

RESIDENTIAL AND MIXED-USE TYPOLOGIES

Existing Project Densities

The following slides depict development projects with their associated residential densities.

Density

Residential density is dwelling units per acre. It is determined by dividing the number of dwelling units (DU's) by the total area of a project site in acres (AC):

$$\frac{\text{Number of Dwelling Units (DU's)}}{\text{Site Area (AC)}} = \text{DU/AC}$$

Building materials, Floor Area Ratio, and applicable building height, setbacks, design guidelines are other factors that will influence how a development project will look.
