Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 104521

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 30343

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

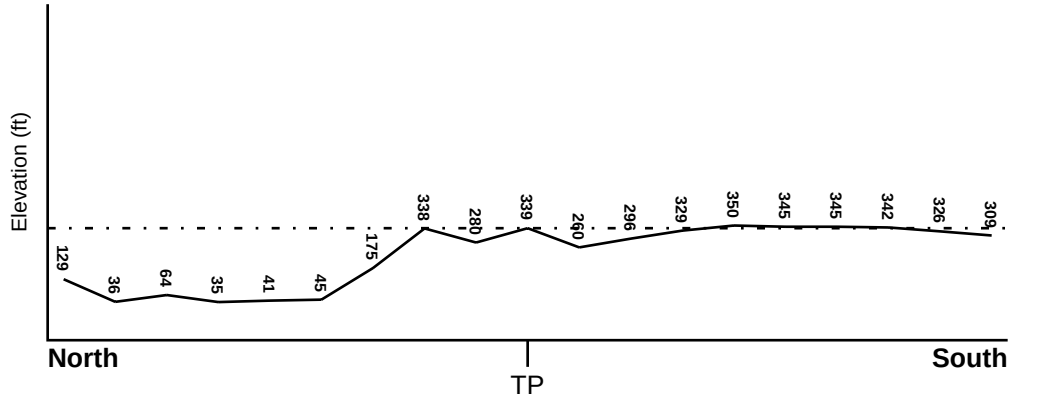
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

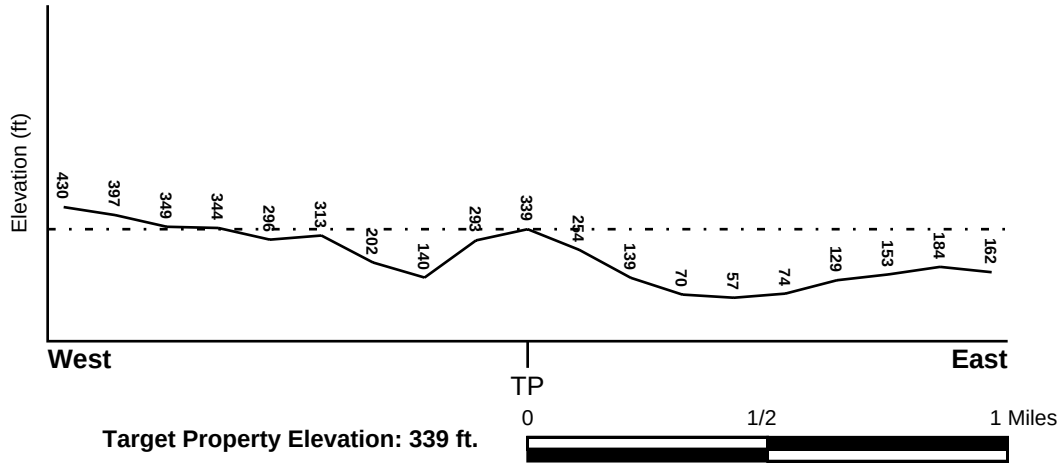
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 339 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHESTERTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

RE: unauth. release — IVAC
10300 CAMPUS PT.
LA JOLLA, 92121

Marie Helen of IVAC called to report that IVAC overfilled diesel fuel tank while topping it off in preparation for a precision test. Estimated amt lost: 40 gallons.

IVAC staff had already flushed spilled diesel into a storm drain (!) with plenty of water from a fire hydrant. I informed her that flushing to a storm drain was in violation of law and to notify the RWQCO immediately. She said she would.

The overfill occurred in the parking lot area — diesel flowed over asphalt parking surface into storm drain. No other structures reportedly affected.

