EXECUTIVE SUMMARY

Linscott, Law & Greenspan Engineers (LLG) has prepared this access analysis to assess the potential impacts associated with the Badiee Airway Industrial Project (“Project”) in the Otay Mesa Community within the City of San Diego. The Project site is a vacant site zoned IBT-1-1 located on the south side of Airway Road, west of La Media Road and east of Britannia Boulevard in the Otay Mesa Community in the City of San Diego. The project requires a Site Development Permit.

The Project proposes the construction of 235,480 square feet (sf) of warehousing and distribution use for up to eight (8) tenants, and 12,000 sf of multi-tenant office use, for a total of 247,480 sf. The Project site is located on the south side of Airway Road, west of La Media Road, east of Britannia Boulevard in the Otay Mesa Community in the City of San Diego. Access to the site is proposed via two (2) driveways along Airway Road. The proposed Project land uses were deemed consistent with the Otay Mesa Community Plan and therefore, the Proposed Project will be preparing an Addendum to the approved Otay Mesa Community Plan EIR, and thereby focuses on Level of Service as the appropriate CEQA metric to evaluate transportation impacts.

Existing traffic counts for the project were developed using available Year 2019 counts and historical counts from approved projects in the area using a growth factor to reflect a Year 2019 traffic volume baseline.

Based on the proposed land use types, the rates for “warehousing” and “commercial office” found in the City of San Diego’s *Trip Generation Manual, May 2003* were used for the proposed Project. The total Project is calculated to generate approximately 1,518 ADT with 222 trips (165 inbound / 57 outbound) during the AM peak hour and 237 trips (86 inbound / 151 outbound) during the PM peak hour. Access to the Project site is proposed via two (2) driveways on Airway Road. The eastern driveway will be used by trucks accessing the site while the western driveway will be used by light vehicles. Project traffic was distributed and assigned to the street system based on the number of loading docks (66), existing traffic patterns in the area, review of trip distribution of similar land uses from recently approved development projects in the vicinity, anticipated traffic patterns to and from the site, and the Project’s proximity to state highways and arterials.

A total of eighteen (18) cumulative projects were identified for consideration in the Near-Term (Opening Year 2021) scenarios.

Based on the City of San Diego’s significance criteria, a **significant direct project impact** is identified on the following segment as the project traffic contribution exceeds the allowable threshold.

- La Media Road, from SR 905 EB Ramps to Airway Road (LOS E)

Mitigation Measure MM-TRA-1: To mitigate the project’s impact to below a level of significance, the project will widen La Media Road on the east side to construct a second northbound through lane from Airway Road to approximately 600 feet north of Airway Road, where the road is already widened to three through lanes. This mitigation measure has already been proposed as part of the La

Media Retail TIS. This mitigation will be permitted and bonded prior to the issuance of the first building permit and will be constructed prior to the issuance of certificate of occupancy.

As a part of the Project frontage improvements, consistent with the Airway Road ultimate classification of a 4-lane Major (76 feet curb-to-curb), per the City of San Diego Street Design Manual, the Project is proposing to widen Airway Road along the Project frontage by 39 feet from the centerline and provide a 21-foot parkway (7-foot non-contiguous sidewalk and 15-foot parkway) to provide the ultimate roadway width. The Project proposes to construct the frontage improvements and relocate the curb to the south similar to the neighboring properties to the west. While the ultimate width would be provided for a raised median, it is noted that there are currently no raised medians on Airway Road along this stretch. Therefore, the project proposes to maintain the existing 2-lanes (with no median) on its frontage along Airway Road. Consistent with the adjacent properties on Airway Road, the westerly driveway would allow full movements until the time raised median is constructed on Airway Road.

The City of San Diego minimum parking requirements for the proposed project were also evaluated. The project meets the City's parking requirements and it is concluded that sufficient parking will be provided on the project site.

ACCESS ANALYSIS
AIRWAY LOGISTICS CENTER

City of San Diego, California
October 23, 2020

1.0 INTRODUCTION

Linscott, Law & Greenspan Engineers (LLG) has prepared this access analysis to assess the potential impacts associated with the Airway Logistics Center (“Project”) in the Otay Mesa Community within the City of San Diego. The Project site is vacant site zoned IBT-1-1 located on the south side of Airway Road, west of La Media Road and east of Britannia Boulevard in the Otay Mesa Community in the City of San Diego. The project requires a Site Development Permit. **Figure 1-1** shows the vicinity map. **Figure 1-2** shows a more detailed project area map.

The following items are included in this access analysis:

- Project Description
- Existing Conditions Discussion
- Analysis Approach and Methodology
- Significance Criteria
- Existing Conditions Analysis
- Cumulative Projects Discussion
- Trip Generation/Distribution/Assignment
- Near-Term Analysis
- Site Access and Active Transportation
- Parking
- Significant Project Impacts and Mitigation Measures

