Executive Summary

This report presents the findings of a Hazardous Materials Technical Study (HMTS) for the Campus Pointe Master Plan Project (project area) located in San Diego, California. The HMTS was performed by Rincon Consultants, Inc. (Rincon). The purpose of this HMTS is to provide a preliminary evaluation of the potential for environmental effects from hazardous materials and hazardous wastes for the project as a result of past or current activities in the area.

The project area consists of eight parcels totaling approximately 84.6-acres located east of Interstate 5 (I-5) north of Campus Point Court, west of Campus Point Drive, and south of Roselle Street in San Diego, California. The project area is currently developed as a technology and life sciences park, consisting of nine buildings utilized as offices, laboratories, and research facilities (10210, 10260, 10290, and 10300 Campus Point Drive and 4110, 4161, 4210/4224, 4242, and 4244 Campus Point Court) and associated parking areas; a soccer field; and areas of steeply sloped, vacant land. The project area is located in an area that is primarily comprised of commercial, light-industrial, and vacant land. Properties in the vicinity of the project area include commercial offices (Qualcomm, Scripps Foundation, Scripps Health), I-5, and vacant land.

Rincon performed a reconnaissance of the subject property on September 23, 2019. The purpose of the reconnaissance was to observe existing project area conditions that may indicate the presence of hazardous materials within the project area. Rincon did not have access to the interiors of the buildings; therefore, only observations of the building exteriors were made. The portions of the project area that are vacant land were not accessible because they were heavily vegetated and steeply sloped. Observations of these areas were made from adjacent developed areas.

Several areas within the project area were observed to be marked as hazardous materials storage areas or labelled with a hazard placard, indicating hazardous and/or flammable materials are stored inside, was observed on the exterior of the structure as follows:

- The west side of the chemical storage, heating and cooling equipment, and storage enclosure building located south of the 10300 Campus Point Drive building was marked with several hazard placards. In addition, utility cover boxes leading from the 10300 Campus Point Drive building to the chemical storage building appears to the location of subterranean piping that possibly contains hazardous or flammable materials.
- Doors on the north side of the 10300 Campus Point Drive Building were marked with hazard placards and flammable materials warning signs.
- A small cinderblock enclosure located southeast of the 10300 Campus Point Drive building was marked with a hazard placard and flammable materials warning signs.
- The equipment storage enclosure associated with the 10290 Campus Point Drive building was marked with several chemical diamonds and a sign noted diesel fuel was stored inside.
- A metals storage box located in the loading dock west of the 4224 Campus Point Court building was marked with a hazard placard and a sign indicated “refrigerant storage.”
- A gate located on the east side of the 4242 Campus Point Court building was labelled with a hazard placard.
- A flammable materials storage cabinet was observed in a gated area on the south side of the 4161 Campus Point Court building.

During the site reconnaissance, the following eight aboveground storage tanks (ASTs) were observed on the project area, which appear to be associated with the operation of emergency power generators:

- An AST labelled as "fuel oil" was observed through an open gate inside of the chemical storage, heating and cooling equipment, and trash enclosure located south of the 10300 Campus Point Drive building
- A diesel fuel AST was observed inside of a small portable metal storage box located north of the 4110 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 4161 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 4224 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 10290 Campus Point Drive building

Evidence of a release was not observed around the ASTs observed north of the 4110 Campus Point Court building or the ASTs at the loading dock west of the 4161 Campus Point Court building. The other ASTs were observed from a distance from public thoroughfares, so we were unable to determine if evidence of releases were present.

A regulatory database search was conducted by Environmental Data Resources (EDR) for sites that generate, store, treat, or dispose of hazardous materials or sites for which a release or incident has occurred. The search was conducted for the project area and included data from surrounding sites within a specified radius of the property. The project area was listed on multiple databases, the majority of which are not indicative of a release of hazardous materials. The following items of potential environmental concern were noted within the project area in the EDR report and additional records were reviewed:

- **4161 Campus Point Court**: According to the database report, facilities associated with this address disposed of "contaminated soil from site clean-up" on two occasions. Approximately 1 ton was disposed in approximately 1990 and 0.05 ton of soil was disposed in 1996. Additional information was not available in the online databases searched.
- **10300 Campus Point Drive:** Regulatory agency records indicated a release of approximately 5-gallons of diesel fuel occurred in April 1986 during a tank integrity test due to overfilling of a 12,000-gallon diesel underground storage tank (UST). Reportedly the diesel fuel was released to the surrounding asphalt pavement and was rinsed into a storm drain using approximately 35 gallons of water. A note to the file indicates that a closure letter was not on file; however, a form completed by the regulatory agency case worker dated May 30, 1986 indicates that the source was contained, there were no off-site impacts, there was no public health risk, no further monitoring was required, and that a copy of the tank integrity test was on file indicating that the tank passed. Based on the closed status of the case and that the release does not appear to have impacted soil or groundwater, this listing is not anticipated to impact the project area.