RE: UNAUTHORIZED RELEASE

Dear Ms. Eir:

I have enclosed a copy of the emergency information report I completed subsequent to our release of April 1, 1986. To further clarify, your official notice (copy also enclosed) requires the following information:

a) 5 gallons of #2 diesel and 35 gallons of water flowed across our parking lot from the underground tank to the storm drain.

b) There was water run-off into the storm drain, but the diesel fuel appears to have been absorbed into the asphalt. There may have been some diesel washed into the storm drain that runs from out property into Sorrento Valley.

c) The clean-up we propose involves replacement of asphalt damaged by the spill.

Please notify me at (619) 458-7991 if additional action is required.

Sincerely,

Marie Hellen

You are hereby notified that it is our information that the underground hazardous substance storage facility located at (address) 10300 Campus Point (city) San Diego (zip) 92121 has experienced an Unauthorized Release (leak). This information was provided to this Department by Marie Helen of IVAC.

The conditions created by the Unauthorized Release must be reported and corrected in accordance with Chapter 6.7 of the California Health and Safety Code and Title 23, Chapter 3, Subchapter 16 of the California Administrative Code.

It is the responsibility of the tank owner or operator to determine the extent and impact of the Unauthorized Release and to complete any required clean-up.

Within **five working days** of receipt of this Official Notice, the tank owner/operator or his agent must submit a written Unauthorized Release Report to the Hazardous Materials Management that includes all of the following information that is known at the time of filing the report:

a. List of type, quantity, and concentration of hazardous substance released.

b. The extent of the soil or groundwater or surface water contamination due to the release based on the results of all investigations completed at the time the report is submitted.

c. Method of clean-up implemented to date and proposed clean-up actions.

d. Method and location of disposal of the released hazardous substance and any contaminated soils or groundwater or surface water.

Subsequent mitigation actions will be discussed upon review of the submitted report and consultation with other responsible agencies.

IMPORTANT NOTES:

1. Notify the local Fire Department immediately if a fire or explosion hazard is present.
2. Notify the Regional Water Quality Control Board (265-5114) with 24 hours regarding this Unauthorized Release.
3. Until the clean-up is complete, the owner or operator shall submit a status report to the Hazardous Materials Management Unit (HMMU) every 3 months or at a more frequent interval specified by the HMMU.
4. It is the responsibility of the tank owner/operator or his agent to maintain the site in a safe and secure manner.
5. Any contaminated soil/liquid removed from the site must be handled, transported and disposed of or recycled as a hazardous waste.
6. Copies of all manifests used to haul and dispose of contaminated soils, groundwater, or materials from the site must be submitted to the HMMU.
7. It shall be unlawful for a person to construct, install, modify, operate, maintain, remove or destroy an underground storage tank used for the storage of hazardous substances without first obtaining a permit as specified in Ordinance No. 7023, Chapter 10, Division 8, Title 6 of the San Diego County Code.

UNDERGROUND STORAGE TANK (UST) CASE
10685 ROSELLE ST., SAN DIEGO, CA 92121
#H16657-001

This letter confirms the completion of site investigation and remedial action for the underground storage tanks formerly located at the above described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e). If a change in land use is proposed, the owner must promptly notify this agency.

Please telephone Pamela Villa Clay at (619) 338-2497 if you have any questions regarding this matter.

Comments (Depth of Remediation, etc.):

Two underground storage tanks formerly storing gasoline were removed from the northern portion of the site on April 14, 1994. A storm drain is located approximately 10 feet north of the former tanks on the adjacent property. The adjacent property, to the north, is owned by the City of San Diego and a sewage lift station is located on the property.

Remediation by excavation was performed at the site. The maximum excavation depth was 15 feet below ground surface (bgs) which included the excavation of soil below the water table (9-11 feet bgs). Excavation activities continued laterally on to the City of San Diego property. During excavation activities an abandoned dewatering well was discovered and subsequently destroyed by the City of San Diego. Additionally, during excavation activities the storm drain backfill was breached and the storm drain collapsed. The storm drain was subsequently repaired in accordance with regulatory standards by contractors for Dana Johnson Lathing. In sum, approximately 368 tons of soil was excavated and disposed of site at Candelaria Environmental Company in Anza, CA.

