"~~Mission City Street "I" to Camino Del Rio North	*Does not exist*	4-Ln Collector w/ TWLTL
Riverwalk Drive	Via Las Cumbres to Fashion Valley Road	*Does not exist*	2-Ln Collector w/ TWLTL
~~Levi Cushman Street "B"~~Riverwalk Street "U"	Via Las Cumbres to Fashion Valley Road	*Does not exist*	4-Ln Collector w/ TWLTL
Hazard Center Drive	Avenida Del Rio to Hazard Center Drive western terminus	*Does not exist*	2-Ln Collector w/ TWLTL
~~New Street "I"~~Mission City Street "I"	Mission City Parkway to eastern terminus	*Does not exist*	2-Ln Collector w/ TWLTL

Notes:
RM = Raised Median.
SM = Striped Median.
TWLTL = Two-Way Left-Turn Lane.
NFP = No Fronting Property.

Notes:
Bold letter indicates substandard LOS E or F.
RM = Raised Median.
SM = Striped Median.
TWLTL = Two-Way Left-Turn Lane. Turn pocket(s) may be considered in place of TWLTL~~.~~
NFP = No Fronting Property.
SI = Significant Impact.
[1] Capacity for a 7-Ln Prime Arterial is calculated assuming that each additional lane above a 6-Ln Arterial adds 5,000 ADT for LOS A, 7,500 ADT for LOS B and 10,000 ADT for LOS C, D, and E.
[2] Shopping Center Driveway was analyzed as a 3-Ln Collector w/ TWLTL.

As shown in Table 5.2, based on the criteria documented in Section 2.3, the CPU land uses and Four-Lane Via Las Cumbres Alternative will result in a LOS of E or F along the following 39 roadway segments, and have a significant traffic impact to the 38 roadway segments in **bold**, when comparing to the existing conditions (Four-Lane Via Las Cumbres Alternative-to-Ground):

- **Sea World Drive, Mission Bay Parkway to Friars Road (LOS F, Δ in V/C 0.175)**
- **Friars Road, Avenida De Las Tiendas to Ulric Street/SR-163 SB Ramps (LOS F, Δ in V/C 0.35)**
- **Friars Road, Mission Village Drive to I-15 SB Ramps (LOS F, Δ in V/C 0.339)**

5.2 Intersection Analysis

Several intersections are proposed to be modified to accommodate buildout of the roadway segment classifications. New intersection legs and twelve new intersections are recommended for the Mission Valley community.

New Intersections

Phyllis Place / Franklin Ridge Road
This intersection will be constructed to include 1 northbound left-turn lane, 1 eastbound through lane, 1 eastbound shared right-turn through lane, 2 westbound left-turn lanes, and 1 westbound through lane.

Via Alta / Franklin Ridge Road
This intersection will be constructed to include 1 northbound left-turn lane, 1 northbound shared right-turn through lane, 1 southbound left-turn lane, 1 southbound shared right-turn through lane, 1 eastbound left-turn lane, and 1 eastbound shared right-turn through lane.

Civita Boulevard / Qualcomm Way
This intersection will be constructed to include 1 northbound left-turn lane, 1 northbound right-turn lane with overlap phase, 1 eastbound through lane, 1 eastbound shared right-turn through lane, 1 westbound left-turn lane, and 1 westbound through lane.

Civita Boulevard / Franklin Ridge Road
This intersection will be constructed to include 1 northbound left-turn lane, 1 northbound through lane, 1 southbound shared right-turn through lane, 1 southbound right-turn lane, 1 eastbound left-turn lane, and 1 eastbound right-turn lane.

~~*New Street "I"*~~*Mission City Street "I" / Fenton Parkway*
This intersection will be constructed to include 2 northbound through lanes, 1 northbound shared right-turn through lane, 1 southbound left-turn lane, 2 southbound through lane, 1 westbound left-turn lane, and 1 westbound right-turn lane.

Riverwalk Drive / Via Las Cumbres
This intersection will be constructed to include 1 northbound through lane, 1 northbound shared right-turn through lane, 1 southbound left-turn lane, 2 southbound through lanes, 1 westbound left-turn lane, and 1 westbound right-turn lane

Riverwalk Drive / Fashion Valley Road
Reconstruct the west leg to provide 1 eastbound left-turn lane and 1 eastbound shared right-turn through lane. Restripe the east leg to provide 1 westbound left-turn lane and 1 westbound shared right-turn through lane.

~~*Levi Cushman Street "B"*~~*Riverwalk Street "U" / Via Las Cumbres*
This intersection will be constructed to include 1 northbound through lane, 1 northbound shared right-turn through lane, 1 southbound left-turn lane, 2 southbound through lanes, 1 westbound left-turn lane, and 1 westbound right-turn lane.

~~*Levi Cushman Street "B"*~~*Riverwalk Street "U" / Fashion Valley Road*
This intersection will be constructed to include 1 northbound left-turn lane, 2 northbound through lanes, 1 southbound through lane, 1 northbound shared right-turn through lane, 1 eastbound left-turn lane, and 1 eastbound right-turn lane.

Hotel Circle North / Via Las Cumbres
This intersection will be constructed to include 1 northbound left-turn lane, 2 northbound through lanes, 1 southbound through lane, 1 southbound shared right-turn through lane, 1 southbound right-turn lane, 1 westbound shared left-turn through lane, 1 westbound through lane, and 1 westbound right-turn lane. These improvements are consistent with the I-8 Corridor Study.

Hotel Circle South / Via Las Cumbres
This intersection will be constructed to include 1 northbound shared right-turn through lane, 2 southbound left-turn lanes. These improvements are consistent with the I-8 Corridor Study.

Hotel Circle South / Camino de La Reina
This intersection will be constructed to include 1 northbound through lane, 1 northbound right-turn lane, and 1 westbound right-turn lane. These improvements are consistent with the I-8 Corridor Study.

Additionally, the roadway network was evaluated to identify intersection locations, both existing and new intersections, that would benefit from the implementation of a roundabout or signalization. Traffic signal warrants were conducted at the intersections where signalization is recommended. Figure 4C-103 (CA) of the California Manual on Uniform Traffic Control Devices (MUTCD) 2014 Edition – Revision 3 (March 9, 2018) was utilized and all intersections would meet the warrants. Signal warrants worksheets are included in Appendix H. Further assessment of the viability of a roundabout should be considered and conducted at the project-level.

A summary of new intersections, new intersection legs, and major control modifications is presented in Table 5.3.

Table 5.3 Planned Intersection Modifications

No.	Intersection	Improvement	Proposed Control
5	Mission Center Road / Civita Boulevard	Split phase to protected (EW)	Signalized
10	Via Las Cumbres / Friars Road	Add south leg	Signalized
34	River Run Drive / Rio San Diego Drive	Single lane roundabout	Roundabout[1]
39	Avenida Del Rio / Camino De La Reina	Relocate intersection to the west (with bridge realignment)	Signalized
43	Mission City Parkway / Camino Del Rio North	Add north leg (bridge to Fenton Parkway)	Signalized
68	Phyllis Place / Franklin Ridge Road	New intersection	Signalized
69	Via Alta / Franklin Ridge Road	New intersection	Signalized
70	Civita Boulevard / Qualcomm Way	New intersection[2]	Signalized
71	Civita Boulevard / Franklin Ridge Road	New intersection[2]	Signalized
72	~~New Street "I"~~Mission City Street "I" / Fenton Parkway	New intersection	Signalized
73	Riverwalk Drive / Via Las Cumbres	New intersection	Signalized

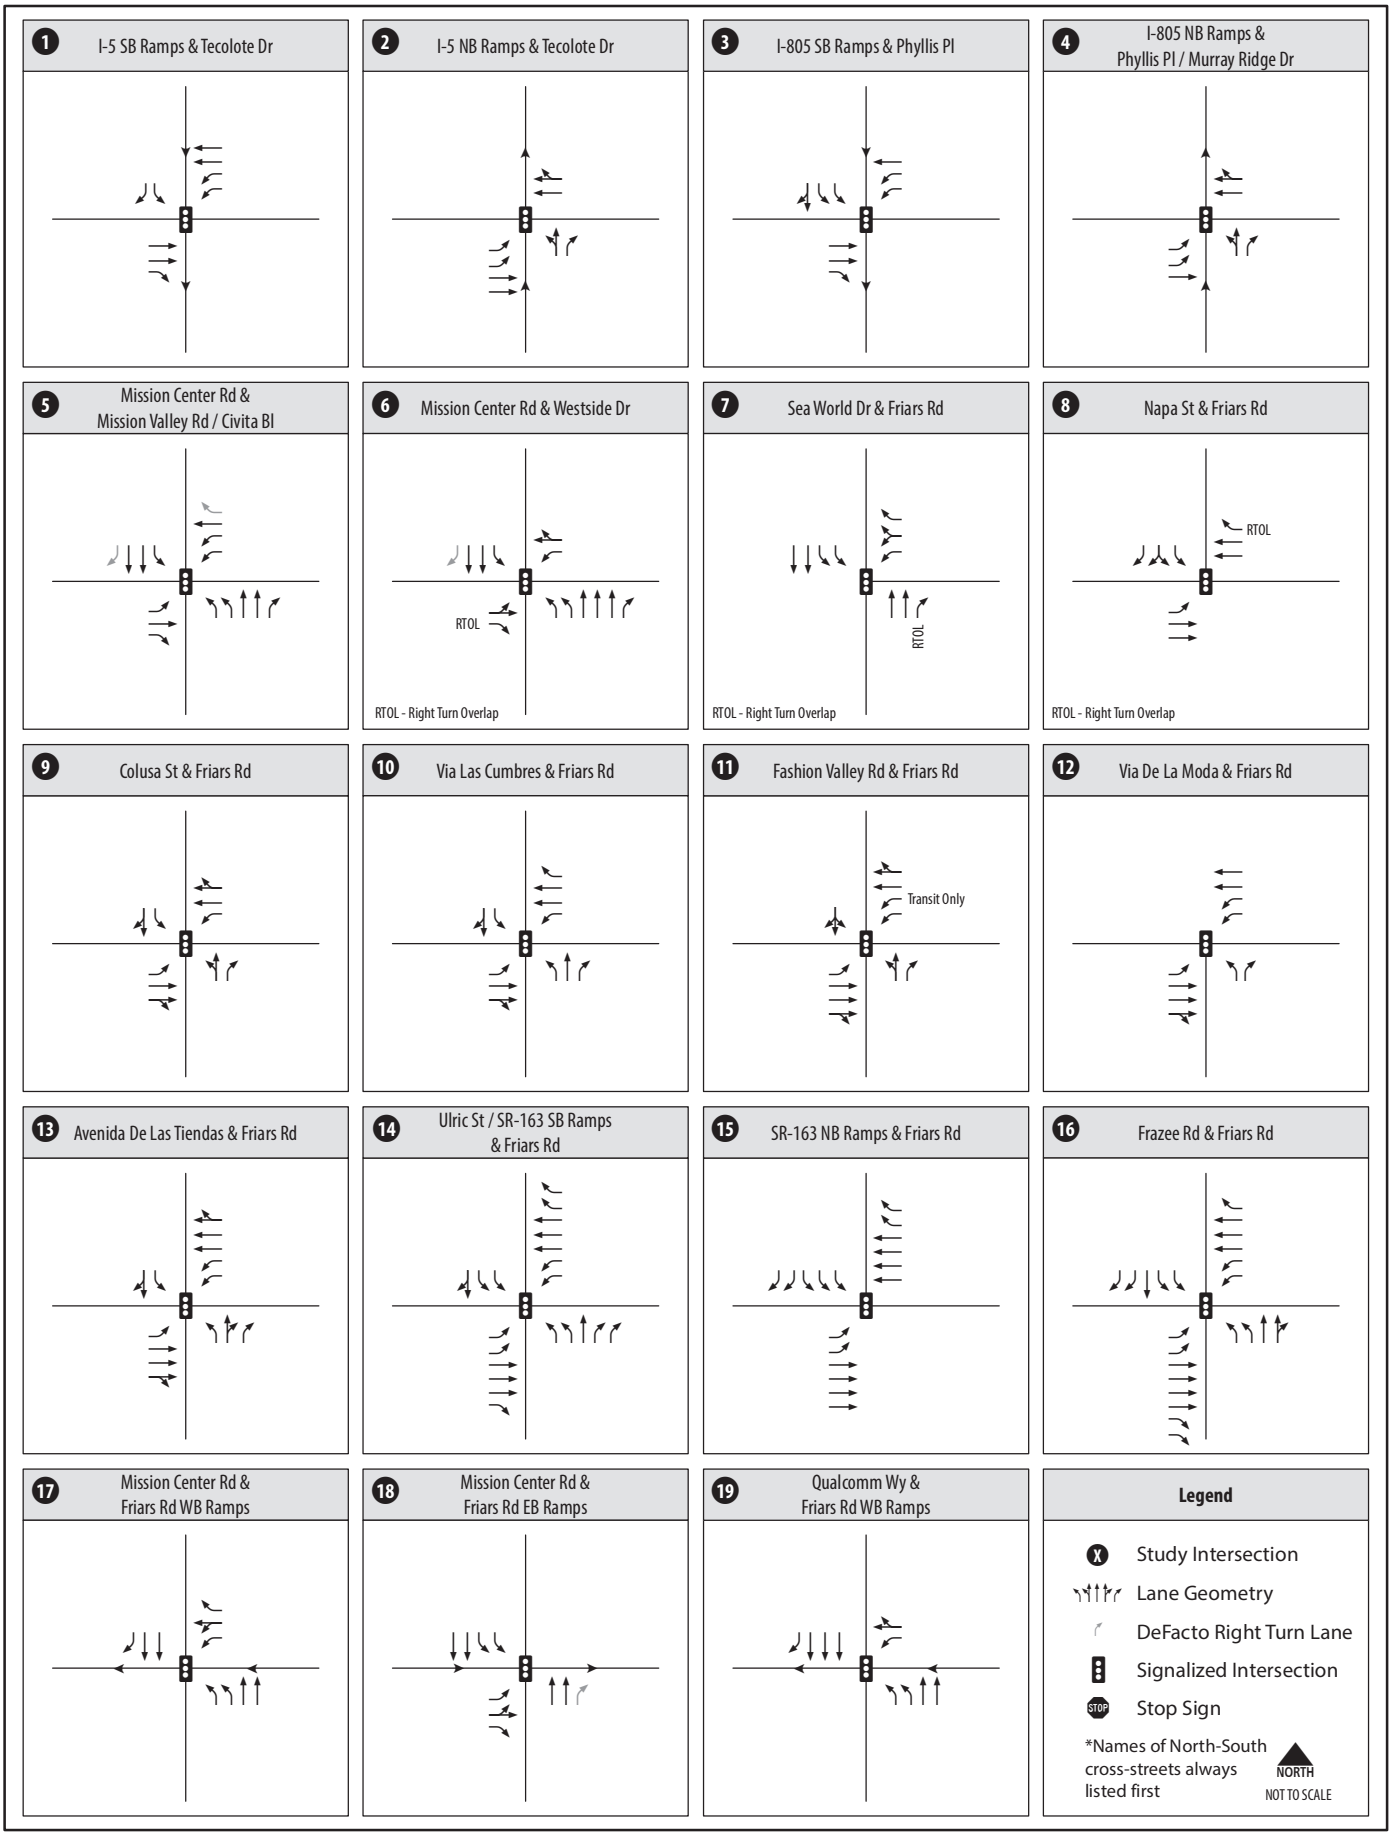

Table 5.3 Planned Intersection Modifications

No.	Intersection	Improvement	Proposed Control
74	Riverwalk Drive / Fashion Valley Road	Modify to accommodate Riverwalk Drive extension	Signalized
75	Avenida Del Rio / Fashion Valley Mall Driveway	Relocate intersection to the west (with bridge realignment)	Signalized
76	~~Levi Cushman Street "B"~~Riverwalk Street "U" / Via Las Cumbres	New intersection	Signalized
77	~~Levi Cushman Street "B"~~Riverwalk Street "U" / Fashion Valley Road	New intersection	Signalized
78	Hotel Circle North / Via Las Cumbres	New intersection	Signalized
79	Hotel Circle South / Via Las Cumbres	New intersection	Signalized
80	Hotel Circle South / Camino De La Reina	Convert to accommodate ne-Way Collector/cycle track	Signalized
--	Frazee Road / Murray Canyon Road	Add north leg & signalize	Signalized

Notes:
[1] High level feasibility assessment was conducted; however, a more detailed operational and feasibility analysis will be needed at the project-level.
[2] Intersection implemented since Existing Conditions Report.

