SPECIAL MEETING.

Council Chamber of the Board of Aldermen of the
City of San Diego, California, November 20th,
1901.

Pursuant to the following call of the Mayor, viz:

OFFICE OF THE MAYOR OF THE CITY OF SAN DIEGO, CALIFORNIA.

San Diego, California, November 19, 1901.

To the Members of the Common Council

of the City of San Diego, California,

Gentlemen:--

I, Frank P. Frary, Mayor of the City of San Diego, a municipal corporation in the County of San Diego, State of California, good cause appearing to me therefor, do hereby call a special session of your Honorable Body for the 20th day of November, 1901, at the hour of 7:30 o'clock p.m. thereof, at your usual and accustomed place of meeting in your chambers in that certain building known as the "City Hall," situated on the southwest corner of Fifth and "G" streets in the said City of San Diego, California.

The purpose for which said special session is called is to consider the advisability of extending the system of water works of said city in Mission Valley by the construction of a submerged flume 14 inches by 14 inches, and about six hundred (600) feet in length, beginning where the present submerged flume ends, viz., at the west boundary of the S.D. Allen tract of land in pueblo lot 1120, thence running easterly six hundred (600) feet, more or less, to the easterly boundary of said tract of land. And also to lay about six hundred (600) feet of ten (10) inch cast iron pipe, commencing at the end of said submerged flume, to be so constructed, thence running in an easterly direction for a distance of about six hundred (600) feet.

Also to consider the advisability of authorizing the purchase of five thousand (5000) feet of lumber for the use of the Street Department of said city.

Also to consider and act upon the petition of George B. Watson for the erection of a corrugated iron shed on lot "B" in block 87 of Horton's addition to the said City of San Diego.

Also to consider the advisability of placing a two (2) inch water main on Second street between Quince and Spruce streets in said city, or to take such other and further action in regard to said matters or any one of them that your Honorable Body may deem advisable.

And you are hereby notified that your presence is desired at the said special session at the time and place and for the purposes above mentioned.

George D. Goldman, City Clerk of the said City of San Diego, and ex-officio Clerk of the Common Council of said city, is hereby directed and instructed to serve, or cause to be served, notices in writing of this call upon each and every member of said Common Council, said notice to contain a statement of the time, place, and object of said special session.

FRANK P. FRARY,

Mayor of the City of San Diego, California.

A meeting of the Board of Aldermen was held this day at 7:30 o'clock p. m., President Jones

presiding.

PRESENT--ALDERMEN Whitson, Rainbow, Perrin, Landis, Watson, Jones and Clerk Goldman.

ABSENT---ALDERMEN Clark, Parrott and Myers.

 The following Message from the Mayor stating the objects for which this Special Session of the Council is called, was read and ordered filed, viz:

M A Y O R ' S O F F I C E .

 San Diego, California, November 20, 1901.

To the Honorable Common Council

of the City of San Diego, California,

Gentlemen:--

Having, on the 19th day of November, 1901, issued a call for and called a special session of your Honorable Body for the 20th day of November, 1901, at the hour of 7:30 o'clock p.m. thereof, at the usual and accustomed place of meeting of your Honorable Body in your chambers in that building known as the "City Hall," situated on the southwest corner of Fifth and "G" streets in the said City of San Diego, I now desire to, and do hereby, notify you, being now assembled pursuant to said call, of the object for which you have convened, which is as follows:

To consider the advisability of extending the system of water works of said city in Mission Valley by the construction of a submerged wooden flume 14 inches by 14 inches, and about six hundred (600) feet in length, beginning where the present submerged flume ends, viz., at the west boundary of the S.D. Allen tract of land in pueblo lot 1120, thence running easterly six hundred (600) feet, more or less, to the easterly boundary of said tract of land. And also to lay about six hundred (600) feet of ten (10) inch cast iron pipe, commencing at the end of said submerged flume, to be so constructed, thence running in an easterly direction for a distance of about six hundred (600) feet.

Also to consider the advisability of authorizing the purchase of five thousand (5000) feet of lumber for the use of the Street Department of said city.

Also to consider and act upon the petition of George B. Watson for the erection of a corrugated iron shed on lot "B" in block 87 of Horton's addition to the said City of San Diego.

Also to consider the advisability of placing a two (2) inch water main on Second street between Quince and Spruce streets in said city, or to take such other and further action in regard to said matters, or any one of them, that your Honorable Body may deem advisable.

All of which is respectfully submitted.

FRANK P. FRARY,

Mayor of the City of San Diego, California.

B E I T O R D A I N E D, By the Common Council of the City of San Diego, as follows:

Section 1. All street grading in the City of San Diego, California, shall hereafter be performed in accordance with the following specifications: The City Engineer shall set stakes indicating the exact depth of cutting or filling required to bring the street to its official grade, and the contractor shall preserve such stakes until the work is completed, and pay the expenses of replacing those removed or disturbed.

The grading shall include such clearing, grubbing, cutting, filling, and other work as may be necessary to properly form the roadway, gutters and sidewalks.

No earth shall be removed from the streets except upon the written authority and direction of the Superintendent of Streets.

No rubbish or perishable material shall be used in the grading of any street, and all boulders and loose stones shall be buried at least six inches below the surface of the finished grade, and care shall be taken to so mix the earth that there shall be no soft places or sand pockets.

Upon all embankments or fills there shall be placed a top dressing of earth of uniform quality, as of such character as will form a compact surface, and such percentage of allowance for settlement shall be made as may be directed by the City Engineer, and when a cut exceeds in depth, all trees standing on the margin of the street shall be removed, unless the owner of the abutting property shall at his own expense place them to the grade when so requested by the contractor.

Before the resolution ordering the work of grading the street is passed by the Common Council, the City Engineer shall make a careful estimate in writing of the number of cubic yards of earth cut, and the number of cubic yards of earth fill, necessary to bring the street or portion of the street proposed to be graded to its official grade, and in case said estimate of cubic yards fill are in excess of the cubic yards of cut, the Superintendent of Streets shall designate in writing the point or points where such earth required for fill shall be taken from, and in case the number of cubic yards cut exceed the number of cubic yards of fill, said Superintendent of Streets shall designate the said point or points where such excess of earth shall be deposited, provided that such excess earth shall not be deposited in any place other than upon the public streets of said city, unless under the direction of the Board of Public Works of said city.

The estimate of the City Engineer, made as above specified, shall be kept on file in the office of the City Engineer, and the designation of the Superintendent of Streets, made as above specified, shall be kept on file in the office of the Superintendent of Streets, and both said estimate and said designation shall, during office hours, be accessible for inspection by any person who may desire to inspect the same.

The place or places where the excess of earth is deposited as well as the place or places from which the earth is taken for making the fills in the street to be graded, shall be by the contractor, before the work is accepted, leveled down and put in a condition satisfactory to the Superintendent of Streets.

The contractor shall furnish all tools, machinery and labor, and provide all temporary bridges, drains and other means required to protect the work from damage, and prosecute all work with diligence, and without unnecessary delay.

The Street Superintendent shall supervise all work and shall not approve or accept the same until the street throughout is finished to the form of cross section and to the

elevations required by the official grade.

All bids and contracts must express the price by the cubic yard for cutting, and the price by the cubic yard for filling, and no other items or expenses shall be allowed unless they are particularly set forth in the contract.

Incidental expenses shall include the cost of all publication and posting and the labor and material incident thereto, and the compensation of the City Engineer for surveys and estimates, and the cost of all labor and materials furnished by him.

Section 2. That Ordinance No.349 of the ordinances of said city, entitled, "An ordinance providing specifications for the grading of streets in the City of San Diego, California, and repealing Ordinance No.53 of the ordinances of said city, entitled, 'An ordinance providing specifications for the grading of streets,' approved December 24th, 1889," approved February 11th, 1896, is hereby repealed.

Section 3. That any work or proceedings commenced for the grading of any street under said Ordinance No.349 shall in no wise be affected hereby, but shall in all respects be finished and completed under said Ordinance No.349, and this ordinance shall in no wise affect such work or proceedings.

Section 4. That this ordinance shall take effect and be in force from and after its passage and approval.

The following report of the Joint Water Committee in the matter of re-laying the water pipe on upper Fifth street, is read and adopted, viz:

San Diego, California, Jany. 17th, 1902.

To the Honorable, the Common Council, *San Diego, California*

San Diego, California,

Gentlemen:--

The undersigned herewith respectfully reports to your Honorable Body as follows:

In the matter of re-laying the 5th street water pipe, your Joint Water Committee, after consultation with the City Auditor and City Engineer recommends that the city use the 600 feet of 24 inch pipe now on hand in the Sewer Department, and the 686 feet of 20 inch pipe on hand in the Water Department, and purchase additional 16 inch pipe sufficient to bring the total expenditure for pipe and laying the same to \$10,000.00, which amount the City Auditor has agreed to certify.

This procedure will provide for re-laying 3805 feet of this line, and leaves 3070 feet yet to be put in; but as we are advised will extend the new pipe line sufficiently to stop the leaks in this pipe line.

We present herewith an ordinance to carry this recommendation into effect and recommend its adoption.

Respectfully submitted,

Geo. B. Watson,

H. M. Landis,

J. P. M. Rainbow,

J. S. Clark,
 J. W. Lambert,
 M. W. Jenks,
 A. H. Kayser,
 W. W. Lewis.

Thereupon an ordinance providing for the purchase of certain material and the laying of certain pipe in repairing the water main on upper Fifth street, being read is referred back to the Water Committee for further investigation.

 A communication from the Board of Public Works recommending that the specifications for the construction of the Point Loma pipe line be changed from partly wooden pipe to a line wholly of cast iron pipe, thus increasing the estimate for doing said work to \$18,500.00, is read and referred to the Water Committee.

 The following report of the Joint Sewer Committee in the matter of a communication from the Board of Health recommending that the 25th street sewer be connected with the water system, so that said sewer could be flushed, is read and adopted, viz:

The Joint Sewer Committee recommends that the within communication from the Board of Health be placed on file, for the reason that the flushing of the 25th streets sewer is fully disposed of in another matter recommended by the Board of Public Works.

Thereupon said communication is placed on file.

 The following report of the Joint Sewer Committee in the matter of building a flush tank on "J" street between 14th and 15th streets, and repairing a number of flush tanks, is read and adopted, viz:

San Diego, Cal., Jan. 16th, 1902.

To the Common Council,

City of San Diego,

Gentlemen:--

The Sewer Committee, to whom was referred the communication from the Board of Public Works asking for authority to build a flush tank for the sewer system on "J" street between Fourteenth and Fifteenth streets, and to repair a number of the flush tanks and connect the same with the city water system, herewith reports as follows:

We find that it is quite essential for the proper working of the sewer system to have this work done at the earliest possible moment. We therefore recommend that the Board of Public

Works be authorized to purchase for said work

3500 brick;

2 barrels of Portland cement;

2 yards of sand;
 1900 feet of 3/4 inch water pipe;
 200 feet of 1/2 inch water pipe;
 1 dozen 3/4 inch elbows;
 1 dozen 3/4 inch tees;
 1 dozen bushing--3/4 inch to 1/2 inch;
 16 1/2 inch service cocks;
 1 Miller-Potter automatic syphon;

provided that the total cost thereof does not exceed the sum of \$190.00.