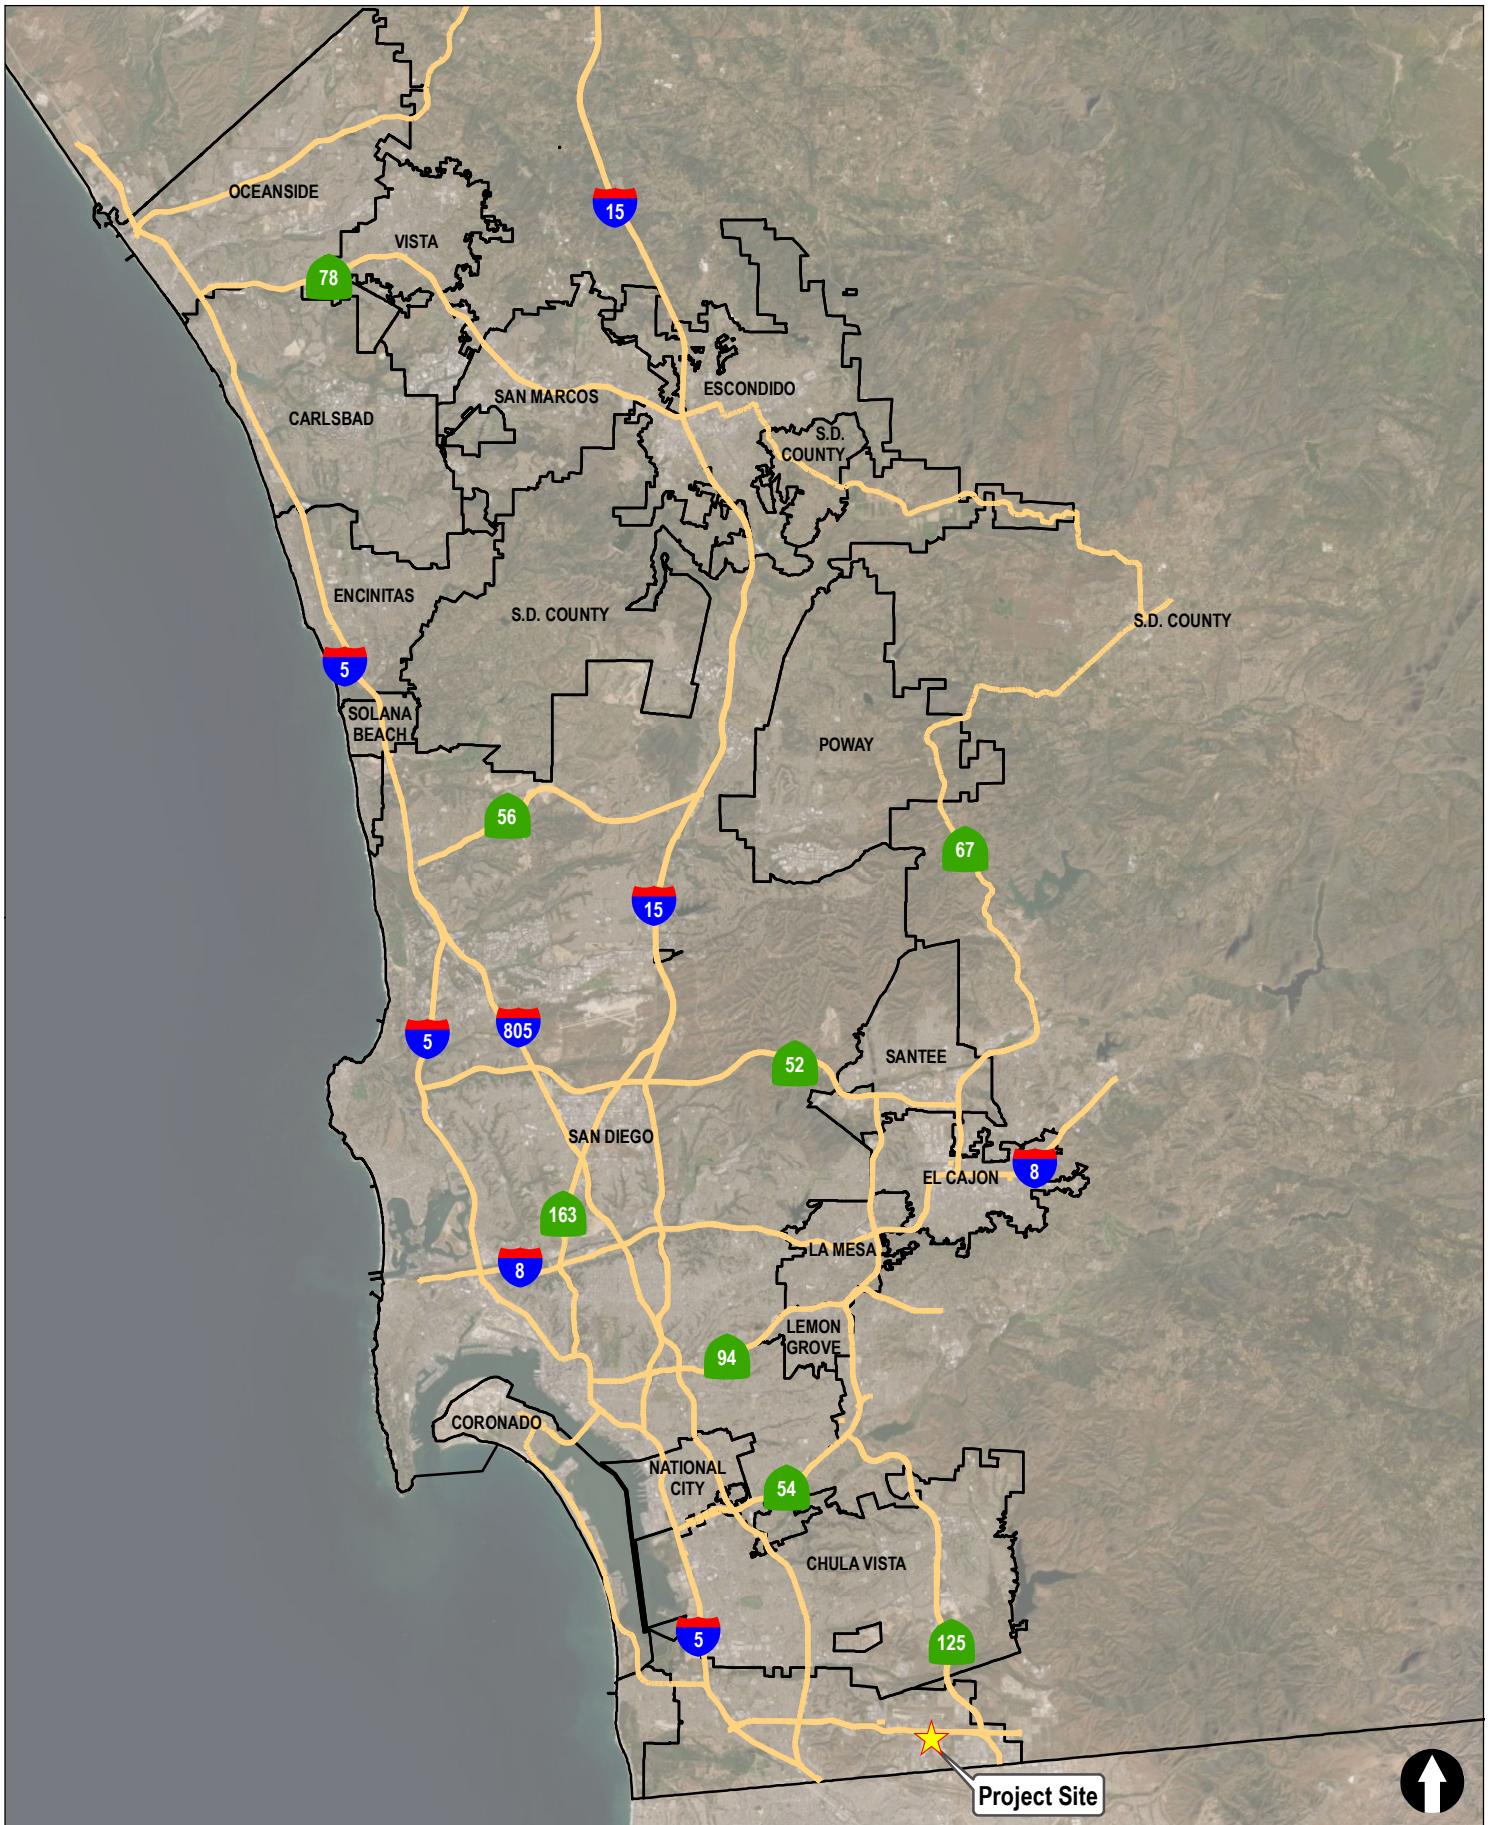

Figure 1-1

Vicinity Map

AIRWAY LOGISTICS CENTER

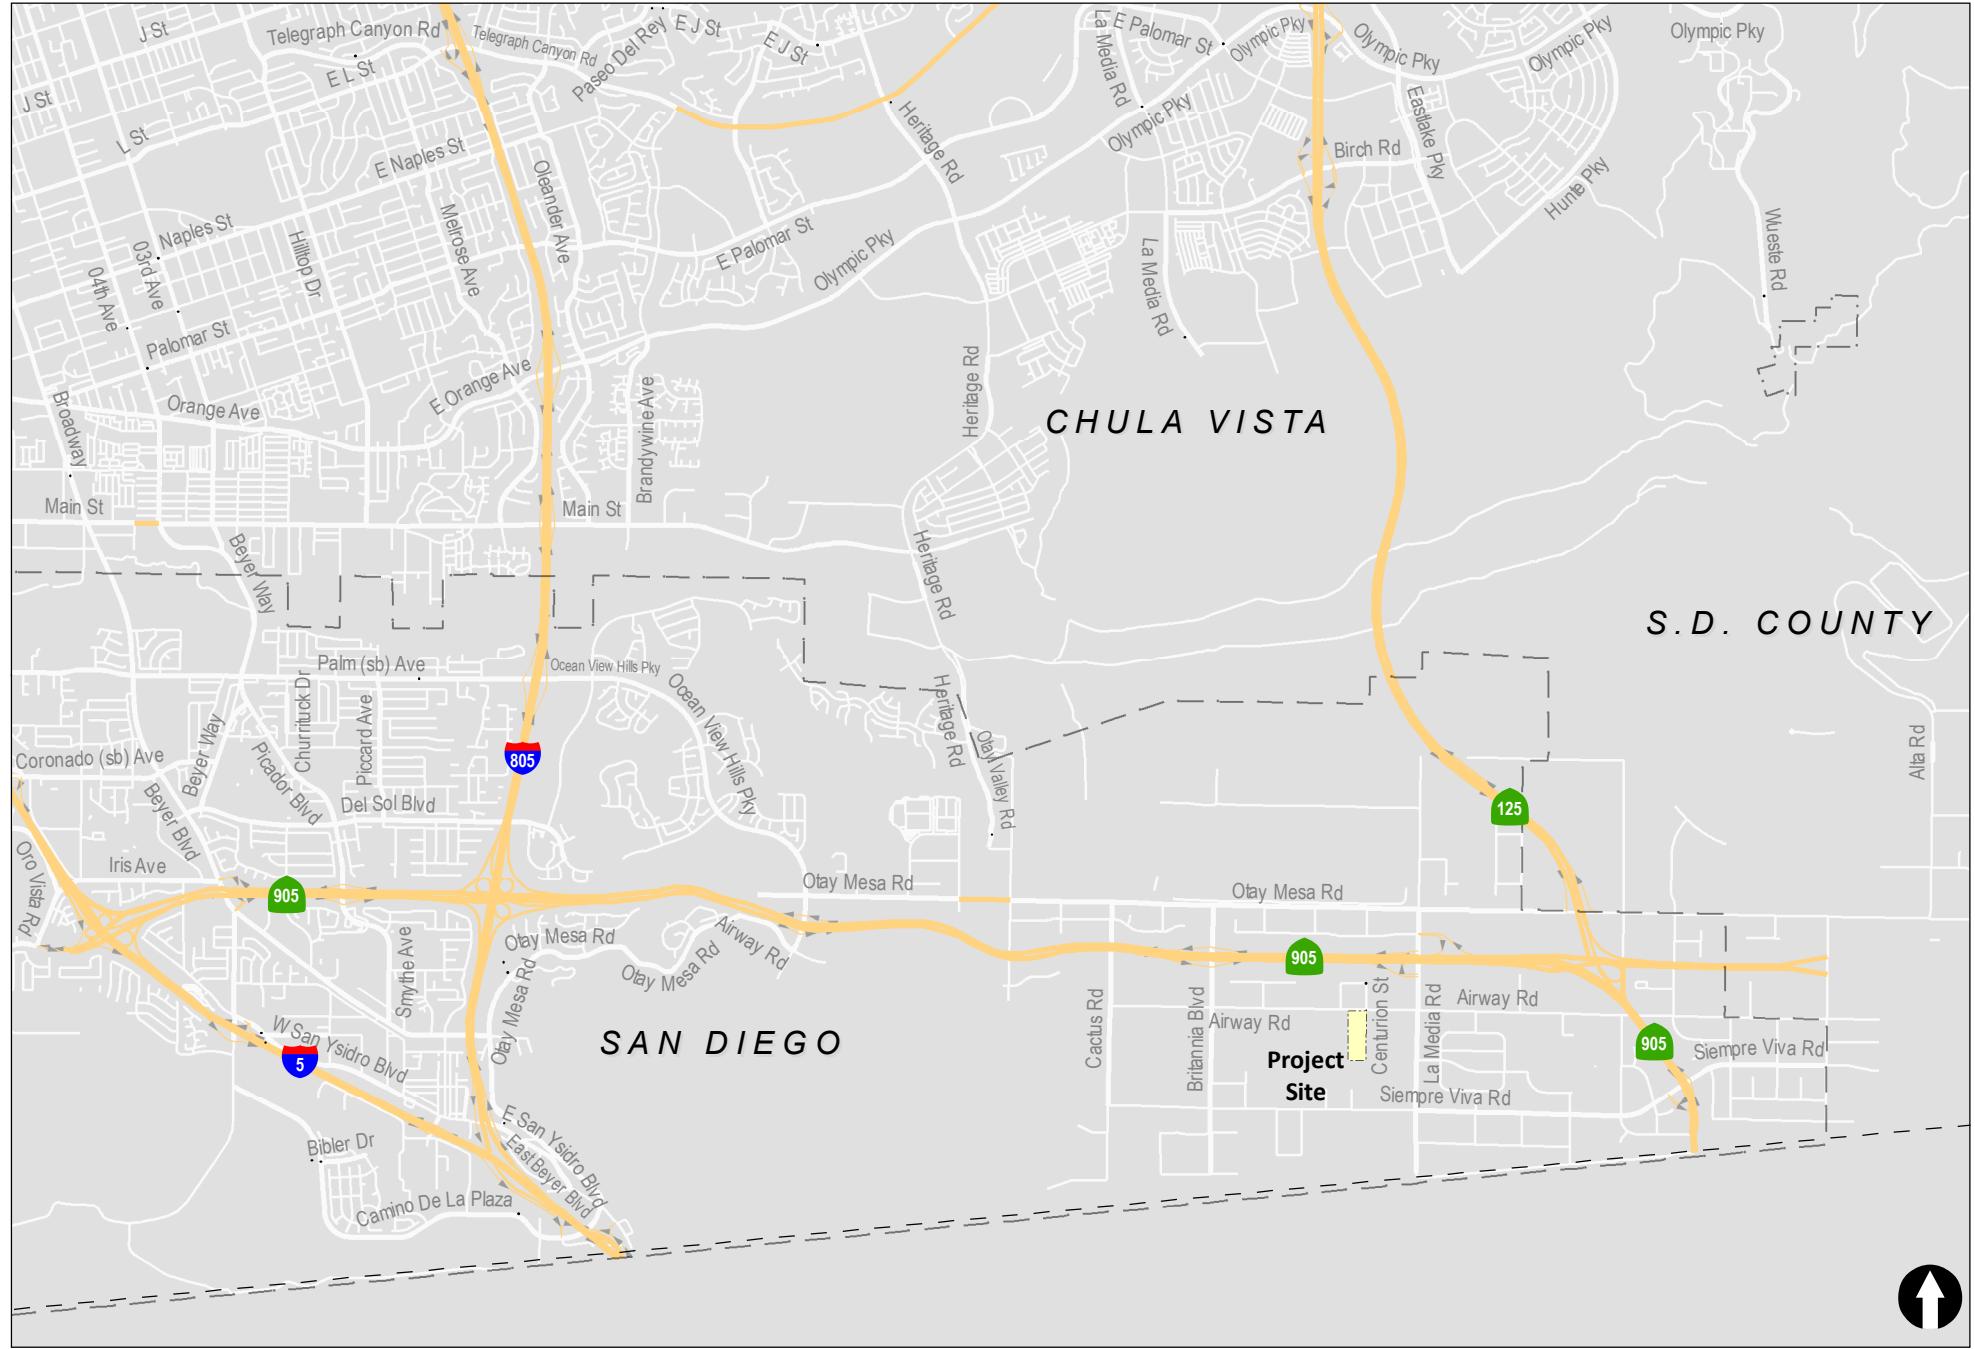

Figure 1-2

Airway Logistics Center

2.0 PROJECT DESCRIPTION

The Project proposes the construction of 235,480 square feet (sf) of warehousing and distribution use for up to eight (8) tenants, and 12,000 sf of multi-tenant office use, for a total of 247,480 sf. The Project site is located on the south side of Airway Road, west of La Media Road, east of Britannia Boulevard in the Otay Mesa Community in the City of San Diego. Access to the site is proposed via two (2) driveways along Airway Road. The proposed Project land uses were deemed consistent with the Otay Mesa Community Plan and therefore, the Proposed Project will be preparing an Addendum to the approved Otay Mesa Community Plan EIR, and thereby focuses on Level of Service as the appropriate CEQA metric to evaluate transportation impacts. **Figure 2-1** shows the proposed site plan.

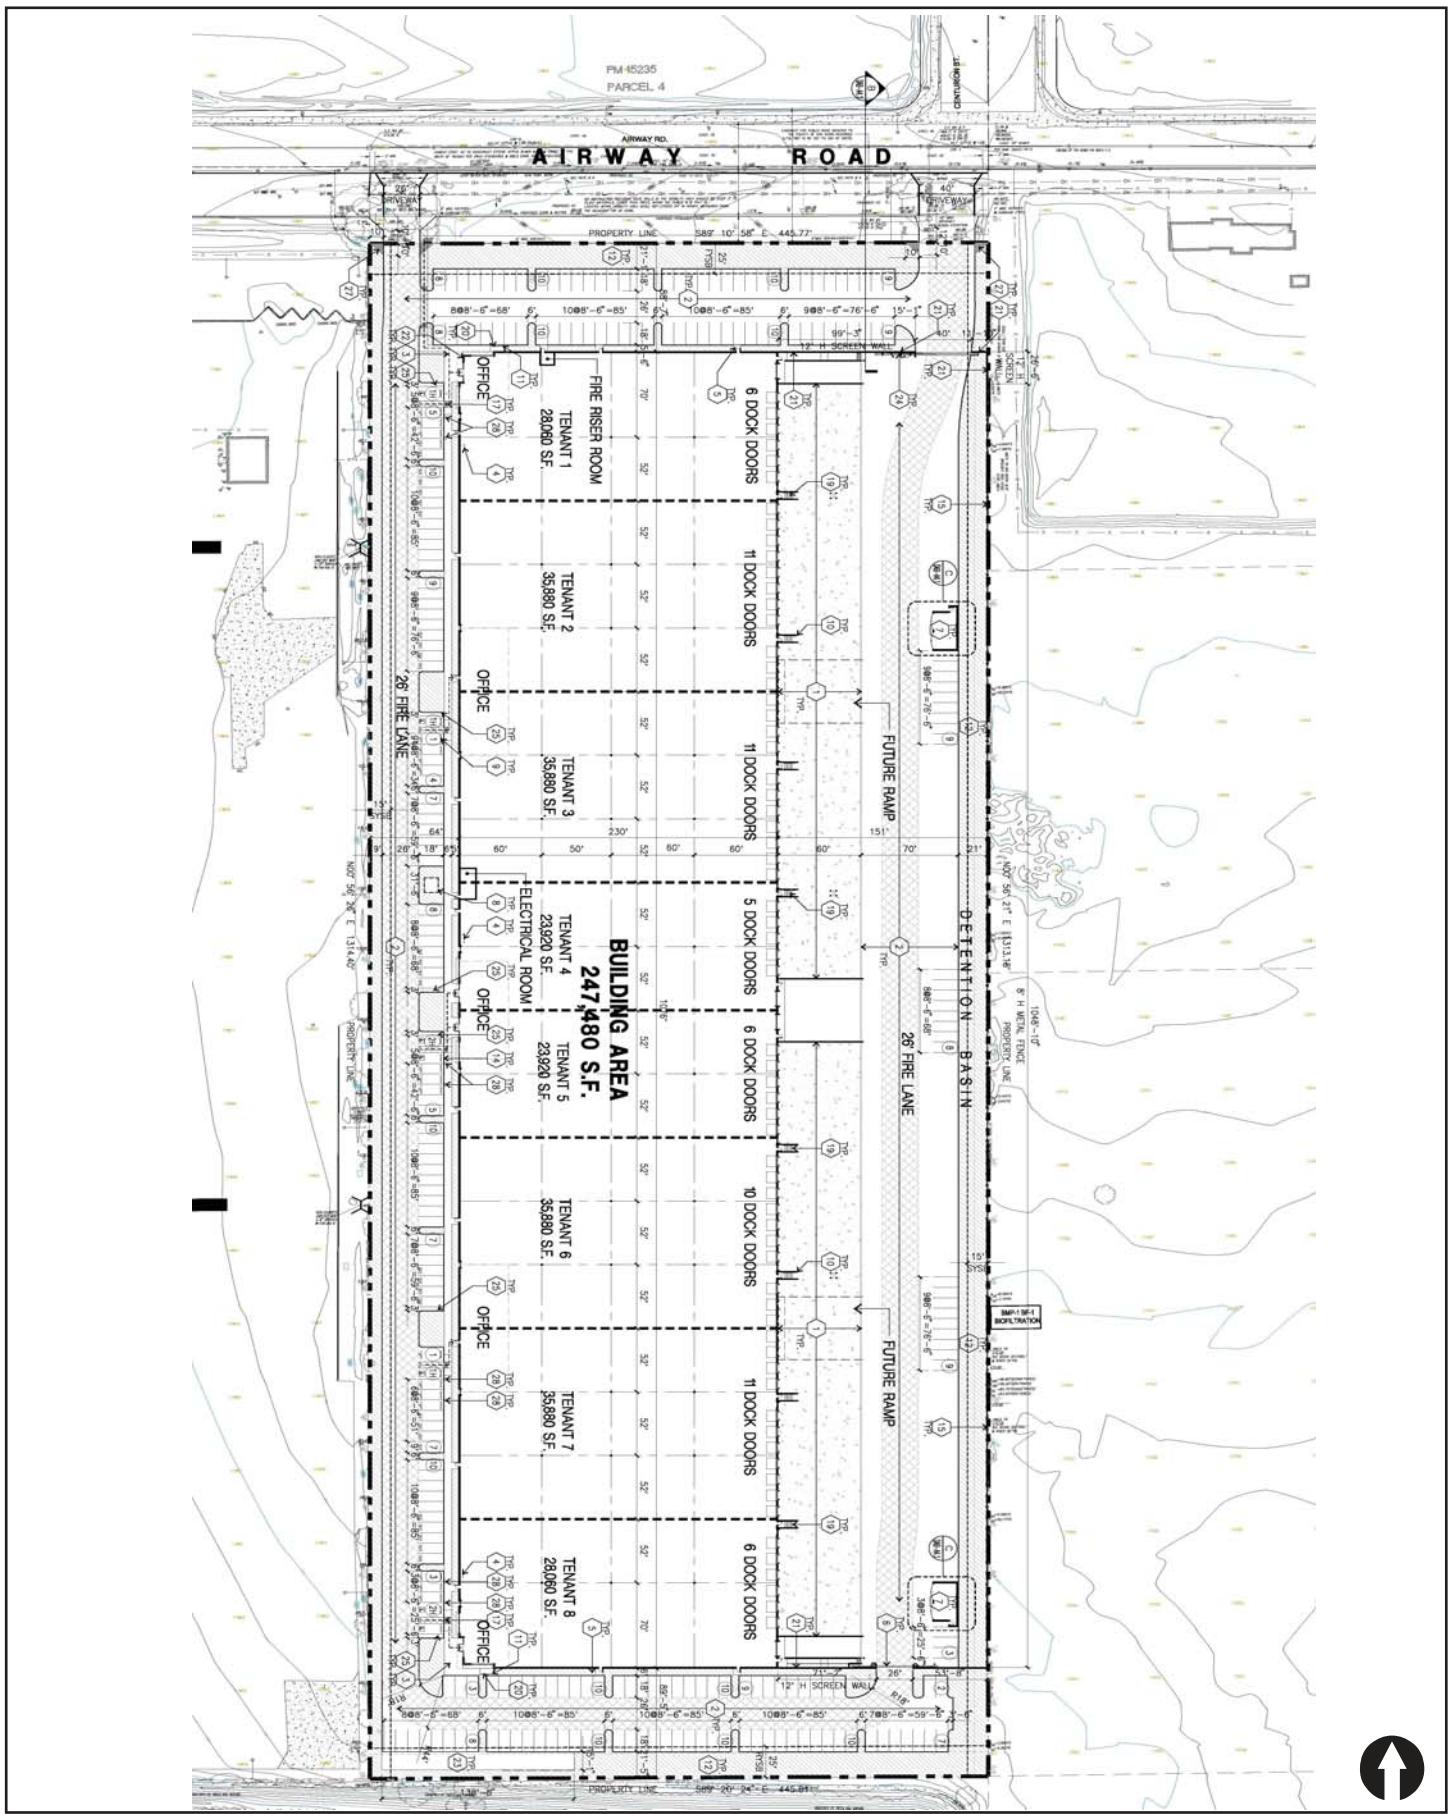

Figure 2-1
Site Plan

3.0 EXISTING CONDITIONS

Evaluation of the traffic impacts associated with the proposed Project requires an understanding of the existing transportation system within the project area. **Figure 3-1** shows an existing conditions diagram, including intersection traffic control type and lane configurations. The study area includes the following intersections and street segments based on the anticipated distribution of the project traffic:

Intersections:

1. Britannia Boulevard / SR 905 WB Ramps
2. Britannia Boulevard / SR 905 EB Ramps
3. La Media Road / SR 905 WB Ramps
4. La Media Road / SR 905 EB Ramps
5. Airway Road / Britannia Boulevard
6. Airway Road / Project Driveway (west) (*Does not Exist*)
7. Airway Road / Centurion Street / Project Driveway (east) (*Does not Exist*)
8. Airway Road / La Media Road

Segments:

Britannia Boulevard

- SR 905 WB Ramps to SR 905 EB Ramps
- SR 905 EB Ramps to Airway Road

La Media Road

- SR 905 WB Ramps/St. Andrews Avenue to SR 905 EB Ramps
- SR 905 EB Ramps to Airway Road

Airway Road

- Britannia Boulevard to Project Driveway (west)
- Project Driveway (west) to Centurion Street/Project Driveway (east)
- Centurion Street/Project Driveway (east) to La Media Road

3.1 Existing Street Network

The following is a description of the existing street network in the study area.

State Route 905 (SR 905) is a 6-lane freeway that provides a direct east-west connection from I-805 to the Otay Mesa Port of Entry. The posted speed limit is 65mph.