  The facility is also listed as associated with four other USTs: two, 500-gallon chemical waste USTs, a 500-gallon diesel UST, and a 5,100-gallon diesel UST. The database report indicates that the chemical waste USTs and the 500-gallon and 12,000-gallon diesel USTs were removed from the site in 1986 and the 5,100-gallon diesel UST was removed in 2009. Information regarding the locations of the USTs and regulatory agency documentation of their removal was not on file.

- **Camp Matthews**: The documents reviewed indicate that the southern portion of the project area is within the Camp Matthew Formerly Used Defense Site boundary. However, the project area is not within the Munitions Response Site (site known to require a munitions response) investigated as part of the report, which is identified as Range Complex No. 1

Based on review of historical aerial photographs and topographic maps, the project area was vacant until it was graded and construction of some of the existing site structures began in the early-1980s and has generally been developed as at present since 2017. Based on the age of the buildings constructed, it is unlikely that that lead-based paint was utilized; however, asbestos-containing materials (ACM) may have been used during construction.

Based on the research conducted as part of this assessment, seven hazardous material findings have been identified and recommendations were provided for additional assessment.

1. Five USTs formerly at 10300 Campus Point Drive, removed in 1986. Recommendation R-1.
2. Reported contaminated soil disposed during site cleanup activities at 4161 Campus Point Court. Recommendation R-2.
3. Current onsite hazardous and/or flammable materials storage areas at various locations within the project area. Recommendation R-3.
4. Multiple diesel fuel ASTs at various locations within the project area. Recommendation R-3.
5. Possible subterranean piping that may contain hazardous and/or flammable materials at 10300 Campus Point Drive. Recommendations R-3.
6. Structures built prior to 1989 that may contain ACM at 10300, 10210, and 10260 Campus Point Drive and 4224/4110, 4242, and 4244 Campus Point Court. Recommendation R-4.
7. Adjacent I-5 freeway. Recommendation R-5.

Rincon also considered the following conditions, which were considered *de minimis*: unexploded ordinance associated with the former Camp Matthews and lead-based paint.

To evaluate the potential project area impact associated with the hazardous material findings identified above, we recommend the following:

- **R-1**: According to the regulatory records reviewed, five USTs were associated with the 10300 Campus Point Drive buildings. The database report lists that the USTs were removed in 1986 and 2009; however, regulatory agency records documenting the removal of the USTs and associated soil sampling were not available for review. If the project area encounters USTs, associated piping, and/or impacted soil it will need to be reported to the County of San Diego DEH and additional assessment may be required.
- **R-2**: According to the regulatory records reviewed, contaminated soil was removed from the project area associated with a site cleanup at 4161 Campus Point Court. Additional information regarding the site clean-up activities was not available in the records reviewed; therefore, it is unknown if additional impacted soil remains in place. If impacted soil remains in place that is contaminated with petroleum hydrocarbons or other contaminants of concern (COCs), it may pose a potential vapor intrusion issue for the project area and additional assessment may be required. If proposed project activities involve the disturbance of the soil in the vicinity of 4161 Campus Point Court, additional assessment should be performed and/or a Soil Management

Plan should be prepared to provide methods and procedures for the excavation, handling, storage, and disposal of contaminated soils, if encountered.

- **R-3**: Hazardous/flammable materials appear to be stored in various locations throughout the project area, including diesel ASTs and possible subterranean piping. If proposed project activities are to occur these areas, the hazardous/flammable materials must be managed and/or disposed in accordance with applicable local, state, and federal laws. If evidence of a release is observed in these locations, additional assessment may be required.
- **R-4**: If structures built prior to 1989 are planned for demolition or repair, an ACM survey should be conducted to determine if ACM is present and will require special handling/disposal.
- **R-5**: According to the historical resources reviewed, the I-5 Freeway has been located adjacent to the west of the alignment since at least 1966. Therefore, aerially-deposited lead has the potential to be located on the properties adjacent to the freeway. If project activities include disturbance of soil adjacent to I-5, additional assessment may be necessary.

