SUBJECT: UNDERGROUNDING UTILITY DISTRICT PROJECT RESIDENTIAL BLOCK 2BB PACIFIC BEACH (CROWN POINT): CITY COUNCIL APPROVAL to prioritize and construct the undergrounding district. The district would also create an overlay that would restrict utility companies from installing above-ground utility lines in the future. SDG&E will be constructing an underground utility system per the franchise agreement in the public right-of-way. The project proposes approximately 19,326 linear feet of trenching of approximately 5 feet deep and 2.5 feet wide along one side of each public right-of-way, installing conduit and substructures such as transformers on concrete pads, installing cable through the conduits, providing individual customer connections, backfilling, removing the existing overhead utility lines and poles, and installing new streetlights where applicable. Curb ramps will be installed where missing. If applicable, street trees will be installed and streets will be resurfaced. Utility poles may need to be installed or upgraded at the boundary of the district where determined necessary for the transition from the existing aerial system to the new underground system. Locations will be determined during final design. The Project is located within Crown Point from Riviera Drive to Crown Point Road, and Moorland Drive to the bay in the Pacific Beach Community Planning Area. The underground utility district is not included on any Government Code listing of hazardous waste sites. Construction of this project will be coordinated with the Public Utilities Department (PUD) Sewer and Water Group Job Crown Point (Project No. 403253) in the same area in order to follow the City’s “One Dig” approach to minimize neighborhood disturbance, adherer to the Street Preservation Ordinance, and reduce costs. In addition, this project is subject to the summer beaches moratorium.

Applicant: City of San Diego, Transportation and Storm Water Department, Right of Way Coordination Division

I. PROJECT DESCRIPTION: See attached Initial Study.

II. ENVIRONMENTAL SETTING: See attached Initial Study.

III. DETERMINATION:

The City of San Diego conducted an Initial Study which determined that the proposed projects could have a significant environmental effect in the following areas(s): HISTORICAL RESOURCES (ARCHAEOLOGY). The project proposal requires the implementation of specific mitigation identified in Section V of this Mitigated Negative Declaration (MND). The project as presented avoids or mitigates the potentially significant environmental effects identified, and the preparation of an Environmental Impact Report (EIR) would not be required.
IV. DOCUMENTATION:

The attached Initial Study documents the reasons to support the above Determination.

V. MITIGATION, MONITORING AND REPORTING PROGRAM:

A. GENERAL REQUIREMENTS – PART I
   Plan Check Phase (prior to permit issuance)

1. Prior to the issuance Bid Opening/Bid Award or beginning any construction related activity on-site, the Development Services Department (DSD) Director’s Environmental Designee (ED) shall review and approve all Construction Documents (CD), (plans, specification, details, etc.) to ensure the MMRP requirements have been incorporated.

2. In addition, the ED shall verify that the MMRP Conditions/Notes that apply ONLY to the construction phases of this project are included VERBATIM, under the heading, “ENVIRONMENTAL/MITIGATION REQUIREMENTS.”

3. These notes must be shown within the first three (3) sheets of the construction documents in the format specified for engineering construction document templates as shown on the City website:

   http://www.sandiego.gov/development-services/industry/information/standtemp.shtml

4. The TITLE INDEX SHEET must also show on which pages the “Environmental/Mitigation Requirements” notes are provided.

B. GENERAL REQUIREMENTS – PART II
   Post Plan Check (After permit issuance/Prior to start of construction)

1. PRE CONSTRUCTION MEETING IS REQUIRED TEN (10) WORKING DAYS PRIOR TO BEGINNING ANY WORK ON THIS PROJECT. The PERMIT HOLDER/OWNER is responsible to arrange and perform this meeting by contacting the CITY RESIDENT ENGINEER (RE) of the Field Engineering Division and City staff from MITIGATION MONITORING COORDINATION (MMC). Attendees must also include the Permit holder’s Representative(s), Job Site Superintendent and the following consultants:

   Archaeologist and Native American Kumeyaay Monitor

   Note: Failure of all responsible Permit Holder’s representatives and consultants to attend shall require an additional meeting with all parties present.

   CONTACT INFORMATION:
   a) The PRIMARY POINT OF CONTACT is the RE at the Field Engineering Division – 858-627-3200
   b) For Clarification of ENVIRONMENTAL REQUIREMENTS, it is also required to call RE and MMC at 858-627-3360

2. MMRP COMPLIANCE: This Project, Project Tracking System (PTS) 511042, shall conform to the mitigation requirements contained in the associated Environmental Document and implemented to the satisfaction of the DSD’s ED,
MMC and the City Engineer (RE). The requirements may not be reduced or changed but may be annotated (i.e. to explain when and how compliance is being met and location of verifying proof, etc.). Additional clarifying information may also be added to other relevant plan sheets and/or specifications as appropriate (i.e., specific locations, times of monitoring, methodology, etc.)

Note: Permit Holder’s Representatives must alert RE and MMC if there are any discrepancies in the plans or notes, or any changes due to field conditions. All conflicts must be approved by RE and MMC BEFORE the work is performed.

3. OTHER AGENCY REQUIREMENTS: Evidence that any other agency requirements or permits have been obtained or are in process shall be submitted to the RE and MMC for review and acceptance prior to the beginning of work or within one week of the Permit Holder obtaining documentation of those permits or requirements. Evidence shall include copies of permits, letters of resolution or other documentation issued by the responsible agency. Not Applicable for this project.

4. MONITORING EXHIBITS: All consultants are required to submit, to RE and MMC, a monitoring exhibit on a 11x17 reduction of the appropriate construction plan, such as site plan, grading, landscape, etc., marked to clearly show the specific areas including the LIMIT OF WORK, scope of that discipline’s work, and notes indicating when in the construction schedule that work will be performed. When necessary for clarification, a detailed methodology of how the work will be performed shall be included.

5. OTHER SUBMITTALS AND INSPECTIONS: The Permit Holder/Owner’s representative shall submit all required documentation, verification letters, and requests for all associated inspections to the RE and MMC for approval per the following schedule:

<table>
<thead>
<tr>
<th>Issue Area</th>
<th>Document submittal</th>
<th>Associated Inspection/Approvals/Note</th>

I. HISTORICAL RESOURCES (ARCHAEOLOGY):

I. Prior to Permit Issuance or Bid Opening/Bid Award
   A. Entitlements Plan Check
      1. Prior to permit issuance or Bid Opening/Bid Award, whichever is applicable, the Assistant Deputy Director (ADD) Environmental designee shall verify that the requirements for Archaeological Monitoring and Native American monitoring have been noted on the applicable construction documents through the plan check process.
   B. Letters of Qualification have been submitted to ADD
      1. Prior to Bid Award, the applicant shall submit a letter of verification to Mitigation Monitoring Coordination (MMC) identifying the Principal Investigator (PI) for the project and the names of all persons involved in the archaeological monitoring program, as defined in the City of San Diego Historical Resources Guidelines (HRG). If applicable, individuals involved in the
archaeological monitoring program must have completed the 40-hour HAZWOPER training with certification documentation.

