HILLMANN
CONSULTING

June 9, 2017

Mr. Curtis Burnett
Din/Cal 4, Inc.
3411 Richmond Avenue, Suite 200
Houston, TX 77046

RE: Phase I Environmental Site Assessment
595 Camino De La Reina, 588 Camino Del Rio North
Mission Valley, CA 92108
Hillmann Project Number: C3-6859

Dear Mr. Burnett:

Hillmann Consulting, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-13, which is the latest version of the E1527 standard published by the ASTM, and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312.

This report is for the exclusive use of the entities named on the front cover, and no other party shall have any right to rely on any service provided by Hillmann Consulting, LLC, without prior written consent.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the Project Manager at (714) 634-9500.

Sincerely,
Hillmann Consulting, LLC

Stephen Bartlett
Environmental Technician

Christopher W. Baker
Vice President of Operations

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AST	– Aboveground Storage Tank
ASTM	– American Standard for Testing Materials
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
DTSC	– Department of Toxic Substances Control
ENG	– Engineering
ERNS	– Emergency Response Notification System
FOI	– Freedom of Information
FOIA	– Freedom of Information Act
FOIL	– Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
INST	– Institutional
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LUST	– Leaking Underground Storage Tank
MSDS	– Material Safety Data Sheet
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
RWQCB	– Regional Water Quality Control Board
SCAQMD	– South Coast Air Quality Management District
SQG	– Small Quantity Generator
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank

1.0 EXECUTIVE SUMMARY

Hillmann Consulting, LLC (Hillmann), performed a Phase I Environmental Site Assessment (ESA) of 595 Camino De La, Reina, 588 Camino Del Rio North in Mission Valley, California (the "Property"). This assessment has been conducted in accordance with the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312.

1.1 Project Details Summary Table

A summary of the pertinent details of the project is provided below:

PROJECT SUMMARY TABLE					
Name of Client	Din/Cal 4, Inc.				
Client Project No.:	N/A				
Client Contact:	Mr. Curtis Burnett				
Description of Project	Phase I Environmental Site Assessment				
Project Name:	N/A				
Street Address:	595 Camino De La Reina, 588 Camino Del Rio North				
City:	Mission Valley	**County:**	San Diego	**State:**	California
Tax ID/Parcel Number:	438-020-75-00, 438-020-74-00				
Zoning Designation:	Commercial				
Approx. Property Area:	5.13 Acres				
Approximate Building Area:	35,900 SF				
Year Built:	1968				
General Type of Usage:	Auto Sales				
Property Owner:	Robert & Marilyn Townsend				
Occupant(s):	Witt Lincoln				
Assessment Personnel:	Mr. Stephen Bartlett				
Property Contact:	Mr. Scott Witt				
Property Escort(s):	Mr. Scott Witt				
Inspection Date:	June 2, 2017				
Weather Conditions:	Cloudy, 68 degrees F				

1.2 Findings Summary Table

The following table summarizes the key findings of this assessment. This table, alone, does not constitute the complete assessment. The report must be reviewed in its entirety.

Assessment Section	No Sig. Concern	Potential Env Concern	REC	Recommended Follow-up	Rep. Ref.
User Provided Info	X				3.0
Data Gaps	X				2.5
Regulatory Review	X				4.1
Historical Review		Historic use as an auto repair facility. Presence of USTs, but no documentation of their removal, potential for soil contamination around tanks	X	Phase II Investigation, Ground Penetrating Radar Investigation	4.4
Site Use		Use as an auto repair facility, staining around the waste oil AST.	x	Same as above	5.2
Adjoining Properties	X				4.1.2 5.2.8
Hazardous Materials		Potential for unauthorized release of hazardous materials	X	Same as above	5.3
Bulk Petroleum Storage		Potential for unauthorized release of petroleum products, staining noted around waste oil AST	X	Same as above	5.3
PCBs		Presence of hydraulic lifts indicates potential for PCB contamination	X	Same as above	5.3
Waste / Discharges	X				5.3
Asbestos Containing Materials (ACM)		Potential for ACM on Property		Compliance with regulations	7.1
Lead Based Paint (LBP)		Potential for LBP on Property		Compliance with regulations	7.2
Radon	X				7.3
Mold	X				7.4
Wetlands	X				7.5

NA = Not Applicable, TBD = To Be Determined, UNK = Unknown

1.3 General Description, Current and Historic Property Use

The Property consists of two rectangular shaped parcels on the south side of Camino De La Reina, between Camino De La Siesta and Camino Del Arroyo. The site is currently an auto body and paint, auto sales, and auto repair facility. The total Property area is approximately 5.31 acres. The Property is located in a suburban developed area characterized by a mix of commercial properties, single and multi-family homes, apartments, and warehouses. The terrain of the Property appeared to be relatively flat. No natural surface bodies of water were observed.

The Property appears to have first been developed with a commercial building circa 1968 which was used as an auto sales and repair facility. The Property currently resembles this configuration.

1.4 Findings, Opinions, and Conclusions

1.4.1 Notable Findings

Due to the historic use of the site as an auto repair shop since approximately 1970, there is the potential for contamination from undocumented releases of hazardous wastes and petroleum products. This constitutes a *REC*.

Mr. Scott Witt indicated that there is an oil water separator located near the eastern garage. The oil water separator was not observed, however. Mr. Scott Witt indicated that it was serviced monthly.

Three (3) 2,000-gallon USTs used for regular unleaded gasoline and one (1) 550-gallon tank used for waste oil were located at the Property. One (1) 2,000-gallon tank was replaced with a double walled tank in 1986, and contamination of the soil was noted. All contaminated soil was excavated and disposed of in a landfill. The waste oil UST was removed in 1991, during which contamination of the soil was noted in the remote piping area. All contaminated soil was excavated and disposed of in a landfill. All three 2,000 gallon USTs were reportedly removed sometime during the early 2000s. Tank closure documentation was provided for one of the tanks, located approximately on the northern side of the main showroom building, additional closure documentation was provided for a second tank, however no final closure letter was issued. No documentation was provided to Hillmann from the property owner or the county of San Diego for the last tank removal. Hillmann was unable to ascertain the approximate location of two of the tanks based off the maps provided by the San Diego Department of Environmental Health, so these tanks constitute a *REC*.

A previous LUST case for the site was noted, with a status of “Completed – Case Closed” as of June 16, 1992. Documents provided from the San Diego County Department of Environmental Health provided a closure letter and documentation proving that soil was contaminated and had been excavated and removed from the site; however, groundwater contamination still exists. This LUST case constitutes a *HREC*.

The site had approximately seventeen hydraulic lifts present at the time of the site visit, due to the age of the site, the presence of these lifts constitutes a *REC* due to possible contamination from old hydraulic fluid.

A LUST case was noted on the eastern adjoining property, no documentation was found for the LUST case, however in 2015, a Voluntary Assistance Program case was opened at the site for the decommissioning of the former auto dealership. Soil tested positive for TPH contamination in several locations. All contaminated soil was excavated and additional soil gas probes were installed which indicated no contamination from VOCs at the site. A No Further Action letter was issued for the site 10/24/2008 Due to these clean-up actions, this does not constitute a REC in connection with the Property.

1.4.2 Non-ASTM Scope Considerations

Hillmann has also performed preliminary evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials (ACM), lead-based paint, radon, mold and wetlands. Our observations and research did not identify any notable concerns, except for the following:

Considering the dates of construction of the existing buildings, asbestos containing materials (ACM) may be present at the Property. Suspected ACM observed during a preliminary visual screening included roofing materials, plaster walls, drywall, ceiling tiles, cove base, adhesive, and stucco. It is possible that additional quantities of suspect ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a preliminary evaluation regarding the potential presence of ACM at the Property.

Considering the dates of construction of the existing buildings, lead-based paint may be present at the Property. A lead based paint survey was conducted by Hillmann on June 2, 2017. In general, no lead based paints were detected at the Property with the exception of tiles in the interior of the showroom, two doors within the showroom, and the upstairs of the warehouse. In general, interior painted surfaces on the Property were in fair condition.

1.4.3 Significant Data Gaps

No data gaps that significantly impacted Hillmann's ability to identify RECs in connection with the Property have been identified.

1.4.4 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

Recognized Environmental Conditions (RECs):

- The Property has operated as an auto repair facility since approximately 1970. There is the potential for undocumented releases of hazardous materials or petroleum products during this time, which constitutes a *REC*.

- Significant staining was noted in the area around the waste oil AST, which indicates that spilling or an undocumented release may have occurred at the location. This constitutes a *REC*.

- Approximately seventeen hydraulic lifts were noted at the Property at the time of the site visit. Because of the age of these hydraulic lifts, there is the potential for an undocumented release and subsequent contamination of the area from hydraulic fluids and/ or PCBs. This constitutes a *REC*.

- Three USTs on the Property were reportedly removed according to the Service Director for the Property, Scott Witt. Closure documents were provided for one of the tanks, and additional documents were provided showing the intent to close a second tank, however no final closure letter was issued. No documentation has been provided to Hillmann from the county of San Diego or from the property owners for the final tank removal. There is still the potential for soil contamination in the vicinity of the tanks. Therefore the USTs constitute a *REC* until Hillmann is provided with tank removal documentation.

Controlled Recognized Environmental Conditions (CRECs):

- No evidence of any CRECs in connection with the Property was identified.

Historical Recognized Environmental Conditions (HRECs):

- Two LUST cases were noted on the Property for the waste oil UST and one of the regular unleaded gasoline USTs. In both cases, according to the San Diego County Department of Environmental Health, all contaminated soil was excavated and removed. However, contaminated groundwater remains at the site.

1.5 Recommendations

1.5.1 Recognized Environmental Conditions

Based on the findings of the Phase I Environmental Site Assessment, Hillmann recommends a Phase II Investigation to determine whether soil, soil vapor or groundwater has been contaminated due to past and present use of Property as an auto repair facility, Documentation regarding the removal of the past USTs on the Property should be obtained, or the use of Ground Penetrating Radar to determine whether the tanks have been removed will be required.

1.5.2 Non-ASTM Considerations

The following should be considered with regard to further investigation or management of Non-ASTM considerations addressed by this report:

- Compliance with all applicable rules and regulations pertaining to the presence of ACM and lead based paint at the Property.

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs nor CRECs. *De minimis condition* is defined by the ASTM as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- Review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- Review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental concerns that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A preliminary visual inspection for the presence of suspect ACM within the accessed areas of buildings on the Property.

Lead-Based Paint (LBP): A preliminary visual inspection of the condition of painted surfaces in the accessed areas of buildings on the Property.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the potential for elevated indoor levels of radon gas to occur in the area of the Property.

Mold: A preliminary visual inspection within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors.

Wetlands: A preliminary review of data published by the US Fish and Wildlife Service regarding the presence or absence of mapped wetlands on the Property. The US Fish and Wildlife Service wetlands data is typically provided to Hillmann by Environmental Data Resources, Inc. (EDR).

2.2 Property Location/Legal Description

The Property is located 595 Camino De La Reina, 588 Camino Del Rio North in Mission Valley, California. The legal designations of the Property are Assessor's Parcel Numbers (APNs) 438-020-75-00, 438-020-74-00. The Property is located on the south side of Camino De La Reina, between Camino De La Siesta and Camino Del Arroyo. The latitude and longitude of the Property is approximately North 32.7660 degrees, and West 117.1622 degrees.

2.3 Significant Assumptions

The following significant assumptions are made:

- Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from EDR during the course of this assessment.

- Hillmann can neither warrant nor guarantee the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

- Hillmann has assumed that the site operations at the time of the site visit reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, Hillmann has also assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not made known to us, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, Hillmann has assumed that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.4 Limitations and Exceptions

2.4.1 Limiting Conditions

Hillmann was unaware of any significant limiting conditions at the time of the assessment.

2.4.2 Other Exceptions or Deletions:

No exceptions or deletions from the ASTM Standard E 1527-13 are reported.

2.5 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions.

Data Gap:	Significant (Yes/No)?	Discussion
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.6 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. The methodology of this Phase I Environmental Site Assessment was consistent with the ASTM Standard Practice for E 1527-13. Findings within this report are based on information collected from observations made on the day of the site visit and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation or other construction purposes. Hillmann makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, the research findings reasonably obtained, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies completely on the information, whether written, graphic or verbal, provided by the subject Property contact(s) or as shown on any documents reviewed or received from the subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Property and neighboring properties that could impact the Property. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-13. The information provided in the regulatory database report is assumed to be correct and complete.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. "Reasonable efforts" are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify subsurface equipment that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Unless otherwise specified in Section 2.1 of this report, an ASTM Vapor Encroachment Screening of the Property utilizing the information collected during the course of this assessment is excluded from the scope of service for this assessment.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement between Din/Cal 4, Inc. and Hillmann Consulting, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

3.1 Prior Environmental Reports/Documentation

Hillmann was not provided with any prior environmental reports or documentation.

3.2 Title Records/Environmental Liens/Activity and Use Limitations

Review of title records is not included in the scope of work for this assessment project. No information regarding environmental liens or activity and use limitations was provided to Hillmann by the Client.

3.3 Specialized Knowledge or Experience

No indication of any specialized knowledge or experience regarding the Property was reported to Hillmann by the Client.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or specialized knowledge of the Property was reported to Hillmann by the Client.

3.5 Property Value Reduction due to Environmental Conditions

No information was provided by the Client to Hillmann regarding a reduction of the Property value due to environmental problems or conditions.

3.6 Reason for Performing Phase I ESA

It is Hillmann's understanding that the Phase I ESA was being performed in consideration of a pending real estate transaction involving the Property for future residential development.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

An EDR Radius Map report was obtained from Environmental Data Resources of Shelton, CT. The EDR Radius Map Report provided a search of standard environmental record sources in general accordance with the requirements of the ASTM E1527-13. Hillmann has reviewed the EDR Radius Map report and a summary of findings is presented in the following tables and report sections. Hillmann also reviewed the list of unmapped sites (referred to by EDR as "Orphan List" sites). Unmapped sites identified as falling within an applicable specific search distance or warranting discussion in the report, if any, have been included in the information presented below. Detailed descriptions of the meaning and significance of the regulatory databases can be found in the EDR Radius Map Report in Appendix E.

Regulatory Database	Search Distance	Property Listed?	Adj. Properties Listed?	Total Listings Within Search Distance

4.1.1 Property Listings

The Property was identified on the following databases:

RGA LUST – Townsend Mercury. The RGA LUST listing indicates that there was a LUST listing for the Property between 1992 and 2004 with no other information provided. Due to the nature of the listing, this does not constitute a REC.

HAZNET, RCRA-SQG, RGA LUST – Witt Lincoln Mercury. The HAZNET listing indicates that hazardous waste was disposed of from the Property one hundred-fifty times between 2015 and 1988. The RCRA-SQG listing indicates that the Property operates as a small-quantity

generator for hazardous waste with no reported violations. The RGA LUST listing indicates that there was a LUST listing for the Property between 2005 and 2012. Due to the lack of reported violations and the nature of the RGA-LUST listing, these listing do not constitute RECs.

LUST, San Diego Co. SAM, AST, San Diego Co. HMMD, SWEEPS UST, EMI – San Diego Auto Auction/ Lincoln. The first LUST listing indicates a status of "Completed – Case Closed" as of 06/16/1992. An aquifer used for drinking water supply was potentially affected from gasoline at the Property. A leak was first discovered during a tank closure procedure on 12/08/1986. The second LUST listing indicates a status of "Completed – Case Closed" as of 06/16/1992. Soil was affected from waste oil at the Property. Contaminated soil was excavated and disposed of from the site. A leak was first discovered during a tank closure procedure on 01/10/1992. The San Diego County SAM listing indicates facility types of "Drinking Water Aquifer Impacted" and "Soils Only", both with statuses of "Closed Case" as of 06/16/1992. According to the San Diego County Department of Environmental Health, all contaminated soil was excavated but contaminated groundwater reamins.The LUST case does constitute a HREC.

The AST listing indicates that the Property is registered as having one (1) 2900-gallon AST with no other pertinent information. The San Diego County HMMD listing indicates that the Property is registered as having a permit from San Diego County to generate hazardous waste with several reported minor violations including: failure to properly dispose of hazardous waste at an authorized location, failure to complete and/or submit an annotated site map, failed to properly empty container, and failure to properly label hazardous waste accumulation containers. The SWEEPS UST listing indicates that the Property is listed as having one (1) 2,000-gallon tank for regular unleaded gasoline with an active status, two (2) 2,000-gallon tanks for regular unleaded gasoline with no reported status, and one (1) 300-gallon tank for waste oil reportedly removed. The EMI listing indicates that pollution was emitted at the Property under the San Diego County Air Pollution Control District between 1999 and 2006. Due to lack of documentation regarding the removal of the USTs on the site, the potential presence of these USTs constitutes a REC.

4.1.2 Adjoining Property Listings

EDR HIST AUTO – Located at 591 Camino De La Reina, adjoining to the west-northwest and at a lower elevation relative to the Property. The EDR Historical Auto Listing indicates that the site operated as an auto station in 2008. Due to the nature of the listing, this does not constitute a REC in connection with the Property.

EDR HIST AUTO – Located at 5030 Camino De La Siesta, adjoining to the south-southwest and at a higher elevation relative to the Property. The EDR Historical Auto listing indicates that site operated as an auto station in 1999. Due to the nature of the listing, this does not constitute a REC in connection with the Property.

RCRA-SQG, LUST, San Diego Co. SAM, SLIC, UST, AST, SWEEPS UST, FINDS, ECHO, EMI, HAZNET, HIST CORTESE – Bob Baker Ford Chrysler Plymouth, at 730 Camino Del Rio North, adjoining to the east and at a higher elevation relative to the Property. The RCRA-SQG listing indicates that the site operates as a small quantity generator for hazardous waste with one reported "general" violation on 01/07/2004 with no other pertinent information. The first LUST listing indicates a status of "Completed – Case Closed" as of 11/20/2008. Soil was

potentially affected by gasoline at the address. A leak was first discovered during a tank closure procedure on 07/19/2005, a No Further Action letter was issued for the site on 10/24/2008. The second LUST listing indicates a status of "Case Closed" as of 03/09/1988. Soil was potentially affected by gasoline at the address. The San Diego County SAM listing indicates that the site had a failed integrity test with a status of "Closed Case" as of 11/24/1986, a case of "Soils Only" with a status of "Case Closed" as of 03/09/1988, and a case of "Soils Only" with a status of "Case Closed" as of 11/07/2008. The first SLIC listing indicates a status of "Completed – Case Closed" as of 03/09/1988. Soil was potentially affected by gasoline at the address. The second SLIC listing indicates a status of "Completed – Case Closed" as of 11/24/1986. The UST listing indicates that the site is registered as having an active UST. The AST listing indicates that the site is registered as having an active AST. The SWEEPS UST listing indicates that the site is registered as having two (2) active 4,000-gallon tanks for regular unleaded gasoline, one (1) active 1,000-gallon tank for petroleum, five (5) 7,500-gallon tanks for regular unleaded gasoline with unreported statuses, one (1) 2,000-gallon tank for oil with an unreported status, one (1) 1,000-gallon tank for "chemical" with an unreported status, and two (2) 500-gallon tanks for petroleum waste with unreported statuses. The FINDS listing indicates that the site is on the California Hazardous Waste Tracking System – Datamart, Hazardous Air Pollutant Major, RCRA, and State Master databases. The ECHO listing indicates a registry id of "110002688887" with no other information provided. The EMI listing indicates that the site emitted pollution twelve times between 1999 and 2010 under the San Diego County Air Pollution Control District. The HAZNET listing indicates that unspecified hazardous waste was disposed of once from the site in 2013 by "other recovery of reclamation for reuse including acid regeneration". The HIST CORTESE listing indicates that the site is in the Cortese region with no other pertinent information. Due to later remediation actions, and the status of the LUST listing, these listings do not constitute RECs in connection with the Property.

SLIC, San Diego Co. HMMD, NPDES – Camino Del Rio Mixed Use Project, at 730 Camino Del Rio North, adjoining to the east and at a higher elevation relative to the Property. The SLIC listing indicates a status of "Completed – Case Closed as of 06/10/2015. A voluntary assistance program (VAP) case was opened in May 2015 for the decommissioning of the former Bob Baker Ford auto dealership. The dealership included auto service bays and subsurface hydraulic lift systems and is being redeveloped for mixed use residential. The Department of Environmental Health (DEH) previously over saw the assessment of a waste oil release from an underground storage tank at this site. Several site investigations were conducted and the unauthorized release case was closed on October 24, 2008, with total recoverable petroleum hydrocarbons (TRPH) contamination remaining in soil, and low concentrations of volatile organic compounds (VOCs) in both soil and groundwater. Since the closure of H02961-003, additional assessment was conducted at the project site. In May 2013, twelve investigative borings were advanced to collect both soil and groundwater samples to fill in data gaps from the previous investigations at the project site. Groundwater was encountered at 14 to 16 feet below ground surface (bgs), and temporary wells were installed to collect groundwater samples. The soil and groundwater samples collected were analyzed for total petroleum hydrocarbons (TPH), VOCs, polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and metals. The soil laboratory analytical results indicated levels of TPH in the diesel range, background concentrations of metals and a low concentrations of the PAH, fluorine. Groundwater analytical results indicated trace concentrations of metals in the background range, and a trace concentration of fluorine. The hydraulic lift systems were removed in April 2015,

and 18 soil samples were collected and analyzed for TPH, VOCs and PCBs. One of the soil sample results, H12, indicated the presence of TPH contamination, in both the diesel and oil range. Excavation was conducted to remove contaminated soil. In April 2015, ten (10) soil gas probes were installed to evaluate for the presence of VOCs. All samples taken were nondetect for VOCs. The San Diego County HMMD listing indicates that the site is registered as having a permit for handling regulated hazardous waste and for generating hazardous waste with several reported minor violations. The NPDES listing indicates that the site is registered under the NPDES program with an "Active" status as of 12/22/2014. Due to remediation actions and the status of the SLIC listing, these listings do not constitute RECs in connection with the Property.

4.1.3 ASTM Search Distance Findings

The following is a summary of the findings of the regulatory database review with regard to sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this report informative and yet concise, Hillmann has provided a brief discussion of the listed site(s) for each database category that appears most likely to impact the Property based on distance, topography and/or case status. A copy of the full EDR Radius Map Report, including available details of all listed sites, is included in Appendix E.

Note that listings for the following databases, if identified, would be discussed above in Sections 4.1.1 and 4.1.2: Registered Storage Tanks, Federal RCRA Generators, Federal and State INST and ENG Controls, ERNS.

Federal NPL: No NPL listings were identified within a one-mile radius of the Property.

Federal Delisted NPL: No DNPL listings were identified within a ½-mile radius of the Property.

Federal CERCLIS: No CERCLIS listings were identified within a ½-mile radius of the Property.

Federal CERCLIS-NFRAP: One (1) CERC-NFRAP listings were identified within a ½-mile radius of the Property. The closest listing is described as Hazard R E Inc. at Cabrillo Freeway & Friars Road. This site is approximately 1,947 feet north-northwest and at a higher elevation relative to the Property. The listing indicates that the site does not qualify for the National Priorities List (NPL) based on existing information. In addition, a discovery date of 12/01/1979 and an archive site date of 09/01/1984 is noted. Considering the distance and status, this site is not considered to be a REC in connection with the Property.

Federal RCRA-CORRACTS: No CORRACTS listings were identified within a one-mile radius of the Property.

Federal RCRA-TSD: No TSD listings were identified within a ½-mile radius of the Property.

State/Tribal Hazardous Waste Sites: Two (2) SHWS listings were identified within a one-mile radius of the Property on the EnviroStor database. The closest listing is described as Proposed Civita Elementary School at the Northeast Corner of Via Alta and Civita Boulevard.

This site is approximately 4,955 feet northeast and at a higher elevation relative to the Property. The listing indicates an "Active" status as of 01/28/2016. The site type is noted as School Investigation. A Project Wide Phase 1 was issued 06/09/2016. Considering distance and topographic relation, this site is not considered to be a REC in connection with the Property. Due to status and/or distance, the other listing does not represent a REC either.

No SHWS listings were identified within a one-mile radius of the Property on the RESPONSE database.

State/Tribal Landfill/Solid Waste Disposal Sites: No SWF/LF listings were identified within a ½-mile radius of the Property.

State/Tribal leaking Storage Tanks: Eleven (11) LUST listings were identified within a ½-mile radius of the Property. The closest two listings are described in Sections 4.1.1 and 4.1.2. The next closest listing is described as Midway Jeep Chrysler at 777 Camino Del Rio S. This site is approximately 694 feet southeast and at a higher elevation relative to the Property. The listing indicates a status of "Completed – Case Closed" as of 09/28/1992. Soil was potentially affected from waste oil at the address. A leak was first discovered during a tank closure procedure on 09/03/1992. Considering the status and only soil media was impacted, this listing is not considered to be a REC in connection with the Property. Due to distance, status, hydraulic gradient or other reasons, none of the other eight listed facilities represent a REC to the Property.

Eight (8) SLIC listings were identified within a ½-mile radius of the Property. The two closest listings are described in Section 4.1.2. The next closest listing is described as McBride's Mission Valley Arco at 915 Camino Del Rio S. The site is approximately 1,171 feet east-southeast and at a higher elevation relative to the Property. The listing indicates a facility status of "Completed – Case Closed" as of 06/05/1990 when a NFA letter was issued. Considering the status and distance, this listing is not considered to be a REC in connection with the Property. Due to distance, status, hydraulic gradient or other reasons, none of the other five listed facilities represent a REC to the Property.

Nine (9) San Diego Co. SAM were identified within a ½-mile radius of the Property. The two closest listings are described in Sections 4.1.1 and 4.1.2. The next closest listing is described as Courtesy Chevrolet at 750 Camino Del Rio North. This site is approximately 690 feet northeast and at a lower elevation relative to the Property. The listing indicates that at the site had a failed integrity test with a status of "Closed Case" as of 10/14/1987, a failed integrity test with a status of "Closed Case" as of 10/18/1988, and a facility type of "Soils Only" with a status of "Closed Case" as of 05/09/1997. Due to status and distance, this listing is not considered to be a REC in connection with the Property. Due to distance, status, hydraulic gradient or other reasons, none of the other six listed facilities represent a REC to the Property.

