APPENDICES

Appendix A: CalEEMod Annual and Daily Output Files
Appendix B: DPM Toxicity Values, Air Emissions and Risk Calculation Tables
Appendix C: AERMOD Modeling Output Files

GLOSSARY OF TERMS AND ACRONYMS

Acronym	Description
AB 2588	Air Toxics Hot Spots Program
ADT	Average Daily Trips
AERMOD	AMS/EPA Regulatory Model
APCD	Air Pollution Control District
AQIA	Air Quality Impact Analysis
AQMP	Air Quality Management Plan
AQTR	Air Quality Technical Report
ARB	California Air Resources Board
aREL	Acute Reference Exposure Level
ASF	Age sensitivity factor
AT	Averaging time
CAAA	Clean Air Act Amendments
CCAA	California Clean Air Act
CAAQS	California Ambient Air Quality Standards
CalEEMod	California Emissions Estimator Model
Cal/EPA	California Environmental Protection Agency
CAPCOA	California Air Pollution Control Officers Association
CARB	California Air Resources Board
CEQA	California Environmental Quality Act
CAP	Climate Action Plan
CDIS	Clinical Documentation Integrity Specialist
CO	Carbon Monoxide
CPF	Cancer potency factor
CUP	Conditional Use Permit
cREL	Chronic Reference Exposure Level
DBR	Daily breathing rate
DPM	Diesel particulate matter
ED	Exposure duration
EF	Exposure frequency
EIB	Emission Inventory Branch
EPA	Environmental Protection Agency
FAH	Fraction time at home
g/L	Grams per liter
g/sec	Grams per second
HAP	Hazardous Air Pollutants
HI	Hazard index
hp	Horsepower
HQ	Hazard quotient
HRA	Health risk assessment
kg	Kilograms
km	Kilometers
L	Liters
LMA	Local Mobility Analysis
m	Meters
m ²	Square meters
m ³	Cubic meters
mg	Milligrams

GLOSSARY OF TERMS AND ACRONYMS

Acronym	Description
MBARD	Monterey Bay Air Resources District
MOB	Medical Office Building
MP	Multipathway adjustment factor
lb/day	Pounds per Day
MACT	Maximum Achievable Control Technologies
NAAQS	National Ambient Air Quality Standards
NESHAP	National Emissions Standards for Hazardous Air Pollutants
NO ₂	Nitrogen Dioxide
NO _x	Oxides of Nitrogen
OEHHA	Office of Environmental Health Hazard Assessment
O ₃	Ozone
Pb	Lead
PM ₁₀	Particulate Matter 10 Micrometers or less in aerodynamic diameter
PM _{2.5}	Particulate Matter less than or equivalent to 2.5 microns in diameter
ppb	Parts per billion
ppm	Parts per million
RAQS	Regional Air Quality Strategy
REL	Reference Exposure Level
ROG	Reactive Organic Gas
SANDAG	San Diego Association of Governments
SCAQMD	South Coast Air Quality Management District
SCR	Substantial Conformance Review
SD	San Diego
SDAB	San Diego Air Basin
SDAPCD	San Diego County Air Pollution Control District
SDG&E	San Diego Gas & Electricity
SDP	Site Development Permit
SIP	State Implementation Plan
SO ₂	Sulfur Dioxide
SO _x	Oxides of Sulfur
SR	State Route
TAC	Toxic air contaminant
T-BACT	Toxics best available control technology
TDM	Transportation Demand Management
TPY	Tons Per Year
TSD	Technical Support Document
USEPA	US Environmental Protection Agency
µg/m ³	Microgram per Cubic Meter
UTM	Universal Transverse Mercator
VCAPCD	Ventura County Air Pollution Control District
VMT	Vehicular Miles Travelled
VOC	Volatile Organic Compounds
yd ³	Yards cubed
χ /Q	Normalized dispersion coefficient, Chi/Q

1.0 INTRODUCTION

This Air Quality Technical Report (AQTR) was prepared for the Scripps Mercy Hospital Conditional Use Permit (CUP) #304755 Amendment Project ("Project"). The Project involves demolition of existing buildings and construction of new medical offices and hospital buildings at the Scripps Mercy Hospital campus, which is located at 4077 Fifth Avenue in San Diego, California. The City of San Diego is located within the San Diego County Air Pollution Control District (SDAPCD). Regional and localized impacts from Project construction and operational activities are analyzed following SDAPCD guidance, as stated in this report. Due to its proximity to nearby residents and sensitive receptors, a Health Risk Assessment (HRA) to evaluate the temporary cancer and non-cancer health risk impacts due to construction activities is also included in this report.

This section provides an introduction to the AQTR, including a description of the Project site setting and the criteria pollutant and diesel particulate matter (DPM) emission sources considered for calculation of air quality and health risk impacts from construction and operations.

1.1 Site Setting

The Scripps Mercy Hospital CUP Amendment Project involves demolition of existing buildings and construction of new medical offices and hospital buildings at the Scripps Mercy Hospital Campus in the Uptown community of the City of San Diego. The Project site is located on approximately 21.07 acres, generally at 4077 Fifth Avenue, and is currently developed with the Scripps Mercy Hospital campus buildings, surface and structured parking, internal streets and driveways, and landscaping.

The Project site is situated north of Washington Street, east of Fourth Avenue, east and west of Sixth Avenue, and south of an existing development that is located along Arbor Drive. Regional access to the site is provided by State Route 163 (SR 163), immediately east of the Project site. Local access to the site is via Washington Street, Fifth Avenue, Lewis Street, Sixth Avenue, and Fourth Avenue.

The Project site is located in a neighborhood consisting of residential and medical/professional offices, along with retail and restaurant establishments. The nearest identified sensitive receptors to the Project site are the Select Specialty Hospital, which is across Washington Street to the south of the Project site; the Warwick apartment building, located immediately to the east of the Project site; Florence Elementary School, located at 3914 1st Avenue approximately 0.17 mile (0.27 kilometers or km) southwest of the Project site; and Green Beans Preschool, located at 3975 Front Street, approximately 0.19 mile (0.30 km) southwest of the Project site. A Google Earth photograph showing the Project site boundary and the nearest residents and sensitive receptors is provided in Figure 1.

FIGURE 1: SCRIPPS MERCY HOSPITAL PROJECT SITE WITH LOCATION OF SENSITIVE RECEPTORS IDENTIFIED

1.2 Project Description

Construction for the Project would include Hospital I (15 stories, 630,000 square feet), Hospital II (15 stories, 380,000 square feet), Hospital Support Building (three stories with three levels of parking below ground, 65,000 square feet), Medical Office Building (MOB II) (seven stories above-grade, 200,000 square feet) and associated parking (three levels above-grade and two levels below-grade), a Central Energy Plant Expansion (2,400 square feet), and two Utility Yards. The Project may include changes in stationary source equipment such as boilers, chillers or emergency backup engines. The specific details of such equipment changes, that may include replaced or new equipment meeting current SDAPCD emissions standards, have not been developed at this time.

Demolition would include the Facility Building, Generator Building and Cooling Tower, Behavioral Health Clinic, Hospital Building, 550 Washington Building, 550 Washington Parking Structure, Mercy Manor, Parking Lot 4.1, and Emergency Department.

Construction of the Project is scheduled to begin in 2022. While some components of the Project may commence operation by 2030, an expanded schedule has been developed, which shows full development of the Project not ending until 2038. Therefore, the air emissions calculations in this report, developed for all construction occurring in the 2022-2030 timeframe, with Project operations after 2030, are considered to be conservative.

The Cancer Center and associated parking structure, currently under construction, would remain, as well as the College Building, Mercy Gardens, the Chapel, Central Energy Plant, and Parking Lot 12. A new parking structure (Sixth Avenue Parking Structure and Bridge) has been approved and will be constructed at the surface parking located on the east side of Sixth Avenue separately and in advance of major construction efforts of the Project. While this parking structure is part of the existing CUP for the hospital campus, its construction has been previously approved under Substantial Conformance Review (SCR) No. 531932.

Areas of the Project site that are not being demolished/constructed will continue operating during the twelve (12) components of construction. Operations of the newly constructed areas are expected to begin upon completion of each component of construction and will overlap with the construction of later components.

2.0 REGULATORY SETTING

The following section provides information about the existing air quality regulatory framework, meteorology and climate, and existing background air quality at the Scripps Mercy Hospital Project site.

Air pollutants are regulated at the national, state, and air basin level; each agency has a different degree of control. The United States Environmental Protection Agency (USEPA) regulates at the national level; the California Air Resources Control Board (CARB) regulates at the state level; and the SDAPCD regulates air quality in San Diego County.

The federal and state governments have been empowered by the federal and state Clean Air Acts to regulate the emission of airborne pollutants and have established ambient air quality standards for the protection of public health. The USEPA is the federal agency designated to administer national air quality regulations, while CARB is the state equivalent in the California Environmental Protection Agency (Cal/EPA). Local control over air quality management is provided by CARB through multi-county and county-level Air Pollution Control Districts (APCDs) (also referred to as Air Quality Management Districts). CARB establishes statewide air quality standards and is responsible for the control of mobile emission sources, while the local APCDs are responsible for enforcing standards and regulating stationary sources. CARB has established 15 air basins statewide. The City of San Diego is located in the San Diego Air Basin (SDAB), which is under the jurisdiction of the SDAPCD.

2.1 California Air Resources Board

The California Air Resources Board (CARB), which became part of the Cal/EPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (CCAA), meeting state requirements of the federal Clean Air Act and establishing the California Ambient Air Quality Standards (CAAQS). It is also responsible for setting emission standards for vehicles sold in California and for other emission sources such as consumer products and certain off-road equipment. CARB also established passenger vehicle fuel specifications and oversees the functions of local air pollution control districts and air quality management districts, which in turn administer air quality activities at the regional and county level. The CCAA is administered by CARB at the state level and by the Air Quality Management Districts at the regional level. Both state and federal standards are summarized in Table 1. The federal "primary" standards have been established to protect the public health. The federal "secondary" standards are intended to protect the nation's welfare and account for air pollutant effects on soil, water, visibility, materials, vegetation, and other aspects of the general welfare.