2. MMC will provide a letter to the applicant confirming the qualifications of the PI and all persons involved in the archaeological monitoring of the project meet the qualifications established in the HRG.

3. Prior to the start of work, the applicant must obtain written approval from MMC for any personnel changes associated with the monitoring program.

II. **Prior to Start of Construction**

A. **Verification of Records Search**

1. The PI shall provide verification to MMC that a site specific records search (1/4 mile radius) has been completed. Verification includes, but is not limited to a copy of a confirmation letter from South Coastal Information Center, or, if the search was in-house, a letter of verification from the PI stating that the search was completed.

2. The letter shall introduce any pertinent information concerning expectations and probabilities of discovery during trenching and/or grading activities.

3. The PI may submit a detailed letter to MMC requesting a reduction to the ¼ mile radius.

B. **PI Shall Attend Precon Meetings**

1. Prior to beginning any work that requires monitoring; the Applicant shall arrange a Precon Meeting that shall include the PI, Native American consultant/monitor (where Native American resources may be impacted), Construction Manager (CM) and/or Grading Contractor, Resident Engineer (RE), Building Inspector (BI), if appropriate, and MMC. The qualified Archaeologist and Native American Monitor shall attend any grading/excavation related Precon Meetings to make comments and/or suggestions concerning the Archaeological Monitoring program with the Construction Manager and/or Grading Contractor.

   a. If the PI is unable to attend the Precon Meeting, the Applicant shall schedule a focused Precon Meeting with MMC, the PI, RE, CM or BI, if appropriate, prior to the start of any work that requires monitoring.

2. **Acknowledgement of Responsibility for Curation (CIP or Other Public Projects)**

   The applicant shall submit a letter to MMC acknowledging their responsibility for the cost of curation associated with all phases of the archaeological monitoring program.

3. **Identify Areas to be Monitored**

   a. Prior to the start of any work that requires monitoring, the PI shall submit an Archaeological Monitoring Exhibit (AME) (with verification that the AME has been reviewed and approved by the Native American consultant/monitor when Native American resources may be impacted) based on the appropriate construction documents (reduced to 11x17) to MMC identifying the areas to be monitored including the delineation of grading/excavation limits.

   b. The AME shall be based on the results of a site specific records search as well as information regarding the age of existing pipelines, laterals and associated appurtenances and/or any known soil conditions (native or formation).

   c. MMC shall notify the PI that the AME has been approved.

4. **When Monitoring Will Occur**

   a. Prior to the start of any work, the PI shall also submit a construction schedule to MMC through the RE indicating when and where monitoring will occur.

   b. The PI may submit a detailed letter to MMC prior to the start of work or during construction requesting a modification to the monitoring program.
This request shall be based on relevant information such as review of final construction documents which indicate conditions such as age of existing pipe to be replaced, depth of excavation and/or site graded to bedrock, etc., which may reduce or increase the potential for resources to be present.

5. Approval of AME and Construction Schedule
After approval of the AME by MMC, the PI shall submit to MMC written authorization of the AME and Construction Schedule from the CM.

### III. During Construction

#### A. Monitor Shall be Present During Grading/Excavation/Trenching
1. The Archaeological Monitor shall be present full-time during all soil disturbing and grading/excavation/trenching activities which could result in impacts to archaeological resources as identified on the AME. **The Construction Manager is responsible for notifying the RE, PI, and MMC of changes to any construction activities such as in the case of a potential safety concern within the area being monitored. In certain circumstances OSHA safety requirements may necessitate modification of the AME.**
2. The Native American consultant/monitor shall determine the extent of their presence during soil disturbing and grading/excavation/trenching activities based on the AME and provide that information to the PI and MMC. If prehistoric resources are encountered during the Native American consultant/monitor’s absence, work shall stop and the Discovery Notification Process detailed in Section III.B–C and IV.A–D shall commence.
3. The PI may submit a detailed letter to MMC during construction requesting a modification to the monitoring program when a field condition such as modern disturbance post-dating the previous grading/trenching activities, presence of fossil formations, or when native soils are encountered that may reduce or increase the potential for resources to be present.
4. The archaeological and Native American consultant/monitor shall document field activity via the Consultant Site Visit Record (CSVR). The CSVR’s shall be faxed by the CM to the RE the first day of monitoring, the last day of monitoring, monthly (Notification of Monitoring Completion), and in the case of ANY discoveries. The RE shall forward copies to MMC.

#### B. Discovery Notification Process
1. In the event of a discovery, the Archaeological Monitor shall direct the contractor to temporarily divert all soil disturbing activities, including but not limited to digging, trenching, excavating or grading activities in the area of discovery and in the area reasonably suspected to overlay adjacent resources and immediately notify the RE or BI, as appropriate.
2. The Monitor shall immediately notify the PI (unless Monitor is the PI) of the discovery.
3. The PI shall immediately notify MMC by phone of the discovery, and shall also submit written documentation to MMC within 24 hours by fax or email with photos of the resource in context, if possible.
4. No soil shall be exported off-site until a determination can be made regarding the significance of the resource specifically if Native American resources are encountered.

#### C. Determination of Significance
1. The PI and Native American consultant/monitor, where Native American resources are discovered shall evaluate the significance of the resource. If Human Remains are involved, follow protocol in Section IV below.
   a. The PI shall immediately notify MMC by phone to discuss significance determination and shall also submit a letter to MMC indicating whether additional mitigation is required.
b. If the resource is significant, the PI shall submit an Archaeological Data Recovery Program (ADRP) and obtain written approval of the program from MMC, CM and RE. ADRP and any mitigation must be approved by MMC, RE and/or CM before ground disturbing activities in the area of discovery will be allowed to resume. **Note: If a unique archaeological site is also an historical resource as defined in CEQA Section 15064.5, then the limits on the amount(s) that a project applicant may be required to pay to cover mitigation costs as indicated in CEQA Section 21083.2 shall not apply.**

   (1). Note: For pipeline trenching and other linear projects in the public Right-of-Way, the PI shall implement the Discovery Process for Pipeline Trenching projects identified below under ‘D.’

c. If the resource is not significant, the PI shall submit a letter to MMC indicating that artifacts will be collected, curated, and documented in the Final Monitoring Report. The letter shall also indicate that no further work is required.