State/Tribal Voluntary Cleanup Sites: No VCP listings were identified within a ½-mile radius of the Property.

State/Tribal Brownfields: No BROWNFIELDS listings were identified within a ½-mile radius of the Property.

Review of the sites identified within the ASTM search parameters did not identify any nearby or surrounding area sites that are considered to be a REC in connection with the Property, unless as discussed otherwise previously in this section.

4.2 Additional Environmental Record Sources

4.2.1 Supplemental Database Listings

Hillmann reviewed the EDR Radius Map report for listings on supplemental databases that were searched in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases, if identified, would be discussed in Section 4.1.1 and 4.1.2. None of the other supplemental database listings identified by the EDR Radius Map report are considered to be a REC in connection with the Property.

4.2.2 Local Agency & Internet Research

Hillmann performed a search of available local and municipal agencies for pertinent information pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Hillmann also conducted a cursory internet search of the Property address for information indicative of a REC. The following table summarizes the findings of the research:

Source:	Inquiry Made?	Type:	Outcome:
Environmental Protection Agency (EPA)	Yes	FOIA Request	Response not received prior to issuance of report.
Department of Toxic Substances Control (DTSC)	Yes	FOIA Request	Response indicated no records found.
Regional Water Quality Control Board (RWQCB) – San Diego Region (9)	Yes	FOIA Request	Response indicated that records for the Property address could be found online.
County of San Diego, Department of Public Health	Yes	FOIA Request	Response provided records of a previous LUST case on Property.
San Diego Air Pollution Control Disctrict (SDAPCD)	Yes	FOIA Request	Response not received prior to issuance of report.
San Diego County Geographical Information System (GIS)	Yes	On-line search	No information indicative of a REC was identified.
CA DTSC EnviroStor database http://www.envirostor.dtsc.ca.gov/public/	Yes	Internet	The Property address was searched. No results for the Property were found.
CA GeoTracker database http://geotracker.waterboards.ca.gov/	Yes	Internet	The Property address was searched. A record for a LUST cleanup site on the Property was found. A record for a Voluntary Assistance Program clean-up site and a SLIC clean-up site were found for the eastern adjoining property, a No Further Action Letter for the site was issued 10/24/2008.
USEPA Envirofacts search http://www.epa.gov/enviro/index.html	Yes	Internet	The Property address was searched. No results for the Property were found.

www.google.com	Yes	On-line search	The Property address search returns results as Witt Lincoln.
www.realquest.com	Yes	On-line search	Basic Property information such as parcel number, date of construction, and building square footages were collected. Pertinent information, where obtained, is referenced in the appropriate sections of this report.
Other:	NA		

4.3 Physical Setting Sources

4.3.1 USGS 7.5 Minute Topographic Map

The USGS 7.5 minute series topographic maps covering the Property (La Jolla, CA 2012 & Point Loma, CA 2012) were reviewed. The maps indicated an approximate elevation at the Property of 35 feet above mean sea level. The topography indicated by the map appeared to be sloping downward to the west-northwest. The closest down gradient body of water appeared to be the San Diego River, approximately 514 feet west-northwest.

4.3.2 Soils

Based on USDA Soil Conservation Service (SCS) data summarized by the EDR Geocheck-Physical Setting Source Addendum, the soil type at the Property is classified as "Urban Land." The Urban Land designation indicates that a majority of the original soils on the site have been disturbed by developed or covered with impervious surfaces, such as buildings or pavement.

4.3.3 Geology

Based on geologic data summarized by the EDR Geocheck - Physical Setting Source Addendum, the geologic formation in the vicinity of the Property is described as a stratified sequence of the Cenozoic Era, Tertiary System, Pilocene Series.

4.3.4 Hydrology

No site specific hydro-geologic data was available for the Property. Based on the drainage/topography of the Property and surrounding area, the inferred direction of groundwater flow appears to be towards the west-northwest. A detailed subsurface investigation of the Property would be needed to accurately determine site specific groundwater data such as depth, gradient and flow direction.

4.4 Historical Use – Property and Adjoining Properties

Hillmann has conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.4.1 Fire Insurance Maps

A search of Sanborn Fire Insurance Maps for the Property and surrounding area was conducted by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. EDR provided a Sanborn report that stated fire insurance maps covering the target property were not found.

4.4.2 City Directories

Hillman obtained an EDR City Directory Abstract report to obtain data of historic city directory listings for the Property. The following is a generalized summary of the findings of City Directory Research:

YEAR(S)	SUMMARY	
2000 – 2013	**Property:**	The Property is listed as Edition Lincoln Mercury, Hertz Local, and Witt Lincoln.
	Adjacent Properties:	The adjoining property to the north is listed as apartments. The adjoining property to the east is listed as Twin Anchor Boats and Yachts, Vetco Inc., Empire Marine, Mission 4 Autos LLC, Evans Tire & Service Centers, University Motors Inc., various car dealerships, and Airport Rent-A-Car. The adjoining properties to the south are listed as Comfort Suites, Marriot, and Fairfield Inn. The adjoining properties to the west are listed as various commercial businesses including, Nuvison Technology Corporation, Pacific Plumbing, and Metro Family Physicians Medical Group.
1990 – 1999	**Property:**	The Property is listed as El Camino Acceptance Corp, Townsend Leasing, Townsend Lincoln Mercury, and Townsend Daihatsu.
	Adjacent Properties:	The adjoining property to the north is listed as apartments. The adjoining property to the east is listed as University Ford, and University Chrysler Plymouth. The adjoining properties to the south are listed as Comfort Suites. The adjoining properties to the west are listed as various commercial businesses, including Occupational Therapy Network, Costa Del Mar Window Cleaning, and Trans Waste Services.
1980 – 1989	**Property:**	The Property is listed as Townsend Lincoln Mercury
	Adjacent Properties:	The adjoining property to the east is listed as University Ford, Townsend Rent A Car, and University Chrysler Plymouth. The adjoining properties to the south are listed as Comfort Suites and Gulliver's Restaurant. The adjoining properties to the west are listed as various commercial businesses including various financial and medical offices.
1970 – 1979	**Property:**	The Property is not listed.
	Adjacent Properties:	The adjoining property to the east is listed as University Tire Center and University Motors. The adjoining properties to the south are listed as Miracle Water Co. Water Softeners.

4.4.3 Historical Topographic Map Review

Hillmann obtained and reviewed an "EDR Historical Topographic Map Report" from EDR containing historic aerial photography of the Property and adjoining properties. The following interpretation of land usage was made by review of the maps:

YEAR(S)	DESCRIPTION	
1903/1904, 1930	**Property**	The Property is depicted as undeveloped land with a road running through it.
	Adjacent Properties	The adjoining property to the north is depicted with a structure. The adjoining properties to the east, south, and west are depicted as undeveloped land.

1942/1943	**Property**	The Property is depicted as undeveloped land.
	Adjacent Properties	The adjoining properties to the north, east, and south are depicted as undeveloped land. The adjoining properties to the west are depicted with a structure.
1953	**Property**	The Property is depicted as undeveloped land.
	Adjacent Properties	The adjoining properties to the north and east are depicted as undeveloped land. The adjoining properties to the south are depicted with a structure. The adjoining properties to the west are depicted with a structure.
1967	**Property**	The Property is depicted as undeveloped land.
	Adjacent Properties	The adjoining properties to the north are depicted as undeveloped land. The adjoining property to the east is depicted with four large structures and one smaller structure. The adjoining properties to the south are depicted with six small structures. The adjoining properties to the west are depicted as undeveloped land.
1975	**Property**	The Property is depicted with three large structures and two smaller structures.
	Adjacent Properties	The adjoining properties to the north are depicted as undeveloped land. The adjoining property to the east is depicted with four large structures and one smaller structure. The adjoining properties to the south are depicted with six structures. The adjoining properties to the west are depicted with a large structure.
1996	**Property**	The Property is shaded to denote general urban development.
	Adjacent Properties	The adjoining properties are shaded to denote general urban development.
2012	**Property**	There is no building development depicted on the topographic map.
	Adjacent Properties	There is no building development depicted on the topographic map.

4.4.4 Aerial Photograph Review

Hillmann obtained and reviewed an "EDR Aerial Photo Decade Package Report" from EDR containing historic aerial photography of the Property and adjoining properties. In addition, Hillmann reviewed historic aerial photographs of the Property online at www.historicaerials.com. The following interpretation of land usage was made by review of the aerial photographs:

YEAR(S)	DESCRIPTION	
1949, 1953	**Property**	The Property appears to be agricultural land.
	Adjacent Properties	The adjoining properties appear to be agricultural land.
1964, 1966	**Property**	The Property appears to be agricultural land.
	Adjacent Properties	The adjoining properties to the north, east, and west appear to be agricultural land. The adjoining properties to the south appear to be developed with seven small structures.
1970	**Property**	The Property appears to be developed with a car sales lot, with several buildings and a large parking lot.
	Adjacent Properties	The adjoining properties to the north and west appear to be undeveloped land. The adjoining property to the east appears to be developed with a car sales lot, with several commercial buildings and a large parking lot. The adjoining properties to the south appear to be developed with seven small structures.

1979	**Property**	The Property appears to be developed with a car sales lot, with several buildings and a large parking lot.
	Adjacent Properties	The adjoining property to the north appears to be undeveloped land. The adjoining property to the east appears to be developed with a car sales lot, with several commercial buildings and a large parking lot. The adjoining properties to the south appear to be developed with several small structures. The adjoining properties to the west appear to be developed with two large commercial buildings.
1985	**Property**	The Property appears to be developed with a car sales lot, with several buildings and a large parking lot.
	Adjacent Properties	The adjoining property to the north appears to be undeveloped land. The adjoining property to the east appears to be developed with a car sales lot, with several commercial buildings and a large parking lot. The adjoining properties to the south appear to be cleared for development. The adjoining properties to the west appear to be developed with four large commercial buildings.
1989	**Property**	The Property appears to be developed with a car sales lot, with several buildings and a large parking lot.
	Adjacent Properties	The adjoining property to the north appears to be undeveloped land. The adjoining property to the east appears to be developed with a car sales lot, with several commercial buildings and a large parking lot. The adjoining properties to the south appear to be developed with three large commercial buildings. The adjoining properties to the west appear to be developed with four large commercial buildings.
1994, 2005, 2009, 2010, 2012	**Property**	The Property appears to be developed with a car sales lot, with several buildings and a large parking lot.
	Adjacent Properties	The adjoining property to the north appears to be developed with two apartment buildings. The adjoining property to the east appears to be developed with a car sales lot, with several commercial buildings and a large parking lot. The adjoining properties to the south appear to be developed with three large commercial buildings. The adjoining properties to the west appear to be developed with four large commercial buildings.

4.4.5 Petroleum/Natural Gas Well Review

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property. In addition, Hillmann conducted a search of the property location on the Division of Oil, Gas & Geothermal Resources Well Finder database (http://maps.conservation.ca.gov/doggr/index.html). No record of any historical petroleum/natural gas wells at the Property was identified.

4.4.6 Historical Records Data Failure

Historic land use data prior to 1903 was not readily available at the time of the assessment. The Property was determined by this assessment to have been first developed with a commercial building dating back to 1970. It is Hillmann's opinion that no significant data gaps were encountered.

4.4.7 Summary of Historic Use Research

The Property appears to have first been developed with a commercial building circa 1968 which was used as an auto sales and repair facility. The Property currently resembles this configuration.

The adjoining properties appear to have been undeveloped land up until 1964, when the southern properties appeared with several small structures which were used as a water softening plant. Circa 1985, the structures were demolished and the land was graded for development. By 1989, the properties were developed with two hotels. The eastern property appears to have first been developed circa 1970 which was used as an auto sales and repair facility. Circa 1979, the eastern property was developed with two large commercial buildings. By 1985 another large commercial building was developed. Circa 1994, the northern property was developed with apartments.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjacent public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, Hillmann accessed and observed representative areas of building interiors to the extent they were made safely accessible with the cooperation of the site escort.

The site reconnaissance was conducted by Mr. Stephen Bartlett on June 2, 2017. Weather conditions at the time of the assessment included a temperature of approximately 68 degrees F and cloudy skies. Hillmann was escorted by Mr. Scott Witt, the service director for the Property.

5.1.1 Significant Inaccessible Areas

No significant areas were excluded from Hillmann's visual inspection.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

The Property consists of two rectangular shaped parcels on the south side of Camino De La Reina, between Camino De La Siesta and Camino Del Arroyo. The site is currently an auto body and paint, auto sales, and auto repair facility. The total Property area is approximately 5.31 acres. The Property is located in a suburban developed area characterized by a mix of commercial properties, single and multi-family homes, apartments, and warehouses.

5.2.2 Topographic Characteristics

The terrain of the Property appeared to be relatively flat. No natural surface bodies of water were observed.

5.2.3 General Description of Structures

The Property is improved with one approximately 35,272 SF commercial structure and one approximately 600 SF commercial structure. The building is set on a slab-on-grade foundation and has a roll on roof. The interior consists of several small office spaces and a large garage/warehouse space which includes two paint booths.

5.2.4 Sources of Heating and Cooling

An electric cooling system and a natural gas heating system were present at the Property.

5.2.5 Potable Water Source/Sewage Disposal System

The Property is currently serviced by the municipal water and sewer systems.

5.2.6 Current Use(s) of the Property

The Property is currently used as an auto body and paint, auto sales, and auto repair facility.

5.2.7 Past Use(s) of the Property

No obvious indication of past Property usage likely to have involved the use, treatment, storage, disposal or generation of hazardous substances or petroleum products was observed at the time of the site visit. Please refer to Section 4.4 for findings of historical site use research.

5.2.8 Current Use(s) of the Adjoining Properties

The following describes adjacent and abutting properties:

Dir	Street Address	Description
N	510 Camino De La Reina	Apartments
E	730 Camino Del Rio N.	Construction Site
S	631 Camino Del Rio S. 641 Camino Del Rio S.	Hotels
W	5030 Camino De La Siesta 591 Camino De La Reina	Commercial office spaces

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

5.2.9 Past Use(s) of the Adjoining Properties

No indication of past uses of the adjoining properties was noted at the time of the site visit.

5.2.10 Current/Past Uses of Surrounding Area

The Property is located in suburban area of Mission Valley, California. The vicinity of the Property consists of a mix of single and multi-family residential properties, warehouses, hotel, apartment complexes, and commercial properties. No indications of past Property uses that differ substantially from current conditions were observed at the time of the site visit.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The facility at the Property stored various hazardous materials including automotive paints, paint waste, waste oil, metal filters, brake fluid, and used antifreeze. Waste paint, metal filters, brake fluid, and used antifreeze and waste oil were stored in twelve 55-gallon drums. The new paint was stored in flammable safety cabinets within the garage. The household cleaning

products were stored within a closet in the office area of the facility. New oil was stored in a separate storage area in large square ASTs and was serviced by Orange Line Oil Company.

5.3.2 Drums

Twelve 55-gallon drums were observed at the Property. Three of the drums were located within the garage space near the two painting booths. These two drums stored waste paint and one stored waste paint products. The waste paint drums are reportedly emptied bi-monthly by CleanTech Environmental Services Inc. The other nine drums were observed in a storage area by the waste oil AST. These drums store used antifreeze, brake fluid, and metal filters. These drums are emptied bi-monthly by CleanTech Environmental Inc. All drums were observed within secondary containment with the exception of the plastic drum storing paint waste products. These features do not appear to represent an environmental concern to the Property but should be removed and disposed of in connection with site development activities.

5.3.3 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property at the time of the site visit.

5.3.4 Unidentified Substance Containers

No unidentified substance containers were noted on the Property at the time of the site visit.

5.3.5 Storage Tanks

One approximately 500-gallon AST used for storing waste oil was noted on the Property. The tank is a double-walled steel tank. There was significant staining and a small amount of fluid present around the area of the tank. This may indicate either a leak from the tank or improper handling of the drums in the storage closet next to the tank. Four square ASTs for new oil were noted within a storage closet. They were approximately 250-gallons each and were double-walled fiberglass tanks with no evidence of any leaks.

5.3.6 Polychlorinated Biphenyls (PCBs)

Approximately seventeen hydraulic lifts were noted in the garage spaces used for automotive repairs. No leaking or surface staining was observed around the vicinity of the lifts. Due to the age of these hydraulic lifts, there is potential for an undocumented release and subsequent subsurface contamination from hydraulic fluid and/ or PCBs. This constitutes *a REC*.

5.3.7 Odors

No strong, unusual or pungent odors were noted on the Property.

5.3.8 Pools of Liquid

No pools of unknown liquid were noted at the Property.

5.3.9 Interior Stains or Corrosion

*De minimis s*taining was observed on the pavement in various locations at the Property. No interior stains or corrosion were noted at the Property. These features do not represent an environmental concern to the Property.

5.3.10 Interior Drains/Sumps

Floor drains were noted at the bay doors for every service bay. According to Mr. Scott Witt, these drains lead to an oil water separator located near the eastern garage. The oil water separator was not observed during the site visit, however Mr. Scott Witt indicated that it was serviced monthly.

5.3.11 Exterior Pits/Ponds/Lagoons

No evidence of exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

Significant pavement staining was observed in the vicinity of the waste oil AST. *De minimis s*taining was observed on the pavement on the parking lot. No evidence of stained soils or stressed vegetation was identified on the Property.

5.3.13 On-Site Solid Waste Dumping/Fill Material

A dumpster used for on-site solid waste dumping was noted on the north side of the Property.

5.3.14 Wastewater

No wastewater discharges were noted on the Property.

5.3.15 Septic Systems

No indication of septic systems was noted on the Property.

5.3.16 Wells

No evidence of wells was noted at the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Type	Name; Affiliation/Title	Summary
Client	Mr. Curtis Burnett, Din/Cal 4	Mr. Curtis Burnett, of Din/Cal 4, Inc., was provided with an environmental questionnaire with instructions to have it completed by a party knowledgeable of the Property. Information is referenced where pertinent in the report.
Property Owner	Mr. Scott Witt, Service Director	Mr. Scott Witt, service director for the Property was provided with an environmental questionnaire with instructions to complete it to the best of his knowledge. Information is referenced where pertinent in the report.
Property Occupants	Not applicable	Hillmann was not able to interview individual building occupants.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjacent or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjacent or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.2.2.

7.0 NON-ASTM SCOPE CONCERNS

In accordance with our contract agreement, Hillmann has conducted preliminary evaluations of the following "Non-ASTM Scope Considerations" that are outside of the requirements of the ASTM E1527-13 standard:

7.1 Asbestos-Containing Material (ACM)

Considering the dates of construction of the existing buildings, asbestos containing materials (ACM) may be present at the Property. Suspected ACM observed during a preliminary visual screening included roofing materials, plaster walls, drywall, ceiling tiles, cove base, adhesive, and stucco. It is possible that additional quantities of suspect ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a preliminary evaluation regarding the potential presence of ACM at the Property.

7.2 Lead-Based Paint

A lead based paint survey was conducted by Hillmann on June 2, 2017. Lead based paint was detected at the Property in the interior of the showroom, two doors within the showroom, and the upstairs of the warehouse. In general, interior painted surfaces on the Property were in fair condition.

7.3 Radon

According to data compiled by the USEPA, as summarized by the EDR Radius Map Report with GeoCheck, the Property is located in an area with a low potential for radon concentrations that exceed current USEPA action guidelines. The County of San Diego is classified as a Zone 3 or 'low risk' area for radon. Accordingly, radon is unlikely to represent an environmental concern to the Property.

7.4 Mold

During the assessment, Hillmann conducted a preliminary inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. No obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

7.5 Wetlands

Based on a review of the EDR Radius Map Report with GeoCheck, no NWI mapped wetlands were indicated at the Property. However, the report identifies the Property as within the 100 year flood plain of the San Diego River.

It is emphasized that the absence of NWI mapped wetland areas indicated by the EDR report does not necessarily rule out the potential presence of regulated wetland areas on or immediately adjoining the Property. A wetland delineation should be sought from a qualified firm if a more

comprehensive determination regarding the presence or absence of wetlands on or adjacent to the Property is warranted.

8.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. Hillmann has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

QUESTIONNAIRES/USER PROVIDED INFORMATION

HILLMANN
CONSULTING

ENVIRONMENTAL DUE DILIGENCE – USER QUESTIONNAIRE

For Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the *report user* must provide the following information (if available) to the environmental professional. As per the Brownfields Amendments, failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Please complete the following questionnaire and provide any of the referenced information (if available) to Hillmann.

Respondent Name:	CURTIS BURNETT
Company/Affiliation:	DIN/CAL 4, INC.
Address:	3411 RICHMOND AVE. STE 200, HOUSTON TX 77046
Response Date:	7/25/17

1. Environmental Cleanup Liens
Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

Yes ☐ *No* ☒

2. Activity and Land Use Limitations
Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes ☐ *No* ☒

3. Specialized Knowledge or Experience
Do you have any specialized knowledge or experiences related to the property, nearby properties, or are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ☐ *No* ☒

4. Purchase Price vs. Fair Market Value
Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

Yes ☒ *No* ☐

HILLMANN
CONSULTING

5. Commonly Known or Reasonably Ascertainable Information
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

Yes ☒ *No* ☐ ADJACENT PROPERTY HAS BEEN REMEDIATED.

5a. Do you know the past uses of the property?

Yes ☒ *No* ☐ AUTO DEALERSHIP

5b. Do you know of specific chemicals that are present or were once were present at the property?

Yes ☐ *No* ☒

5c. Do you know of spills or other chemical releases that have taken place at the property?

Yes ☐ *No* ☒

5d. Do you know of any environmental cleanups that have taken place at the property?

Yes ☐ *No* ☒

6. Obviousness of the Presence or Likely Presence of Contamination
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes ☐ *No* ☒

HILLMANN
CONSULTING

Phase I ESA - Environmental Questionnaire

The following questionnaire should be completed by a representative of the Property that is most knowledgeable about its usage, condition and history. Please complete and either give to the Hillmann representative during the site inspection, or fax to 714-634-9507.

General:

HILLMANN
CONSULTING

Instructions: Please answer each question. Check "D/K" if you don't know, or otherwise lack sufficient knowledge of the Property to answer the question.

	PREVIOUS INVESTIGATIONS	
1.	Have any previous environmental investigations (e.g.- Phase I Environmental Site Assessment, soil/groundwater testing, radon testing, asbestos survey, tank closure/removal reports, etc.) been performed at the Property?	☐ Yes ☐ No ☑ D/K
2.	If yes, what concerns were indicated or recommendations made? *(please provide a copy of all previous environmental reports)*	
	PROPERTY USAGE	
3.	To the best of your knowledge, is the Property or any adjoining property currently occupied or formerly occupied for industrial purposes? If yes, please elaborate: Auto dealer to the east - former.	Property: ☑ Yes ☐ No ☐ D/K Adj. Property: ☐ Yes ☐ No ☐ D/K
4.	Is the property or any adjoining property currently used, or have they ever been used, as a gasoline filling station, dry cleaning facility, automotive service/repair shop, auto body repair shop, commercial printing facility, photo development laboratory shop, junkyard, landfill, or as a waste treatment, storage disposal, recycling or processing facility? If yes, please elaborate:	Property: ☑ Yes ☐ No ☐ D/K Adj. Property: ☑ Yes ☐ No ☐ D/K
5.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries,, or any other waste materials been dumped above grade, buried and/or burned on the property?	☐ Yes ☑ No
	BULK STORAGE TANKS	
6.	Are there currently, or have there been previously, any registered or unregistered above ground or underground storage tanks located at the Property? *If YES, please provide number, size, age of tanks, permits, closure reports, regulatory agency correspondence, and related information.* 8 above ground dual walled tanks - approx. 3000 gal capacity	Current Tanks: ☑ Yes ☐ No ☐ D/K Previous Tanks: ☐ Yes ☐ No ☑ D/K
7.	Are there currently, or have there been previously, any vent pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Current: ☐ Yes ☐ No ☑ D/K Previous: ☐ Yes ☐ No ☑ D/K
8.	Are there currently, or have there been previously, any leakage of hazardous substances or petroleum products from above ground or underground storage tank systems at the Property?	Current: ☐ Yes ☑ No ☐ D/K Previous: ☐ Yes ☐ No ☑ D/K

HILLMANN
CONSULTING

SPILLS, RELEASES, WASTES		
9.	Are there currently, or have there been previously, any waste discharges on or adjacent to the property, other than storm water or into a municipal sanitary sewer system? If yes, please elaborate:	Current: ☐ Yes ☑ No ☑ D/K Previous: ☐ Yes ☐ No ☑ D/K
10.	Are there currently, or have there been previous, any septic systems, dry wells or leach fields on the property? If yes, please elaborate:	Current: ☐ Yes ☑ No ☐ D/K Previous: ☐ Yes ☐ No ☑ D/K
11.	Are there currently, or have there been previously, any flooring, drains or walls located within the facility that are, or have been, stained by substances (or, in the case of drains, used for) other than water or are emanating foul odors? If yes, please elaborate:	Current: ☐ Yes ☑ No ☐ D/K Previous: ☐ Yes ☐ No ☑ D/K
12.	Are there currently, or have there been previously, any spills or releases of hazardous substances or petroleum products within the building(s) or on the exterior of the Property?	Current: ☐ Yes ☑ No ☐ D/K Previous: ☐ Yes ☐ No ☑ D/K
13.	Has any non-native and/or contaminated fill material been deposited on the Property?	☐ Yes ☑ No ☐ D/K
14.	Have any current or former property occupants generated hazardous wastes or other wastes (such as waste oil, or medical wastes) that required non-conventional storage, handling and/or disposal methods? *If YES, please indicate type of waste and the name of the waste handling contractor:* waste oil, coolant – CleanTech	☑ Yes ☐ No ☐ D/K
TRANSFORMERS/HYDRAULIC EQUIPMENT		
15.	Are any power transformers, capacitors or hydraulic equipment present at the Property? If yes, please elaborate:	☑ Yes ☐ No ☑ D/K
16.	If power transformers are present, who owns them?	☐ Yes ☐ No ☑ D/K
17.	If hydraulic equipment is present, indicate age of equipment and name/telephone # of service contactor:	☐ Yes ☑ No ☐ D/K
REGULATORY DISCLOSURE		
18.	Have there been any environmental liens or governmental notification or involvement relating to past or current use or disposal of hazardous substances with respect to the property of any facility or structure located on the property?	☐ Yes ☑ No ☐ D/K

HILLMANN
CONSULTING

19.	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency? *(if not applicable, please check* NO*)*	☐ Yes ☑ No ☐ D/K
20.	Is there any environmental litigation, administrative action or cleanup action involving the property related to a release or threatened release of any hazardous substance or petroleum product?	☐ Yes ☑ No ☐ D/K
21.	Are you aware of testing of any environmental media (soil, groundwater, surface water, etc.) at the property which identified levels of contaminants in excess of regulatory standards and/or cleanup guidelines?	☐ Yes ☑ No ☐ D/K
	ENVIRONMENTAL/BUILDING CONDITIONS	
22.	Has asbestos testing ever been conducted at the Property? *If YES, please forward a copy of test results and/or survey reports:*	☐ Yes ☐ No ☑ D/K
23.	Are any asbestos containing materials present at the Property? If yes, please elaborate:	☐ Yes ☐ No ☑ D/K
24.	Has lead paint testing ever been conducted at the Property? *If YES, please forward a copy of test results.*	☐ Yes ☐ No ☑ D/K
25.	Is lead-based paint present at the Property? If yes, please elaborate:	☐ Yes ☐ No ☑ D/K
26.	Has radon testing ever been conducted at the Property? *If YES, please forward a copy of test results.*	☐ Yes ☐ No ☑ D/K
27.	Are there any problems with water intrusion, water damaged surfaces or excessive mold growth within the buildings? If yes, please elaborate:	☐ Yes ☐ No ☑ D/K

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Certified Sanborn® Map Report

05/17/17

Site Name:	Client Name:
595 Camino DE LA Reina	Hillmann Environmental Co.
595 Camino DE LA Reina	1745 W Orangewood Avenue
San Diego, CA 92108	Orange, CA 92868-0000
EDR Inquiry # 4940860.3	Contact: Kristine Savona

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 1965-4C25-853C

PO # NA

Project C3-6859

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 1965-4C25-853C

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Hillmann Environmental Co. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 02/07/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

HAZARD R E INC	CABRILLO FWY & FRIAR	NNW 1/4 - 1/2 (0.369 mi.)	30	229

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/04/2017 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

TOWN & COUNTRY RESOR	***500 NORTH HOTEL CIRC***	***WSW 1/4 - 1/2 (0.479 mi.)***	***H36***	***295***

EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the EMI list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 EMI site within approximately 0.001 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAN DIEGO AUTO AUCTI Facility Id: 3400	***588 CAMINO DEL RIO N***	***0 - 1/8 (0.000 mi.)***	***A9***	***14***

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2015 has revealed that there are 2 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 6 RGA LUST sites within approximately 0.001 miles of the target property.