Four-Lane Via Las Cumbres Alternative intersection geometrics are presented in **Figure 5-3**, while forecast AM and PM peak hour turning movements are displayed in **Figure 5-4**, and midday turning movements in **Figure 5-5**.

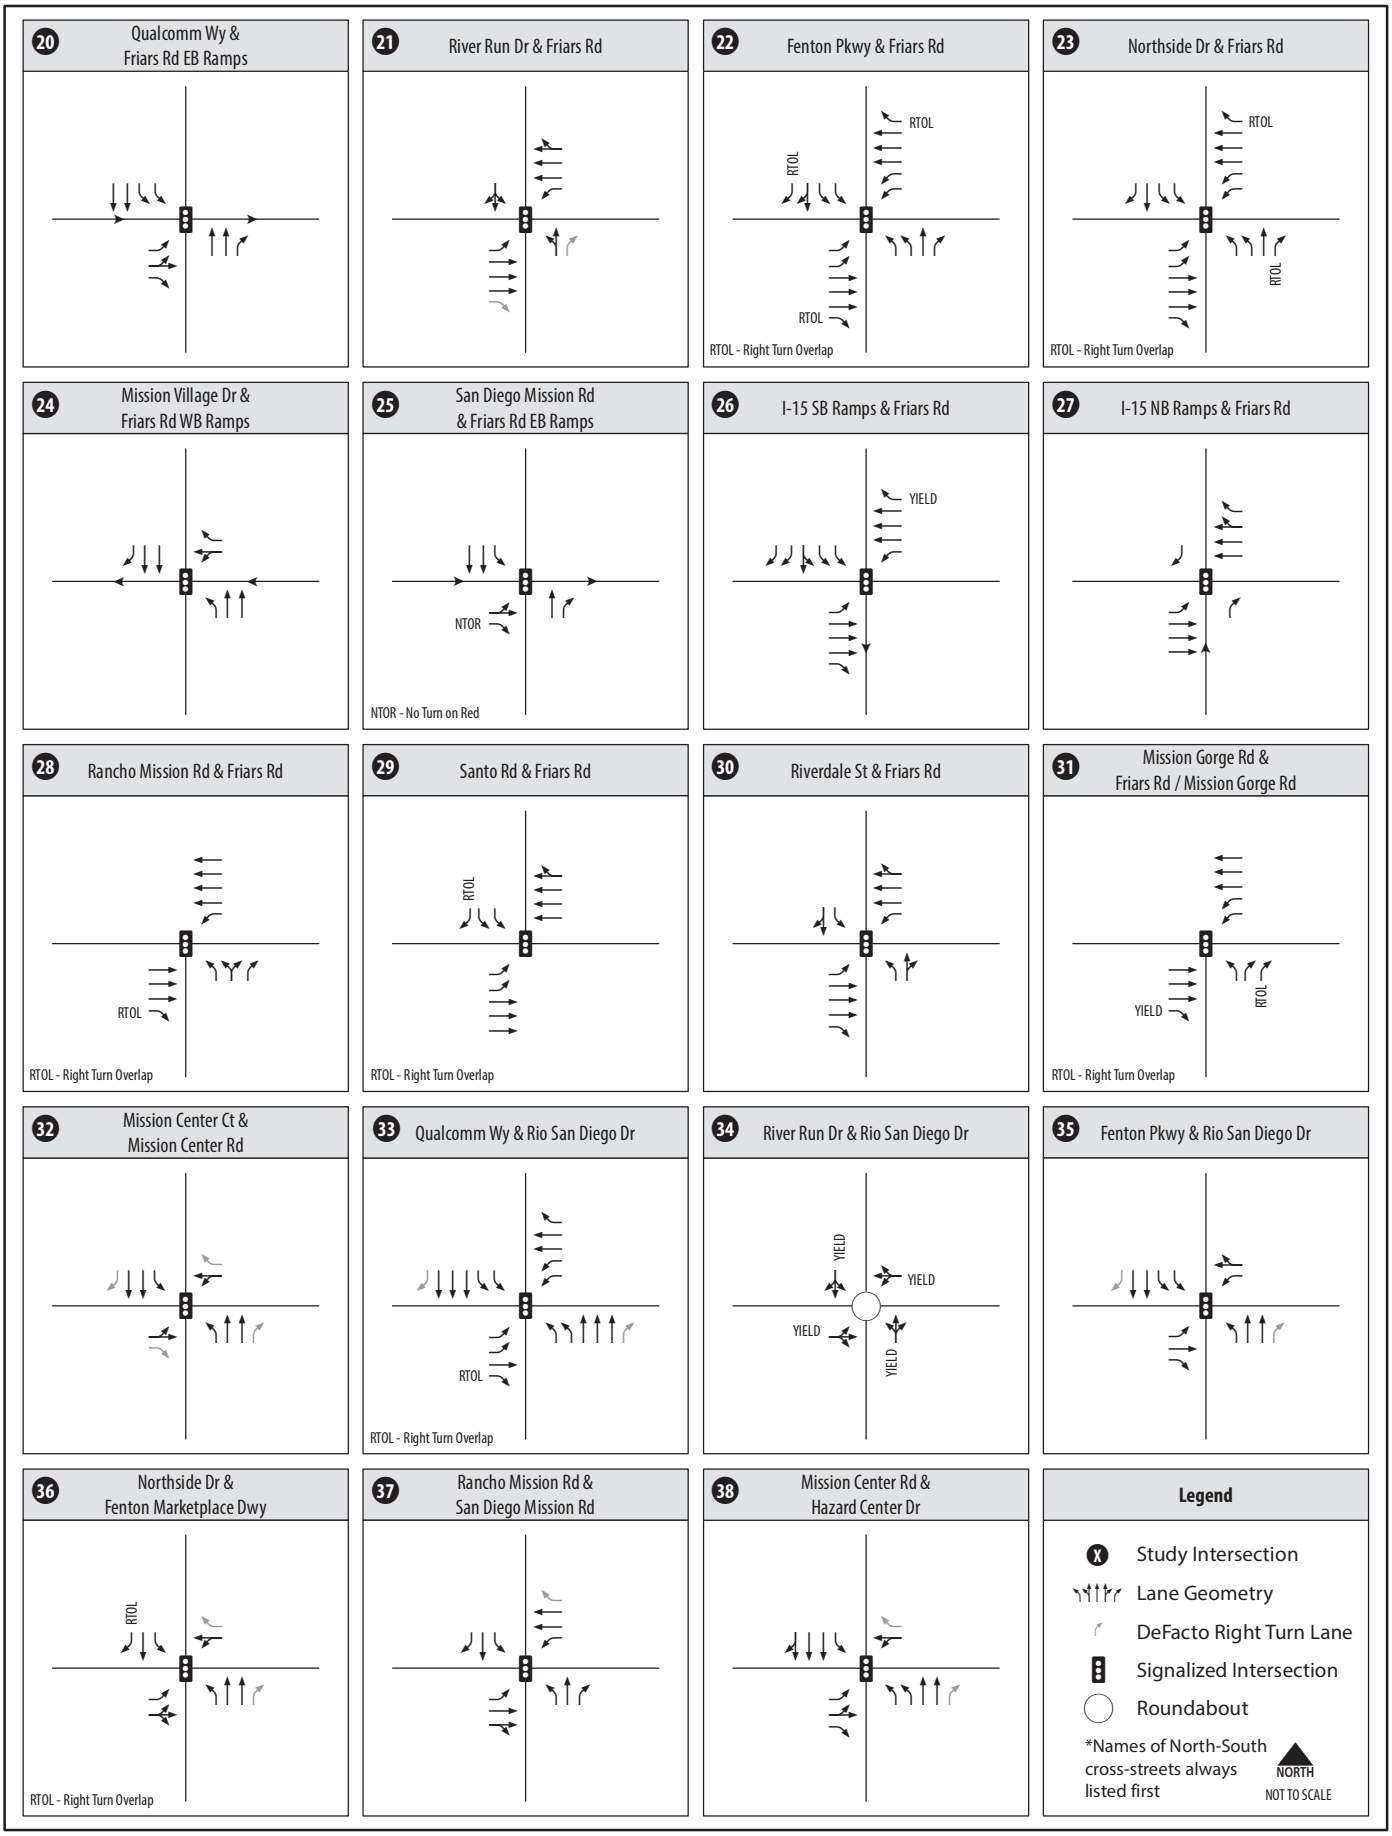

Figure 5-6 presents AM and PM peak hour intersection LOS analysis results, while midday results are displayed in **Figure 5-7**. AM and PM peak hour and midday LOS analysis results, as well as any potential traffic impacts associated with the Four-Lane Via Las Cumbres Alternative when comparing to the existing conditions are provided in **Table 5.4**. Signal timing was assumed to be optimized under Four-Lane Via Las Cumbres Alternative conditions. Intersection LOS calculation worksheets are provided in **Appendix I**.

Notes:
Bold letter indicates substandard LOS E or F.
SI = Significant Impact.

As shown in Table 5.4, the following 16 intersections were found to operate at a substandard LOS E or F during the AM or PM peak hour through implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative conditions. Based on the significant impact criteria outlined in Section 2.3 implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative would result in a significant impact at the 13 intersections shown in **bold**:

- 2: I-5 NB Ramps / Sea World Drive/Tecolote Road (AM LOS E, Δ in Delay 1.0) – not impacted
- **3: I-805 SB Ramps / Phyllis Place (PM LOS E, Δ in Delay 49.4)**
- **4: I-805 NB Ramps / Phyllis Place (PM LOS F, Δ in Delay 74.4)**
- 23: Northside Drive / Friars Road (PM LOS E, Δ in Delay 0.9) – not impacted
- **24: Mission Village Drive / Friars Road WB Ramps (PM LOS F, Δ in Delay 97.5)**
- **25: Mission Village Drive / Friars Road EB Ramps (AM LOS E, Δ in Delay 26.1; PM LOS F, Δ in Delay 37.7)**
- **27: I-15 NB Ramps / Friars Road (PM LOS F, Δ in Delay 83.5)**
- **40: Mission Center Road / Camino De La Reina (PM LOS E, Δ in Delay 37.1)**
- **45: Fairmount Avenue / Camino Del Rio North/I-8 WB Off-Ramp (PM LOS F, Δ in Delay 12.5)**
- **50: I-8 WB Ramps/Mission Valley Mall Driveway / Camino Del Rio North (PM LOS E, Δ in Delay 2.2)**
- **52: Qualcomm Way / Camino Del Rio N/I-8 WB Ramps (AM LOS E, Δ in Delay 46.1; PM LOS F, Δ in Delay 76.2)**
- **58: Mission Center Road / I-8 EB Ramps (PM LOS E, Δ in Delay 6.3)**
- 59: Mission Center Road / Camino Del Rio South (PM LOS E, Δ in Delay -32.6) – not impacted
- **61: Texas Street / Camino Del Rio South (AM LOS E, Δ in Delay 9.8)**
- **67: Texas Street / Madison Avenue (AM LOS F, Δ in Delay 30.9)**
- **74: Fashion Valley Road & Riverwalk Drive (PM LOS F, Δ in Delay 95.0)**

5.3 Freeway Segment Analysis

Freeway Improvements

Freeway improvements within the Mission Valley study area are identified within this chapter. The improvements were derived from the Revenue Constrained scenario of SANDAG's *San Diego Forward: The Regional Plan* (2015), the currently adopted regional transportation plan, and are anticipated to be implemented by 2050.

SR-163/Friars Road Interchange

Phase I of this improvement will widen and improve Friars Road and the overcrossing from Avenida de las Tiendas to Mission Center Road, and reconstruct the interchange to include improvements to ramp intersections. Phase II will consist of the construction of new connector roadways and structures. Phase III will consist of the construction of auxiliary lanes along northbound and southbound SR-163. Phase I is anticipated to be implemented by 2020.

I-15, from I-8 to SR-163

Two managed lanes will be added to this segment of I-15, one in each direction. This segment will consist of eight freeway lanes and two managed lanes. This improvement is anticipated to be implemented by 2035.

I-5, from I-8 to La Jolla Village Drive
Two managed lanes will be added to this segment of I-5, one in each direction. This segment will consist of eight/ten freeway lanes and two managed lanes. This improvement is anticipated to be implemented by 2050.

I-5, from I-15 to I-8
Unspecified operational improvements are anticipated to be implemented along this segment of I-5 by 2050.

I-8, from I-5 to SR-125
Unspecified operational improvements are anticipated to be implemented along this segment of I-8 by 2050.

I-805, from SR-15 to SR-163
Four managed lanes will be added to this segment of I-805, two in each direction. This segment will consist of eight/ten freeway lanes and four managed lanes. This improvement is anticipated to be implemented by 2050.

Forecast freeway volumes were obtained from the Model. Tables 5.5a and 5.5b present the Four-Lane Via Las Cumbres Alternative and existing freeway segment LOS results for study segments during the AM and PM peak periods, respectively. These two tables also identify any potential traffic impacts associated with the Four-Lane Via Las Cumbres Alternative when comparing to the existing conditions. HCS freeway segment analysis worksheets are provided in Appendix J.

Notes:
Bold letter indicates LOS E or F.
[1] M = Mainline; A = Auxiliary Lane.
[2] D = Directional Split.
[3] K = Peak Hour %.
[4] Heavy Vehicle Factor.