**TABLE 1
NATIONAL AND STATE AMBIENT AIR QUALITY STANDARDS**

Pollutant	Averaging Time	California Standards ¹		National Standards ²		
		Concentration ³	Method ⁴	Primary ^{3,5}	Secondary ^{3,6}	Method ⁷
Ozone (O ₃) ⁸	1 Hour	0.09 ppm (180 µg/m ³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m ³)		0.070 ppm (137 µg/m ³)		
Respirable Particulate Matter (PM ₁₀) ⁹	24 Hour	50 µg/m ³	Gravimetric or Beta Attenuation	150 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m ³		—		
Fine Particulate Matter (PM _{2.5}) ⁹	24 Hour	—	—	35 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m ³	Gravimetric or Beta Attenuation	12.0 µg/m ³	15 µg/m ³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m ³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m ³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m ³)		9 ppm (10 mg/m ³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m ³)		—	—	
Nitrogen Dioxide (NO ₂) ¹⁰	1 Hour	0.18 ppm (339 µg/m ³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m ³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m ³)		0.053 ppm (100 µg/m ³)	Same as Primary Standard	
Sulfur Dioxide (SO ₂) ¹¹	1 Hour	0.25 ppm (655 µg/m ³)	Ultraviolet Fluorescence	75 ppb (196 µg/m ³)	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m ³)	
	24 Hour	0.04 ppm (105 µg/m ³)		0.14 ppm (for certain areas) ¹¹	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas) ¹¹	—	
Lead ^{12,13}	30 Day Average	1.5 µg/m ³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m ³ (for certain areas) ¹²	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m ³		
Visibility Reducing Particles ¹⁴	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24 Hour	25 µg/m ³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m ³)	Ultraviolet Fluorescence			
Vinyl Chloride ¹²	24 Hour	0.01 ppm (26 µg/m ³)	Gas Chromatography			

See footnotes on next page ...

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above $150 \mu\text{g}/\text{m}^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from $15 \mu\text{g}/\text{m}^3$ to $12.0 \mu\text{g}/\text{m}^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at $35 \mu\text{g}/\text{m}^3$, as was the annual secondary standard of $15 \mu\text{g}/\text{m}^3$. The existing 24-hour PM10 standards (primary and secondary) of $150 \mu\text{g}/\text{m}^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard ($1.5 \mu\text{g}/\text{m}^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

2.2 San Diego County Air Pollution Control District

The San Diego County Air Pollution Control District (SDAPCD) was created to protect the public from the harmful effects of air pollution, achieve and maintain air quality standards, foster community involvement and develop and implement cost-effective programs that meet state and federal mandates while considering environmental and economic impacts.

Specifically, the SDAPCD is responsible for monitoring air quality and planning, implementing, and enforcing programs designed to attain and maintain state and federal ambient air quality standards in the district. Programs developed include air quality rules and regulations that regulate stationary source emissions, including area sources, point sources, and certain mobile source emissions. The SDAPCD is also responsible for establishing permitting requirements for stationary sources and ensuring that new, modified or relocated stationary sources do not create net emissions increases; and thus, are consistent with the region's air quality goals. The SDAPCD provides thresholds in Regulation II, Rule 20.2, Table 20-2-1, which are the screening level thresholds for an ambient air quality impact assessment (AQIA). These trigger levels were established for stationary sources of air pollution and are commonly used for environmental evaluations. The SDAPCD enforces air quality rules and regulations through a variety of means, including inspections, educational or training programs, or fines, when necessary.

2.3 State Implementation Plan / Regional Air Quality Strategy

The federal Clean Air Act Amendments (CAAA) mandate that states submit and implement a State Implementation Plan (SIP) for areas not meeting air quality standards. SIPs are comprehensive plans that describe how an area will attain national and state ambient air quality standards. SIPs are a compilation of new and previously submitted plans, programs (i.e., monitoring, modeling and permitting programs), district rules, state regulations and federal controls and include pollution control measures that demonstrate how the standards will be met through those measures.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB forwards SIP revisions to the USEPA for approval and publication in the Federal Register.

Thus, the Regional Air Quality Strategy (RAQS) and Air Quality Management Plan (AQMP) prepared by SDAPCD and referenced herein become part of the SIP as the material relates to efforts ongoing in San Diego to achieve the national and state ambient air quality standards. The most recent SIP element for San Diego County was submitted in November 2020 (SDAPCD 2020). The document defines the plan for attaining the National Ambient Air Quality Standards (NAAQS) for ozone in San Diego County. The San Diego RAQS was developed pursuant to CCAA requirements. The RAQS was initially adopted in 1991 and was updated in 1995, 1998, 2001, 2004, 2009 and 2016 (SDAPCD 2016).

The RAQS identifies feasible emission control measures to provide progress in San Diego County toward attaining the state ozone standard. The pollutants addressed in the RAQS are volatile organic compounds (VOC) and oxides of nitrogen (NO_x), precursors to the photochemical formation of ozone (the primary component of smog). The RAQS was initially adopted by the San Diego County Air Pollution Control Board on June 30, 1992, and amended on March 2, 1993, in response to CARB comments. At present, no attainment plan for particulate matter less than 10 microns in diameter (PM₁₀) or particulate matter less than 2.5 microns in diameter (PM_{2.5}) is required by the state regulations; however, SDAPCD has adopted measures to reduce particulate matter in San Diego County. These measures range from regulation against open burning to incentive programs that introduce cleaner technology (SDAPCD 2005).

The RAQS relies on information from CARB and San Diego Association of Governments (SANDAG), including mobile and area source emissions, as well as information regarding projected growth in the county, to estimate future emissions and then determine strategies necessary for the reduction of emissions through regulatory controls. CARB mobile source emission projections and SANDAG growth projections are based on population and vehicle trends as well as land use plans developed by the cities and the county as part of the development of the individual General Plans. As such, projects that propose development consistent with the growth anticipated by the general plans would be consistent with the RAQS. If a project proposes development which is less dense than anticipated within the General Plan, the project would likewise be consistent with the RAQS. If a project proposes development that is greater than that anticipated in the General Plan and SANDAG's growth projections, the project might conflict with the RAQS and SIP; and thus, have a potentially significant impact on air quality.

Under state law, the SDAPCD is required to prepare an AQMP for pollutants for which the SDAB is designated non-attainment. Each iteration of the SDAPCD's AQMP is an update of the previous plan and has a 20-year horizon. Currently the SDAPCD has implemented a 2012 8-hour National Ozone Implementation/Maintenance Plan, a 2007 8-hour Ozone Plan, and a 2004 Carbon Monoxide Plan. The SDAPCD adopted the 2008 8-hour Ozone Attainment Plan for San Diego County on December 16, 2016. CARB adopted the ozone plan as a revision to the California SIP on March 23, 2017. Currently CARB is considering the AQMP for attaining the 2008 Federal 8-hour 75 parts per billion (ppb) and the 2015 Federal 8-hour 70 ppb ozone standards. These plans are available for download on the CARB website located at: <https://ww2.arb.ca.gov/our-work/programs/california-state-implementation-plans/nonattainment-area-plans/san-diego-county-0>

2.3.1 Air Pollutants of Concern

The pollutants analyzed for this report are criteria air pollutants from construction and operational activities, and toxic air contaminants (TACs) from construction activities at the Project site.

2.3.1.1 Criteria Air Pollutants

The seven criteria air pollutants regulated under NAAQS are as follows: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), respirable particulate matter (or particulate matter with an aerodynamic diameter of 10 microns or less, PM₁₀), fine particulate matter (or particulate matter with an aerodynamic diameter of 2.5 microns or less, PM_{2.5}), sulfur dioxide (SO₂), and lead (Pb). Primary standards are designed to protect human health with an adequate margin of safety. Secondary standards are designed to protect property and the public welfare from air pollutants in the atmosphere. Areas that do not meet the NAAQS for a particular pollutant are considered to be “non-attainment areas” for that pollutant.

CARB is the state regulatory agency with authority to enforce regulations to both achieve and maintain air quality in the state. CARB is responsible for the development, adoption, and enforcement of the state’s motor vehicle emissions program, as well as the adoption of the California Ambient Air Quality Standards (CAAQS). CARB also reviews operations and programs of the local air districts and requires each air district with jurisdiction over a non-attainment area to develop its own strategy for achieving the NAAQS and CAAQS. The California Clean Air Act of 1988 (CAA) provides the state with the ability to adopt ambient air quality standards and other regulations provided they are at least as stringent as federal standards, or more stringent.

Through the CAA, CARB has established the CAAQS for six criteria air pollutants also regulated by the NAAQS, and also has established CAAQS for additional pollutants, including sulfates, hydrogen sulfide, vinyl chloride and visibility-reducing particles. The SDAB is currently classified as a non-attainment area under the CAAQS for O₃, PM₁₀, and PM_{2.5}. It should be noted that CARB does not differentiate between attainment of the 1-hour and 8-hour CAAQS for O₃; therefore, if an air basin records an exceedance of either standard, the area is considered non-attainment for the CAAQS for O₃. The SDAB has recorded exceedances of both the 1-hour and 8-hour CAAQS for O₃.

The SDAPCD is required to monitor air pollutant levels to ensure that air quality standards are met and, if they are not met, to develop strategies to meet the standards. Depending on whether the standards are met or exceeded, the local air basin is classified as being in “attainment” or “non-attainment.” San Diego County is listed as a federal non-attainment area for ozone (8-hour) and a state non-attainment area for ozone (1-hour and 8-hour standards), PM₁₀ and PM_{2.5}. As shown in Table 2, the SDAB is in attainment for the state and federal standards for nitrogen dioxide, carbon monoxide, sulfur dioxide and lead. Characteristics of ozone, carbon monoxide, nitrogen dioxide, and suspended particulates are described below.