Environmental Interest/Information System
HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: A voluntary assistance program (VAP) case was opened in May 2015 for the decommissioning of the former Bob Baker Ford auto dealership. The dealership included auto service bays and subsurface hydraulic lift systems and is being redeveloped for mixed use residential. The Department of Environmental Health (DEH) previously over saw the assessment of a waste oil release from an underground storage tank at this site, H02961-003. Several site investigations were conducted and the unauthorized release case was closed on October 24, 2008, with total recoverable petroleum hydrocarbons (TRPH) contamination remaining in soil, and low concentrations of volatile organic compounds (VOCs) in both soil and groundwater. Since the closure of H02961-003, additional assessment was conducted at the project site. In May 2013, twelve investigative borings were advanced to collect both soil and groundwater samples to fill in data gaps from the previous investigations at the project site. Groundwater was encountered at 14 to 16 feet below ground surface (bgs), and temporary wells were installed to collect groundwater samples. The soil and groundwater samples collected were analyzed for total petroleum hydrocarbons (TPH), VOCs, polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and metals. The soil laboratory analytical results indicated levels of TPH in the diesel range, background concentrations of metals and a low concentrations of the PAH, fluorine. Groundwater analytical results indicated trace concentrations of metals in the background range, and a trace concentration of fluorine. The hydraulic lift systems were removed in April 2015, and 18 soil samples were collected and analyzed for TPH, VOCs and PCBs. One of the soil sample results, H12, indicated the presence of TPH contamination, in both the diesel and oil range. The excavated spoils were also sampled, and the results found higher

CAMINO DEL RIO MIXED USE PROJECT (Continued) **S106060287**

concentrations of TPH, and low levels of VOCs, isopropyltoluene, butylbenzene and naphthalene. Over-excavation was conducted around the H12 location to remove contamination to a depth of 15 feet bgs. One of the interim soil sample points located on the western side at 10 feet bgs, indicated higher concentrations of TPH contamination and a low concentration of the VOC, 1,2,3-trimethylbenzene. This stockpiled soil was sampled and one of the samples, SP2 indicated the presence of PCBs, though the interim samples were all nondetect for PCBs. A final overexcavation was conducted in May 2015 to remove contaminated soil along the western side and final confirmation samples were taken. Confirmation samples were all nondetect for TPH. A soil gas investigation including 10 soil gas probes was also conducted in April 2015, in targeted areas of concern to evaluate the presence of VOCs. All of the soil gas samples were nondetect for VOCs. The excavated soil was disposed at a permitted facility. The proposed redevelopment calls for 5 feet of clean fill to be placed on top of the entire site. Based on this plan, the residual TRPH contamination identified in case H02961-003 does not pose a risk for the proposed change in land use to residential mixed use. The low concentrations of known contaminants that remain will not pose an increased health risk for future occupants, based on the change in land use. The consultant has stated that no further action is required for contaminants in the hydraulic lift area. DEH concurs with the consultant.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Site History:	Comments: The property is located at 350 Camino de la Reina (Site) in San Diego, California. The Site is an irregularly-shaped parcel, totaling approximately 13 acres of land. The site is currently developed with three commercial buildings and surface parking areas historically used by the San Diego Union Tribune. The buildings on Site are a five-story office building with a sub-grade parking level,

UNION TRIBUNE BUILDING SITE (Continued) **S118672171**

a three-story building formerly used for production, but currently identified as an office building, and a single-story vehicle maintenance garage. In 1986, during the removal of four USTs (two 10,000- gallon diesel, one 12,000-gallon gasoline and one 2,000-gallon motor oil), benzene and total petroleum hydrocarbons (TPH) were encountered in soil and groundwater at the Site and Local Oversight Program case H00174-001 was opened. On December 8, 1997, a closure letter (H00174-001) was issued by the DEH for case H00174-001. Benzene was detected in groundwater at a concentration of 19 micrograms per liter ("g/l) at this time. In February 1996, a 550-gallon diesel UST and a 280-gallon waste-oil UST were reportedly removed from the Site. Petroleum hydrocarbon-impacted soil was reportedly detected in the immediate area of the USTs. Following the removal of the UST and export of impacted soil, fourteen confirmation soil samples were collected and analyzed with no detectable levels of petroleum hydrocarbons. On April 18, 2008, the DEH issued a closure level for case H00174-002. In 1997, diesel fuel was reportedly detected in soil during an upgrade to the piping system near the fuel dispensing islands; however, the contamination was determined to be related to the former release from 1986. The DEH issued a closure letter for case H00174-002 on April 9, 2008. On March 18, 2016, the area beneath a previously removed clarifier was sampled. On April 27, 2016, ten additional confirmation soil samples were collected from the areas beneath the previously removed clarifier and wash-out. On April 28, 2016, soil sampling was conducted after the removal of four hydraulic lifts on site. The hydraulic lifts were encased in concrete. Confirmation samples were collected by breaking through the base of the concrete vault and subsampling the soil immediately adjacent to the base of the vault. On May 17, 2016, additional soil samples were collected adjacent to each of the lifts in an effort to identify the lateral and vertical extent of contamination. On July 1, 2016, two Hydropunch groundwater samples were collected from the locations with the highest detected concentrations of diesel in soil (North West Lift and South East Lift). Analysis of the chromatographs from the groundwater samples and the presence of BTEX components in the groundwater indicate that the groundwater contamination consists mainly of gasoline and weathered gasoline. These results do not indicate the presence of a significant amount of hydraulic fluid. It was concluded that the contamination present in the groundwater beneath the Site was predominantly from the prior UST release(s) and did not originate from the hydraulic lifts, clarifier, or wash-out.
The TPH and VOC constituents detected in the groundwater are the same contaminants previously reported in the closure summary of case #H00174-001. Therefore, it was concluded that additional assessment is not warranted and that DEH Case #DEH2016-LSAM-00377 should be closed. DEH concurs with this conclusion. If, in the future, the maintenance building is demolished and the subsurface disturbed in the area of the impacted soil, DEH requests that you enter the Voluntary Assistance Program to document that impacted soil is properly characterized and disposed.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

STATE MASTER

ELECTRIC GENERATOR

Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	KK
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT1039
LOC Case Number:	H13029-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	On September 8, 1988, the Department of Environmental Health (DEH) directed soil sampling associated with the replacement of four gasoline and used oil underground storage tanks (USTs). The DEH inspector observed indications that a release of hydrocarbons had occurred. Approximately 720 cubic yards of hydrocarbon-impacted soil were excavated from the used oil UST excavation. DEH subsequently opened unauthorized release case H13029-001 and requested that hydrocarbon impacts be assessed. As a result, several monitoring wells and borings were installed at the site to assess sorbed- and dissolved-phase hydrocarbons. Hydrocarbon-impacted soil was primarily observed in the central and western portions of the site with concentrations of total petroleum hydrocarbons as gasoline and benzene detected as high as 5,500 and 20 milligrams per kilogram, respectively. Dissolved-phase and liquid-phase hydrocarbons (LPH) have historically been observed in the central and western to southwestern portions of the site. LPH, while observed historically, never reached a measurable thickness and has not been observed at the site since 1999, approximately 12 years ago. Concentrations of dissolved-phase benzene and MTBE were detected up to a maximum of 4,700 and 1,040 micrograms per liter, respectively. Numerous groundwater sampling activities indicated that dissolved-phase hydrocarbon impacts were generally confined to the site boundaries. A natural attenuation evaluation was conducted at the site. Based on trend analysis conducted with site specific data, the consultant determined that natural attenuation is an effective mitigation strategy and estimates that MTBE will reach the secondary maximum

MOBIL OIL STATION #18-G6F (Continued) **S100178890**

contaminant level (MCL) of 5 micrograms per liter within approximately 11 years or by the year 2022. Benzene is estimated to reach the primary MCL of 1 microgram per liter within approximately 41 years or by the year 2052. A soil vapor probe was installed immediately beneath the station building slab to evaluate the potential vapor risk to onsite building occupants. Direct measurement of soil gas indicated that constituents of concern were not present beneath the structure at levels above the laboratory reporting limit. The subsequent vapor risk evaluation conducted with a contaminant value of half the laboratory reporting limit indicated an acceptable level of risk of less than one in a million for the existing commercial site use. The City of San Diego is the local water purveyor and has indicated that they are evaluating potential groundwater use within the Mission Valley Aquifer. However, at this time, the details of any future groundwater development in the vicinity of this site are not clear. As a result, DEH is closing the unauthorized release case for this site. The City of San Diego has reviewed documents associated with this case and is aware of the existing site conditions. Should additional information be provided to DEH which indicates there is a reasonable potential for health impacts to exist or emerge in the near future, as judged by DEH or the Regional Water Quality Control Board, this case will be reopened and appropriate actions will be required of the responsible party to mitigate such risks. A receptor pathway evaluation conducted by the consultant did not identify any complete pathways which could potentially impact human health or the environment based on existing information. The consultant prepared a corrective action plan for the site and notified the public, including surrounding property owners and other interested parties, of the recommendation to implement natural attenuation and close the associated DEH case. Based on the provided data, DEH agrees with the consultants recommendation for no further action at this time.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

South Map:	5622832 POINT LOMA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

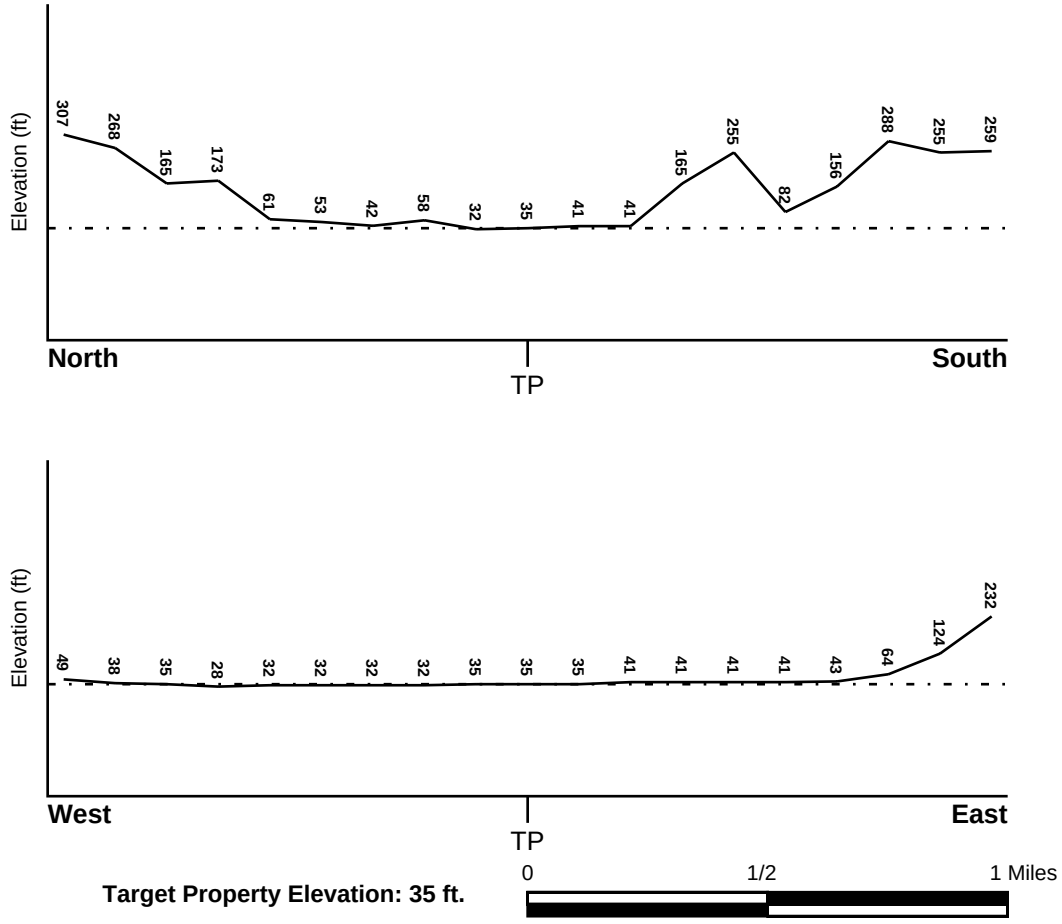

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C1618G	FEMA FIRM Flood data
Additional Panels in search area:	**FEMA Source Type**
06073C1619G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LA JOLLA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/8 - 1/4 Mile ENE	N
3	1/8 - 1/4 Mile ESE	Not Reported
4	1/4 - 1/2 Mile West	NW
7	1/4 - 1/2 Mile ENE	WNW
11	1/2 - 1 Mile East	Not Reported
17	1/2 - 1 Mile SE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6
2	14 inches	33 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.6
3	33 inches	59 inches	stratified gravelly sand to gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.6

Soil Map ID: 3

Soil Component Name: RIVERWASH

Soil Surface Texture: gravelly coarse sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified extremely gravelly coarse sand to gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 5

Soil Component Name: TERRACE ESCARPMENTS

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Public Records Act Number: 1-051917-01
Location: 595 Camino De La Reina & 588 Camino Del Rio North, Mission Valley, CA 92108

Dear Ms. Savona:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Sacramento's Central Files, please contact me at (916) 255-6449.

Sincerely,

Ruth J. Saroian

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. District Public Records staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record.

San Diego Air Pollution Control District
INSTRUCTIONS FOR REQUESTING RECORDS

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order received. A form is available on the APCD's web page at http://www.sdapcd.org. Requests may be submitted by facsimile to (858) 586-2601, or by email to apcdpermits@sdcounty.ca.gov.

2. Requests must be for records prepared, owned, used, or retained by the District. Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records. Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

    i. Facility Name, Address, or Identification Number;
    ii. Facility Application Number, or Permit to Operate Number; or
    iii. Facility Notice of Violation/Notice to Comply Number.

4. You will be notified in writing within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency.

4. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

5. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

6. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

Direct costs of duplication are the following:

Paper copies: $.20 first page of each separate document plus $.05 per page for subsequent pages.

Scanned copies: $.20 first page of each separate document plus $.02 per page for subsequent pages, plus $10.00 for each CD.

Electronic copies (provided in an electronic format already maintained by the District) may be provided for free if sent electronically, or for the cost of each CD as specified above.

In addition, when records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. [Gov. Code Sec. 6253.9(b)] The District will provide an invoice for charges due along with the copied records. These charges are due and payable upon receipt of the invoice and the copied records. Non-payment of invoices could result in a requirement that requests for records be pre-paid in person before releasing the requested documents.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records staff at **(858) 586-2600, Monday through Friday, 8:00 a.m. to 5:00 p.m. Our Fax number is (858) 586-2601. Our email address is apcdpermits@sdcounty.ca.gov.**

Subject: Unauthorized Release, - HMMU#NT0498
Townsend Lincoln Mercury
588 Camino Del Rio North
Site Characterization and Clean-up

Dear Mr. Frank:

In accordance with your request we are issuing this report stating our findings regarding the unauthorized release that has occurred at the subject location.

On 4 December 1986 we were asked by Art Rocco of Fritz Nachant Construction Company to a take soil sample from an open excavation were a 2000 steel gallon tank had been removed. One sample was obtained from twelve feet below the bottom of the excavation (B1-D12) and submitted to Analytical Technologies Incorporated for analysis. Results of this analysis indicated further site characterization was needed.

Three additional test borings were drilled and sampled on 20 January 1987 (Appendix A) These wells were completed and water samples obtained and submitted to Analytical Technologies for analysis 22 January 1987.

The site is located within the Lower San Diego hydrographic subunit. This is a beneficial use area in which ground water has limited industrial and recreational uses. The water table at this time was approximately 13 feet. All samples were placed in teflon capped jars and transported in chilled containers to Analytical Technologies, Incorporated for analysis. Results of these analysis are summarized in the attached tables Nos. 1, 2, and 3

Based on these findings, 36 cubic yards of contaminated soil was excavated from the trench (above 100 ppm total petroleum) and disposed of at a class II hazardous materials disposal site On 4 March 1987. Copies of the disposal manifest for this material are included with the report.

Segregation of the non-contaminated versus contaminated materials during clean-up was accomplished using a organic vapor meter (OVM, Bacharach 503 sniffer). Backup samples were obtained for analysis from the bottom sidewalls of the excavation when (OVM) readings dropped below 100 ppm total fuel hydrocarbons.

Results of this analysis are summarized in the attached Table No.4. All lab reports are also included with this letter for reference.

Please feel free to call our office if you have any questions.

Sincerely,

Peter J. Rubens

Project : Townsend Lincoln Mercury

Attention : Robert Austin

On March 3, 1987, Analytical Technologies Inc. received three (3) soil samples. The samples were analyzed for total lead, fuel hydrocarbons, and purgeable aromatics.

The total lead was analyzed using atomic absorption/graphite furnace in accordance with EPA method 7421.

The fuel hydrocarbons were analyzed using gas chromatography/ flame ionization detection in accordance with EPA method 8015 (modified for fuel analysis).

The purgeable aromatics were analyzed using gas chromatography/ photoionization detection in accordance with EPA method 8020. The sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

Project : Townsend Lincoln Mercury

On January 23, 1987, Analytical Technologies, Inc. received two (2) sediment water samples for analysis. The samples were analyzed for benzene, toluene, ethylbenzene, and xylenes.

The benzene, toluene, ethylbenzene, and xylene were analyzed using gas chromatography/photoionization detection in accordance with EPA method 602. Sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

On January 23, 1987, Analytical Technologies, Inc. received two (2) WATER soil samples for analyses. The samples were analyzed for benzene, toluene, and xylenes (BTX).

The benzene, toluene, and xylenes were analyzed by using gas chromatography/photo-ionization detection in accordance with EPA method 8020. Sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Subject: Permit Requirements for Well Permit # H92957

Dear Mr. Heaton:

The following is the information required under the permit conditions for well permit H92957. These wells were abandoned as part of the site closure of the property located at 588 North Camino Del Rio, San Diego, California.

The wells were abandoned on 20 and 21 August 1992. A representative of the County of San Diego, Hazardous Materials Division (HMMD), Johanna F. Berry, witnessed the removal and abandonment of the monitoring wells.

The monitoring wells were abandoned using the following procedure:

1) The concrete\bentonite seals were drilled out using a 8" diameter hollow stem auger.

2) The monitoring well casings were removed intact from the borings with a cable and winch.

3) The gravel packs and the bentonite seals were drilled out of the borings using 8" solid flight augurs.

4) The borings were then abandoned with a mixture of concrete and bentonite.

5) The augurs were steam cleaned before and between borings.

The following information is include in the Appendix.

A) Boring Logs

B) Site Map

Sincerely,

Michael J. Barnett
Staff Geologist

Bernard J. Luther, CEG 1356
President

MONITORING WELL AND BORING CONSTRUCTION AND DESTRUCTION PERMIT

SITE NAME: TOWNSEND LINCOLN - MERCURY

SITE ADDRESS: 588 CAMINO DEL RIO NORTH, SAN DIEGO, CA 92108

PERMIT FOR: DESTRUCTION OF 3 GROUNDWATER MONITORING WELLS

PERMIT APPROVAL DATE: 08/12/92

PERMIT EXPIRES ON: 12/09/92

PERMIT CONDITIONS:

1. All wells must be destroyed in accordance with Department of Water Resources Bulletin 74-81 and 74-90.

2. All wash water must be contained and disposed of properly.

3. Provide documentation of well destruction. This should include:

   a) A description of the method of destruction,
   b) A description of the type of sealing materials and quantity used and
   c) The date the work was started and the date the work was completed.

4. All water and soil that is placed in drums must be labeled and stored as specified in the SA/M Manual in:

   Section 1, C., 5.

5. This office must be given 48 hour notice of any drilling activity on this site.

6. This office must be given advanced notification of drilling cancellation.

PERMIT APPLICATION SUPPLEMENT

GROUND WATER AND VADOSE MONITORING WELLS

1. Well design, logging and construction must be supervised by a geologist, Engineering Geologist or Civil Engineer who is registered or certified by the State of California.

2. Provide verification of a well Drilling C-57 license

3. Provide a plot plan giving location of existing improvements such as structures, underground tanks, underground utilities, underground piping, and the proposed monitoring and/or observation wells.

4. What is the proposed purpose of the well? Destruction of 3 monitoring wells

5. What procedures will be used to prevent the well from providing an avenue to contamination during construction?

Boring will have Casing, Screen, and Gravel Pack Remove; then cleaned out and filled with a Concrete/Bentonite slurry

6. What field procedures will be utilized to determine if contamination exists?

N/A

7. What procedures will be used to determine whether samples will be sent for laboratory testing or archiving?

N/A

8. What constituents will be monitored and tested?

N/A

9. How will samples be transported and preserved? N/A

10. What sampling methods will be used?

N/A

11. Are you proposing a variation from the methods and/or procedures presented in the Requirements for the construction of vadose and Ground Water Monitoring Wells (dated January 1992) If yes, specify these variations?

No

12. What procedures will be used to insure no contamination will be introduced by the drilling equipment?

Drilling Equipment will be steam-cleaned between Borings.

13. What methods will be used to clean sampling equipment? N/A

14. What cleaning method will be used to clean casing and screen prior to installation?

N/A

OFFICIAL NOTICE

May 22, 1992

Townsend Lincoln/Mecury
588 Camino Del Rio North
San Diego, CA 92120

Jean Warren
291-3030

Dear Sirs:

RE: MONITORING WELL CONSTRUCTIONS DEFICIENCIES
588 CAMINO DEL RIO NORTH, SAN DIEGO, CA APN: 438-030-10

On May 19, 1992 staff of Environmental Health Services, Hazardous Materials Management Division performed inspections of the monitoring wells constructed for the above referenced project. These wells were installed by Applied Hydrogeologic Consultants.

During these inspections it was noted that several of the existing wells are in need of repair. The following corrections are needed to bring these wells up to current standards.

1. Water was found inside the security vaults of the following wells; H2 and H3. All water must be removed and measures taken to prevent water from building up inside the security vault in the future.

2. Watertight locking well casing caps must be used to properly seal each well. The following wells did not have watertight locking well caps installed: H1, H2, and H3. Watertight locking well caps must be installed on these wells.

3. Well casing caps must be locked to prevent unauthorized access and/or tampering with the well. H1, H2, and H3 were missing their protective locks and must be provided with such locks.

4 B. The perimeter seal on wells H1 and H2 are cracked. The well is also located in a low spot of the sidewalk where water builds up and has leaked into the well. The security vault must be reinstalled to provide adequate drainage away from the well.

Poorly maintained wells are considered a nuisance as defined in San Diego County Code Section (SDCCS) 67.430. The present condition of these wells are in violation of SDCCS 67.430 and 67.402.

All repairs should be completed within 30 days of this notice. Should you have any questions please contact me at (619) 338-2241.