Following soil remediation activities, three groundwater monitoring wells were installed. Two wells were installed on the subject property and one well was installed, with permission and bonding, on the City of San Diego property. The initial sampling of the wells revealed non-detectable levels of contamination in two wells, MW-2 and MW-3. Well MW-1 revealed low concentrations of 1.5 milligram per liter of TPH and 7.0 micrograms per liter of benzene. Two subsequent groundwater monitoring events revealed non-detectable levels of TPH and BTEX in all three groundwater monitoring wells. It appears that the unauthorized release has not impacted the beneficial uses of the groundwater beneath the site. The Responsible Party plans to appropriately destroy the three groundwater monitoring wells upon receipt of no further action status for the site.

Soledad Valley Creek is located approximately 50 feet north/northwest of the former USTs at the northern limit of the subject property line. This concrete-lined creek drains to an estuary immediately south of Carmel Valley Road. Due to the non-detectable concentrations of petroleum fuel hydrocarbons it does not appear that the creek has been negatively impacted by this unauthorized release.

VII. ADDITIONAL COMMENTS, DATA, ETC.

The soil and groundwater contamination levels do not exceed the general cleanup levels for the site. In beneficial use areas the soil levels are 100 mg/kg TPH (gs) and water levels of MCL. All gasoline components are less than detectable levels in groundwater however detectable levels of chlorinated hydrocarbons have been detected in groundwater at levels that exceed the MCLs. The highest concentrations are the following; PCE: 25 ppb, TCA: 19 ppb, and CIS 1, 3 DCA: 3 ppb. Chlorinated compounds have not been historically used at this site. The source appears to be the storm drain that lies just north of the former USTs and on the adjac4ent city of San Diego property. This site has met the requirements for assessing and mitigating the petroleum hydrocarbon contamination associated with the unauthorized release.

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

Dear Mr. Martinez:

Kleinfelder West, Inc. (Kleinfelder), on behalf of Scripps Health (Scripps), is pleased to present this site assessment report and site conceptual model for the former gasoline underground storage tank, located at the Scripps Memorial Hospital in La Jolla, California (Figure 1, Site Vicinity Map). The enclosed site assessment report provides a description of our understanding of the site history, recent site investigation activities, and laboratory analytical results. Based on the findings of this underground storage tank/soil investigation, Scripps requests that the County of San Diego Department of Environmental Health consider granting closure at this Site.

1.0 INTRODUCTION

This Site Assessment Report (SAR) presents the results of the site assessment activities associated with the former underground storage tank (UST) at Scripps Memorial Hospital – La Jolla, located at 9888 Genesee Avenue in La Jolla, California (Site, Figure 1). The Assessor's Parcel Number (APN) for the Site is 343-160-26-00.

1.1 SITE HISTORY

The Site is currently occupied by an active hospital, Scripps Memorial Hospital, which is located southeast of the intersection of Genesee Avenue and Interstate 5 at the northern edge of La Jolla, California (Figure 1). The Site is surrounded by commercial businesses on the east and north, by the right-of-way for Interstate 5 on the west, and by the University of California San Diego (UCSD) campus on the south.

The Site currently includes approximately nine major structures, two parking structures, several smaller support structures, several surface parking lots, one aboveground storage tank (AST), and two diesel fuel USTs (Figure 2).

The areas occupied by the Site were undeveloped land prior to 1953. By 1963, the center of the hospital facility had been graded where the main hospital building and the Central Engineering Plant (CEP) Building had been constructed. The two Medical Arts Buildings were constructed prior to 1974. The Burtec Dialysis Center and the Human Resources Building were constructed prior to 1982.

Based on a San Diego County Department of Environmental Health (DEH) records review and January 10, 2007 site visit, Kleinfelder understands that Scripps removed three USTs (two diesel USTs and one gasoline UST) and a dispenser island from the Site in 1999. The three former USTs were located north of the Boiler Room/CEP Building, and reportedly included a 4,000-gallon diesel UST, an 8,000-gallon diesel UST, and a 1,000-gallon gasoline UST. The three former USTs were reportedly installed in the 1970s, and were located north of the CEP Building, in the vicinity of the current UST configuration.