Introduction

This report presents the findings of a Hazardous Materials Technical Study (HMTS) for the Campus Pointe Master Plan Project (project area) located in San Diego, California (Figure 1, Vicinity Map). The HMTS was performed by Rincon Consultants, Inc. (Rincon). The following sections present our findings and provide our opinion as to the presence of Environmental Conditions with the potential to impact the project.

Purpose

The purpose of this HMTS is to provide a preliminary evaluation of the potential for environmental effects from hazardous materials and hazardous wastes for the project as a result of past or current activities in the area. Our report documents properties of potential environmental concern within the project area and vicinity, which have or may have been impacted by hazardous materials or wastes and identifies environmental concerns that have the potential to impact the operation or construction of the proposed project.

Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the project area to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist in the project area or at properties located in the vicinity of the project area.
- Reviewed online files for the project area and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current U.S. Geological Survey (USGS) topographic map to obtain information about the project area and regional topography and uses of the project area and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Division of Oil and Gas records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs within the project area.
- Reviewed the National Pipeline Mapping System database for adjacent and nearby natural gas and hazardous materials pipelines.
- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the project area and adjacent properties.

Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of this study may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Project Description

The project consists of a neighborhood development permit (NDP) entitlement application (Process 2) for the existing Campus Pointe campus buildings (10260, 10290, and 10300 Campus Point Drive), referred to as CP1 through CP3. The owner of the Campus Pointe campus has purchased the adjacent Genesis campus which contains six existing buildings (4110, 4161, 4210/4224, 4242, and 4244 Campus Point Court and 10210 Campus Point Drive). The combined area of the Campus Pointe and Genesis campuses comprises the project area.

The Campus Pointe Master Plan project would retain existing buildings in the Campus Point campus, CP1 through CP3, and four existing buildings on the Genesis campus (4210/4224, 4242, and 4244 Campus Point Court and 10210 Campus Point Drive), referred to as G1 through G4; but, includes plans to demolish the 4110 and 4161 Campus Point Court buildings. The project would increase intensity by constructing four new buildings (CP4 through CP7), as well as a new central energy plant and a retail amenity building. Other site improvements include grading, site utilities, drainage improvements, landscaping, irrigation, and hardscape.

Location

The project area consists of eight parcels totaling approximately 84.6-acres located east of Interstate 5 (I-5) north of Campus Point Court, west of Campus Point Drive, and south of Roselle Street in San Diego, California (Figure 2, Site Map). The project area is identified as Assessor's Parcel Number (APN) 343-230 -13-00, -14-00, -17-00, -38-00, -40-00, -41-00, -42-00, and -43-00.

Project Area and Vicinity General Characteristics

The project area is currently developed as a technology and life sciences park, consisting of nine buildings utilized as offices, laboratories, and research facilities, associated parking areas, a soccer field, and areas of steeply sloped, vacant land.

The project area is located in an area that is primarily comprised of commercial, light-industrial, and vacant land. Properties in the vicinity of the project area include commercial offices (Qualcomm,

Scripps Foundation, Scripps Health), I-5, and vacant land. The current adjacent land uses are depicted on Figure 3, Adjacent Land Use Map.

Descriptions of Structures, Roads, Other Improvements on the Site

During the site reconnaissance, the site was developed with nine multi-story buildings, three equipment/storage enclosures, garden, asphalt-paved parking, landscaped areas, and a soccer field.

Access to the project area is available from a driveway on Campus Point Drive and Campus Point Court.

The City of San Diego provides water and sewer service. San Diego Gas & Electric provides electrical and natural gas service. Private vendors provide solid waste collection and disposal services.

Records Review

Physical Setting Sources

Geology and Hydrogeology

The San Diego area is within the Peninsular Ranges Geologic Province of California (CGS, 2002). This province is characterized by northwest-trending mountains and faults. Rocks within the Peninsular Range Province were emplaced during Cretaceous orogenic events and uplifted into the present mountain ranges during the late Tertiary and Quaternary periods. Igneous, volcanic, metamorphic, and sedimentary rocks are all found within the Peninsular Ranges. The area is seismically active, with several known active faults crossing the Province (CGS, 2002).

Site Geology

According to the *Preliminary Geotechnical Investigation* prepared for a portion of the project area (10290 Campus Point Drive) by Geocon Incorporated (Geocon, 2015), the site is underlain by artificial fill and the Scripps and Ardath formations. Artificial fill was described as "medium dense silty sand and stiff sandy silt and clay" and was expected to be present at depths ranging from less than 5 feet to 20 feet below ground surface (bgs). Geocon states that the fill was likely placed at the site during mass grading activities in 1979/1980. The Scripps Formation was described as "medium-grained, yellowish brown sandstone containing cobble-conglomerate beds." The Ardath Formation was described as "olive-gray and yellowish brown silty shale."