Sincerely,

MARTIN ORTEGA, Environmental Health Specialist
Hazardous Materials Management Division

Dear Mr. Luther:

RE: EXPIRED WELL PERMIT -- W92957 APN: 438-020-10
588 N CAMINO DEL RIO, SAN DIEGO, CA

The well drilling permit issued on August 12, 1992 for the above referenced site has expired pursuant to Section 67.444 of the San Diego County Code. Our records indicate that complete well logs and accompanying information have not been submitted to this office.

Within fifteen (15) days of the date of this notice, you must submit to this office the information listed on the well log reporting list, attached. If no work has been done in regards to this permit you must notify this office in writing.

Failure to provide the information specified above is a violation of Section 67.447 of the San Diego County Code. Violation of this section is a misdemeanor (Section 67.448).

If you have any questions contact Edward Sanko at (619) 338-2339.

Sincerely,

Edward T. Sanko

San Diego, CA 92117

Project Name: Townsend Lincoln/Mercury

Attention: Steve Austin

On January 22, 1987, Analytical Technologies, Inc. received one (1) soil sample for analyses. The sample was analyzed for fuel hydrocarbons and benzene, toluene, and xylenes (BTX).

The fuel hydrocarbons were analyzed by using gas chromatography/flame-ionization detection in accordance with EPA method 8015 (modified for fuel analysis).

The benzene, toluene, and xylenes were analyzed by using gas chromatography/photo-ionization detection in accordance with EPA method 8020. Sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

San Diego, California 92117

Atention : Steve Austin
Project : Townsend Lincoln Mercury

On January 23, 1987, Analytical Technologies, Inc. received two (2) sediment water samples for analysis. The samples were analyzed for benzene, toluene, ethylbenzene, and xylenes.

The benzene, toluene, ethylbenzene, and xylene were analyzed using gas chromatography/photoionization detection in accordance with EPA method 602. Sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

Note: The samples from this project will be disposed of thirty (30) days from the date of this report. If an extended storage period is required, please contact our sample control department before the scheduled disposal date.

✓ Approved ____ Denied

Conditions Minimum of a 3' bentonite seal

Kevin M. Hale 1-20-87
Health Officer Date

Within 30 days of well completion, I will furnish the Department of Health Services and the State of California with a complete and accurate well log. I will certify the design and construction of the well in accordance with the permit application.

Robert S. Austin 21 Jan 87
RG/CEG/RCE Signature Date

PERMIT APPLICATION SUPPLEMENT
VADOSE AND GROUND WATER MONITORING WELLS

1. Well design, logging and construction must be supervised by a Geologist, Engineering Geologist or Civil Engineer who is registered or certified by the State of California.

2. Provide verification of a Well Drilling C-57 license.

3. Provide a plot plan giving location of existing improvements such as structures, underground tanks, underground utilities, underground piping and the proposed monitoring and/or observation wells.

4. What is the proposed purpose of the well? CONTAMINANT PLUME DELINIATION / MONITORING - IN SITU SAMPLING.

5. What procedures will be used to prevent the well from providing an avenue ~~to~~ FOR contamination during construction?
HOLLOW STEM AUGER TO PREVENT COLLAPSE DURING CONSTRUCTION. IMMEDIATE COMPLETION WITH GRAVEL PACK AND BENTONITE SEAL (SEE FIGURE 2)

6. What field procedures will be utilized to determine if contamination exists? VISUAL AND ORGANIC VAPOR METER EVALUATION

7. What procedures will be used to determine whether samples will be sent for laboratory testing or archiving?
SAME AS 6 AND ALSO REPRESENTATIVE SAMPLES FOR ANALYTICAL BACKUP.

8. What constituents will be monitored and tested? TOTAL PETROLEUM HYDROCARBONS, BENZENE, TOLUENE, XYLENE, ETHYL BENZENE & TOTAL ORGANIC LEAD. USING EPA 8015 (FUELS), EPA 8020 (FUELS) AND EPA 7421.

9. How will samples be transported and preserved? KEPT IN CHILLED CONTAINERS & DELIVERED BY TRUCK TO LAB.

10. What sampling method will be used?

STERILIZED BAILERS WILL BE USED TO OBTAIN WATER SAMPLES.

11. Are you proposing a variation from the methods and/or procedures presented in the Requirements for construction of Vadose and Ground Water Monitoring Wells (dated May 1986)? If yes, specify these variations.

NO

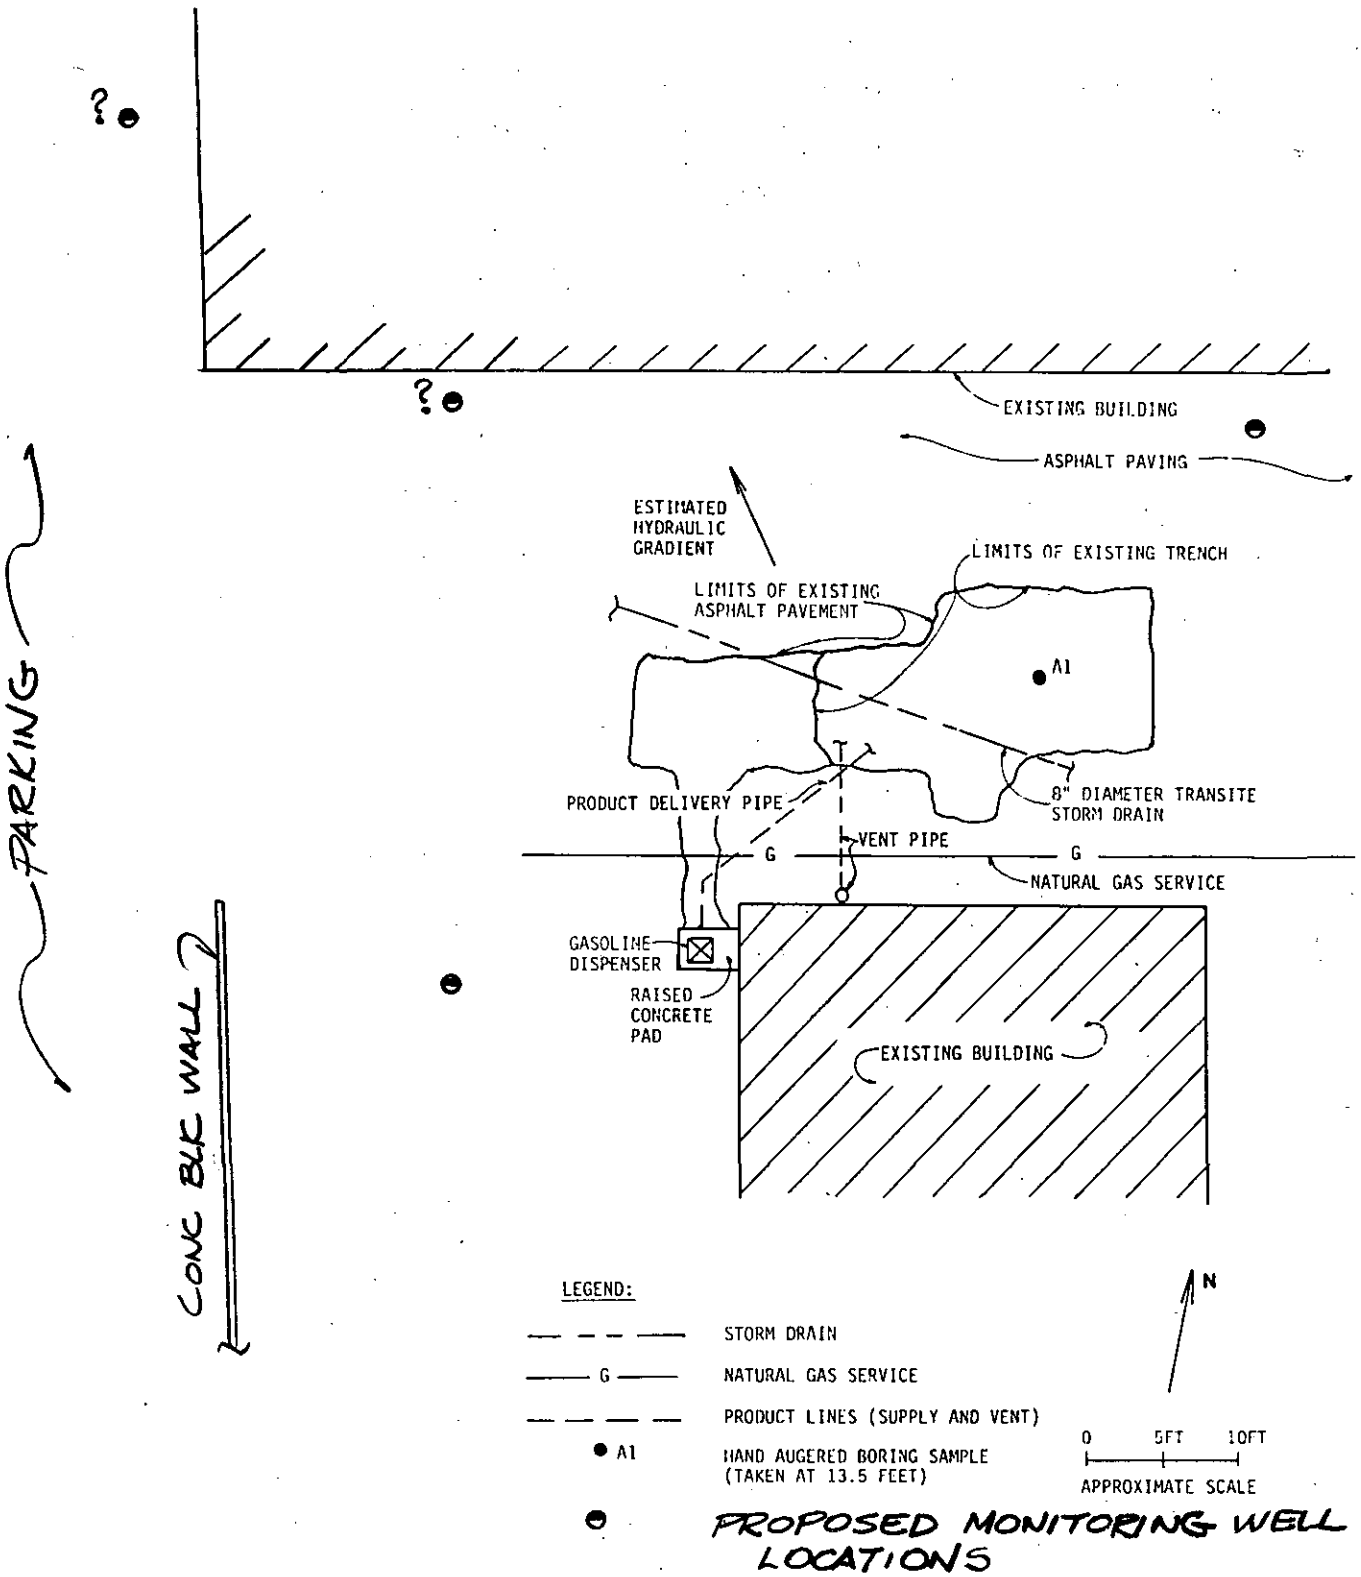

12. What procedures will be used to insure no contamination will be introduced by the drilling equipment?

STEAM CLEANING PRIOR TO DRILLING

13. What methods will be used to clean the sampling equipment? STEAM.

14. What cleaning method will be used to clean casing and screen prior to installation?

HOT WATER WASH.

OFFICIAL NOTICE

May 19, 1992

Townsend Lincoln/Mecury
588 Camino Del Rio North
San Diego, CA

RE: MONITORING WELL CONSTRUCTIONS DEFICIENCIES
588 Camino Del Rio North San Diego, CA

On May 19, 1992 staff of Environmental Health Services, Hazardous Materials Management Division performed inspections of the monitoring wells constructed for the above referenced project. These wells were installed by Applied Hydrogeologic Consultants.

During these inspections it was noted that several of the existing wells are in need of repair. The following corrections are needed to bring these wells up to current standards.

1. Water was found inside the security vaults of the following wells; H2 and H3. All water must be removed and measures taken to prevent water from building up inside the security vault in the future.

2. Watertight locking well casing caps must be used to properly seal each well. The following wells did not have watertight locking well caps installed: H1, H2, and H3. Watertight locking well caps must be installed on these wells.

3. Well casing caps must be locked to prevent unauthorized access and/or tampering with the well. H1, H2, and H3 were missing their protective locks and must be provided with such locks.

3. The perimeter seal on wells H1 and H2 are cracked. The well is also located in a low spot of the sidewalk where water builds up and has leaked into the well. The security vault must be reinstalled to provide adequate drainage away from the well.

Poorly maintained wells are considered a nuisance as defined in San Diego County Code Section (SDCCS) 67.430. The present condition of these wells are in violation of SDCCS 67.430 and 67.402.

All repairs should be completed within 30 days of this notice. Should you have any questions please contact me at (619) 338-2241.

Sincerely,

Martin Ortega, Environmental Health Specialist

ATTN: MO LAHAISE
Subject: Soil Disposal, Townsend Lincoln Mercury

Dear Mo,

We are proposing to dispose of the stockpiled soil from J.R. Townsend Lincoln/Mercury at the Miramar landfill facility.

Please review the enclosed request and soil sample analysis and authorize this disposal if it meets with your approval. If you have any questions or need any further information, please don't hesitate to call.

Thank You Very Much!

Sincerely,
KODIAK MANAGEMENT, Inc.

Michael L. Breid
Project Manager

Unauthorized Release #H04863-002
Assessors Parcel Number 438-020-10

Gentlemen:

Pursuant to your request, Peter M. Stang-Consultant (PMSC) is pleased to provide this letter report regarding surficial soil discoloration observed at the subject site during environmental engineering services associated with the above-referenced unauthorized release of petroleum hydrocarbons. The subject site is the Townsend Lincoln-Mercury site located at 588 Camino Del Rio North in San Diego, California.

BACKGROUND

Nachant Environmental Inc. (NEI) has previously prepared a report entitled "Site Assessment Report for Unauthorized Release #H04863-002 at 588 Camino Del Rio North, San Diego, California", dated March 9, 1992. A review of this report indicates that a used oil tank was removed from the subject site on July 10, 1991. Used oil impacts beneath the tank were not noted and samples collected from beneath the former tank location contained non-detectable Total Recoverable Petroleum Hydrocarbon (TRPH) concentrations. A remote fill line is present which provided access to the tank and soil sampling activities performed adjacent to the line indicated that TRPH concentrations exceeding normal County of San Diego Hazardous Materials Management Division (HMMD) action levels were detected. In addition, an area located south of the former tank was observed to possess surficial soil discoloration and elevated TRPH concentrations. A more detailed description of the activities is presented in the previously referenced NEI report.

April 28, 1992
Project Number: 92-008

On April 22, 1992, a meeting to discuss the subject site was held at the HMMD offices. Present at the meeting were Mr. Mike Breid (Kodiak Management, Inc.), Mr. Pete Stang (PMSC), Mr. Darryl Fowler (HMMD), Mr. Mo Lahsaie (HMMD) and Mr. Jim Munch (San Diego Regional Water Quality Control Board). Based upon the NEI report, the fact that the surficial soil staining observed is located above (approximately 1 to 2 feet) the remote fill line, the likelyhood that the surficial soil discoloration is not related to the used oil tank or associated piping, and the regulatory agencies opinion that the surficial soil discoloration required further description, it was agreed that additional services be conducted to describe/investigate the discoloration. The services performed are described below.

SCOPE OF SERVICES

The following services were performed:

1. Reviewed the following aerial photographs available at the County of San Diego Survey Records Department:

   - 1953 aerial photograph AXN-3M-194 (3-31-1953);
   - 1966 aerial photograph GS-VB01-1-107 (11-2-1966);
   - 1968 aerial photograph, San Diego Atlas #90 (SD-23);
   - 1970 aerial photograph 7-11 (10-9-1970); and
   - 1978 aerial photograph 210-22D-28 (8-28-1978).

2. Contacted general engineering contractors Mr. J. Paul Nachant and Mr. Mike Breid regarding construction practices in the 1960's.

3. Prepared this letter report.

AERIAL PHOTOGRAPH REVIEW

1953 Aerial Photograph. A review of the 1953 aerial photograph indicates that the site is under agricultural development. The site appears plowed and structures are not visible on the site.

1966 Aerial Photograph. A review of the 1966 aerial photograph indicates that the site is graded and contains numerous vehicles and construction-type equipment. Two areas containing discolored surficial soil are present on the site. Area "A", as depicted on Figure 1, consists of a strip trending generally north-northwest, originating at the southern property boundary and terminating near the center of the site. Area "A" corresponds with the area of surficial soil discoloration noted in the NEI report. Based on the scale of the aerial photograph (1 inch

equals 2000 feet), the area of discolored soil is approximately 320 feet long and 20 to 40 feet wide, comprising approximately 9600 square feet. The discolored soil appears consistent with the surficial "oiling" of soils during construction activities for purposes of dust suppression. This area is located between the present day showroom and offices to the west, service bays to the north and east and the property boundary to the south.

Area "B", the second area of soil discoloration, consists of an irregular patch in the southeast portion of the site. It is approximately 160 feet long (north to south) and from 20 to 40 feet wide, comprising an estimated 4800 square feet.

1968, 1970, and 1978 Aerial Photographs. The 1968, 1970, and 1978 aerial photographs indicate the site is developed as an automobile dealership and appear similar to the present day development of the site.

PERSONAL COMMUNICATIONS

Mr. Gene Warren of Townsend Lincoln-Mercury indicated in April 1992 that the subject site was developed as an automobile dealership in approximately 1967. This is consistent with the previously noted observations made during review of aerial photographs. Mr. J. Paul Nachant and Mr. Mike Breid, general engineering contractors with numerous years of construction experience in San Diego County, have indicated that petroleum hydrocarbon products were routinely used in the 1960's for dust suppression in unpaved areas during construction activities.

ESTIMATED VOLUME OF DISCOLORED SOIL

Based upon the above information and the information presented in the previously referenced NEI report, the following estimates of the volume of discolored/TRPH-containing soils have been calculated. The NEI report indicates that the discoloration generally is approximately 4 inches thick and that total TRPH impacts may be up to 1 foot thick (4 inches discoloration and 8 inches of TRPH downward migration). Therefore, it is estimated that approximately 120 cubic yards of discolored soils are present in Area "A" at an average depth of 4 inches and a total of 360 yards if TRPH impacts extend to an average depth of 1 foot. Additionally, it is estimated that approximately 60 cubic yards of discolored soils are present at a thickness of 4 inches and 180 cubic yards are present at a thickness of 1 foot in Area "B". Therefore, it is estimated that a total of between 180 and 540 cubic yards of discolored/TRPH-containing soils are surficially present at the subject site.

Total Vol:
360
180
540 y^3

wide range ?

April 28, 1992
Project Number: 92-008

RECOMMENDATIONS

It is recommended that the HMMD and the Regional Water Quality Control Board review the information provided herein and that pursuant to the meeting of April 21, 1992 and:

1. the fact that the discolored/TRPH-containing soil is present immediately below and "capped" by concrete and asphalt;

2. the conclusions in the NEI report that the releases of used oil from the remote fill line were limited;

3. used oil impacts were not noted in the former tank excavation;

4. the surficial discolored soil ~~is located above the former used oil tank and remote fill line~~ and ~~does not~~ appear to be associated with the tank or remote fill line;

5. the soil discoloration/TRPH-impacted material is estimated to be 1 foot or less in thickness;

6 the estimated volume of discolored/TRPH-containing soil presented above, \80-540 y3

the HMMD and the RWQCB consider the unauthorized release #H04863-002 and the noted surficial discolored soils case for closure.

LIMITATIONS

This work was performed exclusively for the client and is not to be transferred, used or relied upon by entities other than the client, the applicable regulatory agencies, or Townsend Lincoln-Mercury without the written consent of Peter M. Stang-Consultant. This work was performed within the standard of care generally exercised in the geographic region at the time the services were performed. No warranty, either expressed or implied, is made.

Please contact the undersigned if you have any questions regarding the contents of this letter.

Sincerely,

Peter M. Stang

APPENDIX A:
Laboratory Reports and Chain-of-Custody Documentation

1.0 INTRODUCTION

1.1 Purpose

This report presents the results of the Nachant Environmental, Inc. (NEI) subsurface soil investigation conducted at Townsend Lincoln Mercury, located at 588 Camino Del Rio North, San Diego California (Figure 1). The purpose of this investigation was to characterize the nature and vertical and lateral extent of hydrocarbon impacted soil in the vicinity a remote fill line associated with a former used oil underground storage tank.

1.2 Scope of Work

The following scope of services was performed to characterize and delineate the vertical and lateral extent of hydrocarbon impacted soil:

- Prepared a Health and Safety Plan for implementation during field activities;
- Drilled 8 soil borings in the vicinity of the remote fill line;
- Collected soil samples at select intervals for laboratory analysis;
- Analyzed select soil samples at a State-certified laboratory for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1;
- Performed limited soil excavation activities;
- performed soil stockpile characterization;
- Prepared a written report which presents field data, analytical results, findings, and conclusions of NEI's subsurface investigation.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property is located at 588 Camino Del Rio North in Mission Valley, San Diego, California (Figure 2) and is currently occupied by Townsend Lincoln Mercury. The site is bound to the west by Camino De La Siesta, to the north by Camino De La Reina and to the south by Camino Del Rio North. The site slopes gently to the west, northwest towards the San Diego River located approximately 600 feet to the north. Townsend Lincoln Mercury utilizes the site for the sale, maintenance, and repair of automobiles. Onsite structures includes a showroom, painting and body shop, office space and automobile service bays. The remainder of the site is predominantly asphalt cover and is used for the storage and display of automobiles.

Land use in the site vicinity is predominantly commercial with some residential structures to the north. Commercial establishments occupy properties directly west and east of the site. Properties to the north are occupied by residential dwellings. Highway I-8 borders the site to the south.

2.2 Site Background Information

It is our understanding that a 550-gallon underground storage tank (UST) was removed from the site on July 10, 1991. The tank reportedly contained used oil from the repair and maintenance of automobiles at the site. A remote fill line connected fill ports located within the service bay

structure to the former underground used-oil tank. An estimated 120 feet of fill line is present beneath the service bay. It is our understanding that during tank removal activities by a County of San Diego, Department of Health, Hazardous Material Management Division (HMMD) field representative, no evidence of tank leakage was reported. In addition, soil samples collected from within the tank excavation contained no detectable concentrations of Total Recoverable Petroleum Hydrocarbons (TRPH). The tank excavation was subsequently backfilled. During tank removal activities, no samples were collected from the remote fill line.

The HMMD representative for the subject site, upon review of the tank removal report and analytical results, indicated that additional environmental engineering services would be required to move the case towards closure. Based upon conversations with Mr. Mo Lahsale of the HMMD, characterization of the soil in the vicinity of the remote fill line was required. Townsend Lincoln Mercury contracted Fritz A. Nachant, Incorporated, which subcontract NEI to perform environmental engineering services in order to characterize soil in the vicinity of the remote fill line.

3.0 GEOLOGIC AND HYDROGEOLOGIC SETTING

3.1 Geography

The site is located in Section 21 of Township 16 south, Range 3 west in San Diego, California. Topographic coverage of the site is provided by the U.S. Geological Survey (USGS) Topographic Quadrangle, La Jolla, 1967, photorevised 1975. The elevation of the site is approximately 35 feet above mean sea level (USGS, 1967) and there is little topographic relief across the site. Based on the USGS topographic map, surface runoff from the subject property appears to flow to the west-northwest into the San Diego River which discharges into the Pacific Ocean approximately 5.5 miles west of the site. The site is located within Mission Valley which is flanked by large, relatively flat lying mesas incised by numerous ephemeral stream drainages.

3.2 Regional Geology

The site is located within the coastal zone of the Peninsular Range Geologic Province. This region is underlain by a basement complex of Late Cretaceous undifferentiated igneous rocks of the Southern California Batholith and Jurrassic prebatholithic metavolcanic rocks. The basement complex in this region is non-conformably overlain by a sedimentary succession of marine and nonmarine rocks that were deposited within the San Diego embayment. These rocks range in age from Late Cretaceous to Recent. The most abundant deposits of the embayment are gently folded and faulted Eocene marine, lagoonal and nonmarine rocks that are easterly thinning and northwest-trending (Kennedy, 1975).

3.3 Local Geology

The site is underlain by undifferentiated alluvium and slopewash (Kennedy, 1975). Alluvium generally consists of poorly consolidated deposits of clay, silt, sand, and gravel-sized particles derived from sources that lie in or near the area. These deposits intertongue with Holocene-age slopewash that commonly mantles the lower valley slopes throughout much of the region. The slopewash deposits also consist of poorly consolidated silt, sand, and gravel-sized particles derived chiefly from nearby sources of soil and decomposed bedrock (Kennedy, 1975). Artificial fill associated with highway I-8 is mapped as bordering the site to the south (Kennedy, 1975).

3.4 Regional Hydrogeology

The site is located within the Mission San Diego Hydrologic Subarea (MSDHS 7.11) of the Lower San Diego Hydrologic Subunit (LSDHS). The LSDHS comprises an area of approximately 170 square miles and receives less than 11 to 18 inches of precipitation annually (CDWR, 1967). The prominent feature of the LSDHS is the San Diego River, which discharges into the Pacific Ocean

approximately 5.5 miles west of the site. The present day channel of the San Diego River is located approximately 600 feet north of the subject site.

G-H20 ≈ 13' BG

In the site vicinity, the principal source of groundwater is in the alluvial sediments associated with the San Diego River flood plain. The estimated direction of regional groundwater flow is west, toward the Pacific Ocean. Groundwater in the alluvium is generally encountered at less than 25 feet bgs and in a monitoring well located onsite is encountered at approximately 13 feet bgs (AHC, 1987). The MSDHS is designated by the California Department of Water Resources as a beneficial use zone with respect to groundwater. Existing beneficial uses for groundwater in the MSDHS include industrial service supply and industrial process supply (CRWQCB, 1984). Groundwater quality in the LSDHS is generally rated as marginal to inferior for domestic use and inferior for irrigation use due to high total dissolved solids and high chloride concentrations, respectively (CDWR, 1967). A detailed listing of beneficial uses for the Mission San Diego Subarea is provided in Table 1.