In 1986, the two diesel USTs were reportedly replaced with two new double-walled diesel USTs – a 7,000-gallon and a 4,000-gallon. The 7,000-gallon UST supplies diesel fuel to the Boiler Room, while the 4,000-gallon UST provides fuel to the back-up generators in the Boiler Room.

In 1999, the gasoline UST and associated dispenser and piping were excavated and removed from the Site. The gasoline UST was adjacent and north of the current diesel USTs. During excavation activities, no groundwater was observed in the excavation pit to a maximum depth of approximately 13 feet below ground surface (bgs). Two soil samples (T1-E-10' and T1-W-10') were collected in the excavation pit at approximately 10 feet bgs, and were submitted to an analytical laboratory for total petroleum hydrocarbon (TPH) analysis. The analytical results reported a TPH concentration of 890 milligrams per kilogram (mg/kg) in sample T1-W-10', located at the western edge of excavation pit. No actions were reportedly conducted to remove TPH-impacted soils during the excavation, and the case remains open with the DEH (Case No. H14291-001). Additionally, Scripps has not conducted any further investigations to assess the extent of contamination associated with the former gasoline UST.

On October 25, 2006, Scripps received a letter from the DEH requesting the final remediation documents associated with the former UST and TPH-impacted soils. On December 5, 2006, Scripps applied to the DEH to enter the UST open case into the Private Oversight Program (POP). Through the POP program, the DEH will manage and review the case in accordance with the California Health and Safety Code corrective action process, applicable industry practices, and the most recent DEH Site Assessment and Mitigation (SAM) manual. Upon completion of the Phase II investigation, the DEH will issue a Local Oversight Program (LOP) case closure letter, as appropriate. On April 9, 2007, DEH provided approval for the work plan.

2.0 GEOLOGY

2.1 LOCAL GEOLOGY

The Site is located in the coastal plain section of the Peninsular Ranges Geomorphic Province of California. This geomorphic province encompasses an area that extends approximately 900 miles from the Transverse Ranges and the Los Angeles Basin south to the southern tip of Baja California (Mexico), and varies in width from approximately 30 to 100 miles (Norris and Webb, 1990). The province is characterized by mountainous terrain on the east composed mostly of Mesozoic igneous and metamorphic rocks, and relatively low-lying coastal terraces to the west underlain by late Cretaceous, Tertiary, and Quaternary age sedimentary rocks. The coastal plain generally consists of subdued landforms underlain by sedimentary rock. The Site is also underlain by the Eocene age Scripps Formation (Kennedy and Peterson, 1975). Although not encountered during the field investigation, the geologic map by Kennedy and Peterson shows that the Pleistocene age Lindavista Formation outcrops on the Site to the west and overlays the Scripps Formation. The Lindavista Formation is a near shore terrace deposit, and typically consists of reddish-brown silty to clayey sand.

2.2 SITE GEOLOGY

The results of our site investigation indicate that fill and one geologic unit underlie the site. Subsurface lithology consists sequentially of artificial fill and Eocene age Scripps Formation. The Lindavista Formation is present on the Scripps campus at higher elevations to the east, but was not encountered in our investigation. Detailed descriptions of these materials are provided in the boring logs (Appendix A). Generalized descriptions are provided in the subsequent sections.

2.2.1 Fill

Fill was encountered in all six boring locations and typically consisted of gray brown to brown, moist, fine to medium grained silty sand with varying amounts of gravel, organics and debris. This fill was reportedly placed during the removal of the former gasoline UST, as well as during general grading operations for construction. The fill thickness ranges in depth from approximately 2 to 8.5 feet across the Site. It should be noted that the actual fill depth might vary in areas between our borings based on uncertainties of the actual pre-grading conditions at the site.

Copyright 2007 Kleinfelder

2.2.2 Scripps Formation

Directly underlying the fill, the Eocene-age Scripps Formation (Tsc) was encountered in all boring locations. This unit typically consists of a gray-brown to olive-brown, moist, fine grained, sandy siltstones/silty sandstones that are moderately to highly indurated and weakly bedded. This unit was encountered at depths ranging between approximately 2 and 8.5 feet bgs.

