INTRODUCTION

The 3Roots San Diego Project (3Roots) site is located on 412 acres east of Camino Santa Fe along Carroll Canyon in the city of San Diego, California (see the Vicinity Map). The site address is 9255 Camino Santa Fe, San Diego, CA 92121. The existing site contains Hanson Aggregates Pacific Southwest's Carroll Canyon Plant, which has historically been used for sand and gravel mining and associated uses. Portions of the site are leased to tenants with construction materials-related operations. The quarry activities are ending, so the site will be reclaimed and then redeveloped as a mixed-use project. The site is bounded by a natural canyon and residential development to the north, commercial and industrial development to the south, natural areas and commercial development to the west, and commercial and industrial (including Vulcan Materials Company's Carroll Canyon quarry) development to the east. Carroll Canyon Creek flows in a westerly direction through the site.

Vicinity Map

Under pre-project conditions, the site was used for sand and gravel mining and processing as well as related activities. The mining area occurred north of Carroll Canyon Creek, while the processing, operations, and offices were primarily south of Carroll Canyon Creek. The quarry operations are ending, so the site will be reclaimed and redeveloped.

The project is currently being entitled and will be redeveloped pursuant to a Vesting Tentative Map being prepared by Project Design Consultants. The project includes approximately 259 acres of open space (including approximately 215 acres of natural open space, landscaped slopes, and 44 acres of parkland), a 40 acre mixed-use district (Urban Core), 16.5 acres of medium high residential, 16.7 acres of medium density residential, 69.7 acres of low/medium low density residential, and 39.2 acres of on-site roads and parkways. The project also proposes to extend Carroll Canyon Road nearly 2,000 feet west of Camino Santa Fe.

A FEMA designated floodplain and floodway for Carroll Canyon Creek are currently delineated along the site. The associated *Flood Insurance Rate Maps* (FIRM) are Map Numbers 06073C1343G and 1344G dated May 16, 2012 (see the HEC-RAS Work Map and FIRM Exhibit in the map pocket).

The redevelopment includes alterations and improvements to Carroll Canyon Creek from existing Camino Santa Fe on the downstream (west) end to the upstream (east) limits of the site. The creek modifications are as follows beginning from downstream. Carroll Canyon Creek will be realigned from Camino Santa Fe to the proposed Carroll Canyon Road crossing (see the HEC-RAS Work Map and FIRM Exhibit in the map pocket). The existing creek will be filled and developed, and the creek flow will be redirected to an existing lateral channel south of Carroll Canyon Creek. Grading will be performed along the lateral channel to create a wetlands area and increase the channel capacity. Drop structures will be constructed to lower the channel gradient between drops in order to reduce flow velocities. An approximately 66-foot wide by 24-foot high arch culvert will be constructed where the realigned creek crosses the proposed Carroll Canyon Road. Upstream of the crossing, Carroll Canyon Creek will generally follow its existing alignment, but will be channelized over an approximately 2,700 foot length with a series of drop structures. The drop structures in this reach will also lower the channel gradient between the drops in order to reduce the flow velocities. This will minimize the need for erosion protection along the channel. From the upper end of the channelized segment to the upstream project limits, Carroll Canyon Creek will generally remain under its existing condition, except for some grading and bank protection along the southerly bank.

This report provides existing and proposed condition hydraulic analyses for entitlement purposes. The proposed condition analyses reflect PDC's Vesting Tentative Map. The Carroll Canyon Creek floodplain and floodway will ultimately be revised to follow the new alignment. A Conditional Letter of Map Revision and Letter of Map Revision will be prepared, when needed, for the proposed creek conditions.

HYDRAULIC ANALYSES

Hydraulic analyses have been performed for PDC's Vesting Tentative Map. Carroll Canyon Creek through the site has been analyzed and its floodplain and floodway are currently mapped by FEMA. The effective FEMA models are from a September 1982 HEC-2 and a February 2005 Letter of Map Revision (see the excerpts in Appendix A). The earlier September 1982 HEC-2 covers the entire study reach covered by this report. The 2005 LOMR updates the portion of the

reach between FIRM cross-sections AS and BJ. The following describes the hydraulic modeling input parameters and entitlement-level results for the 3Roots project.