Airway Road is currently constructed as a 2-lane Collector between Britannia Boulevard and La Media Road. Airway Road between Britannia Boulevard and La Media Road is classified as a 4-lane Major Road in the City's *Otay Mesa Community Plan Mobility Element*. Curbside parking is

prohibited, and bike lanes are not provided. Per the Otay Mesa Community Plan, Class II bicycle lanes are proposed on Airway Road. Contiguous sidewalks are provided intermittently on Airway Road between Britannia Boulevard and La Media Road. The current curb-to-curb width is 38' with curb and gutter provided on the north side and intermittently on the south side. A bus stop for MTS Route 909 are located on Airway Road within ¼ mile of the project site. The posted speed limit is 35 mph.

Britannia Boulevard is currently constructed as a 6-lane Prime Arterial between SR 905 WB Ramps and SR 905 EB Ramps and as a 5-lane (3 southbound lanes and 2 northbound lanes) Major Arterial between SR 905 EB Ramps and Airway Road. Britannia Boulevard is classified as a 6-lane Prime Arterial from SR 905 to Airway Road in the City's *Otay Mesa Community Plan Mobility Element*. Curbside parking is prohibited. Bike lanes are provided in both directions. Contiguous sidewalks are provided on both sides of Britannia Boulevard between SR 905 and Airway Road. Bus stops for MTS Route 909 are provided on the Britannia Boulevard, approximately 160' south of Otay Mesa Road. The posted speed limit is 40 mph.

La Media Road is currently constructed as a 6-lane Prime Arterial between SR 905 WB Ramps and SR 905 EB Ramps and as a 3-lane Collector (2 southbound lanes and 1 northbound lane) between SR 905 EB Ramps and Airway Road. La Media Road is classified as a 6-lane Prime Arterial from SR 905 to Airway Road in the City's *Otay Mesa Community Plan Mobility Element*. Curbside parking is prohibited. Bike lanes are provided on both sides of La Media Road between Otay Mesa Road and SR 905 EB ramps; however, only a southbound bike lane exists between SR 905 EB ramps and Airway Road. Contiguous sidewalks are provided on both sides of La Media Road between Otay Mesa Road and SR 905 EB ramps; however, a sidewalk exists only on the west side of La Media Road between SR 905 EB ramps and Airway Road. Bus stops for MTS Route 905 are provided on La Media Road. The posted speed limit is 35 mph.

3.2 Existing Traffic Volumes

Given the changes in travel patterns and lower activity due to the CoVid-19 pandemic, existing traffic counts were unable to be conducted. Therefore, historical traffic count data was obtained and used for the proposed project as explained below.

Britannia Boulevard Corridor – Year 2019 (May 22, 2019, Wednesday) traffic counts were available for the listed street segments and intersections below and used as counted as they are within a two-year timeframe and considered current:

- Britannia Boulevard between SR 905 EB Ramps and Airway Road
- Britannia Boulevard / SR 905 WB Ramps Intersection
- Britannia Boulevard / SR 905 EB Ramps Intersection
- Britannia Boulevard / Airway Road Intersection

La Media Road and Airway Road Corridor – The traffic counts from development projects that were recently approved or currently in process were reviewed. These include the approved Sunroad Transportation Impact Study (February 2018) and, Plaza La Media Retail TIS (pending approval, March 13, 2020).

The traffic counts from the above projects were conducted in 2015 and 2016. Based on a comparison of street segment counts along La Media Road (from SR 905 and Airway Road) between the Years 2015/2016 and 2019, a growth rate of 1.6% per year was calculated. Therefore, a growth rate of 2% per year was used and applied to the Year 2016 intersection counts for the SR 905 WB and SR 905 EB Ramps/ La Media Road intersection from the Plaza La Media Retail TIS to reflect a Year 2019 traffic volume baseline.

Similarly, on Airway Road, east of La Media Road, based on a comparison of 2019 count and 2015 count, a growth rate of -4.8% per year was calculated. However, to be conservative, a growth rate of 2% per year was used and applied to the Year 2015 counts for the La Media Road / Airway Road intersection and Airway Road segment between Britannia Boulevard and La Media Road from the Plaza La Media Retail TIS to reflect a Year 2019 traffic volume baseline to ensure traffic volumes as they are within a two-year timeframe and considered current.

Historical traffic count data was unavailable at the Airway Road / Centurion Street intersection. Therefore, traffic volumes at this intersection were forecasted based on the adjacent land use and balanced with the traffic volumes at the adjacent Airway Road / La Media Road intersection.

Figure 3–2 shows the Existing Traffic Volumes. **Appendix A** contains the count sheets, the historical count comparison, and the Centurion Street volumes forecast.

