**APPLICATIONS:**

- Biofiltration swales can be located directly behind the curb to collect runoff from the street, or behind the sidewalk when a sidewalk underdrain is provided.
- Breaks in the swale can be provided at driveways, bus stops, street intersections, etc.
- Where infiltration is not allowable, a subdrain pipe and liner can be provided.

**BENEFITS:**

- Provides a high level of treatment for a wide variety of pollutants
- Reduction in runoff volume through retention in the soil of the basin, along with limited infiltration through the bottom of the basin where infiltration is allowable.
