This Information Bulletin describes the minimum requirements for obtaining patio cover permits for residential buildings using this information bulletin, International Code Council Evaluation Services (ICC-ES) reports, or designed using conventional light-frame wood construction. For clarification of the permit process, visit the Development Services Department, third floor, 1222 First Avenue, or telephone (619) 446-5000.

I. DEFINITION

A. Patio covers are one-story structures not more than 12 feet in height above grade and used only for recreational, outdoor living purposes and not as carports, garages, storage rooms or habitable rooms.

B. Patio covers may be attached or detached and are permitted only as accessory to dwelling units such as one-or two-family dwellings or lodging houses or to individual dwelling units in multiple dwelling-unit buildings.

C. Patio covers must be open on one or more sides. (CBC Appendix I section 102 and 103).

1. Patio structures may extend over existing exterior wall openings.
2. Patio covers shall not be enclosed in any manner and shall remain open when exterior openings in an existing building provide access for emergency egress or rescue from sleeping rooms.
3. An enclosed patio structure is permitted if it covers exterior wall openings that only provide light and ventilation for the residents.
4. Openings surrounding patio covers may be enclosed by the following methods: (a) insect screening, (b) approved translucent or transparent plastic not more than 0.125 inches in thickness, (c) glass conforming to the provisions of Chapter 24, or (d) any combination of the noted methods.

5. Means of egress conforming to the requirements of Chapter 10 are to be provided from the enclosed patio structure.

6. Enclosure walls must have a clear height of not less than 6'-8" measured from the floor to the sofit of the supporting members.

7. Enclosure walls may have any configuration, provided the open or glazed area of the longer wall and one additional wall is equal to at least 65 percent of the area below a minimum of 6 feet 8 inches (2032 mm) of each wall, measured from the floor.

II. WHEN IS A PERMIT REQUIRED?

Patio cover structures that do not exceed 300 square feet of projected roof area may be exempt from a building permit in single family residential zones. Although such patio covers may still be exempt from building permit, they are not exempt from electrical, plumbing, mechanical permit requirements and other building regulations (SDMC 129.0203(a)). Building permits for any new patio cover or repair or enclosure of an existing patio cover will be required if any of the following conditions occur:

1. The patio structure is located on a site that contains environmental sensitive lands.
2. The patio structure encroaches into any required side yards or established setbacks.
3. The property is located in the Coastal Zone or any site regulated by a Planned Residential Development (PRD) permit or Planned Infill Residential Development Documents Referenced in this Information Bulletin

- California Residential Code, (CRC)
- San Diego Municipal Code, (SDMC)
- Project Submittal Manual
- Information Bulletin 117, Regulations Covering Permit Expiration and Extension
- Information Bulletin 123, Minimum Standards for Renewal of Roof Covering
- Information Bulletin 501, Fee Schedule, Construction Permits - Structures
- General Application, DS-3032
(PIRD) permit.

Please telephone (619) 446-5000 to verify if the proposed location is in one of these areas.

A final inspection must be approved before the work is considered complete by the City of San Diego.

III. YOUR OPTIONS FOR SERVICE

Patio Cover permits may be obtained over-the-counter when using this information bulletin, ICC-ES evaluation reports or designed using conventional light-frame wood construction. All other projects shall be submitted for review. Refer to the Project Submittal Manual section 2A.

Appointments are recommended for over-the-counter plan review and submitted projects. Telephone (619) 446-5300 to schedule an appointment.

IV. PROJECT FEES

Fees which include Plan Check, Permit and Inspection are charged at initial review. For more information, refer to Information Bulletin #501.

V. DRAWINGS TO PROVIDE/FORMS TO COMPLETE

Plans must be drawn to scale and must be of sufficient clarity to indicate the location, nature, and extent of the work proposed. Be sure to clearly label all existing and proposed construction.

Plans must show, in detail that the proposed work will conform to the provisions of the 2007 California Building Code, Zoning Ordinances, and all other relevant laws, ordinances, rules, and regulations. Zoning information is available at the Development Service Department, 1222 First Avenue, 3rd Floor or call (619) 446-5000.

Three sets of plans are required and must include:

A. Site Plan

Before drawing the site plan, contact the Development Services Department at (619) 446-5000 for additional requirements regarding yard setbacks, Very High Fire Hazard Severity Zone, City of San Diego Brush Management Zones, and other requirements

Three copies of a site plan are required for a permit. You must include information on each of the following items on the plot plan:

1. Name of owner.
2. Address and Accessor’s Parcel Number where the patio is to be built.
3. Legal description of property.
4. North arrow and scale. Suggested scale: 1 inch equals 20 feet.
5. Boundaries and dimensions of property.*
6. Names of bordering streets.*
7. Width of alley(s), if any.*
9. Location and width of easements. Private easements should be shown on the property’s deed.*
10. Location and dimensions of existing buildings, structures, retaining walls, paved parking, and driveways. Include distance from property lines.
11. Location and dimensions of proposed patio.
12. Existing survey hubs, pipes and similar permanently installed property line identification.

*This information is available from the Records Section, (619) 446-5200.

B. Foundation and Framing Plans

Provide three copies if this information bulletin or (ICC-ES) evaluation reports approved plan available from your material supplier is used for the patio design.

If plans have to be submitted because of customized design of the patio, provide three copies of plan documents. These plans should include a roof framing plan, foundation plan, elevations, cross-sections, connection details, and structural calculations.