As shown in Tables 5.5a and 5.5b, the following 33 directional mainline freeway segments are projected to operate at LOS E or F under Four-Lane Via Las Cumbres Alternative conditions. Based on the significant impact criteria outlined in Chapter 2, implementation of the Four-Lane Via Las Cumbres Alternative would result in a significant impact on 31 of those directional segments presented in **bold**:

1. **I-8 EB, I-5 Interchange to Morena Boulevard (AM LOS E, Δ in Speed -11.3; PM LOS F, Δ in Speed -23.3)**
2. **I-8 EB, Morena Boulevard to Taylor Street (AM LOS E, Δ in Speed -10.0; PM LOS F, Δ in Speed -16.8)**
3. **I-8 EB, Taylor Street to Hotel Circle (PM LOS F, Δ in Speed -4.0)**
4. **I-8 WB, Taylor Street to Hotel Circle (AM LOS E, Δ in Speed -2.7)**
5. **I-8 EB, Hotel Circle to SR-163 Interchange (PM LOS E, Δ in Speed -3.4)**
6. I-8 EB, SR-163 Interchange to Mission Center Road (PM LOS E, Δ in Speed 6.3) – not impacted
7. **I-8 EB, Mission Center Road to Qualcomm Way / Texas Street (AM LOS E, Δ in Speed -11.2; PM LOS F, Δ in Speed -12.2)**
8. **I-8 WB, Mission Center Road to Qualcomm Way / Texas Street (AM LOS F, Δ in Speed -8.1)**
9. I-8 EB, Qualcomm Way/Texas Street to I-805 Interchange (PM LOS E, Δ in Speed 6.9) – not impacted
10. **I-8 EB, I-805 Interchange to I-15 Interchange (PM LOS F, Δ in Speed -4.6)**
11. **I-8 WB, I-805 Interchange to I-15 Interchange (AM LOS E, Δ in Speed -3.0)**
12. **I-8 EB, I-15 Interchange to Fairmount Ave (PM LOS F, Δ in Speed -6.7)**
13. **I-5 NB, I-8 Interchange to Old Town Avenue (AM LOS F, Δ in Speed -15.6; PM LOS F, Δ in Speed -15.3)**
14. **SR-163 NB, Genesee Avenue to Friars Road (AM LOS E, Δ in Speed -8.3)**
15. **SR-163 SB, Genesee Avenue to Friars Road (PM LOS F, Δ in Speed -11.5)**
16. **SR-163 NB, Friars Road to I-8 Interchange (AM LOS F, Δ in Speed -16.1; PM LOS F, Δ in Speed -11.5)**
17. **SR-163 NB, I-8 Interchange to 6th Avenue (AM LOS F, Δ in Speed -19.5; PM LOS F, Δ in Speed -13.9)**
18. **SR-163 NB, 6th Avenue to Washington Street (AM LOS E, Δ in Speed -10.9; PM LOS E, Δ in Speed -9.0)**
19. **SR-163 SB, 6th Avenue to Washington Street (AM LOS F, Δ in Speed -29.2; PM LOS F, Δ in Speed -26.5)**
20. **I-805 NB, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (AM LOS F, Δ in Speed -20.0)**
21. **I-805 SB, Mesa College Drive / Kearny Villa Road to Murray Ridge Road / Phyllis Place (PM LOS F, Δ in Speed -20.0)**
22. **I-805 NB, Murray Ridge Road / Phyllis Place to I-8 Interchange (AM LOS E, Δ in Speed -6.5)**
23. **I-805 SB, Murray Ridge Road / Phyllis Place to I-8 Interchange (PM LOS F, Δ in Speed -15.3)**
24. **I-805 NB, I-8 Interchange to Adams Avenue (AM LOS F, Δ in Speed -9.7)**
25. **I-805 SB, I-8 Interchange to Adams Avenue (PM LOS F, Δ in Speed -6.8)**
26. **I-805 NB, Adams Avenue to El Cajon Boulevard (AM LOS F, Δ in Speed -4.9)**
27. **I-805 SB, Adams Avenue to El Cajon Boulevard (PM LOS F, Δ in Speed -5.9)**
28. **I-15 NB, Aero Drive to Friars Road (AM LOS F, Δ in Speed -16.2)**
29. **I-15 SB, Aero Drive to Friars Road (PM LOS F, Δ in Speed -8.6)**
30. **I-15 NB, Friars Road to I-8 (AM LOS E, Δ in Speed -4.2; PM LOS E, Δ in Speed -8.7)**
31. **I-15 SB, Friars Road to I-8 (AM LOS E, Δ in Speed -8.1; PM LOS E, Δ in Speed -6.2)**
32. **I-15 NB, I-8 to Adams Avenue (AM LOS E, Δ in Speed -7.9; PM LOS F, Δ in Speed -13.8)**
33. **I-15 NB, Adams Avenue to El Cajon Boulevard (AM LOS E, Δ in Speed -6.4; PM LOS E, Δ in Speed -11.4)**

5.4 Freeway Ramp Metering Analysis

Table 5.6 presents the Four-Lane Via Las Cumbres Alternative freeway ramp metering analysis results, as well as any potential traffic impacts associated with the Four-Lane Via Las Cumbres Alternative when comparing to the existing conditions. Existing ramp meter flow rates were assumed under Four-Lane Via Las Cumbres Alternative conditions.

Table 5.6 Freeway Ramp Metering Analysis – Four-Lane Via Las Cumbres Alternative

Ramp	Peak Hour	Total Demand[1] (veh/hr)	SOV Demand[2] (veh/hr)	SOV Demand per lane (veh/hr)	Meter Rate[3] (veh/hr)	Future Excess Demand[4] (veh/hr)	Future Delay[5] (min)	Future Queue[6] (ft)	Existing Delay[5] (min)	Δ Delay[5] (min)	SI?
I-5 NB On-Ramp @ Sea World Drive	AM	1730	1,730	865	965	0	0	0	0	0	N

	PM	1570	1,397	699	529	170	19.28	4,925	0.11	19.17	**Y**
I-15 SB On-Ramp @ Friars Road (EB approach)	AM	845	845	845	N/A[7]	0	0	0	0	0	N
	PM	1190	1,190	1190	996	194	11.69	5,625	0	11.69	N
I-8 EB On-Ramp @ Texas Street (NB approach)	AM	490	490	490	N/A[7]	0	0	0	0	0	N
	PM	450	450	450	810	0	0	0	0	0	N
I-8 EB On-Ramp @ Texas Street (SB approach)	AM	850	850	850	N/A[7]	0	0	0	0	0	N
	PM	570	479	479	444	35	4.73	1,025	0	4.73	N
I-8 EB On-Ramp @ Fairmount Avenue (NB approach)	AM	725	725	725	N/A[7]	0	0	0	0	0	N
	PM	725	725	725	744.5	0	0	0	0	0	N
I-8 EB On-Ramp @ Fairmount Avenue (SB approach)	AM	270	270	270	N/A[7]	0	0	0	0	0	N
	PM	825	825	825	745	80	6.44	2,325	0	6.44	N

Notes:
SOV = Single Occupancy Vehicle. HOV = High Occupancy Vehicle. SI? = Significant Impact?
[1] Total Demand is the peak hour demand for both SOV and HOV lanes expected to use the on-ramp.
[2] SOV Demand = (Total Demand) – (HOV Demand).
[3] Meter Rate is the peak hour capacity expected to be processed through the ramp meter per lane. This value was obtained from Caltrans. The average between the "high" and "low" meter rate was used.
[4] Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.
[5] Delay = (Excess Demand / Meter Rate) X 60 min/hr.
[6] Queue = (Excess Demand) X 29 ft/veh. SOV volumes were used in the calculation of Queue. A zero represents no excess queue. It is important to note the on-ramp queues could also occur as a result of freeway congestions as the lack of freeway capacity could limit the number of vehicles that can merge onto the freeway.
[7] Ramp not metered.
* HOV demand was obtained from Caltrans Performance Measurements System (PeMS).

As shown in Table 5.6, excess demand is anticipated at the following metered ramps:

- I-5 SB On-Ramp @ Sea World Drive (AM & PM)
- I-805 NB On-Ramp @ Murray Ridge Road (AM)
- I-805 SB On-Ramp @ Phyllis Place (PM)
- I-15 NB On-Ramp @ Friars Road (AM & PM)
- I-15 SB On-Ramp @ Friars Road – EB Approach (PM)
- I-8 EB On-Ramp @ Texas Street – SB Approach (PM)
- I-8 EB On-Ramp @ Fairmount Avenue – SB Approach (PM)

Based on the significant impact criteria outlined in Chapter 2.3, implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative would result in a significant impact at the following freeway ramp meter:

- I-15 NB On-Ramp @ Friars Road (AM & PM)

5.5 Significant Impacts and Mitigation Measures

This chapter identifies recommended mitigation measures for intersection and roadway facilities that would be significantly impacted through implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Mitigated intersection analysis worksheets are provided in Appendix K.

5.5.1 Roadway Mitigation Measures

Sea World Drive, Mission Bay Parkway to Friars Road (LOS F) - Adding a travel lane in each direction would increase the capacity of the roadway from a 4-Lane Major Arterial to a 6-Lane Major Arterial which would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. In order to implement this mitigation, additional right of way acquisition would be required from a built-environment or the existing right of way would need to be repurposed at the expense of existing or planned active transportation facilities. This would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. In addition, the funding source for the implementation of this mitigation has not been determined. Therefore, this impact would remain significant and unavoidable.*

Friars Road, Avenida De Las Tiendas to Ulric Street/SR-163 SB Ramps (LOS F) - Widening the roadway from a 6-Lane Major Arterial to an 8-Lane Prime Arterial would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class IV One-Way Cycle Track on both sides of the roadway; therefore, there is insufficient right-of-way on Friars Road to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Friars Road, Mission Village Drive to I-15 SB Ramps (LOS F) - Widening the roadway from a 6-Lane Expressway to an 8-Lane Expressway would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this

mitigation measure. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

Friars Road, I-15 SB Ramps to I-15 NB Ramps (LOS F) - Widening the roadway from a 6-Lane Prime Arterial to an 8-Lane Prime Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

Friars Road, I-15 NB Ramps to Rancho Mission Road (LOS F) - Widening the roadway from a 7-Lane Prime Arterial to an 8-Lane Prime Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class IV One-Way Cycle Track on both sides of the roadway; therefore, there is insufficient right-of-way on Friars Road to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Friars Road, Santo Road to Riverdale Street (LOS F) - Widening the roadway from a 6-Lane Prime Arterial to an 8-Lane Prime Arterial would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives includes a Class IV One-Way Cycle Track on both sides of the roadway; therefore, there is insufficient right-of-way on Friars Road to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Rio San Diego Drive, River Run Drive to Fenton Parkway (LOS E) - Widening the roadway to maintain 4-Lane Collector with Two-Way Left-Turn Lane while providing the recommended Class II Bike Lanes would improve the operations to LOS B. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class II Bike Lane on both sides of the segment through restriping; therefore, there is insufficient right-of-way on Rio San Diego Drive to accommodate the additional travel lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Hotel Circle North, I-8 WB Off-Ramp to Via Las Cumbres (LOS F) – Widening the roadway from a 2-lane Collector (one-way) to a 4-lane Collector (one-way) would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class IV Two-Way Cycle Track; therefore, there is insufficient right-of-way on Hotel Circle North to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Camino De La Reina, Avenida Del Rio to Camino De La Siesta (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 2-Lane Collector with Two-Way Left-Turn Lane would improve the operations along this roadway segment. This roadway segment would continue to operate at LOS F, however this mitigation would improve the operation to pre-project conditions. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along this segment to accommodate a Two-Way Left-Turn Lane along Camino De La Reina. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Camino Del Rio North, 1800' west of Ward Road to Ward Road (LOS E) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 2-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class II Bike Lane on both sides of the segment through restriping of the existing Two-Way Left-Turn Lane; therefore, there is insufficient right-of-way on Camino Del Rio North to accommodate the additional lane, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Hotel Circle South, I-8 EB Off-Ramp to Via Las Cumbres (LOS E) - Widening the roadway from a 2-lane Collector (one-way) to a 3-lane Collector (one-way) would improve the operation to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives includes a Class IV Two-Way Cycle Track; therefore, there is insufficient right-of-way on Hotel Circle South to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Hotel Circle South, Via Las Cumbres to I-8 EB On-Ramp (LOS F) - Widening the roadway from a 2-lane Collector (one-way) to a 4-lane Collector (one-way) would improve the operation to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation

of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include a Class IV Two-Way Cycle Track; therefore, there is insufficient right-of-way on Hotel Circle South to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Camino Del Rio South, I-15 SB Ramps to I-15 NB Ramps (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include retaining the Class II Bike Lane on both sides of the segment; therefore, there is insufficient right-of-way on Camino Del Rio South to accommodate the additional lanes, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Morena Boulevard, Tecolote Road to West Morena Boulevard (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Via Las Cumbres, Linda Vista Road to Friars Road (LOS F) - Widening the roadway from a 3-Lane Collector without Two-Way Left-Turn Lane to a 3-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate the additional Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Avenida Del Rio, Fashion Valley Parking Lot to Camino De La Reina (LOS F) - Widening the roadway from a 4-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate the additional Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Ulric Street, Fashion Hills Boulevard to 600' South of Fashion Hills Boulevard (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS E (better than pre-project conditions). The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Ulric Street, 600' South of Fashion Hills Boulevard to Friars Road (LOS F) - Widening the roadway from a 3-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS E (better than pre-project conditions). The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate the additional Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Camino De La Siesta, Camino De La Reina to Camino Del Rio North (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 2-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate the additional Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Metropolitan Drive, Mission Valley Road to Murray Canyon Road (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane (No Fronting Property) to a 2-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. All CPU Alternatives include retaining the Class II Bike Lane on both sides of the segment; therefore, there is insufficient right-of-way on Metropolitan Drive to accommodate the additional Two-Way Left-Turn Lane, maintain existing features, and provide proposed bicycle improvements. Such roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Mission Center Road, Murray Ridge Road to 1200' West of Murray Ridge Road (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Collector without Two-Way Left-Turn Lane would improve the operations to LOS E. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City*

policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.

Mission Center Road, 1200' West of Murray Ridge Road to 950' North of Mission Valley Road (LOS F) – Widening the roadway from a 3-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate an additional travel lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Auto Circle, Camino Del Rio North to I-8 EB Ramps (LOS F) - Widening the roadway from a 4-Lane Major Arterial to a 6-Lane Major Arterial would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Murray Ridge Road, Mission Center Road to I-805 NB Ramps (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Murray Ridge Road, I-805 NB Ramps to I-805 SB Ramps (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Franklin Ridge Road, Via Alta to Civita Boulevard (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel*

lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.

Qualcomm Way, Camino Del Rio North to I-8 WB Ramps (LOS F) - Widening the roadway from a 5-Lane Major to a 6-Lane Major would improve the operation to LOS E. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate an additional travel lane. A detail project study report is needed to identified appropriate improvement to address impacts and accommodate auto, bicycle, pedestrian and transit along Qualcomm Way and Texas Street, between Camino de la Reina and Camino Del Rio South. Therefore, this impact would remain significant and unavoidable.*

Qualcomm Way, I-8 WB Ramps to I-8 EB Ramps (LOS F) - Widening the roadway from a 6-Lane Major to an 8-Lane Prime would improve the operation to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. A detail project study report is needed to identified appropriate improvement to address impacts and accommodate auto, bicycle, pedestrian and transit along Qualcomm Way and Texas Street, between Camino de la Reina and Camino Del Rio South. Therefore, this impact would remain significant and unavoidable.*

Texas Street, 1400' North of Madison Avenue to Madison Avenue (LOS F) – Widening the roadway from a 3-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations along this roadway segment. This roadway segment would continue to operate at LOS F, however this mitigation would improve operations to pre-project conditions. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate an additional travel lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Texas Street, Madison Avenue to Meade Avenue (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Texas Street, Meade Avenue to El Cajon Boulevard (LOS F) - Widening the roadway from a 2-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not*

recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.

Northside Drive, Fenton Marketplace Driveway to Lowes's Frontage Road (LOS E) - Widening the roadway from a 3-Lane Collector with Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate an additional travel lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Rancho Mission Road, Friars Road to San Diego Mission Road (LOS F) - Widening the roadway to provide a 4-Lane Collector with Two-Way Left-Turn Lane and provide the recommended Class IV cycle tracks would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

Rancho Mission Road/Ward Road, San Diego Mission Road to Camino Del Rio North (LOS F) - Widening the roadway to provide a 4-Lane Collector with Two-Way Left-Turn Lane and provide the recommended Class IV cycle tracks would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

Riverdale Street, Friars Road to Vandever Avenue (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS E. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes and a Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Fairmount Avenue, Camino Del Rio N/I-8 WB Off-Ramp to I-8 EB Off-Ramp (LOS F) – Widening the roadway from a 4-Lane Major Arterial to a 6-Lane Major Arterial would improve the operations along this roadway segment to LOS E. The identified significant traffic related impact to this roadway segment would be fully

mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Fairmount Avenue, I-8 EB Off-Ramp to Camino Del Rio South (LOS F) – Widening the roadway from a 6-Lane Expressway to an 8-Lane Expressway would improve the operations along this roadway segment to LOS D. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate two additional travel lanes. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Riverwalk Drive, Fashion Valley Road to Avenida Del Rio (LOS F) - Widening the roadway from a 2-Lane Collector without Two-Way Left-Turn Lane to a 4-Lane Collector with Two-Way Left-Turn Lane would improve the operations to LOS C. The identified significant traffic related impact to this roadway segment would be fully mitigated with the implementation of this mitigation measure. *However, this mitigation measure is not recommended. There is insufficient right-of-way along this segment to accommodate the two additional travel lanes and Two-Way Left-Turn Lane. In addition, roadway widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

5.5.2 Intersection Mitigation Measures

3. *I-805 SB Ramps / Phyllis Place (LOS E: PM Peak Hour)* – The southbound right movement is projected to be over capacity and the eastbound through and westbound left movements are projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative during the PM peak hour. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the southbound approach to add an additional southbound right-turn lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the southbound approach to accommodate the additional travel lanes. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

4. *I-805 NB Ramps / Phyllis Place (LOS F: PM Peak Hour)* – The eastbound left movement, westbound through, westbound right, northbound left, and northbound through movements are projected to be over capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

- Widen the northbound approach to add an additional northbound left-turn lane.