2.3 TOPOGRAPHY

The Site is located on a mesa at the intersection of Interstate I-5 and Genesee Avenue. According to the United States Geological Survey Del Mar Quadrangle, California- San Diego County 7.5-minute series, dated 1975, surface elevations vary from 310 to 350 feet mean sea level (msl) with a greatest drop off at the north and northeast boundaries of the Site. The regional topographic slope across the Site is to the east-northeast, towards Carroll Canyon. Rainfall onto the Site is interpreted to run off into storm drains on the Site.

2.4 HYDROLOGY

The Site is located within the Miramar Reservoir Hydrologic Area (906.10) and the Penasquitos Hydrologic Unit. Beneficial uses of groundwater in the area are listed as municipal, agricultural, and industrial uses. However, the Site is in an area that drains into Penasquitos Canyon, and is exempt by the State Water Resources Control Board from the municipal use designation under the terms and conditions of the State Board Resolution No. 88-63, Sources of Drinking Water Policy.

The Site is located within the Peninsular Ranges Geomorphic Province of California (Norris and Webb, 1990). The terrace deposits consist of sandstone with high clay and slit content and some gravel, which are generally associated with the Bay Point Formation located in other areas within San Diego County.

The groundwater elevation at the Site is approximately 100 feet bgs, based on subsurface investigations previously conducted at the Site. The interpreted direction of groundwater flow is generally to the northeast, towards Carroll Canyon Creek. However, groundwater depth and groundwater flow direction can be influenced by local pumping, rainfall, and irrigation patterns. The Carroll Canyon Creek is located approximately ½-mile to the northeast.

2.5 HYDROGEOLOGY

Previous site investigations indicate that the depth to groundwater is approximately 10 feet bgs. During the recent soil investigation, no groundwater was observed to a maximum depth of 13 feet bgs. It is likely that perched groundwater may exist in certain areas of the Site due to the low permeability silts/clays.

The groundwater gradient beneath the Site is likely towards the northeast, based on surface topography. The elevation of groundwater on the Site is estimated to be greater than 100 feet below ground surface based on previous subsurface investigations on the facility. Shallower perched water may exist seasonally or in utility trenches at the Site.

3.0 FIELD INVESTIGATION AND ANALYTICAL RESULTS

3.1 FIELD INVESTIGATION

On June 11, 2007, Kleinfelder observed the advancement of six soil borings, KA-1 to KA-4B. The six borings were advanced using direct push drilling methods (e.g., Geoprobe-type rig). Prior to initiation of field activities, Kleinfelder completed a site-specific health and safety plan, which addressed site safety hazards, equipment handling safety procedures, monitoring equipment, and possible risk from chemical contamination originating from the Site. Safety procedures were discussed with field personnel prior to the initiation of field activities. Modified Level D safety equipment (e.g., steel-toed boots, protective head wear, hearing protection, nitrile gloves, highly reflective vests, and safety eyewear) was required. Cones and caution tape were used to separate the public area from the work area. Field exploration was completed without incident. Kleinfelder notified Mr. Danny Martinez of the County of San Diego Site Assessment and Mitigation Program approximately 72 hours prior to commencing field activities. A storm water pollution prevention plan was not needed for soil investigation since the field work was limited to drilling.

Prior to the advancement of the borings, air knifing activities were performed to "probe" for any buried utilities (e.g., electrical, gas, product lines, etc), to minimize the likelihood of injury to personnel and/or damage to the utilities during the drilling activities. The six borings were advanced at the Site, using a direct-push drill rig, to depths ranging from 6.5 feet bgs to 13 feet bgs. Kleinfelder staff logged the subsurface lithology using the Unified Soil Classification System (USCS), and collected samples for laboratory analysis. The air knifing, drilling, and soil sampling were performed by Milestone Exploration, Inc. (Milestone) of Tustin, California.