We further recommend that the Board of Public Works be authorized to build a flush tank on "J" street between Fourteenth and Fifteenth streets, and connect the same with the city water system; and to raise repair and connect with the city water system flush tanks located as follows, to-wit:

At the intersection of Columbia and Ivy streets;

At the intersection of India and Fir streets;

At the intersection of Twenty-first and "F" streets;

At the intersection of Twenty-fifth street and the alley between "F" and "G" streets;

At the south line of the City Park on Twenty-fifth street;

At the intersection of Twenty-first and "B" streets;

At the intersection of Seventeenth and "A" streets;

At the intersection of Eighteenth and "A" streets;

provided that said work shall be done under the supervision of the Superintendent of Sewers and to the satisfaction of the Board of Public Works; and provided further that expense for such work shall not exceed the sum of \$285.00.

We have reduced the amount to be expended for material and also for labor to a considerable extent, as the Superintendent of Sewers informed the Committee that he had found several hundred feet of 3/4 inch pipe already laid, which he did not know of prior to making up the estimate for the Board of Public Works. We therefore submit herewith two ordinances to take the place of the ordinance transmitted by the Board of Public Works with their communication, and recommend that the same be adopted.

Respectfully,

M. J. Perrin,

F. C. Hyers,

H. M. Landis,

W. W. Lewis,

B. Burnell,

R. J. Blair.

REGULAR MEETING.

Council Chamber of the Board of Aldermen of the
City of San Diego, California, March 3rd, 1902.

A Regular Meeting of the Board of Aldermen was held this day at 7:30 p.m., President Jones presiding.

PRESENT--ALDERMEN Clark, Rainbow, Parrott, Perrin, Hyers, Jones and Clerk Goldman.
ABSENT---ALDERMEN Whitson, Landis and Watson.

17th, and Adjourned Meeting held February
The minutes of Adjourned Meeting held February 24th, 1902, are read and approved.

The following Message from the Mayor vetoing an ordinance providing for the purchase of a steam road roller for the use of the City of San Diego, California, being read is ordered filed; said ordinance being referred to the Finance Committee.

San Diego, California, March 1st, 1902.

To the Honorable Common Council
of the City of San Diego, California,

Gentlemen:--

I have the honor to return herewith an ordinance providing for the purchase of a steam road roller for the use of the City of San Diego, California.

I return aforesaid ordinance without my approval and give the following reasons:

The tax rate is fixed and apportioned to the different funds in May, and until we know the amounts in the different funds it is unwise to incur any heavy expenditures. The total amount apportioned for the Street Department in 1901

| | |
|---------------------------|-------------|
| was - - - - - | \$18,530.00 |
| Amount expended - - - - - | \$18,216.74 |

If the amount apportioned for 1902 be the same as for the year 1901 and we take out of that \$4500.00 for the steam roller, it leaves for the Street Department only \$14,030.00, which is not sufficient to meet the requirements for the year.

Should the Council in fixing rates of taxation and apportioning same to the different add to the amount allowed the Street Department last year \$4500 for the purchase of the steam roller, I would approve the ordinance as the roller would increase the efficiency of the Street Department in caring for the streets.

I therefore veto the ordinance.

Respectfully submitted,

FRANK P. FRARY,

Mayor of the City of San Diego, California.

A communication from the City Attorney recommending that the city take tax deeds to certain lots and blocks in Mannasse and Schiller's addition, Louis' addition, Horton's addition, Middletown right of way, Middletown, and Fifth Street addition, being read is ordered filed.

amending section 1 of Ordinance No.661, entitled, "An Ordinance imposing a license upon certain persons selling goods, wares and merchandise," being read is on motion of Alderman Perrin adopted, viz:

San Diego, Cal., March 13th, 1902.

To the Board of Aldermen,

City,

Gentlemen:--

The Health and Morals Committee, to whom was referred an ordinance amending section 1 of Ordinance No.661, entitled, "An Ordinance imposing a license upon certain persons selling goods, wares and merchandise," herewith reports as follows:

We recommend that section 1 thereof be amended by striking out the words "That it shall be and is hereby declared to be unlawful for any person or persons, without first obtaining a license therefor as herein provided, to engage in or carry on the business of selling tamales, popcorn, candy, peanuts, fish, or other edibles or merchandise from a wagon, cart, wheelbarrow, or other vehicle, or from a table or stand, or otherwise, at a fixed place regularly occupied by such person upon any street, sidewalk, alley, or public park in the City of San Diego, California."

We further recommend that the words "during the day time" in section 1 be stricken out, and the words "between the hours of 7 o'clock a.m. and 6:30 p.m." be inserted in place thereof.

We further recommend that the words "That the rate of such license last above mentioned, shall be \$2.50 per month," in section 1 be stricken out.

We present herewith an ordinance in accordance with this report and recommend that it be adopted.

Respectfully,

M. J. Perrin,

H. M. Landis,

F. C. Hyers.

The following report of the Street Committee in the matter of an ordinance regulating the construction of sidewalks and curbs, is read and adopted, viz:

San Diego, Cal., March 13th, 1902.

To the Common Council,

City,

Gentlemen:--

The Joint Street Committee, to whom was referred an ordinance regulating the construction of sidewalks and curbs, and authorizing the Board of Public Works to issue permits

for said work, herewith recommends that no further action be taken on said ordinance.

We also recommend that an ordinance be adopted providing that the City Engineer shall check up all work done under permits granted by the Common Council, before any certificate is issued to the property owner that said sidewalks and curbs have been laid to the official grade.

We present herewith an ordinance to carry this recommendation into effect and recommend its adoption.

Respectfully,

F. C. Hyers,

M. J. Perrin,

J. W. Lambert,

F. H. Briggs.

Thereupon an ordinance regulating the laying of sidewalks and curbs, is read and adopted by the following vote, to-wit:

Said ordinance as adopted is as follows, viz:

O R D I N A N C E No. 1 0 9 9.

-----

An Ordinance prescribing certain regulations for the laying of sidewalks and curbs in the City of San Diego, California.

B E I T O R D A I N E D, By the Common Council of the City of San Diego, as follows:

Section 1. That it shall be and is hereby declared to be unlawful for any person to lay or put in place any sidewalk or curb in or upon any street in the City of San Diego, California, without first obtaining permission so to do from the Common Council of the said City of San Diego. Any person desiring to construct a sidewalk or curb upon any street in the City of San Diego, California, shall make application in writing to the said Common Council of said city for permission so to do; said application shall state the place where said sidewalk or curb is to be laid, and the number of feet of said sidewalk or curb to be constructed. Said applicant shall deposit with the Board of Public Works of said city the sum of \$10.00 for each 50 feet of sidewalk and the sum of \$10.00 for each 50 feet of curb which he desires to construct, as security for the removal of all debris and surplus material from the street in said city when said sidewalk or curb has been constructed, and that said sidewalk and curb will be laid to the official grade of said street.

When said application has been granted by the said Common Council and said sum so deposited with the said Board of Public Works, said Board of Public Works shall issue a permit for the construction of said sidewalk or curb, and shall immediately notify the City Engineer of said city of the issuance of such permit, and thereafter the said City Engineer shall set the grade stakes for the construction of such sidewalk and curb, which stakes shall be to the official grade of said street; and thereafter said sidewalk and curb shall be laid and constructed according to said grade stakes and according to the official grade of said street, and not otherwise.

After said sidewalk and curb shall have been so constructed, the City Engineer shall

survey said sidewalk and curb for the purpose of ascertaining whether said sidewalk and curb has been laid to the official grade of said street, and according to the stakes set therefor. If the said City Engineer shall find that the said sidewalk and curb has been laid to the official grade of said street, he shall issue to the person for whom the said sidewalk and curb has been laid a certificate in writing certifying that fact, but he shall not issue any certificate if he finds that said sidewalk and curb has not been laid to the official grade of said street; when the said City Engineer issues such certificate, the said Board of Public Works shall thereafter return said deposit, provided, that said surplus material and debris has been removed from said street upon which said sidewalk and curb has been so constructed. If the said City Engineer shall find that the said sidewalk and curb has not been laid to the official grade of said street, he shall immediately notify the said Board of Public Works of that fact, and said deposit shall not be returned until said sidewalk and curb has been laid to the official grade of said street, and a certificate issued to that effect by the said City Engineer.

The said City Engineer shall charge the regular fees for making such survey and setting such stakes as prescribed by the ordinances of this city, except that no extra fees shall be charged for checking up work after the completion thereof. This ordinance shall not apply to work done under a contract by the Superintendent of Streets under the general street law of the State of California.

Section 2. That any person who shall violate any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine not exceeding the sum of \$100.00, or by imprisonment in the city jail of said city for a period not exceeding fifty days, or by both such fine and imprisonment.

Section 3. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 4. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance to publish, or cause the same to be published, once in the city official newspaper of said city, to-wit: the San Diego Union and Daily Bee.

Section 3. That the said City Clerk, after making such sale, shall immediately report the same to the said Common Council, giving the name of the purchaser or purchasers, the amount of the highest and best bid offered, both separately and collectively, and such other facts as may be necessary to fully inform the said Common Council of the proceedings had attending such sale. And said Common Council shall thereupon by ordinance, accept or reject any or all of said bids made, and approve and confirm any sale or all of the sales, or disapprove or reject any one of the sales, or all of the sales made at such time.

Section 4. That if any sale be approved by the said Common Council, as herein provided, and the consideration therefor be paid to the said City of San Diego, a deed shall be executed by the said City of San Diego, as hereinafter provided, to said property so sold.

That the purchaser of said property at such sale shall pay to the said City of San Diego five per cent of the amount of his bid at the time such sale is made, taking the receipt of the said City Clerk therefor, which amount so paid shall be returned to the said purchaser in case said sale is not approved by the said Common Council within thirty (30) days after receiving the report of the same; and if such sale be approved by the said Common Council, the said five per cent shall be paid by the said City Clerk to the City Treasurer of said City.

Section 5. That if such sale, or any sale of said property, be approved by the said Common Council, the purchaser of said real estate shall be entitled to a deed from the said City of San Diego for and to said real estate so sold, upon presenting to the Mayor of said City a receipt from the Treasurer of said City showing that the balance of the purchase price of the said real estate, not already paid to the said City Clerk, has been paid to the said City Treasurer, and the Mayor of said City shall thereafter, in the name of, for and on behalf, and as the act and deed of said City, execute and acknowledge a deed of conveyance to the said purchaser of said real property, the execution of which deed shall be attested by the said City Clerk of said City by affixing thereto his signature and the official seal of said City.

Section 6. That the proceeds of such sale, or any sale made at said time and place of said property, or of any portion thereof, shall be, if said sale is approved by the said Common Council as aforesaid, placed and deposited in the treasury of said City to the credit of the Delinquent Tax Fund thereof.

Section 7. That all ordinances or parts of ordinances in conflict herewith, be and the same are hereby repealed.

Section 8. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 9. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish, or cause the same to be published once in the City official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

Thereupon an ordinance declaring the grade of Third street at the southwest corner of the "Plaza" and of the "Plaza" on the south line thereof 100 feet east of the east line of Third street to be changed, and establishing the grade of the same at said points, being read is on motion of Alderman Watson adopted by the following vote, to-wit:

AYES -- ALDERMEN Rainbow, Perrin, Hyers, Landis, Watson and Jones.

NOES -- NONE.

ABSENT--ALDERMEN Clark, Whitson and Parrott.

