

## Statement From Community Leaders

On behalf of the Homeowners for a Green and Safe Point Loma, we are pleased to have Kevin Faulconer's direct involvement in seeking alternative (non-trucking) solutions for the BUDG project.

We remain cautiously optimistic that the newly proposed resolution (SDG&E pipeline) will, in fact, be a viable alternative to the current plan of trucking 1.1MM scf of Methane Gas for resale, through our residential neighborhoods. We applaud Mr. Faulconer's approach to finding a NEW alternative solution, which endorses not only the "green" attributes of the excess methane utilization; but also embraces the safety and quality of life issues here on Point Loma.

We look forward to working with Mr. Faulconer and the project design team, to fully vet the environmental and safety implications of this pipeline integration plan for the residents of Point Loma, and ensure the homeowners & residents are kept apprised of this project, as work is done to bring it online in 2010.

Best regards,

John Pedersen