C. Floor Plan

For patio covers within 6'-0” of a dwelling, include a floor plan and show the following information:

1. Use and dimensions of all rooms adjacent to the patio cover.
2. Size and type of all windows and doors from those rooms.

D. Permit Application

All projects must be submitted with a Permit Application. Instructions can be found on the reverse side of the application. If you intend to obtain your permit on the same day as plan review, the application must be fully completed.
Note: there are no exceptions to the Workers Compensation Insurance requirements. If the property owner is doing the construction work or is hiring a number of different contractors, a separate Owner-Builder Verification form must be signed by the owner before the permit can be issued.

VI. ADDITIONAL REGULATIONS

A. This information bulletin recommends that all patio structures be located at least 5 feet from assumed or real property lines.

Additional requirements of the building code related to fire separation distance, opening protection and parapet requirements may need to be addressed, based on the distance of the patio structure from real or assumed property lines. Such requirements include limitations on new and existing exterior wall openings of 25% of the wall area, fire protection ratings of supports and walls. Refer to CBC Tables 602 and 704.8.

B. No fire protection is required for the common wall between the dwelling unit and patio cover as they fall under the same occupancy classification.

C. When existing wall openings are required for light and/or ventilation within the dwelling unit itself and they open into a patio cover, the minimum ceiling height of the patio structure shall be 7'-0" measured from the floor surface to the underside of the rafters. When no required openings exist in the common wall, the minimum required height for the patio cover may be 6'-8". (CBC Appendix I section 102).

D. All electrical wiring and equipment must comply with regulations for exterior installation.

E. Patio covers may be located within a required side yard or rear yard, subject to the following requirements: (SDMC 131.0461 (a)(8)).
   1. The patio structure shall not be located closer than 5 feet to any property line;
   2. The patio shall be open on at least three sides except for support columns with maximum dimensions of 18 inches by 18 inches in plan view;
   3. The support columns shall have a minimum separation of 8 feet measured on center;
   4. The height of the roof of the patio shall not exceed the roof eave or the sill plate of the second floor, whichever is lower.

F. Patio covers located in the environmental sensitive lands and brush management zones must comply with sections 143.0101 and 142.0412 of the SDMC.

G. Structures located in a Very High Fire Hazard Severity Zone or Brush Management Zones, governed by the City of San Diego’s Brush Management Ordinance, may need to meet additional fire protection requirements.

VII. CONSTRUCTION SPECIFICATIONS

Following are the minimum construction specifications for patio covers.

A. The concrete mix for footings must meet a compressive strength of \( f'c = 2,500 \) psi minimum.

B. Lumber must be Douglas fir-larch No. 2 or better. All lumber must be grade-marked. Joists, girders, and posts may be required to be protected against decay and termites. (CBC Section 2304.11).

C. Post size is based on the height of the floor above the slab (at the highest point):
   0 to 8 feet high: 4x4 minimum,
   8 to 10 feet high: 6x6 minimum

D. The post anchorage and bracing details shown on the following sheets have been approved by the City of San Diego for unenclosed patio covers.
   1. Posts must be anchored at the lower end and must be braced at the upper end using any of the details shown in Figure 3. Decorative-type bracing may be substituted if the same resistance to lateral loading is provided.
   2. Post anchorage to slabs may be accomplished with a standard approved post base installed per the manufacturer's installation instructions. The footing must be adequate for the load applied. See Section IX below and Table A. When the load on supporting post does not exceed 750 pounds per posts, a minimum 3 1/2-inch-thick concrete slab-on-grade may be substituted for the pad footings shown on the typical framing details. (CBC Appendix I104.2).
E. When it is desired to connect and support one side of the patio cover structure by attaching it directly to the dwelling unit, the rafter spacing and beam sizes may be as shown in Tables B and C. However, the main beam may be replaced on the side attached to the dwelling unit with a ledger the same size as the rafters and fastened to the studs with 3/8" x 5" lag screws spaced at 16" maximum on center. See Figure 7 and 8. Patio rafters may not be solely supported by the existing rafter tails or fascia of the house.

The size of the existing headers at openings adjoining the proposed patio covers may need to be verified based on the configuration of an existing building and the depth of the patio cover.

F. Specify roof covering when submitting plans. If nominal one-half-inch-thick roof sheathing is used, the roof may have rafters spaced not more than 24" on center. Patio covers constructed of light-transmitting plastics shall comply with Sections 2606 and 2609 of the California Building Code and to the manufacturer's installation instructions. The corrugations must be placed perpendicular to and across the supports. Roof systems shall be sloped 1/4 inch in 12 inches for drainage.

G. Framing hardware and fasteners shall be hot-dipped galvanized or stainless steel if in preservative-treated wood. (CBC 2304.9.5).

VIII. INSPECTIONS
An Inspection Record Card is issued at the time the permit is obtained. The inspector signs this card as the construction is inspected and approved. The approved plans, the Inspection Record Card, and the permit are important records and should be retained.

A combination permit is active for 180 days. Each inspection scheduled and passed extends the permit 180 days. Permits approaching expiration can be extended under special circumstances. Refer to Information Bulletin 117, Regulation Covering Permit Expiration and Extension, for more information.

Inspections are required at the following times:

A. When footing has been excavated but before concrete is placed,