4.0 INVESTIGATIVE METHODS

4.1 Health and Safety Plan

A site-specific Health and Safety Plan was developed by NEI prior to the field investigation. The plan: (1) identified potentially hazardous substances to be expected during drilling activities, (2) specified protective clothing and monitoring equipment to be used during onsite activities, and (3) outlined measures to be implemented in the event of an emergency. Onsite personnel were required to review the Health and Safety Plan prior to commencement of the site investigation and instructed to conduct all field activities in accordance with plan specifications.

4.2 Field Activities

4.2.1 Exploratory Soil Borings

NEI performed environmental engineering services at the subject site in order to characterize the nature and lateral and vertical extent of hydrocarbon impacted soil associated with the remote used-oil fill line. NEI's investigation consisted of drilling 8 shallow soil borings and collecting soil samples for laboratory analysis.

On January 10, 1992, Fritz A. Nachant Incorporated drilled 4 shallow soil borings at select locations near the remote fill line in order to characterize soil in the vicinity of the line (Figure 3). The soil borings were advanced using a hand auger. Soil samples (P1 - P4) were collected from each boring at depths of 16 to 20 inches below ground surface (bgs) (top of the concrete floor). Relatively undisturbed soil samples were collected from the barrel of the hand auger and placed in laboratory clean glass jar with Teflon lids. The auger was decontaminated prior to and in between borings and sampling locations by washing in a dilute solution of Alconox and double rinsing with tap water. Samples were labeled and placed in a cooled ice chest for storage and transportation to the analytical laboratory. Samples were transported under chain-of-custody documentation.

Based on the initial analytical results, NEI performed additional soil sampling activities at the site. On February 4, 1992, NEI drilled 4 additional shallow soil borings at locations near the remote fill line and collected soil samples (#10254 - #10257) from each boring at depths of approximately 20 inches bgs (Figure 3). Samples were collected as outlined above. Sample were delivered to an onsite mobile laboratory immediately upon collection.

4.2.2 Soil Excavation

Based on the analytical results of the January 10 and February 4, 1992 investigations, two sampling locations (P3 and GS-1) were identified as containing hydrocarbon concentrations above 100 milligrams per kilogram (mg/kg). Based upon the historic clean up level in a beneficial groundwater use zone, NEI recommended that soils in excess of 100 mg/kg be removed from the site by over excavating.

On February 4, 1992, NEI performed over-excavation activities in the vicinity of sample location P3 (9810 mg/kg TRPH). Sample P3 was located adjacent to a remote fill port at the central portion of the service bay (Figure 3). Excavation activities were performed using a pick and shovel. A total of 7 soil samples were collected from within and adjacent to the excavation in order to assist in determining the nature and extent of hydrocarbon-impacted soil. Samples were collected at depths ranging from 18 inches to 4 feet bgs. Relatively undisturbed soil samples were collected in laboratory cleaned glass jars with Teflon lids and labeled for laboratory analysis by an onsite mobile laboratory. In an effort to assess the limits of contamination, the over-excavation was extended to a depth of approximately 3.5 to 4 feet bgs and an estimated 1.5 cubic yards of soil were excavated and stockpiled onsite. The approximate extent of the final excavation is illustrated in Figure 4. Based upon field observations and analytical results, the unauthorized release of hydrocarbons appears to have been associated with over-spillage of used oil during discharge into the remote fill port. In addition, residual oil was apparent within the fill line which may indicate that the line was not flushed out during tank removal activities.

3.5-4.0 deep
1.5 y³
st. pile

On February 20, 1992 NEI performed excavation activities in the vicinity of sample GS-1 (2,900 mg/kg TRPH) (Figure 3). A total of 11 soil samples were collected and analyzed onsite by a mobile laboratory in order to quantify the level of hydrocarbon impact on the soil and help establish limits of the excavation. Soil samples were collected as outlined above. The horizontal limits of the excavation were approximately 11 feet by 4 feet and extended to a depth of approximately 1.5 feet bgs. The approximate extent of the final excavation is presented in Figure 5. An estimated 1.5 cubic yards were removed and stockpiled onsite. Impacted soils appeared to be associated with a gray to greenish gray discolored soil layer extending from approximately 5 to 9 inches bgs. This discolored layer appeared to thin towards the west and pinch out towards the north. The discolored soil lay directly below the concrete flooring and consisted of a fine to medium grained sand with little clay and little to trace gravel. Native soil consisting of thinly bedded, brown fine grained micaceous sand was apparent unconformably underlying the discolored layer.

Exc size
11' x 4' x 1.5'
1.5 y³

4.3 Waste Materials Management

Impacted soil generated from the borings and excavation activities was stockpiled at the northeastern corner of the site. After collecting soil samples for stockpile characterization, the soils were placed in 55-gallon DOT approved drums for storage pending laboratory analytical results and disposal. Rinsate generated during decontamination of sampling equipment (approximately 7 gallons) was discharged onto the soil stockpile.

5.0 ANALYTICAL TESTING PROGRAM

5.1 Laboratory Analysis

Laboratory analysis of the soil samples was performed offsite by Quality Assurance Laboratory (QAL) and onsite site by Mobile One Laboratory. Both QAL and Mobile One Laboratory are certified by the State of California for the analysis of hazardous materials. Based on the historic use of the remote fill line and former underground storage tank, soil samples were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1. The HMMD

representative for the site, Mr. Mo Lahsaie indicated that the additional suite of analyses recommended in the Site Assessment and Mitigation manual (SAM 1992) would not be required at this time.

6.0 STOCKPILE CHARACTERIZATION

6.1 Stockpile Characterization

St-Pile = 3 y^3

On February 24, 1992 NEI collected two soil samples (SP-1 and SP-2) from the soil stockpile located at the northeastern corner of the site. The stockpile consisted of approximately 3 cubic yards of used-oil impacted soil. Soil samples were selected at random from the stockpile. Soil was accessed using a shovel and samples were collected by pushing stainless steel sampling tubes into freshly exposed soil. The sample tubes were sealed with Teflon and plastic end caps and immediately placed in an ice chest cooled with blue ice for transportation to the analytical laboratory. Samples tubes were decontaminated prior to sampling by washing in a dilute solution of Alconox and double rinsing with tap water.

The two samples were analyzed for TRPH using EPA method 418.1 on a 3 day turn around time. The sample with the highest TRPH concentration was additionally analyzed for chlorinated hydrocarbons (EPA Method 8010), benzene, toluene, ethylbenzene, and xylene (BTEX compounds) using EPA method 8020, polychlorinated biphenyls (PCBs) using EPA Method 8080, and for organic lead using DHS method.

7.0 INVESTIGATIVE FINDINGS

7.1 Site Stratigraphy

The site is located at an elevation of approximately 35 feet above mean sea level and is underlain by deposits of silt, sand, and gravel. Artificial fill was encountered within the upper 1 foot and generally consisted of yellowish-brown to gray fine to medium grained sand with little clay and little to trace gravel. Native soils encountered during drilling generally consisted of thinly bedded brown fine grained micaceous sand and were interpreted to be alluvial deposits associated with the San Diego River Valley.

7.2 Site Hydrogeology

The site lies in the Mission San Diego Hydrologic Subarea which has been designated as a beneficial use area for groundwater. Groundwater was not encountered during our subsurface investigation; however, groundwater is reported to occur at a depth of approximately 13 feet bgs within a monitoring well located onsite (AHC, 1987).

G-H2O ≈ 13' BG.

7.3 Subsurface Utilities

During excavation activities, an approximate 1.5 inch diameter electrical conduit and 3 inch diameter remote fill line were encountered. Both lines appeared to have been laid flush to the ground surface prior to installation of the the concrete floor and neither line appeared to have a trench line which may act as a potential pathways for subsurface migration of hydrocarbons. Approximate locations of underground lines are depicted on Figures 3 and 4. A strip drain runs the length of the service bay and discharges at the north end of the structure. During our site investigation, stagnant water mixed with some hydrocarbons was observed in the bottom of the drain. Cracks in the concrete contained drain may act as a pathway for subsurface migration of hydrocarbons; however, no cracks were apparent within the drain. ?

7.4 Laboratory Results

Laboratory analysis of soil samples was performed offsite by Quality Assurance Laboratory (QAL) and onsite by Mobile One Laboratory. Both QAL and Mobile One Laboratory are certified by the California Department of Health Services for analysis of hazardous materials. A total of 30 soil samples were analyzed for TRPH. The laboratory results are summarized in Table 2. Laboratory reports and chain-of-custody documentation are included in Appendix A.

The 8 soil samples collected from the exploratory soil borings contained non-detectable concentrations of TRPH with the exception of samples GS-1 and P3. These samples contained 2,400 mg/kg and 9,810 mg/kg TRPH, respectively. Confirmation soil samples collected from the over excavation activities in the vicinity of GS-1 and P3 suggest that TRPH impacted soil is localized and is of limited extent.

Seven confirmation samples were collected from within and adjacent to the excavation in the vicinity of P3 (Figure 4). Samples were collected at depths ranging from 18 inches to 4 feet bgs and contained no detectable concentrations of TRPH. Sample 10258 collected directly below P3 at 3.5 feet bgs contained no detectable concentrations of TRPH. The lateral limits of impacted soil are delineated by samples 10262 to the south, sample 10259 to the east, samples 10261 and 10264 to the north, and sample 10260 to the west. Based on the analytical results, TRPH impacted soil appears to extend to a depth of approximately 3.5 feet bgs and be limited laterally by an area approximately 2 feet by 4 feet (Figure 4).

P3

Eleven soil samples were collected to characterize the nature and extent of impacted soil in the vicinity of GS-1. TRPH concentrations ranged from non-detectable to 6,000 mg/kg. The highest TRPH concentration (samples TLM-S1) was detected within the discolored soil layer extending from 5 to 9 inches bgs along the eastern portion of the excavation. Samples collected below the discolored layer at approximately 24 inches bgs contained TRPH concentration ranging from non-detect to 68 mg/kg. Sample 10255, collected approximately 11 inches below GS-1 contained no detectable concentrations of TRPH. The lateral extent of TRPH impacted soil is delineated to the west by samples TLM-6 and TLM-S7 which contained no detectable concentrations of TRPH. Sample TLM-S9 collected east of the excavation also contained no detectable concentration of TRPH. Based on the analytical results, TRPH impacted soils appear to be limited to a relatively thin elongate area bordering the eastern portion of the excavation (Figure 5).

GS-1

The 2 soil samples collected from the soil stockpile contained TRPH concentrations at 1,400 and 202 mg/kg. The sample with the highest concentration (SP-1) additionally contained ethylbenzene and xylene at concentrations of 1,400 and 797 µg/kg, respectively. No detectable concentrations of organic lead, polychlorinated biphenyls or chlorinated hydrocarbons were detected in sample SP-1.

8.0 DISCUSSION

Based on field observations and laboratory analytical results of the soil samples collected during this investigation, an inadvertent unauthorized release of used-oil has occurred at the site. Laboratory analytical results indicate that soils located in the vicinity of GS-1 and P3 were impacted with TRPH concentrations up to 6,000 mg/kg and 9,810 mg/kg, respectively. Impacted soil in the vicinity of P3 appeared to have been caused by over fill of the remote fill port adjacent to P3. Hydrocarbon impacted soil in the vicinity of GS-1 appeared to be associated with a relatively thin layer of discolored artificial fill material.

Analytical results for the samples collected in the vicinity of P3 contained TRPH concentrations ranging from 9,810 mg/kg to non-detectable levels. Field observations and laboratory analytical results suggest that little migration of used-oil has occurred in the vicinity of P3. Impacted soils appeared to have been limited to an area approximately 4 feet long by 2 feet wide and 3.5 feet deep. Confirmation samples collected during excavation activities contained no detectable concentrations of TRPH. Based on the analytical results, it appears that soil containing detectable levels of TRPH have been removed during over-excavation activities.

Based on the analytical results and field observations, TRPH impacted soil in the vicinity of GS-1 appears to be limited to a thin elongate area paralleling the strip drain. The area appears to extend vertically from the bottom of the concrete floor (5 inches bgs) to approximately 17 inches bgs. The approximately 12 inch thick layer extends laterally, approximately 2.5 feet west from the eastern portion of the strip drain. In addition, the impacted layer appears to thin laterally from east to west and pinch out towards the north. The southern limit of the impacted area was not delineated during this investigation. This area of TRPH impacted soil appears to be associated with a relatively thin discolored soil layer.

The discolored soil layer was limited to the upper 3 to 4 inches of artificial fill material which consists of a brown to greenish-gray fine to medium sand with little clay and trace to little gravel. Impacted soil associated with the discolored layer appears to have migrated vertically to the upper 6-inches of the underlying native soil which consists of brown fine micaceous sand.

Based on the depth (5 to 17 inches bgs) and orientation of the impacted soil in the vicinity of GS-1, it appears unlikely that impacted soil is related to an unauthorized release from the remote fill line. The orientation of the impacted soil suggests an association with the adjacent strip drain; however, the bottom of the strip drain is at 10 inches bgs which does not account for the impacted layer observed from approximately 5 to 9 inches bgs. In addition, no cracks or other pathway of migration were observed in the strip drain. Based on field observations and analytical results, it appears that impacted soil is related to the artificial fill layer.

9.0 RECOMMENDATIONS

NEI proposes the following recommendations based on the available background information, site specific subsurface conditions as indicated by our field investigation, and laboratory results:

1) This report should be submitted to the proper regulatory authorities. The client should wait for written comments from the regulatory authorities prior to initiating additional work at the site.

2) The majority of TRPH-impacted soil in the vicinity of sample location P3 has been removed. Upon approval from the HMMD, NEI recommends that the excavation be backfilled with "clean" imported fill material.

3) TRPH impacted soil in the vicinity of GS-1 appears to be limited to a relatively thin soil layer immediately underlying the concrete flooring. NEI recommends that the thin impacted soil layer be allowed to remain in place.

4) The HMMD and RWQCB are requested to review the contents of this report and issue a letter of opinion regarding site closure.

5) Soil generated during drilling activities has been characterized. The soil should be disposed of at an appropriate disposal facility to allow for expedient closure of the site.

10.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon visual observations of the site, laboratory analyses, and our interpretation of the available site information, as described in this report. They are intended exclusively for the purpose outlined herein and at the site location and project indicated. This report was prepared in general accordance with the accepted professional standards of care which existed in San Diego County at the time the assessment was performed. No warranty, expressed or implied, is made.

This report was prepared exclusively for Townsend Lincoln Mercury by NEI and is not to be utilized or relied upon by entities other then Townsend Lincoln Mercury, the HMMD and/or the RWQCB without the consent of NEI.

We trust this report provides Townsend Lincoln Mercury with the information you require at this time. Should you have any questions regarding the content of this submittal, please do not hesitate to call.

February 29, 1992

Mr. Ben Hough
Nachant Environmental
P.O. Box 620098
San Diego, CA 92162

Dear Ben:

The following report is for the analysis of eleven soil samples from the Townsend Lincoln Mercury site (Project No. E3187). The samples were analyzed by Mobile One Laboratories in our mobile lab in accordance with EPA Method 418.1 modified for soils. The results are summarized on the following pages.

Levels of recoverable petroleum hydrocarbons were found in five of the samples. All quality control results were within acceptable limits.

Should you have any questions concerning the analysis or require further information, please do not hesitate to call me. Thank you for using Mobile One Labs.

Sincerely,

James E. Picker, Ph.D.

SAMPLE LOG #3143-92B THROUGH 3144-92B
DATE ANALYZED: FEBRUARY 27, 1992

EXTRACTION METHOD: 5030
ANALYSIS METHOD: 8020
Concentrations were calculated using a 4 point curve of concentrations 2.5, 5, 10 and 20 ppb.

LABORATORY CONTROL STANDARD
A 15 ppb standard verification was run in the sample set up.

METHOD BLANK
NO TARGET ANALYTES WERE DETECTED IN METHOD BLANK.

COMPOUND	%RECOVERY
Benzene	92%
Toluene	86%
Ethylbenzene	91%
Xylenes	84%

SPIKE DATA
A QAL Method Blank was spiked in duplicate with 20 ppb 8020 standard.

COMPOUND	SPIKE % RECOVERY	RELATIVE % DIFFERENCE
Benzene	103%	7%
Toluene	103%	0%
Ethylbenzene	89%	7%
Xylenes	93%	2%

LISA MACCLELLAN
QA/QC DIRECTOR

QUALITY CONTROL TERMINOLOGY

•LCS - LABORATORY CONTROL STANDARD. REPORTED AS % RECOVERY OF AN INDEPENDENT STANDARD CARRIED THROUGH ALL SAMPLE PREPARATION PROCEDURES TO VERIFY METHOD PERFORMANCE. ACCEPTALBE RANGE IS 80%-120% RECOVERY.
•SPIKE - ENVIRONMENTAL SAMPLE IS MATRIX SPIKED WITH METHOD COMPOUNDS AND % RECOVERY OF CONCENTRATION SPIKED INTO SAMPLE IS CALCULATED. REPORTED AS % RECOVERY. ACCEPTABLE RANGE FOR "NORMAL MATRIX SAMPLE" IS 75%-125% RECOVERY.
•SURROGATES - COMPOUNDS REPRESENTATIVE OF A GROUP OF COMPOUNDS. SURROGATES ARE SPIKED INTO ENVIRONMENTAL SAMPLES AND % RECOVERY OF CONCENTRATION SPIKED IS CALCULATED AND REPORTED. ACCEPTABLE RANGE VARIES DEPENDING ON SAMPLE MATRIX AND ANALYSIS METHOD.

Ms. Lori Guthrie
Nachant Environmental
P.O. Box 620098
San Diego, CA 92162

Dear Lori:

Enclosed please find the report for the analysis of twelve soil samples from the Townsend Lincoln Mercury site (Project No. E3187). The samples were analyzed by Mobile One Laboratories in our mobile lab in accordance with EPA Method 418.1 modified for soils. The results are summarized on the following pages.

Recoverable petroleum hydrocarbons were found in one of the samples. The quality control results are within acceptable limits for precision and accuracy.

Should you have any questions concerning the analysis or require further information, please do not hesitate to call me. Thank you for using Mobile One Labs.

Sincerely,

Jim

Dear Ms Townsend:

RE: UNAUTHORIZED RELEASE #T0440/H04863-001 & 002
TOWNSEND LINCOLN MERCURY DEALERSHIP
588 CAMINO DEL RIO NORTH, SAN DIEGO, CA 92108-3299

The site remediation information submitted to this agency by Applied Consultants dated March 19, 1992 summarizing the site characterization and mitigation activities at the above referenced location has been reviewed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

This information has also been discussed with staff of the Regional Water Quality Control Board (RWQCB). Based on the information submitted and current requirements, the RWQCB concurs with the determination of this agency that no further action is required at this time.

Please be advised that this letter does not relieve Townsend Lincoln Mercury of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve Townsend Lincoln Mercury of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your efforts in resolving this matter. Please contact the Hazardous Materials Management Division, Mo Lahsaie, at (619) 338-2256, if you require additional assistance.

Sincerely,

VICTORIA L. GALLAGHER, Chief
Hazardous Materials Management Division

DISPOSAL AND REMEDIATION

CAUSE AND TYPE OF RELEASE: PIPING ASSOCIATED WITH WASTE OIL UST
QTY OF SOIL/PRODUCT DISPOSED: APPROX. 3 CUBIC YARDS
MANIFESTS PROVIDED? YES
DISPOSAL LOCATION: MIRAMAR LANDFILL
CLEANUP LEVELS ESTABLISHED: SOIL(100 mg/kg TRPH)
TYPE OF REMEDIATION USED AT SITE? EXCAVATION AND DISPOSAL
MAXIMUM CONCENTRATIONS REMAINING ON SITE:

HALOGENATED ORG.	BTXE	VOLATILE ORG.
BELOW LAB DET.LIMITS	BTXE WERE ANALYZED FOR STOCKPILE SOIL ONLY: <50;<50;797;1400 µg/kg	

SEMIVOLATILE ORG.	PESTICIDES & PCB's	8015/DHS - TPH
	<0.05 µg/kg OF PCBs	

ORGANIC LEAD	418.1 - TRPH	
<0.5 mg/kg	68 mg/kg	

ADDITIONAL COMMENTS: 550 WASTE OIL UST WAS REMOVED ON 6/21/91. UNAUTHORIZED RELEASE WAS ASSOCIATED WITH REMOTE PIPING AREA ONLY. CONTAMINATED SOIL WAS REMOVED AND CONFIRMATORY SOIL SAMPLES WERE COLLECTED FROM THE REMOTE PIPING

AREA. BASED ON THE INFORMATION PROVIDED IN THE SITE ASSESSMENT REPORT, IT WAS NOTED THAT A SURFICIAL SOIL STAINING LAYER IS PRESENT BENEATH THE SITE. THIS AREA OF STAINED SOIL WAS DUE TO SURFICIAL OILING OF SOILS DURING CONSTRUCTION ACTIVITIES FOR PURPOSE OF DUST SUPPRESSION. THIS LAYER IS APPROXIMATELY 1 TO 2 FEET BELOW GRADE AND IS UNRELATED TO THE RELEASE FROM UNDERGROUND STORAGE TANK. GROUND WATER IS LOCATED AT 12' BELOW GRADE AND THERE IS NO APPARANT THREAT TO PUBLIC AND/OR ENVIRONMENTAL HEALTH AT THIS SITE.

geotechnical services

Dear Ms. Townsend:

environmental services In accordance with your request, Applied Consultants has abandoned the three ground-water monitoring wells established on the above referenced property.

structural engineering

The three monitoring wells were abandoned under well permit W92957 and in accordance with the California Well Standards Bulletin 74-90. The cuttings generated during the abandonment of the monitoring wells were transported to the Miramar Landfill on 21 July 1993, under a Non-Hazardous, Non-Infectious Special Waste Manifest (attached).

forensic engineering

A copy of this letter and a copy of the Non-Hazardous, Non-Infectious Special Waste Manifest has been sent to Mr. Mo Lahsaie, of the County of San Diego, Hazardous Materials Management Division in order process the final site closure of the unauthorized release reported on the subject property.

If you have any questions please feel free to call.

Sincerely,

Michael J. Barnett

Description: - Soil Disposal Form

From: Mike BARNETT **Title:** Staff Geologist

Comments/Action:

REQUEST FOR CLASS III LANDFILL DISPOSAL OF HYDROCARBON CONTAMINATED SOIL

RECEIVED
MAR 2 1993
Ans'd.

I. SITE LOCATION

Site Name	Office Use Only: H
Townsend Lincoln - Mercury	
Site Address	**City** / **Zip**
588 Camino Del Rio - North	San Diego 92108

II. GENERATOR OF WASTE

Generator Name	
Townsend Lincoln - Mercury.	
Mailing Address	**City/State** / **Zip**
588 Camino Del Rio - North	San Diego / CA 92108

III. SOIL CHARACTERIZATION

Amount of Soil (Cubic Yards)	This is an:	Number of Samples Analyzed:
2.5	[X] Estimate [ ] Actual	/

IV. CONSTITUENTS

	Concentration (MG/KG)					TPH by DOHS LUFT/EPA 8015 Conc. (MG/KG)	TRPH by IR (418.1) Conc. (MG/Kg)
	Benzene	Toluene	Xylene	Ethylbenzene	Organic Lead		
Mean	NA	.09	.083	.098	NA	ND	NA
Range	—	—	—	—	—	—	—

(Check only one)
Soil disposition: [ ] Stock Pile [ ] In Place [X] Drums [ ] Boring [ ] Other

Type of Contaminant: [X] Gasoline [X] Diesel [ ] Oil/Hydraulic Fluid [ ] Other _____

The following must be enclosed in the attached document dated: 2 3 93

1) All laboratory results in compliance with the "San Diego sampling and analysis requirements", documents. Section III, SA/M Manual, January 1991 or the most recent version.
2) Chain of Custodies.
3) Statistical Calculations: Table of Data Values, Mean, Range, Variance Standard Deviation, Appropriate Number of Samples, 80% Confidence Interval Upper and Lower Limit.
4) Plot Plan of Site/Soil Locations.
5) Plot Plan of Sample Locations.

V. Based on historical and present use of the site and completion of San Diego Sampling and laboratory analysis requirements, it is our opinion that the petroleum hydrocarbon contaminated soil is suitable for Class III landfill disposal. We request the above described soil be disposed of at Miramar Landfill with concurrence of the landfill operator.

Michael T Barnett — Consultant's Signature — 3 Feb 93 — Date

Mike Barnett — Consultant's Name (Please Print)

Applied Consultants — Consultants Company

Generator's Signature — 26 Feb 93 — Date

VI. This request, manifest and all receipts must be returned to the HMMD to complete the site closure process.

VII. Based on the data provided and providing it is true, accurate and representative of the soil described above, the HMMD and the RWQCB consider this soil to be suitable for disposal at Class III landfill.