Existing Conditions

Since the FEMA effective data was prepared many years ago, an updated existing condition HEC-RAS model was created primarily from recent topographic mapping prepared for the project. The following describes the input parameters. The existing condition cross-sections at the upstream (cross-section 54) and downstream (cross-section 27.1) study reach limits are from the effective HEC-2 model to allow tie-in with the FEMA effective data. The remaining cross-sections were created from the 3Roots project's 2-foot contour interval topographic mapping flown on November 3, 2016, where available. This mapping does not extend over the southerly portion of the floodplain from cross-sections 34 to 38.2, so the mapping was supplemented in this area with SanGIS' 2014 2-foot contour interval topographic mapping. The 2016 mapping is on NGVD 29 datum, while the 2014 mapping is on NAVD 88 datum. The elevations of the portion of the cross-sections within the 2014 mapping were reduced by 2.1 feet to convert to NGVD 29, i.e., the analyses in this report are on NGVD 29. This conversion is specified in FEMA's April 5, 2016, *Flood Insurance Study, San Diego County, California and Incorporated Areas* (see Appendix A). The downstream starting water surface elevation was set at the FIRM 100-year water surface elevation (152 feet NAVD = 149.9 feet NGVD 29).

There is an existing bridge and three culverts in the study reach. These were modeled based on field measurements, as-built drawings, and topographic data.

The 100-year flow rates are from the effective model. The flow rate is 5,600 cubic feet per second (cfs) at and below cross-section 27.3, 4,500 cfs from cross-section 27.5 to 34.5, and 3,500 cfs above cross-section 35.

The existing condition roughness coefficients were assigned based on a site visit and review of aerial photographs. The main channel primarily contains cobbles, so a roughness coefficient of 0.040 was assigned for this portion of most cross-sections. The overbank areas contain mature vegetation so a roughness coefficient of 0.075 was assigned for this portion of most cross-sections. There were variations from these typical values in some locations, and the roughness coefficients were adjusted accordingly.

The existing condition HEC-RAS results are included in Appendix B. The existing condition model starts just downstream of Carroll Canyon Road, which is approximately 6,200 feet west of the site. Improvements will ultimately extend towards this location, so it was included in the current modeling. The model extends just upstream of the easterly site boundary.

Proposed Conditions

The existing condition model was revised to reflect the proposed grading and channel realignment from PDC's Vesting Tentative Map. Cross-sections 38.8 to 50 were modified in the proposed condition model. Since a portion of Carroll Canyon Creek is being realigned, proposed condition cross-sections 38.9 to 48.9 are at different locations than the existing condition cross-sections in this numeric range. Three cross-sections are used at each drop structure. There is one cross-section at the bottom of the drop, one at the top of the drop, and one 5- to 10-feet upstream

of the top of the drop. The proposed culvert at Carroll Canyon Road was represented by the ConSpan Arch option in HEC-RAS based on the proposed dimensions. The roughness coefficients were generally set at 0.040 along the channel bed to represent cobbles and 0.075 beyond the channel bed to represent mature vegetation.

The proposed condition HEC-RAS results are included in Appendix B. The results show that the flow velocities between the drops can generally be lower than the erosive threshold of 6 feet per second (fps). There are some segments along the proposed project (between Camino Santa Fe and Carroll Road, and upstream of the channelization) where the flow velocities are above 6 fps. In these areas, bank protection may be needed or a reduction of the channel gradient can be considered. The City of San Diego's requirement for 2 feet of freeboard is met and the proposed culvert can convey the 100-year flow.

CONCLUSION

Existing and proposed condition 100-year hydraulic analyses have been performed for Lennar's 3Roots San Diego Project's Vesting Tentative Map by PDC. The results show that the proposed channel and culvert can convey the 100-year flow with the required freeboard. In addition, the drop structures can achieve the goal of reducing the flow velocities. Therefore, the entitlement-level analyses show that the proposed channelization is hydraulically feasible. However, bank protection or adjustments may be needed in areas with erosive flow velocities.

The project also proposes to extend Carroll Canyon Road nearly 2,000 feet west of Camino Santa Fe. The 100-year water surface elevations below the Carroll Canyon Road extension and upstream of the site will not be altered by the project (the end of Appendix B combines the existing and proposed condition results to allow comparison). A Conditional Letter of Map Revision and Letter of Map Revision will be processed to update the 100-year floodplain and floodway along the project extents.