Table 2 presents the current attainment status for the SDAB.

**TABLE 2
SUMMARY OF SAN DIEGO AIR BASIN (SDAB)
FEDERAL AND STATE ATTAINMENT STATUS**

Criteria Pollutant	Federal Designation	State Designation
Ozone (8-Hour)	Non-attainment	Non-attainment
Ozone (1-Hour)	Attainment *	Non-attainment
Carbon Monoxide	Attainment	Attainment
PM ₁₀	Unclassifiable **	Non-attainment
PM _{2.5}	Attainment	Non-attainment
Nitrogen Dioxide	Attainment	Attainment
Sulfur Dioxide	Attainment	Attainment
Lead	Attainment	Attainment
Sulfates	No Federal Standard	Attainment
Hydrogen Sulfide	No Federal Standard	Unclassified
Visibility	No Federal Standard	Unclassified

* The federal 1-hour standard of 12 ppm was in effect from 1979 through June 15, 2005. The revoked standard is referenced here because it was employed for such a long period and because this benchmark is addressed in state Implementation Plans.

** At the time of designation, if the available data does not support a designation of attainment or nonattainment, the area is designated as unclassifiable.

2.3.1.2 Toxic Air Contaminants

TACs are controlled under a different regulatory process than criteria pollutants. Because no safe level of emissions can be established for TACs region-wide, the regulation of TACs is based on the levels of cancer risk and other health risks posed to persons who may be exposed. Joint federal, state and local regulations aimed at lessening public exposure to TACs are constantly revisited and updated.

Under federal law, 188 substances are listed as HAPs that are TACs. Major sources of specific HAPs are subject to the requirements of the National Emissions Standards for Hazardous Air Pollutants (NESHAP) program. The USEPA establishes regulatory schemes for specific source categories and requires implementation of Maximum Achievable Control Technologies (MACTs) for major sources of HAPs in each source category.

State law has established the framework for California's TAC identification and control program, which is generally more stringent than the federal program, and is aimed at HAPs that are a concern in California. The state has formally identified more than 200 substances as TACs and has adopted appropriate control measures for each.

Once adopted at the state level, each air district is required to adopt a measure that is equally or more stringent. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) enacted in 1987 requires certain applicable facilities in San Diego County to quantify the emissions of TACs, and in some cases, conduct a health risk assessment (HRA), and to notify the public, while developing risk reduction strategies. In San Diego County, SDAPCD Rule 1210 implements the public notification and risk reduction requirements of AB 2588 and requires facilities to reduce risks to acceptable levels within 5 years. In addition, SDAPCD Rule 1200 establishes acceptable risk levels, and emission control requirements for new and modified facilities that may emit TACs.

The emissions of TACs from operational activities are expected to be much lower than emissions of TACs from construction and demolition activities on the Project site. Therefore, an HRA has been performed only for the impacts of construction activities, to evaluate the health risks from these short-term, temporary activities. The TAC that has potential to have the biggest health impacts on nearby sensitive receptors is diesel particulate matter (DPM) and diesel exhaust components from construction equipment on the Project site. Diesel exhaust is mainly composed of particulate matter and gases, which contain potential cancer-causing substances in addition to some noncancer hazards. Emissions from diesel engines currently include over 40 substances that are listed by EPA as HAPs and by CARB as TACs. On August 27, 1998, CARB and the Office of Environmental Health Hazard Assessment (OEHHA) identified particulate matter in diesel exhaust as a TAC, based on data linking diesel particulate emissions to increased risks of lung cancer and respiratory disease (Cal/EPA 1998).

2.3.2 Background Air Quality

The SDAPCD monitors air quality conditions at locations throughout the SDAB. The purpose of the monitoring stations is to measure ambient concentrations of pollutants, including criteria pollutants, ozone precursors and TACs, and to determine whether the CAAQS and the NAAQS are met. The monitors closest to the Project site are the San Diego Sherman Elementary School and the Chula Vista monitoring stations, located approximately 3 miles south and 9.3 miles south of the Project site, respectively. The Sherman Elementary monitoring site has only 2019 data for ozone, so the 2017 and 2018 data for ozone, PM₁₀, and PM_{2.5} and the 2019 data for PM₁₀ and PM_{2.5} are from the Chula Vista monitoring station. A summary of the data recorded at the two monitoring stations from 2017 through 2019 is presented in Table 3.

TABLE 3 AMBIENT AIR BACKGROUND POLLUTANT CONCENTRATIONS/EXCEEDANCES/STANDARDS			
Pollutant	2017	2018	2019
Ozone (O₃)			
State maximum 1-hour concentration (ppm)	0.085	0.076	0.084
National maximum 8-hour concentration (ppm)	0.074	0.064	0.072
State maximum 8-hour concentration (ppm)	0.075	0.065	0.072
Number of Days Standard Exceeded			
CAAQS 1-hour (>0.09 ppm)	0	0	0
CAAQS 8-hour (>0.070 ppm)/NAAQS 8-hour (>0.070 ppm)	1 / 1	0 / 0	1 / 1
Respirable Particulate Matter (PM₁₀)			
National maximum 24-hour concentration (µg/m ³)	59.0	45.0	68.2
State maximum 24-hour concentration (µg/m ³)	61.0	45.0	69.4
State annual average concentration (µg/m ³)	21.7	22.0	22.0
Annual or Days Standard Exceeded *			
NAAQS 24-hour (>150 µg/m ³)	0	0	0
CAAQS 24-hour (>50 µg/m ³)/Annual (>20 µg/m ³)	1 / Yes	0 / Yes	1 / Yes
Fine Particulate Matter (PM_{2.5})			
National Maximum 24-hour concentration (µg/m ³)	42.7	41.9	18.6
State maximum 24-hour concentration (µg/m ³)	42.7	41.9	18.6
Annual average concentration (µg/m ³)	--	9.9	8.1
Annual or Days Standard Exceeded *			
NAAQS 24-hour (>35 µg/m ³)/Annual (>12.0 µg/m ³)	1 / No	1 / No	0 / No
CAAQS Annual (>12 µg/m ³)	No	No	No

Notes:

µg/m³ = micrograms per cubic meter; ppb = parts per billion; ppm = parts per million; N/A = Not available.

CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard.

BOLD value indicates greater than standard.

2019 O₃ measured at the Sherman Elementary station (450B 24th Street, approximately 3 miles south of the Project site); 2017-2018 O₃ and 2017-2019 PM₁₀ and PM_{2.5} measured at the Chula Vista monitoring station (80 E. J Street, Chula Vista, approximately 9.3 miles south of the Project site)

* In the case of an Annual standard a No or Yes response is provided.

3.0 AIR QUALITY IMPACTS ANALYSIS

3.1 Significance Criteria Methodology

Air quality modeling was performed in general accordance with the methodologies outlined in the SDAPCD 2009 RAQS to identify construction and operational emissions

associated with the proposed Project. All criteria pollutant and DPM emissions were calculated using the California Emissions Estimator Model (CalEEMod) software version 2016.3.2 which incorporates current air emission data, planning methods and protocol approved by CARB (CAPCOA 2016). Speciated diesel exhaust TAC emissions were calculated for acute health risk calculations, from published emission factors (VCAPCD 2001).

As referenced, construction activities would include demolition of existing buildings, grading, construction of the buildings/utilities and related improvements as well as paving parking areas. Construction activities would require the use of equipment that would generate criteria air pollutant emissions. For modeling purposes, it was assumed that all construction equipment used would be diesel-powered. Construction emissions associated with development of the proposed Project were quantified by estimating the types of equipment, including the number of individual pieces of equipment, that would be used on-site during each of the construction components as well as off-site haul trips to remove demolition debris. Construction emissions were analyzed using the regional thresholds established by the SDAPCD and published within the City of San Diego Significance Determination Thresholds Guidelines (SD City 2016).

Operational emissions include mobile source emissions, energy emissions and area source emissions. Mobile source emissions are generated by motor vehicle trips associated with operation of the Project. Emissions attributable to energy use include electricity and natural gas consumption for space and water heating. Area source emissions are generated by landscape maintenance equipment, use of consumer products and painting. To determine whether a regional air quality impact would occur, the increase in emissions would be compared with the SDAPCD-recommended regional thresholds for operational emissions.

3.2 Thresholds of Significance

Based on City of San Diego Significance Determination Thresholds Guidelines, a project would have a significant air quality impact if it would:

- a. *Conflict with or obstruct implementation of the applicable air quality plan;*
- b. *Violate any air quality standard or contribute substantially to an existing or projected air quality violation;*
- c. *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions that exceed quantitative thresholds for ozone precursors);*
- d. *Expose sensitive receptors to substantial pollutant concentrations;*
- e. *Create objectionable odors affecting a substantial number of people; or*
- f. *Release substantial quantities of air contaminants beyond the boundaries of the premises upon which the stationary source emitting the contaminants is located.*

A significant adverse air quality impact may occur when a project individually or cumulatively interferes with progress toward the attainment of the ozone standard by generating emissions that equal or exceed the established long-term quantitative thresholds for pollutants or exceed a state or federal ambient air quality standard for any criteria pollutant.

As referenced, the SDAPCD has established thresholds in Rule 20.2 for new or modified stationary sources (SDAPCD 2015). With the exception of Volatile Organic Compounds (VOC) and PM_{2.5} thresholds, the City of San Diego screening quantities shown in the California Environmental Quality Act Significance Determination Thresholds, Table A-2, incorporate screening level thresholds from Rule 20.2 for use in air quality reports and for determining CEQA air quality impacts. The City does not show a standard for PM_{2.5} but does include a threshold for Reactive Organic Gas/Volatile Organic Compounds (ROG/VOC) emissions. The U.S. EPA uses the term VOC and the CARB's Emission Inventory Branch (EIB) uses the term Reactive Organic Gases (ROG) to essentially define the same thing. There are minor deviations between compounds that define each term, however for purposes of this study we will assume they are equivalent due to the fact South Coast Air Quality Management District (SCAQMD) interchanges these words and because air quality models directly calculate ROG in place of VOC. Collectively, the standards shown in Table A-2 of the City's 2016 CEQA Determination Thresholds and the PM_{2.5} threshold shown in Table 20.2-1 of SDAPCD Rule 20.2, are used herein to determine whether Project emissions would cause a significant air quality impact. These screening criteria can be used to demonstrate that a project's total emissions would not result in a significant impact as defined by CEQA. Also, since SDAPCD does not have air quality impact threshold for ROG/VOC, it is acceptable to use the Monterey Bay Air Resources District (MBARD) ROG threshold referenced by the SCAQMD.