Darryl J Fowler — HMMD Authorized Representative — 4/22/93 — Date

E. Rosalind Dunenstein — RWQCB Authorized Representative — Mar. 16, 1993 — Date

STOCKPILE STATISTICS WORKSHEET
SIMPLE RANDOM SAMPLING AND SYSTEMATIC RANDOM SAMPLING

1	List sample results from laboratory Analytical Method 8015 m for Diesel Units (i.e. mg/kg) mg/kg	1 ND	2	3
		4	5	6
		7	8	9
2	Determine number of sample values n		n =	1
3	Calculate sample mean With n = number of sample measurements $\bar{x} = \frac{\sum_{i-1}^{n} x_i}{n}$		$\bar{x}$ =	ND
4	Calculate sample variance $s^2 = \frac{\sum_{i-1}^{n} x_i^2 - \frac{(\sum_{i-1}^{n} x_i)^2}{n}}{n-1}$		s^2 =	—
5	Calculate sample standard deviation $s = \sqrt{s^2}$		s =	—
	Calculate degrees of freedom $df = n-1$		df =	0
7	Calculate standard error of the mean $s_{\bar{x}} = \frac{s}{\sqrt{n}}$		$s_{\bar{x}}$ =	—
8	Obtain student's 't' value corresponding to the degree of freedom value determined in #6 above. (See attached Table reproduced on the back of this page.)		$t_{.20}$ =	3.078
9	Calculate the confidence interval $CI = \bar{x} \pm t_{.20}\, s_{\bar{x}}$		CI =	—
10	Obtain regulatory threshold for the contaminant of concern RT		RT =	100
11	Calculate $\Delta = RT - \bar{x}$		Δ =	99.91
12	Estimate minimum number of samples $n_{min} = \frac{t_{.20}^2\, s^2}{\Delta^2}$		n_{min} =	—

PLEASE NOTE: In accordance with the California Code of Regulations, Title 22, Section 66694, the HMMD follows the sampling guidelines set forth in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Third Edition" U.S. Environmental Protection Agency, 1986. This worksheet is based on information found in Volume II, Part III, Ch... of "SW-846" and is provided as an aid for stockpile characterization. For circumstances requiring data manipulation beyond that indicated on the worksheet, refer to "SW-846".

TABULATED VALUES OF STUDENT'S 't'
FOR EVALUATING SOLID WASTES

3052 Clairemont Drive, Suite H-10
San Diego, CA 92117

Project Name: Townsend Lincoln/Mercury

Attention: Steve Austin

On January 22, 1987, Analytical Technologies, Inc. received one (1) soil sample for analyses. The sample was analyzed for fuel hydrocarbons and benzene, toluene, and xylenes (BTX).

The fuel hydrocarbons were analyzed by using gas chromatography/flame-ionization detection in accordance with EPA method 8015 (modified for fuel analysis).

The benzene, toluene, and xylenes were analyzed by using gas chromatography/photo-ionization detection in accordance with EPA method 8020. Sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

PS:mag

Enclosures

NOTE: The sample from this project will be disposed of thirty (30) days from the date of this report. If an extended storage period is required, please contact our sample control department before the scheduled disposal date.

Subject: Disposal of Cuttings, Development Water, and Wash Water
Townsend Lincoln Mercury, 588 Camino Del Rio North

Dear Mr. Lahsaie:

In accordance with the request of Mr. Gene Warren of Townsend Lincoln Mercury, we have abandoned three monitoring wells at 588 Camino Del Rio North, San Diego, California. The well abandonment was performed in accordance with Permit No. W92957.

As we discussed, the gravel pack from the wells has been stored on-site in 55-gallon DOT drums. The wash water from steam cleaning the augers and the water from re-developing the wells has also been stored on-site in 55 gallon DOT drums. Approximately 1-1/2 drums of soil and 1-2/3 drums (90 gallons) of water are stored on-site.

The attached tabulation of the soil and water laboratory analysis data (previously reported in AC reports dated 3 April 1987 and 19 March 1992) shows the soil analysis in Boring/MW1 did not detect petroleum hydrocarbons or benzene above the detection limit. Ethylbenzene, toluene, and total xylenes were detected at 0.083, 0.090, and 0.173 mg/kg, respectively.

Although only one soil sample was analyzed from the borings/monitoring wells, it should be noted that Boring/MW 1 was the closest boring to the former tank location.

The water analyses from 1987 were tested for and did not detect Benzene, Ethylbenzene, Toluene, or Total Xylenes (BTEX) above the detection limits in MW1 and MW3. MW2 was either not sampled or not analyzed.

The confirmatory water samples obtained from the three monitoring wells in February 1992 were analyzed for TPH and BTEX. TPH was detected in MW2 (110 µg/kg). TPH was not detected in MW1 or MW3, and BTEX was not detected in the three samples.

Based on the failure to detect TPH and benzene above detection limits during the original drilling, the low levels of Toluene, Ethylbenzene, and Total Xylenes in the soil sample, and on the failure to detect Toluene, Ethylbenzene, and Total Xylenes in the subsequent groundwater samples, Applied Consultants requests permission to dispose of the soil as nonhazardous waste at the Miramar Landfill.

As we discussed, attached is a Request for Class III Landfill Disposal of Hydrocarbon Contaminated Soil. The soil does not, however, contain petroleum hydrocarbons.

Based on the low level of TPH encountered in water sample MW2 and the lack of BTEX in the water samples, Applied Consultants requests permission to dispose of the approximately 90 gallons of water in the on-site planters.

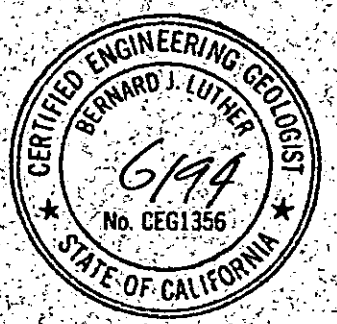

If you have any questions or require additional information, please contact the undersigned or Mr. Michael Barnett.

Sincerely,

Karen G. Blaettler
Geologist

environmental services

Dear Mr. Lahsaie:

structural engineering

In accordance with your request Applied Consultants is providing additional information regarding the techniques used to redevelop the monitoring wells prior to obtaining and analyzing water samples at Townsend Lincoln Mercury, 588 Camino Del Rio North, San Diego, California.

forensic engineering

The three monitoring wells on the site were established on 20 January 1987. Initial water samples were obtained on 22 January 1987 (AC Report 3 April 1987). Although the boring depths were shown as 20', 19.8' and 20' for MW1, MW2, and MW3, respectively, the field notes show shallower depths to the bottoms of the wells on 22 January 1987.

During the original well development on 22 January 1987, the field notes state that 20 bailers of water were removed from MW1, 70 bailers (approximately 4 wellbore volumes) of water were removed from MW2, and 55 bailers (approximately 4 wellbore volumes) of water were removed from MW3.

On 13 February 1992, the depth to ground water and to the bottom of the well was measured in each well prior to redevelopment. Monitoring wells 1, 2, and 3 were re-developed on 13 and 14 February 1992 using a 1.75 inch diameter bailer as a surge block. In MW1 a strong back-and-forth movement of the water was developed using a brisk up and down movement of the bailer. MW2 and MW3 were bailed dry on 13 February 1992 and did not recover enough in a two-hour period to use the bailer as a surge block.

MW-1 5-6-92 w. Karen
10:50 = bailing was Finished
11:50 = sample was taken
12.22 12.2

MW-2
11:09 Finish bailing
11:58 Sample was taken
12.11 → 12.08

On 14 February 1992 a hand auger with a 1.5 inch diameter bucket was used to loosen the accumulated silt from the bottoms of the three wells. The well depths were advanced by alternately using the bailer and the auger bucket to agitate the well and remove the silty water.

During redevelopment, approximately 6 gallons of water were purged from MW1, 12.5 gallons of water were purged from MW2, and 13 gallons of water were purged from MW3. The purge water was stored on-site in a 55-gallon DOT drum.

In accordance with the SA/M manual and as requested during a telephone conversation on 6 February 1992 with Mr. Mo Lahsaie, HMMD specialist, the wells were re-developed at least 72 hours prior to purging and sampling.

On 18 February 1992 water samples were obtained from MW-1, MW-2, and MW-3. The water samples were obtained by bailer after two well-bore volumes of water had been removed from each well and the ground water pH, conductivity, and temperature had stabilized. Four gallons of water was removed from MW-1, 5.5 gallons from MW-2, and 6 gallons from MW-3. The ground water was allowed to recharge to 80% of the static water level before sampling. how long it took to recover 80%? Time?

The depths of the wells as reported in the well completion diagrams, the depths measured during the original development, and the depths before and after redevelopment are shown in the following table:

REPORTED AND MEASURED WELL DEPTHS

Well No.	Depth 1/20/87	Depth 1/22/87	Depth 2/13/92	Depth 2/18/92
MW1	20'	15'5"	15.93'	15.61'
MW2	19.8'	17'6"	14.11'	17.06'
MW3	20'	17'2"	14.78'	18.30'

The total amount of water removed from each well during redevelopment and purging is shown on Table 2 of AC Report dated 19 March 1992.

The well redevelopment methods used at Townsend Lincoln Mercury were reviewed prior to sampling, and were considered sufficient to re-establish the hydraulic connection between the formational materials and the well packing material. The stable pH, conductivity, and temperature measurements at the time samples were obtained support this conclusion.

If you have any questions please feel free to call.

Sincerely,

Karen G. Blaettler
Staff Geologist

geotechnical services

Dear Mr. Warren:

environmental services

In accordance with your request Applied Consultants has obtained and analyzed water samples from the monitoring wells at Townsend Lincoln Mercury, 588 Camino Del Rio North, San Diego, California (Figure 1).

structural engineering

forensic engineering

BACKGROUND

A 2,000 gallon gasoline underground storage tank was removed from the site on 2 December 1986. A soil samples obtained from the bottom of the excavation, at a depth of 12.5' below grade, was found to contain 2,700 mg/kg TPH, 180 mg/kg Toluene, 150 mg/kg Ethylbenzene, and 530 mg/kg Xylene. Benzene was not detected, at a detection limit of 25 mg/kg, in the sample. The hydrocarbons were reported in the C6 to C12, gasoline, hydrocarbon range

High detection limit

Three borings/monitoring wells were established around the excavation (MW1, MW2, and MW3; Figure 2). Purgeable aromatic hydrocarbons (BTE&X) were not detected in water samples obtained from MW1 and MW3 on 21 January 1987 (Table 3). MW2 apparently was not sampled. The water samples were not analyzed for TPH or lead (AC report dated 3 April 1987).

? MW2

36 y³

Thirty six cubic yards of contaminated soil were subsequently removed from the tank excavation and transported to a landfill. TPH was not detected, at a detection limit of 5 mg/kg, in three confirmatory soil samples obtained from the bottom sidewalls of the excavation (MWSW-D11, NSW-D11, and SSW-D12B). Purgeable aromatic hydrocarbons were not detected, at a detection limit of .025 mg/kg, in the single sidewall sample (NWSW-D11) analyzed for these constituents

TPH=ND

BTXE=ND

A new 2,000 gallon, double walled, fiberglass was subsequently installed in the excavation.

It is our understanding that after reviewing the files for this project in 1991, the HMMD requested the testing of confirmatory water samples from the monitoring wells. This was confirmed in a telephone conversation on 6 February 1992 with Mr. Mo Lahsaie, HMMD specialist. Mr. Lahsaie also recommended that the wells be re-developed at least 72 hours prior to purging and sampling.

PROCEDURE

Monitoring wells 1, 2, and 3 were re-developed on 13 and 14 February 1992 using a 1.75 inch diameter bailer as a surge block. Approximately 6 gallons of water were purged from MW1, 12.5 gallons of water were purged from MW2, and 13 gallons of water were purged from MW3. The purge water was stored on-site in a 55-gallon DOT drum.

The elevations of the tops of the well casing were surveyed relative to a brass plug (TLM RCE 9416). The brass plug is located at the south edge of the parking structure entrance across Camino de la Siena from the west entrance to the Townsend Lincoln Mercury Service Department. The elevation of the brass plug was not readily available. For comparison purposed and elevation of 100.00 feet was assigned to this temporary benchmark.

Water levels were measured in the three monitoring wells on 13 and 18 February 1992 using the stick and paste method (Table 1).

On 18 February 1992 water samples were obtained from MW-1, MW-2, and MW-3. The water samples were obtained by bailer after two well-bore volumes of water had been removed from each well and the ground water pH, conductivity, and temperature had stabilized. Four gallons of water was removed from MW-1, 5.5 gallons from MW-2, and 6 gallons from MW-3. The ground water was allowed to recharge to 80% of the static water level before sampling.

The total amount of water removed from each well during redevelopment and purging is shown on Table 2.

The water samples were placed in teflon capped VOA-vials and preserved with HCL. The samples were then placed in a chilled container for transport to the laboratory.

The three water samples were analyzed for total petroleum hydrocarbons (TPH) and purgeable aromatic hydrocarbons (BTE&X) in accordance with the DHS Method (8015-M) and EPA Method 8020, in series. The sample with the highest TPH level was also analyzed for total lead in accordance with EPA Method 7421.

FINDINGS

The monitoring wells are located in an asphaltic concrete-paved driveway. The area was repaved at least once between 1987 and 1992, covering monitoring wells MW2 and MW3. The well cover of MW3 apparently was hit during the paving operation, breaking the inner wall of the well cover and the slip cap on the well. The gaskets on all three well covers had deteriorated and were breached.

Water was measured at a depth of approximately 12 feet in the monitoring wells. The relative casing elevations, depth to water and piezometric surface determined from the monitoring well measurements are recorded in Table 1 and Figure 2. The ground water gradient determined from these measurements is essentially flat, 0.001, to the northwest (Figure 2).

TPH was detected at 110 µg/l in water sample MW2. The hydrocarbon range was reported in the C6 to C12, gasoline, range. TPH was non-detected in the water samples from MW1 and MW3 at a detection limit of 50 µg/l. BTE&X were non-detected in the water samples from MW1, MW2, and MW3 at detection limits 0.5 µg/l, 0.5 µg/l, 0.5 µg/l, and 1 µg/l, respectively (Table 3). Total lead was detected at 0.006 mg/l in water sample MW2. The laboratory analysis, quality control/quality assurance data and chain of custody are attached (ATI No. #202193).

CONCLUSION

The low levels of TPH and total lead detected in MW2 are not considered significant. Based on these results, the non-detection of BTE&X in MW2, and the non-detection of TPH and BTE&X in MW1 and MW3, Applied Consultants recommends that tank closure be granted.

Copies of this report should be forwarded to the HMMD and the CRWQCB for their review. The address and contacts at the HMMD and CRWQCB are as follows:

RE: Limited Phase II Subsurface Investigation Report
595 Camino De La Reina
Mission Valley, California 92108
Hillmann Project Number: C3-6987

Dear Mr. Burnett:

Hillmann Consulting, LLC, is pleased to provide this Limited Phase II Subsurface Investigation Report prepared for the above referenced property.

This report is for the exclusive use of the entities named on the front cover, its affiliates, designates and assignees, rating agencies, prospective bond holders and bond holders, and no other party shall have any right to rely on any service provided by Hillmann Consulting, LLC, without prior written consent.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the Project Manager at 714-634-9500.

Very Truly Yours,
Hillmann Consulting, LLC

Brandon Clements
Regional Director

DRAFT

1.0 INTRODUCTION / BACKGROUND

Hillmann Consulting, LLC (Hillmann) conducted a Limited Phase II Subsurface Investigation at 595 Camino De La Reina, Mission Valley, California (**Figure 1**). The property consists of two rectangular shaped parcels located on the south side of Camino De La Reina, between Camino De La Siesta and Camino Del Arroyo. The site is developed as an auto dealership that features auto body repair and painting, auto sales, and mechanical automotive repair. The total property area is approximately 5.31 acres. The property is located in a suburban developed area characterized by a mix of commercial properties, single and multi-family homes, apartments, and warehouses. The layout of the property is depicted on **Figure 2**. The property is being considered for redevelopment as residential use.

In June 2017, Hillmann completed a Phase I Environmental Site Assessment for the property. Records indicate the site was first developed for commercial purposes around 1970 as an auto dealership and repair shop and it has been used in that capacity since that time. Three 2,000-gallon USTs used for storage of regular unleaded gasoline and one 550-gallon tank used for waste oil were formerly located at the property. One of the 2,000-gallon tanks was replaced with a double walled tank in 1986, and contamination of the soil was noted. However, the contaminated soil was reportedly excavated and disposed in a landfill. The waste oil UST was removed in 1991 and soil contamination was noted in the remote fill area. Records indicate the contaminated soil from this area was also excavated and disposed in a landfill. All three 2,000 gallon USTs were reportedly removed sometime during the early 2000s, although no documentation was provided.

In addition, the site is currently equipped with approximately seventeen above ground hydraulic lifts, however, each location has evidence of surface repair and patching, suggesting these above ground lifts might be replacements for former subsurface hydraulic lifts. In addition, the site is equipped with a waste water clarifier, two above ground oil storage tanks, and two paint spray booths side by side. These concerns were identified as recognized environmental conditions that justified preliminary subsurface investigation. These results are presented in Hillmann's *"Phase I Environmental Site Assessment Report"* dated June 9, 2017.

In October 2017, Hillmann completed a Limited Phase II Subsurface Investigation at the property that featured soil and soil gas sampling to identify potential contamination from petroleum hydrocarbons, lead, PCBs, and volatile organic compounds (VOC). The current investigation is an independent assessment of the site that was constrained by time and cost factors as part of a self-directed effort. The objective of this work was to determine the current representative subsurface conditions in targeted areas of the site. This investigation was not intended to meet the more stringent requirements of a regulatory driven assessment.

The investigation featured soil gas sampling which was considered very important in determining possible vapor intrusion impacts. The investigation included installation of 22 soil borings and soil gas probes in targeted areas of the site. Results of soil sampling indicated low levels of petroleum hydrocarbons in soil and no lead concentrations greater than current screening levels. Results from soil gas sampling indicated no significant concentrations of VOC in soil gas. Based on these results, we recommend no further sampling at the site.

DRAFT

2.0 GEOLOGY/HYDROGEOLOGY

Based on the drilling logs, shallow soils beneath the site consist of mixed silty sand, clayey sand and silt type deposits from near surface to 12.5 feet below grade, the deepest interval explored by drilling in this investigation. Groundwater was encountered at maximum depth but the boring was sealed with bentonite and no groundwater samples were obtained. Descriptions of the sediments encountered during drilling are presented in the drilling logs (**Appendix C**). Based on the Phase I report a groundwater investigation was conducted at an adjoining property in May 2015 and groundwater was present at 14-16 feet below grade at that time (730 Camino Del Rio North, Mission Valley, CA). This is in reasonable agreement with the on-site investigation results.

3.0 SITE INVESTIGATION

On October 28, 2017, Pacific Coast Locators, Inc. conducted a subsurface utility investigation that included metallic sensing and ground penetrating radar in the main outdoor service area of the site. Results identified an apparent backfilled excavation area located at the northwest corner of the western service building. This area was targeted for subsurface investigation by boring HB21. The geophysical survey report is included as **Appendix E**.

On October 21-28, 2017, Hillmann installed 22 soil borings (HB1-HB22) in targeted areas near the backfilled excavation, the hydraulic lifts, the clarifier, and oil storage and paint areas to maximum depths ranging from 3 to 12.5 feet below grade using hand auger tools. The locations of the borings are indicated on **Figure 2**.

During drilling, the soil column was logged by a California Professional Geologist and soil samples were preserved for laboratory analysis. Select samples were tested for carbon chain hydrocarbons corresponding to gasoline, diesel fuel, and oil weights (C4-C12, C13-C22, and C23-C40 ranges, respectively) by EPA Method 8015M and for lead by EPA Method 6010B. In addition, one sample (HB8-3) was tested for PCBs by EPA Method 8082. A&R Laboratories of Ontario, California analyzed the samples.

With two exceptions each boring was completed with a soil gas sampling probe installed at maximum depth. Boring HB21 encountered apparent groundwater at 12.5 feet and was sealed with bentonite to 11.5 feet below grade before probe installation. Boring HB11 was installed to 10 feet, but a rock collapsed into the base of the bore hole, and the base was sealed with bentonite and the probe was installed at 8 feet below grade. The probes consist of plastic micro-porous vapor implants that are approximately 2 inches long with a 0.5-inch outside diameter, connected to 0.25-inch outside diameter nylaflow tubing that extended above the surface. The annulus around the vapor implants was backfilled with approximately 0.5 feet of screen-washed #3 sand. The probes were sealed using bentonite placed immediately above the sand pack to provide a secure borehole seal. The probes were finished with gas-tight fittings at the surface pending vapor purging and sampling.

The soil gas sampling probes were allowed to equilibrate overnight, but less than 24 hours before collecting vapor samples. Prior to vapor sampling, shut-in and leak tests were conducted on the probes. The probe head was attached to the sampling train assembly of

Nylaflow tubing, valves, and fittings and connected to a purge pump. The pump was used to evacuate the sealed system using an applied vacuum of 100 inches of water column (in. WC). The vacuum on each probe was monitored for 90 seconds with the sampling train system sealed. After the shut-in test was validated, the sampling train was leak tested. Liquid isobutylene was applied around all connections in the sampling train to evaluate whether the system was sealed from ambient air leaks. A detection of 10 times the reporting limit of this compound might suggest that ambient air leakage had occurred.

The purpose of purging is to remove stagnant air from the vapor sampling train to ensure representative samples are obtained. The probes were purged using an adjustable vacuum pump set at 200 mL/minute. During purging, the soil gas was monitored for VOC, oxygen, and carbon dioxide content using a Mini-Rae 2000 multi gas detector to ensure that non-atmospheric formation air was being sampled (**Appendix D**).

After purging three volumes through the system, vapor samples were collected from the probes on October 22 and October 29, 2017. During sampling, the purge pump was operated at 200 mL/minute, and the vacuum was monitored to ensure it was below 100 in. WC. Vacuum applied below this level helps ensure chemical partitioning from pore water to soil gas and the stress on the air seals are both minimized. The samples were containerized in Tedlar bags which were delivered to the laboratory for expedited analysis. Fresh tubing was used on each sampling train between holes. The soil gas samples were tested for VOC using EPA Method 8260B by A&R Laboratories of Ontario, California.

3.1 Laboratory Results

Results from soil sampling indicated just two soil samples had detectable levels of petroleum hydrocarbons with a maximum of 180 mg/Kg diesel range hydrocarbons in sample HB8-3. The results from lead analysis indicated some samples had low, background levels of lead with a maximum of 8.58 mg/Kg. No PCBs were detected in soil. The detected concentrations were compared to conservative Regional Screening Levels (RSLs) provided by EPA and modified for use in California by DTSC. The RSL levels for total petroleum hydrocarbons in soil are divided into six non-descript categories that depend on the relative speciation of aromatic and aliphatic hydrocarbons in the source contaminant. In a residential setting, these screening levels range from 82 mg/Kg to 230,000 mg/Kg, depending on the hydrocarbon species, which for this site is not known. Other guidance on screening levels for total petroleum hydrocarbons is provided by the San Francisco Regional Water Quality Control Board. The SFRWQCB provides conservative Environmental Screening Levels (ESLs) in different tiers based on generic conceptual site models. The most conservative of these (Tier 1) are protective of human health in residential settings. For diesel range hydrocarbons this screening value is 230 mg/Kg. This conflicting guidance is frequently problematic when petroleum hydrocarbon levels are detected greater than 100 mg/Kg as is the case for this site, however, it can be argued that the concentrations detected at the site are insignificant for the proposed use. The lead concentrations are well below the DTSC Screening Level for residential applications of 80 mg/Kg. These results are summarized in **Table 1**. The laboratory reports from soil sampling are included in **Appendix B**.

DRAFT

Results from soil gas sampling indicated toluene was detected in four soil gas samples with a maximum of 0.85 ug/L in sample SG11-8. In addition, PCE was detected in one sample (SG20-10) with 0.31 ug/L. No other VOC was detected in any of the soil gas samples. The detected concentrations were compared to the DTSC Future Construction Residential Screening Levels, which are derived from current indoor air quality standards and published default structure attenuation values for future residential construction. Results indicated none of the samples had toluene or PCE concentrations greater than these conservative screening guidelines (310 ug/L for toluene and 0.46 ug/L for PCE). These results are summarized in **Table 2**. The laboratory reports from soil gas sampling are included in **Appendix B**.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The subject site is an auto dealership that was first developed around 1970 and has been used in that capacity to the present time. The site features auto repair services and is equipped with numerous above ground hydraulic lifts, above ground oil storage tanks, and a waste water clarifier. Records indicate the site once maintained USTs used for fuel and oil storage but these were reportedly removed and contaminated soil was excavated and properly disposed. Inspection of the site indicated the areas with above ground hydraulic lifts had concrete patches suggesting these were replacements for former subsurface hydraulic lifts. The historic use of petroleum hydrocarbons at the site was identified as a recognized environmental condition that justified preliminary targeted subsurface investigation. The site is being considered for future residential use.

In October 2017, Hillmann installed 22 soil borings and soil gas sampling probes in targeted locations across the site. These locations were selected as the most likely areas to have subsurface impacts. Results of soil sampling indicated low levels of petroleum hydrocarbons and lead that are below recognized current residential screening levels for soil. In addition, low levels of toluene and PCE were detected in soil gas but were less than the current future construction residential screening levels for these compounds. These results suggest no significant subsurface impacts in any of the 22 areas selected for subsurface investigation at the site; however, during grading of the site, there is a possibility that isolated areas will have actionable levels of petroleum compounds due to the historic nature of business activities. If encountered, elevated petroleum concentrations in the underlying soil should be separated out and properly addressed during the grading process.

Based on these results, we recommend no further sampling at the site.

5.0 LIMITATIONS

This Subsurface Investigation was performed in accordance with generally and currently accepted engineering practices and principles; however, the procedures and methodologies used in this investigation are not intended to meet all specific regulatory guidelines as this work was completed as a self-directed effort. Although the data in this report is indicative of subsurface conditions in areas investigated, no further conclusions regarding the absence or presence of subsurface contamination in other areas of the site should be construed or inferred other than those expressly stated in this report. The conclusions made are based on information

DRAFT

obtained from field observations, independent laboratory analytical results, and from current and relevant Federal, State, regional, and local agencies.

Notes: ND - Not Detected. EPA Regional Screening Levels (RSLs) are human health risk based screening levels used by EPA and DTSC to determine Health Risk in residential and commercial settings. The TPH RSLs are designated by hydrocarbon species, which for this site is unknown. San Francisco Regional Water Quality Control Board Environmental Screening Levels (2016 SFRWQCB ESLs) are conservative (Tier 1) human health screening levels based on generic conceptual site model designed for use at most sites, including residential applications and shallow soil exposure. Please refer to lab reports for complete results.