According to the current USGS Geologic Map (Geologic Map of the San Diego 30' x 60' Quadrangle, 2008) the project area is underlain by the Scripps Formation and Ardath Shale.

Regional Groundwater Occurrence and Quality

During the preparation of this Hazardous Materials Technical Study, we reviewed the California State Water Resources Control Board's (SWRCB's) online GeoTracker database to determine depth to groundwater and flow direction in the vicinity for the project area. According to *Case Closure Summary, Underground Storage Tank (UST) Case, 10685 Roselle St., San Diego, CA 92121 #H16657-001*, prepared by the County of San Diego Department of Environmental Health, dated November 14, 1996, groundwater in the vicinity of the project area is reported to flow to the north/northwest. Depth to groundwater at the 10685 Roselle Street property, located approximately 0.22-mile north of the project area, was reported to range from 9.8 to 11. 3 feet bgs. However, the project area is located at an elevation of approximately 300 feet above mean sea level (MSL) and the 10685 Roselle Street property is located at an elevation of approximately 40 feet MSL; therefore, groundwater at the site may not correlate with groundwater depth at the 10685 Roselle Street property. Regulatory agency case closure records for properties at a similar elevation to the project area were reviewed on GeoTracker and the County of San Diego Department of Environmental Health (DEH) stated that groundwater in the project area vicinity is anticipated to be at a depth of greater than 100 feet. Based on the local topography, it is anticipated that groundwater would flow to the west/northwest.

Geocon's *Preliminary Geotechnical Investigation* indicated that groundwater was not encountered to the total depth investigated of 19.5 feet bgs (Geocon, 2015).

Standard Environmental Record Sources

EDR was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the project area and included data from surrounding sites within specified radii of the project area. A copy of the EDR report, which specifies the ASTM search distance for each public list, is included as Appendix A. As shown on the attached EDR report, federal, state and county lists were reviewed as part of the research effort. Please refer to Appendix A for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the project area. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

Online regulatory agency files reviewed for the project area are discussed in the Additional Environmental Record Sources section of this report.

Offsite Properties

Offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., LUST, National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the project area, based on the following factors:

- Reported distance of the facility from the project area
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the assumed groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the project area, based on one or more of the factors listed above, are summarized in Table 2. In accordance with ASTM, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Orphan Listings

EDR reported one orphan or unmapped site listing, which EDR was unable to plot due to insufficient address information. Based on Rincon's review of the limited address information or site description for the orphan listing, it is not expected to impact the project area.

Additional Environmental Record Sources

Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for facilities within the specified search radii that were interpreted to have the potential to impact the project area, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, DTSC EnviroStor database), as described below. Copies of selected documents reviewed are included in Appendix B.

Project Area

The following listings are located within the project area:

- **Leidos at 4161 Campus Point Court**: This facility is listed on the HAZNET and CERS HAZ WASTE database. According to the EDR report, the facility disposed of 0.05 tons of "contaminated soil from site clean-up" in 1996. Additional information was not available in the online databases searched. Based on this information, it is unknown if this listing has the potential to have impacted the project area.
- **Science Applications International at 4161 Campus Point Court**: The facility is listed on the HAZNET database. According to the EDR Report, the facility disposed of 1 ton of "contaminated soil from site clean-up" in 1990. Additional information was not available in the online database searched. Based on this information, it is unknown if this listing has the potential to have impacted the project area.
- **Eli Lilly and Company/IVAC Corporation at 10300 Campus Point Drive**: The facility is listed on the RCRA-SQG, FINDS, ECHO, San Diego Co. HMMD, CPS-SLIC, HAZNET, LUST, HIST CORTESE, RGA-LUST, CIWQS, CERS, CERS TANKS, and CERS HAZ WASTE databases. According to the EDR Report, the facility is associated a release of an unreported substance caused by overfilling of piping in April 1986. The case was closed as of 1986.

  Online records were reviewed at the County of San Diego DEH Environmental Health Document Library. The records reviewed indicated that a release of approximately 5-gallons of diesel fuel occurred in April 1986 due to overfilling of a 12,000-gallon diesel UST on the western portion of the property in preparation of performing tank integrity testing. Reportedly the diesel fuel was released to the surrounding asphalt pavement and was rinsed into a storm drain using approximately 35 gallons of water. A note to the file indicates that a closure letter was not on file; however, a form completed by the DEH case worker dated May 30, 1986 indicates that the source was contained, there were no off-site impacts, there was no public health risk, no further monitoring was required, and that a copy of the tank integrity test was on file indicating that the tank passed. Based on the closed status of the case and that the release does not appear to have impacted soil or groundwater, this listing is not anticipated to impact the project area.