Said ordinance as adopted is as follows, viz:

**Ordinance No. 1106.**  
An Ordinance Declaring the Grade of That Portion of Third Street in the City of San Diego, California, at the Southwest Corner of the "Plaza", and the Grade of That Portion of the Said "Plaza" on the South Line Thereof One Hundred (100) Feet East of the East Line of Said Third Street to Be Changed, and Establishing the Grade of the Same at the Said Points.  
Be it Ordained by the Common Council of the City of San Diego, as follows:  
Section 1. Whereas, the Common Council of the City of San Diego, California, on the 20th day of January, 1902, duly passed a Resolution of Intention to change the grade of that portion of Third street in the said City of San Diego at the southwest corner of the "Plaza", and the grade of that portion of the said "Plaza" on the south line thereof one hundred (100) feet east of the east line of the said Third street, which Resolution of Intention designated and established the district to be benefited by such change of grade and to be assessed to pay the cost of the same; and  
Whereas, said Resolution of Intention was duly published for ten (10) days in the newspaper of said City in which the official notices of the Common Council of said City are usually printed and published, to-wit: the San Diego Union and Daily Bee, in every regular issue of said newspaper during the said period of ten (10) days as directed by the said Resolution of Intention, and in the manner and by the persons required by law; and  
Whereas, the Superintendent of Streets did, within five (5) days after the first publication of said Resolution of Intention, duly cause notices of the passage of said Resolution of Intention to be conspicuously posted within said district in the manner and form required by law, and more than thirty (30) days having elapsed from the date of the first publication of said Resolution of Intention in said newspaper as aforesaid, and no objection to said proposed change of grade having been filed with the Clerk of the said Common Council, and no objection having been made to such proposed change of grade, and the petition of the owners of a majority of the property affected by the said proposed change of grade having been filed with the said Clerk and presented to this Common Council requesting that such grade be changed as aforesaid, and as required by law.  
Therefore, Be It Further Ordained, by the Common Council of the City of San Diego, as follows:  
That the grade of that portion of Third street in the said City of San Diego at the southwest corner of the "Plaza" on the east line of said Third street one hundred and forty-five (145) feet south of a point where the said east line of Third street intersects the south line of "D" street, and the grade of that portion of said "Plaza" in said City on the south line thereof one hundred (100) feet east of the east line of said Third street, be and the same is hereby changed and established, and declared to be in conformity with said Resolution of Intention as follows:

The grade of that portion of said Third street on the east line thereof at the southwest corner of said "Plaza", being at a point on the east line of said Third street one hundred and forty-five (145) feet south of the point where the east line of said Third street intersects the south line of "D" street, shall be and the same is hereby changed from thirty-nine (39) feet above the datum-line of levels as fixed by Ordinance No. 3 of the ordinances of the said City of San Diego, entitled, "An ordinance establishing a datum-line for the grading of streets in the City of San Diego, State of California, and providing for the manner of establishing grades by ordinance", approved June 20th, 1886, to, and fixed and established at thirty-eight and five tenths (38.5) feet above said datum-line; and that the grade of that portion of the said "Plaza" on the south line thereof one hundred (100) feet east of the east line of said Third street be and the same is hereby changed from thirty-nine and eighty-five hundredths (39.85) feet above said datum-line to and fixed and established at thirty-nine (39) feet above said datum-line. Said "Plaza" being bounded on the east by Fourth street, on the north by "D" street, and on the west by Third street.

That the grade of all points heretofore fixed by the ordinances of said City shall be and remain as they now are on the said Third street and said "Plaza", except as herein changed.

That there shall be a uniform ascent and descent between all points at which the grade elevations on said Third street and on said "Plaza" are so established.

That the numbers used above, where their meaning is not shown to be otherwise by their immediate context, mean the number of feet which the points designated in the said grade as changed shall be above the said datum-line of levels as fixed by said Ordinance No. 3.

Section 2. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 3. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 4. That the City Clerk of the said City of San Diego, he, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

The following report of the Joint Street Committee in the matter of specifications for street work, is read and adopted, viz:

San Diego, Cal., April 4th, 1902.

To the Common Council,

City,

Gentlemen:--

The Joint Street Committee, to whom was referred a communication from the City Attorney in the matter of paving "D" street from the east line of Sixth street to the west line of Twelfth street and also the matter of sidewalking and curbing Twenty-second street from "C" street to "H" street, which communication recommends that the work contemplated on

these streets be not commenced until some changes be made in the specifications, and also asking for instructions as to what kind of paving is to be done on "D" street, herewith recommends that "D" street be paved with bituminous rock on natural earth foundation, but that said work be not commenced until some changes have been made in the specifications for paving on natural earth. The City Engineer is now preparing new specifications for said work by direction of the committee.

We also recommend that amendments be made to the specifications for sidewalking and curbing, as suggested by the City Attorney, and present herewith an ordinance to carry this recommendation into effect.

Respectfully,

F. C. Hyers,

M. J. Perrin,

J. W. Lambert,

J. S. Clark.

Thereupon an ordinance prescribing specifications for sidewalking and curbing in the City of San Diego, California, being read is on motion of Alderman Landis adopted by the following vote, to-wit:

AYES -- ALDERMEN Clark, Rainbow, Johnson, Perrin, Hyers, Landis, Watson and Jones.

NOES -- NONE.

ABSENT--ALDERMAN Whitson.

Said ordinance as adopted is as follows, viz:

#### Ordinance No. 1109.

An Ordinance Prescribing Specifications for Sidewalking and Curbing in the City of San Diego, California.  
BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

Section 1. That all sidewalking and curbing in the City of San Diego, California, shall be hereafter done in accordance with the following specifications, viz:

All work shall, during its progress and on its completion, conform to the lines and levels, and to the official grade of the streets upon which said work is to be constructed.

The work to be done shall be as follows:

(a) preparing the foundation for the sidewalk and digging the trench for the curb; (b) constructing and laying the curbing prescribed in the Resolution of Intention; (c) constructing and laying Portland cement concrete pavement; (d) furnishing all materials and labor necessary to perform said work and to complete the same; (e) removing from the streets and sidewalks adjacent to the work, all surplus material and debris.

The work shall be prosecuted in sections of such respective length as may be prescribed to the contractor in writing by the Superintendent of Streets.

All material used in sidewalking and curbing in the City of San Diego, California, shall comply with the following requirements:

1. No cement will be accepted that is not from the works of reliable manufacturers of well established reputation, and the cement will not be tested or permitted to be used unless delivered in original packages properly labelled.

Tests of the cement will, unless otherwise specified, be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

Samples for test may be taken from every package delivered, and unless they meet the requirements herein specified such packages may be rejected.

The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch, and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge. No. 30 sieve shall have 900 meshes to the square inch, and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge. No. 50 sieve shall have 2500 meshes to the square inch and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge. No. 100 sieve shall have 10,000 meshes to the square inch, and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass through a number twenty sieve and be retained on a No. 30 sieve.

Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a

feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate shall not show any signs of warping or cracking after seven (7) days in either air or water.

Any cement showing signs of swelling, after being mixed, will be rejected.

Portland cement shall be ground to such a degree of fineness that not less than 98% by weight shall pass a No. 50 sieve, and not less than 90% by weight shall pass a No. 100 sieve.

The ultimate tensile strength of briquettes, one square inch in cross-section, made of neat Portland cement, shall be as follows:

One day in air and six days in water 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 190 pounds.

Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimensions of any stone will not exceed one and one half inch (1-1/2") nor the least dimension of any stone be less than one quarter (1/4") of an inch, and must be free from dust, dirt or other foreign matter.

Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one half inch (1 1/2"), nor the least dimensions of any pebbles be less than one quarter (1/4") of an inch, and must be free from dust, dirt or other foreign matter.

Water shall be fresh, and free from earth, dirt or sewerage.

All sidewalks within that portion of the City of San Diego which is bounded on the north by the north line of "A" street, on the west by the west line of Fourth street, on the east by the east line of Sixth street, and on the south by the north line of "L" street, shall extend from the curb line to the property line.

Outside of the limits of the district above described, the pavement shall be five feet four inches (5'-4") wide located in the center of the sidewalk, provided, however, that at all intersections the pavement will extend to the inside line of the curb.

The cement and sand in the specified proportions, by volume shall be thoroughly mixed dry, on a tight platform with shovels or hoes until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

The cement, sand, and lamp black in the specified proportions shall be thoroughly mixed dry, on a tight platform, with shovels or hoes, until no streaks of cement are visible. Water shall be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantities to produce mortar of the desired consistency, and the whole thoroughly

mixed with shovels or hoes until a homogeneous mass is produced.

The mortar, while fresh, shall be spread upon the concrete base before the latter has set, in such quantities that after being thoroughly manipulated and spread over the concrete it will make a layer three quarters ( $\frac{3}{4}$ ) of an inch thick conforming to the required grade and cross-section. The surface shall be thoroughly dressed and smoothed and cut into slabs.

Board or timber forms shall be provided by the contractor to mold the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

Retempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed, shall be removed from the work.

All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened, by sprinkling with water just previous to placing the concrete.

The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers of approved pattern, it shall not be in any place less than three (3) inches thick and the upper surface of it shall be parallel with the proposed surface for the completed pavement.

Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proper proportions of sand and stone.

Concrete shall not be dropped too great a height or thrown from too great a distance when being placed upon the work.

All concrete sidewalks and concrete curbing shall be plainly and legibly stamped in letters not less than two inches long, with the name of the contractor constructing the same, and the month and year of such construction.

All returns of concrete sidewalks shall be plainly and legibly stamped in letters not less than three inches long, with the names of the streets or avenues upon which the return fronts.

All the stamping herein provided for shall be done by and at the expense of the contractor, under the direction and to the satisfaction of the Superintendent of Streets, and shall be at such place or places, on such sidewalks and curbing as said Superintendent of Streets may direct, and no concrete sidewalks or concrete curbing shall be accepted by the said Superintendent of Streets unless stamped as herein provided.

2. Stone curbs. All natural stone curbs are to be constructed of granite free from defects or flaws that would impair their usefulness for the purpose for which intended. Each block of stone must be at least four (4) feet long, six (6) inches thick at top and bottom and sixteen (16) inches deep.

The tops of each stone shall be dressed to the prescribed width of six (6") inches from which it shall not vary more than one quarter ( $\frac{1}{4}$ ") of an inch, and its face shall be dressed for a distance of not less than eight (8) inches on paved streets and twelve (12") inches on unpaved streets, down from the top. These dressed surfaces must be true and properly squared. They must be first class pean hammered and no holes are to be allowed. The back of the stone for a depth of two (2") inches is to be pointed to a fair surface, free from inequalities exceeding one half ( $\frac{1}{2}$ ") of an inch measured from a straight edge, and the joints of the stone are to show an even edge for a depth equal to the depth of dressing on the face. The joints below the dressed portion must not be pitched more than one quarter ( $\frac{1}{4}$ ") on an inch under square and must not interfere with the making of close joints not exceeding one eighth ( $\frac{1}{8}$ ") of an inch throughout the dressed portion of the ends. All edges bordering dressed surfaces shall be sharply defined.

The lower part of each stone is to be roughly squared and shall not fall below an average thickness of six (6") inches at the bottom and shall have no point where its minimum thickness falls below four (4") inches.

The curb for corners shall be cut to a radius of ten (10) feet, and its joints must be on true radial lines. The joints must not exceed one eighth ( $\frac{1}{8}$ ) of an inch and must be cut the full depth. All joints shall be filled with cement grout.

The curb shall rest on not less than four (4) inches of sand, backed up with not less than three (3) inches in width of sand to within four (4) inches of the top of the curb. All back-filling shall be thoroughly tamped so that there will be no displacement of the curb.

All curbs shall be set to true lines and grades as given by the City Engineer.