Ken Zheng - Lab Director

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

The data and information on this, and other accompanying documents, represent only the sample(s) analyzed and is rendered upon condition that it is not to be reproduced, wholly or in part, for advertising or other purposes without approval from the laboratory.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

Ken Zheng - Lab Director

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

The data and information on this, and other accompanying documents, represent only the sample(s) analyzed and is rendered upon condition that it is not to be reproduced, wholly or in part, for advertising or other purposes without approval from the laboratory.

Ph: 818-249-7700 Fax: 818-249-7701

INTRODUCTION

Pacific Coast Locators, Inc. was hired by Hillmann Consulting, LLC to perform a Subsurface Investigation on Friday, July 7th, 2017 to determine the location of potential Underground Storage Tank(s), fill ports, pipeline and/or evidence of excavation within the area of concern on-site.

GEOPHYSICAL METHODOLOGY AND EQUIPMENT

The Sensors and Software Utility Scan Ground Penetrating Radar unit with 250MHz antenna sends a dielectric signal into the earth, which registers with the density of the soil that it is penetrating. Any other material of varied density will either speed up the signal creating an inverted hyperbola or slow it down leaving a hyperbola trail. This is similar to a rock in a creek. The water bends around the rock leaving a tail wake. The GPR signal is not bending however; it is sending back a continuous signal of the curvature of the anomaly it encounters.

The Schonstedt GA-52Cx Magnetic Locator detects iron and steel objects underground, such as USTs, buried oil wells and buried metal monitoring well lids. The Schonstedt GA-52Cx Magnetometer provides audio detection signals with frequencies that vary with gradient field intensity. The signals peak in frequency when the locator's tip is held directly over the target.

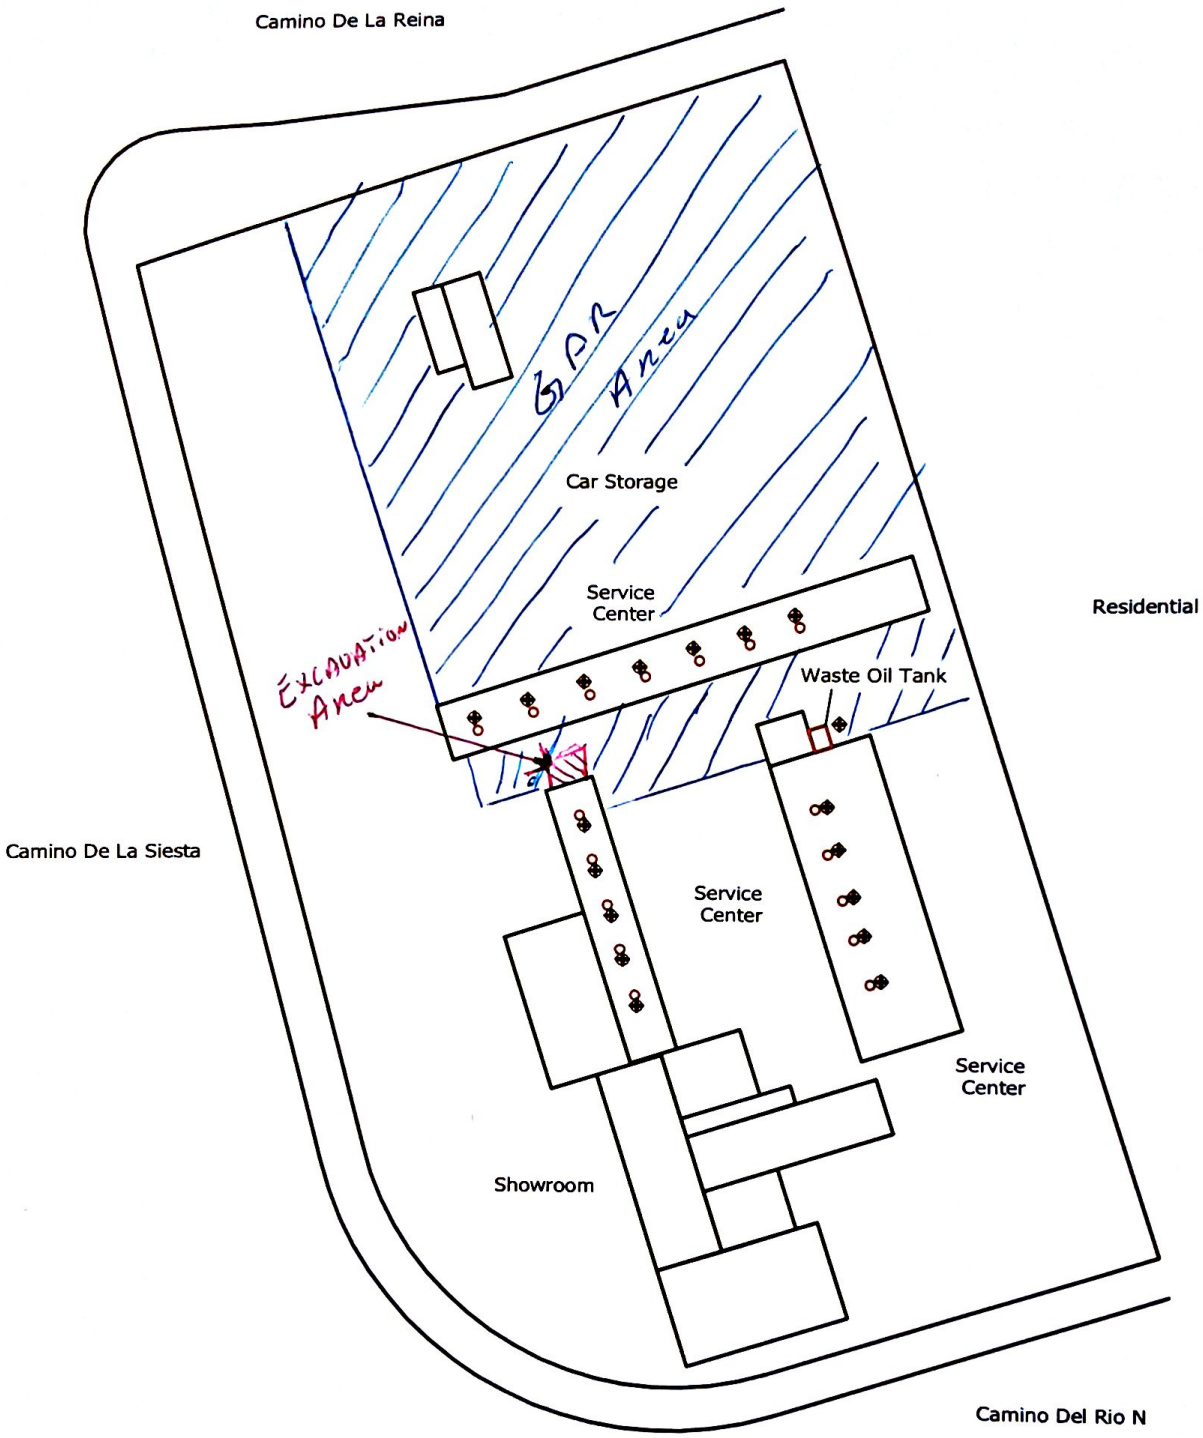

SITE AREA

The Subject site is a car dealership, located on Camino de la Reina in San Diego, CA. Our technician found an excavation area at the NW corner of the service center. The area was marked with a chalk outline. Pictures are below.

ANALYSES / INTERPRETATIONS AND FINDINGS

Our technician performed a Subsurface Utility Investigation using GSSI SIR3000 Ground Penetrating Radar with 400MHz antenna, the RD4000 Electro-Magnetic Transmitter & Receiver, and the Schonstedt GA-52Cx Magnetometer in and around the area of concern on-site. Our technician did not confirm any UST's but marked the area for excavation.

LIMITATIONS

Please be advised that there are limitations to any Subsurface Investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No Subsurface Investigation or equipment can provide a complete image of buried features. Our results should always be used in conjunction with as many methods as possible including: consultation of existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features and utilization of services such as Dig Alert/Underground Service Alert.

Federal Emergency Management Agency

Washington, D.C. 20472

August 20, 2018

THE HONORABLE KEVIN FAULCONER
MAYOR, CITY OF SAN DIEGO
202 C STREET
11TH FLOOR
SAN DIEGO, CA 92101

CASE NO.: 18-09-1388C
COMMUNITY: CITY OF SAN DIEGO, SAN DIEGO COUNTY, CALIFORNIA
COMMUNITY NO.: 060295

DEAR MR. FAULCONER:

This is in reference to a request that the Federal Emergency Management Agency (FEMA) determine if the property described in the enclosed document is located within an identified Special Flood Hazard Area, the area that would be inundated by the flood having a 1-percent chance of being equaled or exceeded in any given year (base flood), on the effective National Flood Insurance Program (NFIP) map. Using the information submitted and the effective NFIP map, our determination is shown on the attached Conditional Letter of Map Revision based on Fill (CLOMR-F) Comment Document. This comment document provides additional information regarding the effective NFIP map, the legal description of the property and our comments regarding this proposed project.

Additional documents are enclosed which provide information regarding the subject property and CLOMR-Fs. Please see the List of Enclosures below to determine which documents are enclosed. Other attachments specific to this request may be included as referenced in the Determination/Comment document. If you have any questions about this letter or any of the enclosures, please contact the FEMA Map Information eXchange (FMIX) toll free at (877) 336-2627 (877-FEMA MAP) or by letter addressed to the Federal Emergency Management Agency, Engineering Library, 3601 Eisenhower Ave Ste 500, Alexandria, VA 22304-6426.

Sincerely,

Luis V. Rodriguez, P.E., Director
Engineering and Modeling Division
Federal Insurance and Mitigation Administration

ADDITIONAL CONSIDERATIONS (Please refer to the appropriate section on Attachment 1 for the additional considerations listed below.)

DETERMINATION TABLE (CONTINUED) LEVEE PROTECTED
PORTIONS REMAIN IN THE SFHA
CONDITIONAL LOMR-F DETERMINATION

This document provides the Federal Emergency Management Agency's comment regarding a request for a Conditional Letter of Map Revision based on Fill for the property described above. Using the information submitted and the effective National Flood Insurance Program (NFIP) map, we have determined that the proposed structure(s) on the property(ies) would not be located in the SFHA, an area inundated by the flood having a 1-percent chance of being equaled or exceeded in any given year (base flood) if built as proposed. Our final determination will be made upon receipt of a copy of this document, as-built elevations, and a completed Community Acknowledgement form. Proper completion of this form certifies the subject property is reasonably safe from flooding in accordance with Part 65.5(a)(4) of our regulations. Further guidance on determining if the subject property is reasonably safe from flooding may be found in FEMA Technical Bulletin 10-01. A copy of this bulletin can be obtained by calling the FEMA Map Assistance Center toll free at (877) 336-2627 (877-FEMA MAP) or from our web site at http://www.fema.gov/mit/tb1001.pdf. This document is not a final determination; it only provides our comment on the proposed project in relation to the SFHA shown on the effective NFIP map.

This comment document is based on the flood data presently available. The enclosed documents provide additional information regarding this request. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at (877) 336-2627 (877-FEMA MAP) or by letter addressed to the Federal Emergency Management Agency, Engineering Library, 3601 Eisenhower Ave Ste 500, Alexandria, VA 22304-6426.

Luis V. Rodriguez, P.E., Director
Engineering and Modeling Division
Federal Insurance and Mitigation Administration

Federal Emergency Management Agency

Washington, D.C. 20472

CONDITIONAL LETTER OF MAP REVISION BASED ON FILL COMMENT DOCUMENT

ATTACHMENT 1 (ADDITIONAL CONSIDERATIONS)

DETERMINATION TABLE (CONTINUED)

LOT	BLOCK/ SECTION	SUBDIVISION	STREET	**OUTCOME** WHAT WOULD BE REMOVED FROM THE SFHA	FLOOD ZONE	1% ANNUAL CHANCE FLOOD ELEVATION (NAVD 88)	LOWEST ADJACENT GRADE ELEVATION (NAVD 88)	LOWEST LOT ELEVATION (NAVD 88)
--	--	--	588 Camino Del Rio North	Structure (NW Bldg)	X (shaded)	38.0 feet	40.0 feet	--
--	--	--	588 Camino Del Rio North	Structure (South Bldg)	X (shaded)	38.0 feet	39.0 feet	--

PORTIONS OF THE PROPERTY REMAIN IN THE SFHA (This Additional Consideration applies to the preceding 3 Properties.)

Portions of this property, but not the subject of the Determination/Comment document, may remain in the Special Flood Hazard Area. Therefore, any future construction or substantial improvement on the property remains subject to Federal, State/Commonwealth, and local regulations for floodplain management.

CONDITIONAL LOMR-F DETERMINATION (This Additional Consideration applies to the preceding 3 Properties.)

Comments regarding this conditional request are based on the flood data presently available. Our final determination will be made upon receipt of this Comment Document, certified as-built elevations and/or certified as-built survey. Since this request is for a Conditional Letter of Map Revision based on Fill, we will also require the applicable processing fee, and the "Community Acknowledgement" form. Please note that additional items may be required before a final as-built determination is issued.

This letter does not relieve Federal agencies of the need to comply with Executive Order 11988 on Floodplain Management in carrying out their responsibilities and providing Federally undertaken, financed, or assisted construction and improvements, or in their regulating or licensing activities.

LEVEE PROTECTED (This Additional Consideration applies to the preceding 3 Properties.)

The subject property is located in an area protected from the 1-percent annual chance flood (base flood) by a levee or other structure subject to possible failure or overtopping by a flood larger than the base flood.

This attachment provides additional information regarding this request. If you have any questions about this attachment, please contact the FEMA Map Information eXchange (FMIX) toll free at (877) 336-2627 (877-FEMA MAP) or by letter addressed to the Federal Emergency Management Agency, Engineering Library, 3601 Eisenhower Ave Ste 500, Alexandria, VA 22304-6426.

Revised: July 25, 2018
Revised: August 15, 2018

LOMC Clearinghouse
847 South Pickett Street
Alexandria, Virginia 22304-4605

SUBJECT: ADDITIONAL DATA REQUEST IN SUPPORT OF A CONDITIONAL LETTER OF MAP REVISION BASED ON FILL (CLOMR-F) FOR THE WITT MISSION VALLEY PROJECT
(RICK ENGINEERING COMPANY JOB NUMBER 18065)

Dear LOMA Manager:

Pursuant to the letter dated July 27, 2018 regarding FEMA case number 18-09-1388C, the provided comments were addressed. Provided below are the comments provided in italics, followed by Rick Engineering Company's response.

1. "*The parking garage/residential building corner at the southern garage entrance appears to be at an elevation of 35' based on the submitted plans. Please either revise the submitted plans, or submit a revised Elevation Form with the corrected LAG for the subject structure.*"

   Response: Please refer to the provided updated Grading Plan and zoomed-in Exhibit in Attachment 1 that displays retaining walls that are independent from the garage/residential building structure, located near the southern garage entrance. Please note that the LAG at the four corners of the driveway entrance are each above the BFE, slightly below the Top of Wall elevation.

If you have any questions or require additional information to aid in your review of the enclosed documents please contact Hernan Cortez at (805) 329-6887 or myself at (619) 291-0707, or by email at hcortez@rickengineering.com and/or bhastie@rickengineering.com.

Sincerely,

PARCELS 1 AND 2 OF PARCEL MAP NO. 17806, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, DECEMBER 30, 1996.

GRADING AND DRAINAGE NOTES

A. GRADING: IT IS PROPOSED THAT THE PROJECT BE GRADED AS SHOWN HEREON. APPROXIMATELY 29,000 CUBIC YARDS WILL BE IMPORTED TO COMPLETE THE PROPOSED GRADING.

B. DRAINAGE: STORM WATER GENERATED ON-SITE WILL BE COLLECTED THROUGH A SYSTEM OF PRIVATE STORM DRAIN PIPES AS SHOWN HEREON. THE PROPOSED PRIVATE STORM DRAIN SYSTEM WILL DISCHARGE TO EXISTING DRAINAGE FACILITIES, AS SHOWN.

C. BMPS: THE PROJECT WILL PROPOSE A NUMBER OF CONSTRUCTION AND POST CONSTRUCTION BMPS TO ADDRESS WATER QUALITY ISSUES CREATED BY THE PROPOSED PROJECT. THESE MEASURES WILL BE ADDRESSED IN THE PROJECT'S SWPPP AND STORM WATER QUALITY MANAGEMENT CONTROL PLAN (SWQMP).

D. ALL PROPOSED ONSITE STORM DRAIN FACILITIES SHALL BE PRIVATE.

E. PRIVATE STORM DRAINS LOCATED WITHIN THE PUBLIC RIGHT OF WAY IS SUBJECT TO APPROVAL BY THE CITY ENGINEER WITH THE ISSUANCE OF AN ENCROACHMENT MAINTENANCE AND REMOVAL AGREEMENT (EMRA).

GENERAL NOTES:

1. FOR PROJECT UTILITIES, SEE SHEET C2.0.
2. PRIOR TO THE ISSUANCE OF ANY CONSTRUCTION PERMIT, THE OWNER/PERMITEE SHALL INCORPORATE ANY CONSTRUCTION BEST MANAGEMENT PRACTICES NECESSARY TO COMPLY WITH CHAPTER 14, ARTICLE 2, DIVISION 1 (GRADING REGULATIONS) OF THE SAN DIEGO MUNICIPAL CODE, INTO THE CONSTRUCTION PLANS OR SPECIFICATIONS.

GENERAL NOTES (CONT.):

3. PRIOR TO THE ISSUANCE OF ANY CONSTRUCTION PERMIT, THE OWNER/PERMITTEE SHALL ENTER INTO A MAINTENANCE AGREEMENT FOR THE ONGOING PERMANENT BMP MAINTENANCE SATISFACTORY TO THE CITY ENGINEER.
4. NO OBSTRUCTION INCLUDING SOLID WALLS IN THE VISIBILITY AREA SHALL NOT EXCEED 3 FEET IN HEIGHT. PLANT MATERIAL, OTHER THAN TREES, WITHIN THE PUBLIC RIGHT OF WAY THAT IS LOCATED WITHIN THE VISIBILITY AREAS SHALL NOT EXCEED 24 INCHES IN HEIGHT, MEASURED FROM THE TOP OF THE ADJACENT CURB.
5. ROOF, DECK AND BALCONY DRAINAGE DESIGN AND DISCHARGE SHALL BE DESIGNED DURING THE MINISTERIAL PHASE OF THE PROJECT.

FLOOD HAZARD INFORMATION

1. FLOOD ZONE DESIGNATION: "AE" (AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD).
2. PANEL: 1618 OF 2375.
3. MAP NO.: 06073C1618G
4. DATE OF MAP: MAY 16, 2012
5. BASE FLOOD ELEVATION: 38.8± M.S.L. (NAVD88)
6. ALL AREAS LOWER THAN THE BASE FLOOD ELEVATION PLUS 2 FEET IS SUBJECT TO INUNDATION.
7. THIS PROJECT SHALL COMPLY WITH SECTION 143.0145 AND 143.0146 OF THE MUNICIPAL CODE FOR DEVELOPMENT IN THE FLOOD HAZARD AREA.

TOPOGRAPHIC INFORMATION

1.0 INTRODUCTION

The purpose of this Waste Management Plan (WMP) for the *Witt Mission Valley Project* in the City of San Diego is to provide analysis of the solid waste impacts anticipated for the *Witt Mission Valley Project* and how those impacts will be mitigated. The goal of this WMP is to identify sufficient mitigation to reduce the potential impacts of the *Witt Mission Valley Project* on solid waste services. Two acceptable approaches to managing waste are to reduce the tons disposed to 60 tons or less, or to provide diversion of 75 percent or more, thus meeting the goal established by Assembly Bill 341.

The 5.13-acre *Witt Mission Valley Project* site is located at 588 Camino de la Reina, San Diego, California 92108. Camino de la Reina forms the project site's northern boundary; Camino de la Siesta is along the western project boundary; and Camino del Rio North forms the site's southern boundary, separating the project site from Interstate 8 (I-8). (See Figure 1, *Witt Mission Valley Project Location Map*) The project site is currently developed with commercial auto dealership sales and offices (Witt Lincoln), service bays, and exterior auto sales areas with surface parking lots. The project site is zoned MV-CR (Mission Valley – Commercial Retail) and is designated Commercial Retail in the Mission Valley Community Plan. The project proposes utilizing the "Multiple Use Development Option" allowed in the Community Plan to create a mixed-use project (commercial, retail and residential units).

The proposed project involves demolition of existing structures (38,070 square feet) and on-site surface parking and construction of a mixed-use development consisting of a residential, retail, commercial, and shopkeeper units (approximately 527,760 square feet gross floor area). The project would range in height from one story to five stories and would have a total of 267 residential units, 6,000 square feet of retail space, 3,600 square feet of commercial space, and 10 shopkeeper units. A total of 422 parking spaces would be provided in a central five-story above ground parking structure, as well as surface parking lots. The project is being designed to comply with the USGBC LEED standards. (See Figure 2, *Witt Mission Valley Project Site Plan*)

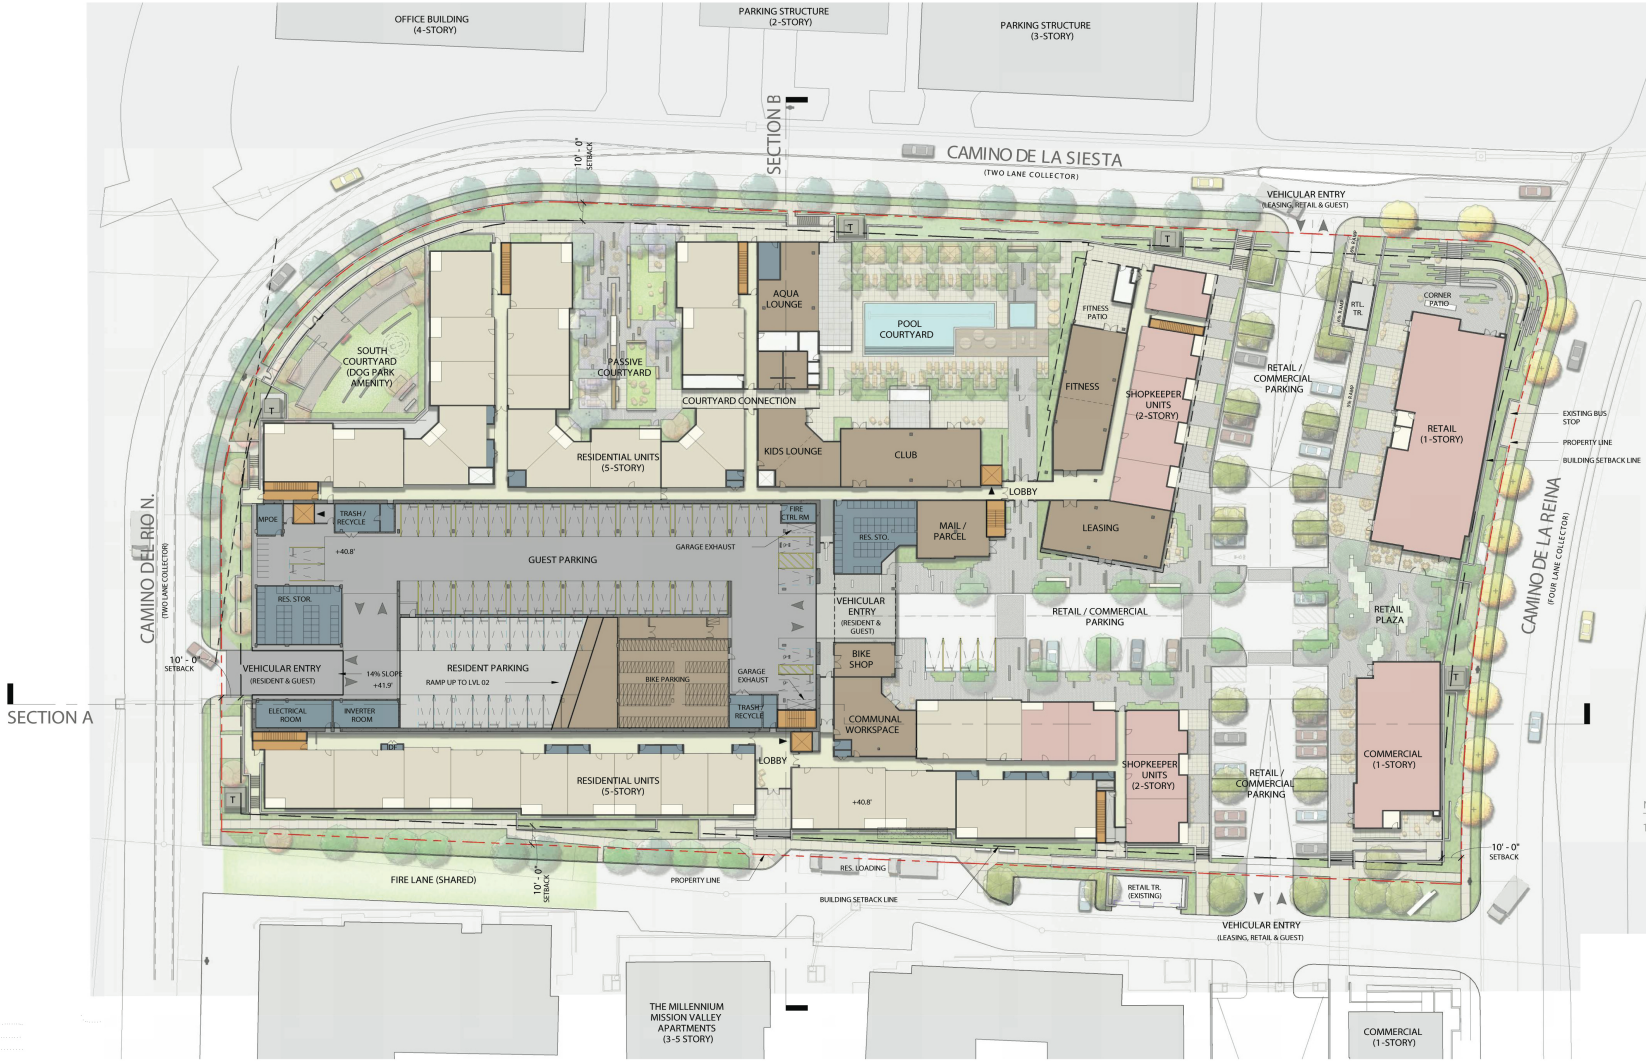

The proposed *Witt Mission Valley Project* involves a Site Development Permit and a Planned Development Permit. The project proposes a mix of residential, retail, and commercial uses and complies with the Mission Valley Planned District Ordinance which allows for a Multi-Use Option (LDC 1514.0307.c). The project would develop under the existing zone and land use designation; therefore, a Rezone and Community Plan Amendment would not be required.