The daily construction and operational emission thresholds for pollutants evaluated are as follows:

- Reactive Organic Gases (ROG) - 137 pounds/day;
- Nitrogen Oxides (NO_x) - 250 pounds/day;
- Carbon Monoxide (CO) - 550 pounds/day;
- Sulfur Oxides (SO_x) - 250 pounds/day;
- Particulate Matter (PM₁₀) - 100 pounds/day; and
- Particulate Matter (PM_{2.5}) - 67 pounds/day.

The annual operational emission thresholds for pollutants evaluated are as follows:

- Reactive Organic Gases (ROG) – 15 tons/yr;
- Nitrogen Oxides (NO_x) – 40 tons/yr;
- Carbon Monoxide (CO) – 100 tons/yr;
- Sulfur Oxides (SO_x) - 40 tons/yr;
- Particulate Matter (PM₁₀) – 15 tons/yr; and
- Particulate Matter (PM_{2.5}) – 10 tons/yr.

3.3 Construction Emissions

Project construction would generate temporary air pollutant emissions. These impacts are associated with fugitive dust (PM₁₀ and PM_{2.5}) from soil disturbance and exhaust emissions (NO_x, CO and SO₂) from heavy construction vehicles. For the purpose of estimating emissions, it was assumed that portions of the 21-acre site would be disturbed and developed for overall construction. The number of haul trips to remove demolition debris were estimated based on cubic yards. As noted, construction would generally consist of asphalt and building material removal, site preparation, construction of the buildings and related improvements and the application of architectural coating (painting).

Table 4 shows the estimated Project construction schedule for each of the planned demolition activities and facility expansion, improvements, and structures at the site. The schedule shows redevelopment of the hospital campus extending until 2038. Therefore, the CalEEMod air emissions modeling completed for all Project construction in the 2022-2030 timeframe, with operation after 2030, is considered to be conservative. The expected equipment fleet for each construction component was provided by the applicant's construction firm, Layton Construction Company and is shown in Table A-1, provided in Appendix A.

Construction Schedule		Estimated Dates
1	Parking Lot 4.1 Demolition	Nov 2022 - Mar 2023
2	MOB II Construction	Apr 2023 - Dec 2024
3	Behavioral Health Building Demolition	Oct 2023 - Mar 2024
4	550 Washington Building Demolition	Jan 2025 - Jul 2025
5	Hospital I and Hospital Support Building Construction	Apr 2024 - Mar 2028
6	Emergency Department Demolition	Mar 2029 - Oct 2029
7	Existing Hospital Demolition	Mar 2029 - April 2030
8	Mercy Manor Demolition	2030
9	Central Energy Plant Expansion	2031-2032
10	Facility and Generator Building Demolition	2033
11	Hospital II Construction	2034-2038

3.3.1 Standard Construction Conditions and Emissions Reduction

Demolition, site preparation, and grading would involve the greatest concentration of heavy equipment use and the highest potential for fugitive dust emissions. The Project would be required to comply with SDAPCD Rule 55, which identifies fugitive dust standards and is required to be implemented at all construction sites located within the SDAB. Therefore, the following conditions 1 through 5, which generally reduce fugitive dust emissions, were included in CalEEMod for site preparation and grading phases of construction.

1. Minimization of Disturbance. Construction contractors should minimize the area disturbed by clearing, grading, earth moving, or excavation operations to prevent excessive amounts of dust.

2. Soil Treatment. Construction contractors should treat all graded and excavated material, exposed soil areas, and active portions of the construction site, including unpaved on-site roadways, to minimize fugitive dust. Treatment shall include, but not necessarily be limited to, periodic watering, application of environmentally safe soil stabilization materials, and/or roll compaction as appropriate. Watering shall be done as often as necessary, and at least three times daily, preferably at the start of each morning, mid-day, and after work is completed for the day. For modeling purposes, it was assumed that watering would occur three times daily, during the construction of this development.

3. Soil Stabilization. Construction contractors should monitor all graded and/or excavated inactive areas of the construction site at least weekly for dust stabilization. Soil stabilization methods, such as water and roll compaction, and environmentally safe dust control materials shall be applied to portions of the construction site that are inactive for over four days. If no further grading or excavation operations are planned for the area, the area shall be seeded and watered until landscape growth is evident, or periodically treated with environmentally safe dust suppressants, to prevent excessive fugitive dust.

4. No Grading During High Winds. Construction contractors should stop all clearing, grading, earth moving, and excavation operations during periods of high winds (20 miles per hour or greater, as measured continuously over a one-hour period).

5. Street Sweeping. Construction contractors should sweep all on-site driveways and adjacent streets and roads at least once per day, preferably at the end of the day, if visible soil material is carried over to adjacent streets and roads.

In addition to SDAPCD Rule 55 requirements, emissions modeling also accounts for the use of low-VOC paint (50 g/L for interior coatings and 100 g/L for exterior coatings) as required by SDAPCD Rule 67.

3.3.2 Construction Emissions

Construction is assumed to begin in the Fall of 2022. Table 5 shows modeled Project maximum daily impacts of criteria pollutants by year throughout the construction period (conservatively assuming completion by 2030), with a comparison of each year's daily impacts to the SDAPCD Rule 20.2 screening thresholds. Construction of the proposed Project would exceed the SDAPCD regional construction emission thresholds for daily emissions for NO_x. All other criteria pollutant emissions are below the daily screening level thresholds, as analyzed for each year of construction.

Year	ROG	NO_x	CO	SO₂	Fug PM₁₀	Exh PM₁₀	Total PM₁₀	Fug PM_{2.5}	Exh PM_{2.5}	Total PM_{2.5}
2022	11.3	7.03	7.72	0.013	0.83	0.37	1.17	0.44	0.34	0.76
2023	20.8	168	175	0.504	20.8	6.76	26.5	8.41	6.38	13.7
2024	58.3	338	370	1.006	35.2	13.2	44.2	16.1	12.5	24.6
2025	29.5	216	274	0.678	2.21	8.28	10.5	0.60	7.88	8.47
2026	27.7	202	259	0.619	1.63	7.87	9.49	0.44	7.50	7.94
2027	51.8	226	299	0.685	2.09	8.98	11.1	0.57	8.56	9.12
2028	16.0	120	151	0.355	1.38	4.63	6.01	0.38	4.41	4.78
2029	6.59	45.8	57.6	0.163	0.43	1.80	2.24	0.11	1.69	1.80
2030	7.32	24.3	56.3	0.173	0.40	0.72	1.12	0.10	0.72	0.82
Screening Threshold (lb/day)	137	250	550	250	-	-	100	-	-	100
Exceeds Threshold (Y/N)?	N	Y	N	N	-	-	N	-	-	N

See Appendix A for CalEEMod ver. 2016.3.2 computer model output for the demolition of existing development, daily emissions shown.

The Project maximum daily construction NO_x emissions for Hospital I and II were conservatively modeled under a combined construction component from 2024 through 2028. However, construction of Hospital II is scheduled to be at the end of the Project and most likely would be constructed from 2034 to 2038. By adjusting the allocation of emissions to be associated with separate construction components for Hospital I and II, the daily construction emissions would be reduced by over 26% in 2024. Therefore, the estimated maximum NO_x emissions for all periods would be below the screening threshold and additional mitigation for NO_x emissions will not be required.

Table 6 shows modeled Project maximum annual impacts of criteria pollutants by year throughout the construction period (conservatively assuming completion by 2030), with a comparison of each year's annual impacts to the SDAPCD Rule 20.2 screening thresholds.

Year	ROG	NO_x	CO	SO₂	Fug PM₁₀	Exh PM₁₀	Total PM₁₀	Fug PM_{2.5}	Exh PM_{2.5}	Total PM_{2.5}
2022	0.07	0.38	0.39	0.00	0.00	0.02	0.02	0.00	0.02	0.02
2023	0.65	6.18	5.68	0.02	0.56	0.21	0.77	0.20	0.20	0.40
2024	3.36	20.62	22.41	0.06	1.29	0.80	2.09	0.44	0.76	1.20
2025	3.23	23.73	30.21	0.07	0.22	0.92	1.14	0.06	0.87	0.93
2026	3.61	26.43	33.81	0.08	0.21	1.03	1.23	0.06	0.98	1.03
2027	4.08	22.63	29.16	0.07	0.21	0.88	1.10	0.06	0.84	0.90
2028	0.33	2.45	3.09	0.01	0.03	0.09	0.12	0.01	0.09	0.10
2029	0.07	0.48	0.60	0.00	0.00	0.02	0.02	0.00	0.02	0.02
2030	0.71	2.37	5.48	0.02	0.04	0.07	0.11	0.01	0.07	0.08
Screening Threshold (ton/yr)	15	40	100	40	15	-	100	-	-	100
Exceeds Threshold (Y/N)?	N	N	N	N	N	-	N	-	-	N

See Appendix A for CalEEMod ver. 2016.3.2 computer model output for the demolition of existing development, daily emissions shown.

In summary, construction of the proposed Project would not exceed the SDAPCD regional daily and annual construction emission thresholds for criteria pollutant emissions. Thus, the Project construction emissions would not conflict with the SIP, RAQS or AQMP, violate an air quality standard or contribute to an existing or projected violation, result in a cumulatively considerable increase in ozone or particulate matter emissions or expose receptors to substantial pollutant concentrations (thresholds a-f).