3. Wooden curbs. Wooden curbs shall be of sound black-heart redwood planks 3"x12" in size, free from sap, well and truly set to the official line of the gutter, and inclined one (1) inch toward the property line at the top of the curb, to the curb grade, and securely spiked with sixty (60) penny spikes to 4"x4" redwood stakes not over eight feet apart and at least three (3) feet long, securely planted, not driven, in hard ground. At corners the radius of the curve shall be ten (10) feet, and the return or curve shall be of not less

than three pieces of 1"x12", thoroughly spiked together, the face of which shall be one continuous piece extending from property line to property line.

4. Artificial stone or concrete curb. Artificial stone or concrete curb shall be eight (8) inches wide by sixteen (16) inches deep. The Portland cement used to be subject to the requirements herein enumerated. The concrete shall be composed of one part in volume of Portland cement, two parts of sand and four parts of broken stone. The moulds shall be banked up solidly with earth so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete prepared as hereinafter specified and thoroughly tamped to within three quarters ( $\frac{3}{4}$ ) of an inch of grade. The final layer of three quarters ( $\frac{3}{4}$ ) of an inch of mortar shall be of one part of cement to one of sand filled in and smoothed with a trowel. After setting for twelve (12) hours it shall then be covered with wet earth three (3) inches deep and kept so covered for ten days.

The face of the curb down to the grade line of the gutter shall be finished in the same manner as the top.

5. Cement sidewalks. Pavements of this class shall consist of a foundation of Portland cement concrete three (3) inches thick, and a wearing surface of Portland cement mortar three quarters ( $\frac{3}{4}$ ) of an inch thick, making a total thickness of the completed pavement at least three and three quarter ( $3\frac{3}{4}$ ) inches.

The earth bed on which the pavement is to rest shall be graded to the required depth below the official grade of the street, the surface of such bed shall be parallel to and conform in every respect to the cross-section of the pavement when finished; the ground, after being perfectly dressed, shall be made solid by ramming or rolling. All soft or spongy places not affording a firm foundation shall be dug out; all trench refilling shall be thoroughly drenched with water and tamped; all depressions which appear shall be refilled with good and sound material and well rammed. In all places where any filling may be necessary to bring the bed to the required height it shall be done in layers not to exceed eight (8) inches in thickness, and each layer shall be thoroughly drenched and tamped to insure a solid bed.

The base or foundation shall be three (3) inches in thickness, composed of one part by volume Portland cement, two (2) parts of sand and four (4) parts of broken stone or gravel. The Portland cement used to be subject to the requirements hereinbefore enumerated. The concrete shall be filled in and thoroughly tamped to within three quarters ( $\frac{3}{4}$ ) of an inch of grade. The final layer of mortar three quarters ( $\frac{3}{4}$ ) of an inch thick to be laid before the base becomes set or dry, and shall be composed of one part by volume of Portland cement to one part of sand, colored with lampblack to a dark slate color, and smoothed with a trowel. After setting for twelve (12) hours it shall be covered with wet earth three (3) inches deep and kept so covered for ten (10) days.

#### CONTRACTOR.

Section 2. The contractor shall preserve all stakes set for lines, levels or measurements of the work in their proper place until authorized to remove them by the City Engineer. Any expense in replacing said stakes, which the contractor or his subordinates may have failed to preserve, shall be borne by the contractor. The contractor shall, when required to do so by the Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work who shall refuse or neglect to obey said Superintendent of Streets in anything relating to the work, or who shall perform his work in a manner contrary to these specifications or who shall be found to be incompetent or unfaithful.

All loss or damage arising from the nature of the work to be done under these specifications, during the progress of the work, and before the acceptance thereof, or from any unforeseen obstruction or difficulty which may be encountered in the performance of the work, or from any act or commission on the part of the contractor, or any person or agent employed by him, occurring in the course of the work, not authorized by these specifications, shall be sustained and borne by the contractor. No work will be considered as accepted which may be defective in its construction, or deficient in any of the requirements of the specifications in consequence of the negligence of any officer of the city to point out said defects or deficiency during the construction, and the contractor shall be required to correct any imperfect work, whenever discovered, before the final acceptance of the work. The contractor shall give twelve (12) hours' notice in writing when he shall require the service of the City Engineer for laying out any portion of the work. He shall dig all stake holes necessary to give lines and levels. The contractor shall not disturb any monuments or stakes found on the line of improvement until authorized so to do by the City Engineer. He shall reset any monuments or stakes when so directed by the City Engineer. The contractor shall be required to remove, at his own expense, all obstructions, such as trees, stones, old blocks, debris, etc.,

that may be in the way of making the required improvements; he shall remove all obstructions in a careful manner, and replace the same when necessary that the same should be replaced, in as good a condition as found, and to the proper grade, and all projecting stones or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements by fence or otherwise to prevent accident, and shall hang thereon proper lights to burn from dusk until daylight, and the contractor shall hold the city harmless from any and all suits for damages arising from or out of and during the performance of said work, or any part thereof, and before the same has been accepted. The City, through its Superintendent of Streets, reserves the right of suspending the work, or any part thereof, and at any time during the construction of the same on account of the failure to comply with these specifications, without other compensation to the contractor for such suspension other than extending the time for completing the work for as long a period

as the same shall be delayed by such suspension. When any contractor, during the progress of his work, fails to comply with the provisions of these specifications either in respect to the materials employed or the manner of employing them, the Superintendent of Streets shall notify the Common Council at once of such failure, and until their decision is reached on the point at issue shall require a suspension of said work from the contractor.

No materials of any kind shall be used until they have been examined and approved by the Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or materials so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets, and the decision of the said Superintendent of Streets shall be final as to the quality of work or materials. In case the contractor shall neglect or refuse, after written notice, to remove or replace said rejected work or materials they shall be removed and replaced by the said Superintendent of Streets at the contractor's expense.

Section 3. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 4. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 5. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

About Alderman, Clark,

Said Ordinance as adopted is as follows, viz:

**Ordinance No. 1120.**

# 1120.

An Ordinance Prescribing Certain Regulations for the Laying of Sidewalks and Curbs in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That it shall be and is hereby declared to be unlawful for any person to lay or put in place any sidewalk or curb in or upon any street in the City of San Diego, California, without first obtaining permission so to do from the Board of Public Works of said city. Any person desiring to construct a sidewalk or curb upon any street in the said City of San Diego shall make application in writing to the said Board of Public Works for permission so to do; said application shall state the place where said sidewalk or curb is to be laid, and the number of feet of said sidewalk or curb to be constructed.

Said applicant shall deposit with the said Board of Public Works the sum of ten dollars (\$10.00) for each one hundred (100) feet of sidewalk and curb, or fractional part thereof where the applicant desires to construct both a sidewalk and curb at the same time in front of the same property, or ten dollars (\$10.00) for each one hundred (100) feet of sidewalk, or fractional part thereof, where the applicant desires to construct a sidewalk, without constructing a curb at the same time in front of the same property, or ten dollars (\$10.00) for each one hundred (100) feet of curb, or fractional part thereof, where the applicant does not desire to construct a sidewalk at the same time in front of the same property, as security for the removal of all debris and surplus material from the street in said City when said sidewalk, or curb has been constructed, and also as security that said sidewalk and curb shall be laid to the official grade of said street.

Upon said application being made and said sum being so deposited with the said Board of Public Works, the said Board of Public Works shall issue a permit to the applicant for the construction of the work described in the application, and shall immediately notify the City Engineer of said City of the issuance of such permit, and thereafter the said City Engineer shall set the grade stakes for the construction of the said work, which stakes shall be to the official grade of said street; and thereafter said work shall be constructed according to the said grade stakes and according to the official grade of said street, and according to the specifications prescribed for doing such work by the ordinances of said City in force at the time such work is done, and not otherwise.

After said work shall have been so constructed, the said City Engineer shall survey the same for the purpose of ascertaining whether said work has been constructed to the official grade of said street, and according to the stakes set, therefor. If the said City Engineer shall find that the said work has been constructed according to the official grade of said street, he shall issue, to the person for whom the said work has been constructed, a certificate in writing certifying that fact, but he shall not issue any certificate if he finds that the said work has not been constructed according to the official grade of said street; when the said City Engineer issues such certificate, the said Board of Public Works shall thereafter return said deposit, provided, that said surplus materials and debris have been removed from said street upon which said work has been so constructed. If the said City Engineer shall find that the said work has not been constructed according to the official grade of said street, he shall immediately notify the said Board of Public Works of that fact, and said deposit shall not be returned until said work has been constructed according to the official grade of said street, and a certificate issued to that effect by the said City Engineer.

Provided, however, that no permit shall be issued by the said Board of Public Works for the construction of bituminous rock or asphalt sidewalks, or wooden curbs; nor shall a permit be issued by said Board of Public Works for the construction of a concrete or other sidewalk or curb after a resolution of intention has been passed by the Common Council of said City to sidewalk or curb the portion of the street upon which the applicant desires to construct such sidewalk or curb, without special permission having been first had and obtained from the Common Council of said City.

The said City Engineer shall charge the regular fees for making such survey and setting such stakes as prescribed by the ordinances of this City, except that no extra fees shall be charged for checking up work after the completion thereof. This ordinance shall not apply to work done under a contract by the Superintendent of Streets under the general street law of the State of California, where an assessment is to be levied therefor.

Section 2. That Ordinance No. 1099, and all ordinances or parts of ordinances of said City in conflict herewith be and the same are hereby repealed.

Section 3. That any person who shall violate any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine not exceeding the sum of one hundred dollars (\$100.00), or by imprisonment in the City jail of said City for a period of not exceeding fifty (50) days, or by both such fine and imprisonment.

Section 4. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 5. That the City Clerk of the said City of San Diego, he, and he is hereby authorized and directed immediately after the approval of this ordinance, to publish or cause the same to be published once in the City official newspaper of said City; to-wit: the San Diego Union and Daily Bee.

The following Report of the Joint Ways and Means Committee to whom was referred the estimates of the probable necessities for the various departments of the City for the Fiscal year 1902, is read and on Motion Alderman Watson adopted, viz:

San Diego, California, May 7th 1902.

To the Honorable Common Council  
of the City of San Diego, California.

Gentlemen;

We, your Joint Ways and Means Committee to whom was referred the estimates of the probable necessities for the

Various Departments of the City for the fiscal year 1902, upon which to base the rate for Municipal taxes for said year, herewith report and recommend as follows:

Upon the total assessment roll for the fiscal year 1902, viz: \$12,140,000, we estimate that there will be a small percentage of delinquencies, and have therefore based our estimates upon \$11,500,000. Net Valuation.

We recommend that your Honorable Body adopt a rate of \$1.45 upon the \$100.00 assessed valuations, which we recommend to be apportioned as follows:

#### Fire Department Fund.

Rate of \$.75 upon the \$100.00 assessed valuations will produce \$20,115. Which amount will provide for maintaining the Fire Department during the current fiscal year.

#### Salary Fund.

Rate of \$.21 upon the \$100.00 assessed valuations will produce \$24,150, which amount, together with the estimated apportionments from other sources, will provide for the salaries of the officers and employees as now fixed.

#### Police Department Fund.

The revenue derived from the Police Court and the City Justice Court is estimated to be sufficient to provide for the necessary expenses of the police Department, other than the salaries which are paid from the salary fund, therefore no levy is recommended for the Police Department fund.

#### Street Fund.

Rate of \$.155 upon the \$100.00 assessed valuations together with the estimated apportionments from other sources, will produce \$18,625, which amount will provide for maintaining the street Department during the current fiscal year.