This WMP consists of two sections corresponding to the implementation of site development: the *Construction Phase* (to include demolition) and the *Occupancy Phase* (post-construction). The WMP addresses the projected amount of waste that could be generated by the project based on current City generation rates and estimates; waste reduction goals; and recommended techniques to achieve the waste reduction goals, such as recycling. The project includes two months of demolition. Construction of the project (including demolition) will take approximately 24 – 26 months. Construction will take place as a single phase and is estimated to begin early 2019.

Figure 1
Witt Mission Valley - Project Location Map and Aerial

Figure 2
Witt Mission Valley Project Site Plan

Waste disposal sites and recycling methods and opportunities may change from those available today; however, it is not expected that waste diversion and disposal sites listed in Table 4 would change by the time the project is anticipated to begin construction. This WMP includes the following general information known at the time the WMP was prepared:

- Projected waste generation calculations and identification of types of waste materials generated;
- Source separation techniques for waste generated;
- How materials will be re-used on-site;
- Name and location of current recycling, re-use, and landfill facilities where waste will be disposed of if not re-used on-site;
- A "buy recycled" program;
- Measures to be implemented directed at reducing construction debris;
- Method(s) for communicating waste reduction and recycling goals to subcontractors;
- A general time line for construction and development; and
- A list of required progress and inspections by City staff, based on current ordinances.

2.0 BACKGROUND

In 1989, the California Legislature passed Assembly Bill (AB) 939: Integrated Waste Management Act, which mandated that all cities reduce waste disposed in landfills from generators within their borders by 50 percent by the year 2000. AB 939 required all local governments to prepare a Source Reduction and Recycling Element, which incorporates waste management policies and programs to achieve the mandated waste reduction. Since 1990, the City has diverted more than 50 percent of its generated waste stream from disposal. This bill specified that solid waste should be considered by the equation GENERATED = DISPOSED + DIVERTED. "Diverted" materials are put into a *hierarchy* in the law, as follows:

- First *source reduction*, such as using a reusable bag, making double-sided copies, or other measure that stops waste at the source.
- Secondary measures include *recycling* and *composting*. Because these measures often have transportation and processing impacts, they are considered less preferable than source reduction.
- In the Public Resources Code, various methods of *transformation* for energy production are limited to ten percent of the total waste reduction target.

In 2008, SB 1016 was chaptered. Known as the Solid Waste Disposal Measurement Act, SB 1016 maintained the 50 percent diversion requirement, but changed to a disposal-based measurement system, expressed as the 50 percent Equivalent Per Capita Disposal Target. This built upon AB 939 by implementing a simplified and timelier indicator of jurisdiction performance that focuses on reported disposal at Board-permitted disposal facilities. This established a goal of not recycling more, but disposing of less. AB 341: Jobs and Recycling, chaptered in 2011, was intended to create green jobs by expanding recycling to every multi-family dwelling and business. It charged CalRecycle with responsibility for ensuring that the State is diverting at least 75 percent of solid waste that is generated within the State by 2020. SB 1016 establishes that compliance with State law is measured by reducing

the amount of waste material requiring disposal, and AB 341 increases the diversion target to 75 percent.

Additional local regulation pertaining to solid waste management includes the City of San Diego's Municipal Code Ch.14 Art. 2 Div. 8: §142.0810, §142.0820, Ch. 6 Art. 6 Div. 7; §66.0706, §66.0709, §66.0710; and Ch. 6 Art. 6 Div. 6; §66.0711, §66.0604, §66.0606. These statues designate refuse and recycling space allocation requirements for:

- on-site refuse and recyclable material storage requirements,
- diversion of construction and demolition debris regulations, and
- diversion of recyclable materials generated from residential facilities, businesses, commercial/institutional facilities, apartments, condominiums, and special events requiring a City permit.

The City of San Diego has established a threshold of 40,000 square feet of development as generating sufficient waste (60 tons) to have a potentially cumulatively significant impact on solid waste services. *Witt Mission Valley Project* as proposed exceeds this threshold. The purpose of this WMP is to identify mitigation measures to reduce this potential impact to below a level of significance.

The City Recycling Ordinance is found in Municipal Code section 66.0701 et. seq. It requires the provision of recycling service for all single-family residences; and commercial facilities and multifamily residences with service for four cubic yards or more. In addition, the ordinance also requires development of educational materials to ensure occupants are informed about the City's ordinance and recycling services including information on types of recyclable materials accepted.

Construction and Demolition (C&D) Debris Diversion Deposit Program applies to all applicants for building, demolition, and removal permits. This ordinance requires that the applicant post a deposit (Table 1, *C&D Debris Deposit Table*). The deposit is not returned until the applicant demonstrates that a minimum amount of the material generated has been diverted from disposal in landfills. Mixed construction debris recycling facilities in San Diego are evaluated quarterly to determine how much of the throughput is recycled, and how much is a "residual" material requiring disposal. Facilities that accept mixed debris typically achieve a 68 percent or less diversion rate. Single materials recyclers, such as metal recyclers, often achieve a nearly 100 percent diversion rate. When comingled materials are sent to a mixed facility, the 75 percent diversion goal established by AB 341 will not be met. Depending on the project, to ensure that the overall diversion goal is attained, some materials must often be separated and trucked to facilities with higher diversion rates, such as aggregate and metal recyclers.

Table 1
C&D Debris Deposit Table

Building Category	Sq. Ft. Subject to Ordinance*	Deposit per Sq. Ft.	Range of Deposits
Residential New Construction	500-125,000 detached 500-100,000 attached	$0.40	$200-$50,000 $200-$40,000
Non-residential New Construction	1,000-25,000 commercial 1,000-75,000 industrial	$0.20	$200-$5,000 $200-$15,000
Non-residential Alterations	286 with no maximum	$0.70	$200 and up
Residential Demolition	286 with no maximum	$0.70	$200 and up
Non-residential Demolition	1,000 with no maximum	$0.20	$200 and up
Roof Tear-off	All projects	-	$200
Residential Alterations	500 and above	-	$1,000

* Projects under the minimum square footage subject to the ordinance are exempt from the C&D debris recycling deposit.

2.1 Exterior Refuse and Recyclable Material Storage Area Requirements

The *Witt Mission Valley Project* will develop in single phase over an approximate 24 – 26 month period. Development is anticipated to begin early 2019. Because the *Witt Mission Valley Project* includes residential and nonresidential development, exterior refuse and recyclable material storage areas will be provided in accordance with City regulations per Chapter 14, Article 2, Division 8: Refuse and Recyclable Material Storage Regulations, §142.0820 and §142.0830.

2.2 Exterior Refuse and Recyclable Material Storage Areas for *Witt Mission Valley Project*

Witt Mission Valley Project would develop a mixed-use project with a total of 267 residential units, 9,600 square feet of retail and commercial space. Table 2, *Minimum Exterior and Recyclable Material Storage Areas for Residential Development*, shows the required amount of refuse and recyclable storage areas for the project's residential element. As shown in Table 2, the project would be required to provide 510.7 square feet each of exterior refuse and recyclable material storage area, for a total of 1,022 square feet of material storage area. Table 3, *Minimum Exterior and Recyclable Material Storage Areas for Commercial and Industrial Development*, shows the required amount of refuse and recyclable storage areas for the project's commercial office element. As shown in Table 3, the project would be required to provide 24 square feet each of exterior refuse and recyclable material storage area, for a total of 48 square feet of material storage area.

Table 2
Minimum Exterior Refuse and Recyclable Material Storage Areas for Residential Development

Number of Dwelling Units per Development	Minimum Refuse Storage Area per Development (square feet)	Minimum Recyclable Material Storage Area per Development (square feet)	Total Minimum Storage Area per Development (square feet)
2-6	12	12	24

Source: City of San Diego Municipal Code, Chapter 14, Article 2, Division 8: Refuse and Recyclable Material Storage Regulations, §142.0830, Table 142-08C, effective January 1, 2000.

3.0 EXISTING CONDITIONS

The *Witt Mission Valley Project* site encompasses approximately 5.13 previously graded and developed acres. The project site is bordered by Camino de la Reina to the north, Camino de la Siesta to the west, and Camino del Rio North forms the site's southern boundary, separating the project site from I-8. The project site is currently developed with 38,070 square feet of commercial auto dealership sales and office uses.

4.0 PROPOSED CONDITIONS

The proposed project involves demolition of existing structures (38,070 square feet) and on-site surface parking and construction of a mixed-use development consisting of residential, retails, commercial, and restaurant shopkeeper units. The project would range in height from one to five stories and would have a total of 267 residential units, 6,000 square feet of retail space, 3,600 square feet of commercial space and 10 shopkeeper units. A total of 422 parking spaces would be provided in a central five-story above ground parking structure, as well as surface parking lots. The project is

being designed to comply with the USGBC LEED standards. (See Figure 2, *Witt Mission Valley Project Site Plan.*)

Demolition and construction will be completed in a single phase over a 24 to 26 month period with construction anticipated to begin in early 2019. Construction practices will comply with local, State, and Federal regulations regarding handling of building materials to ensure waste minimization requirements are met.

5.0 DEMOLITION, GRADING, AND CONSTRUCTION WASTE

Demolition and construction will occur over a period of approximately 24 to 26 months. ESD staff would be present for an early pre-construction meeting to evaluate waste segregation, signage, and salvage.

5.1 Demolition

The project site is the location of an existing commercial auto dealership. The demolition phase will include the deconstruction/demolition and removal of the existing buildings, associated structures, asphalt parking and walkway areas, and interior landscaping. Approximately 5,599.87 tons of waste are expected to be generated during demolition. Approximately 5,370.56 tons of material would be recycled, to include trees, concrete, asphalt, foundations, building structure, masonry walls, curb and gutter, and switch gear and cable. Approximately 229.31 tons of debris would be disposed in a landfill, to include non-useable lumber, drywall, glass, miscellaneous trash, roofing paper, broken roof tiles, and floor tile. Table 4, *Witt Mission Valley Project Waste Generation – Demolition*, summarizes the type and amount of demolition materials, as well as diversion/disposal.

Table 4
Witt Mission Valley Project Waste Generation – Demolition

Material Type	Estimated Waste Quantity (tons)	Handling	Estimated Diversion (tons)	Estimated Disposal (tons)
DEMOLITION WASTE

TOTAL	5,599.87		5,370.56	229.31

5.2 Grading

As discussed in Section 1.0, the project site has been completely graded and is currently developed with 38,070 square feet of commercial auto dealership sales and offices. Following demolition activities, the project would require approximately 100 cubic yards of cut and 29,000 cubic yards of fill. Approximately 28,900 cubic yards of material would be imported. Therefore, no waste materials (earth) would be required to be disposed of as a result on project grading operations.

5.3 Construction

Construction activities would generate packaging materials and unpainted wood, including wood pallets, and other miscellaneous debris. Construction debris would be separated on-site into material-specific containers to facilitate reuse and recycling and to increase the efficiency of waste reclamation and/or would be collected by a contracted waste hauler and separated at the facility. Source separation of materials at the construction site is essential to (1) ensure appropriate waste diversion rate, (2) minimize costs associated with transportation and disposal, and (3) facilitate compliance with the C&D ordinance. The types of construction waste anticipated to be generated include:

- Asphalt and Concrete
- Brick/Masonry/Tile
- Cardboard
- Carpet, Padding/Foam
- Drywall
- Landscape Debris

- Mixed C&D Debris
- Roofing Materials
- Scrap Metal
- Unpainted Wood and Pallets
- Garbage/Trash

According to the U.S. Environmental Protection Agency, commercial construction projects typically generate 3.9 pounds of construction waste per square feet of building construction and multi-family residential units generate approximately 4.0 pounds per square feet. Based on these estimates, construction waste generated by the *Witt Mission Valley Project* is shown in Table 5, *Witt Mission Valley Project Waste Generation*, and would total approximately 716 tons.

Table 5
Witt Mission Valley Project Waste Generation

Building Type	Size (square feet)	Generation Rate (pounds per square foot)	Tons Generated
Commercial / Retail Space	9,600	3.9	19
Residential/Shopkeeper	343,160	4.0	686
		Total	**705**

In accordance with State diversion targets, a minimum of 75 percent of construction materials will be recycled. Materials to be recycled would be redirected to appropriate recipients selected from ESD's directory of facilities that recycle construction materials, scrap metal, and yard waste.

To facilitate management of construction materials, the developer shall identify one person or agency connected with the proposed development to act as Solid Waste Management Coordinator, whose responsibility it becomes to work with all contractors and subcontractors to ensure material separation and coordinate proper disposal and diversion of waste generated. The Solid Waste Management Coordinator will help to ensure all diversion practices outlined in this Waste Management Plan are upheld and communicate goals to all contractors involved efficiently.

The responsibilities of the Solid Waste Management Coordinator, include, but are not limited to, the following:

- Review the Solid Waste Management Plan including responsibilities of Solid Waste Management Coordinator.
- Review and update procedures as needed for material separation and verify availability of containers and bins needed to avoid delays.
- Review and update procedures for periodic solid waste collection and transportation to recycling and disposing facilities.
- The authority to issue stop work orders if proper procedures are not being allowed.

The contractors will perform daily inspections of the construction site to ensure compliance with the requirements of the Waste Management Plan and all other applicable laws and ordinances and report directly to Solid Waste Management Coordinator. Daily inspections will include verifying the availability and number of dumpsters based on amount of debris being generated, correct labeling of

dumpsters, proper sorting and segregation materials, and salvaging of excess materials. Additionally, the following apply:

- Solid waste management coordinator will be responsible for educating contractors and subcontractors regarding waste management plan requirements and ensuring that contractors and subcontractors carry out the measures described in the WMP.
- Solid waste management coordinator will ensure ESD attendance at a Precon and assure compliance with segregation requirements, and verification of recycled content in base materials.
- Recycling areas will be clearly identified with large signs, approved by ESD, and sufficient amounts of material-specific bins will be provided for necessary segregation.
- Recycling bins will be placed in areas that are readily accessible to contractors/subcontractors and in areas that will minimize misuse or contamination by employees and the public.
- Solid waste management coordinator will be responsible for ensuring that contamination rates in bins remain below 5 percent by weight of the bin.

Table 6, *Witt Mission Valley Project Waste Generation – Construction*, is included below to summarize the types of waste generated, the amount of each waste type diverted, and the overall amount remaining to be disposed of in landfills.

Table 6
Witt Mission Valley Project Waste Generation – Construction

Material Type	Estimated Waste Quantity (tons)	Handling	Estimated Diversion (tons)	Estimated Disposal (tons)
CONSTRUCTION WASTE				
Asphalt and Concrete	507.11	**Hanson Aggregates** 9229 Harris Plant Road San Diego, CA 92126 (100% diversion)	507.11	--
Brick/Masonry/ Tile	144.89	**Vulcan Carroll Canyon Landfill and Recycle Site** 10051 Black Mountain Road San Diego, CA 92126 (100% diversion)	144.89	--
Cardboard	14.24	**Allan Company** 6733 Consolidated Way San Diego, CA 92121 (100% diversion)	9.97	4.27
Carpet, Padding/Foam	7.24	**DFS Flooring** 10178 Willow Creek Road San Diego, CA 92131 (100% diversion)	7.24	--
Drywall	101.42	**EDCO Station Transfer and Buy Back Center** 8184 Commercial Street La Mesa, CA 91942 (70% diversion)	70.99	30.43
Landscape Debris	14.48	**Miramar Greenery** 5180 Convoy Street San Diego, CA 92111 (100% diversion)	14.48	--
Mixed C&D Debris	434.67	**Otay C&D/Inert Debris Processing Facility** 1700 Maxwell Road Chula Vista, CA 91913 (76% diversion)	326.00	108.67
Roofing Materials	7.34	**LEED Recycling**	7.34	--

		8725 Miramar Place San Diego, CA 92121 (100% diversion)		
Scrap Metal	35.21	**Allan Company** 6733 Consolidated Way San Diego, CA 92121 (100% diversion)	24.35	10.86
Unpainted Wood & Pallets	173.84	**Miramar Greenery** 5180 Convoy Street San Diego, CA 92111 (100% diversion)	173.84	--
Garbage/Trash	7.34	**Miramar Landfill** 5180 Convoy Street San Diego, CA 92111 (0% diversion)	--	7.34
TOTAL	**1,447.48**		**1,286.21**	**161.57**

Construction debris will be separated onsite into material-specific containers, corresponding to the materials types in Table 5, to facilitate reuse and recycling and to increase the efficiency of waste reclamation. The *Wit Mission Valley Project* will implement a target of 20 percent recycled material and 75 percent for landfill diversion. As shown in Table 5, 89 percent of the construction materials generated by the project are expected to be diverted from landfills.

6.0 OCCUPANCY

While the construction phase for the *Witt Mission Valley Project* occurs as a one-time waste generation event as construction of the project proceeds, tenant/owner occupancy requires an on-going plan to manage waste disposal to meet the waste reduction goals established by the City and State. The *Witt Mission Valley Project* will comply with the City's Recycling Ordinance. Solid waste collection would be provided by a private hauler.

6.1 Solid Waste Recycling

The following table expresses the anticipated refuse and recyclable storage requirements based on Table 142-08B and 142.08C of the City of San Diego Municipal Code.

Table 7
Minimum Exterior and Recyclable Material Storage Areas for the Witt Mission Valley Project

Land Use	Gross Floor Area/Units	Minimum Refuse Storage Area (square feet)	Minimum Recyclable Material Storage Area (square feet)	Total Minimum Storage Area (square feet)
Residential	277 units	528	528	1,056
Commercial / Restaurant Use	9,600 sq ft	24	24	48
TOTAL		552	552	1,104

The *Witt Mission Valley Project* would be required to provide a minimum of 552 square feet refuse storage area and a minimum of 552 square feet recyclable material storage area for a total of approximately 1,104 square feet minimum exterior refuse and recyclable material storage area.

As shown in Table 8, *Estimated Solid Waste Generation from the Witt Mission Valley Project – Occupancy Phase*, during occupancy, the expected generated waste per year from the *Witt Mission Valley Project* when fully occupied would be approximately 359 tons.

Table 8
Estimated Solid Waste Generation from the Witt Mission Valley Project – Occupancy Phase

Use	Intensity	Waste Generation Rate	Estimated Waste Generated (tons/year)
Residential	267 units	1.2 tons/year/unit	332.4
Commercial-Restaurant	9,600 sq ft	0.0028 tons/year/sq ft	27
		TOTAL	359.4

On-site recycling services shall be provided to all tenants/residents within *Witt Mission Valley Project*. Tenants/residents within *Witt Mission Valley Project* that receive solid waste collection service shall participate in a recycling program by separating recyclable materials from other solid waste and depositing the recyclable materials in the recycling container provided for the occupants. Recycling services are required by Section 66.0707 of the City of San Diego Land Development Code. Based on current requirements, these services shall include the following:

- Collection of recyclable materials as frequently as necessary to meet demand;
- Collection of plastic bottles and jars, paper, newspaper, metal containers, cardboard, and glass containers;
- Collection of other recyclable materials for which markets exist, such as scrap metal, wood pallets
- Collection of food waste for recycling by composting, where available (prior to issuance of building and occupancy permits, the project proponent will meet with representatives from ESD to ensure that their educational materials and haulers can comply with the requirements for this service);
- Use of recycling receptacles or containers which comply with the standards in the Container and Signage Guidelines established by the City of San Diego Environmental Services Department;
- Designated recycling collection and storage areas; and
- Signage on all recycling receptacles, containers, chutes, and/or enclosures which complies with the standards described in the Container and Signage Guidelines established by the City of San Diego Environmental Services Department

As required by Section 66.0707 of the City of San Diego Land Development Code, the building management or other designated personnel shall ensure that occupants are educated about the recycling services as follows:

- Information, including the types of recyclable materials accepted, the location of recycling containers, and the occupants' responsibility to recycle shall be distributed to all occupants annually;
- All new occupants shall be given information and instructions upon occupancy; and
- All occupants shall be given information and instructions upon any change in recycling service to the commercial facility.

6.2 Landscaping and Green Waste Recycling

Plant material selection will be guided by the macro-and micro-climate characteristics of the project site and surrounding region to encourage long-term sustainability without the excessive use of water pesticides and fertilizers. Irrigation of these areas, where practical, will utilize reclaimed water applied via low precipitation rate spray heads, drip emitters, or other highly efficient systems. Landscape maintenance would include the collection of green waste and disposal of green waste at recycling centers that accept green waste. This will help further reduce the waste generated by developments within *Witt Mission Valley Project* during the occupancy phases.

7.0 CONCLUSION

The City of San Diego Development Services Department is requiring that this WMP be prepared and submitted to the City of San Diego's ESD.

This WMP will be implemented to the fullest degree of accuracy and efficiency. Additionally, the project will be required to adhere to City ordinances, including the *Construction and Demolition Debris Diversion Deposit Program*, the City's *Recycling Ordinance*, and the *Refuse and Recyclable Materials Storages Regulations*. The WMP plan for the *Witt Mission Valley Project* is designed to implement and adhere to all city ordnance and regulations with regards to waste management. The measures in the WMP would ensure that impacts are mitigated to below a level of significance.

Prior to the issuance of any grading or construction permits, the Solid Waste Coordinator will ensure ESD's attendance at a precon. The Solid Waste Coordinator will ensure that 1) the proposed approach to contractor education is approved, 2) the written specifications for base materials, concrete pavers, decomposed granite, and mulch, is approved, and 3) that the ESD inspector approves the separate waste containers, signage, and hauling contract(s) for the following materials:

- Asphalt/concrete
- Brick/masonry/Tile
- Cardboard
- Carpet/padding/foam
- Drywall
- Landscape debris
- Mixed C&D debris
- Scrap metal

- UNTREATED woodwaste
- Refuse

The project will be designed to achieve 75 percent of construction waste to be source reduced and/or recycled. While diversion activities during occupancy will achieve only 40 percent diversion and will not achieve the State target of 75 percent, the project incorporates several measures above and beyond the requirements of local ordinance.

- First, the project exceeds ordinance requirements and even the State waste reduction target during construction.
- Second, the project includes landscaping that will reduce yardwaste, and will provide transportation to a composting facility for the yard waste that is produced. The project proponent will ensure that ESD reviews the landscaping plans and hauling contract for the facility to verify that waste reduction goals are met.
- Third, the project would include LEED measures to reduce waste.

The project will target 20 percent recycled content of construction materials and 75 percent for landfill diversion.

These measures ensure that the waste generated by the project will be properly managed and that solid waste services will not be impacted.

The following standard mitigation applies to the project to reduce cumulative impacts on solid waste to below a level of significance:

1.0 Prior to Permit Issuance or Bid opening/Bid award

A. LDR Plan check

1. Prior to the issuance of any construction permit, including but is not limited to, demolition, grading, building or any other construction permit, the Assistant Deputy Director (ADD) Environmental Designee shall verify that the all the requirements of the Refuse & Recyclable Materials Storage Regulations and all of the requirements of the waste management plan are shown and noted on the appropriate construction documents. All requirements, notes and graphics shall be in substantial conformance with the conditions and exhibits of the associated discretionary approval.
2. The construction documents shall include a waste management plan.
3. Notification shall be sent to:

MMC Environmental Review Specialist
Development Service Department
9601 Ridgehaven Court
Ste. 220, MS 1102 B
San Diego, California 92123 1636
(619) 980 7122

Environmental Services Department (ESD)
9601 Ridgehaven Court
Ste. 210, MS 1102 A
San Diego, California 92123 1636
(858) 573-1236

II. Prior to Start of Construction

A. Grading and Building Permit - Prior to issuance of any grading or building permit, the permittee shall be responsible to arrange a preconstruction meeting to coordinate the implementation of the MMRP. The Precon Meeting that shall include: the Construction Manager, Building/Grading Contractor; MMC; and ESD and the Building Inspector and/or the RE (whichever is applicable) to verify that implementation of the waste management plan shall be performed in compliance with the plan approved by LDR and the San Diego ESD, to ensure that impacts to solid waste facilities are mitigated to below a level of significance.
   1. At the Precon Meeting, the Permittee shall submit reduced copies (11" x 17") of the approved waste management plan, the RE, BI, MMC, and ESD.
   2. Prior to the start of construction, the Permittee/Construction Manager shall verify that the project targets 20 percent recycled content for construction materials and 75 percent of construction materials for landfill diversion.
   3. Prior to the start of construction, the Permittee/Construction Manager shall submit a construction schedule to the RE, BI, MMC, and ESD.

III. During Construction

The Permittee/Construction Manager shall call for inspections by the RE/BI and both MMC and ESD, who will periodically visit the demolition/construction site to verify implementation of the waste management plan. The Consultant Site Visit Record (CSVR) shall be used to document the Daily Waste Management Activity/progress.

IV. Post Construction

A. Within 30 days after the completion of the implementation of the Mitigation Monitoring Reporting Program (MMRP), for any demolition or construction permit, a final results report shall be submitted to both MMC and ESD for review and approval to the satisfaction of the City. MMC will coordinate the approval with ESD and issue the approval notification. ESD will review/approve City Recycling Ordinance-required educational materials prior to occupancy.