   (1). Note: For Pipeline Trenching and other linear projects in the public Right-of-Way, if the deposit is limited in size, both in length and depth; the information value is limited and is not associated with any other resource; and there are no unique features/artifacts associated with the deposit, the discovery should be considered not significant.

   (2). Note, for Pipeline Trenching and other linear projects in the public Right-of-Way, if significance cannot be determined, the Final Monitoring Report and Site Record (DPR Form 523A/B) shall identify the discovery as Potentially Significant.

D. Discovery Process for Significant Resources – Pipeline Trenching and other Linear Projects in the Public Right-of-Way

The following procedure constitutes adequate mitigation of a significant discovery encountered during pipeline trenching activities or for other linear project types within the Public Right-of-Way including but not limited to excavation for jacking pits, receiving pits, laterals, and manholes to reduce impacts to below a level of significance:

1. Procedures for documentation, curation and reporting
   a. One hundred percent of the artifacts within the trench alignment and width shall be documented in-situ, to include photographic records, plan view of the trench and profiles of side walls, recovered, photographed after cleaning and analyzed and curated. The remainder of the deposit within the limits of excavation (trench walls) shall be left intact.
   b. The PI shall prepare a Draft Monitoring Report and submit to MMC via the RE as indicated in Section VI-A.
   c. The PI shall be responsible for recording (on the appropriate State of California Department of Park and Recreation forms – DPR 523A/B) the resource(s) encountered during the Archaeological Monitoring Program in accordance with the City’s Historical Resources Guidelines. The DPR forms shall be submitted to the South Coastal Information Center for either a Primary Record or SDI Number and included in the Final Monitoring Report.
   d. The Final Monitoring Report shall include a recommendation for monitoring of any future work in the vicinity of the resource.

IV. Discovery of Human Remains

If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains; and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98) and State Health and Safety Code (Sec. 7050.5) shall be undertaken:
A. Notification
1. Archaeological Monitor shall notify the RE or BI as appropriate, MMC, and the PI, if the Monitor is not qualified as a PI. MMC will notify the appropriate Senior Planner in the Environmental Analysis Section (EAS) of the Development Services Department to assist with the discovery notification process.
2. The PI shall notify the Medical Examiner after consultation with the RE, either in person or via telephone.

B. Isolate discovery site
1. Work shall be directed away from the location of the discovery and any nearby area reasonably suspected to overlay adjacent human remains until a determination can be made by the Medical Examiner in consultation with the PI concerning the provenience of the remains.
2. The Medical Examiner, in consultation with the PI, will determine the need for a field examination to determine the provenience.
3. If a field examination is not warranted, the Medical Examiner will determine with input from the PI, if the remains are or are most likely to be of Native American origin.

C. If Human Remains ARE determined to be Native American
1. The Medical Examiner will notify the Native American Heritage Commission (NAHC) within 24 hours. By law, ONLY the Medical Examiner can make this call.
2. NAHC will immediately identify the person or persons determined to be the Most Likely Descendent (MLD) and provide contact information.
3. The MLD will contact the PI within 24 hours or sooner after the Medical Examiner has completed coordination, to begin the consultation process in accordance with CEQA Section 15064.5(e), the California Public Resources and Health & Safety Codes.
4. The MLD will have 48 hours to make recommendations to the property owner or representative, for the treatment or disposition with proper dignity, of the human remains and associated grave goods.
5. Disposition of Native American Human Remains will be determined between the MLD and the PI, and, if:
   a. The NAHC is unable to identify the MLD, OR the MLD failed to make a recommendation within 48 hours after being notified by the Commission, OR;
   b. The landowner or authorized representative rejects the recommendation of the MLD and mediation in accordance with PRC 5097.94 (k) by the NAHC fails to provide measures acceptable to the landowner, THEN
   c. To protect these sites, the landowner shall do one or more of the following:
      (1) Record the site with the NAHC;
      (2) Record an open space or conservation easement; or
      (3) Record a document with the County.
   d. Upon the discovery of multiple Native American human remains during a ground disturbing land development activity, the landowner may agree that additional conferral with descendants is necessary to consider culturally appropriate treatment of multiple Native American human remains. Culturally appropriate treatment of such a discovery may be ascertained from review of the site utilizing cultural and archaeological standards. Where the parties are unable to agree on the appropriate treatment measures the human remains and buried with Native American human remains shall be reinterred with appropriate dignity, pursuant to Section 5.c., above.
D. If Human Remains are NOT Native American
1. The PI shall contact the Medical Examiner and notify them of the historic era context of the burial.
2. The Medical Examiner will determine the appropriate course of action with the PI and City staff (PRC 5097.98).
3. If the remains are of historic origin, they shall be appropriately removed and conveyed to the San Diego Museum of Man for analysis. The decision for internment of the human remains shall be made in consultation with MMC, EAS, the applicant/landowner, any known descendant group, and the San Diego Museum of Man.

V. Night and/or Weekend Work
A. If night and/or weekend work is included in the contract
1. When night and/or weekend work is included in the contract package, the extent and timing shall be presented and discussed at the precon meeting.
2. The following procedures shall be followed.
   a. No Discoveries
      In the event that no discoveries were encountered during night and/or weekend work, the PI shall record the information on the CSVR and submit to MMC via fax by 8AM of the next business day.
   b. Discoveries
      All discoveries shall be processed and documented using the existing procedures detailed in Sections III – During Construction, and IV – Discovery of Human Remains. Discovery of human remains shall always be treated as a significant discovery.
   c. Potentially Significant Discoveries
      If the PI determines that a potentially significant discovery has been made, the procedures detailed under Section III – During Construction and IV – Discovery of Human Remains shall be followed.
   d. The PI shall immediately contact the RE and MMC, or by 8AM of the next business day to report and discuss the findings as indicated in Section III-B, unless other specific arrangements have been made.
B. If night and/or weekend work becomes necessary during the course of construction
1. The Construction Manager shall notify the RE, or BI, as appropriate, a minimum of 24 hours before the work is to begin.
2. The RE, or BI, as appropriate, shall notify MMC immediately.
C. All other procedures described above shall apply, as appropriate.