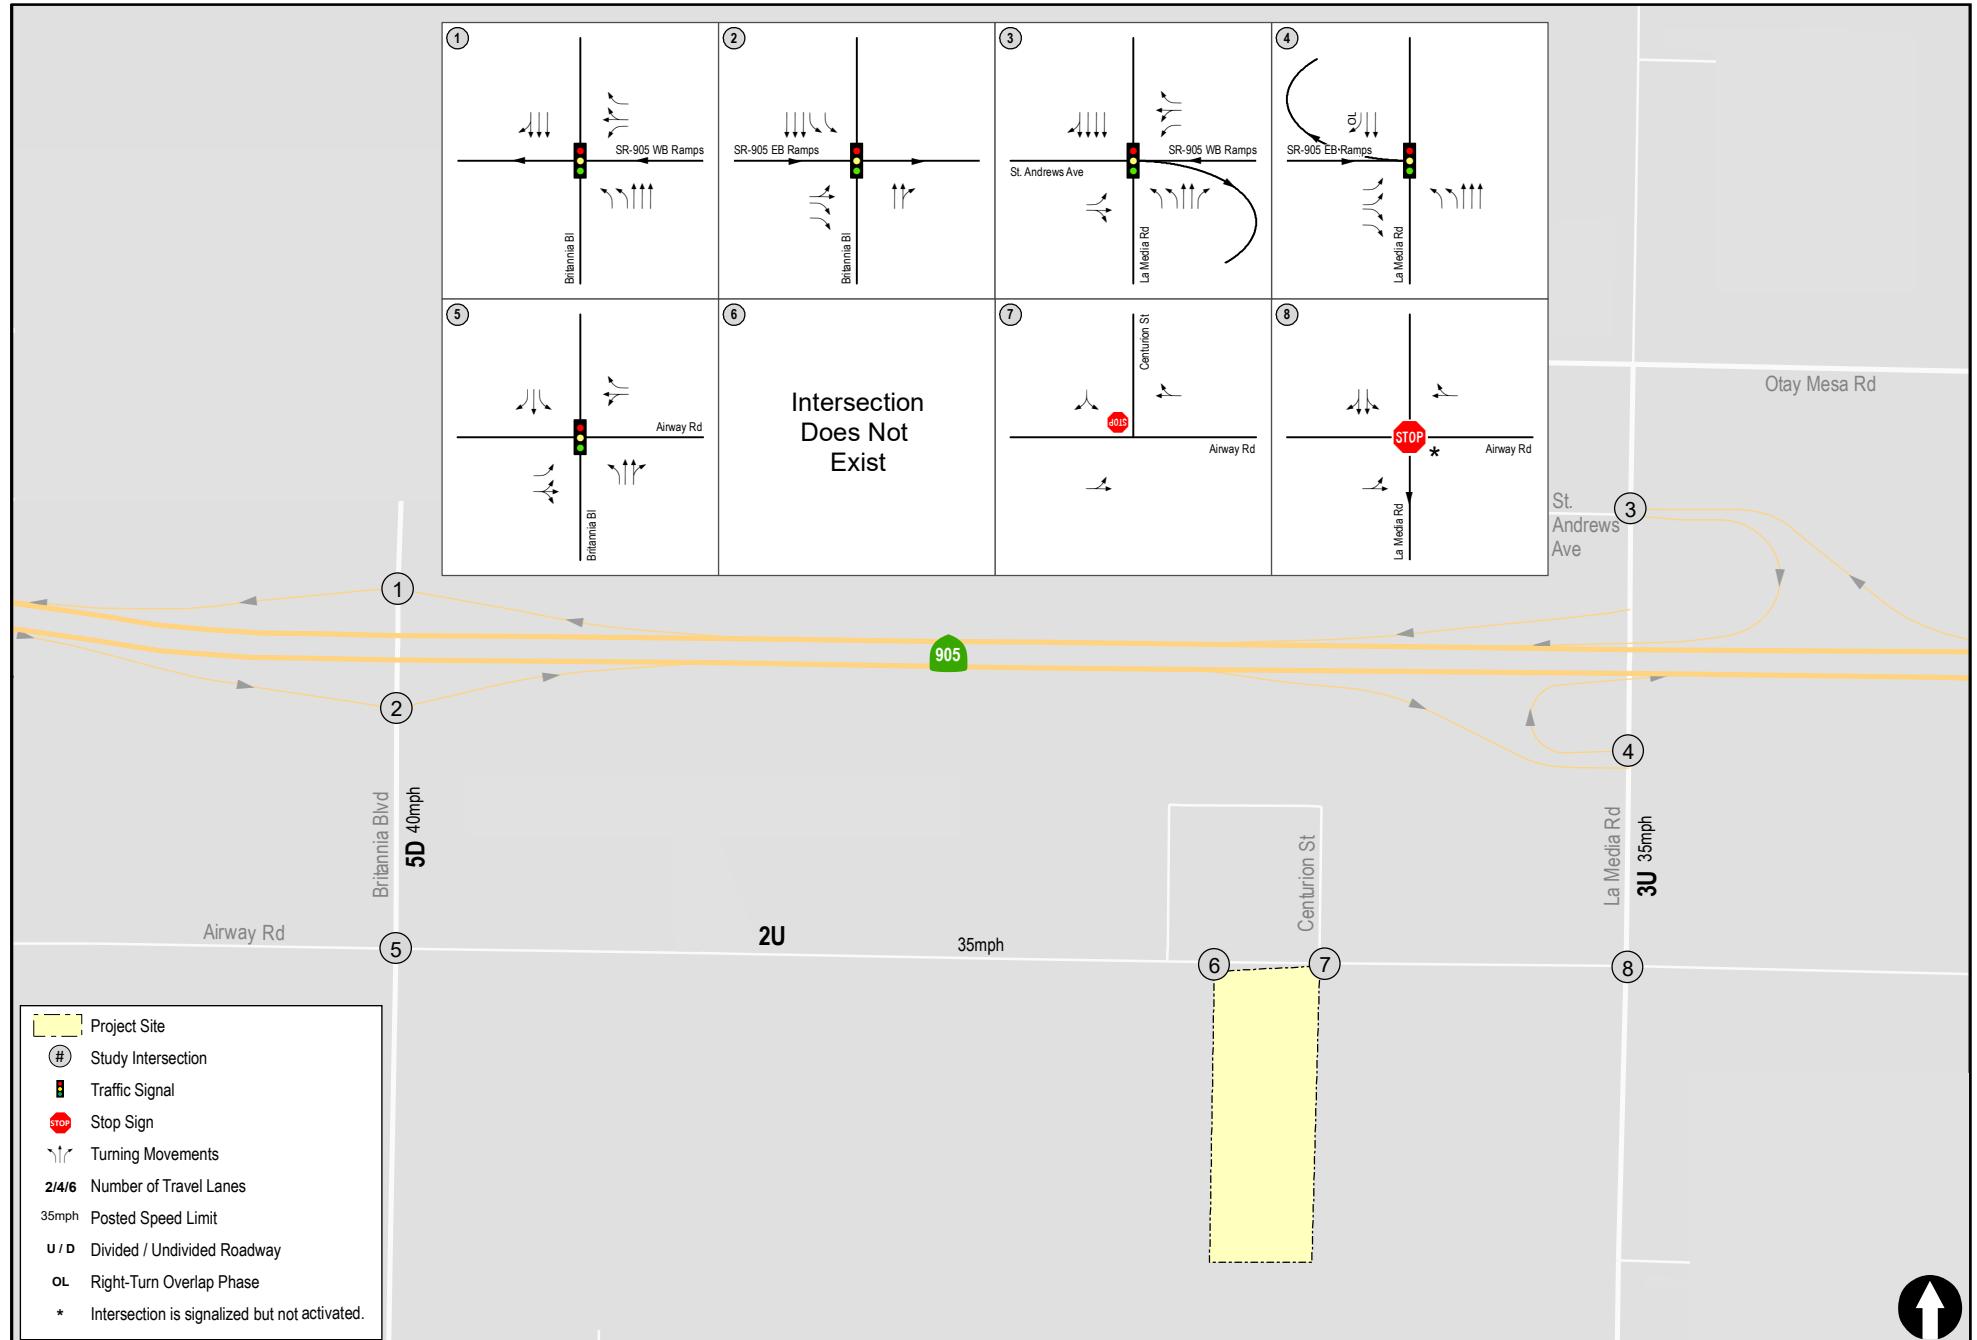

Figure 3-1

Existing Conditions Diagram

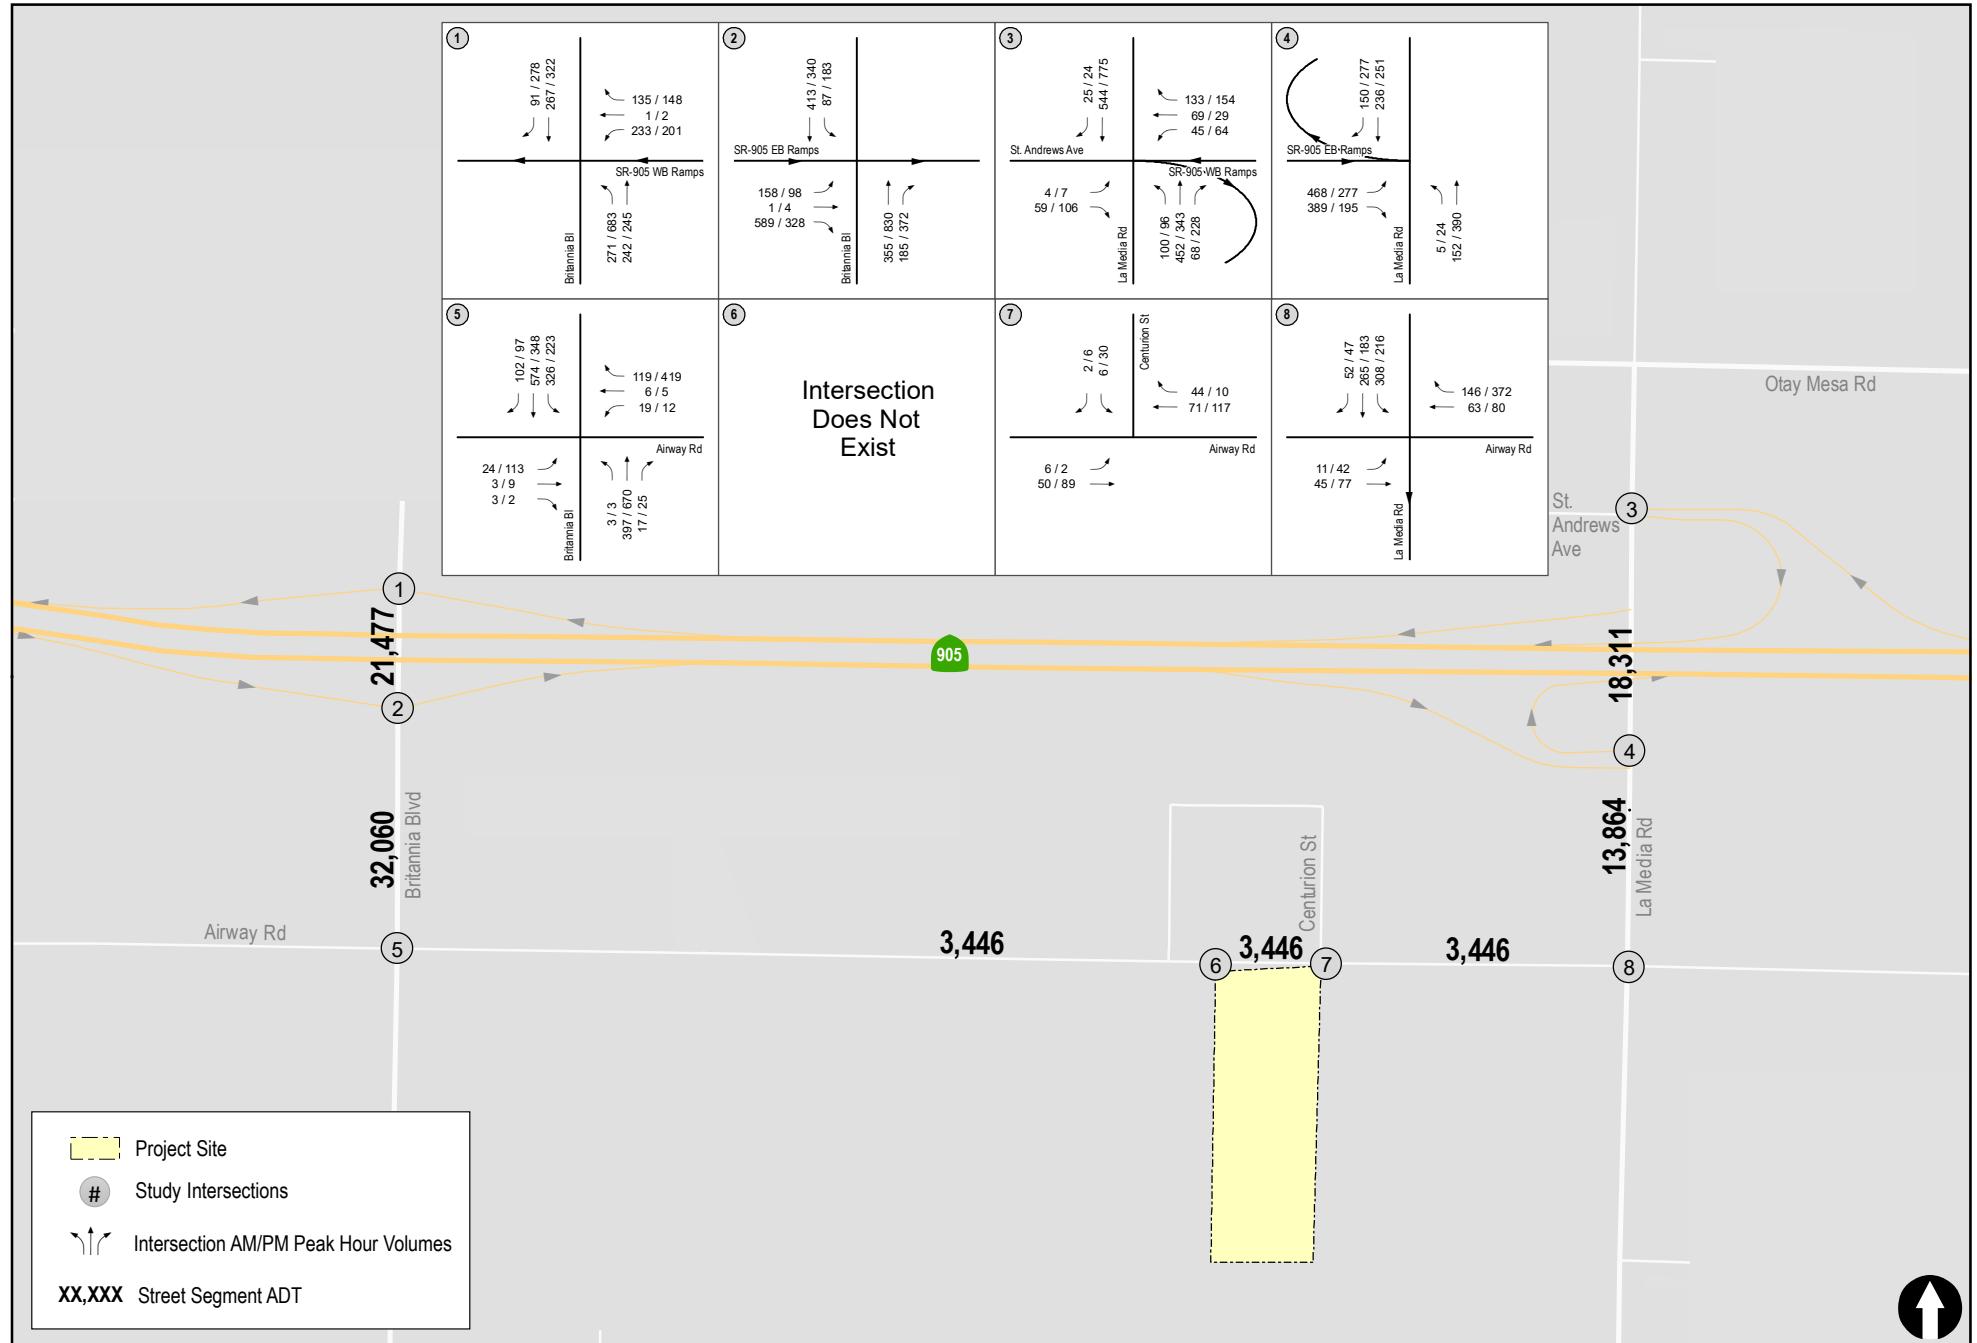

Figure 3-2

Existing Traffic Volumes

4.0 ANALYSIS APPROACH AND METHODOLOGY

Level of service (LOS) is the term used to denote the different operating conditions which occur on a given roadway segment under various traffic volume loads. It is a qualitative measure used to describe a quantitative analysis taking into account factors such as roadway geometries, signal phasing, speed, travel delay, freedom to maneuver, and safety. Level of service provides an index to the operational qualities of a roadway segment or an intersection. Level of service designations range from A to F, with LOS A representing the best operating conditions and LOS F representing the worst operating conditions. Level of service designation is reported differently for signalized and unsignalized intersections, as well as for roadway segments.

4.1 Intersections

Signalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay was determined utilizing the methodology found in Chapter 19 of the *Highway Capacity Manual 6th Edition (HCM 6)*, with the assistance of the *Synchro 10* computer software. The delay values (represented in seconds) were qualified with a corresponding intersection Level of Service (LOS). Signalized intersection calculation worksheets and a more detailed explanation of the methodology are attached in *Appendix B*.

Unsignalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay and Levels of Service (LOS) was determined based upon the procedures found in Chapter 20 of the *Highway Capacity Manual 6th Edition (HCM 6)*, with the assistance of the *Synchro 10* computer software. Unsignalized intersection calculation worksheets and a more detailed explanation of the methodology are attached in *Appendix B*.

Vehicle classification counts were reviewed from the Sunroad Otay Mesa Transportation Impact Analysis (February 2018). Based on the vehicle classification counts and to maintain consistency with other transportation studies conducted in the area, a 16% heavy vehicle factor was applied to all study intersections for this analysis.

4.2 Street Segments

Street segment analysis is based upon the comparison of daily traffic volumes (ADTs) to the City of San Diego's *Roadway Classification, Level of Service, and ADT Table*. This table provides segment capacities for different street classifications, based on traffic volumes and roadway characteristics. The City of San Diego's *Roadway Classification, Level of Service, and ADT Table* is attached in *Appendix C*.

5.0 SIGNIFICANCE CRITERIA

According to the City of San Diego's *Significance Determination Thresholds* dated July 2016, a project is considered to have a significant impact if project traffic would decrease the operations of surrounding roadways by a defined threshold. The City defined thresholds are shown in **Table 5–1**.

The impact is designated either a “direct” or “cumulative” impact. According to the City’s *Significance Determination Thresholds*,

“*Direct* traffic impacts are those projected to occur at the time a proposed development becomes operational, including other developments not presently operational but which are anticipated to be operational at that time (near term).”

“*Cumulative* traffic impacts are those projected to occur at some point after a proposed development becomes operational, such as during subsequent phases of a project and when additional proposed developments in the area become operational (short-term cumulative) or when affected community plan area reaches full planned buildout (long-term cumulative).”

It is possible that a project’s near term (direct) impacts may be reduced in the long term, as future projects develop and provide additional roadway improvements (for instance, through implementation of traffic phasing plans). In such a case, the project may have direct impacts but not contribute considerably to a cumulative impact.”

For intersections and roadway segments affected by a project, level of service (LOS) D or better is considered acceptable under both direct and cumulative conditions.”

If the project exceeds the thresholds in *Table 5–1*, then the project is considered to have a significant “direct” or “cumulative” project impact. A significant impact can also occur if a project causes the Level of Service to degrade from D to E, even if the allowable increases in *Table 5–1* are not exceeded. A feasible mitigation measure will need to be identified to return the impact within the City thresholds, or the impact will be considered significant and unmitigated.

TABLE 5-1
CITY OF SAN DIEGO
TRAFFIC IMPACT SIGNIFICANT THRESHOLDS

Level of Service with Project ^b	Allowable Increase Due to Project Impacts ^a	
	Roadway Segments	Intersections
	V/C	Delay (sec.)
E	0.02	2.0
F	0.01	1.0

Footnotes:

- a. If a proposed project's traffic causes the values shown in the table to be exceeded, the impacts are determined to be significant. The project applicant shall then identify feasible improvements (within the Traffic Impact Study) that will restore/and maintain the traffic facility at an acceptable LOS. If the LOS with the proposed project becomes unacceptable (see note b), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, the project applicant shall be responsible for mitigating the project's direct significant and/or cumulatively considerable traffic impacts.
- b. All LOS measurements are based upon Highway Capacity Manual procedures for peak-hour conditions. However, V/C ratios for roadway segments are estimated on an ADT/24-hour traffic volume basis (using Table 2 of the City's Traffic Impact Study Manual). The acceptable LOS for roadways and intersections is generally "D" ("C" for undeveloped locations).

General Notes:

- 1. Delay = Average control delay per vehicle measured in seconds for intersections or minutes for ramp meters
- 2. LOS = Level of Service
- 3. V/C = Volume to Capacity ratio

6.0 ANALYSIS OF EXISTING CONDITIONS

6.1 Peak Hour Intersection Levels of Service

Table 6-1 summarizes the peak hour intersection operations under Existing conditions. As seen in **Table 6-1**, the study intersections are calculated to currently operate at LOS D or better.

Appendix D contains the existing intersection analysis worksheets.

6.2 Daily Street Segment Levels of Service

Table 6-2 summarizes the street segment operations under the Existing conditions. As seen in **Table 6-2**, the following study segment is calculated to currently operate at LOS E:

- La Media Road, from SR 905 EB Ramps to Airway Road

TABLE 6-1
EXISTING INTERSECTION OPERATIONS

Intersection	Control Type	Peak Hour	Existing	
			Delay ^a	LOS ^b
1. Britannia Boulevard / SR 905 WB Ramps	Signal	AM	29.5	C
		PM	27.4	C
2. Britannia Boulevard / SR 905 EB Ramps	Signal	AM	25.6	C
		PM	25.4	C
3. La Media Road / SR 905 WB Ramps	Signal	AM	21.2	C
		PM	23.0	C
4. La Media Road / SR 905 EB Ramps	Signal	AM	26.3	C
		PM	17.8	B
5. Airway Road / Britannia Boulevard	Signal	AM	25.8	C
		PM	44.0	D
6. Airway Road / Project Driveway (west, DNE ¹)	TWSC ^c	AM	—	—
		PM	—	—
7. Airway Road / Centurion Street / Project Driveway (east, DNE ¹)	OWSC ^d / TWSC ^c	AM	9.8	A
		PM	10.5	B
8. Airway Road / La Media Road ^e	AWSC ^f	AM	17.6	C
		PM	17.8	C

Footnotes:

- a. Average delay expressed in seconds per vehicle.
- b. Level of Service.
- c. TWSC – Two-Way Stop Controlled intersection. Worst movement delay is reported.
- d. OWSC – One-Way Stop Controlled intersection. Worst movement delay is reported.
- e. A traffic signal is in place at this intersection, however, it is not in operation. Therefore, it is analyzed as an all-way stop controlled intersection.
- f. AWSC – All-Way Stop Controlled intersection. Average delay is reported.

SIGNALIZED		UN SIGNALIZED	
DELAY/LOS THRESHOLDS		DELAY/LOS THRESHOLDS	
Delay	LOS	Delay	LOS
0.0 ≤ 10.0	A	0.0 ≤ 10.0	A
10.1 to 20.0	B	10.1 to 15.0	B
20.1 to 35.0	C	15.1 to 25.0	C
35.1 to 55.0	D	25.1 to 35.0	D

- a. Capacities based on City of San Diego's Roadway Classification Table.
- b. Average Daily Traffic Volumes.
- c. Level of Service.
- d. Volume to Capacity.

7.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

7.1 Trip Generation

The Project proposes the construction of 235,480 square feet (sf) of warehousing and distribution use for up to eight (8) tenants, and 12,000 sf of multi-tenant office use. Based on the proposed land use types, the rates for “warehousing” and “commercial office” found in the City of San Diego’s *Trip Generation Manual, May 2003* were used for the proposed Project.

Table 7-1 tabulates the total Project traffic generation. The total Project is calculated to generate approximately 1,518 ADT with 222 trips (165 inbound / 57 outbound) during the AM peak hour and 237 trips (86 inbound / 151 outbound) during the PM peak hour.

TABLE 7-1
PROJECT TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)		AM Peak Hour					PM Peak Hour				
		Rate ^a	Volume	% of ADT	In:Out	Volume			% of ADT	In:Out	Volume		
					Split	In	Out	Total		Split	In	Out	Total
Warehousing	235.48 KSF	5 /KSF	1,178	15%	70:30	124	53	177	16%	40:60	76	113	189
Commercial Office	12.00 KSF	Log formula ^b	340	13%	90:10	41	4	45	14%	20:80	10	38	48
Total		—	1,518	—	—	165	57	222	—	—	86	151	237

Footnotes:

a. Rate is based on City of San Diego’s Trip Generation Manual.

b. $\ln(\text{ADT}) = 0.756 \ln(\text{KSF}) + 3.95$

7.2 Trip Distribution/Assignment

Access to the Project site is proposed via two (2) driveways on Airway Road. The eastern driveway will be used by trucks accessing the site while the western driveway will be used by light vehicles. Project traffic was distributed and assigned to the street system based on the number of loading docks (66), existing traffic patterns in the area, review of trip distribution of similar land uses from recently approved development projects in the vicinity, anticipated traffic patterns to and from the site, and the Project’s proximity to state highways and arterials. **Figure 7-1** shows the Project traffic distribution. **Figure 7-2** shows the total Project traffic volumes.