3.4 Operational Emissions

Operational emissions include emissions from electricity consumption (energy sources), vehicle trips (mobile sources), area sources, landscape equipment, and evaporative emissions as the structures are repainted over the life of the Project. The majority of operational emissions are associated with vehicle trips to and from the Project site.

The Central Plant Energy Expansion may include replacing older equipment or adding new stationary source equipment, including boilers, chillers, or emergency backup engines. Such equipment would be required to meet SDACPD Best Available Control Technology, or the cleanest achievable emission standards for new equipment. The operational emission changes due to the expansion would not be expected to contribute significant air emissions at levels that would conflict with air quality standards, thereby changing the conclusions in this section. In fact, equipment changes may lead to reduced air emissions at the Project site.

The CalEEMod modeling for operational emissions considered the Project design conditions listed in the Climate Action Plan (CAP) Consistency Checklist. These Project design conditions that must be incorporated into the Project are listed below. According to the CAP Consistency Checklist, the Project would implement a Transportation Demand Management (TDM) Program that would include the following Project design conditions used to reduce emissions:

- Offering a carpool program to employees and preferred parking spaces (designated) for employees that self-select to carpool with other employees;
- Maintaining an employer network in the SANDAG iCommute program and promoting its RideMatcher service to its employees;
- Scripps Health's current Transportation Discount Benefit program provides a 30 percent discount for employees using public transportation, such as the bus, trolley or Coaster trains, and a \$30.00 per month discount for employees using van pools. The program benefits both employees and the environment by contributing to a work-life balance, as well as reducing greenhouse gas emissions. Participants can save even more money by purchasing transit passes or paying for monthly van pool lease costs on a pre-tax basis;
- Offering flexible and alternative work hours;
- Offering virtual doctor and urgent care visits, which allow doctors to work remotely and patients not needing to drive to appointments;
- Offering employees of Scripps Health "work at home" options via Telecommuting, Telemedicine, Clinical Documentation Integrity Specialist (CDIS), or other approved programs shifting up to five percent of the workforce to working remotely for one or more days per week; and
- Access to services that reduce the need to drive, such as cafes, commercial stores, banks, post offices, restaurants, gyms, and childcare, within 1,320 feet (1/4 mile) of the hospital campus.

Table 7 summarizes the modeled Project maximum daily emissions, with Project design features, associated with operation of the proposed Project. The emissions are based upon the conservative Project build-out year of 2030, with consideration of Project emission reductions that will occur when existing site buildings are demolished. The updated traffic study (LLG 2021) was used to determine the overall Project-related net changes in operational vehicle trips. The existing hospital building, the medical office building at 550 Washington Street and the Behavioral Health Clinic will be demolished, removing 6,993 average daily trips (ADT) from the CUP baseline. The new construction of Hospital I and II and MOB II will increase vehicle trips by 10,340 ADT and 22,750 ADT respectively. The Hospital I and II and MOB II will not be occupied until construction has been completed. Then existing buildings will be demolished. The overall net change in ADT due to the CUP Amendment Project will be 26,097 ADT. The area and energy-related emission reductions from demolished buildings were based upon similar assumptions as newly constructed buildings,

without any design features or mitigation applied. The emission reductions from demolition of Mercy Manor and the Generator Building have not been considered due to minimal changes in net operational emissions.

CalEEMod output files are included in Appendix A. As shown in Table 7, the Project maximum daily operational emissions would not exceed the SDAPCD thresholds for any of the pollutants, ROG, NO_x, CO, SO_x, PM₁₀ or PM_{2.5}.

3.5 Objectionable Odors

The proposed Project would involve the use of diesel-powered construction equipment. Diesel exhaust odors may be noticeable temporarily at adjacent properties; however, construction activities would be temporary and are not considered significant. The Project does not include industrial or agricultural uses that are typically associated with objectionable odors. Therefore, impacts associated with objectionable odors (significance threshold e) would be less than significant.

3.6 Local Carbon Monoxide Emissions and CO Hotspots

Carbon monoxide is a colorless, odorless, poisonous gas that may be found in high concentrations near areas of high traffic volumes. CO emissions are a function of vehicle idling time, meteorological conditions, and traffic flow. The SDAB is in attainment of state and federal CO standards. The El Cajon monitoring site is the closest station to the Project site that provides CO data. The maximum 8-hour CO level recorded in 2019 was 1.0 part per million (ppm). Concentrations are below 9 ppm, the state and federal 8-hour standard. The maximum 1-hour CO level recorded in 2019 was 1.3 ppm. Concentrations are below 20 ppm and 35 ppm, the state and federal 1-hour standards, respectively.

Although CO is not a regional air quality concern in SDAB, elevated CO levels can occur at or near intersections that experience severe traffic congestion. A localized air quality impact is considered significant if the additional CO emissions resulting from the project create a "hotspot" where the California 1-hour standard of 20.0 ppm or the 8-hour standard of 9 ppm is exceeded. This can occur at severely congested intersections during cold winter temperatures. Screening for elevated CO levels is recommended for severely congested intersections experiencing levels of service E or F with project traffic where a significant project traffic impact may occur. The potential for CO hotspots is based on the University of California Davis CO Protocol defined in the Transportation Project-Level Carbon Monoxide Protocol Revised December 1997 UCD-ITS-RR-97. Section 4.7 of the protocol provides specific criteria for performing a screening level CO review for projects within a CO attainment area. Specifically, project-related traffic that would worsen the LOS at intersections operating at LOS E or F, would be subject to a detailed evaluation. If not, no further review is necessary.

The Local Mobility Analysis (LMA) prepared for the Project (LLG 2020) indicated that there are locations where the Project adds traffic to intersections at LOS E or F, but design strategies are proposed to address these locations. These design strategies are anticipated to improve the flow of additional traffic at LOS E and F intersections. Since the Project-related traffic would not worsen the LOS at intersections operating at LOS E or F and improvements would be made to allow better traffic flow, the Project is anticipated to result in less-than-significant transportation impact. Receptors would not be exposed to additional pollutant concentrations (threshold d and f) related to CO hotspots. No further evaluation with respect to CO hotspots is required.

3.7 SIP/AQMP/RAQS Consistency

As noted, the RAQS relies on information from CARB and SANDAG, including projected growth in the county, mobile, area and all other source emissions to project future emissions and determine from that the strategies necessary for the reduction of stationary source emissions through regulatory controls. Projects that propose development that is consistent with the growth anticipated by the general plan is consistent with the SIP, AQMP and RAQS.

The Scripps Mercy Hospital CUP Amendment Project involves demolition of existing buildings and construction of new medical offices and hospital buildings at the Scripps Mercy Hospital Campus in the Uptown community of the City of San Diego. The Project site is located in the Medical Complex Neighborhood of the Uptown Community Plan and is designated Institutional, Community Commercial: 0-109 Du/Ac, and Open Space. The site is designated Institutional & Public and Semi-Public Facilities; Multiple Use; and Parks, Recreation, and Open Space in the San Diego General Plan.

Discretionary actions associated with the proposed Project include a Conditional Use Permit (CUP) Amendment to CUP No. 304755, a Site Development Permit (SDP) to amend existing SDP No. 531932, and a Planned Development Permit for demolition and construction on the Scripps Mercy Hospital Campus site. The project would also provide a right-of-way dedication in the form of a street easement along the east side of Sixth Avenue and vacation of remnant Public Services Easements.

The Project is consistent with the General Plan, which identifies the site as Institutional, Public, and Semi-Public Facilities; Park, Open Space, and Recreation; and Multiple Use. Additionally, the Project is consistent with the Uptown Community Plan, which designates the Project site for Institutional and Community Commercial uses.

The Project is zoned CC-3-8 and CC-3-9 (Commercial--Community zones), RM-3-9 (Multi Family Residential), as well as the OC-1-1 (Open Space--Conservation) and OR-1-1 (Open Space--Residential). Proposed redevelopment of the site would occur in the CC-3-8 and CC-3-9 zones, both of which allow hospitals with the application of a CUP. The Project does not propose any new development in the OC-1-1 and OR-1-1 zones. Thus, the Project would be consistent with the growth assumptions in the City's General Plan and would not conflict with the RAQS or SIP and significance threshold (threshold a - air quality plans) referenced above. As such, impacts related to this threshold would be less than significant.

4.0 HEALTH RISK ASSESSMENT

An HRA was performed for the health risk impacts from diesel exhaust due to construction activities at the site. This section provides the methodology used to complete the HRA, as well as health risk assessment results. Specifically, this section discusses the methodology for DPM emission quantification, air concentration estimation from air dispersion modeling, and health risk characterization. Emissions

of TACs due to operations at the newly constructed buildings are estimated to be much lower than the emissions due to construction activities; therefore, only the health risk from construction equipment diesel exhaust were analyzed.

4.1 HRA Objective and Significance Thresholds

The purpose of this analysis is to evaluate the excess lifetime cancer risks and the noncancer chronic and acute impacts that are attributable to the DPM emissions due to construction of the Project on off-site residents and sensitive receptors.

The City of San Diego *CEQA Significance Determination Thresholds* (SD City 2016), p.6, requires a project applicant to assess whether the project will expose sensitive receptors to substantial pollutant concentrations. Sensitive receptors are defined as long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences (such as medical patients in homes), schools, playgrounds, and childcare centers. While the City's thresholds guidance does not require all residences to be considered as sensitive receptors, this HRA includes residence locations near the Project site. Receptors were placed at 10 of the closest off-site residential locations (such as the Warwick apartments and the house on Bathhouse Row) and at 3 of the closest off-site sensitive receptor locations (Select Specialty Hospital, Florence Elementary School, and Green Beans Daycare Center). Figure 1 shows where the residential and sensitive receptors are located relative to the Project site. Off-site commercial and industrial receptors are not considered to be sensitive receptors, and therefore, were not included in the HRA.