Prior to drilling activities, Underground Service Alert (USA) was notified to mark out existing utilities in the vicinity of the proposed boring locations. Additionally, a geophysical survey was preformed by Cable, Pipe and Leak Detection, Inc. (CPL) of Spring Valley, California to locate or clear any additional subsurface structures or utilities in the vicinity of the individual boring locations. At each boring location, Borings KA-1, KA-2 and KA-3 were cored at the surface in order to get through approximately 10-inches of reinforced concrete that was present in the area.

Copyright 2007 Kleinfelder

The soil samples were collected with a 1.5-inch diameter by 24-inch long sample barrel containing four 6-inch long stainless steel sleeves. Soil samples selected for analysis were sealed with Teflon sheeting and end caps. All soil samples were placed in sealed coolers, packed with ice, and transported under chain-of-custody (COC) to EnviroMatrix Analytical Laboratories in San Diego, California. Copies of the boring logs are included in Appendix A. Copies of the laboratory analytical reports and COCs are included as Appendix B.

It should be noted that boring KA-4, located in the vicinity of the former pump dispenser, encountered shallow refusal on three separate attempts at depths ranging from approximately 6.5 to 7.5 feet bgs. The two additional attempts to advance the boring are identified as KA-4A and KA-4B. Due to the nature of this obstruction, no further attempts were made at this location. Refusal was also encountered at borings KA-1 and KA-2 at approximately 9 and 8 feet respectively within the Scripps Formation.

Drilling equipment used during the soil investigation, including probes and sampling equipment, were decontaminated to prevent cross-contamination between boring locations. The decontamination process consisted of washing equipment with a soap and water solution; followed by a rinse with clean tap water; and then followed by second rinse with de-ionized water. All investigative-derived soil cuttings and decontamination liquids were contained in a 55-gallon drum and stored onsite for disposal, once soil analytical results were reviewed.

Upon receipt of the laboratory analytical results, Scripps will arrange for the disposal of the drummed waste by a licensed waste hauler. No stockpiled soil was generated as part of this investigation.

3.2 ANALYTICAL RESULTS

During the soil investigation, a total of nine soil samples were collected and submitted for laboratory analysis, using one or more of the following methods:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260B
- Total petroleum hydrocarbons as gasoline (TPH-g) and as diesel (TPH-d) by USEPA Method 8015.

Copyright 2007 Kleinfelder

According to the soil analytical results, the laboratory reported TPH-d concentrations of 481 mg/kg and 18.8 mg/kg were reported in two deeper soil samples from boring KA-3 at approximately 9 to 11 feet bgs and 11 to 13 feet bgs, respectively. However, during a review of the gas chromatograms, it appears that the TPH results may be a weathered gasoline fingerprint. Additionally, several VOCs were reported above the USEPA Region 9 residential and industrial preliminary remediation goals (PRGs, 2004) for soil in the two deeper samples from KA-3. The VOC constituents reported in the KA-3 soil samples are more associated with TPH-g, not TPH-d. The detected constituents are located within the previously defined hydrocarbon-impacted soil.

Three borings (KA-1, KA-2, and KA-4) are located outside of the lateral extent of the TPH-impacted soil area. Figure 3 illustrates where the borings are located in relation to the previously-identified TPH-impacted soil boundary and the recently defined impacted soil boundary.

Table 1 summarizes the analytical results for petroleum hydrocarbons in soil. Table 2 summarizes the analytical results for VOCs in soil.

4.0 DELINEATION OF CONTAMINATION

Based on the analytical results, a limited extent of petroleum hydrocarbon contamination appears to be present in the soil, and appears to be confined to the former gasoline UST excavation area. The VOC and TPH concentrations are highest within the excavation backfill and extend to approximately 13 feet bgs and 5 feet in diameter. Additionally, the area under the former pump dispenser shows no contamination at shallower depths. The estimated volume of contaminated soil is approximately 250 cubic feet (ft^3) or 9.4 cubic yards (yd^3). The estimated mass of contaminated soil is approximately 0.01 tons (or 19 pounds).