#### Sewer and Drainage Fund.

Rate of \$.01 upon the \$100.00 assessed valuations will produce \$1,150, which amount will provide in full for maintaining the sewer Department during the current fiscal year.

#### Street Light Fund.

Rate of \$.17 upon the \$100.00 assessed valuations will produce \$19,550, the amount required for the payment of lighting the streets and Public places under the provisions of the contract with the San Diego Gas and Electric Light Company.

#### Park Improvement Fund.

Rate of \$.005 upon the \$100.00 assessed valuations will produce \$575, which will provide for the proper care of Parks and Plazas for the current fiscal year.

#### Public Health Fund.

Rate of \$.025, upon the assessed valuations will produce \$2,875, which

amount will provide in full for maintaining the Health Department during the current fiscal year.

#### Library Fund.

Rate of \$.05 upon the \$100.00 assessed valuation, together with the estimated apportionments from other sources, will produce \$5,900, which will provide for the necessary expenses of the Public Library during the current fiscal year.

#### Public Building Fund.

Rate of \$.04 upon the \$100.00 assessed valuation, together with the estimated apportionments from licenses, will produce \$10,000, which amount will provide in full for rentals of Public buildings, engine houses, jail and jail attendants, Plaza purchase, and for gas used by the city; and also provides \$6,000.00 for payments on New City Hall building.

#### Office Fund.

Rate of \$.02 upon the \$100.00 assessed valuation will produce \$2,300, which will provide in full for the stationary, books, postage, printing, fuel, etc., for the various departments, if proper economy is used.

#### General Fund.

Rate of \$.04 upon the \$100.00 assessed valuation will produce \$4,600, which amount will provide for the general and contingent expenses of the city during the current fiscal year.

#### Legal Fund.

The revenue derived from the delinquent taxes is sufficient to provide for the necessary expenses of the legal fund; therefore, no levy is recommended for said fund.

#### Water Fund.

The revenue derived from the sale of water by this department is estimated to be sufficient to provide for the necessary expenses of the water department, including salaries; therefore, no levy is recommended for said fund.

#### School Bond Interest and Sinking Fund.

Rate of \$.045 upon the \$100.00 assessed valuation will produce \$5.175, which provides for the redemption of bonds and payment of interest required.

#### Refunding Bond Interest and Sinking Fund.

Rate of \$.14 upon the \$100.00 assessed valuation will produce \$16.100, which amount will provide for the redemption of bonds and payment of interest required.

#### Water Bond Interest and Sinking Fund.

Rate of \$.365 upon the \$100.00 assessed valuation will produce \$41.975, which will provide for the redemption of bonds and payment of interest required.

We therefore, recommend the adoption of an ordinance in accordance with the apportionments hereto attached marked "Exhibit A".

Respectfully Submitted

H. M. Landis.

J. T. Johnson.

J. P. M. Rainbow.

Said Ordinance as adopted is as follows, viz:

#### Ordinance No. 1129.

An Ordinance Prescribing Specifications for Asphalt Pavement on Asphalt Concrete Base in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That the paving of all streets in the city of San Diego, California, with asphalt pavement on asphalt concrete base shall be done in accordance with the specifications hereinafter contained.

The street pavement, guttering, and culverts provided for herein are to be constructed according to the plans and drawings and cross-section, approved by the Common Council, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed; said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Grading and preparing the roadbed; (b) Trenching for, and constructing, the culverts; (c) Constructing and laying an Asphalt pavement on Asphalt Concrete base; (d) Constructing and laying along the exterior lines of the said pavement the guttering prescribed; (e) Furnishing all material and labor necessary to perform said work and complete the same.

Section 2. That all grading and the preparation of the roadbed for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the subgrade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered it shall be taken out below the sub-grade, and the space shall be refilled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below a point two (2) inches above the sub-grade. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface, all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. All covers to sewer manholes, and valve boxes on the line of work that are not to the established grade shall be reset to the established grade of the street, and grade stakes set therefor by the said City Engineer. The contract price per square yard for the finished pavement shall include the cost of re-setting the said covers, and no extra compensation shall be allowed the contractor for re-setting them.

8. The roller used shall be of a weight of not less than two hundred and fifty (250) pounds for each one (1) inch width of roller.

Section 3. That the gutters may be paved with natural stone blocks, Portland cement concrete, or with the same material as the street pavement, and laid in the same manner. The Resolution of Intention shall state the material

with which the gutter is to be paved. The paving of gutters shall commence at the curb and shall conform to the cross-section of the street, and shall be of such width as shall be specified in the Resolution of Intention. The paving of all gutters with natural stone shall be as follows:

1. The blocks shall be of porphyry or granite, as specified in the Resolution of Intention. The stone shall in all cases be free from lamination, stratification, or other defects, and shall be of uniform grade and texture throughout.

2. The stone blocks shall be neatly cut to the following dimensions: In length, not more than ten (10) nor less than seven (7) inches; in width, not more than four and one half (4½) nor less than three and one-half (3½) inches, and to a uniform depth of seven inches. All blocks shall be dressed to rectangular faces with straight edges on top, bottom and sides. The sides and ends shall be dressed so as to make three-fourths (¾) of an inch joints the full depth of the blocks. The top and bottom faces shall be parallel and there must be no knob or projections on either the top, bottom, sides or ends of the stone.

3. The blocks shall be laid by hand and firmly bedded in four (4) inches of clean, sharp sand.

4. The blocks shall be laid with their greatest length at right angles to the axis of the street and in straight courses of uniform depths and widths throughout. At the intersection of one street with another street the gutter shall be constructed to the line of the culverts. If culverts are not constructed across the intersection, the blocks will be laid to true radial lines, following the curvature of the curb. Each course shall be set perpendicular to the surface so that in alternate courses all longitudinal joints shall be broken by a lap of at least two (2) inches, and the outer edge shall be laid to form a toothing of at least four (4) inches.

5. When laid, the pavement of the gutter shall be immediately covered with screened pea gravel, which shall first be thoroughly washed and heated and while hot shall be raked or swept in the joints until all are completely filled. The blocks shall then be rammed with rammers weighing from seventy-five (75) to eighty (80) pounds, until all have been forced to a firm unyielding bed, and the gutter brought to a perfect surface. Every block that does not have a solid bearing, as well as all general depressions in the surface, resulting from a thorough

ramming of each block, shall be taken up, and additional sand placed upon the foundation and the blocks again laid and rammed until brought to a solid bearing and perfect surface. While the blocks are being rammed the joints shall be kept well filled with gravel.

6. Immediately after ramming, the gravel shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the gravel is hot, boiling paving cement until all the joints are completely full. Additional hot gravel of the above specified size and quality shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

7. The said paving cement shall be composed of twenty (20) parts of refined asphaltum and three (3) parts of residuum oil mixed with one hundred (100) parts of tar, which shall be obtained from the direct distillation of coal-tar, and shall be the residuum therefrom. These ingredients shall be delivered on the work at least one week before being used, in order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work. The cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use. Three and one-half (3½) gallons of cement shall be used for each and every square yard of gutter.

8. As soon as the joints shall have been thoroughly tamped and before the paving shall have become cold, a layer of clean, dry coarse sand, one-half (½) inch in thickness, shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

9. All blocks shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and culling of the blocks.

10. All natural stone block gutters shall be paid for at a stated price per square yard, which price per square yard shall include the furnishing of all labor and materials, the foundation, the grouting, and all other work and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 4. That all Portland cement concrete gutters shall be constructed as follows:

1. Portland cement concrete gutters shall be of the width stated in the Resolution of Intention.

2. The thickness shall be six (6) inches at center and at the edge adjoining the curb, and shall be eight (8) inches at the edge adjoining the street pavement, and shall be laid to conform to the cross-section of the street, as shown on the plans and drawings on file in the office of the said City Engineer.

3. The Portland cement used shall conform to the requirements enumerated in Section 8 of this Ordinance.

4. The Portland cement concrete shall be composed of one (1) part, by volume, of cement, two (2) parts of sand and four (4) parts of broken rock. The moulds shall be banked up solidly so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete as hereinafter specified and thoroughly tamped to within one (1) inch of the finished surface. The final layer of one (1) inch of mortar shall be one part of cement to one of sand filled in and finished with a trowel. After setting for twelve (12) hours it shall be covered with wet earth and kept so covered for ten (10) days.

Section 5. That all culverts shall be constructed as follows:

1. Culverts may be of vitrified pipe, cast-iron pipe, or of Portland cement concrete, as called for in the Resolution of Intention.

2. All culverts shall be constructed in the line of the gutters and in the direction of the main flow of water, and as shown by the plans and drawings for same in the office of the said City Engineer.

3. If of vitrified stone pipe, the material shall be close grained, well glazed, thoroughly pressed and burned clear through so as to show a uniform color when broken. The inside of the bells and the outside of the spigot ends shall be wiped clean, thoroughly wet and well and closely jointed as laid. The trench for the pipe shall be two (2) feet wide, graded true with the bottom uniformly solid. The joints shall be thoroughly cemented with a mortar composed of one (1) part of Portland cement to one (1) part

of sand. The pipe shall be laid upon the bottom of the trench, and thereafter the trench shall be filled in around the pipe with concrete which shall be well tamped under the lower quarters of the pipe, and the pipe covered with cement concrete six (6) inches in thickness on both sides and top. After the concrete is finished and has set for twelve (12) hours it shall be covered with six (6) inches of earth and kept so covered for ten (10) days. Y branches with conduit pipes shall be laid and concreted in the same manner.

4. If the culverts are constructed of cast-iron pipe, the material shall be the best quality of cast-iron pipe coated inside and out with a double coat of paraffine paint, and laid and concreted as specified above.

5. The concrete in which pipe culverts are laid shall be composed of one (1) part, by volume, of Portland cement, two (2) parts of sand, and four and one-half (4½) parts of gravel or crushed rock, mixed as hereinafter specified.

6. If the culverts are constructed of Portland cement concrete, with cast-iron covers, the culverts shall be constructed so as to conform to the alignment and grade, and shall be of the dimensions shown by the plans and drawings on file in the office of the said City Engineer, who shall set the grade stakes for that purpose in accordance therewith. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand and four parts of broken stone. The concrete shall be placed in position against wood moulds substantially held in place so as to permit of no movement of the mass while the concrete is being rammed.

7. The cast-iron covers for the culverts shall be of good quality of cast-iron free from flaws, cracks, or other defects. They shall be perfect castings of the exact form and size as shown upon the plans and drawings in the office of the said City Engineer. Where the culvert crosses street railway tracks, the covers shall be made of the proper length and form to fit closely between the rails. Each section of the cast-iron plates shall be set in a bed of mortar in such manner as to insure a uniform bearing upon the walls of the culvert, and any plate that is not so bedded shall be reset, and any plate that may be imperfect in form or material shall be replaced by and at the expense of the contractor before the work is accepted. All surfaces of cast-iron culvert plates shall receive one coat of paraffine paint.

8. The contract price shall be per linear foot for the culvert complete, and shall include all the labor and material and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining it in perfect condition until it shall have been finally accepted by the said Superintendent of Streets.

Section 6. That all asphalt concrete pavements shall be constructed as follows:

1. Upon the sub-grade prepared, as hereinafter described, there shall be constructed an asphalt concrete base six (6) inches in thickness after compression, which shall be composed of asphaltic cement, sand, and broken rock. The asphaltic cement may be composed of either natural or artificial asphalt which shall conform to the tests required for the material in the wearing surface hereinafter described.