The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the northbound approach to accommodate the additional travel lanes. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

24. *Mission Village Drive / Friars Road WB Ramps (LOS F: PM Peak Hour*) – The westbound left, westbound through, northbound left, and the southbound through movements are projected to be over capacity and the southbound right movement is projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the westbound approach to add an additional westbound left-turn lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

25. *Mission Village Drive / Friars Road EB Ramps (LOS E: AM Peak Hour & LOS F: PM Peak Hour)* – The southbound through and northbound right movements are projected to be over capacity, and all other movements are projected to approach capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvements would allow the intersection to operate at LOS D or better during both peak hours.

    - Restripe the southbound approach to add a third southbound through lane.
    - Widen the northbound approach to add a second northbound right-turn lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of these improvements. *However, this mitigation measure is not recommended at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.*

27. *I-15 NB Ramps / Friars Road (LOS F: PM Peak Hour)* – The eastbound left movement is projected to be over capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the eastbound approach to add a second eastbound left-turn lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended*

at this time because the City anticipates that the stadium site will be studied further in a specific plan effort. Because it is unknown whether this improvement would be compatible with anticipated future planning efforts for the stadium site, implementation of the improvement at this time could ultimately be obsolete. Therefore, this impact would remain significant and unavoidable.

40. *Mission Center Road / Camino De La Reina (LOS E: PM Peak Hour)* – The northbound and southbound approaches are projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvements would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the northbound approach to add an exclusive right-turn lane.
    - Widen the westbound approach to add an exclusive right-turn lane.
    - Widen the eastbound approach to add an exclusive right-turn lane.
    - Convert all right-turn lanes to overlap phasing.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of these improvements. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the northbound, westbound, and eastbound approaches to accommodate the additional travel lanes. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

45. *Fairmount Avenue / Camino Del Rio North/I-8 WB Off-Ramp (LOS F: PM Peak Hour)* – The northbound left, southbound through, and all of the eastbound movements are projected to be over capacity, and the westbound and southbound left movements are projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvements would allow the intersection to operate at LOS D or better than pre-project conditions, during the both peak hours.

    - Widen the southbound approach to add a third southbound through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of these improvements. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the southbound approach to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

50. *I-8 WB Ramps/Mission Valley Mall Driveway / Camino Del Rio North (LOS E: PM Peak Hour)* – The westbound left movement is projected to be over capacity and the northbound through movement is projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvements would allow the intersection to operate at LOS D of better during the both peak hours.

    - Widen the westbound approach to construct an additional westbound left-turn lane. Including widening of the I-8 westbound On-ramp to construct an additional lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of these improvements. *However, this mitigation measure is not*

recommended. There is insufficient right-of-way available along the westbound approach and I-8 On-ramp to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.

52. *Qualcomm Way / Camino Del Rio N/I-8 WB Ramps (LOS E: AM Peak Hour & LOS F: PM Peak Hour)* – the northbound and southbound approaches are projected to be over capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvements would allow the intersection to operate at LOS D of better during the both peak hours.

    - Widen the southbound approach to construct an additional two (2) southbound through lanes.
    - Widen the northbound approach to construct an additional northbound through lane.
    - Widen the westbound approach to construct an additional westbound left-turn lane, restripe the existing westbound left-through shared lane to a through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of these improvements. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the southbound, northbound, and westbound approach to accommodate the additional travel lanes. A detail project study report is needed to identified appropriate improvement to address impacts and accommodate auto, bicycle, pedestrian and transit along Qualcomm Way and Texas Street, between Camino de la Reina and Camino Del Rio South. Therefore, this impact would remain significant and unavoidable.*

58. *Mission Center Road / I-8 EB Ramps (LOS E: PM Peak Hour)* – The southbound left and through movements are projected to be over capacity and the northbound through movement is projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at pre-project condition or better during the both peak hours.

    - Widen the southbound approach to construct an addition southbound through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the southbound approach to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

61. *Texas Street / Camino Del Rio South (LOS E: AM Peak Hour)* – The southbound left movement is projected to be over capacity and the northbound right and northbound through movements are projected to be approaching capacity during the AM peak hour with the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the northbound approach to construct an additional northbound through lane.

The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the northbound approach to accommodate the additional travel lane. A detail project study report is needed to identified appropriate improvement to address impacts and accommodate auto, bicycle, pedestrian and transit along Qualcomm Way and Texas Street, between Camino de la Reina and Camino Del Rio South. Therefore, this impact would remain significant and unavoidable.*

67. *Texas Street / Madison Avenue (LOS F: AM Peak Hour)* – The eastbound left movement, westbound right movement, northbound through movement, and the southbound left movement are projected to be over capacity and the northbound left movement is projected to be approaching capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the northbound approach to construct an additional northbound through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the northbound approach to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

74. *Fashion Valley Road & Riverwalk Drive (LOS F: PM Peak Hour)* – The eastbound left, northbound left, westbound left, and westbound through are projected to be over capacity under the implementation of the CPU land uses and Four-Lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the westbound approach to construct an additional westbound through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the westbound approach to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable.*

Table 5-8 provides a comparison of Four-Lane Via Las Cumbres Alternative operations at the impacted intersections, with and without mitigation measures.

Table 5-8 Impacted Intersection Level of Service with Mitigation Measures – Four-Lane Via Las Cumbres Alternative

			Mitigated Conditions				Four-Lane Via Las Cumbres Alternative			
			AM		PM		AM		PM

5.5.3 Freeway Segment Mitigation Measures

EB I-8, I-5 Interchange to Morena Boulevard (AM – LOS E; PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

EB I-8, Morena Boulevard to Taylor Street (AM – LOS E; PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more

accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

EB I-8, Taylor Street to Hotel Circle (PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

WB I-8, Taylor Street to Hotel Circle (AM – LOS E) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

EB I-8, Hotel Circle to SR-163 Interchange (PM – LOS E) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

EB I-8, Mission Center Road to Qualcomm Way / Texas Street (AM – LOS E; PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

WB I-8, Mission Center Road to Qualcomm Way / Texas Street (AM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

EB I-8, I-805 Interchange to I-15 Interchange (PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through fair share contributions in addition to the funding identified in the ~~Revenue Constrained Network~~Regional Plan. *This impact would remain significant and unavoidable.*

Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through transportation demand management measures and fair share contributions in addition to the funding identified in the Revenue Constrained NetworkRegional Plan. *This impact would remain significant and unavoidable.*

SB I-15, Friars Road to I-8 (AM & PM – LOS E) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network identifies two managed lanes will be added to this segment of I-15, one in each direction. This segment will consist of eight freeway lanes and two managed lanes. This improvement is anticipated to be implemented by 2035.operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual developmentimprovements and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through transportation demand management measures and fair share contributions in addition to the funding identified in the Revenue Constrained NetworkRegional Plan. *This impact would remain significant and unavoidable.*

NB I-15, I-8 to Adams Avenue (AM – LOS E; PM – LOS F) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network does not identifyies operational improvements along this segment. These improvements are anticipated to be completed by Year 2050. There is some uncertainty related to the actual improvements development and associated traffic impacts

that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through transportation demand management measures.~~fair share contributions in addition to the funding identified in the Revenue Constrained Network.~~ *This impact would remain significant and unavoidable.*

NB I-15, Adams Avenue to El Cajon Boulevard (AM & PM – LOS E) - SANDAG's 2050 San Diego Forward: The Regional Plan (2015) Revenue Constrained Managed Lanes and Highway Network does not identify~~ies operational~~ improvements along this segment. ~~These improvements are anticipated to be completed by Year 2050.~~ There is some uncertainty related to the actual ~~improvements~~ development and associated traffic impacts that will materialize over time. Future development projects' transportation studies would be able to more accurately identify individual project-level impacts and provide the mechanism to mitigate them through transportation demand management measures.~~fair share contributions in addition to the funding identified in the Revenue Constrained Network.~~ *This impact would remain significant and unavoidable.*

5.5.4 Ramp Meter Mitigation Measures

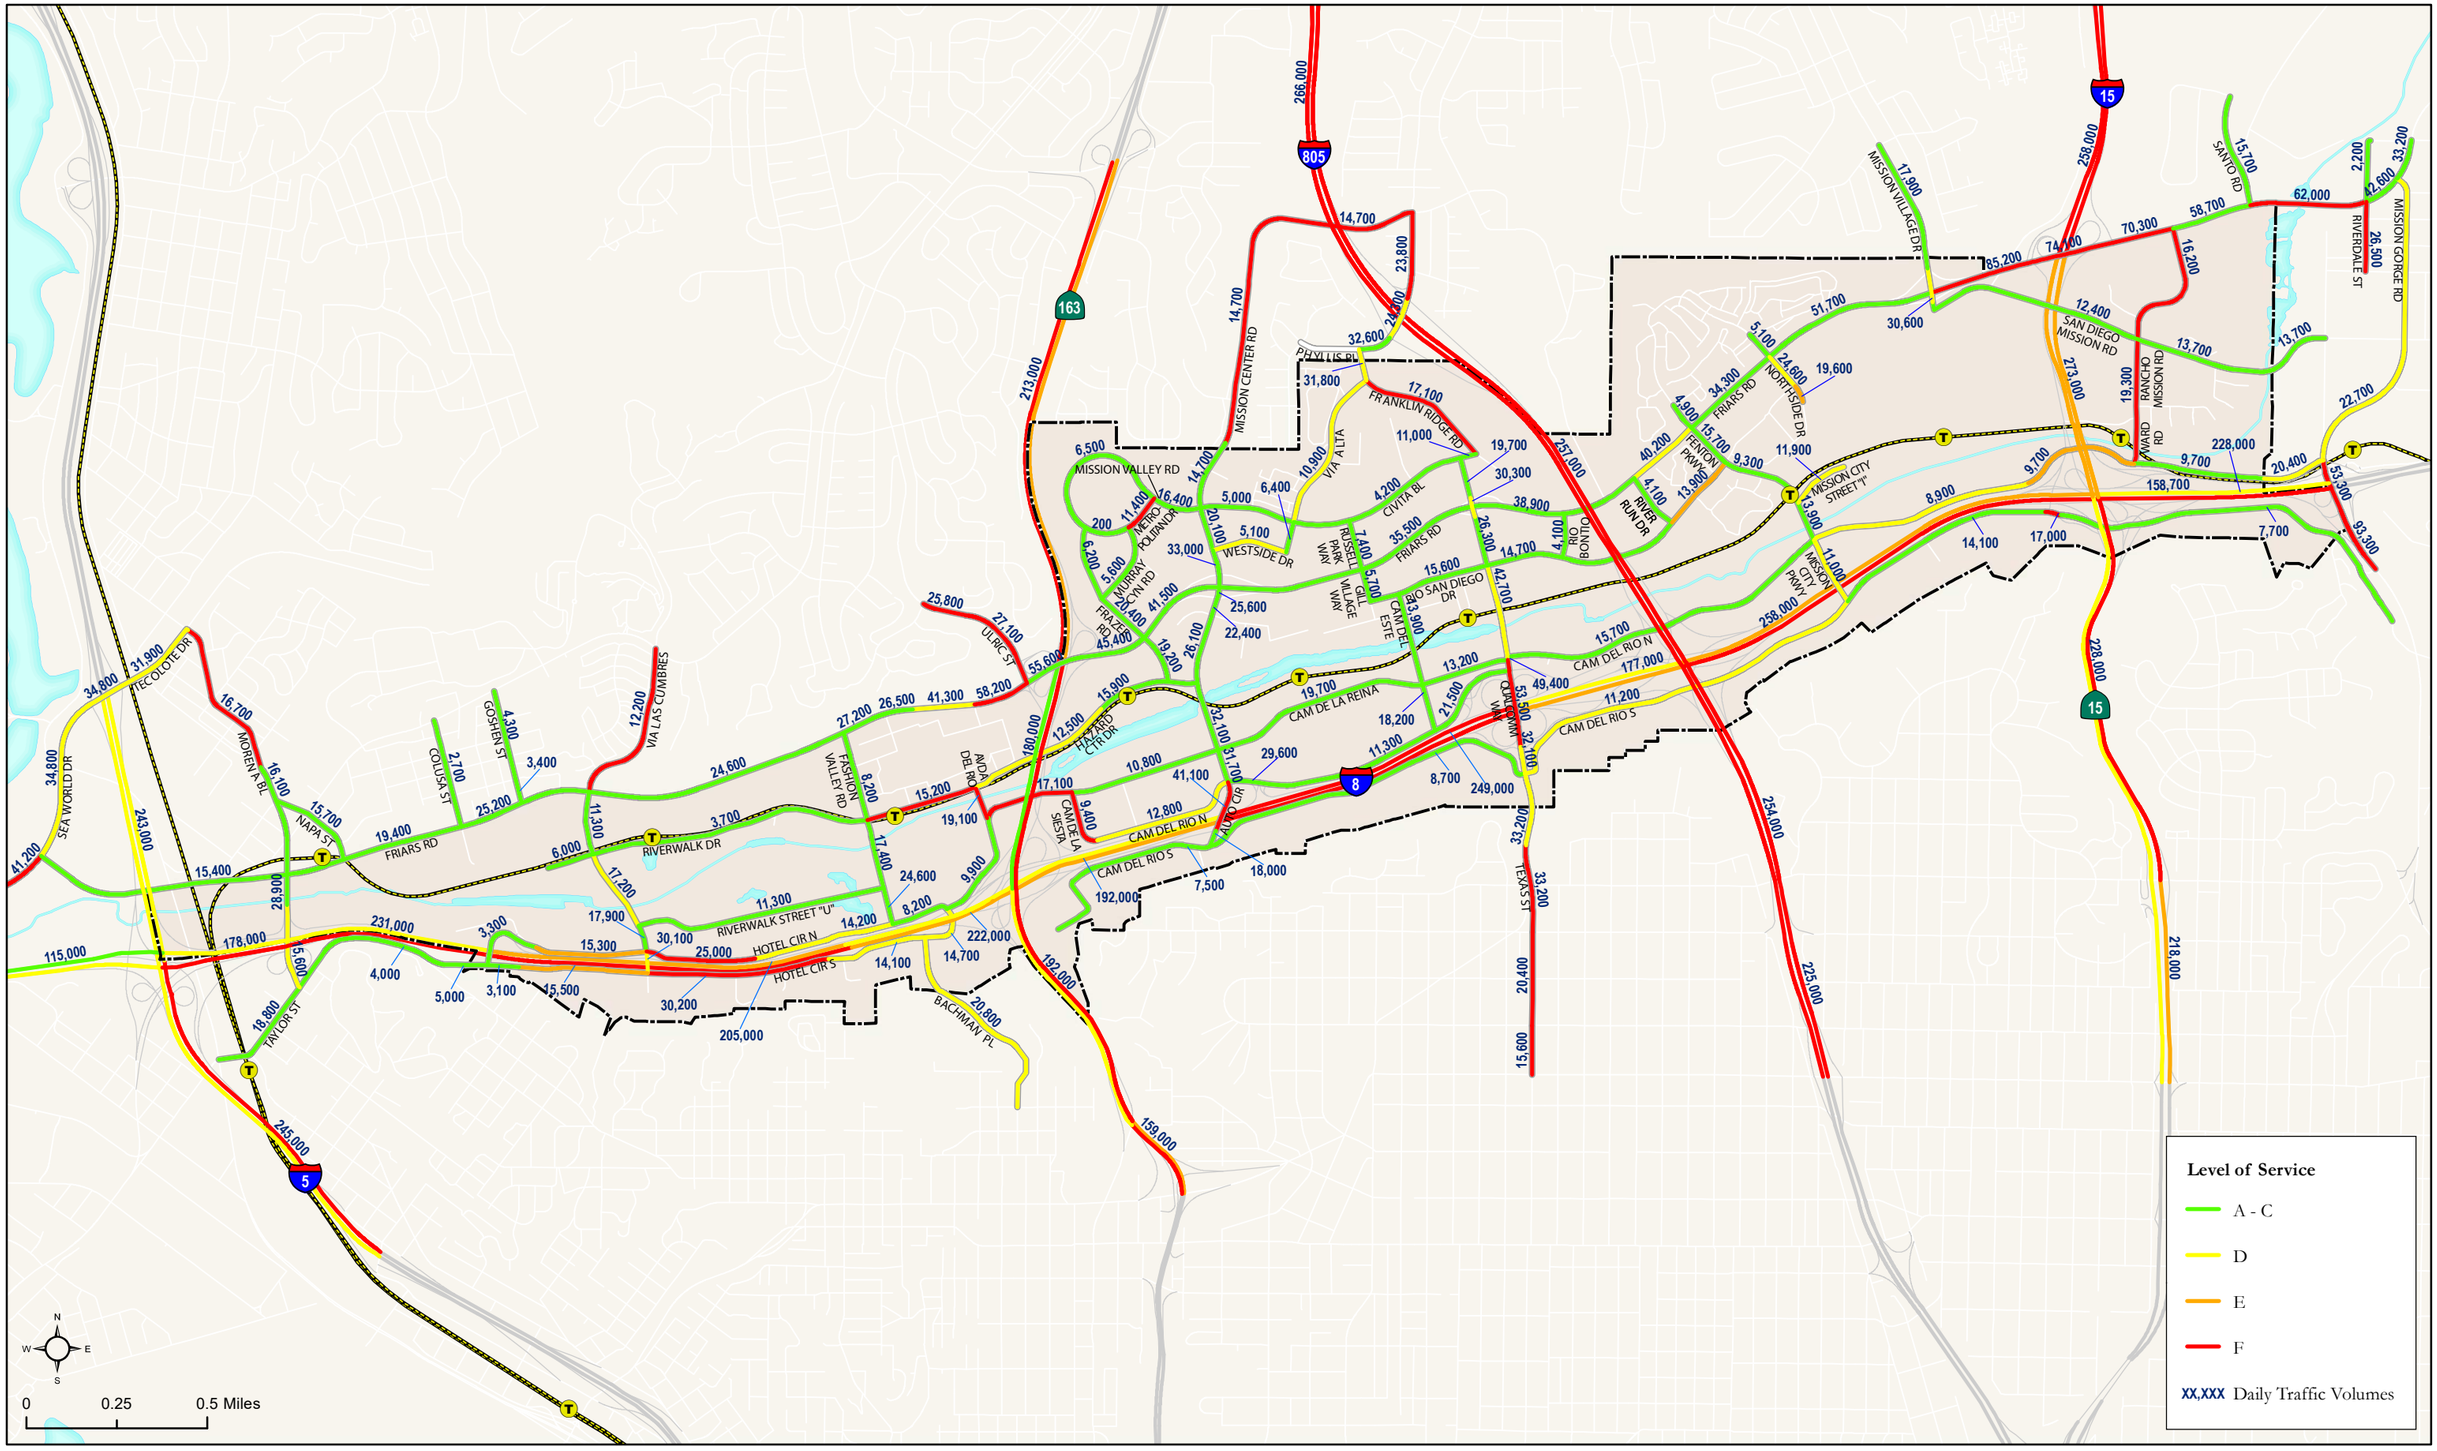
I-15 NB On-Ramp @ Friars Road (AM &PM Peak Hour) – The City of San Diego shall coordinate with Caltrans to address ramp capacity at this impacted location. The proposed CPU already includes a variety of planned transit, pedestrian, and bicycle facilities that would help to reduce single-occupancy vehicle (SOV) travel and reduce ramp demand. Coordination with Caltrans shall include consideration of further measures that would include additional lanes, interchange reconfigurations, and transportation demand management (TDM) measures. However, specific capacity improvements are still undetermined as these are future improvements that must be defined more over time and implementation of freeway improvements in a timely manner is beyond the full control of the City of San Diego. *Therefore, this impact would remain significant and unavoidable.*