The City's thresholds guidance does not provide significance thresholds to evaluate health risk impacts. However, SDAPCD Rule 1200(d) provides risk thresholds for new projects:

- An excess lifetime cancer risk level of more than 10 in one million; or
- A chronic hazard index (HI) greater than 1.0; or
- An acute HI greater than 1.0.

Non-criteria pollutants such as HAPs or TACs are also regulated by the SDAPCD. Rule 1200 (Toxic Air Contaminants - New Source Review) adopted on June 12, 1996, requires evaluation of potential health risks for any new, relocated, or modified emission unit which may increase emissions of one or more toxic air contaminants. The rule requires that projects that propose to increase cancer risk to between 1 and 10 in one million need to implement toxics best available control technology (T-BACT) or impose the most effective emission limitation, emission control device or control technique to reduce the cancer risk. At no time shall the project increase the incremental cancer risk to over 10 in one million or a health hazard index (chronic and acute HI) greater than one. Projects creating cancer risks less than one in one million are not required to implement T-BACT technology.

These risk thresholds were used as the significance thresholds to review health risk impacts from DPM emissions due to Project construction on off-site residences and sensitive receptor locations. Project construction activities in each component include such activities as site grading, building, and paving operations.

4.2 Methodology

This analysis evaluated cancer risk and chronic noncancer risk from DPM emissions. Acute noncancer risk due to DPM emissions was analyzed using speciated TACs found in diesel exhaust.

The HRA was performed to calculate the Project construction health risk impacts, consistent with the following guidance:

- SDAPCD's *Supplemental Guidelines for Submission of Rule 1200 Health Risk Assessments*;
- SDAPCD's *Supplemental Guidelines for Submission of Air Toxics "Hot Spots" Program Health Risk Assessments*; and
- OEHHA's *Air Toxics Hot Spots Program Risk Guidance Manual for Preparation of Health Risk Assessments Guidelines*.

4.3 DPM Emissions Quantification Methods

The DPM emission sources considered for the screening HRA include Project on-site diesel-fueled construction equipment. This equipment use will result in DPM emissions from diesel exhaust, as well as emissions of speciated TACs found in diesel exhaust.

Diesel exhaust, a complex mixture that includes hundreds of individual constituents, is identified by the State of California as a known carcinogen (Cal/EPA 1998). Under California regulatory guidelines, DPM is used as a surrogate measure of carcinogen exposure for the mixture of chemicals that make up diesel exhaust as a whole. Cal/EPA and other proponents of using the surrogate approach to quantifying excess lifetime cancer risks associated with the diesel mixture indicate that this method is preferable to use of a component-based approach because it provides a protective approach to estimating health risks. A component-based approach involves estimating risks for each of the individual components of a mixture. Furthermore, Cal/EPA has concluded that "potential cancer risk from inhalation exposure to whole diesel exhaust will exceed the multi-pathway cancer risk from the speciated components (OEHHA 2003)." The cancer and chronic analyses were based on the surrogate approach, using DPM as recommended by Cal/EPA. However, acute risk impact analysis used a speciated compound-based approach, as required by SDAPCD for HRAs completed for Rule 1200. Toxicity values for DPM and speciated compounds in diesel exhaust are presented in Appendix B.

Project emissions for construction equipment-related diesel usage were obtained from the CalEEMod modeling output files that were developed for the air impacts analysis presented in Section 3.0. For each year of each Project construction component, the annual and maximum daily emissions of PM₁₀ from equipment exhaust was obtained and used to calculate annual average diesel exhaust emissions and maximum hourly speciated TAC emissions in diesel exhaust. A summary of Project construction DPM emissions information obtained from CalEEMod is provided in Appendix B.

4.4 Air Concentration Estimation Methods

The HRA evaluated air concentrations of toxic air contaminant (TACs) to calculate excess lifetime cancer risk impacts and noncancer chronic and acute impacts. The methodologies used to obtain air concentrations were based on the most recent SDAPCD *Supplemental Guidelines for Rule 1200 HRAs* (SDAPCD 2019), the *Supplemental Guidelines for Submission of Air Toxics "Hot Spots" Program HRAs* (SDAPCD 2015), and the OEHHA HRA Guidelines (OEHHA 2015).

4.5 AERMOD Model Parameters

Air dispersion modeling was performed using Lakes AERMOD View Version 9.9.0 (v. 19191), with the parameters listed in Table 9 (USEPA 2019a).

One on-site area source representing the area where the demolition/construction activities will occur was modeled. Figure 2 shows the area source location on the Project site. AERMOD output files are included in Attachment C.

4.6 Health Risk Assessment Results

Cancer, chronic, and acute risks due to exposure to diesel exhaust emissions were calculated for the nearest resident and sensitive receptor for each modeling scenario/source. Exposure to diesel exhaust was assumed to occur 10 hours/day, 7 days/week, for the projected duration of the 25-year construction/demolition activities. For cancer risk calculations, the 25-year average construction DPM emission rate was further averaged into 30-years, and the duration of resident and sensitive receptor exposure was assumed to occur over a 30-year lifetime. For chronic risk calculations, average annual emissions over the 25-year construction period were used. For acute risk calculations, maximum hourly emissions were used, with acute risk results for the most impacted target organ reported. Cancer and noncancer risk results are presented in Table 10.

Risk Type	Receptor Type	Risk Results	Threshold	Exceed Threshold?
30-yr Cancer Risk	Resident	8.71E-05	1.0E-05	Yes
	Sens. Rec.	2.77E-05		Yes
Chronic Risk	Resident	0.09	1.0	No
	Sens. Rec.	0.03		No
Acute Risk	Resident	0.89	1.0	No
	Sens. Rec.	0.70		No

As shown in Table 10, the noncancer chronic and acute risks due to construction of the Project are below the SDAPCD CEQA thresholds. The cancer risk exceeds the SDAPCD CEQA thresholds, which is a significant impact. Construction Mitigation Measure 1, which helps to reduce cancer risk impacts from DPM, would be incorporated into the Project. Sections 4.6.1 – 4.6.2 address this proposed mitigation measure. Health risk calculations are included in Appendix B.

4.6.1 Construction Mitigation Measure to Reduce Cancer Risk from DPM

To reduce DPM emissions associated with Project construction to below a level of significance, the Project will meet Mitigation Measure 1, defined below.

Mitigation Measure 1: Diesel Exhaust Emissions Reduction. During construction activities, efforts shall be made to reduce diesel exhaust emissions from all construction equipment greater than 100 hp with use of Tier 4 Interim or better equipment, including equipment with an installed diesel particulate filter (DPF), where feasible, and by use of other emission reduction practices. Construction equipment that is certified less than Tier 4 Interim may only be used if unavailable from vendors, in which case equipment with DPFs installed shall be used whenever possible. Additionally, measures shall be employed to reduce DPM emissions, that may include, but would not be limited to, reduction in the number and/or horsepower rating of construction equipment, limiting the number of daily construction haul truck trips to and from the proposed Project using cleaner vehicle fuel, and/or limiting the number of individual construction Project components occurring simultaneously. These measures would be used to ensure that health risk impacts from construction do not exceed significance levels.

4.6.2 Adjustment to Average Annual DPM Construction Emissions

CalEEMod runs for the construction components were completed initially without the consideration of Mitigation Measure 1. The calculations for reduction in cancer risk impacts due to the expected extended schedule of construction to 2038 also did not consider Mitigation Measure 1. Therefore, an adjustment to the average annual DPM emissions from all 16 years of construction, spread out over a 30-year lifetime, was made in the emissions calculation tables shown in Appendix B. This adjustment was

made assuming that all construction off-road equipment will meet Tier 4 Interim standards or equivalent with DPFs installed as feasible. As needed to reduce impacts below the 10 in one million significance level, a DPM emission reduction of about 89% with Tier 4 Interim equipment and use of DPFs and other emission reduction practices was assumed from this mitigation measure.

Table 11 shows the cancer risk calculated for the nearest resident and sensitive receptor with Tier 4 Interim equipment and use of DPFs and other reduction measures included.

Risk Type	Receptor Type	Risk Results	Threshold	Exceed Threshold?
30-yr Cancer Risk	Resident	9.58E-06	1.0E-05	No
	Sens. Rec.	3.05E-06		No

The residential receptor in Table 11 is located at the Warwick apartment building, which is directly adjacent to the Project site. All other residential locations have significantly lower cancer risk than the maximally impacted residential receptor listed in Table 11.

The sensitive receptor in Table 11 is located at the Select Specialty Hospital, which is directly across Washington Street from the Project site. The two other sensitive receptor locations analyzed had significantly lower cancer risk than the maximally impacted sensitive receptor listed in Table 11.

With construction Mitigation Measure 1 incorporated, the cancer risk impacts are below the SDAPCD CEQA threshold, so no significant impact is expected. It is important to note that following local SCAPCD and OEHHA guidelines (listed in Section 4.2) for HRAs, BlueScape used conservative assumptions that overstate actual risks to off-site residents and sensitive receptors by a wide margin. The Residential Combined Exposure Factor (CEF) was calculated to consider the most sensitive residents with higher breathing rates and age specific factors (ages 0 through 2) over a 2-year period. The Sensitive Receptor location is at the Select Specialty Hospital, where patients would only be staying for a few days to a few weeks, and not for the 30-year time period considered for the cancer risk calculations.

5.0 CONCLUSIONS

The air quality impact analysis of construction due to the Project demonstrates that short-term emissions from construction of the Project will not exceed the SDAPCD air quality thresholds. Therefore, emissions from Project construction will be below the CEQA levels of significance.

Emissions of all criteria pollutants from Project operation are below all applicable daily and annual screening thresholds of significance. No CO hot spots analysis is required and as such, no CO hot spots will be created as a result of Project operation.