VI. Post Construction
A. Submittal of Draft Monitoring Report
1. The PI shall submit two copies of the Draft Monitoring Report (even if negative), prepared in accordance with the Historical Resources Guidelines (Appendix C/D) which describes the results, analysis, and conclusions of all phases of the Archaeological Monitoring Program (with appropriate graphics) to MMC via the RE for review and approval within 90 days following the completion of monitoring. **It should be noted that if the PI is unable to submit the Draft Monitoring Report within the allotted 90-day timeframe as a result of delays with analysis, special study results or other complex issues, a schedule shall be submitted to MMC establishing agreed due dates and the provision for submittal of monthly status reports until this measure can be met.**
   a. For significant archaeological resources encountered during monitoring, the Archaeological Data Recovery Program or Pipeline Trenching Discovery Process shall be included in the Draft Monitoring Report.
   b. Recording Sites with State of California Department of Parks and Recreation
      The PI shall be responsible for recording (on the appropriate State of California Department of Park and Recreation forms–DPR 523 A/B) any
significant or potentially significant resources encountered during the Archaeological Monitoring Program in accordance with the City’s Historical Resources Guidelines, and submittal of such forms to the South Coastal Information Center with the Final Monitoring Report.

2. MMC shall return the Draft Monitoring Report to the PI via the RE for revision or, for preparation of the Final Report.
3. The PI shall submit revised Draft Monitoring Report to MMC via the RE for approval.
4. MMC shall provide written verification to the PI of the approved report.
5. MMC shall notify the RE or BI, as appropriate, of receipt of all Draft Monitoring Report submittals and approvals.

B. Handling of Artifacts
1. The PI shall be responsible for ensuring that all cultural remains collected are cleaned and catalogued
2. The PI shall be responsible for ensuring that all artifacts are analyzed to identify function and chronology as they relate to the history of the area; that faunal material is identified as to species; and that specialty studies are completed, as appropriate.

C. Curation of artifacts: Accession Agreement and Acceptance Verification
1. The PI shall be responsible for ensuring that all artifacts associated with the survey, testing and/or data recovery for this project are permanently curated with an appropriate institution. This shall be completed in consultation with MMC and the Native American representative, as applicable.
2. When applicable to the situation, the PI shall include written verification from the Native American consultant/monitor indicating that Native American resources were treated in accordance with state law and/or applicable agreements. If the resources were reinterred, verification shall be provided to show what protective measures were taken to ensure no further disturbance occurs in accordance with Section IV – Discovery of Human Remains, Subsection C.
3. The PI shall submit the Accession Agreement and catalogue record(s) to the RE or BI, as appropriate for donor signature with a copy submitted to MMC.
4. The RE or BI, as appropriate shall obtain signature on the Accession Agreement and shall return to PI with copy submitted to MMC.
5. The PI shall include the Acceptance Verification from the curation institution in the Final Monitoring Report submitted to the RE or BI and MMC.

D. Final Monitoring Report(s)
1. The PI shall submit one copy of the approved Final Monitoring Report to the RE or BI as appropriate, and one copy to MMC (even if negative), within 90 days after notification from MMC of the approved report.
2. The RE shall, in no case, issue the Notice of Completion until receiving a copy of the approved Final Monitoring Report from MMC which includes the Acceptance Verification from the curation institution.
VI. PUBLIC REVIEW DISTRIBUTION:

Draft copies or notice of this Mitigated Negative Declaration were distributed to:

City of San Diego:
- Mayor’s Office
- Councilmember Lorie Zapf – Council District 2
- City Attorney
  - Shannon Thomas
- Transportation & Storm Water Department
  - James Nabong
  - Donna Chralowicz
- Public Utilities Department
  - Keli Balo
- Public Works Department
  - Carrie Purcell
- Park and Recreation Department
  - Herman Parker – Director
  - Mission Bay Park Committee Staff Representative

VII. RESULTS OF PUBLIC REVIEW:

( ) No comments were received during the public input period.

( ) Comments were received but did not address the draft Mitigated Negative Declaration finding or the accuracy/completeness of the Initial Study. No response is necessary. The letters are attached.

(X) Comments addressing the findings of the draft Mitigated Negative Declaration and/or accuracy or completeness of the Initial Study were received during the public input period. The letters and responses follow.

Copies of the draft Mitigated Negative Declaration, the Mitigation, Monitoring and Reporting Program and any Initial Study material are available in the office of the Planning Department for review, or for purchase at the cost of reproduction.

1010 Second Avenue
San Diego, California 92101

Subject: Draft Mitigated Negative Declaration
Undergrounding Utility District Project, Residential Block 21B
Project No. 511042

Dear Ms. Herrmann,

I have reviewed the subject DMND on behalf of this committee of the San Diego County Archaeological Society.

Based on the information contained in the DMND, SDCAS concurs with the cultural resources monitoring program specified, which incorporates the City's standard wording for such projects.

Thank you for the opportunity to participate in the public review of this DMND.

Sincerely,

[Signature]

James W. Boyle, Jr., Chairperson
Environmental Review Committee

cc: SDCAS President

P.O. Box 61106
San Diego, CA 92168-1106
(619) 526-0225
1. Project Title/Project number: Residential Block 2BB Pacific Beach (Crown Point) Undergrounding Utility District Project / PTS 511042

2. Lead agency name and address: City of San Diego, Planning Department, 1010 Second Avenue, Suite 1200, East Tower, MS 413, San Diego, CA 92101

3. Contact person and phone number: Myra Herrmann, Senior Planner, (619) 446-5372

4. Project location: Pacific Beach (Crown Point) from Riviera Drive to Crown Point Road, and Moorland Drive to the bay, in the Pacific Beach Community Plan.

5. Project Applicant/Sponsor’s name and address: City of San Diego, Transportation and Storm Water Department / James Bajet, 1010 2nd Avenue, Suite 900, MS 608, San Diego, CA 92101 (619) 533-3046.

6. General Plan designation: Right-of-Way (surrounding Residential; Commercial Retail and Services; and Park, Open Space, and Recreation)

8. Description of project (Describe the whole action involved, including but not limited to, later phases of the project, and any secondary, support, or off-site features necessary for its implementation.): CITY COUNCIL APPROVAL to prioritize and construct the undergrounding district. The district would also create an overlay that would restrict utility companies from installing above-ground utility lines in the future. SDG&E will be constructing an underground utility system per the franchise agreement in the public right-of-way. The project proposes approximately 19,326 linear feet of trenching of approximately 5 feet deep and 2.5 feet wide along one side of each public right-of-way, installing conduit and substructures such as transformers on concrete pads, installing cable through the conduits, providing individual customer connections, backfilling, removing the existing overhead utility lines and poles, and installing new streetlights where applicable. Curb ramps will be installed where missing. If applicable, street trees will be installed and streets will be resurfaced. Utility poles may need to be installed or upgraded at the boundary of the district where determined necessary for the transition from the existing aerial system to the new underground system. Locations will be determined during final design. Construction of this project will be coordinated with the Public Utilities Department (PUD) Sewer and Water Group Job Crown Point (Project No. 403253) in the same area in order to follow the City’s “One Dig” approach to minimize neighborhood disturbance, adherer to the Street Preservation Ordinance, and reduce costs. In addition, this project is subject to the summer beaches moratorium.