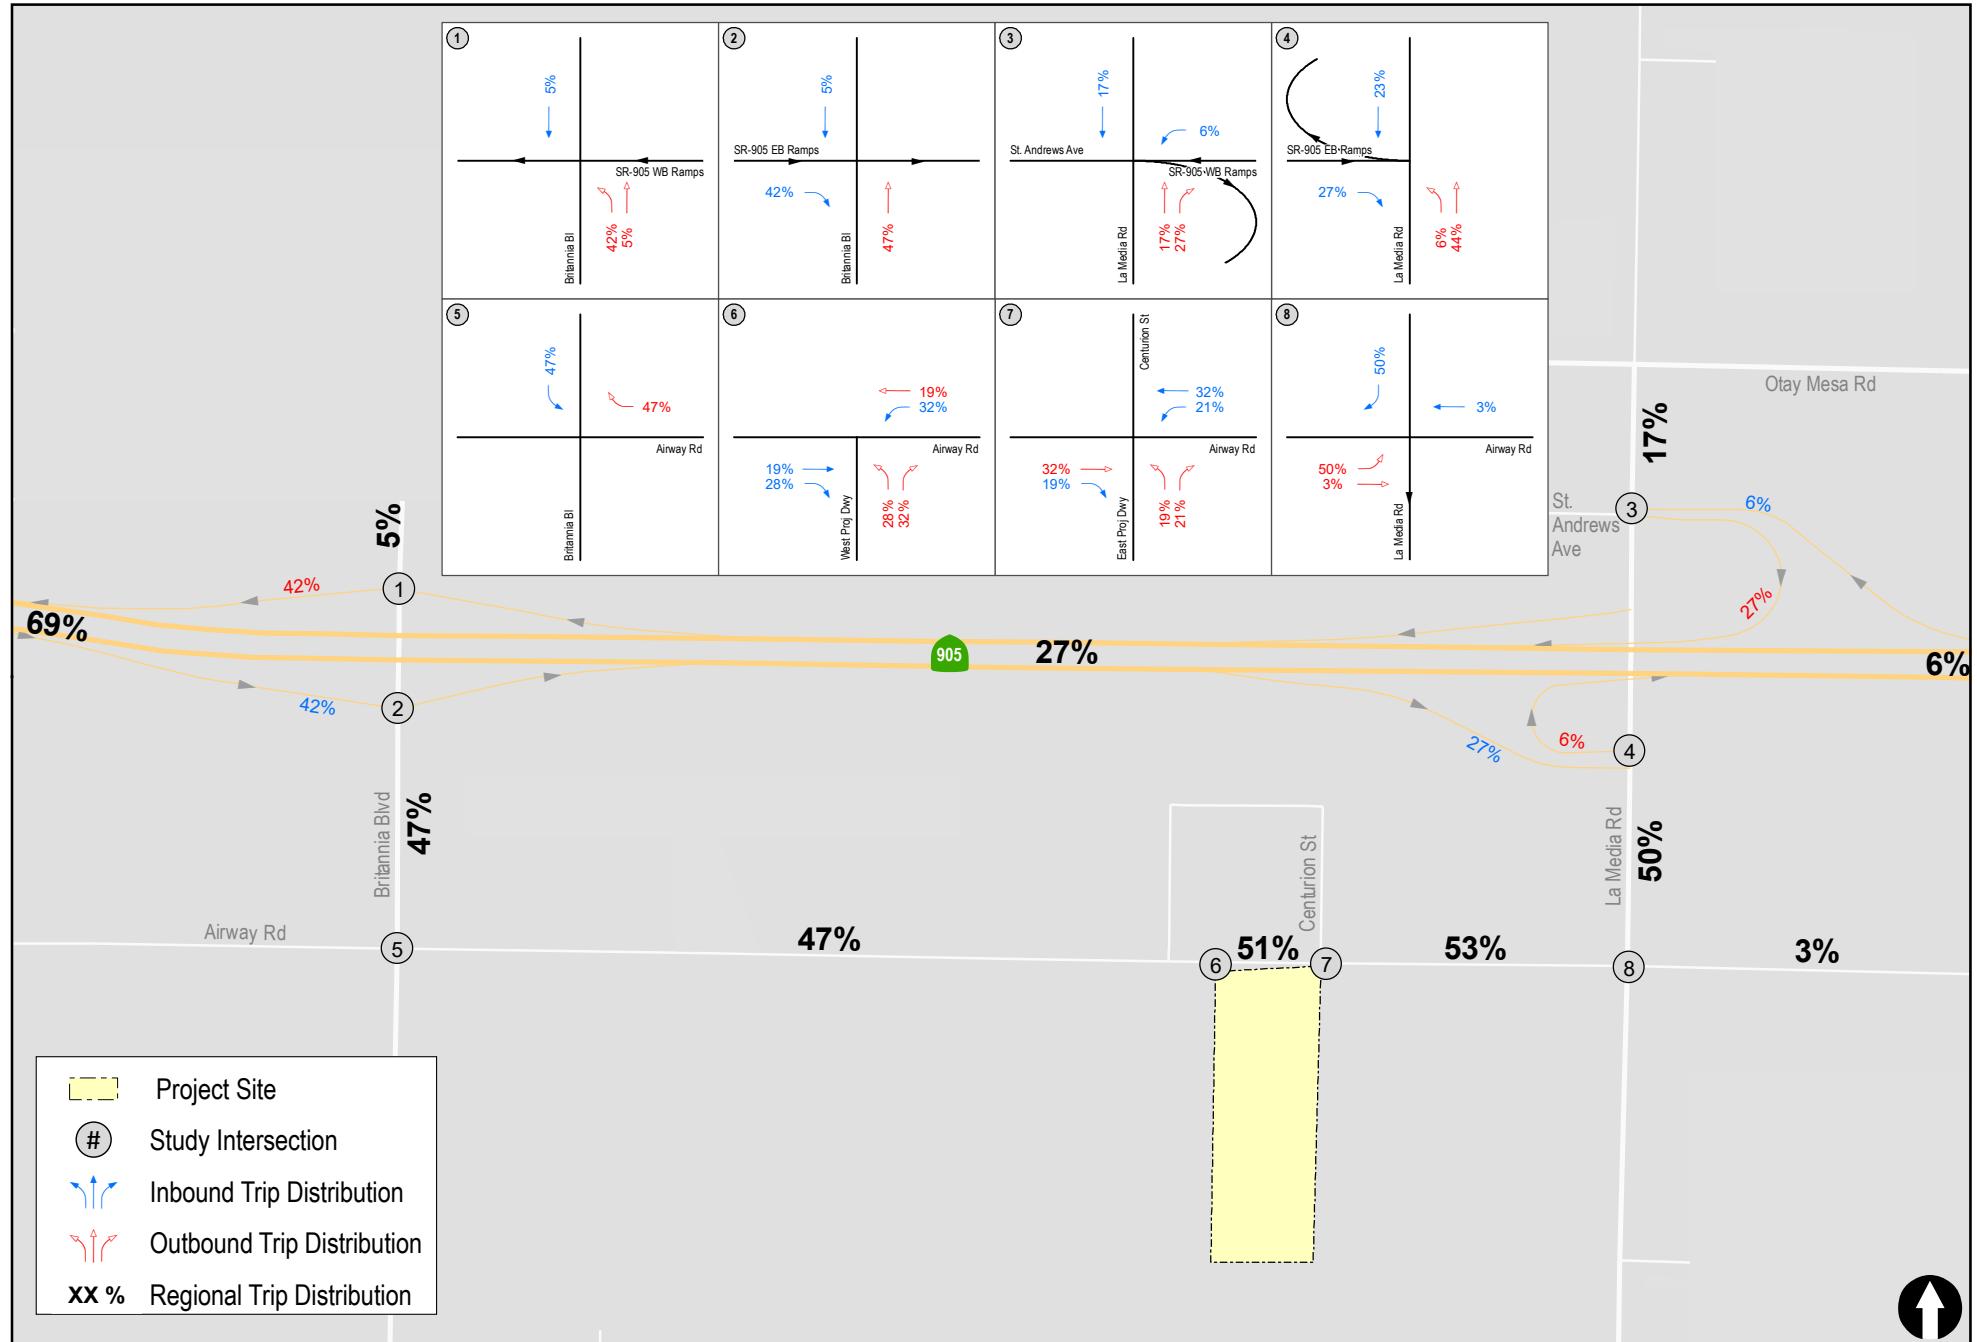

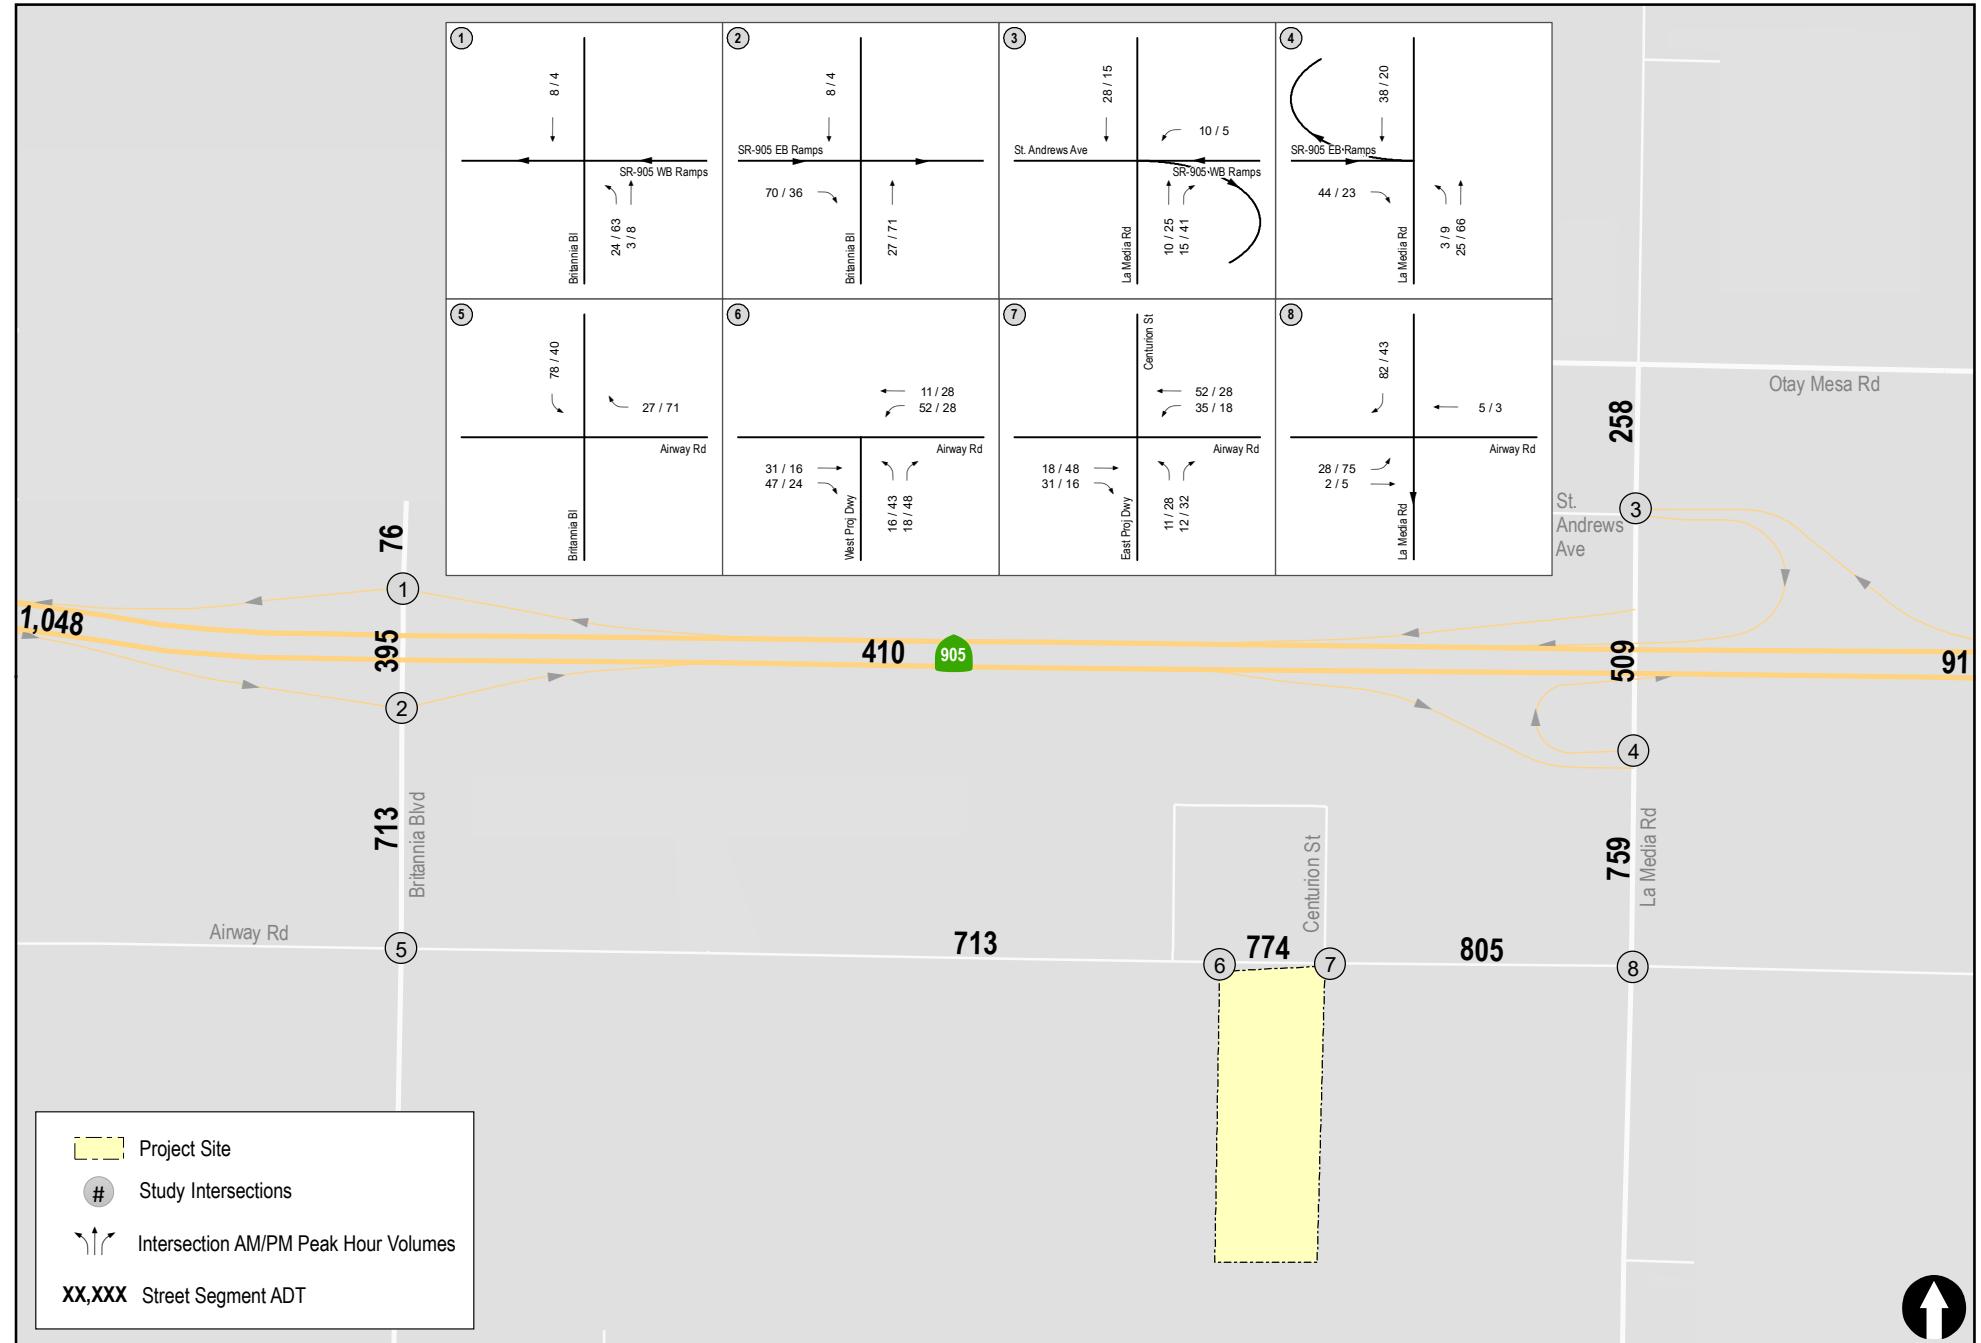

Figure 7-1

Project Trip Distribution

Otay Mesa Rd

Figure 7-2

Project Traffic Volumes

8.0 ANALYSIS OF EXISTING + PROJECT CONDITIONS

Project traffic was added onto existing traffic volumes to determine Existing + Project volumes. *Figure 8-1* shows the Existing + Project traffic volumes.

8.1 Peak Hour Intersection Levels of Service

Table 8-1 summarizes the peak hour intersection operations under the Existing + Project scenario. As seen in *Table 8-1*, with the addition of Project traffic, the study intersections are calculated to continue operating at LOS D or better.

Appendix E contains the Existing + Project intersection analysis worksheets.

8.2 Daily Street Segment Levels of Service

Table 8-2 summarizes the street segment operations under the Existing + Project scenario. As seen in *Table 8-2*, with the addition of Project traffic, the following study segment is calculated to continue operating at LOS E:

- La Media Road, from SR 905 EB Ramps to Airway Road

Based on the City of San Diego's significance criteria, a **significant direct project impact** is identified on the following segment as the project traffic contribution exceeds the allowable threshold.

- La Media Road, from SR 905 EB Ramps to Airway Road (LOS E)

Mitigation measures for these impacts are discussed in detail in *Section 12.2*.

TABLE 8-1
EXISTING + PROJECT INTERSECTION OPERATIONS

Intersection	Control Type	Peak Hour	Existing		Existing + Project		Δ^c	Sig?
			Delay ^a	LOS ^b	Delay	LOS

Existing + Project Traffic Volumes

9.0 CUMULATIVE PROJECTS

Cumulative projects represent reasonably foreseeable planned development that contributes to background traffic conditions for the Near-Term (Opening Year 2021) scenarios. LLG researched ongoing cumulative project development in the study area that were recently approved or projects that are currently under review. A total of eighteen (18) cumulative projects were identified for consideration in the Near-Term (Opening Year 2021) scenarios.

Table 9–1 contains a list of cumulative projects that were considered in the Near-Term (Opening Year 2021) analysis. **Figure 9–1** shows the locations of the cumulative projects. **Figure 9–2** shows the cumulative projects traffic volumes. **Appendix F** contains additional information regarding the cumulative projects.