APPENDIX A

EFFECTIVE FEMA DATA

Datum Shift from "Flood Insurance Study"

3.3 Vertical Datum

All FIS reports and FIRMs are referenced to a specific vertical datum. The vertical datum provides a starting point against which flood, ground, and structure elevations can be referenced and compared. Until recently, the standard vertical datum in use for newly created or revised FIS reports and FIRMs was the National Geodetic Vertical Datum of 1929 (NGVD). With the finalization of the North American Vertical Datum of 1988 (NAVD), many FIS reports and FIRMs are being prepared using NAVD as the referenced vertical datum.

All flood elevations shown in this FIS report and on the FIRM are referenced to NAVD, with exception of two panels: 06073C2151F and 06073C2152F. These panels were not updated with this revision and are referenced to NGVD. Flooding sources on the non-updated FIRMs include Nestor Creek, Otay River, San Diego Bay, Telegraph Canyon Creek, and Tijuana River. The profile panels and floodway data tables that contain information corresponding with the non-updated panels have been included in NGVD, in addition to all of the data being presented in NAVD. Structure and ground elevations in the community must, therefore, be referenced to NAVD. It is important to note that adjacent communities may be referenced to NGVD. This may result in differences in Base (1-percent-annual-chance) Flood Elevations (BFEs) across the corporate limits between the communities. The conversion factor for each flooding source studied by detailed methods is shown below in Table 12 “Flooding Source Conversion Factor.”

TABLE 12: FLOODING SOURCE DATUM SHIFT VALUES

| Stream Name | Elevation (feet NAVD above NGVD) |
|---|----------------------------------|
| Adobe Creek | +2.2 |

February 2005 LOMR

Federal Emergency Management Agency

Washington, D.C. 20472

OCT 14 2004

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Dick Murphy
Mayor, City of San Diego
202 C Street, 11th Floor
San Diego, CA 92101

IN REPLY REFER TO:
Case No.: 04-09-1311P
Follows Conditional
Case No.: 02-09-1510R
Community Name: City of San Diego, CA
Community No.: 060295
Effective Date of **FEB 10 2005**
This Revision:

Dear Mayor Murphy:

The Flood Insurance Study report and Flood Insurance Rate Map for your community have been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panel(s) revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Federal Insurance and Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Oakland, California, at (510) 627-7103, or the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at <http://www.fema.gov/nfip>.

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at <http://www.fema.gov/nfip>.

**LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)**

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the modified channel and culvert rests with your community. We may request that your community submit a description and schedule of channel and culvert activities.

COMMUNITY REMINDERS

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at <http://www.fema.gov/nfip>.

LETTER OF MAP REVISION DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION (CONTINUED)

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Federal Insurance and Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7103

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at <http://www.fema.gov/nfip>.

**LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)**

PUBLIC NOTIFICATION OF REVISION

Within 90 days of the second publication in the local newspaper, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised BFEs presented in this LOMR may be changed.

A notice of changes will be published in the *Federal Register*. This information also will be published in your local newspaper on or about the dates listed below.

LOCAL NEWSPAPER

Name: *San Diego Daily Transcript*
Dates: 11/04/2004 11/11/2004

102929 101104091311 102IAC

CHANGES ARE MADE IN DETERMINATIONS OF BASE FLOOD ELEVATIONS FOR THE CITY OF SAN DIEGO, SAN DIEGO COUNTY, CALIFORNIA, UNDER THE NATIONAL FLOOD INSURANCE PROGRAM

On June 19, 1997, the Department of Homeland Security's Federal Emergency Management Agency identified Special Flood Hazard Areas (SFHAs) in the City of San Diego, San Diego County, California, through issuance of a Flood Insurance Rate Map (FIRM). The Mitigation Division has determined that modification of the elevations of the flood having a 1-percent chance of being equaled or exceeded in any given year (base flood) for certain locations in this community is appropriate. The modified Base Flood Elevations (BFEs) revise the FIRM for the community.

The changes are being made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (Public Law 93-234) and are in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, Public Law 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65.