5.5.5 All Transportation Facilities Mitigation Measures

Future specific plan proposals shall conduct transportation studies and include coordination between the City of San Diego, Caltrans, SANDAG and MTS to identify needed transportation improvements.

The City of San Diego shall continue to coordinate with Caltrans and SANDAG on future improvements, as future project-level development proceeds, to potentially develop "fair share" mitigation strategies for freeway impacts, as appropriate.

6.0 Two-Lane Via Las Cumbres Alternative



This chapter discusses the traffic operations under the Two-Lane Via Las Cumbres Alternative and assesses potential traffic impacts by comparing the Two-Lane Via Las Cumbres Alternative to existing conditions. Intersection analysis for those intersections that are influenced by the Via Las Cumbres connection are included in this chapter. Roadway segments, intersections influenced by the Via Las Cumbres connection, and freeway segments were evaluated in determining traffic impacts associated with the Two-Lane Via Las Cumbres Alternative. Mitigation measures for significant traffic impacts are identified, as necessary.

The Two-Lane Via Las Cumbres Alternative land uses and mobility network are similar to those analyzed under the Four-Lane Via Las Cumbres Alternative, with the following exception:

- The Via Las Cumbres connection between Friars Road and ~~Levi-Cushman Street "B"~~Riverwalk Street "U" is proposed to have two travel lanes, Class II buffered bicycle lanes and painted median from Friars Road to ~~Levi-Cushman Street "B"~~Riverwalk Street "U" (with additional lanes at intersections as needed), grade separated from the trolley and bridge over the San Diego River; plus enhancements to Fashion Valley Road to raise it to the 15-year flood level with Class IV two-way cycle track. Note that the Via Las Cumbres connection was assumed to be a Four-Lane Major Arterial with Class IV one-way cycle tracks in the Four-Lane Via Las Cumbres Alternative.

6.1 Roadway Segment Analysis

Roadway segment analysis was conducted for the Two-Lane Via Las Cumbres Alternative roadway classifications. Figure 6-1 and Table 6.1 display the projected ADT volumes and associated roadway LOS under Two-Lane Via Las Cumbres Alternative conditions. Table 6.1 also identifies any potential traffic impacts associated with the Two-Lane Via Las Cumbres Alternative when comparing to existing conditions.

Notes:
Bold letter indicates substandard LOS E or F. RM = Raised Median. | SM = Striped Median. | TWLTL = Two-Way Left-Turn Lane. Turn pocket(s) may be considered in place of TWLTL. | NFP = No Fronting Property. | SI = Significant Impact.
[1] Capacity for a 7-Ln Prime Arterial is calculated assuming that each additional lane above a 6-Ln Arterial adds 5,000 ADT for LOS A, 7,500 ADT for LOS B and 10,000 ADT for LOS C, D, and E.
[2] Shopping Center Driveway was analyzed as a 3-Ln Collector w/ TWLTL.

As shown in Table 5.2, based on the criteria documented in Section 2.3, the CPU land uses and Two-Lane Via Las Cumbres Alternative will result in a LOS of E or F along the following 39 roadway segments, and have a significant traffic impact to the following 38 roadway segments in **bold**, when comparing to the existing conditions (Two-Lane Via Las Cumbres Alternative Plan-to-Ground):

- **Sea World Drive, Mission Bay Parkway to Friars Road (LOS F, Δ in V/C 0.175)**
- **Friars Road, Avenida De Las Tiendas to Ulric Street/SR-163 SB Ramps (LOS F, Δ in V/C 0.354)**
- **Friars Road, Mission Village Drive to I-15 SB Ramps (LOS F, Δ in V/C 0.343)**
- **Friars Road, I-15 SB Ramps to I-15 NB Ramps (LOS F, Δ in V/C 0.459)**
- **Friars Road, I-15 NB Ramps to Rancho Mission Road (LOS F, Δ in V/C 0.267)**
- **Friars Road, Santo Road to Riverdale Street (LOS F, Δ in V/C 0.31)**
- **Rio San Diego Drive, River Run Drive to Fenton Parkway (LOS E, Δ in V/C 0.624)**
- **Hotel Circle North, I-8 WB Off-Ramp to Via Las Cumbres (LOS F, Δ in V/C 0.995)**
- Hotel Circle North, Via Las Cumbres to I-8 WB Off-Ramp (LOS E, Δ in V/C -0.660) – not impacted
- **Camino De La Reina, Avenida Del Rio to Camino De La Siesta (LOS F, Δ in V/C 0.374)**

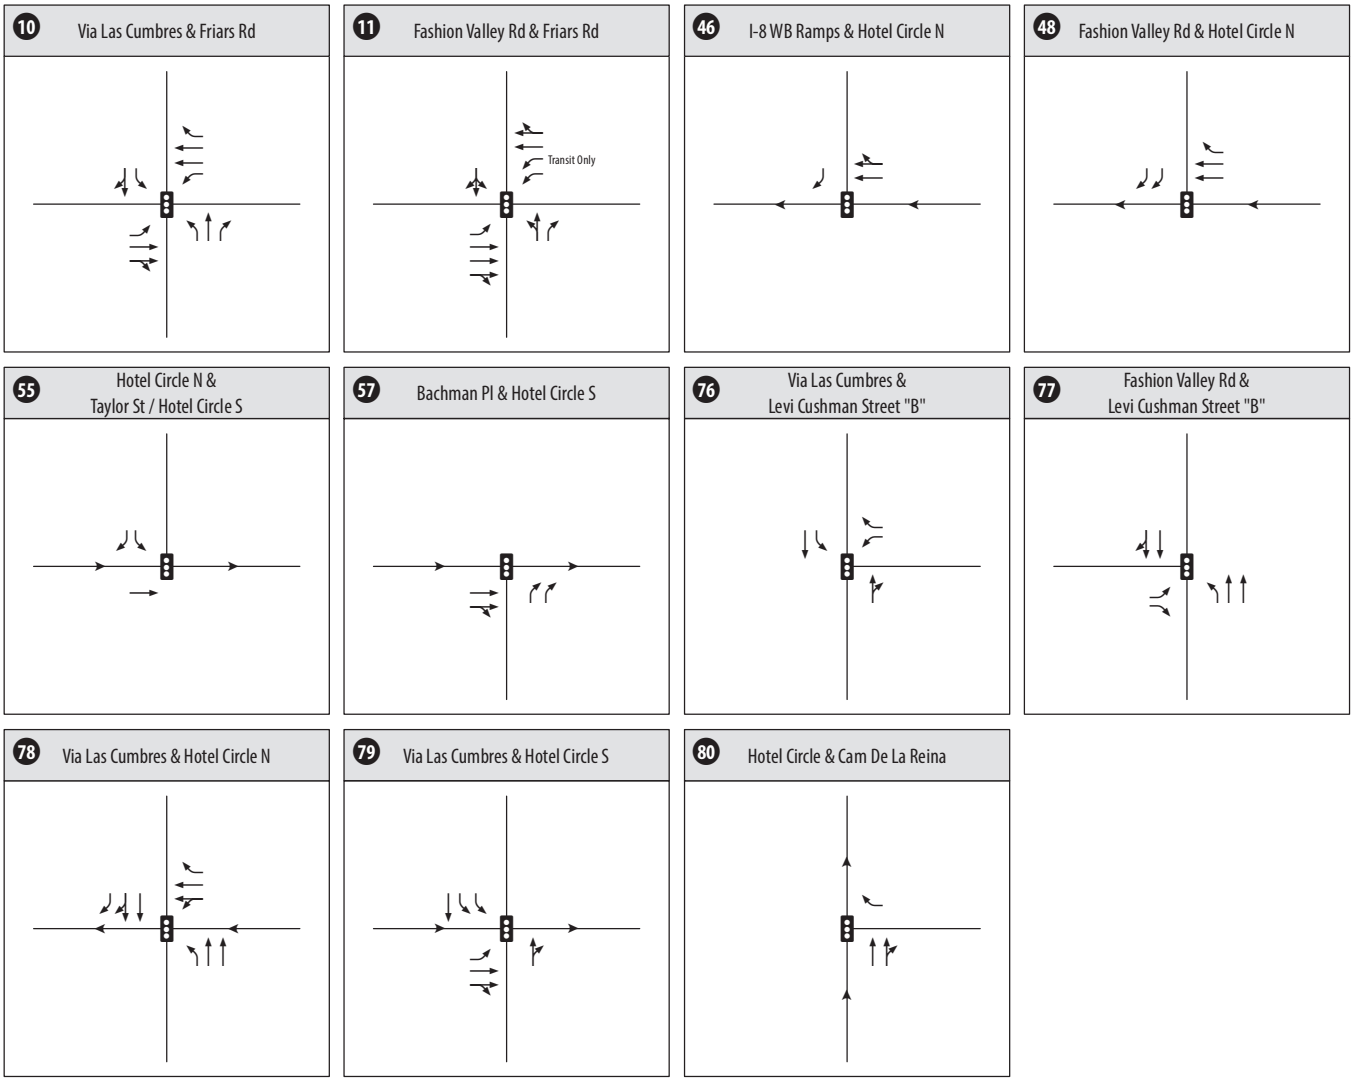
- **Camino De La Siesta, Camino De La Reina to Camino Del Rio North (LOS F, Δ in V/C 0.532)**
- **Metropolitan Drive, Mission Valley Road to Murray Canyon Road (clockwise) (LOS F, Δ in V/C 0.969)**
- **Mission Center Road, Murray Ridge Road to 1200' West of Murray Ridge Road (LOS F, Δ in V/C 0.741)**
- **Mission Center Road, 1200' W of Murray Ridge Rd to 950' N of Mission Valley Rd (LOS F, Δ in V/C 0.361)**
- **Auto Circle, Camino Del Rio North to I-8 EB Ramps (LOS F, Δ in V/C 0.176)**
- **Murray Ridge Road, Mission Center Road to I-805 NB Ramps (LOS F, Δ in V/C 0.254)**
- **Murray Ridge Road, I-805 NB Ramps and I-805 SB Ramps (LOS F, Δ in V/C 0.840)**
- **Franklin Ridge Road, Via Alta to Civita Boulevard (LOS F, Δ in V/C 1.140)**
- **Qualcomm Way, Camino Del Rio North to I-8 WB Ramps (LOS F, Δ in V/C 0.574)**
- **Qualcomm Way, I-8 WB Ramps to I-8 EB Ramps (LOS F, Δ in V/C 0.342)**
- **Texas Street, 1400' North of Madison Ave to Madison Avenue (LOS F, Δ in V/C 0.176)**
- **Texas Street, Madison Avenue to Meade Ave (LOS F, Δ in V/C 0.221)**
- **Texas Street, Meade Ave to El Cajon Boulevard (LOS F, Δ in V/C 0.118)**
- **Northside Drive, Fenton Marketplace Driveway to Lowe's Frontage Road (LOS E, Δ in V/C 0.165)**
- **Rancho Mission Road, Friars Road to San Diego Mission Road (LOS F, Δ in V/C 0.51)**
- **Rancho Mission Road, San Diego Mission Road to Camino Del Rio North (LOS F, Δ in V/C 0.648)**
- **Riverdale Street, Friars Road to Vandever Avenue (LOS F, Δ in V/C 2.2)**
- **Fairmount Avenue, Camino Del Rio North/I-8 WB Off-Ramp to I-8 EB Off-Ramp (LOS F, Δ in V/C 0.328)**
- **Fairmount Avenue, I-8 EB Off-Ramp to Camino Del Rio South (LOS F, Δ in V/C 0.13)**
- **Riverwalk Drive, Fashion Valley Road to Avenida Del Rio (LOS F, Δ in V/C 1.9)**