2. The sand must be clean, sharp sand, free from clay and loam. The broken rock shall be clean, hard rock, roughly cubical in shape with angular edges and ranging in size from a pea (minimum) to the largest size which will pass through a ring one (1) inch in diameter.

3. The broken rock, with enough of the above mentioned sand to fill voids in the same, shall be heated to a temperature of three hundred (300) degrees Fahrenheit after which the asphaltic cement above specified, and also heated to a temperature of three hundred (300) degrees Fahrenheit, shall be applied to the same in proportion of eight (8) pounds of asphaltic cement to one cubic foot of broken rock and sand, and the whole shall be thoroughly mixed in a mechanical mixer.

4. The mixing shall be continued until each partical of sand and broken rock is coated with the asphaltic cement. When thus prepared it shall be delivered upon the work, in wagons or dump carts at a temperature of not less than two hundred and fifty (250) degrees Fahrenheit and shall be immediately spread on the sub-grade previously prepared to such a depth that it shall have, after compression, a uniform thickness of six (6) inches.

5. The compression of this concrete layer shall be done as follows: As soon as the material has been spread for rolling it shall be rolled with a hot hand roller weighing not less than two hundred and fifty (250) pounds to the lineal foot and as the material cools, it shall be rolled with a roller weighing not less than one hundred and fifty (150) pounds per inch in width of roller. And such rolling shall be continued until the material is thoroughly compacted.

6. The upper surface of this asphalt-

ic concrete foundation shall be finished parallel to, and two (2) inches below, the grade of the finished pavement, and shall be made to extend close up to and around all openings or projections and to fit all irregularities.

Section 7. That all asphalt used in the construction of the pavement specified in this ordinance shall comply with the following specifications:

1. Upon the asphalt concrete foundation as hereinbefore described, there shall be placed an asphalt wearing surface prepared as follows:

Asphaltic 9 per cent to 17 per cent by Cement weight.

Sand 83 per cent to 65 per cent by weight.

Finely powdered Carbonate 5 per cent to 18 per cent by of Lime weight.

Total 100 per cent to 100 per cent by weight.

2. The asphaltic cement shall be prepared from a refined asphalt mixed with a refined liquid asphalt, as described below, and shall contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide. It shall be heated to a temperature of three hundred (300) degrees Fahrenheit before adding it to the other materials used in making the asphalt wearing surface. In no case shall this asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit.

4. The refined solid asphalt shall be manufactured wholly from asphaltic material, and must be free from admixture with any residues obtained by the artificial distillation of coal, coal-tar, or paraffine oil. It must contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide, and not more than four (4) per cent of non-bituminous organic matter. It must be of even and uniform composition, and when heated to a temperature of three hundred (300) degrees Fahrenheit for five (5) hours, must not lose more than four (4) per cent in weight of vaporizable material. The bitumen contained in it must be of a permanent and cementitious character, which when mixed with the refined liquid asphalt will make a durable cement.

5. The refined liquid asphalt must be a highly cementitious liquid asphalt, refined so as to deprive it of all water and light oil. It must contain not less than 95 per cent of bitumen soluble in carbon disulphide, and not less than 90 per cent thereof shall be soluble in 88 degrees naphtha. When heated to a temperature of 300 degrees Fahrenheit for five hours it must not lose more than 5 per cent in weight of vaporizable oils. Material which has been cracked in the process of refining, or which contains any admixture of paraffine or coal-tar product will be rejected, and shall not be allowed to enter into the composition of the asphalt wearing surface.

6. The sand shall be clean, sharp, siliceous sand, and shall contain not more than 3 per cent of loam, clay or other earthy impurities; it must all pass an eight mesh to the inch screen.

7. The materials above described shall be prepared in the following manner: The sand shall be heated in dryers to a temperature between 300 and 375 degrees Fahrenheit. The hot sand and cold lime dust shall be thoroughly mixed together in a mixer. A quantity of asphaltic cement (previously heated to 300 degrees Fahrenheit) sufficient to produce a pavement containing not less than 9 per cent of bitumen soluble in carbon disulphide shall then be added, and the whole mass shall be mixed until every particle of the sand and lime dust is thoroughly coated with a thin layer of asphaltic cement.

8. The material so produced must leave the mixer at a temperature between two hundred and fifty and three hundred and twenty-five degrees Fahrenheit, and must be fine grained and capable of producing a compact pavement. Sand and asphaltic cement and dust must be used in order to secure this result.

9. The mixture prepared as above shall be brought to the work in carts or dump wagons, and shall not be colder than 250 degrees Fahrenheit or hotter than 325 degrees Fahrenheit when it reaches the work.

10. It shall at once be spread uniformly over the concrete foundation prepared for it, with hot shovels and hot rakes, to such a depth that, after receiving its ultimate compression, the finished asphalt wearing surface shall not be thinner than two (2) inches. The thickness shall be constantly tested by means of gauges.

11. It shall be immediately compressed with hot hand rollers, after which a small amount of hydraulic cement shall be swept over it, and it will then immediately be thoroughly rolled with a roller weighing not less than 250 pounds per inch in width of roller. This rolling shall be continued for not less than five (5) hours for each one thousand square yards of pavement. All places that are inaccessible to the roller must be tamped with hot iron tampers. The resulting pavement must show a close-grained even and smooth surface, true to grade and cross-section, and free from all

hollows and irregularities. No traffic shall be allowed on the street until the pavement is thoroughly cooled and set. No wearing surface shall be laid in rainy weather, or when the foundation is wet from rain or other cause.

12. The contract price shall be per square yard of finished pavement, and shall include all gradings, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same until it shall have been finally accepted by the Street Superintendent.

Section 8. That all cement, broken stone, or gravel, or other materials not hereinbefore mentioned, shall comply with the following specifications:

1. No cement will be accepted, tested, or permitted to be used unless delivered in the original packages with manufacturer's name and brand of cement thereon.

2. Tests of the cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements herein specified such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch, and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge. No. 30 sieve shall have 900 meshes to the square inch, and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge. No. 50 sieve shall have 2500 meshes to the square inch, and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge. No. 100 sieve shall have 10,000 meshes to the square inch, and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass through a number twenty (20) sieve and be retained on a No. 30 sieve.

8. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

9. Any cement showing signs of swelling, after being mixed, will be rejected.

10. Portland cement shall be ground to such a degree of fineness that not less than 98 per cent by weight shall pass a No. 50 sieve, and not less than 90 per cent by weight shall pass a No. 100 sieve.

11. The ultimate tensile strength of briquettes, one square inch in cross-section, made of neat Portland cement, shall be as follows:

One day in air and six days in water, 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

12. The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 190 pounds.

13. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half inches ( $1\frac{1}{2}$ ) nor the least dimension of any stone be less than one quarter ( $\frac{1}{4}$ ) of an inch, and must be free from dust, dirt or other foreign matter.

14. Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one-half inches ( $1\frac{1}{2}$ ) nor the least dimension of any pebble be less than one quarter ( $\frac{1}{4}$ ) of an inch, and must be free from dust, dirt or other foreign matter.

15. Water shall be fresh, and free from earth, dirt or sewerage.

Section 9. That the mode and methods in performing the work shall be as follows:

1. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform with shovels or hoes until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall

be added by sprinkling during the process of mixing in quantities to secure the required consistency.

2. The cement and sand for mortar in the specified proportions shall be thoroughly mixed dry, on a tight platform, with shovels or hoes until no streaks of cement are visible. Water shall be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

3. The mortar, while fresh, shall be spread upon the concrete base before the latter has set, in such quantities that after being thoroughly manipulated and spread over the concrete it will make a layer one inch thick conforming to the required grade and cross-section, which shall be thoroughly dressed and smoothed.

4. Board or timber forms shall be provided by the contractor to mould the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

5. Retempering of concrete or mortar shall not be permitted, and mortar of concrete that has begun to set before ramming is completed shall be removed from the work.

6. All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

7. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than the thickness called for, and the upper surface shall be parallel with the proposed surface of the completed work.

8. Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proportions of sand and stone specified.

Section 10. That all work done shall be subject to the following conditions and requirements:

1. The contractor shall give twelve (12) hours notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found to be incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the progress of the work, and before the acceptance thereof, or from any act or commission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner, and replace the same when necessary that the same should be replaced in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the

said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 11. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 12. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 13. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

*Said Ordinance as adopted is as follows, viz:*

**Ordinance No. 1128.**

An Ordinance Prescribing Specifications for Bituminous Rock Pavement on Natural Earth in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That the paving of all streets in the City of San Diego, California, with bituminous rock pavement on the natural earth shall be done in accordance with the specifications hereinafter contained.

The street pavement, guttering, and culverts provided for herein are to be constructed according to the plans and drawings and cross-section, approved by the Common Council, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed; said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Grading and preparing the roadbed; (b) Trenching for, and constructing, the culverts; (c) Constructing and laying a pavement of bituminous rock; (d) Constructing and laying along the exterior lines of the said pavement the guttering prescribed; (e) Furnishing all material and labor necessary to perform said work and complete the same.

Section 2. That all grading and the preparation of the roadbed for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the subgrade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered it shall be taken out below the sub-grade, and the space shall be filled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below the established grade line of the street. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. All covers to sewer manholes, and valve boxes on the line of work that are not to the established grade shall

be reset to the established grade of the street, and grade stakes set, therefore by the City Engineer. The contract price per square yard for the finished pavement shall include the cost of resetting the said covers, and no extra compensation shall be allowed the contractor for re-setting them.

8. The roller used shall be of a weight of not less than two hundred and fifty (250) pounds for each one (1) inch width of roller.

Section 3. That the gutters may be paved with natural stone blocks, Portland cement concrete, or with the same material as the street pavement, and laid in the same manner. The Resolution of Intention shall state the material with which the gutter is to be paved. The paving of gutters shall commence at the curb and shall conform to the cross-section of the street, and shall be of such width as shall be specified in the Resolution of Intention.

The paving of all gutters with natural stone shall be as follows:

1. The blocks shall be of porphyry or granite, as specified in the Resolution of Intention. The stone shall in all cases be free from lamination, stratifications, or other defects, and shall be of uniform grade and texture throughout.

2. The stone blocks shall be neatly cut to the following dimensions: In length, not more than ten (10) nor less than seven (7) inches; in width, not more than four and one-half (4½) nor less than three and one-half (3½) inches, and to a uniform depth of seven inches. All blocks shall be dressed to rectangular faces with straight edges on top, bottom and sides. The sides and ends shall be dressed so as to make three-fourths (¾) of an inch joints the full depth of the blocks. The top and bottom faces shall be parallel and there must be no knob or projections on either the top, bottom, sides or ends of the stone.

3. The blocks shall be laid by hand and firmly bedded in four (4) inches of clean, sharp sand.

4. The blocks shall be laid with their greatest length at right angles to the axis of the street, and in straight courses of uniform depths and widths throughout. At the intersection of one street with another street the gutter shall be constructed to the line of the culverts. If culverts are not constructed across the intersection, the blocks will be laid to true radial lines, following the curvature of the curb. Each course shall be set perpendicular to the surface so that in alternate courses all longitudinal joints shall be broken by a lap of at least two (2) inches, and the outer edge shall be laid to form a toothing of at least four (4) inches.