Footnotes:

- a. Trip generation obtained from *Otay Mesa Lumina TIS*, February 20, 2019
- b. Phase 2 of the Cross Border Facility Project is not expected to be completed until the Year 2023, according to the information provided in the Final Lumina TIA (February 2019). Therefore, this project is not expected to generate additional trips to the study area prior to the Proposed Project's Opening Day by Year 2021.
- c. Phase 1 and 2 of the Lumina Project is not expected to be completed until the Year 2023 (Phase 1) and Year 2027 (Phase 2), according to the information provided in the Final Lumina TIA (February 2019). Therefore, this project is not expected to generate additional trips to the study area prior to the Proposed Project's Opening Day by Year 2021.
- d. Otay 250 project expected opening day is late Year 2022. Therefore, this project is not expected to generate additional trips to the study area prior to the Proposed Project's Opening Day by Year 2021.

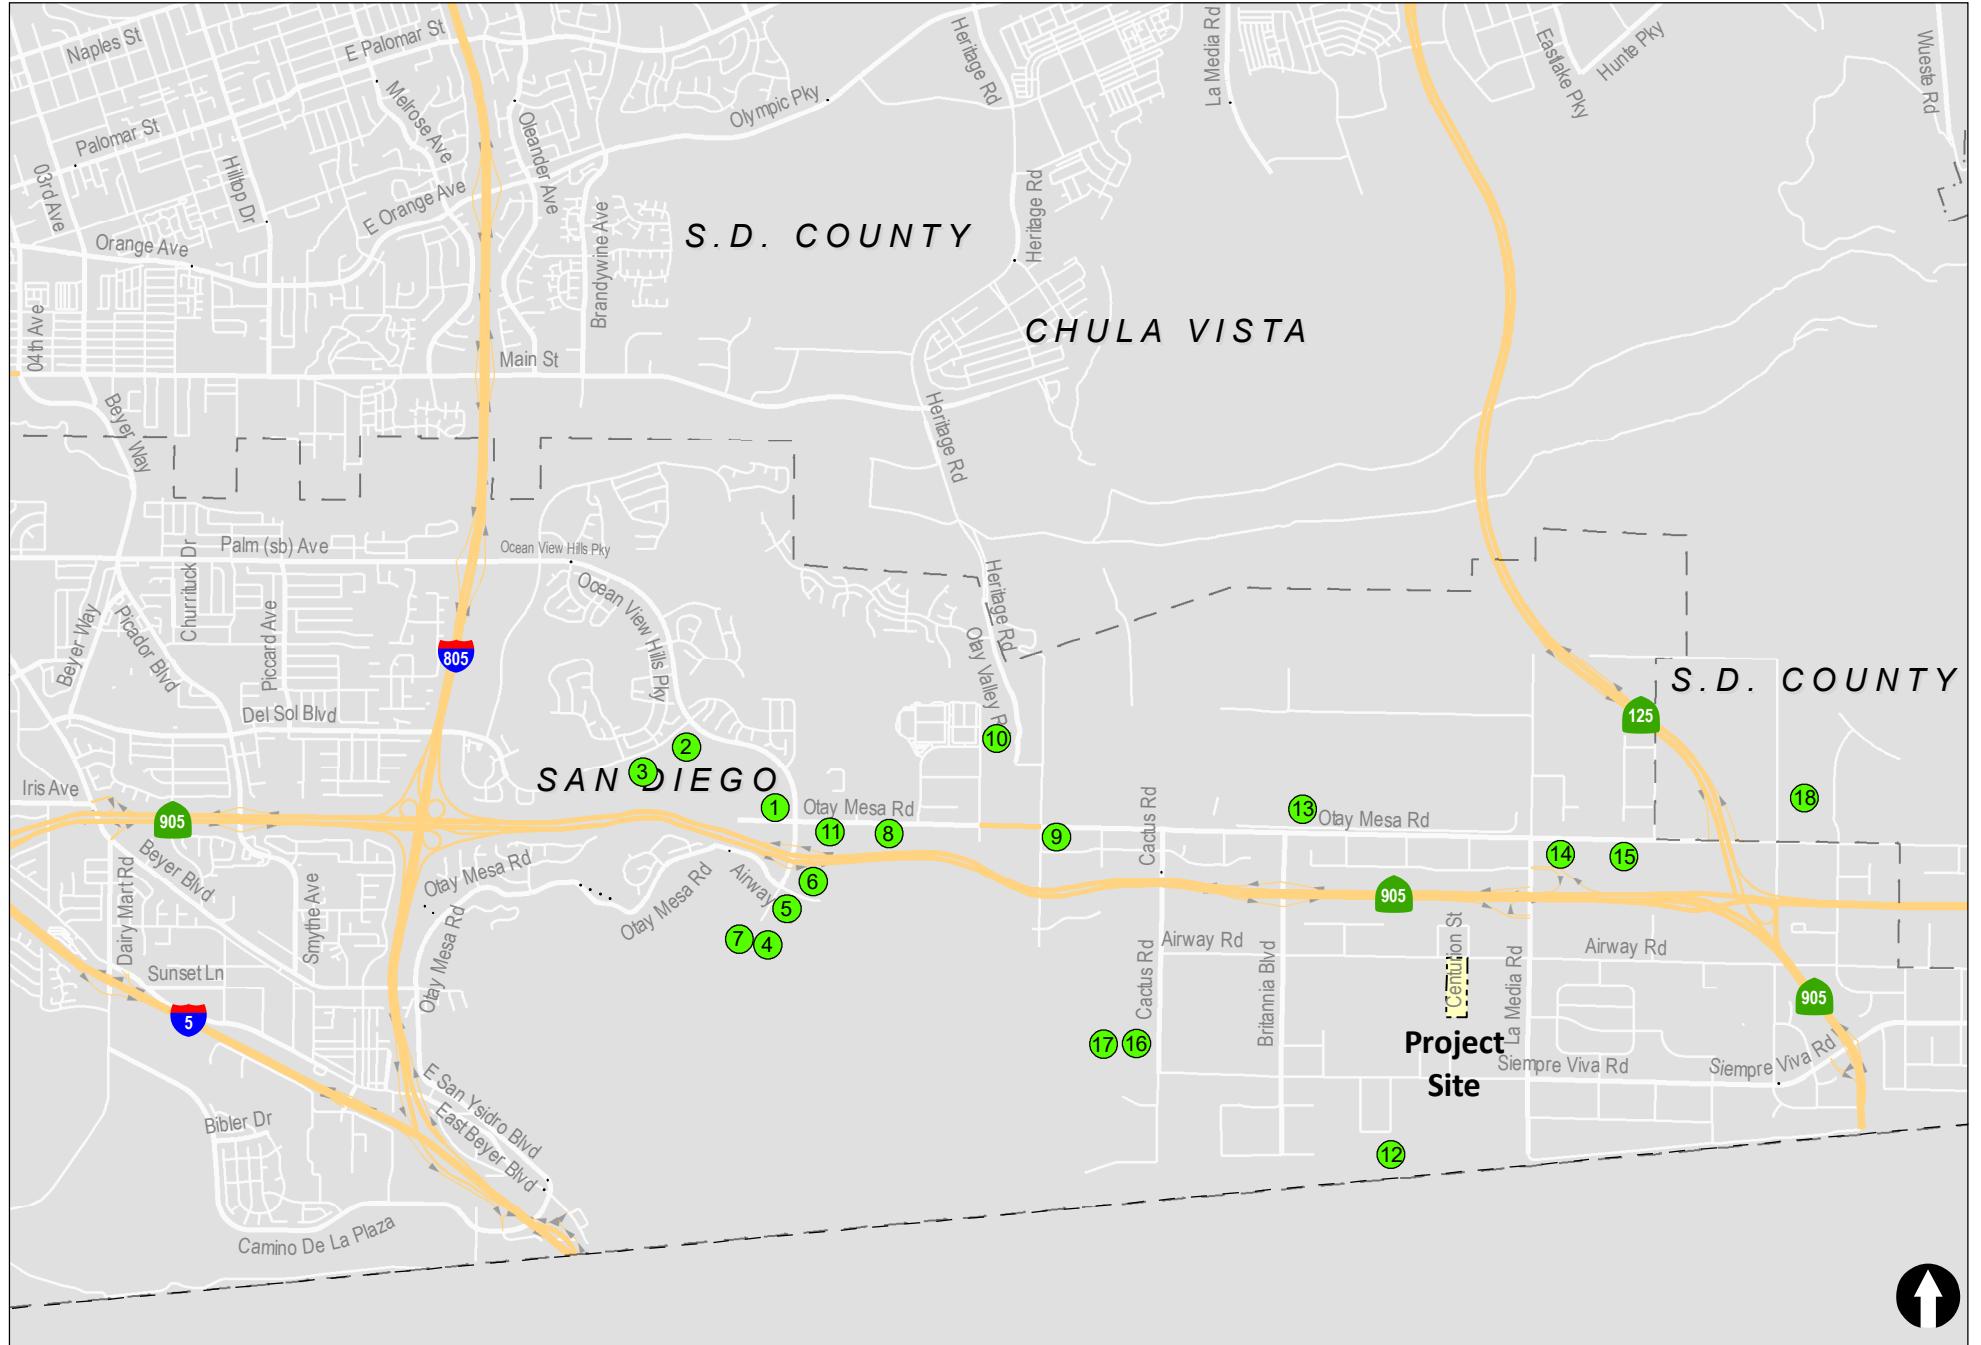

Figure 9-1
Cumulative Projects Location Map

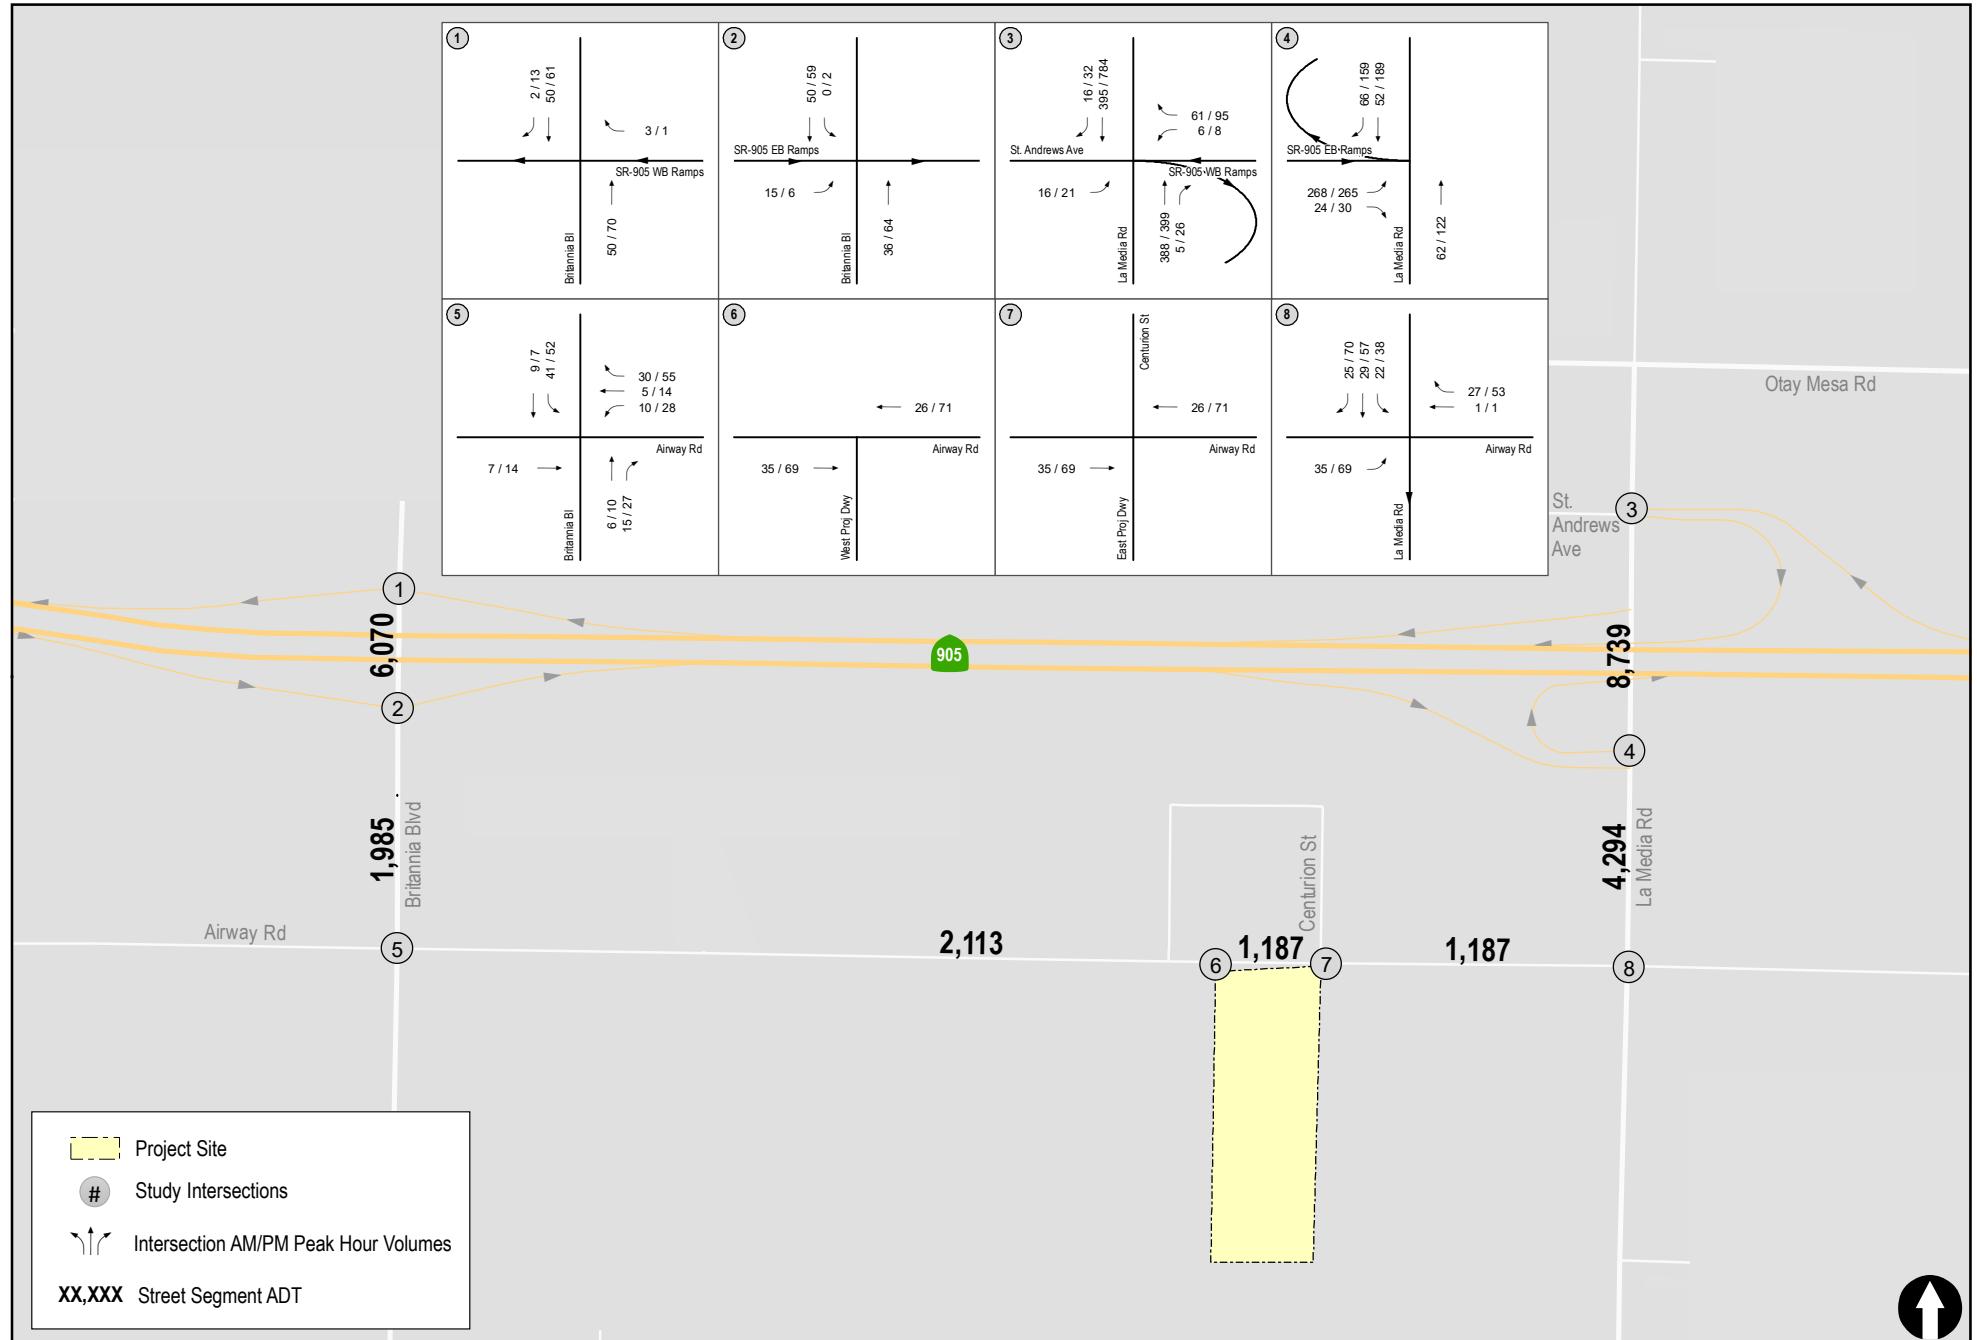

Figure 9-2

Cumulative Projects Traffic Volumes

10.0 ANALYSIS OF NEAR-TERM (OPENING YEAR 2021) CONDITIONS

10.1 Near-Term Network Assumptions

No changes to the street network or intersection geometry from existing conditions were assumed for the analysis of this scenario.