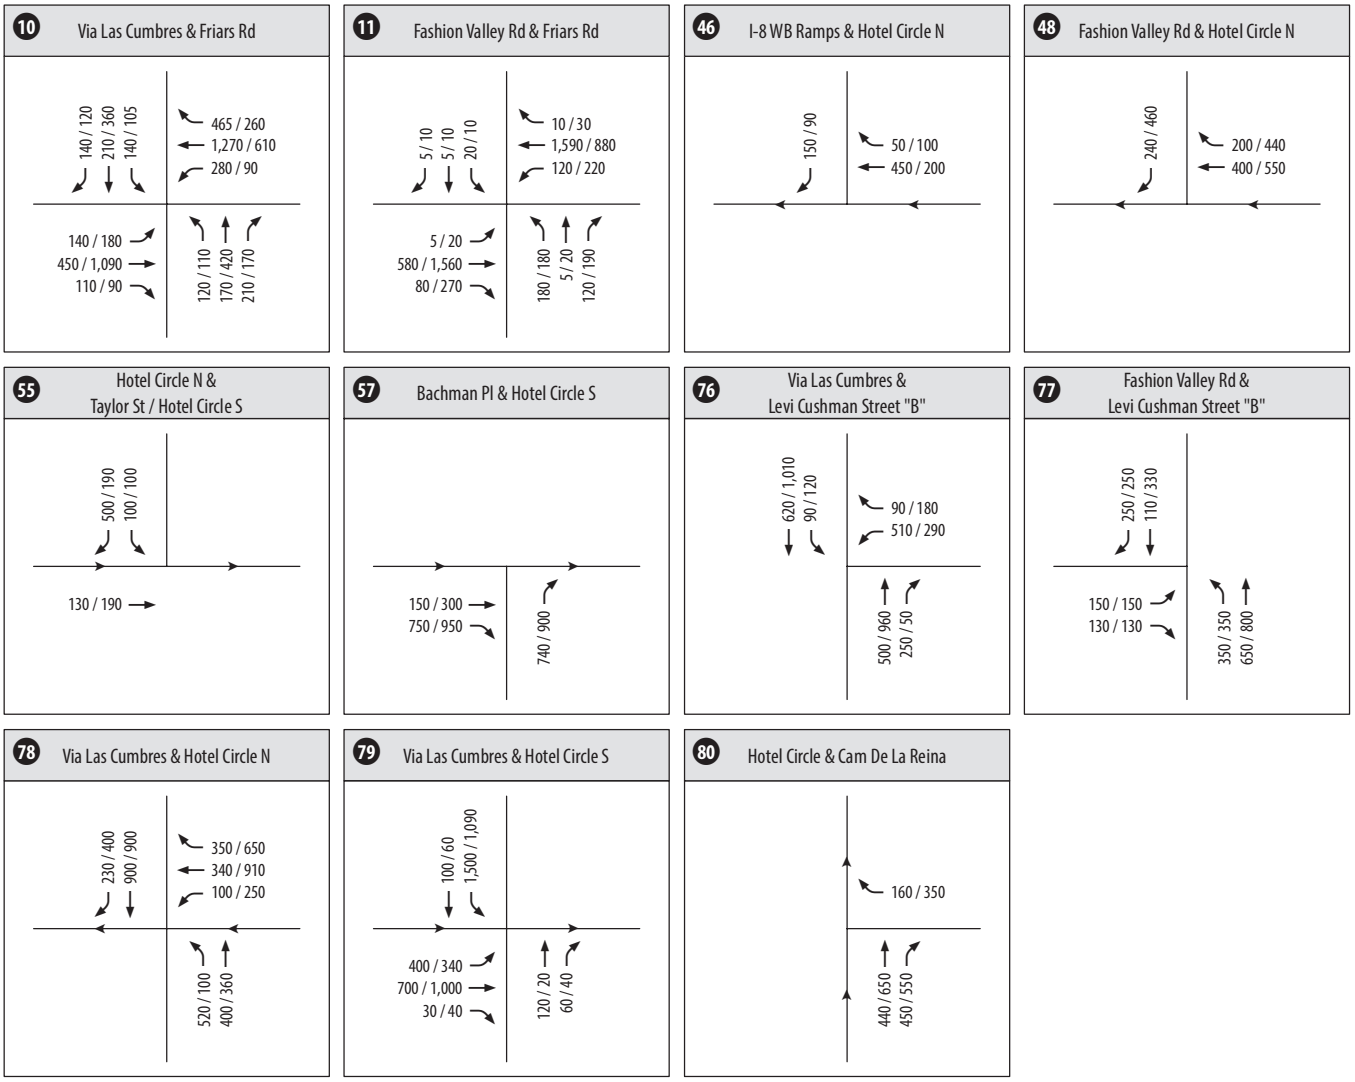
The asterisk (*) above identifies the one new roadway segment impact resulting from the Two-Lane Via Las Cumbres Alternative.



6.2 Intersection Analysis

This chapter provides a focused intersection analysis for 12 intersections in the vicinity of the Via Las Cumbres extension. Based on a comparison between the Four-Lane Via Las Cumbres Alternative roadway ADT in Table 5.2 and the Two-Lane Via Las Cumbres roadway ADT in Table 6.1, it was determined that the following intersections could be affected by the Two-Lane Via Las Cumbres Alternative:

- 10: Via Las Cumbres / Friars Road
- 11: Fashion Valley Road / Friars Road
- 46: I-8 WB Ramps / Hotel Circle North (W)
- 48: Fashion Valley Road / Hotel Circle North
- 55: Hotel Circle North / Taylor Street/Hotel Circle South
- 57: Bachman Place / Hotel Circle South
- 74: Fashion Valley Road / Riverwalk Drive
- 76: Via Las Cumbres & ~~Levi Cushman Street "B"~~Riverwalk Street “U”
- 77: Fashion Valley Road & ~~Levi Cushman Street "B"~~Riverwalk Street “U”
- 78: Via Las Cumbres & Hotel Circle North
- 79: Via Las Cumbres & Hotel Circle South
- 80: Hotel Circle South & Camino De La Reina



Two-Lane Via Las Cumbres Alternative intersection geometrics are presented in Figure 6-2, while forecast AM and PM peak hour turning movements are displayed in Figure 6-3, and midday turning movements in Figure 6-4.

AM and PM peak hour and midday LOS analysis results, as well as potential traffic impact associated with this alternative are provided in Table 6.2. Signal timing was assumed to be optimized under Two-Lane Via Las Cumbres Alternative conditions. Intersection LOS calculation worksheets are provided in Appendix L.

Intersection	Control	Two-Lane Via Las Cumbres						Existing			
		AM Peak		PM Peak		Midday Peak		AM / PM / Midday	AM / PM / Midday	AM / PM / Midday	
		Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS	Δ Avg. Delay (sec.)	SI ?
10: Via Las Cumbres / Friars Road	Signal	49.7	D	50.1	D	-	-	16.5 / 20.8 / -	B / C / -	33.2 / 29.3 / -	N
11: Fashion Valley Road / Friars Road	Signal	30.0	C	60.1	**E**	29.9	C	22.0 / 51.3 / 12.0	C / D / B	8.0 / 8.8 / 17.9	**Y**
46: I-8 WB Ramps / Hotel Circle North (W)	Signal	1.3	A	3.7	A	-	-	6.6 / 6.6 / -	A / A / -	5.3 / 2.9 / -	N
48: Fashion Valley Road / Hotel Circle North	Signal	35.6	D	27.8	C	21.0	C	10.0 / 16.2 / 11.5	A / B / B	25.6 / 11.6 / 9.5	N
55: Hotel Circle North / Taylor Street/Hotel Circle South	AWSC	2.3	A	2.0	A	-	-	34.2 / 43.1 / -	D / E / -	-31.9 / -41.1 / -	N
57: Bachman Place / Hotel Circle South	Signal	7.4	A	10.2	B	-	-	22.9 / 19.5 / -	C / B / -	-15.5 / -9.3 / -	N
74: Fashion Valley Road / Riverwalk Drive	Signal	34.3	C	94.5	**F**	-	-		Does Not Exist		**Y**
76: Via Las Cumbres & ~~Levi Cushman Street "B"~~Riverwalk Street "U"	Signal	16.4	B	13.5	B	-	-		Does Not Exist		N
77: Fashion Valley Road & ~~Levi Cushman Street "B"~~Riverwalk Street "U"	Signal	23.7	C	22.1	C	-	-		Does Not Exist		N
78: Via Las Cumbres & Hotel Circle North	Signal	43.3	D	52.1	D	-	-		Does Not Exist		N
79: Via Las Cumbres & Hotel Circle South	Signal	50.7	D	49.3	D	-	-		Does Not Exist		N
80: Hotel Circle South & Camino De La Reina	Signal	3.4	A	3.4	A	-	-		Does Not Exist		N

As shown in the table and based on the significant impact criteria outlined in Chapter 2, implementation of the CPU land uses and Two-Lane Via Las Cumbres Alternative would result in operations at LOS E or F, and significant impacts to the following intersections for the 12 focused intersections, as noted in **bold**:

- **11: Fashion Valley Road / Friars Road (PM LOS E, Δ in Delay 8.8)**
- **74: Fashion Valley Road & Riverwalk Drive (PM LOS F, Δ in Delay 94.5)** – also impacted under the Four-Lane Via Las Cumbres Alternative in Chapter 5

The Four-Lane Via Las Cumbres Alternative and the Two-Lane Via Las Cumbres Alternative share very similar forecast traffic volumes outside of the 12 intersections presented in Table 6.2. Therefore, the following intersections identified as significantly impacted by the CPU land uses and Four-Lane Via Las Cumbres Alternative will also be impacted under this scenario:

- **3: I-805 SB Ramps / Phyllis Place**
- **4: I-805 NB Ramps / Phyllis Place**
- **24: Mission Village Drive / Friars Road WB Ramps**
- **25: Mission Village Drive / Friars Road EB Ramps**
- **27: I-15 NB Ramps / Friars Road**
- **40: Mission Center Road / Camino De La Reina**
- **45: Fairmount Avenue / Camino Del Rio North/I-8 WB Off-Ramp**
- **50: I-8 WB Ramps/Mission Valley Mall Driveway / Camino Del Rio North**
- **52: Qualcomm Way / Camino Del Rio N/I-8 WB Ramps**
- **58: Mission Center Road / I-8 EB Ramps**
- **61: Texas Street / Camino Del Rio South**
- **67: Texas Street / Madison Avenue**

Three additional intersections were identified as operating at LOS E under CPU land uses and Four-Lane Via Las Cumbres Alternative conditions, however, they were not identified as significantly impacted due to the minor changes in delay. These intersections will continue to operate at LOS E, yet not impacted, including:

- 2: I-5 NB Ramps / Sea World Drive / Tecolote Road
- 23: Northside Drive / Friars Road
- 59: Mission Center Road / Camino Del Rio South

6.3 Freeway Segment Analysis

The freeway analysis includes the freeway improvements identified in Chapter 4, derived from the Revenue Constrained scenario of SANDAG's *San Diego Forward: The Regional Plan* (2015), the currently adopted regional transportation plan, and are anticipated to be implemented 2050.

Table 6.3a and **Table 6.3b** present the Two-Lane Via Las Cumbres Alternative freeway segment LOS results for study segments during the AM and PM peak periods, respectively. These tables also identify the potential traffic impacts associated with the CPU land uses and Two-Lane Via Las Cumbres Alternative. HCS freeway segment analysis worksheets are provided in **Appendix M**.

Notes:
Bold letter indicates LOS E or F.
[1] M = Mainline; A = Auxiliary Lane.
[2] D = Directional Split.
[3] K = Peak Hour %.
[4] HVF = Heavy Vehicle Factor.

As shown, the following 33 directional mainline freeway segments are projected to operate at LOS E or F under CPU land uses and Two-Lane Via Las Cumbres Alternative conditions. Based on the significant impact criteria outlined in Chapter 2, implementation of the CPU land uses and Two-Lane Via Las Cumbres Alternative would result in a significant impact on 32 of those directional segments, as noted in **bold**:

- **I-8 EB, I-5 Interchange to Morena Boulevard (AM LOS E, Δ in Speed -11.1; PM LOS F, Δ in Speed -22.9)**
- **I-8 EB, Morena Boulevard to Taylor Street (AM LOS E, Δ in Speed -9.7; PM LOS F, Δ in Speed -16.2)**

6.4 Significant Impacts and Mitigation Measures

This chapter identifies recommended mitigation measures for intersection and roadway facilities that would be significantly impacted through implementation of the CPU land uses and Two-Lane Via Las Cumbres Alternative. Mitigated intersection analysis worksheets are provided in Appendix N.

6.4.1 Roadway Mitigation Measures

As noted at the beginning of this chapter, the Two-Lane Via Las Cumbres Alternative is similar to the Four-Lane Via Las Cumbres Alternative. As in the previous section, the impacts roadway segments and mitigations under this alternative will be identical to those disclosed in Chapter 5, the Four-Lane Via Las Cumbres Alternative.

6.4.2 Intersection Mitigation Measures

As stated in Section 6.2, the Two-lane Via Las Cumbres Alternative only evaluated 12intersections, which are located adjacent to the Via Las Cumbres extension. As such, the Two-lane Via Las Cumbres Alternative would be responsible for mitigation the mitigation identified below for the intersection of Fashion Valley Road / Friars Road, as well as those identified in Section 5.5.2 (Four-Lane Via Las Cumbres Alternative mitigation measures).

11. *Fashion Valley Road & Friars Road (LOS E: PM Peak Hour)* – The eastbound through, northbound left, westbound left, and westbound through are projected to be over capacity under the implementation of the CPU land uses and Two-lane Via Las Cumbres Alternative. Implementing the following improvement would allow the intersection to operate at LOS D or better during both peak hours.

    - Widen the eastbound approach to construct an additional eastbound through lane.

    The identified significant traffic related impact to this intersection would be fully mitigated with the implementation of this improvement. *However, this mitigation measure is not recommended. There is insufficient right-of-way available along the westbound approach to accommodate the additional travel lane. In addition, the widening would be inconsistent with City policies promoting active transportation and the City of Villages growth strategy, and would obstruct the City's efforts to achieve Climate Action Plan (CAP) active transportation mode share goals. Therefore, this impact would remain significant and unavoidable with the implementation of the Two-Lane Via Las Cumbres.*

6.4.3 Freeway Segment Mitigation Measures

The CPU land uses and Two-Lane Via Las Cumbres Alternative impact to freeway segments are the same as those identified in the Four-lane Via Las Cumbres Alternative. Therefore, mitigation measures identified in Chapter 5, the Four-lane Via Las Cumbres Alternative are applicable toward the Two-Lane Via Las Cumbres Alternative.

6.4.4 Ramp Meter Mitigation Measures

Since the Two-Lane Via Las Cumbres Alternative traffic volumes are similar to the Four-lane Via Las Cumbres Alternative, all significant impacts and mitigation measures identified in Chapter 5, the Four-lane Via Las Cumbres Alternative are applicable toward the Two-Lane Via Las Cumbres Alternative.

7.0 Cross-Valley Connection Alternative

This chapter discusses the traffic operations under the Cross-Valley Connection Alternative and assesses potential traffic impacts by comparing this alternative to existing conditions.