9. Surrounding land uses and setting: Mainly single-family residential, with a few parcels of multi-family residential and neighborhood commercial, adjacent to Mission Bay Park.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.): None.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun? Tribal consultation was conducted in October 2016 with the Iipay Nation of Santa Ysabel and resulted in a recommendation for Native American Kumeyaay monitoring during all construction-related trenching activities in the project area.
Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission’s Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics  ☐ Greenhouse Gas Emissions  ☐ Population/Housing  ☐ Agriculture and Forestry Resources
☐ Hazards & Hazardous Materials  ☐ Public Services
☐ Air Quality  ☐ Hydrology/Water Quality  ☐ Recreation
☐ Biological Resources  ☐ Land Use/Planning  ☐ Transportation/Traffic
☒ Cultural Resources  ☐ Mineral Resources  ☒ Tribal Cultural Resources
☐ Utilities/Service System  ☐ Geology/Soils  ☐ Noise
☒ Mandatory Findings of Significance

DETERMINATION: (To be completed by Lead Agency)

On the basis of this initial evaluation:

☐ The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ Although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ The proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (a) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (b) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required.
Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or (MITIGATED) NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or (MITIGATED) NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

I) AESTHETICS – Would the project:

a) Have a substantial adverse effect on a scenic vista? ☐ ☐ ☐ ☒

The proposed project would not substantially affect a scenic vista since it would be located primarily under the public right-of-way and would not be visible once constructed, except for a few transformer boxes placed above ground on concrete pads. The project would improve the visual quality of the area by removing existing above ground utility poles and lines.

b) Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? ☐ ☐ ☐ ☒

The project would be constructed almost exclusively below grade and is not located within a scenic highway.

c) Substantially degrade the existing visual character or quality of the site and its surroundings? ☐ ☐ ☐ ☒

Please see I. a.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area? ☐ ☐ ☐ ☒

The proposed project would not have the potential to create light or glare impacts. Streetlights will be removed and replaced in like and kind. Additional streetlights may be added due to safety concerns if it is determined that a particular location or intersection is made safer with a streetlight.

II) AGRICULTURAL AND FOREST RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No existing agricultural uses are located in proximity of the project site that could be affected by the proposed project.

III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied on to make the following determinations – Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Construction of the proposed project could increase the amount of harmful pollutants entering the air basin. However, construction emissions would be temporary. In addition, construction Best Management Practices (BMPs), such as watering for dust abatement, would reduce construction dust emissions by 75 percent. With the implementation of project BMPs during construction and the lack of operational emissions, the proposed project would not result in a conflict of air quality plans.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Please see III.a.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

As described above, construction operations could temporarily increase the emissions of dust and other pollutants. However, construction emissions would be temporary and
it is anticipated that implementation of BMPs would reduce potential impacts related from construction activities to a level less than significant. Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable federal or state ambient air quality standards.

d) Expose sensitive receptors to substantial pollutant concentrations?

Construction operations could temporarily increase the emissions of harmful pollutants, which could affect sensitive receptors adjacent to the proposed project. However, construction emissions would be temporary and it is anticipated that implementation of construction BMPs would reduce potential impacts related to construction activities to minimal levels. Therefore, the proposed project would not expose sensitive receptors to substantial pollutant concentrations.

e) Create objectionable odors affecting a substantial number of people?

Operation of construction equipment and vehicles could generate odors associated with fuel combustion. However, these odors would only remain temporarily in proximity to the construction equipment and vehicles. After construction is complete, there would be no objectionable odors associated with the project.

IV. BIOLOGICAL RESOURCES – Would the project:

a) Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

The project is in an urban setting more than 100 feet from the Multi-Habitat Planning Area (MHPA) and would not impact sensitive species or habitat listed in local or regional plans, policies or regulations, or by the Department of Fish and Game or U.S. Fish and Wildlife Service.

b) Have a substantial adverse effect on any riparian

<tr>
<td>d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>The proposed project is located in the developed public right-of-way and does not have the potential to interfere with the movement of any migratory species or wildlife corridors.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>The proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Reasonable steps will be taken to protect existing trees while work is in progress. If a tree must be</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
removed for safety reasons, new street trees will be planted when the City is able to get a property owner to agree to water and care for the tree until it becomes established.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The project site is located within the public right-of-way and therefore would not conflict with an adopted Habitat Conservation Plan or other approved local, regional or state habitat conservation plan.

V. CULTURAL RESOURCES – Would the project:

a) Cause a substantial adverse change in the significance of an historical resource as defined in §15064.5?

The purpose and intent of the Historical Resources Regulations of the Land Development Code (Chapter 14, Division 3, and Article 2) is to protect, preserve and, where damaged, restore the historical resources of San Diego. The regulations apply to all proposed development within the City of San Diego when historical resources are present on the premises. CEQA requires that before approving discretionary projects, the Lead Agency must identify and examine the significant adverse environmental effects, which may result from that project. A project may have a significant effect on the environment (Sections 15064.5(b) and 21084.1). A substantial adverse change is defined as demolition, destruction, relocation, or alteration activities, which would impair historical significance (Sections 15064.5(b)(1)). Any historical resource listed in, or eligible to be listed in the California Register of Historical Resources, including archaeological resources, is considered to be historically or culturally significant. Because the potential does exist that cultural material could be found or that traces of recorded sites might be uncovered, an archaeological and Native American monitor would be present on site during the trenching. The implementation of these mitigation requirements would reduce potential impacts to historical resources to below a level of significance and would not result in a substantial adverse change to the significance of an historical resource.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?
The proposed project would occur in an area where archaeological resources have been recorded. Site P-37-011571 represents a recorded archaeological site on Crown Point consisting mainly of intact and disturbed shell midden as well as cobble lithic artifacts, ecofacts and historic debris. The site has been evaluated in accordance with CEQA and the Public Resources Code during previous construction projects in the area, and although considered not significant in most cases, the potential remains for resources to be encountered during construction-related trenching activities. Additionally, this project required tribal consultation in accordance with AB52 and resulted in a recommendation for Native American Kumeyaay monitoring due to a potential for human remains to be encountered in the area. As such, the project is required to implement mitigation measures outlined in Section V of the MND under Historical Resources (Archaeology) which will reduce potential impacts to below a level of significance.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Project plans do not call for trenching depths that exceed the City of San Diego’s CEQA Significance thresholds for paleontological resources. Therefore, no impact would occur to paleontological or unique geologic resources.

d) Disturb any human remains, including those interred outside of dedicated cemeteries?