10.2 Near-Term Traffic Volumes

Near-Term (Opening Year 2021) traffic volumes were calculated for the study area by adding the total cumulative projects traffic volumes shown on *Figure 9–1* onto the existing traffic volumes.

Figure 10–1 shows the Near-Term (Opening Year 2021) traffic volumes.

10.3 Near-Term (Opening Year 2021) Analysis

10.3.1 Peak Hour Intersection Levels of Service

Table 10–1 summarizes the peak hour intersection operations under the Near-Term (Opening Year 2021) conditions. As seen in *Table 10–1*, the study intersections are calculated to operate at LOS D or better.

Appendix G contains the Near-Term (Opening Year 2021) intersection analysis worksheets.

10.3.2 Daily Street Segment Levels of Service

Table 10–2 summarizes the street segment operations under the Near-Term (Opening Year 2021) conditions. As seen in *Table 10–2*, the following study segment is calculated to operate at LOS F:

- La Media Road, from SR 905 EB Ramps to Airway Road

10.4 Near-Term (Opening Year 2021) + Project Analysis

Near-Term (Opening Year 2021) + Project traffic volumes were calculated by adding the Project traffic volumes to the Near-Term (Opening Year 2021) traffic volumes. *Figure 10–2* shows the Near-Term (Opening Year 2021) + Project traffic volumes.

10.4.1 Peak Hour Intersection Levels of Service

Table 10–1 summarizes the peak hour intersection operations under the Near-Term (Opening Year 2021) + Project conditions. As seen in *Table 10–1*, with the addition of Project traffic, the study intersections are calculated to continue to operate at LOS D or better.

Appendix H contains the Near-Term (Opening Year 2021) + Project intersection analysis worksheets.

10.4.2 Daily Street Segment Levels of Service

Table 10–2 summarizes the street segment operations under the Near-Term (Opening Year 2021) + Project conditions. As seen in *Table 10–2*, with the addition of Project traffic, the following study segment is calculated to continue to operate at LOS F:

- La Media Road, from SR 905 EB Ramps to Airway Road

Based on the City of San Diego's significance criteria, a **significant direct project impact** is identified on the following segment as the project traffic contribution exceeds the allowable threshold.

- La Media Road, from SR 905 EB Ramps to Airway Road (LOS F)

Mitigation measures for these impacts are discussed in detail in *Section 12.2*.