The Cross-Valley Connection Alternative land uses and mobility network are similar to those analyzed under the Four-Lane and Two-Lane Via Las Cumbres alternatives, with the following exceptions:

- A new road (~~Street "J"~~Riverwalk Street "J") will be constructed connecting Friars Road to Hotel Circle South in place of Via Las Cumbres. This new road will be constructed with two to four travel lanes, a painted median and Class II buffered bicycle lanes. This alternative provides for crossing under the MTS trolley tracks (in a manner similar to how Qualcomm Way and Mission Center Road cross under Friars Road), which eliminates the need for an elevated roadway within the core of the Mission Valley community. Like the Four-Lane and Two-Lane Via Las Cumbres alternatives, this alternative would require a bridge over the San Diego River, constructed to allow for the 100-year flood event.
- Designate Via Las Cumbres from Friars Road to the proposed southern terminus just north of the trolley tracks as a Two-Lane Collector – it is anticipated that this road would carry approximately 5,000 ADT.

Aside from road alignment of the new connection and engineering design, this alternative essentially is the same as the Two-Lane Via Las Cumbres Alternative from a traffic impact assessment perspective since both alternatives provide a single two-lane connection from Friars Road to Hotel Circle South. The only differences between these two alternatives are the two intersections at Friars Road, one at Via Las Cumbres and the other at ~~Street "J"~~Riverwalk Street "J". Traffic that utilizes the Via Las Cumbres and Friars Road intersection in the Two-Lane Via Las Cumbres Alternative would, in this Cross-Valley Connection Alternative, have the option to use one of two intersections to access destinations, thus reducing traffic volumes at the Via Las Cumbres intersection and maintaining or improving traffic operations at that intersection. The Via Las Cumbres and Friars Road intersection was project to operate at LOS D during the peak hours, based on engineering judgement and the understanding of traffic signal operations, it can be concluded the both Via Las Cumbres /Friars Road and ~~Street "J"~~Riverwalk Street "J" / Friars Road intersections would operate at LOS D or better under the Cross-Valley Connection Alternative.

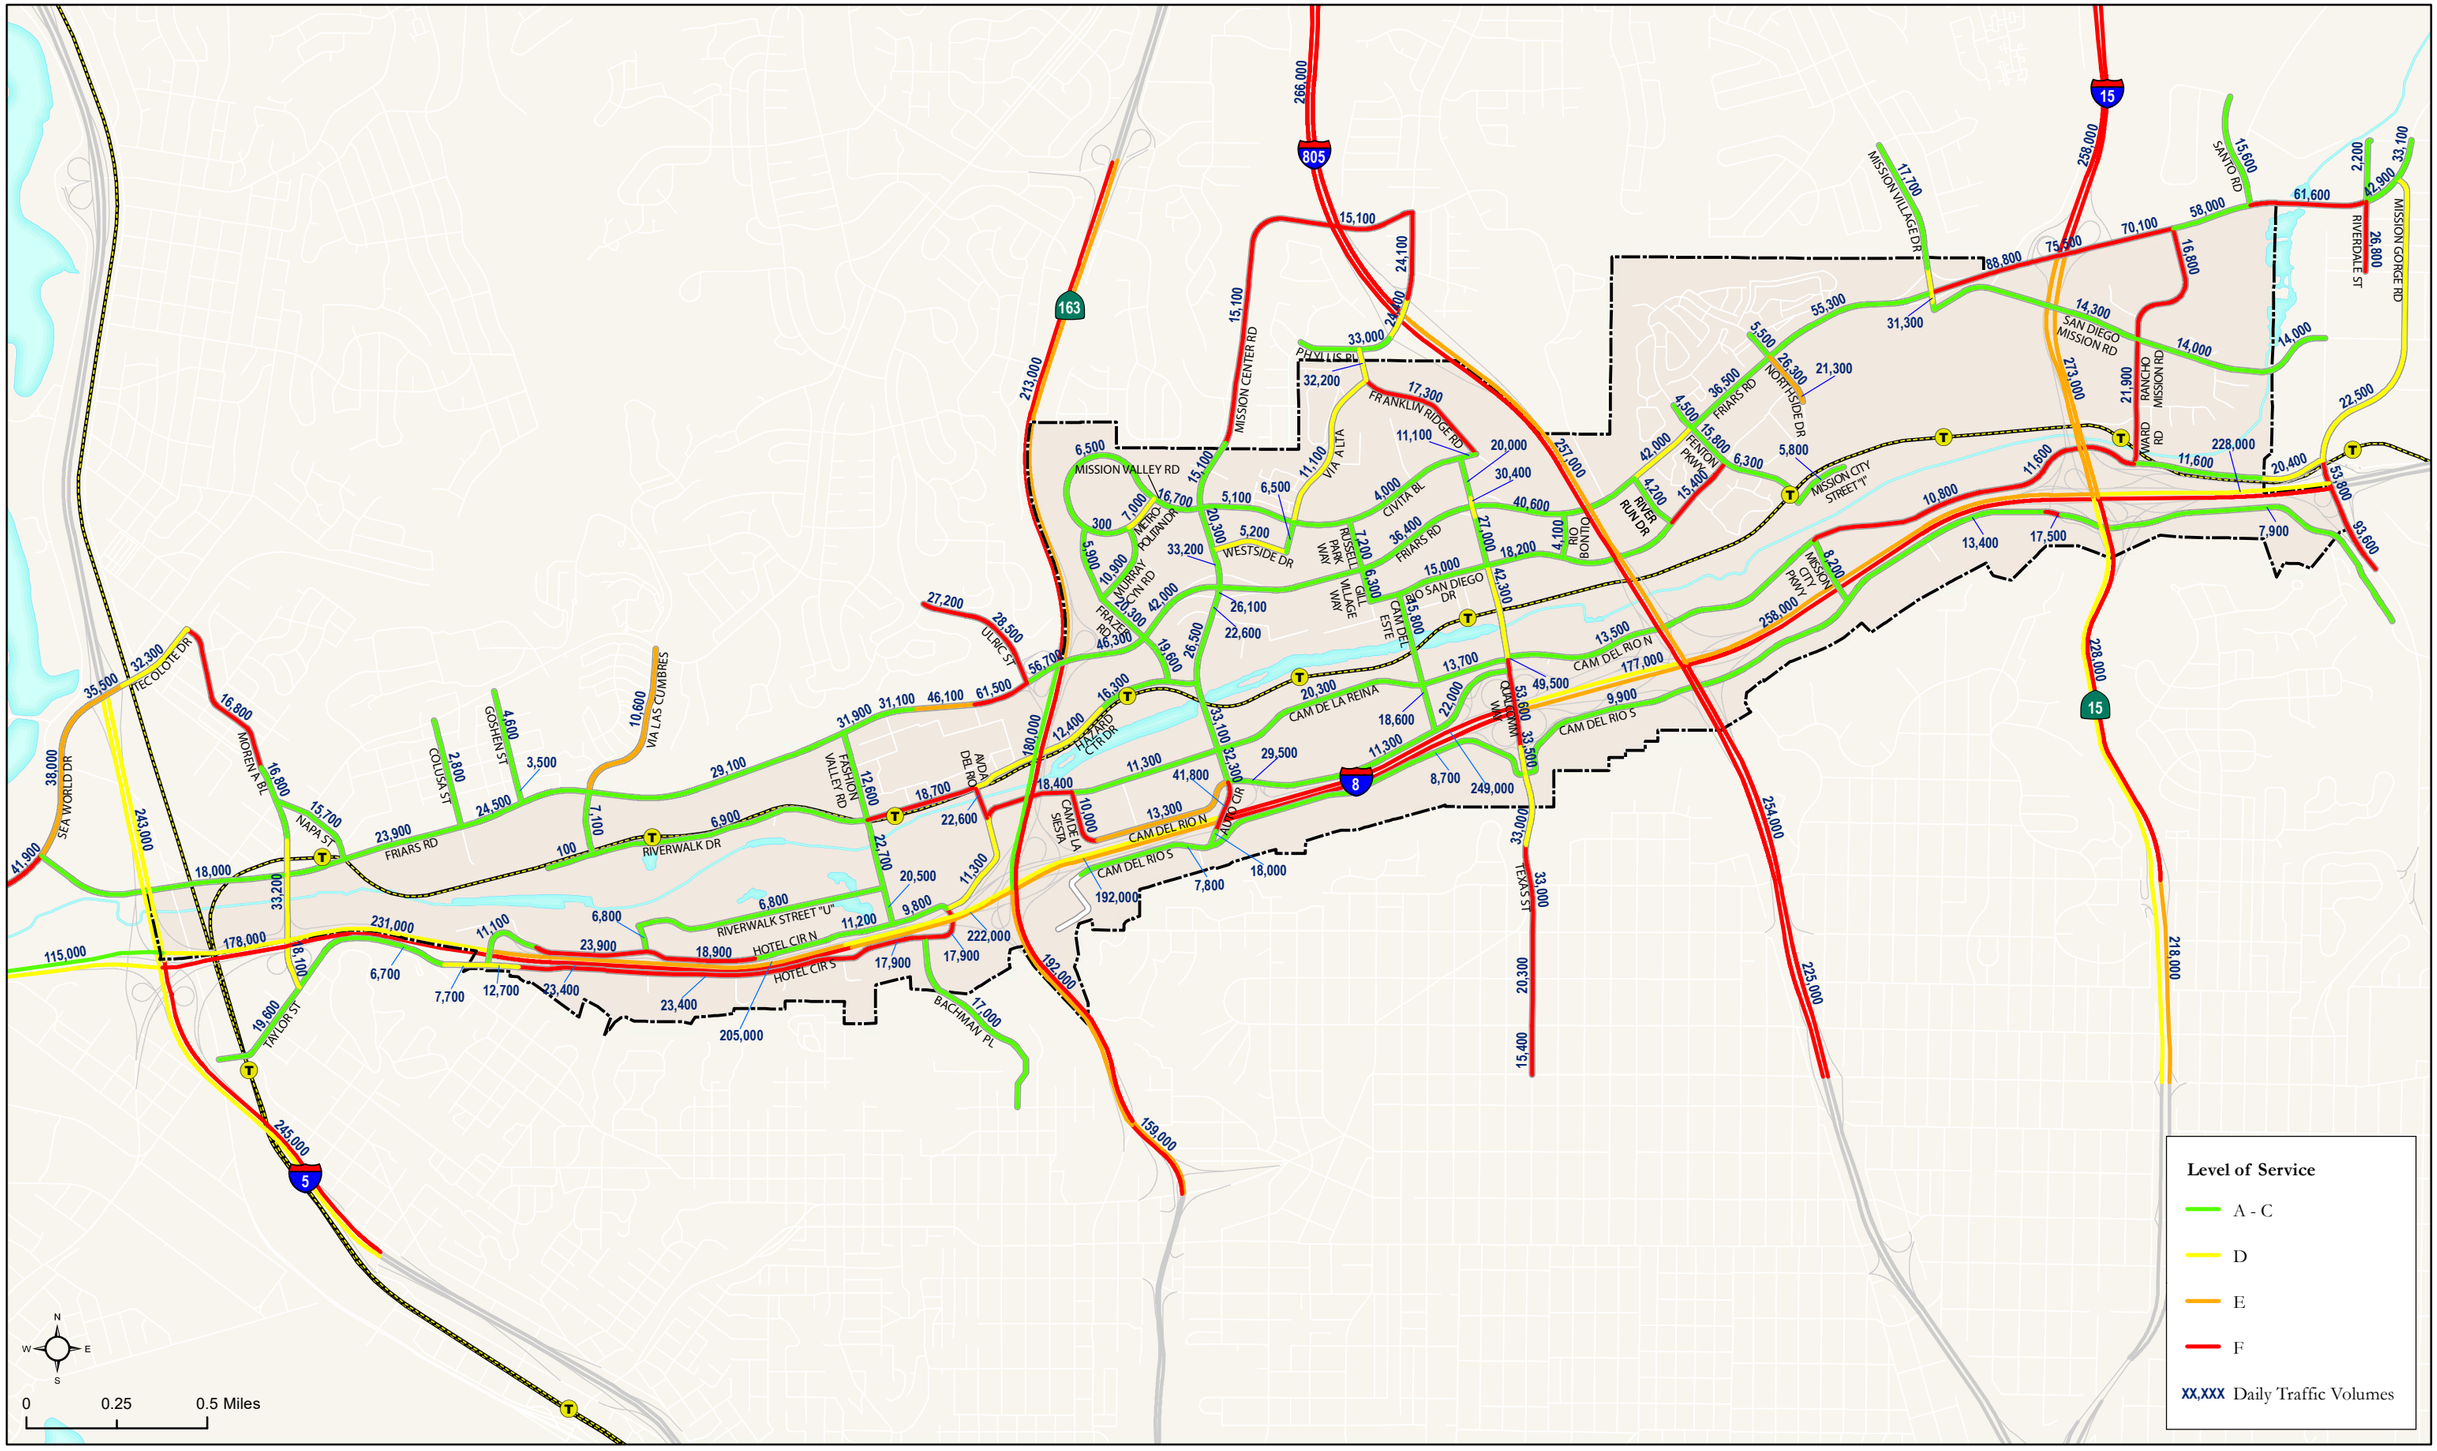
7.1 Traffic Operations

Based on discussion above, traffic operations (roadway segment, intersection, freeway segment) under the Cross-Valley Connection Alternative would be the same as those presented under the Two-Lane Via Las Cumbres Alternative.

7.2 Significant Impacts and Mitigation Measures

Significant traffic impacts and mitigation measures identified in the Two-lane Via Las Cumbres Alternative are applicable toward the Cross-Valley Connection Alternative.

8.0 No-Connection Alternative



This chapter discusses the traffic operations under the No-Connection Alternative and assesses potential traffic impacts by comparing the No-Connection Alternative to the existing conditions. Roadway and freeway segments were evaluated in determining traffic impacts associated with the No-Connection Alternative. Since this is not an alternative for possible adoption, intersection-level analysis was not conducted and mitigation measures were also not provided.

The No-Connection Alternative land use and network are similar to the CPU land uses and Four-Lane Via Las Cumbres Alternative network with the following exceptions:

- No Via Las Cumbres or Cross Valley connection between Riverwalk Drive and ~~Levi Cushman Street "B"~~Riverwalk Street "U".
- Implementation of the I-8 Corridor Concept Alternative 3A Phase I only - construction of slip ramps and removal of existing ramps along Hotel Circle North and Hotel Circle South. No Via Las Cumbres bridge across I-8 between Hotel Circle North and Hotel Circle South.
- No Fenton Parkway connection between ~~New Street "I"~~Mission City Street "I" and Camino Del Rio North.

8.1 Roadway Segment Analysis

The roadway segment analysis was conducted for the No-Connection Alternative roadway classifications. Figure 8-1 and Table 8.1 display the projected ADT volumes and associated roadway LOS under No-Connection Alternative conditions. Table 8.1 also identifies any potential traffic impacts associated with the No-Connection Alternative when comparing to the existing conditions.

Notes:
Bold letter indicates substandard LOS E or F.
RM = Raised Median.
SM = Striped Median.
TWLTL = Two-Way Left-Turn Lane. Turn pocket(s) may be considered in place of TWLTL.
NFP = No Fronting Property.
SI = Significant Impact.
[1] Capacity for a 7-Ln Prime Arterial is calculated assuming that each additional lane above a 6-Ln Arterial adds 5,000 ADT for LOS A, 7,500 ADT for LOS B and 10,000 ADT for LOS C, D, and E.
[2] Shopping Center Driveway was analyzed as a 3-Ln Collector w/ TWLTL.