Please refer to section V.a. Archaeological and Native American monitoring will be required during all construction related activities. If human remains are encountered, all provisions of the Mitigation Monitoring and Reporting Program (MMRP), the California Public Resources Code, and the California Health and Safety Code will be implemented to ensure the appropriate treatment of any burials or associated grave goods.

VI. GEOLOGY AND SOILS – Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>

</thead>
<tbody>
<tr>
<td>Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
</tr>
<tr>
<td><strong>The project site is not located within an Alquist-Priolo Fault Zone and is not located in proximity to any faults. The project does not include any structures for human occupancy and would utilize proper engineering design and construction practices. There would be no risk from rupture of a known earthquake fault in this category.</strong></td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
</tr>
</tbody>
</table>

**ii) Strong seismic ground shaking?**

The proposed project is located on soil classified by the City of San Diego Seismic Safety Study as low risk and generally stable. The project does not include any structures for human occupancy. The proposed project would utilize proper engineering design and construction practices to ensure that the potential for impacts from ground shaking would remain less than significant.

**iii) Seismic-related ground failure, including liquefaction?**

The proposed project is not located on soil that has a high potential for liquefaction. The project does not include any structures for human occupancy. The design of the proposed project would utilize proper engineering design and construction practices to ensure that the potential for impacts from liquefaction would be less than significant.

**iv) Landslides?**

The proposed project is located on stable soil that does not have a potential for landslides. The proposed project would not expose people or structures to the risk of loss, injury, or death involving landslides. The design of the proposed project would utilize proper engineering design and utilization of standard construction practices to ensure that the potential for impacts would be less than significant.

**b) Result in substantial soil erosion or the loss of topsoil?**

The proposed project is located on stable soil that does not have a potential for landslides. The proposed project would not expose people or structures to the risk of loss, injury, or death involving landslides. The design of the proposed project would utilize proper engineering design and utilization of standard construction practices to ensure that the potential for impacts would be less than significant.
Construction of the proposed project would take place within the developed public right of way and all disturbances to paved streets or easement areas would be replaced in kind. Therefore, there would be no soil erosion or loss of topsoil.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

The proposed project is located on soil characterized as low risk and generally stable. The project would be constructed in the developed right of way and would be constructed almost entirely below grade at depths no greater than approximately 5 feet and 2.5 feet wide. The design of the proposed project would utilize proper engineering design and utilization of standard construction practices. There would be no impacts.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

The project does not include any structures for human occupancy and would be constructed in the developed right of way almost entirely below grade. The design of the proposed projects would utilize proper engineering design and utilization of standard construction practices would ensure that the potential for impacts would be less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

The project would not utilize septic tanks or alternative wastewater systems. Therefore, no impact would occur.

VII. GREENHOUSE GAS EMISSIONS – Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a
The City of San Diego, as of July 2016, is utilizing the Climate Action Plan Consistency Checklist (Checklist) to provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to CEQA. The first step in determining CAP consistency is to assess a project’s consistency with the land use assumptions used in the CAP. Specifically, in Step 1, the proposed project must be determined to be consistent with the existing General Plan and Community Plan land use and zoning designations. Since public utilities such as underground utilities are consistent with all land use and zoning designations, the project is consistent with both the General Plan and Community Plan land use and zoning designations. Thus, the review would proceed to Step 2 of the Checklist to evaluate a project’s consistency with the applicable strategies and actions of the CAP. However, Step 2 only applies to development projects that involve permits that would require a certificate of occupancy. Since a storm drain replacement project does not require a certificate of occupancy, the review is complete and the project is determined to be consistent with the CAP. The project would therefore, not cause any significant increase in GHG emissions, and no mitigation is required. Impacts would be less than significant.

Please also see VII.a. It is anticipated that the proposed projects would not conflict with any applicable plans, policies, or regulations related to greenhouse gases. There is no impact.

VIII. HAZARDS AND HAZARDOUS MATERIALS – Would the project:

a) Create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials?

Construcion of the proposed project may require the use of hazardous materials (fuels, lubricants, solvents, etc.), which would require proper storage, handling, use and disposal; however, the project would not routinely transport, use or dispose of hazardous materials. In addition, construction standards shall be implemented for any subsurface discoveries, to meet local, state, and federal standards. Therefore, the project would not create a significant hazard to the public or environment.

b) Create a significant hazard to the public or the environment through reasonably foreseeable

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Please also see VII.a. It is anticipated that the proposed projects would not conflict with any applicable plans, policies, or regulations related to greenhouse gases. There is no impact.
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>upset and accident conditions involving the release of hazardous materials into the environment?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The project boundary does not contain any Leaking Underground Storage Tank (UST) cleanup sites, permitted UST’s, or other cleanup sites located within 1,000 feet. In the event that construction activities encounter underground contamination, the contractor would be required to implement §803, “Encountering or Releasing Hazardous Substances or Petroleum Products,” of the City of San Diego Standard Specifications for Public Works Construction (“Whitebook”) which is included in all construction documents and would ensure the proper handling and disposal of any contaminated soils in accordance with all applicable local, state, and federal regulations. Compliance with these requirements would minimize the risk to the public and the environment; therefore, impacts would remain less than significant.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

There are no schools within a quarter mile of the project boundary. Impacts would not occur.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

The project site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact would occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No impact would occur.
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

The proposed project is not located within the boundaries of an airport land use plan or an airport land use plan pending adoption. In addition, the proposed project are located below ground surface and would not introduce any new features that would create a flight hazard. There would be no impact.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

The proposed project is not within the vicinity of a private airstrip.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Construction of the proposed project would temporarily affect traffic circulation within the project boundary. However, an approved Traffic Control Plan would be implemented during construction which would allow emergency plans to be employed. Impacts would be less than significant.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

The project, which is located in the developed public right-of-way would remove the overhead utility lines and poles, and place them underground, reducing the risks associated with this category. In addition, the project does not contain wildlands that could pose a threat of wildland fires. As such, the proposed project would not introduce any new features that would increase the risk of fire because the utilities will be located underground.

IX. HYDROLOGY AND WATER QUALITY – Would the project:

a) Violate any water quality standards or waste discharge requirements?