  The facility is also listed as associated with four other USTs: two, 500-gallon chemical waste USTs, a 500-gallon diesel UST, and a 5,100-gallon diesel UST. The EDR report indicates that the chemical waste USTs and the 500-gallon and 12,000-gallon diesel USTs were removed from the site in 1986 and the 5,100-gallon diesel UST was removed in 2009. Information regarding the locations of the USTs was not on file.
- **Camp Matthews**: This facility is listed on the Hist Cal-Sites, Cortese, Envirostor, Response, UXO, and FUDS databases. According to the EDR report the facility is a Formerly Used Defense Site that included artillery and small arms firing ranges and is in the Remedial Investigation phase. Documents were reviewed for the facility on the DTSC's EnviroStor database. The Final Site Inspection Report, prepared by Parsons dated September 2007, indicates that the southern portion of the project area is within the Camp Matthew Formerly Used Defense Site boundary. However, the project area is not within the Munitions Response Site (site known to require a munitions response) investigated as part of the report, which is identified as Range Complex No.

1. Based on this information, the project area is not located within the Munitions Response Site; therefore, the listing is not anticipated to impact the project area.

Adjacent Properties

Two adjacent properties were listed in databases searched by EDR:

- **TRW/LSI Products and Raytheon Semiconductor at 4243 Campus Point Drive**: This property is located adjacent to the south of the project and is listed on the SWEEPS UST, RCRA-SQG, FINDS, ECHO, San Diego Co. HMMD, Hist UST, HAZNET, CERS, and CERS HAZ Waste databases. According to the EDR report, the property is associated with three UST that were removed in 1986: 1,500-gallon and 4,000-gallon chemical waste USTs and a UST of unreported size and contents; and stores and disposes of hazardous wastes. However, these listing are not indicative of a release; therefore, the property is not expected to impact the project area.
- **Scripps Health at 4275 Campus Point Court**: This property is located adjacent to the south of the project area and is listed on the San Diego Co. HMMD, AST, CERS, CERS TANKS, and RCRA NonGen/NLR databases. According to the EDR report, this property has a diesel fuel AST that is utilized to power an emergency generator and disposes of hazardous waste; however, no violations have been noted at the property. Therefore, the property is unlikely to impact the project area.

Upgradient Release Sites

One upgradient property was listed in release databases searched by EDR:

- **Scripps Memorial Hospital at 9888 Genesee Avenue**: This property is located approximately 764 feet to the south southwest of the project area and is listed on the UST, RCRA-LQG, San Diego Co. HMMD, LUST, SWEEPS UST, Hist Cortese, NPDES, CIWQS, CERS, San Diego Co LOP, CERS TANKS, CERS HAZ WASTE, AST, and HAZNET databases. According to the EDR report, the property is associated with a release of gasoline to soil only and the case status is listed as closed as of 2007. Documents were reviewed for the property on the GeoTracker database. The Site Assessment Report, prepared by Kleinfelder, dated August 9, 2007, states that petroleum hydrocarbon impacted soil was encountered during UST and dispenser island removal activities at the site in 1999; however, was left in place at the time. In 2007 additional site assessment activities were performed and determined that approximately 9 cubic yards of petroleum impacted soil remain in place and are limited to an area of approximately 5 feet wide by 13 feet deep. Therefore, based on the limited extent of this release and the distance from the project area, the release at this property is not expected to impact the alignment.

Known or Suspect Contaminated Release Sites with Potential Vapor Migration

The EDR report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the project area. Based on the ASTM E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the project area:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If known or suspect contaminated sites are located within the above referenced distances from the project area, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons (30 feet from the project area) and other COCs (100 feet from the project area). Per ASTM E2600-15, vapors associated with impacted soil or groundwater present within these distances have the potential to migrate beneath the project area.

Petroleum Hydrocarbons and Other COCs

Based on our review of the EDR report information as indicated above, site cleanup activities that resulted in the disposal of contaminated soil took place associated with 4161 Campus Point Court (Figure 2). However, additional documentation was not found regarding the cleanup, the contaminants of concern, and if any contaminated soil remains in place. Based on this, it is unknown if petroleum-hydrocarbon contamination or contamination from other COCs is present in the vicinity of 4161 Campus Point Court that may pose a threat to the project area.