5. When laid, the pavement of the gutter shall be immediately covered with screened pea gravel, which shall first be thoroughly washed and heated and while hot shall be raked or swept in the joints until all are completely filled. The blocks shall then be rammed with rammers weighing from seventy-five (75) to eighty (80) pounds, until all have been forced to a firm unyielding bed, and the gutter brought to a perfect surface. Every block that does not have a solid bearing, as well as all general depressions in the surface, resulting from a thorough ramming of each block, shall be taken up, and additional sand placed upon the foundation and the blocks again laid and rammed until brought to a solid bearing and perfect surface. While the blocks are being rammed the joints shall be kept well filled with gravel.

6. Immediately after ramming, the gravel shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the gravel is hot, boiling paving cement until all the joints are completely full. Additional hot gravel of the above specified size and quality shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

7. The said paving cement shall be composed of twenty (20) parts of refined asphaltum and three (3) parts of residuum oil mixed with one hundred (100) parts of tar, which shall be obtained from the direct distillation of

coal-tar, and shall be the residuum therefrom. These ingredients shall be delivered on the work at least one week before being used, in order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work. The cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use. Three and one-half (3½) gallons of cement shall be used for each and every square yard of gutter.

8. As soon as the joints shall have been thoroughly tamped and before the paving shall have become cold, a layer of clean, dry coarse sand, one-half (½) inch in thickness, shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

9. All blocks shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and culling of the blocks.

10. All natural stone block gutters shall be paid for at a stated price per square yard, which price per square yard shall include the furnishing of all labor and materials, the foundation, the grouting, and all other work and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 4. That all Portland cement concrete gutters shall be constructed as follows:

1. Portland cement concrete gutters shall be of the width stated in the Resolution of Intention.

2. The thickness shall be six (6) inches at center and at the edge adjoining the curb, and shall be eight (8) inches at the edge adjoining the street pavement, and shall be laid to conform to the cross-section of the street, as shown on the plans and drawings on file in the office of the said City Engineer.

3. The Portland cement used shall conform to the requirements enumerated in Section 6 of this Ordinance.

4. The Portland cement concrete shall be composed of one (1) part, by volume, of cement, two (2) parts of sand and four (4) parts of broken rock. The moulds shall be banked up solidly so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete as hereinafter specified and thoroughly tamped to within one (1) inch of the finished surface. The final layer of one (1) inch of mortar shall be one part of cement to one of sand filled in and finished with a trowel. After setting for twelve (12) hours it shall be covered with wet earth and kept so covered for ten (10) days.

Section 5. That all culverts shall be constructed as follows:

1. Culverts may be of vitrified pipe, cast-iron pipe, or of Portland cement concrete, as called for in the Resolution of Intention.

2. All culverts shall be constructed in the line of the gutters and in the direction of the main flow of water, and as shown by the plans and drawings, for same in the office of the said City Engineer.

3. If of vitrified stone pipe, the material shall be close grained, well glazed, thoroughly pressed and burned clear through so as to show a uniform color when broken. The inside of the bells and the outside of the spigot ends shall be wiped clean, thoroughly wet and well and closely jointed as laid. The trench for the pipe shall be two (2) feet wide, graded true with the bottom uniformly solid. The joints shall be thoroughly cemented with a mortar composed of one (1) part of Portland cement to one (1) part of sand. The pipe shall be laid upon the bottom of the trench, and thereafter the trench shall be filled in around the pipe with concrete which shall be well tamped under the lower quarters of the pipe, and the pipe covered with cement concrete six (6) inches in thickness on both sides and top.

After the concrete is finished and has set for twelve (12) hours it shall be covered with six (6) inches of earth and kept so covered for ten (10) days. Y branches with conduit pipes shall be laid and concreted in the same manner.

4. If the culverts are constructed of cast-iron pipe, the material shall be the best quality of cast-iron pipe coated inside and out with a double coat of paraffine paint, and laid and concreted as specified above.

5. The concrete in which pipe culverts are laid shall be composed of one (1) part, by volume, of Portland cement; two (2) parts of sand, and four and one-half (4½) parts of gravel or crushed rock, mixed as hereinafter specified.

6. If the culverts are constructed of Portland cement concrete with cast-iron covers, the culverts shall be constructed so as to conform to the alignment and grade, and shall be of the dimensions shown by the plans and drawings on file in the office of the said City Engineer, who shall set the grade stakes for that purpose in accordance therewith. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand and four parts of broken stone. The concrete shall be placed in position against wood moulds substantially held in place so as to permit of no movement of the mass while the concrete is being rammed.

7. The cast-iron covers for the culverts shall be of good quality of cast-iron, free from flaws, cracks, or other defects. They shall be perfect castings of the exact form and size as shown upon the plans and drawings in the office of the said City Engineer. Where the culverts crosses street railway tracks, the covers shall be made of the proper length and form to fit closely between the rails. Each section of the cast-iron plates shall be set in a bed of mortar in such manner as to insure a uniform bearing upon the walls of the culvert, and any plate that is not so bedded shall be reset, and any plate that may be imperfect in form or material shall be replaced by and at the expense of the contractor before the work is accepted. All surfaces of cast-iron culvert plates shall receive one coat of paraffine paint.

8. The contract price shall be per linear foot for the culvert complete, and shall include all the labor and material and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining it in perfect condition until it shall have been finally accepted by the said Superintendent of Streets.

Section 6. That all cement, broken stone, or gravel, or other materials not heretofore specified shall comply with the following specifications:

1. No cement will be accepted, tested, or permitted to be used unless delivered in the original packages with manufacturers name and brand of cement thereon.

2. Tests of the cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements hereinafter specified such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch, and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge. No. 30 sieve shall have 900 meshes to the square inch, and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge. No. 50 sieve shall have 2500 meshes to the square inch, and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge. No. 100 sieve shall have 10,000 meshes to the square inch, and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes

mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

2. The cement and sand for mortar in the specified proportions shall be thoroughly mixed dry, on a tight platform, with shovels or hoes until no streaks of cement are visible. Water shall be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

3. The mortar, while fresh, shall be spread upon the concrete base before the latter has set, in such quantities that after being thoroughly manipulated and spread over the concrete it will make a layer one inch thick conforming to the required grade and cross-section, which shall be thoroughly dressed and smoothed.

4. Board or timber forms shall be provided by the contractor to mould the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

5. Retempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

6. All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

7. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than the thickness called for, and the upper surface shall be parallel with the proposed surface for the completed work.

8. Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proportions of sand and stone specified.

Section 8. That all bituminous rock used in the construction of the pavement specified in this ordinance shall comply with the following specifications:

1. Bituminous rock pavement shall consist of a wearing surface of natural bituminous rock two (2) inches thick, placed on the natural earth foundation prepared as hereinbefore specified.

2. The rock shall be clean and sharp and of such size that it will pass through a number twenty (20) sieve and be retained on a No. 30 sieve.

3. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

4. Any cement showing signs of swelling, after being mixed, will be rejected.

5. Portland cement shall be ground to such a degree of fineness that not less than 98 per cent by weight shall pass a No. 50 sieve, and not less than 90 per cent by weight shall pass a No. 100 sieve.

6. The ultimate tensile strength of briquettes, one square inch in cross-section, made of neat Portland cement, shall be as follows:

One day in air and six days in water 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

7. The ultimate tensile strength of briquettes, one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 150 pounds.

8. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half inches ( $1\frac{1}{2}$ ) nor the least dimension of any stone be less than one quarter ( $\frac{1}{4}$ ) of an inch, and must be free from dust, dirt or other foreign matter.

9. Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one-half inches ( $1\frac{1}{2}$ ) nor the least dimension of any pebble be less than one quarter ( $\frac{1}{4}$ ) of an inch, and must be free from dust, dirt or other foreign matter.

10. Water shall be fresh, and free from earth, dirt or sewerage.

Section 7. That the mode and methods in performing the work shall be as follows:

1. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform with shovels or hoes until no streaks of cement are visible. Upon the

2. The bituminous rock is to be spread of such thickness that when compacted it shall have a thickness of at least two (2) inches.

3. The bituminous rock must be of good quality, suitable for use as the wearing surface of a pavement. It must yield not less than nine (9) nor more than fifteen (15) per cent of bitumen when extracted by carbon disulphide, and must not contain more than two (2) per cent of non-bituminous combustible material.

4. The consistency of the bitumen extracted by carbon disulphide must fall within the limits of 40 to 80 penetration by the District of Columbia Standard. It must be adhesive and ductile. When heated to a temperature of 300 degrees Fahrenheit for eight (8) hours it must not lose more than twelve (12) per cent in weight of vaporizable material, and must not be so changed by heating as to be harder than of a consistency of eight (8) penetration.

5. The non-bituminous and non-combustible ingredients of the bituminous rock are to be sand and finely pulverized mineral matter, of a character unacted on by water. The sand must be clean, hard, moderately sharp, and must all pass an 8-mesh to the inch screen. At least 15 per cent of the non-bituminous and non-combustible ingredients of the bituminous rock must be fine enough to pass a 100 mesh to the inch screen, and at least 16 per cent must be coarse enough to be retained on a 50-mesh to the inch screen.

6. Should it be necessary to add stone dust to the bituminous rock to supply a deficiency of the finely pulverized mineral matter, powdered carbonate of lime shall be used.

7. The bituminous rock is to be reduced to a finely disintegrated condition by heating, but not in open kettles, nor by any other process liable to burn or impair the quality of the bituminous materials. It is to be brought upon the street in a finely disintegrated condition, not colder than 200 nor hotter than 300 degrees Fahrenheit, and while still hot the bituminous rock is to be spread uniformly, and rolled with hot hand-rollers weighing not less than two hundred and fifty (250) pounds to the lineal foot until this layer is thoroughly compacted.

8. Hand-rolling is to be followed by rolling with a roller weighing not less than 150 pounds per inch in width of roller. This roller is to be used on the warm pavement for at least five hours for each 1,000 square yards of surface.

9. Where the surface cannot be rolled it is to be thoroughly rammed with hot tampers and smoothed with hot smoothing irons.

10. In case the natural bituminous rock deposit from which the contractor desires to take the bituminous rock does not contain material complying with the above requirements, the contractor shall procure bituminous rock from some other deposit and mix the same with the bituminous rock which he desires to use, to bring it to the standard specified herein. In all cases the bituminous rock used must comply with the specifications herein contained.

11. The finished surface must be smooth and conform to the prescribed surface of the roadway.

12. The bituminous rock of the finished pavement shall be fine grained and compact, containing a sufficient amount of asphalt to fill the voids between the grains of sand or other mineral matter entering into its composition. It must be free from water and from appreciable quantities of light, oils volatile at 250 degrees Fahrenheit, and must be in every way serviceable for use as a wearing surface for a street pavement.

13. The contract price shall be per square yard for finished pavement, and shall include all grading, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same until it shall have been finally accepted by the said Street Superintendent.

Section 9. That all work done shall be subject to the following conditions and requirements:

1. The contractor shall give twelve (12) hours notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the pro-

gress of the work, and before the acceptance thereof, or from any act or commission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner, and replace the same when necessary, that the same should be replaced in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits, for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 10. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 11. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 12. That the City Clerk of the said City of San Diego, be and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the City official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

After first giving due notice President Perrin did in open session sign an Ordinance (No 1175) Providing for the return of the Bond Executed to the City of San Diego, By the San Diego Water Company as security for the payment of State and County Taxes for the year 1901-02.

The following report of the Sewer Committee in the matter of the petition of Grace B. Hatch et al., for the extension of the sewer in Fourth street from Juniper to Kalmia, being read is adopted, viz:

San Diego, Cal., May 29th, 1902.