Potential impacts to existing water quality standards associated with the proposed project would include minimal short-term construction-related erosion/sedimentation and no long term operational storm water discharge. Conformance to BMP’s outlined in the Water
### Issue | Potentially Significant Impact | Less Than Significant with Mitigation Incorporated | Less Than Significant Impact | No Impact
--- | --- | --- | --- | ---
Pollution Control Plan (WPCP) and conformance with the City’s Storm Water Standards would prevent or effectively minimize short-term water quality impacts. Therefore, the proposed projects would not violate any existing water quality standards or discharge requirements.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

The proposed project does not propose the use of groundwater. Furthermore, the project would not introduce significant new impervious surfaces that could interfere with groundwater recharge. Therefore, the proposed projects would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?

There are no streams or rivers within the project boundary. Upon completion of the installation of the utility lines underground, the streets would be returned to their preexisting conditions, as will the areas where poles are removed. Therefore the projects would not substantially alter any existing drainage patterns.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off-site?
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Please see IX.c. Since the project would not substantially alter the existing drainage patterns and would not introduce additional impermeable surfaces the rate of surface runoff would not be increased.

e) Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

|       |                               |                                               |                            |           |
|-------|-------------------------------|-----------------------------------------------|                            |           |

Please see IX.c and d. Conformance to BMP’s outlined in the WPCP and compliance with the City Stormwater Regulations would prevent or effectively minimize short-term construction impacts. Therefore, the utility project would not contribute runoff water that would exceed the capacity of existing storm water systems.

f) Otherwise substantially degrade water quality?

|       |                               |                                               |                            |           |
|-------|-------------------------------|-----------------------------------------------|                            |           |

Conformance to BMPs outlined in the WPCP to be prepared for the proposed project and compliance with the City’s Stormwater Regulations would prevent or effectively minimize impacts and would preclude impacts to water quality.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

|       |                               |                                               |                            |           |
|-------|-------------------------------|-----------------------------------------------|                            |           |

The proposed project does not propose construction of any new housing.

h) Place within a 100-year flood hazard area, structures that would impede or redirect flood flows?

|       |                               |                                               |                            |           |
|-------|-------------------------------|-----------------------------------------------|                            |           |

The project is not located within the 100 year floodplain, the proposed project does not propose any new structures that would impeded or redirect flood flows, and therefore would have no impact.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

|       |                               |                                               |                            |           |
|-------|-------------------------------|-----------------------------------------------|                            |           |
The proposed project would not include any new features that would increase the risk associated with flooding beyond those of the existing conditions.

a) Physically divide an established community?

Implementation of the proposed project would involve replacing and installing utility infrastructure below ground and would not introduce any features that could physically divide an established community.

The proposed project is located within the developed right of way and would be consistent with all applicable land use plans, policies, or regulations of an agency with jurisdiction over the project and would not conflict with any applicable land use plans. The project is exempt from the requirement to obtain a Coastal Development Permit pursuant to the SDMC Section 126.0704 "Exemptions from a Coastal Development Permit: subsection (e) Public utility installation of new or increased service to development approved or exempted in the Municipal Code, and public utility repair or maintenance as exempted under the Coastal Commission’s Interpretive Guidelines on Exclusions from Permit Requirements filed with the City Clerk as Document No. OO-17067-2. Additionally, although the edges of the district boundary interface with areas mapped as environmentally sensitive, the project will be conducted entirely within the developed public right-of-way and as such will not require a Neighborhood or Site Development Permit in accordance with SDMC Section 143.0110(c)(1) because the project will not encroach into ESL during or after construction.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

The proposed project would not include any new features that would increase the risk associated with seiche, tsunami, or mudflow beyond those of the existing conditions.

The proposed project is located within the developed right of way and would be consistent with all applicable land use plans, policies, or regulations of an agency with jurisdiction over the project and would not conflict with any applicable land use plans. The project is exempt from the requirement to obtain a Coastal Development Permit pursuant to the SDMC Section 126.0704 "Exemptions from a Coastal Development Permit: subsection (e) Public utility installation of new or increased service to development approved or exempted in the Municipal Code, and public utility repair or maintenance as exempted under the Coastal Commission’s Interpretive Guidelines on Exclusions from Permit Requirements filed with the City Clerk as Document No. OO-17067-2. Additionally, although the edges of the district boundary interface with areas mapped as environmentally sensitive, the project will be conducted entirely within the developed public right-of-way and as such will not require a Neighborhood or Site Development Permit in accordance with SDMC Section 143.0110(c)(1) because the project will not encroach into ESL during or after construction.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?
The proposed project site is not located within or adjacent to any applicable habitat or natural community conservation plans.

XI. MINERAL RESOURCES – Would the project?

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? ☐ ☐ ☐ ❌

The area surrounding the proposed project is not being used for the recovery of mineral resources. Similarly, the area surrounding the proposed project site is not designated for the recovery of mineral resources on the City of San Diego General Plan Land Use Map. Therefore, the proposed project would not result in the loss of availability of a known mineral resource.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? ☐ ☐ ☐ ❌

Please see XI.a.

XII. NOISE – Would the project result in:

a) Exposure of persons to, or generation of, noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? ☐ ☐ ☐ ❌

The proposed project would only generate noise during construction activities, which would be temporary and transitory in nature. Therefore, people would not be exposed to noise levels in excess of any noise regulations.

b) Exposure of persons to, or generation of, excessive ground borne vibration or ground borne noise levels? ☐ ☐ ☐ ❌

Please see XII.a.

c) A substantial permanent increase in ambient noise levels in the project vicinity ☐ ☐ ☐ ❌
above levels existing without the project?

Please see XII.a.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above existing without the project?

Construction of the proposed project would result in a temporary increase in the ambient noise levels in the project vicinity. However, based upon the transitory nature of the utility project and surrounding noise levels in the area resulting from traffic along the streets, the increase in ambient noise would be less than significant.

e) For a project located within an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport would the project expose people residing or working in the area to excessive noise levels?

The proposed project area is not within an airport land use plan or two miles of a public airport.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

The proposed project area is not within the vicinity of a private airstrip.

XIII. POPULATION AND HOUSING – Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?
The project would remove existing utility poles and overhead lines, and place the lines underground. It would not build any new housing, businesses, roadways or infrastructure that could induce growth.

b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

The proposed project would underground overhead utilities and would not remove, displace, or otherwise affect existing housing in any way that would necessitate the construction of replacement housing.

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

The proposed project would underground overhead utilities and would not result in the displacement of people, which would necessitate the construction of replacement housing.