A hydraulic analysis was performed to incorporate updated topographic information and the effects of channelization of Carroll Canyon Creek from approximately 1,150 feet downstream of Rehco Road to approximately 850 feet upstream of Fenton Road, a bridge approximately 650 feet downstream of Rehco Road, a culvert approximately 400 feet upstream of Fenton Road, and the extension of Camino Santa Fe. This has resulted in a revised delineation of the regulatory floodway, increases and decreases in SFHA width, and increased BFEs for the revised reach of Carroll Canyon Creek. The table below indicates existing and modified BFEs for selected locations along the affected lengths of the flooding source(s) cited above.

| Location | Existing BFE (feet)* | Modified BFE (feet)* |
|--|-------------------------|-------------------------|
| Approximately 500 feet upstream of Rehco Road | 204 | 209 |
| Approximately 500 feet upstream of Fenton Road | 241 | 249 |

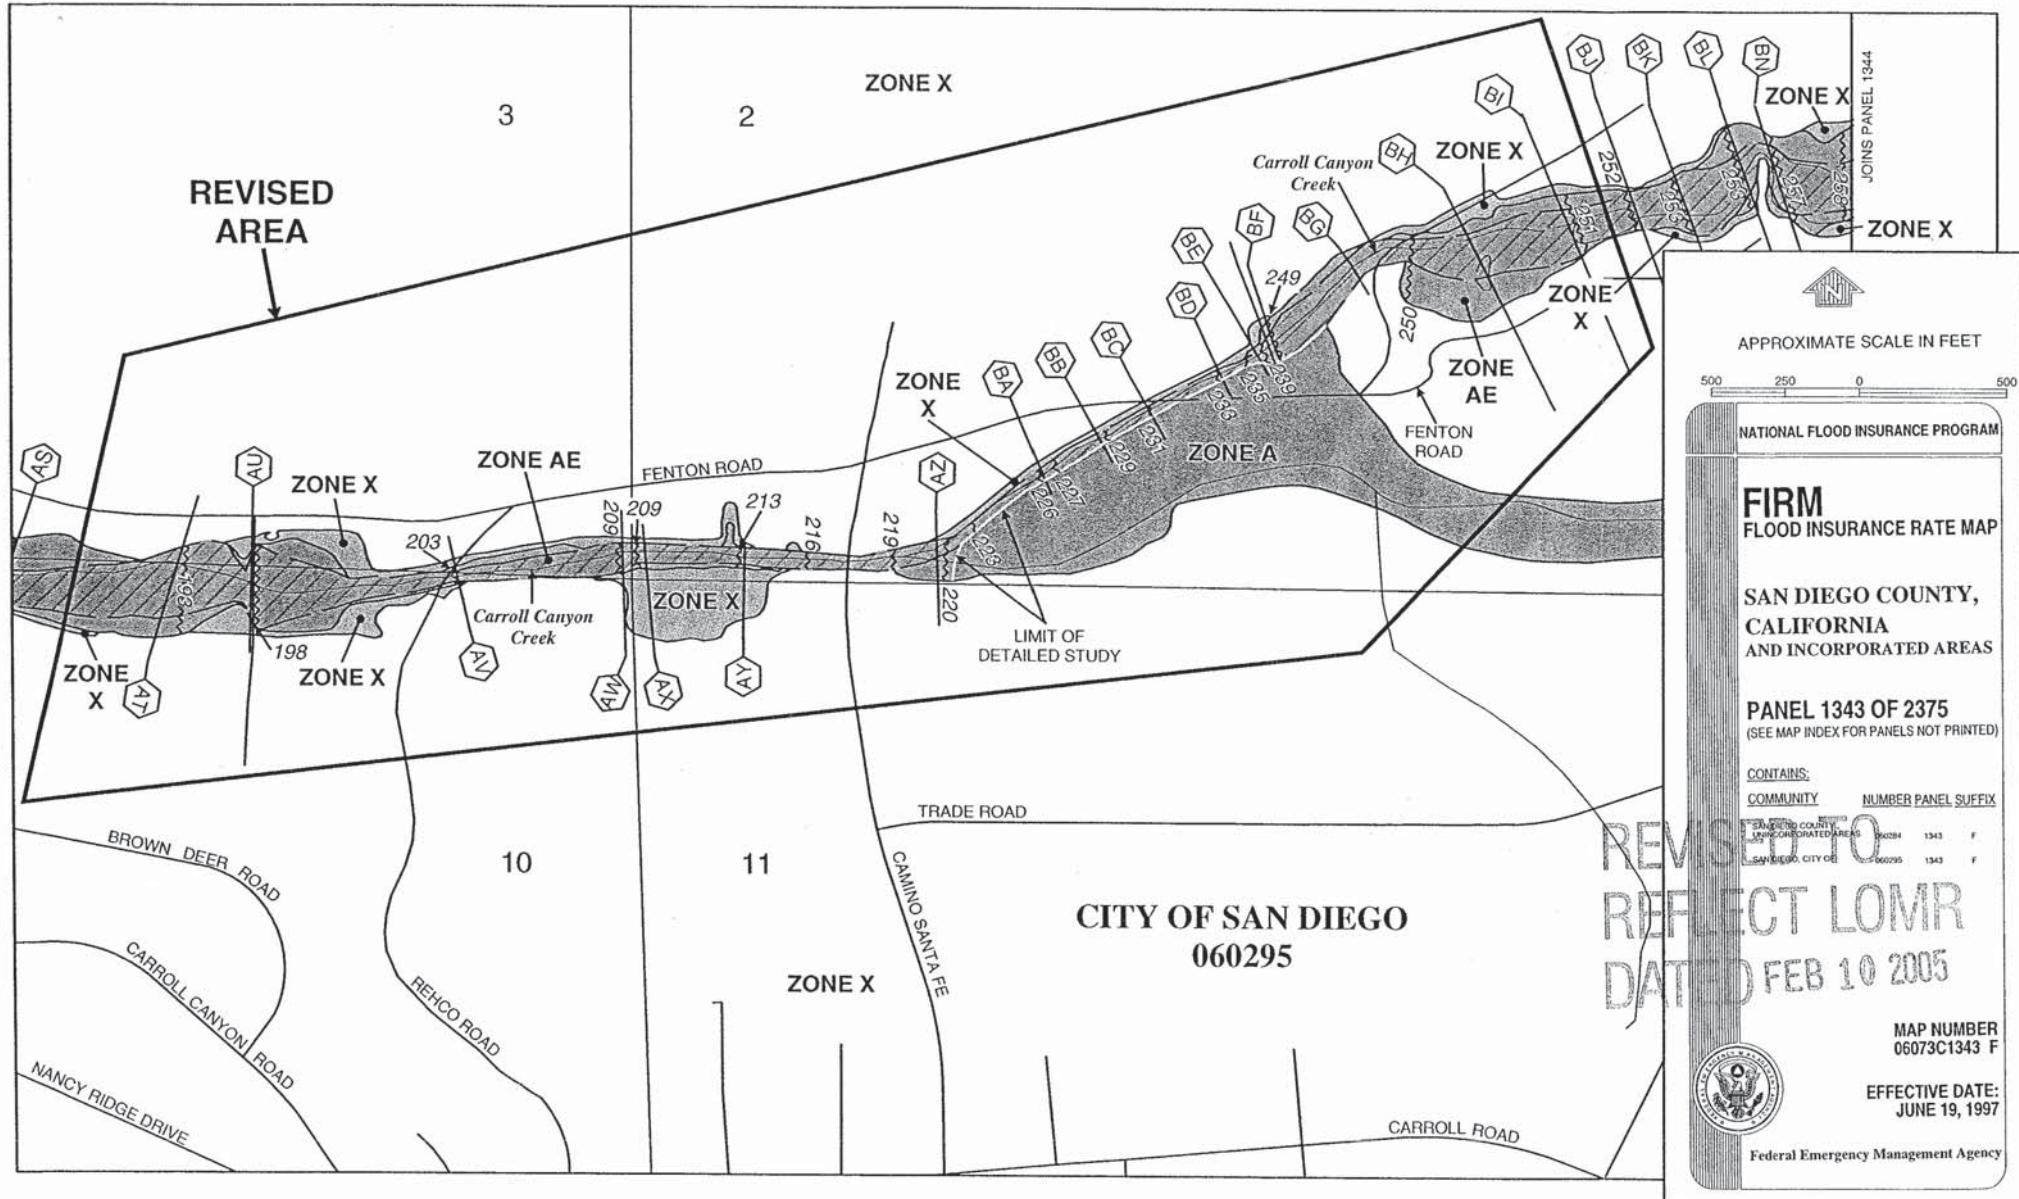

*National Geodetic Vertical Datum, rounded to nearest whole foot

Under the above-mentioned Acts of 1968 and 1973, the Mitigation Division must develop criteria for floodplain management. To participate in the National Flood Insurance Program (NFIP), the community must use the modified BFEs to administer the floodplain management measures of the NFIP. These modified BFEs will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and contents.

Upon the second publication of notice of these changes in this newspaper, any person has 90 days in which he or she can request, through the Chief Executive Officer of the community, that the Mitigation Division reconsider the determination. Any request for reconsideration must be based on knowledge of changed conditions or new scientific or technical data. All interested parties are on notice that until the 90-day period elapses, the Mitigation Division's determination to modify the BFEs may itself be changed.