Since no groundwater was encountered during the investigation, the possibility of migration off-site appears to be minimal. Regional groundwater elevation at the Site is approximately 100 feet bgs. At certain times of the year, perched groundwater may be present in the vicinity of the former UST. However, the presence of clay soils at the Site further reduces the possibility of off-site migration of perched groundwater.

According to the California Department of Water Resources (DWR) records, there are no production or potable water supply wells within the vicinity of the Site. Therefore, there does not appear to be an apparent threat to downgradient receptors via groundwater.

It should be noted that contact with contaminants may occur during excavation activities conducted in the subsurface. The risk would be highest to construction workers directly handling any impacted soil.

5.0 SITE SAFETY

Kleinfelder prepared a project-specific health and safety plan (HASP) prior to initiation of the field activities. All project personnel (Kleinfelder and subcontractors) were directed to follow the requirements stipulated in the HASP, and comply with the requirements of the Occupational Safety and Health Administration (OSHA) hazardous waste operations and emergency response standard (29 Code of Federal Regulations 1910.120).

Kleinfelder performed a preliminary site visit with Scripps to locate proposed boring locations, based on accessibility for drilling equipment and the presence of underground utility lines and structures. The proposed boring locations were then pre-marked for Underground Service Alert (Dig-Alert) clearance and a subsurface geophysical survey, which assisted in locating current USTs and any other underground utilities or structures prior to groundbreaking activities.

Prior to drilling activities, Kleinfelder supervised air knifing activities to further locate any buried utilities (e.g., electrical, gas, product lines, etc), in order to minimize the likelihood of injury to personnel and/or damage to the utilities during the drilling activities.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analytical results, a limited extent of petroleum hydrocarbon contamination appears to be present in the soil that extends to approximately 13 feet bgs. Several of the reported VOC concentrations were above the EPA Region 9 PRGs for residential and industrial land use; however, confined to a limited area in the vicinity of the former UST.

The lateral and vertical extent of impacted soil has been adequately defined both vertically and laterally at the Site. No additional environmental assessment is recommended at this time.

Based on previous activities and the information above, the following conclusions can be made:

- The source of the contamination (former UST at the Site) has been removed;
- TPH and VOC concentrations are limited and appears to be less than approximately 13 feet bgs;
- Groundwater at the Site is approximately 100 feet bgs; and
- Groundwater beneath the Site is exempt by the State Water Resources Control Board from the municipal use designation.

Based on these observations, Kleinfelder recommends that closure and/or no further action be granted for the Site.

7.0 LIMITATIONS

Kleinfelder has performed the services for this project in accordance with the *Phase II Leaking Underground Storage Tank (LUST) Investigation Work Plan*, dated February 19, 2007, and with the current practices in this geographic area for site assessment investigations. No guarantees are either expressed or implied. There is no investigation that is thorough enough to preclude the presence of materials at the Site, which presently, or in the future, may be considered hazardous. Because regulatory evaluation criteria change, acceptable concentrations of contaminants present at the time of an investigation may in the future become subject to different regulatory standards.

This report is for the sole use of the Scripps. It is not the intent of this report to be a site investigation, but a report of the results from a limited soil sample investigation. Unauthorized use or copying of this document is strictly prohibited. Any unauthorized use or copying by a party other than the Scripps and their authorized representatives will release Kleinfelder from any liability resulting from such use.

GENERAL NOTES:

1.
2. *Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual.*
3. *No warranty is provided as to the continuity of soil conditions between individual sample locations.*
4. *Logs represent general soil conditions observed at the point of exploration on the date indicated.*

In general, Unified Soil Classification designations presented on the logs were evaluated by visual methods only. Therefore, actual designations (based on laboratory tests) may vary.

MOISTURE CONTENT

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

CEMENTATION

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

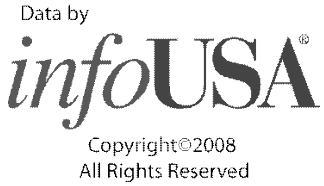
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.