XIV. PUBLIC SERVICES

a) Would the project result in substantial adverse physical impacts associated with the provisions of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service rations, response times or other performance objectives for any of the public services:

i) Fire Protection

Since the proposed utility undergrounding project would not result in population growth, the project would not trigger the need to construct or alter governmental facilities including fire protection facilities.

ii) Police Protection
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>The proposed project would not physically alter any police protection facilities. The undergrounding of utilities would not trigger the need to construct or alter police protection facilities.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>iii) Schools</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>The proposed project would not trigger the need to physically alter any schools. Additionally, the proposed project would not include construction of future housing or induce growth that could increase demand for schools in the area.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>v) Parks</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>The proposed project would not physically alter any parks. Therefore, the proposed projects would not create demand for new parks or other recreational facilities.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>vi) Other public facilities</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>The proposed project would not increase the demand for electricity, gas, or other public facilities.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

XV. RECREATION –

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? ☐ ☐ ☐ ☒

Implementation of the proposed project would place existing overhead utility lines underground. The improved infrastructure would not allow for improved access to existing recreation areas. The proposed project would not directly generate additional trips to existing recreation areas or induce future growth that would result in additional trips to these facilities. Therefore, the proposed project would not increase the use of existing recreational areas such that substantial physical deterioration of the facility would occur or be accelerated.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment? ☐ ☐ ☐ ☒

The proposed project does not include the construction of recreational facilities or require construction or expansion of recreational facilities.

XVI. TRANSPORTATION/TRAFFIC – Would the project?
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?</td>
<td>□</td>
<td>□</td>
<td>☒</td>
<td>☒</td>
</tr>
</tbody>
</table>

Construction of the proposed project would temporarily affect traffic circulation within the project boundary in the area of construction. However, an approved Traffic Control Plan would be implemented during construction so that traffic circulation would not be substantially impacted. Therefore, the project would not result in an increase of traffic which is substantial in relation to existing traffic capacity.

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? | □                             | □                                                 | ☒                                    | ☒         |

Construction of the proposed project would temporarily affect traffic circulation within the project boundary. However, an approved Traffic Control Plan would be implemented during construction so that traffic would not exceed cumulative or individual level of service.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? | □                             | □                                                 | □                                    | ☒         |
<table>
<thead>

<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed projects will be designed to meet City design standards and, therefore, would meet existing levels of safety.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>e) Result in inadequate emergency access?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Construction of the proposed projects would temporarily affect traffic circulation within the project boundary. However, an approved Traffic Control Plan would be implemented during construction so that there would be adequate emergency access.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The project is consistent with the community plan designation and underlying zone and would not result in any conflicts regarding policies, plans, or programs regarding public transit, bicycle or pedestrian facilities. Once completed, the projects will be located below grade.</td>
</tr>
</tbody>
</table>

**XVII. TRIBAL CULTURAL RESOURCES**

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
The proposed project would occur in an area where archaeological resources have been recorded. Site P-37-011571 represents a recorded archaeological site on Crown Point consisting mainly of intact and disturbed shell midden as well as cobble lithic artifacts, ecofacts and historic debris. The site has been evaluated in accordance with CEQA and the Public Resources Code, but does not meet the criteria for listing on the local, state or federal registers as defined in PRC Section 5020.1(k).

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

As stated above, the project has a potential to impact site P-37-011571, which represents a recorded archaeological site on Crown Point consisting mainly of intact and disturbed shell midden as well as cobble lithic artifacts, ecofacts and historic debris. As such, Tribal Consultation in accordance with AB 52 was initiated with the Executive Director of Cultural Resources for the Iipay Nation of Santa Ysabel to determine if the project area contains any Tribal Cultural Resources or areas of human remains which would require further evaluation or special considerations during the environmental review process. Confidential site information was provided during the consultation process which included reference to the presence of human remains in the area. Tribal consultation also made note of this information and a recommendation was made for Native American-Kumeyaay monitoring during all trenching activities to assure that potential impacts to Tribal Cultural Resources are reduced to below a level of significance with implementation of the archaeological monitoring program outlined in Section V of the MND.

XVIII. UTILITIES AND SERVICE SYSTEMS – Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?
The proposed project would place existing overhead utility lines underground and would not exceed the requirements of the Regional Water Quality Control Board.

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>b)</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

Please see XVII a., the construction of new water or wastewater facilities would not be required.

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>c)</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The project would not result in expanded impervious surface area and would not result in substantial quantities of runoff which would require new or expanded treatment facilities. Therefore, the proposed project would not require the construction of new storm water drainage facilities or expansion of existing facilities.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>d)</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The proposed project would not require the use of any permanent water source and, therefore, would not impact existing water supplies.

e) Result in a determination by the wastewater treatment provided which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>e)</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The proposed project would not generate wastewater and, therefore, would not impact an existing wastewater treatment provider.

f) Be served by a landfill with sufficient permitted capacity to

<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>f)</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>
accommodate the project’s solid waste disposal needs?

Construction of the proposed project would generate waste associated with construction activities. This waste would be disposed of in conformance with all applicable local and state regulations pertaining to solid waste including permitting capacity of the landfill serving the project area. Materials able to be recycled shall be done to local standards regulating such activity. Operation of the proposed project would generate minimal solid waste associated with this category and, therefore, would not affect the permitted capacity of the landfill serving the project area.

g) Comply with federal, state, and local statutes and regulation related to solid waste?

The proposed project would not generate solid waste and, therefore, would not affect solid waste statutes and regulations. Any solid waste generated during construction related activities would be recycled or disposed of in accordance with all applicable local, state and federal regulations.

XV. MANDATORY FINDINGS OF SIGNIFICANCE –

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

As noted above under the discussions for Cultural Resources and Tribal Cultural Resources, the project alignment is within a recorded archaeological site. This site has yielded information that is important to the local Kumeyaay community in that it provides evidence of native use and exploitation of shellfish resources within a marine environment prior to the development of housing in the area. As such, Tribal Consultation was conducted in accordance with AB52 which concluded that the trenching activities associated with the project have the potential to impact buried archaeological and tribal cultural resources which requires implementation of the mitigation measures outlined in Section V of the MND and would reduce potential impacts to below a level of significance.
<table>
<thead>
<tr>
<th>Issue</th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation Incorporated</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable futures projects)?

When viewed in connection with the effects of other projects in the area, construction trenching within this underground utility district has the potential to impact archaeological and tribal cultural resources which could incrementally contribute to a cumulative loss of non-renewable resources. However, with implementation of the mitigation measures identified in Section V of the MND, this incremental impact would be reduced to below a level of significance.

c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

As proposed, the utility project does not have the potential to cause substantial adverse effects on human beings.