TABLE 10-1

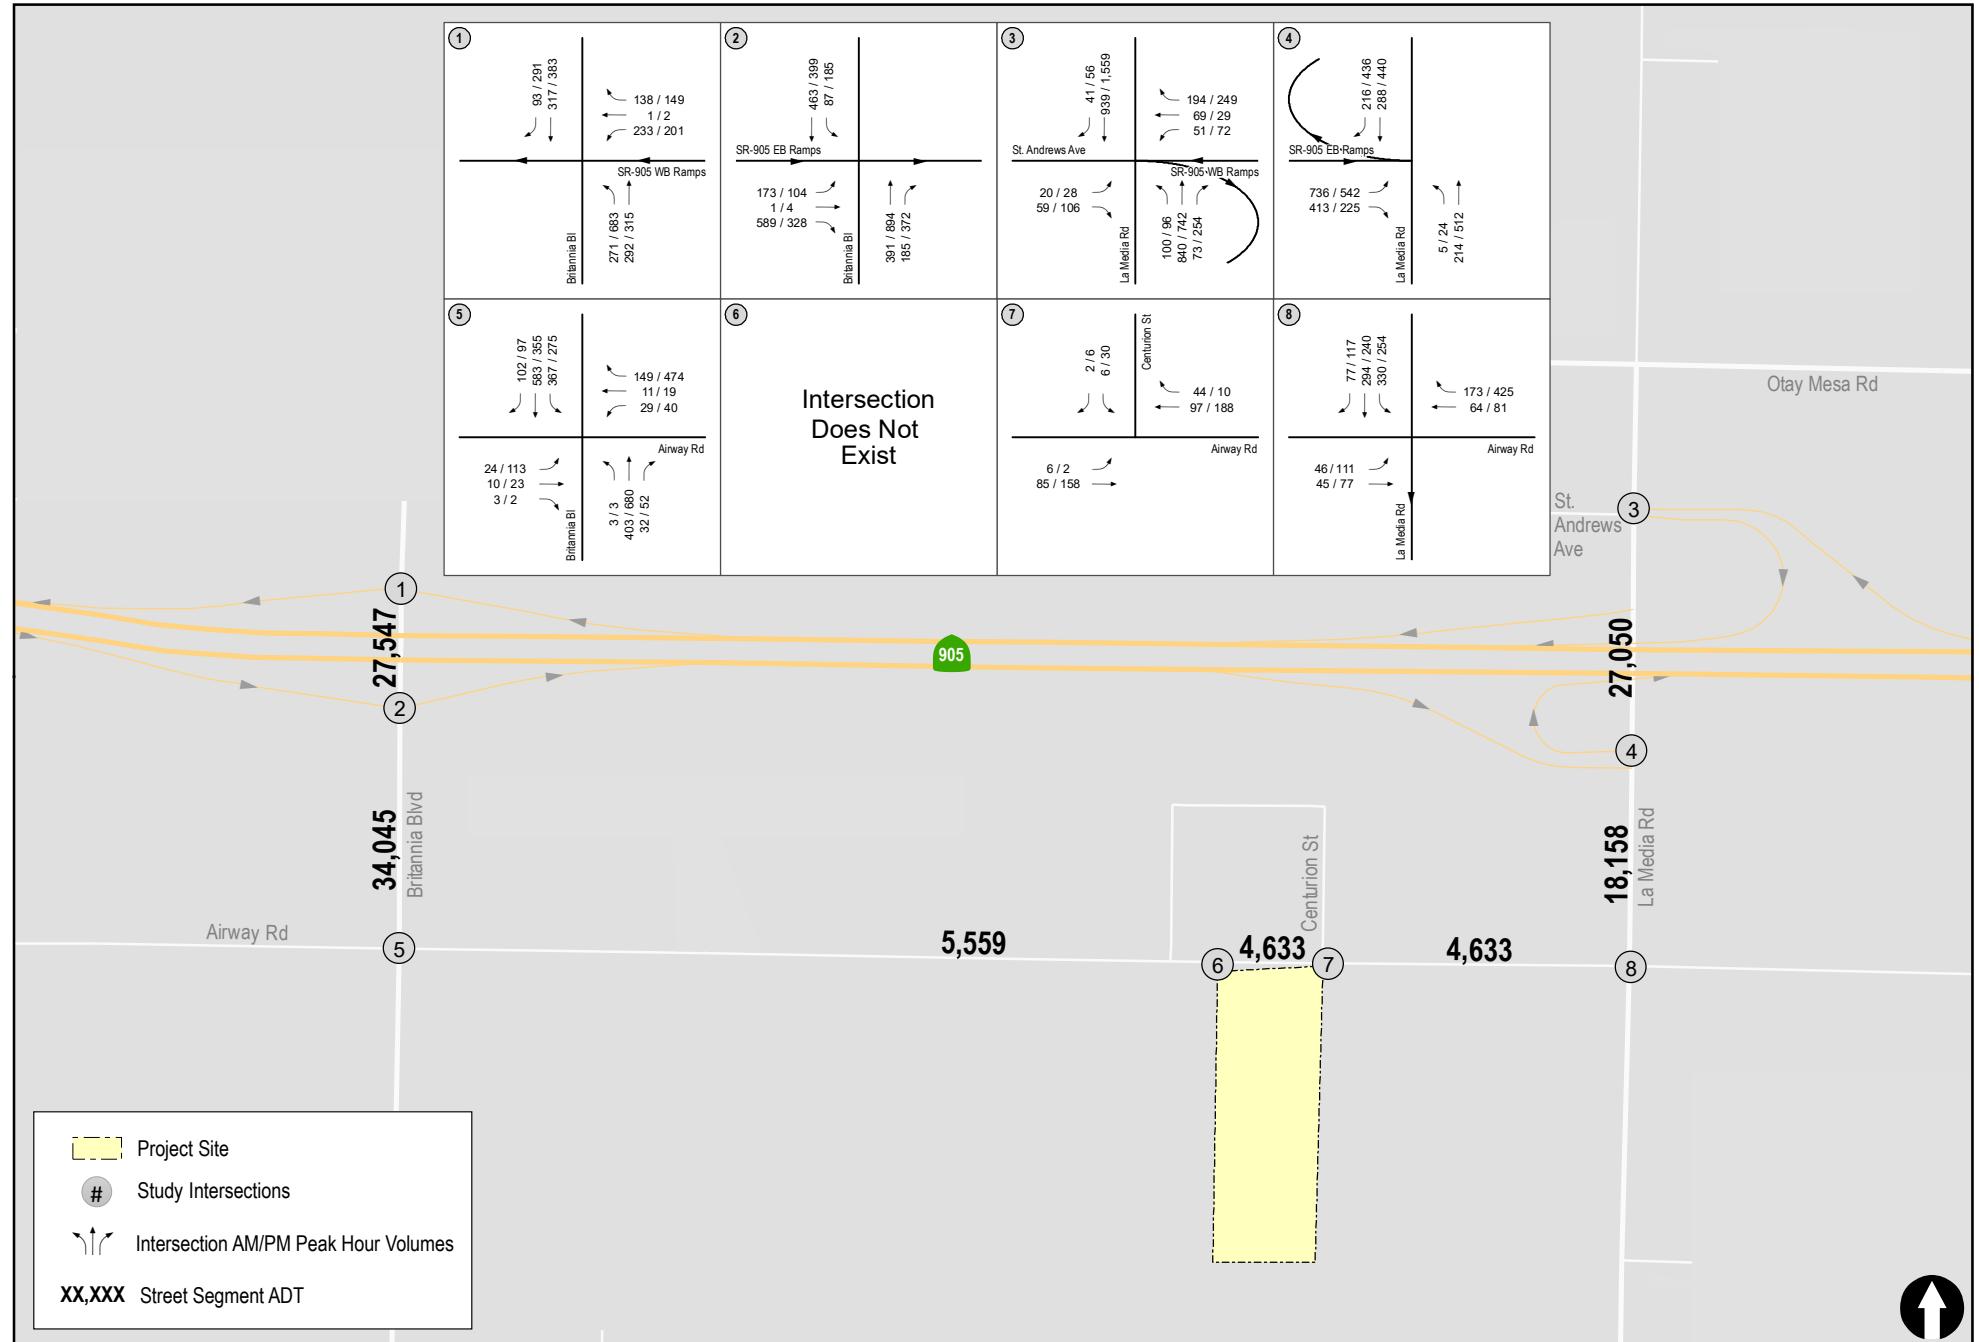

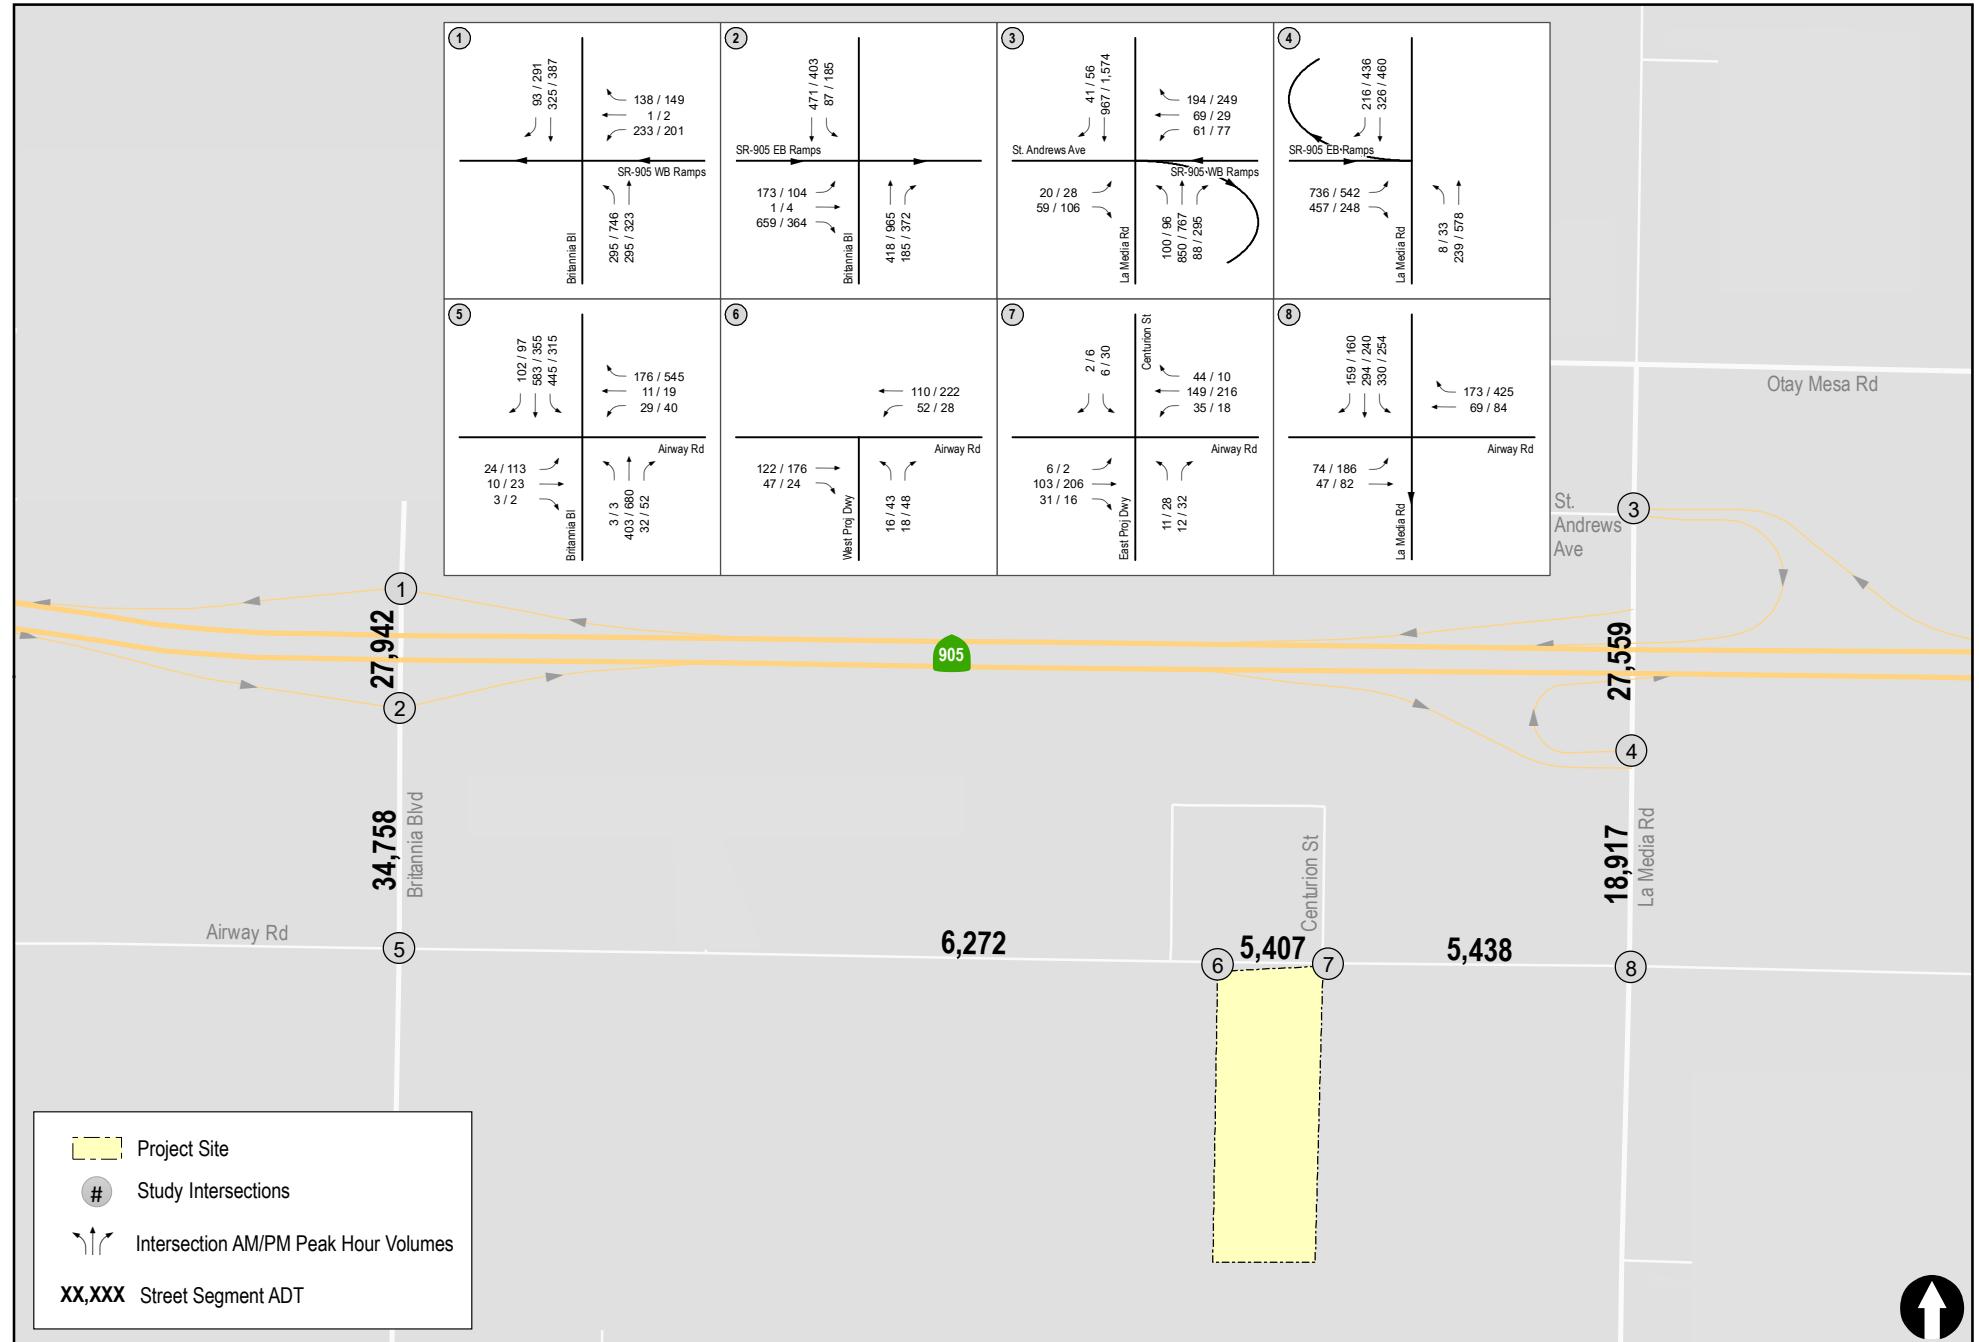

Figure 10-1

Near-Term (Opening Day 2021) Traffic Volumes

11.0 ACCESS AND ACTIVE TRANSPORTATION

11.1 Access and Frontage Improvements

The Project proposes access to the site via two (2) driveways on Airway Road. The eastern driveway will be used by trucks accessing the site. The western driveway will be used by light vehicles only. Both driveways would provide full access.

As a part of the Project frontage improvements, consistent with the Airway Road ultimate classification of a 4-lane Major (76 feet curb-to-curb), per the City of San Diego Street Design Manual, the Project is proposing to widen Airway Road along the Project frontage by 39 feet from the centerline and provide a 21-foot parkway to provide the ultimate roadway width.

The Project proposes to construct the frontage improvements and relocate the curb to the south similar to the neighboring properties to the west. While the ultimate width would be provided for a raised median, it is noted that there are currently no raised medians on Airway Road along this stretch. Therefore, the project proposes to maintain the existing 2-lanes (with no median) on its frontage along Airway Road. Consistent with the adjacent properties on Airway Road, the westerly driveway would allow full movements until the time raised median is constructed on Airway Road. *Appendix I* contains a drawing showing the driveway and frontage improvement designs.

11.2 Pedestrian, Bicycle and Transit Mobility

Along Airway Road between La Media Road and Britannia Boulevard, a contiguous sidewalk currently exists on the north side. However, sidewalks are only provided intermittently on the south side. As a part of the project frontage improvements, per the current Street Design Manual, the Project will provide half-width improvements to meet the ultimate classification of a 4-lane Major on Airway Road. This improvement would include a 21-foot parkway, which would consist of a 6-foot non-contiguous sidewalk and a 15-foot parkway.

There are no bicycle facilities currently provided along Airway Road. As a part of the project frontage requirements, the project will provide half-width improvements to accommodate the ultimate classification of Airway Road as a 4-lane Major with a 76' curb to curb width within a 98' right-of-way that would provide buffered bike lanes on both sides of the roadway.

There are two (2) existing bus stops located within $\frac{1}{4}$ mile walking distance from the Project site, which are described below:

- A bus stop for MTS Route 909 is located on Gigante Street in front of Southwestern Higher Education Center Otay Mesa. Route 909 provides service between Southwestern Higher Education Center Otay Mesa and the Otay Mesa Transit Center. Weekday service begins at 5:05 AM with 1-hour headways and ends at 7:46 PM.
- A bus stop for MTS Route 909, is located just west of the Airway Road / Excellante Street intersection. Route 909 provides service between the Southwestern Higher Education Center

Otay Mesa and the Otay Mesa Transit Center. Weekday service begins at 5:05 AM with 1-hour headways and ends at 7:46 PM.

- In the project study area, a bus stop for MTS Route 905 is also located on west side of La Media Road at the SR 905 EB Ramps intersection. Route 905 provides service between the Iris Avenue Transit Center and Otay Mesa Transit Center. Weekday service begins at 4:10 AM with 30-minute headways and ends at 10:00 PM.

12.0 PARKING

The section below discusses the City of San Diego parking requirements for the proposed project.

12.1 Automobile Parking Requirements

According to Table 142.05E in the *San Diego Municipal Code, Chapter 14: General Regulation, Article 2: General Development Regulation, Division 5: Parking Regulations*, a minimum of 3.3 parking spaces per 1,000 square-feet is required for office uses and 1 space per 1,000 square-feet is required for warehouse use. Based on the above minimum parking requirements, the project required parking is calculated as 276 spaces with 40 parking spaces for the office and 236 spaces for the warehouse use. The City's minimum required parking for accessible parking spaces is provided on SDM-117 of the City of San Diego's Standard Drawings (1/31/2012). According to SDM-117 of the City of San Diego's Standard Drawings, 7 accessible parking spaces are required for uses where the total required number of parking spaces provided are 300 or less.

The proposed project will provide a total of 276 automobile parking spaces, which includes a total of 7 accessible parking spaces. Therefore, the proposed project meet's the City's overall minimum parking and accessible parking requirements.

12.2 Motorcycle Parking Requirements

The City requires that motorcycle parking be provided at a ratio of 2% of the total automobile parking required, or two spaces, whichever is greater. Based on the City's parking requirements, a minimum of 6 motorcycle parking spaces are required. The project will provide a total of 6 motorcycle parking spaces, therefore meeting the City's minimum parking requirements.

12.3 Bicycle Parking Requirements

Per Municipal Code Section 142.0530(e)(1)(A), the project would provide the minimum requirement of two short-term bicycle parking spaces for the proposed office use. Per Municipal Code Section 142.0530(e)(1)(D), the proposed industrial use would be exempt from providing short-term bicycle parking spaces. The project would also be subject to 2019 California Green Building Code Section 5.106.4.1.1, which requires non-residential projects provide short-term bicycle parking spaces equal to either five percent of new visitor vehicle parking spaces or a one, two-bike capacity rack, whichever is greater. The future tenants have not been identified yet. Therefore, employee parking spaces and visitor parking spaces have not been differentiated. As the project proposes warehouse tenant spaces, visitor parking is anticipated to be minimal. The project would provide a total of ten short-term bicycle parking spaces by installing one, five-space rack adjacent to the north end of the building, and one, five-space rack adjacent to the south of the building. This number of short-term bicycle parking spaces is anticipated to exceed the project requirements described above; the additional eight short-term bicycle parking spaces beyond the two required for the office use per the Municipal Code would satisfy the 2019 California Green Building Code requirement under a scenario in which 160 out of 276 vehicle parking spaces provided by the project would be used as

visitor parking. Per Section 142.0530(e)(2)(A), the project would be required to provide 14 long-term bicycle parking spaces (5% of required vehicle parking [276 spaces]). To exceed this requirement, the project would provide at least 15 long-term bicycle parking spaces.

12.4 Carpool, Electric Vehicles (EV's) and Zero Emission Vehicles Parking Requirements

The City requires that carpool and zero emission vehicle parking be provided at a ratio of 8% of the total automobile parking required if there are more than 201 automobile parking spaces provided on the project site. Based on the City's parking requirements, a minimum of 23 carpool and zero emission vehicle parking spaces are required. The project will provide a total of 28 carpool and zero emission parking spaces, therefore exceeding the City's minimum parking requirements.

13.0 SIGNIFICANCE OF IMPACTS AND MITIGATION MEASURES

13.1 Significance of Impacts

Per the City's significance thresholds and the analysis methodology presented in this report, project related traffic is calculated to cause significant impacts within the study area at the one location:

Intersections

- None

Street Segments

- La Media Road between SR 905 EB Ramps and Airway Road

13.2 Mitigation

The following mitigation measures will mitigate the significant impact to below a level of significance.

- ***Mitigation Measure MM-TRA-1: La Media Road between SR 905 EB Ramps and Airway Road*** – To mitigate the project's impact to below a level of significance, the project will widen La Media Road on the east side to construct a second northbound through lane from Airway Road to approximately 600 feet north of Airway Road, where the road is already widened to three through lanes. This mitigation measure has already been proposed as part of the La Media Retail TIS.
- This mitigation will be permitted and bonded prior to the issuance of the first building permit and will be constructed prior to the issuance of occupancy. ***Appendix J*** contains a conceptual drawing of this improvement.

Tables 13-1 and 13-2 shows the post mitigation analysis reducing the project impacts to less than significant.

TABLE 13-1
EXISTING + PROJECT POST-MITIGATION STREET SEGMENT ANALYSIS

Historical Traffic Count (ADT) Comparison

Segment Locations	2015/2016	2019	%	% per year
La Media Road between SR 905 Ramps ^a	16,415	18,311	11.6%	3.9%
La Media road between SR 905 and Airway Road ^b	14,265	13,864	-2.8%	-0.7%
			avg	1.6%
			used	2.0%

Airway Road - east of La Media Road ^c	7,025	5,682	-19.1%	-4.8%
			used	2.0%

Footnotes:

a. The 2016 ADT on this segment obtained from the Sunroad Otay Mesa Tranportation Impact Study

b. The 2015 ADT on this segment obtained from the Plaza La Media Tranportation Impact Study

c. The 2015 ADT on this segment obtained from the Plaza La Media Tranportation Impact Study

General Notes:

1. The 2% growth factor was applied to the La Media Road study intersections

SR-905 WB Ramps to SR-905 EB Ramps	5 Lane Collector	37,500	16,415	0.438	B

(a) Existing roads street classification is based on field observations. The capacity for a 5 Lane Prime Arterial was estimated using the 6 Lane Prime Arterial capacities as a basis.

(b) Average daily traffic (ADT) volumes for the roadway segments were collected by National Data and Surveying Services in November 2016, January 2017, and February 2018.

(c) The v/c Ratio is calculated by dividing the ADT volume by each respective roadway segment's capacity.

* Remainder of Southwestern HEC Otay Mesa trips access site via Excellante Street

APPENDIX B

INTERSECTION METHODOLOGY AND ANALYSIS SHEETS

SIGNALIZED INTERSECTIONS

For signalized intersections, level of service criteria are stated in terms of the average control delay per vehicle for a 15-minute analysis period. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. **Table 1** summarizes the delay thresholds for signalized intersections.

Level of service A describes operations with very low delay, (i.e. less than 10.0 seconds per vehicle). This occurs when progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

Level of service B describes operations with delay in the range 10.1 seconds and 20.0 seconds per vehicle. This generally occurs with good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.

TABLE 1
LEVEL OF SERVICE THRESHOLDS FOR SIGNALIZED INTERSECTIONS

AVERAGE CONTROL DELAY PER VEHICLE (SECONDS/VEHICLE)			LEVEL OF SERVICE
0.0	\leq	10.0	A
10.1	to	20.0	B
21.1	to	35.0	C
35.1	to	55.0	D
55.1	to	80.0	E
	\geq	80.0	F

Source: Highway Capacity Manual, 2000.

Level of service C describes operations with delay in the range 20.1 seconds and 35.0 seconds per vehicle. These higher delays may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.

Level of service D describes operations with delay in the range 35.1 seconds and 55.0 seconds per vehicle. At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or higher v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are more frequent.

Level of service E describes operations with delay in the range of 55.1 seconds to 80.0 seconds per vehicle. This is considered to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.

Level of service F describes operations with delay in excess of over 80.0 seconds per vehicle. This is considered to be unacceptable to most drivers. This condition often occurs with over-saturation (i.e., when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing causes to such delay levels.

UNSIGNALIZED INTERSECTIONS

For unsignalized intersections, level of service is determined by the computed or measured control delay and is defined for each minor movement. Level of service is not defined for the intersection as a whole. **Table 2** depicts the criteria, which are based on the average control delay for any particular minor movement.

TABLE 2
LEVEL OF SERVICE THRESHOLDS FOR UNSIGNALIZED INTERSECTIONS

AVERAGE CONTROL DELAY PER VEHICLE (SECONDS/VEHICLE)			LEVEL OF SERVICE	EXPECTED DELAY TO MINOR STREET TRAFFIC
0.0	\leq	10.0	A	Little or no delay
10.1	to	15.0	B	Short traffic delays
15.1	to	25.0	C	Average traffic delays
25.1	to	35.0	D	Long traffic delays
35.1	to	50.0	E	Very long traffic delays
	\geq	50.0	F	Severe congestion

Source: Highway Capacity Manual, 2000.

Level of Service F exists when there are insufficient gaps of suitable size to allow a side street demand to safely cross through a major street traffic stream. This level of service is generally evident from extremely long control delays experienced by side-street traffic and by queuing on the minor-street approaches. The method, however, is based on a constant critical gap size; that is, the critical gap remains constant no matter how long the side-street motorist waits. LOS F may also appear in the form of side-street vehicles selecting smaller-than-usual gaps. In such cases, safety may be a problem, and some disruption to the major traffic stream may result. It is important to note that LOS F may not always result in long queues but may result in adjustments to normal gap acceptance behavior, which are more difficult to observe in the field than queuing.

APPENDIX C

CITY OF SAN DIEGO ROADWAY CLASSIFICATION TABLE

TABLE 2 (MODIFIED)
City of San Diego Roadway Classifications, Levels of Service (LOS) and Average Daily Traffic (ADT)

Street Classification	Lanes	LEVEL OF SERVICE^a				
		A	B	C	D	E
Freeway	8 lanes	60,000	84,000	120,000	140,000	150,000

Collector (multi-family)	2 lanes	2,500	3,500	5,000	6,500	8,000
Sub-collector (single-family)	2 lanes	—	—	2,200	—	—

Footnotes:

a. Approximate recommended ADT based on City of San Diego Street Design Manual.

General Notes:

1. The volumes and the average daily level of service listed above are only intended as a general planning guideline.
2. Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.
3. **Shaded areas indicate LLG-derived ADT capacities.**