Based on our review of the EDR report, there are no other known or suspect sites contaminated with petroleum hydrocarbons within 528 feet of the project area or contaminated with other COCS within 1,760 feet of the project area.

Cortese Site Listings Onsite or within One-Quarter Mile

The California Environmental Protection Agency (CalEPA) Cortese List includes sites that are included in at least one of the following lists:

- List of Hazardous Waste and Substance sites from DTSC EnviroStor Database
- List of LUST Sites by County and Fiscal Year from Water Board GeoTracker Database

- List of “active” CDO and CAO from Water Board GeoTracker Database
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC

The Cortese List was reviewed for onsite listings and listings within one-quarter mile of the project area. A portion of the site is listed on the Cortese list as Camp Matthews. Additional information regarding the Camp Matthews listing is provided in the Additional Environmental Record Sources section.

Review of State of California Division of Oil and Gas Records

A review of the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System indicates that no oil wells are located on the project area or adjacent properties, or within one-quarter mile of the project area.

Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer[1] indicates that no gas transmission pipelines or hazardous liquid pipelines are located on the project area or adjacent properties.

Site Reconnaissance

Rincon Consultants performed an unaccompanied reconnaissance of the project area on September 23, 2019. Select site photographs taken during the site reconnaissance are provided in Figures 4 and 5. The purpose of the reconnaissance was to observe existing project area conditions that may indicate the presence of hazardous materials within the project area.

Methodology and Limiting Conditions

The site reconnaissance was conducted by:

1. Observing the project area from public thoroughfares,
2. Observing the adjacent properties from public thoroughfares,
3. Observing the exterior of the onsite structures, and
4. Observing the project area from driveways and walking paths/sidewalks.

Rincon did not have access to the interiors of the buildings; therefore, only observations of the building exteriors were made. The portions of the project area that are vacant land were not accessible because they were heavily vegetated and steeply sloped. Observations of these areas were made from adjacent developed areas.

Current Use of the Project Area and Adjacent Properties

The project area is currently developed as a technology and life sciences park, consisting of nine buildings utilized as offices, laboratories, and research facilities, associated parking areas, landscaped areas, a soccer field, garden, and areas of steeply sloped, vacant land.

Adjacent property uses included commercial office buildings, vacant land, and I-5.

Past Use of the Project Area and Adjacent Properties

Based on our site reconnaissance, past uses at the project area and adjacent properties are not readily apparent.

General Description of Structures

The following structures were present onsite:

- 10300 Campus Point Drive: multi-story life sciences and technology office space
- Chemical storage, heating and cooling equipment, and trash enclosure associated with the 10300 Campus Point Drive building
- Two small cinderblock equipment storage enclosures associated with the 10300 Campus Point Drive building
- 10290 Campus Point Drive: multi story life sciences and technology office space
- Equipment storage enclosure associated with 10290 Campus Point Drive Building

- Soccer field
- 10260 Campus Point Drive: multi-story office building
- 10210 Campus Point Court: multi-story office building
- 4110 Campus Point Court: multi-story office building
- 4161 Campus Point Court: multi-story office building/warehouse
- 4210 Campus Point Court: office buildings and pool
- 4224 Campus Point Court: multi-story office building
- 4242 Campus Point Court: multi-story office building and associated equipment enclosure

Exterior Observations

Hazardous Substances and Petroleum Products in Connection with Identified Uses

Several areas within the project area were observed to be marked as hazardous materials storage areas or labelled with a hazard placard, indicating hazardous and/or flammable materials are stored inside, was observed on the exterior of the structure as follows:

- The west side of the chemical storage, heating and cooling equipment, and storage enclosure building located south of the 10300 Campus Point Drive building was marked with several hazard placards. In addition, utility cover boxes leading from the 10300 Campus Point Drive building to the chemical storage building appears to the location of subterranean piping that possibly contains hazardous or flammable materials.
- Doors on the north side of the 10300 Campus Point Drive Building were marked with hazard placards and flammable materials warning signs.
- A small cinderblock enclosure located southeast of the 10300 Campus Point Drive building was marked with a hazard placard and flammable materials warning signs.
- The equipment storage enclosure associated with the 10290 Campus Point Drive building was marked with several chemical diamonds and a sign noted diesel fuel was stored inside.
- A metals storage box located in the loading dock west of the 4224 Campus Point Court building was marked with a hazard placard and a sign indicated “refrigerant storage.”
- A gate located on the east side of the 4242 Campus Point Court building was labelled with a hazard placard.
- A flammable materials storage cabinet was observed in a gated area on the south side of the 4161 Campus Point Court building.