Potential noncancer chronic and acute risks due to Project construction related diesel exhaust emissions are not significant. Potential cancer risks for the nearest resident and sensitive receptor to diesel exhaust emissions due to Project construction activities would be reduced to below a level of significance, with Mitigation Measure 1 incorporated.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	2.40	1000sqft	0.54	2,400.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	13			Operational Year	2030
Utility Company	San Diego Gas & Electric				
CO2 Intensity (lb/MWhr)	720.49	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Scripps Mercy CEP Expansion - San Diego Air Basin, Annual

Project Characteristics -

Land Use - Two Utility Yards (23,000 sq ft) area included in total lot area.

Construction Phase - The central energy plant expansion may occur between Aug 2021 and Mar 2023, but all construction activity was assumed over the year 2022, using the default number of days for this land use type and size.

Off-road Equipment -

Off-road Equipment - Default equipment was used for the construction of the CEP.

Architectural Coating -

Vehicle Trips -

Area Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation - Use low VOC cleaning supplies and electric landscaping.

Energy Mitigation - Implement the same 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - Consistent with 25% reduction in waste for health care facility

1.3 User Entered Comments & Non-Default Data

Scripps Mercy CEP Expansion - San Diego Air Basin, Summer

Project Characteristics -

Land Use - Two Utility Yards (23,000 sq ft) area included in total lot area.

Construction Phase - The central energy plant expansion may occur between Aug 2021 and Mar 2023, but all construction activity was assumed over the year 2022, using the default number of days for this land use type and size.

Off-road Equipment -

Off-road Equipment - Default equipment was used for the construction of the CEP.

Architectural Coating -

Vehicle Trips -

Area Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation - Use low VOC cleaning supplies and electric landscaping.

Energy Mitigation - Implement the same 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - Consistent with 25% reduction in waste for health care facility

1.3 User Entered Comments & Non-Default Data

Scripps Mercy CEP Expansion - San Diego Air Basin, Winter

Project Characteristics -

Land Use - Two Utility Yards (23,000 sq ft) area included in total lot area.

Construction Phase - The central energy plant expansion may occur between Aug 2021 and Mar 2023, but all construction activity was assumed over the year 2022, using the default number of days for this land use type and size.

Off-road Equipment -

Off-road Equipment - Default equipment was used for the construction of the CEP.

Architectural Coating -

Vehicle Trips -

Area Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation - Use low VOC cleaning supplies and electric landscaping.

Energy Mitigation - Implement the same 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - Consistent with 25% reduction in waste for health care facility

Project Characteristics -

Land Use - Lot acreage defined as ED Bldg sqft

Construction Phase - ED Demo project from Dec 2029 through Sept 2030, as shown in the phasing schedule

Off-road Equipment - Demolition equipment as defined by the project.

Demolition -

Trips and VMT - Default trips and VMT

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Commercial	0.00	User Defined Unit	0.32	0.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	13			Operational Year	2031
Utility Company	San Diego Gas & Electric				
CO2 Intensity (lb/MWhr)	720.49	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage defined as ED Bldg sqft

Construction Phase - ED Demo project from Dec 2029 through Sept 2030, as shown in the phasing schedule

Off-road Equipment - Demolition equipment as defined by the project.

Demolition -

Trips and VMT - Default trips and VMT

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Scripps Mercy Demo of Emerg Dept Ambulance - San Diego Air Basin, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage defined as ED Bldg sqft

Construction Phase - ED Demo project from Dec 2029 through Sept 2030, as shown in the phasing schedule

Off-road Equipment - Demolition equipment as defined by the project.

Demolition -

Trips and VMT - Default trips and VMT

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

1.3 User Entered Comments & Non-Default Data

Scripps Mercy Building Demolition - San Diego Air Basin, Annual

Project Characteristics -

Land Use - Land use is required, but this model run is to calculate construction emissions from demolition. Lot acreage is based on total sqft being demo'd.

Construction Phase - Demolition will include Facility Bldg, Gen/CT Bldg, BHC/Hosp Bldg, 550 WA Bldg and Parking, Mercy Manor/Parking 4.1

Off-road Equipment - Equipment based on 550 Demo equipment list.

Off-road Equipment - Equipment based on BHU Demo equipment list.

Demolition - Total sqft of Fac Bldg, Gen Bldg/CT, BHC Bldg, Hospital Bldg, 550 WA Bldg, 550 Parking, Mercy Manor, Parking 4.1 (divided evenly between the two demo projects)

Trips and VMT - Total vendor trips adjusted to allow 3 watering trucks per day for each location. Total hauling trips adjusted to allow C&D waste to be exported from facility.

Area Coating -

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation -

Energy Mitigation -

1.3 User Entered Comments & Non-Default Data

Scripps Mercy Building Demolition - San Diego Air Basin, Summer

Project Characteristics -

Land Use - Land use is required, but this model run is to calculate construction emissions from demolition. Lot acreage is based on total sqft being demo'd.

Construction Phase - Demolition will include Facility Bldg, Gen/CT Bldg, BHC/Hosp Bldg, 550 WA Bldg and Parking, Mercy Manor/Parking 4.1

Off-road Equipment - Equipment based on 550 Demo equipment list.

Off-road Equipment - Equipment based on BHU Demo equipment list.

Demolition - Total sqft of Fac Bldg, Gen Bldg/CT, BHC Bldg, Hospital Bldg, 550 WA Bldg, 550 Parking, Mercy Manor, Parking 4.1 (divided evenly between the two demo projects)

Trips and VMT - Total vendor trips adjusted to allow 3 watering trucks per day for each location. Total hauling trips adjusted to allow C&D waste to be exported from facility.

Area Coating -

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation -

Energy Mitigation -

1.3 User Entered Comments & Non-Default Data

Scripps Mercy Building Demolition - San Diego Air Basin, Winter

Project Characteristics -

Land Use - Land use is required, but this model run is to calculate construction emissions from demolition. Lot acreage is based on total sqft being demo'd.

Construction Phase - Demolition will include Facility Bldg, Gen/CT Bldg, BHC/Hosp Bldg, 550 WA Bldg and Parking, Mercy Manor/Parking 4.1

Off-road Equipment - Equipment based on 550 Demo equipment list.

Off-road Equipment - Equipment based on BHU Demo equipment list.

Demolition - Total sqft of Fac Bldg, Gen Bldg/CT, BHC Bldg, Hospital Bldg, 550 WA Bldg, 550 Parking, Mercy Manor, Parking 4.1 (divided evenly between the two demo projects)

Trips and VMT - Total vendor trips adjusted to allow 3 watering trucks per day for each location. Total hauling trips adjusted to allow C&D waste to be exported from facility.

Area Coating -

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp. Watering 3x per day.

Area Mitigation -

Energy Mitigation -

1.3 User Entered Comments & Non-Default Data

Scripps Mercy Hospital I and II - San Diego Air Basin, Annual

Project Characteristics -

Land Use - Lot acreage adjusted to match 630,000 sqft for Hospital I and 380,000 sq ft for Hospital II.

Construction Phase - Construction will occur from 6/24/2024 through 2/28/2028, based on the phasing figure for Hospital I and II

Off-road Equipment - Coating equipment based on default with adjusted hours.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Site prep equipment based on default.

Trips and VMT -

Grading -

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/bed (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation - Use low VOC cleaning supplies and 3% electric landscaping

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Scripps Mercy Hospital I and II - San Diego Air Basin, Summer

Project Characteristics -

Land Use - Lot acreage adjusted to match 630,000 sqft for Hospital I and 380,000 sq ft for Hospital II.

Construction Phase - Construction will occur from 6/24/2024 through 2/28/2028, based on the phasing figure for Hospital I and II

Off-road Equipment - Coating equipment based on default with adjusted hours.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Site prep equipment based on default.

Trips and VMT -

Grading -

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/bed (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation - Use low VOC cleaning supplies and 3% electric landscaping

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Scripps Mercy Hospital I and II - San Diego Air Basin, Winter

Project Characteristics -

Land Use - Lot acreage adjusted to match 630,000 sqft for Hospital I and 380,000 sq ft for Hospital II.

Construction Phase - Construction will occur from 6/24/2024 through 2/28/2028, based on the phasing figure for Hospital I and II

Off-road Equipment - Coating equipment based on default with adjusted hours.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Site prep equipment based on default.

Trips and VMT -

Grading -

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/bed (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation - Use low VOC cleaning supplies and 3% electric landscaping

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Scripps Mercy HSB Construction - San Diego Air Basin, Annual

Project Characteristics -

Land Use -

Construction Phase - Construction will occur from 7/24/2024 through 7/27/2027, based on the phasing figure for HSB.

Off-road Equipment - Coating equipment based on equipment list.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Excavation phase equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment based on default equipment mix.

Off-road Equipment - Site Prep equipment based on equipment list.

Trips and VMT - Soil export trips associated with hauling may occur during grading or excavation phase.

Grading - Total acreage to be prepped and graded.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation -

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

CO2 Intensity (lb/MWhr)	720.49	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Scripps Mercy HSB Construction - San Diego Air Basin, Summer

Project Characteristics -

Land Use -

Construction Phase - Construction will occur from 7/24/2024 through 7/27/2027, based on the phasing figure for HSB.

Off-road Equipment - Coating equipment based on equipment list.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Excavation phase equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment based on default equipment mix.

Off-road Equipment - Site Prep equipment based on equipment list.

Trips and VMT - Soil export trips associated with hauling may occur during grading or excavation phase.

Grading - Total acreage to be prepped and graded.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation -

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Scripps Mercy HSB Construction - San Diego Air Basin, Winter

Project Characteristics -

Land Use -

Construction Phase - Construction will occur from 7/24/2024 through 7/27/2027, based on the phasing figure for HSB.

Off-road Equipment - Coating equipment based on equipment list.

Off-road Equipment - Construction equipment based on equipment list.

Off-road Equipment - Excavation phase equipment based on equipment list.

Off-road Equipment - Grading equipment based on equipment list.

Off-road Equipment - Paving equipment based on default equipment mix.