As shown in Table 8.1, based on the criteria documented in Section 2.3, the CPU land uses and No-Connection Alternative will result in a LOS of E or F along the following 45 roadway segments, and have a significant traffic impact to the following 41 roadway segments in **bold**, when comparing to the existing conditions (No Connection Alternative Plan-to-Ground):

- **Sea World Drive, Mission Bay Parkway to Friars Road (LOS F, Δ in V/C 0.193)**
- **Sea World Drive, Friars Road to I-5 SB Ramps (LOS E, Δ in V/C 0.213)**
- **Tecolote Road, I-5 SB Ramps and I-5 NB Ramps (LOS E, Δ in V/C 0.126)**
- **Friars Road, Fashion Valley Driveway to Avenida De Las Tiendas (LOS E, Δ in V/C 0.385)**
- **Friars Road, Avenida De Las Tiendas to Ulric Street/SR-163 SB Ramps (LOS F, Δ in V/C 0.42)**
- **Friars Road, Mission Village Drive to I-15 SB Ramps (LOS F, Δ in V/C 0.388)**
- **Friars Road, I-15 SB Ramps to I-15 NB Ramps (LOS F, Δ in V/C 0.482)**
- **Friars Road, I-15 NB Ramps to Rancho Mission Road (LOS F, Δ in V/C 0.264)**
- **Friars Road, Santo Road to Riverdale Street (LOS F, Δ in V/C 0.304)**

8.2 Freeway Segment Analysis

Freeway improvements within the Mission Valley study area under the Adopted Community Plan scenario are assumed to be the same as those identified in Chapter 4, derived from the Revenue Constrained scenario of SANDAG's *San Diego Forward: The Regional Plan* (2015), the currently adopted regional transportation plan, and are anticipated to be implemented by 2050.

Table 8.2a and Table 8.2b present the AM and PM peak hour freeway segment analysis results, respectively, as well as any potential traffic impacts associated with the CPU land uses and No-Connection Alternative when comparing to the existing conditions. HCS freeway segment analysis worksheets are provided in Appendix O.

Table 8.2a Freeway Segment Level of Service Results – No-Connection Alternative AM Peak Hour

Notes:
Bold letter indicates LOS E or F.
[1] M = Mainline; A = Auxiliary Lane.
[2] D = Directional Split.
[3] K = Peak Hour %.
[4] HVF = Heavy Vehicle Factor.

As shown, the following 34directional mainline freeway segments are projected to operate at LOS E or F. Based on the significant impact criteria outlined in Chapter 2, implementation of the CPU land uses and No-Connection Alternative would result in a significant impact on 32 of those directional segments, as is depicted in **bold**:

- **I-8 EB, I-5 Interchange to Morena Boulevard (PM LOS F, Δ in Speed -23.6)**
- **I-8 EB, Morena Boulevard to Taylor Street (AM LOS E, Δ in Speed -9.7; PM LOS F, Δ in Speed -16.2)**
- **I-8 EB, Taylor Street to Hotel Circle (PM LOS F, Δ in Speed -4.4)**
- **I-8 WB, Taylor Street to Hotel Circle (AM LOS E, Δ in Speed -2.9)**
- **I-8 EB, Hotel Circle to SR-163 Interchange (PM LOS E, Δ in Speed -2.2)**
- I-8 EB, SR-163 Interchange to Mission Center Road (PM LOS E, Δ in Speed 7.4) – not impacted
- **I-8 EB, Mission Center Road to Qualcomm Way / Texas Street (AM LOS E, Δ in Speed -10.6; PM LOS F, Δ in Speed -10.6)**

ISTRUCTION NOTES

E CONTROLLER ASSEMBLY WILL BE STATE-FURNISHED ALONG WITH A BATTERY CK UP SYSTEM (BBS). THE CONTRACTOR WILL BE REQUIRED TO INSTALL THE NTROLLER ASSEMBLY ON FOUNDATION. IN ADDITION TO THE 252 DISCRIMINATOR CARD E CONTRACTOR SHALL FURNISH AND INSTALL VIDEO DETECTION UNITS (VDU), A FLAT NEL DISPLAY, BATTERIES FOR THE BATTERY BACK UP SYSTEM AND ONE SERIAL TO ERNET CONVERTER UNIT (SECU). See Sheet [illegible] FOR EQUIPMENT CONFIGURATIONS DETAILS

RNISH AND INSTALL TYPE III-BF SERVICE EQUIPMENT.

STALL EMERGENCY VEHICLE DETECTOR (EVD) PER CALTRANS STANDARD PLANS -4E.

RNISH AND INSTALL R3-4, R3-18 AND R61-7(CA) SIGNS PER CALTRANS STANDARD ANS ES-7N.

RNISH AND INSTALL R9-3a SIGN ON SIGNAL POLE. (STRAP AND SADDLE).

RNISH AND INSTALL VIDEO IMAGE SENSOR (VIS) AS SHOWN. SEE SPECIAL PROVISION.

NTRACTOR SHALL VERIFY SERVICE LOCATION AN REQUIREMENT WITH SAN DIEGO GAS D ELECTRIC CO.

ACE PHASE 2 SIGNAL HEAD 17' ABOVE BASE PLAT.

STING RAMP METER CONTROLLER, CONTRACTOR SHALL PLACE A TERMINAL STRIP EXISTING RAMP METER CONTROLLER CABINET TO LAND ALL THREE OCC'S. RNISH AND INSTALL ONE ETHERNET SWITCH IN THE EXISTING RAMP METER NTROLLER CABINET. See controllers Details

R LOOP DETECTOR INSTALLATION ON EXISTING BRIDGE DECK SEE DETAIL "A".

TYPE 15 ELECTROLIER.

STING CONDUIT TO BE REMAIN FOR CONDUCTORS SEE CONDUIT NOTES RUN 17.

STING CONDUIT TO BE REMAIN, REMOVE ALL CONDUCTORS.

CONDUIT NOTES

6 2"C, [illegible]ITING), 3#14 (PEU), 2#8 (RAMP METER POWER).

7 2"C, 2#8 (SIGNAL).

8 2"C, PER SDG&E REQUIREMENTS.

9 2"C, 2DLC.

10 2"C, 1DLC.

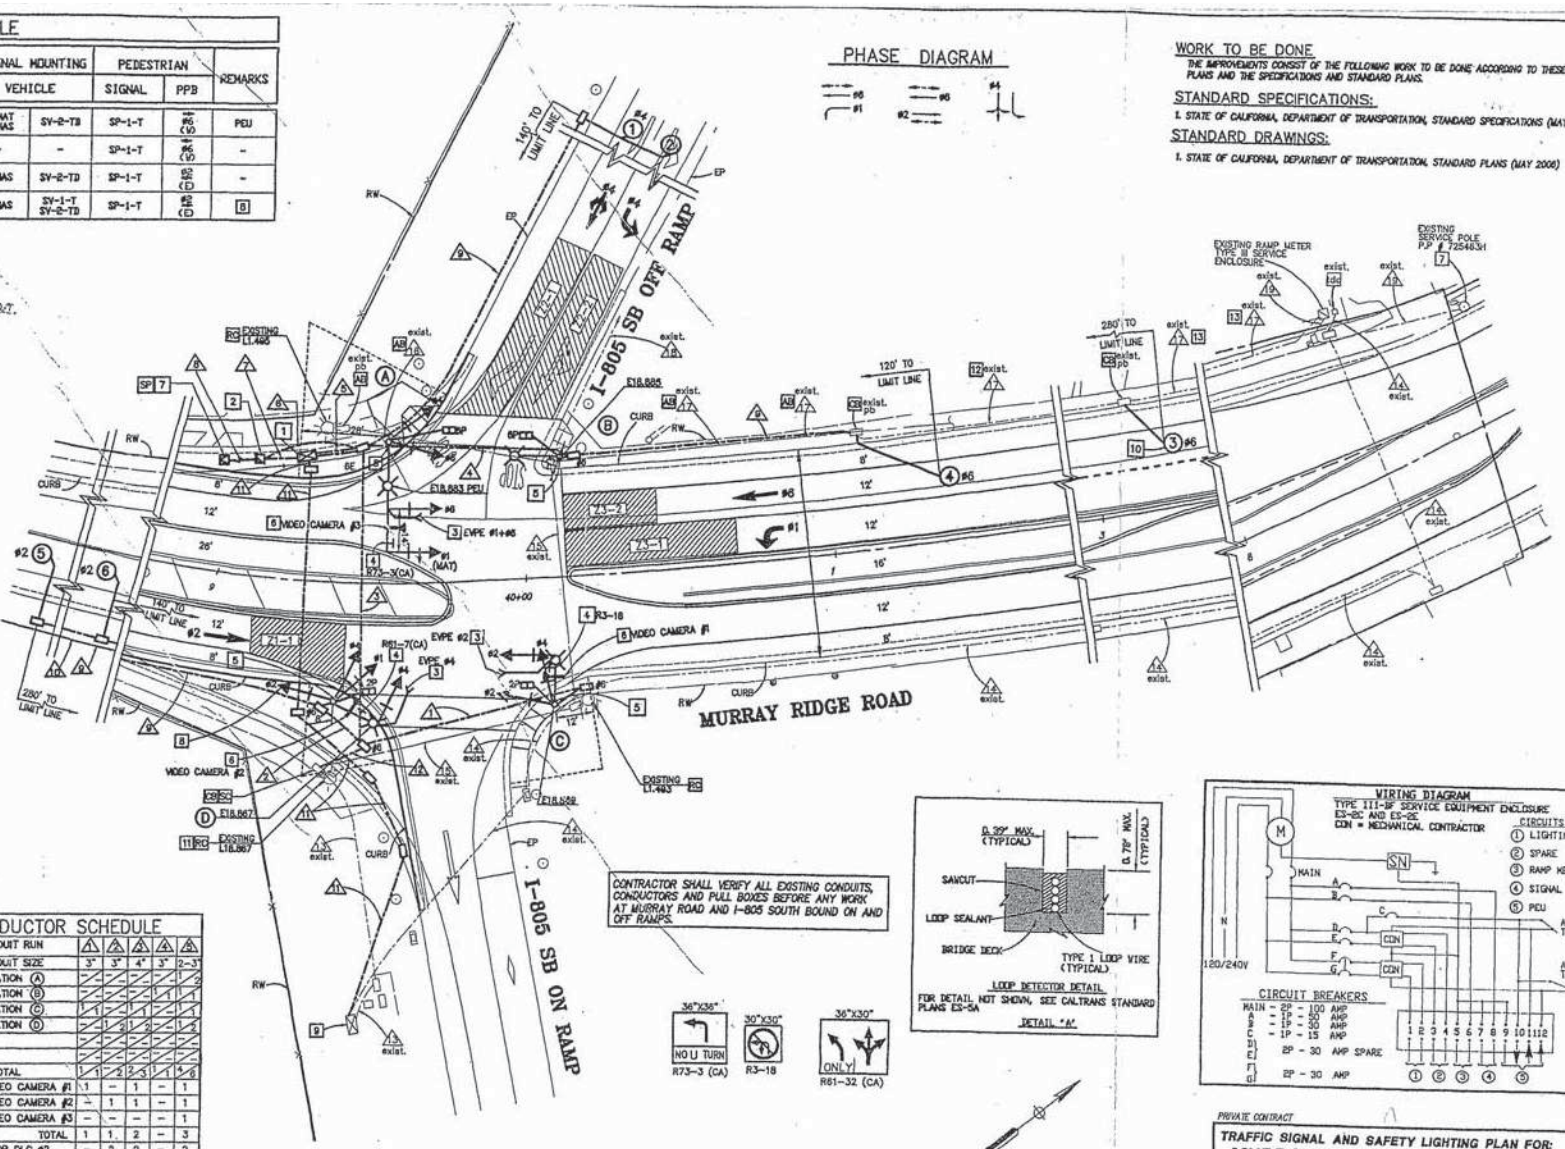
11 2"C, 3-4 PAIR OUTDOOR CATEGORY 5E CABLE (OCC).

12 2"C, 2#8 (RAMP METER POWER).

13 EXISTING 1 1/2"C, 2# 8 (RAMP METER POWER), 2#8 (Ig), 2#8 (RAMP METER POWER), 2dlc.

14 EXISTING 1 1/2"C, 1#8.

15 EXISTING 1 1/2"C, 2# 8 (RAMP METER POWER), 2#8 (Ig), 2dlc. REMOVE 4#8.



16 EXISTING 1 1/2"C, 2# 8 (Ig)

17 EXISTING 1 1/2"C, 2# 8 (RAMP METER POWER), 2#8 (Ig). REMOVE CONDUCTORS AND INSTALL 1DLC.

18 EXISTING 1"C, 2#8c.

19 EXISTING CONDUIT PER SDG&E.

PHASE DIAGRAM

WORK TO BE DONE

THE IMPROVEMENTS CONSIST OF THE FOLLOWING WORK TO BE DONE ACCORDING TO THESE PLANS AND THE SPECIFICATIONS AND STANDARD PLANS.

TRAFFIC PHASE DIAGRAM
STEADY DEMAND SEQUENCE

LOOP DETECTOR DETAIL
FOR DETAIL NOT SHOWN, SEE CALTRANS STANDARD PLAN ES 5A

DETAIL "A"
NOT TO SCALE

NOTES:

1. THE CONTROLLER ASSEMBLY WILL BE STATE-FURNISHED ALONG WITH A BATTERY BACK UP SYSTEM. THE CONTRACTOR WILL BE REQUIRED TO INSTALL THE CONTROLLER ASSEMBLY ON FOUNDATION IN ADDITION TO THE 2&2 DISCRIMINATOR CARD, THE CONTRACTOR SHALL FURNISH/INSTALL VIDEO DETECTION UNITS, A FLAT PANEL DISPLAY, BATTERIES, A BATTERY BACK UP SYSTEM CABINET, AND ONE SERIAL TO ETHERNET CONVERTER UNIT.
2. SALVAGE EXISTING TYPE III CABINET AND FURNISH/INSTALL TYPE III-CF SERVICE EQUIPMENT. SEE WIRING DIAGRAM ON SHEET E-2.
3. INSTALL EMERGENCY VEHICLE PREEMPTION EQUIPMENT, PER CALTRANS PLANS ES-4E.
4. FURNISH/INSTALL MAST ARM MOUNTED SIGNS, PER DETAIL "U", CALTRANS STANDARD PLANS ES-7N.
5. FURNISH/INSTALL VIDEO IMAGE SENSOR SYSTEM TO PROVIDE VIDEO DETECTION FOR APPROACHES AS SHOWN ON PLANS. INCLUDE VIDEO IMAGE SENSOR PROCESSORS, VIDEO PROCESSORS, AND A VIDEO MONITOR IN THE CONTROLLER CABINET. MOUNT VIDEO IMAGE SENSOR CAMERAS. INCLUDE ALL WIRING AND ANCILLERY EQUIPMENT. CAMERAS TO BE MOUNTED PER MANUFACTURER'S RECOMMENDATIONS.
6. RELOCATE TYPE 1-A POLE WITH FLASHING BEACONS AND W3-3 SIGNAGE TO LOCATION SHOWN. REMOVE/SALVAGE OTHER FLASHING BEACON.
7. MAST ARM FOR POLE B TO BE ORDERED WITH TENONS ON THE OPPOSITE SIDE AT THE LOCATIONS SHOWN.
8. FURNISH/INSTALL SIGN ONTO SIGNAL POLE USING STRAP AND SADDLE.
9. FURNISH/INSTALL LEFT ANGLE VISOR PER CALTRANS STANDARD PLAN ES-4C.
10. FURNISH/INSTALL PHOTOELECTRIC UNIT ON POLE D, PER CALTRANS STANDARD PLAN ES-7N.
11. FURNISH/INSTALL 9"x3o SIGN ON SIGNAL POLE. (STRAP AND SADDLE).
12. EXISTING RAMP METER QUEUE LOOPS TO BE REPLACED, AS SHOWN AFTER COLD PLANE AND OVERLAY WORK IS COMPLETED.
13. ADJUST PULL BOXES TO GRADE.