Storage Tanks

During the site reconnaissance, no below-ground storage tanks or evidence of USTs were observed on the project area. The following eight ASTs were observed on the project area, which appear to be associated with the operation of emergency power generators:

- An AST labelled as “fuel oil” was observed through an open gate inside of the chemical storage, heating and cooling equipment, and trash enclosure located south of the 10300 Campus Point Drive building

- A diesel fuel AST was observed inside of a small portable metal storage box located north of the 4110 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 4161 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 4224 Campus Point Court building
- Two diesel fuel ASTs were observed in the loading dock west of the 10290 Campus Point Drive building

Evidence of a release was not observed around the ASTs observed north of the 4110 Campus Point Court building or the ASTs at the loading dock west of the 4161 Campus Point Court building. The other ASTs were observed from a distance from public thoroughfares, so we were unable to determine if evidence of releases were present.

Odors

During the site reconnaissance, Rincon did not identify any strong, pungent, or noxious odors.

Drums

During the site reconnaissance, no drums were observed on the project area.

Hazardous Substances and Petroleum Products Containers Not in Connection with Identified Uses

No hazardous substances or petroleum products not in connection with identified uses were observed at the project area.

Unidentified Substance Containers

No unidentified substance containers or unidentified containers that might contain hazardous substances were observed during the site reconnaissance.

Indications of Polychlorinated Biphenyls (PCBs)

During the site reconnaissance, multiple pad-mounted electrical transformers were observed throughout the project area. No evidence of releases was observed in the vicinity of the transformer.

Other Conditions of Concern

During the site reconnaissance Rincon did not note any of the following:

- Stains or corrosion
- Clarifiers and sumps
- Degreasers/parts washers
- Stained soil or stained pavement
- Waste water
- Septic systems/effluent disposal system
- Pits, ponds, and lagoons

- Stressed vegetation
- Wells
- Solid waste/debris

Heating and Cooling Systems – Equipment storage enclosures associated with the 10300 Campus Point Drive, 10290 Campus Point Drive, and 4242 Campus Point Court appear to enclose the heating and cooling equipment for these buildings; however, these areas were not accessible during the site reconnaissance.

Subterranean Piping – Evidence of subterranean piping was observed running from the south side of the 10300 Campus Point Drive building to the chemical storage building located south of the 10300 Campus Point Drive building, which may contain hazardous and/or flammable materials.

Findings & Opinions

Based on the research conducted as part of this assessment, seven hazardous material findings have been identified. The locations of these hazards are summarized below. If additional assessment is warranted, the necessary recommendations are identified below and described in the following section.

Table 3 – Summary of Hazardous Material Findings

Rincon also considered the following conditions, which were considered *de minimis* as described below:

- Unexploded ordinance: The southern portion of the site is located within the Camp Matthews FUDS boundary; however, the project area is not within the Munitions Response Site (site known to require a munitions response) investigated as part of the report, which is identified as Range Complex No. 1. Based on this information, the project area is not located within the Munitions Response Site; therefore, the listing is not anticipated to impact the project area.
- Lead-based Paint: The structures within the project area were constructed after 1978; therefore, lead-based paint is not likely to have been utilized.

Conclusions & Recommendations

This assessment has revealed evidence of seven Environmental Conditions with the potential to impact the project area. To evaluate the potential project area impact associated with the hazardous material findings identified above, we recommend the following:

- **R-1**: According to the regulatory records reviewed, five USTs were associated with the 10300 Campus Point Drive building: two, 500-gallon chemical waste USTs and 500, 5,100, and 12,000-gallon diesel USTs. The EDR report lists that the USTs were removed in 1986 and 2009; however, regulatory agency records documenting the removal of the USTs and associated soil sampling were not available for review. If the project area encounters USTs, associated piping, and/or impacted soil it will need to be reported to the County of San Diego DEH and additional assessment may be required.
- **R-2**: According to the regulatory records reviewed, contaminated soil was removed from the project area associated with a site cleanup at 4161 Campus Point Court in 1990 (1 ton) and 1996 (0.5 ton). Additional information regarding the site clean-up activities was not available in the records reviewed; therefore, it is unknown if additional impacted soil remains in place. If impacted soil remains in place that is contaminated with petroleum hydrocarbons or other COCs, it may pose a potential vapor intrusion issue for the project area and additional assessment may be required. If proposed project activities involve the disturbance of the soil in the vicinity of 4161 Campus Point Court, additional assessment should be performed and/or a Soil Management Plan should be prepared to provide methods and procedures for the excavation, handling, storage, and disposal of contaminated soils, if encountered.
- **R-3**: Hazardous/flammable materials appear to be stored in various locations throughout the project area, including diesel ASTs and possible subterranean piping (Figure 2). If proposed project activities are to occur in these areas, the hazardous/flammable materials must be managed and/or disposed in accordance with applicable local, state, and federal laws. If evidence of a release is observed in these locations, additional assessment may be required.
- **R-4**: If structures built prior to 1989 are planned for demolition or repair, an ACM survey should be conducted to determine if ACM is present and will require special handling/disposal.
- **R-5**: According to the historical resources reviewed, the I-5 Freeway has been located adjacent to the west of the alignment since at least 1966. Therefore, aerially-deposited lead (ADL) has the potential to be located on the properties adjacent to the freeway. If project activities include disturbance of soil adjacent to I-5, additional assessment may be necessary.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4

RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 10 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 60821

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 775

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 168122

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 125544

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 9760

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 24882

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 182

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 57

Waste name: CHLOROFORM

Description:	In 1917 the U.S. leased 572.3 acres from the City of San Diego for the former Camp Matthews. Located in La Jolla, California, about 12 miles north of San Diego, the former Camp Matthews was situated on 573.3 acres, occupying a portion of the present University of California, San Diego campus. This property is known or suspected to contain military munitions and explosives of concern (e.g., unexploded ordnance) and therefore may present an explosive hazard.
History:	The former Camp Matthews was also known as the Marine Corps Rifle Range. In 1917, the U.S. leased 573.3 acres from the City of San Diego. The camp was declared surplus in 1962, and on 23 September 1964 the Navy conveyed titles and interest in 544 acres and improvements to the University of California, San Diego. The lease for 29.75 acres with the City of San Diego was terminated in 1964. In the late 1960s, UCSD disposed of the following property: transferred about 84.7 acres to the State of California Dept. of Transportation for acquisition of

right-of-way for the San Diego Freeway; deeded approximately 26 acres to the Veterans Administration for the construction of a hospital; and deeded about 39 acres to private parties for commercial /residential development. The majority of the former camp has been developed by UCSD and many of the Camp buildings have been razed to make way for campus buildings. Camp buildings that have been renovated by UCSD are located within the Matthews Campus portion of UCSD and consist of administrative, maintenance, and recreation buildings. About 150 acres of camp property, consisting mostly of abandoned small arms ranges and a court located on the east side of the San Diego Freeway, have been extensively developed by UCSD for a Medical Center, housing, warehouses, and recreational use.

Comments: DTSC has approved the report. DTSC is raising concerns with the lack of effectiveness at preventing volatile organic compounds (VOCs) in groundwater from migrating offsite: there have been 2 significant efforts to impede these VOCs (the phytoremediation pilot study and the permeable reactive barrier pilot study), and both have largely failed. DTSC's recommendations were made to affect future reporting.

Comments: DTSC approves the report with revised documents, which identifies that there were no indoor air risks at the time of sampling, based on comparison to appropriate screening levels. Offsite was identified as 'needing further action' because until groundwater contamination moving from upgradient is under control, this area cannot be considered No Further Action.

Comments: DTSC approved this report. It identified that while soil vapor and groundwater in the northern portion of Building 37 is significantly contaminated with volatile organic compounds (VOCs), the contamination attenuates away from the northern portion of Building 37 into the southern portion. Also, while three groundwater wells were installed in the southern portion of Building 37 as part of this investigation, groundwater monitoring of these wells will occur in the future, to help clarify distribution of VOCs in groundwater.

Comments: DTSC approved both the 2Q2016 and 2017-2018 reports with one letter. Enclosed in the letter were a variety GSU concerns including a) that these results should not be conclusively used to determine soil vapor and indoor air conditions downgradient of this area; b) that regular indoor air sampling should be considered for the offsite office complex; c) that using a concentration of 500 micrograms per liter of trichloroethylene in groundwater as a criterion for soil vapor sampling in the offsite downgradient complex does not appear to be justified, and c) that more proactive groundwater remediation at the source area should take place to prevent further contaminant migration.

Comments:	General Atomics submitted this final Waste Discharge Requirements report before the San Diego Regional Water Quality Control Board allowed them to discontinue the waste discharge reporting process. Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 10061

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 10061

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