Any person having knowledge or wishing to comment on these changes should immediately notify:

The Honorable Dick Murphy
Mayor, City of San Diego
202 C Street, 11th Floor
San Diego, CA 92101

GRAPHIC SCALE

400 0 400 800

1 INCH = 400 FEET

NOTES:

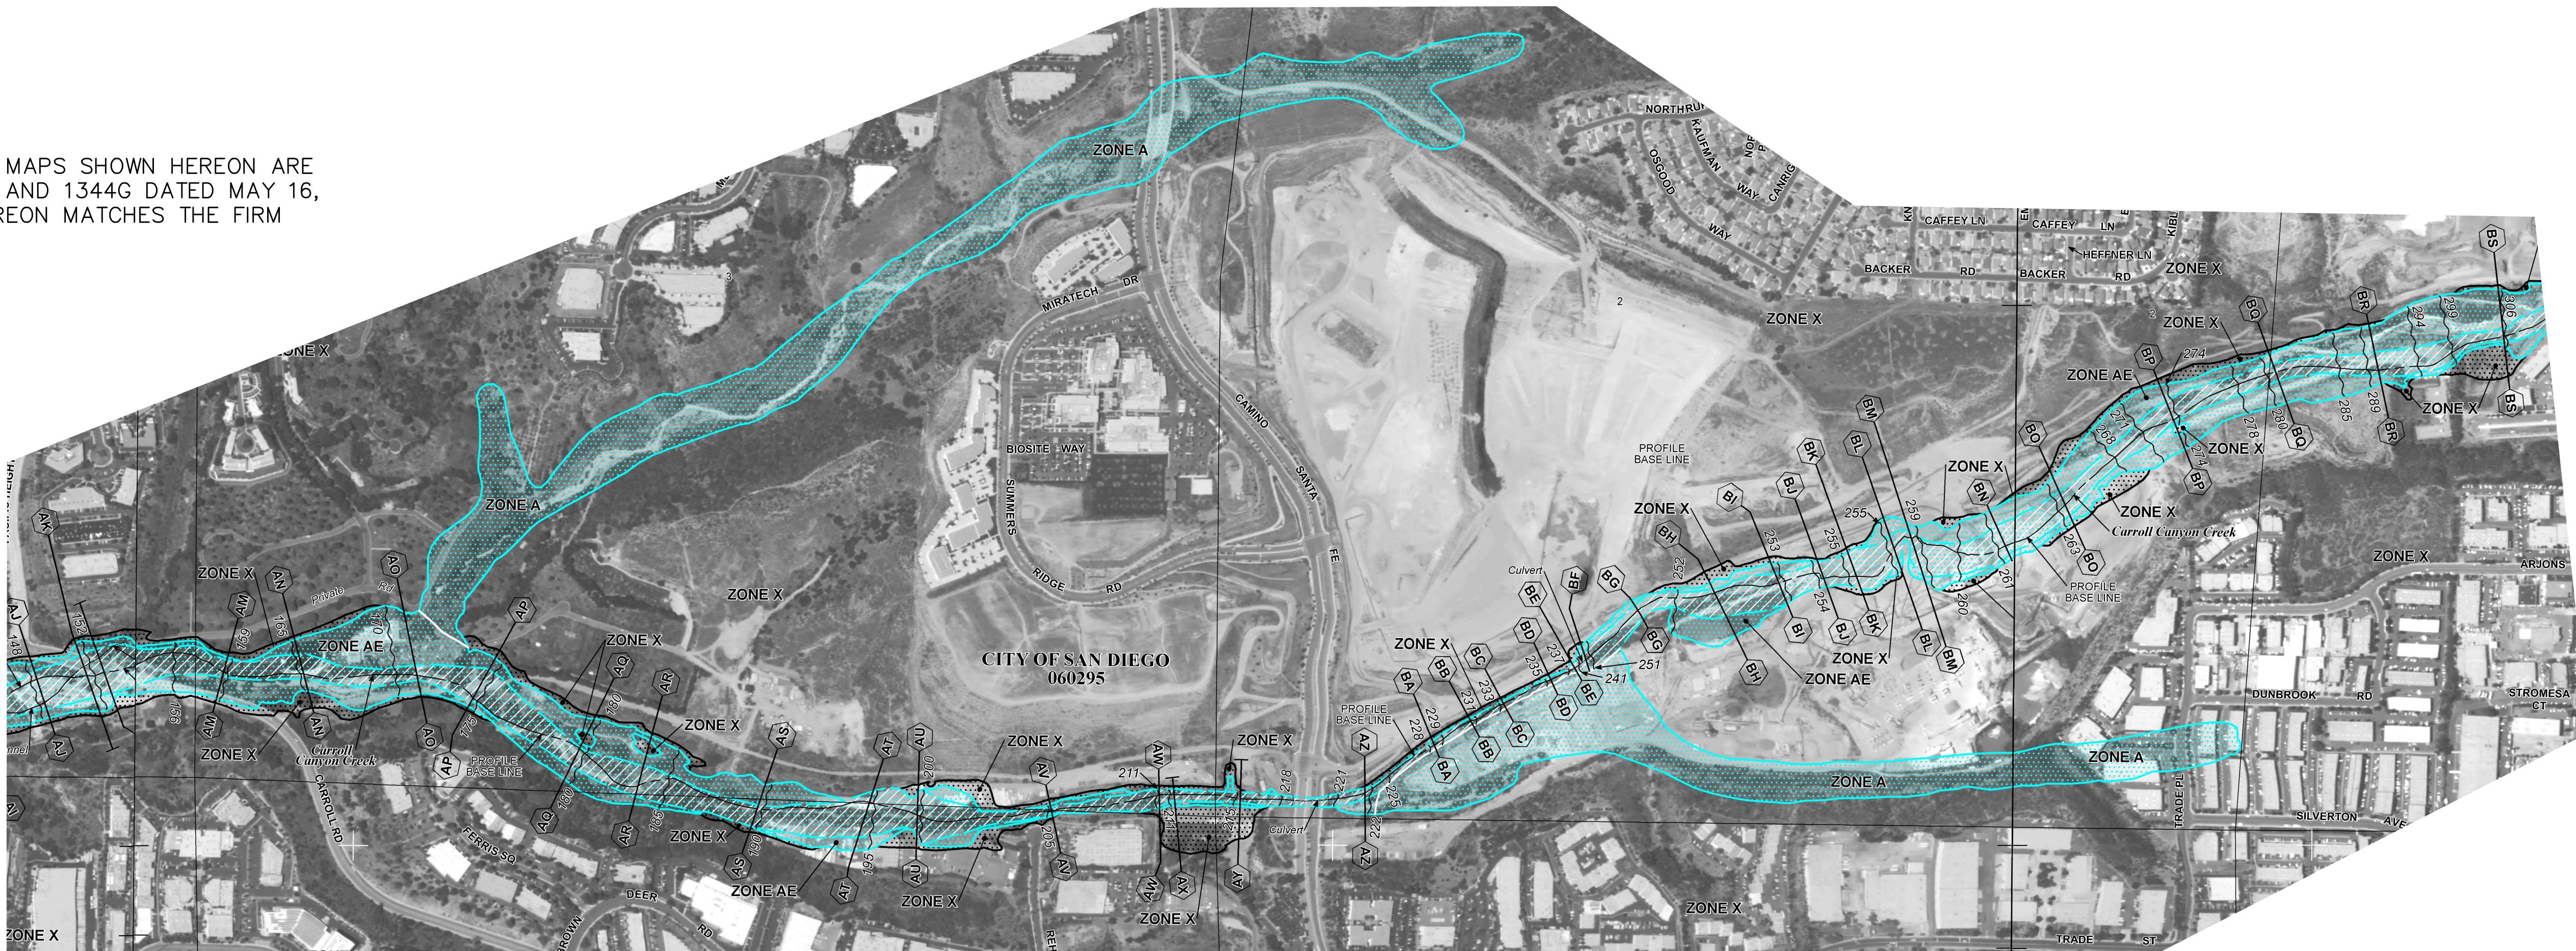

NOTES:
THE FLOOD INSURANCE RATE MAPS SHOWN HEREON ARE
MAP NUMBERS 06073C1343G AND 1344G DATED MAY 16,
2012. THE SCALE SHOWN HEREON MATCHES THE FIRM
SCALE, WHICH IS 1"=500'.

The figure consists of two parts. The top part is a vertical scale bar with a decorative flourish at the top. The bottom part is a horizontal scale bar with markings and a legend.

GRAPHIC SCALE