Off-road Equipment - Site Prep equipment based on equipment list.

Trips and VMT - Soil export trips associated with hauling may occur during grading or excavation phase.

Grading - Total acreage to be prepped and graded.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Trip rate from TIA, Dec 2020 shown as 20/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Area Mitigation -

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

1.3 User Entered Comments & Non-Default Data

Scripps Mercy MOB II - San Diego Air Basin, Annual

Project Characteristics -

Land Use -

Construction Phase - Phases adjusted for activity to begin April 2023 and end in Dec 2024.

Off-road Equipment - Architectural coating equipment as default.

Off-road Equipment - Building construction equipment based on MOB equipment list and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Trips and VMT - Haul trips for soil export split between grading and excavation phases, based on number of day in sub-phase.

Grading - Material export is conservatively assumed to be 87.5% of overall project material export (cy). Total acres graded same as building area.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Driveway trip rate from TIA, Dec 2020 shown as 50/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation - Use of low VOC cleaning supplies and 3% electric landscaping.

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

1.3 User Entered Comments & Non-Default Data

Scripps Mercy MOB II - San Diego Air Basin, Summer

Project Characteristics -

Land Use -

Construction Phase - Phases adjusted for activity to begin April 2023 and end in Dec 2024.

Off-road Equipment - Architectural coating equipment as default.

Off-road Equipment - Building construction equipment based on MOB equipment list and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Trips and VMT - Haul trips for soil export split between grading and excavation phases, based on number of day in sub-phase.

Grading - Material export is conservatively assumed to be 87.5% of overall project material export (cy). Total acres graded same as building area.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Driveway trip rate from TIA, Dec 2020 shown as 50/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation - Use of low VOC cleaning supplies and 3% electric landscaping.

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

1.3 User Entered Comments & Non-Default Data

Scripps Mercy MOB II - San Diego Air Basin, Winter

Project Characteristics -

Land Use -

Construction Phase - Phases adjusted for activity to begin April 2023 and end in Dec 2024.

Off-road Equipment - Architectural coating equipment as default.

Off-road Equipment - Building construction equipment based on MOB equipment list and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Off-road Equipment - Paving equipment as default.

Off-road Equipment - Equipment based on equipment list for MOB and adjusted for MOB II.

Trips and VMT - Haul trips for soil export split between grading and excavation phases, based on number of day in sub-phase.

Grading - Material export is conservatively assumed to be 87.5% of overall project material export (cy). Total acres graded same as building area.

Architectural Coating - SDAPCD Rule 60.0.1. Architectural Coatings: 50 g/L VOC will be applied for interior and exterior paint. Traffic markings paints are listed as 100 g/L VOC.

Vehicle Trips - Driveway trip rate from TIA, Dec 2020 shown as 50/ksf (applied for week days). Weekend trips remain as default.

Area Coating - SDAPCD Rule 67.0.1 Architectural Coatings for reapplication: 50 g/L interior and exterior, with 100 g/L for parking lot paints

Construction Off-road Equipment Mitigation - Tier 4 engines will be implemented for clean fleet construction equipment, over 200 hp.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation - Use of low VOC cleaning supplies and 3% electric landscaping.

Energy Mitigation - 20% improvement for health care facilities assumed for the new 2022 Building Standards for health care facilities. 20% lighting energy reduction for non-residential per 2022 Stds.

Waste Mitigation - 25% reduction in waste for health care facility

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Hospital	467.00	Bed	2.67	507,580.00	0
Hospital	50.00	Bed	0.62	64,341.00	0
Medical Office Building	73.45	1000sqft	0.57	73,448.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	13			Operational Year	2030
Utility Company	San Diego Gas & Electric				
CO2 Intensity (lb/MWhr)	720.49	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Scripps Mercy Existing Hospital Operations - San Diego Air Basin, Summer

Project Characteristics -

Land Use - Lot acreage estimated using GoogleEarth. Existing Hospital, 550 Washington St. MOB, and Behavioral Health Clinic.

Construction Phase -

Off-road Equipment -

Trips and VMT -

Grading -

Architectural Coating -

Vehicle Trips - Net trip rate from TIA, Dec 2020 (updated June 2021) 3320 trips for Hospital/BHC; 3673 trips for 550 Washington MOB (applied for weekdays). Weekend trips remain as default.

Diesel Exhaust - Health Risk Toxicity Values

January 28, 2022

Reference: Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values, Updated October 2, 2020

Pollutant	Cancer Potency Factor (mg/kg-day)⁻¹	Chronic Risk REL (µg/m³)	Acute Risk REL (µg/m³)
Diesel Particulate Matter	1.10E+00	5.00E+00	--
Arsenic	--	--	2.00E-01
Copper	--	--	1.00E+02
Mercury	--	--	6.00E-01
Nickel	--	--	2.00E-01
1,3-Butadiene	--	--	6.60E+02
Acetaldehyde	--	--	4.70E+02
Acrolein	--	--	**
Benzene	--	--	2.70E+01
Formaldehyde	--	--	5.50E+01
Hydrochloric acid	--	--	2.10E+03
Toluene	--	--	5.00E+03
Xylenes (mixed)	--	--	2.20E+04

**ARB Policy is to exclude acrolein from risk management decisions, based upon Method 430 source test emission factors.

Scripps Mercy Hospital CUP Amendment Project

4077 Fifth Ave., San Diego, CA
 CalEEMod Phase Emissions of Exhaust PM₁₀ (DPM)
 January 28, 2022

Reference: CalEEMod Annual and Daily Output (Construction) - Scripps Mercy Hospital (2/20/21, 3/1/21, 8/2/21, and MOB II Remodeling 1/28/22)

Source ID	Source Description	Cancer Risk Modeling				Chronic Risk Modeling			Acute Modeling		
		Cancer Risk Averaging Period (Years)	Avg. Annual Mitigated Exhaust PM ₁₀ Emissions over Avg. Period (tpy)	Avg. Annual Exhaust PM ₁₀ Emissions (w/out DPFs) (g/sec)	Avg. Annual Exhaust PM ₁₀ Emissions (with DPFs) (g/sec)	Construction Phase Length (Years)	Avg. Annual Mitigated Exhaust PM ₁₀ Emissions (tpy)	Avg. Annual Exhaust PM ₁₀ Emissions (g/sec)	Max. Daily Exhaust PM ₁₀ Year	Max. Daily Mitigated Exhaust PM ₁₀ Emissions (lb/day)	Max. Hourly Mitigated Exhaust PM ₁₀ Emissions (g/sec)
SM_CONST	Scripps Mercy Construction Area	30	0.0789	0.00227	0.00025	9.083	0.318	0.00916	2024	8.829	0.1112

Diesel Particulate Filter (DPF) Control Efficiency:

89%

Diesel Particulate Filters (DPFs) installed on all diesel-fueled construction equipment. 89% control efficiency assumed (Ref. <https://www.epa.gov/sites/production/files/2016-03/documents/420f10029.pdf>)
 6/9/21 Update: Construction components schedule was updated by the client on 6/7/21 from the original 8-yr period (2022 - 2030) to a 25-yr period (2022 - 2047). Calculations using OFFROAD2017 DPM emission factors and the new extended schedule reduce total project DPM emissions from 2.89 tons to 2.04 tons.
 1/28/22 Update: Remodeled MOB II only due to project update received 1/20/22. Total Exhaust PM₁₀ = 2.91 tons/project. The new construction schedule (2022 - 2038) now covers a 16-yr period instead of a 25-yr period. See equation below used to Interpolate from the projected DPM emissions for a 25-yr construction timeline (6/9/21 update, above) to the new 16-yr timeline:

$$\text{New 16-yr DPM emissions} = 2.91 \text{ tons/project} - \{[(2.89 \text{ tons/project} - 2.04 \text{ tons/project})/25 \text{ years}] * 16 \text{ years}\}$$

$$= 2.366 \text{ tons/project}$$

Acute Modeling - Speciated Emissions

Component of Diesel Exhaust	Diesel Default TAC Concentration for Acute Risk* (lb/1000gal)	Diesel TAC Acute Ratio (g TAC/g Diesel Exhaust)	Source Emissions (g/sec)

		Cancer Risk Threshold	1.0E-05
		Exceed Threshold?	YES
MICR (Sensitive Receptor)	MICR	unitless	2.77E-05
		Exceed Threshold?	NO

Chronic Risk Due to DPM in the Construction Area

Chronic Hazard Index Calculation

$$HIC = Q_{199} \times X/Q \times MP \times MWAF / REL$$

Abbreviation	Units	DPM
Maximum Annual TAC Emission Rate	Q ₁₉₉	g/sec
Multipathway Factor - Resident	MP _R	unitless
Molecular Weight Adjustment Factor	MWAF	unitless
Chronic REL	REL	µg/m ³
Chronic Risk (Resident)	MICR	unitless
		Chronic Risk Threshold
		Exceed Threshold?
Chronic Risk (Sensitive Receptor)	MICR	unitless
		Exceed Threshold?

Combined Exposure Factor (CEF) Calculations (for Cancer Risk):

Inputs	Abbreviation	Units	Resident
Combined Exposure Factor	CEF	Unitless	677.40
Cancer Risk Equation Conversion Factor	--	(mg/µg) x (m ³ /l)	0.000001

Equation:

$$CEF_R = DBR \times ASF \times ED \times FAH \times EF/AT$$

Resident/Sensitive Receptor CEF for 9 Years

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency	Averaging Time (years)	Exposure Factor	CEF _R
-0.25 to 0	361	10	0.25	1	0.96	70	12.38	677.4
0 to 2	1090	10	2	1	0.96	70	298.97	
2 to 16	572	3	14	1	0.96	70	329.47	
16 to 30	261	1	14	0.73	0.96	70	36.58	

Reference: SCAQMD Risk Assessment Procedures for Rules 1401, 1401.1 and 212, Version 8.1, Sept. 1, 2017 for CEF calculation methodology.