To the Common Council,

San Diego, Calif.,

Gentlemen:--

In the matter of the petition of Grace B. Hatch et al. for the extension of a sewer in Fourth street, the Sewer Committee herewith recommends that said parties be permitted to construct said sewer at their own expense, under the supervision of the Board of Public Works and Superintendent of Sewers, in accordance with plans and specifications therefor to be prepared by the City Engineer; and your Committee further recommends that said parties be re-imbursed by the city for said sewer when there are funds available for said purpose.

Respectfully,

D. F. Jones,

Thereupon a Joint Resolution granting permission to Grace B. Hatch to construct a sewer on Fourth street between Juniper and Kalmia streets, at her own expense, is read and adopted by the following vote, to-wit:

AYES -- ALDERMEN Clark, Whitson, Rainbow, Johnson, Jones, Hyers, Watson and Perrin.

NOES -- NONE.

ABSENT--ALDERMAN Landis.

Said resolution as adopted is as follows, viz:

J O I N T R E S O L U T I O N No. 1 4 1 3.

B E I T R E S O L V E D, By the Common Council of the City of San Diego, as follows:

That permission be and is hereby granted to Grace B. Hatch to construct a sewer running on Fourth street from Juniper to Kalmia streets in the City of San Diego, California, at her own expense, and without any expense whatever to the said City of San Diego; the said City of San Diego to acquire said sewer when the Board of Public Works of said city and the Common Council of said city shall deem it advisable: provided, that the same is constructed according to the specifications to be prepared by the City Engineer of said city, and be laid according to the grade stakes to be set by him, and under the supervision of the Superintendent of Sewers of said city.

The following report of the Joint Finance Committee in the matter of the request of the employees of the Water Department for an increase in salaries, being read is on motion of Alderman Watson adopted, viz:

The Finance Committee recommends that the salaries of the collectors in the Water Department be increased from \$50. to \$60. per month.

S. T. Johnson,  
F. H. Briggs,  
Geo. McNeill.

May 22/02.

Thereupon an ordinance fixing the salaries of the collectors in the Water Department, is read and on motion of Alderman Johnson adopted by the following vote, to-wit:

AYES -- ALDERMEN Rainbow, Johnson, Jones, Hyers and Watson.

NOES -- ALDERMEN Clark, Whitson and Perrin.

ABSENT--ALDERMAN Landis.

Said ordinance as adopted is as follows, viz:

O R D I N A N C E No. \_\_\_\_\_.

An Ordinance fixing the compensation of the Collectors for the Water Department of the City of San Diego, California.

B E I T O R D A I N E D, By the Common Council of the City of San Diego, as follows:

Section 1. That the salary of the two collectors for the Water Department of the City of San Diego, California, be and the same is hereby fixed at sixty dollars (\$60.00) each per month.

Section 2. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 3. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 4. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the

same to be published once in the city official newspaper of said city, to-wit: the San Diego Union and Daily Bee.

An ordinance prescribing specifications for bituminous rock pavement on a Portland cement concrete foundation, is read and adopted by the following vote, to-wit:

**AYES -- ALDERMEN** Clark, Whitson, Rainbow, Johnson, Jones, Hyers, Watson and Perrin.

**NOES -- NONE.**

**ABSENT--ALDERMAN** Landis.

Said ordinance as adopted is as follows, viz:

### Ordinance No. 1139.

#### AN ORDINANCE PRESCRIBING SPECIFICATIONS FOR BITUMINOUS ROCK PAVEMENT ON A PORTLAND CEMENT CONCRETE FOUNDATION IN THE CITY OF SAN DIEGO CALIFORNIA.

Be it ordained, by the Common Council of the City of San Diego, as follows: Section 1. That the paving of all streets in the City of San Diego, California, with bituminous rock pavement on a Portland cement concrete foundation shall be done in accordance with the specifications hereinafter contained.

The street pavement, guttering, and culverts provided for herein are to be constructed according to the plans and drawings and cross-section, approved by the Common Council, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed, said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Grading and preparing the roadbed; (b) Trenching for, and constructing, the culverts; (c) Constructing and laying a pavement of bituminous rock; (d) Constructing and laying along the exterior lines of the said pavement the guttering prescribed; (e) Furnishing all material and labor necessary to perform said work and complete the same.

Section 2. That all grading and the preparation of the roadbed for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of intention, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the sub-grade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered, it shall be taken out below the sub-grade, and the space shall be refilled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below a point two (2) inches above the sub-grade. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street, and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and refilled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. All covers to sewer manholes and valve boxes on the line of the work that are not to the established grade shall be reset to the established grade of the street, and grade stakes set therefor by the City Engineer. The contract price per square yard for the finished pavement shall include the cost of re-setting said covers, and no extra compensation shall be allowed the contractor for re-setting them.

8. The roller used shall be of a weight of not less than two hundred and fifty (250) pounds for each one (1) inch width of roller.

Section 3. That the gutters may be paved with natural stone blocks, Portland cement concrete, or with the same material as the street pavement, and laid in the same manner. The Resolution of Intention shall state the material with which the gutter is to be paved. The paving of gutters shall commence at the curb and shall conform to the cross-section of the street, and shall be of such width as shall be specified in the Resolution of Intention.

The paving of all gutters with natural stone shall be as follows:

1. The blocks shall be of porphyry or granite as specified in the Resolution of Intention. The stone shall be in all cases free from lamination, stratification, or other defects, and shall be of uniform grade and texture throughout.

2. The stone blocks shall be neatly cut to the following dimensions: In length, not more than ten (10) nor less than seven (7) inches; in width, not more than four and one-half (4½) nor less than three and one-half (3½) inches, and to a uniform depth of seven inches. All blocks shall be dressed to rectangular faces with straight edges on top, bottom, and sides. The sides and ends shall be dressed so as to make three-fourths (¾) of an inch joints the full depth of the blocks. The top and bottom faces shall be parallel, and there must be no knob or projections on either the top, bottom, sides, or ends of the stone.

3. The blocks shall be laid by hand and firmly bedded in four (4) inches of clean, sharp sand.

4. The blocks shall be laid with their greatest length at right angles to the axis of the street and in straight courses of uniform depths and widths throughout. At the intersection of one street with another street the gutter shall be constructed to the line of the culverts. If culverts are not constructed across the intersection, the blocks will be laid to true radial lines, following the curvature of the curb. Each course shall be set perpendicular to the surface so that in alternate courses all longitudinal joints shall be broken by a lap of at least two (2) inches, and the outer edge shall be laid to form a toothing of at least four (4) inches.

5. When laid, the pavement of the gutter shall be immediately covered with screened pea gravel, which shall first be thoroughly washed and heated and while hot shall be raked or swept in the joints until all are completely filled. The blocks shall then be cammed with rammers weighing from seventy-five (75) to eighty (80) pounds; until all have been forced to a firm unyielding bed, and the gutter brought to a perfect surface. Every block that does not have a solid bearing, as well as all general depressions in the surface, resulting from a thorough ramming of each block, shall be taken up, and additional sand placed upon the foundation and the blocks again laid and rammed until brought to a solid-bearing and perfect surface. While the blocks are being rammed the joints shall be kept well filled with gravel.

6. Immediately after ramming, the gravel shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the gravel is hot, boiling paving cement until all the joints are completely full. Additional hot gravel of the specified size and quality shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

7. The said paving cement shall be composed of twenty (20) parts of refined asphaltum and three (3) parts of residuum oil mixed with one hundred (100) parts of tar, which shall be obtained from the direct distillation of coal-tar and shall be the residuum therefrom. These ingredients shall be delivered on the work at least one week before being used. In order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work, the cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use. Three and one-half (3½) gallons of cement shall be used for each and every square yard of gutter.

8. As soon as the joints shall have been thoroughly tamped, and before the paving cement shall have become cold, a layer of clean, dry, coarse sand one-half (½) inch in thickness shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

9. All blocks shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and culling of the blocks.

10. All natural stone block gutters shall be paid for at a stated price per square yard, which price per square yard shall include the furnishing of all labor and materials, the foundation, the grouting, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 4. That all Portland cement concrete gutters shall be constructed as follows:

1. Portland cement concrete gutters shall be of the width stated in the Resolution of Intention.

2. The thickness shall be six (6) inches at center and at the edge adjoining the curb, and shall be eight (8) inches at the edge adjoining the street pavement, and shall be laid to conform to the cross-section of the street, as shown on the plans and drawings on file in the office of the said City Engineer.

3. The Portland cement used shall conform to the requirements enumerated in Section 8 of this Ordinance.

4. Portland cement concrete shall be composed of one (1) part, by volume, of cement, two (2) parts of sand, and four (4) parts of broken rock. The moulds shall be banked up solidly so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete as hereinafter specified and thoroughly tamped to within one (1) inch of the finished surface. The final layer of one (1) inch of mortar shall be one part of cement to one of sand filled in and finished with a trowel. After setting for twelve (12) hours it shall be covered with wet earth and kept so covered for ten (10) days.

Section 5. That all culverts shall be constructed as follows:

1. Culverts may be of vitrified pipe, cast-iron pipe, or of Portland cement concrete, as called for in the Resolution of Intention.

2. All culverts shall be constructed in the line of the gutters and in the direction of the main flow of water, and as shown by the plans and drawings for same in the office of the said City Engineer.

3. If of vitrified stone pipe, the material shall be close-grained, well glazed, thoroughly pressed and burned clear through so as to show a uniform color when broken. The inside of the bells and the outside of the spigot ends shall be wiped clean, thoroughly wet and well and closely jointed as laid. The trench for the pipe shall be two (2) feet wide, graded true with the bottom uniformly solid. The joints shall be thoroughly cemented with a mortar composed of one (1) part of Portland cement to one (1) part of sand. The pipe shall be laid upon the bottom of the trench, and the trench shall be filled in around the pipe with concrete which shall be well tamped under the lower quarters of the pipe, and the pipe covered with cement concrete to six (6) inches in thickness on both sides and top. After the cement is finished and has set for twelve (12) hours it shall be covered with six (6) inches of earth and kept so covered for ten (10) days. Y branches with conduit pipes shall be laid and concreted in the same manner.

4. If the culverts are constructed of cast-iron pipe, the material shall be the best quality of cast-iron pipe coated inside and out with a double coat of paraffine paint, and laid and concreted as specified above.

5. The concrete in which pipe culverts are laid shall be composed of one part, by volume, of Portland cement, two (2) parts of sand, and four and one-half (4½) parts of gravel or crushed rock, mixed as hereinafter specified.

6. If the culverts are constructed of Portland cement concrete with cast-iron covers, the culverts shall be constructed so as to conform to the alignment and grade, and shall be of the dimensions shown by the plans and drawings on file in the office of the said City Engineer, who shall set grade stakes for that purpose in accordance therewith. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand, and four parts of broken stone. The concrete shall be placed in position against wood moulds substantially held in place so as to permit of no movement of the mass while the concrete is being rammed.

7. The cast-iron covers for the culverts shall be of good quality of cast-iron free from flaws, cracks, or other defects. They shall be perfect castings of the exact form and size as shown upon the plans and drawings in the office of the said City Engineer. Where the culvert crosses the street railway tracks, the covers shall be made of the proper length and form to fit closely between the rails. Each section of the cast-iron plates shall be set in a bed of mortar in such manner as to insure a uniform bearing upon the walls of the culvert, and any plate that is not so bedded shall be reset, and any plate that may be imperfect in form or material shall be replaced by and at the expense of the contractor before the work is accepted. All surfaces of cast-iron culvert plates shall receive one coat of paraffine paint.

8. The contract price shall be per linear foot for the culvert complete, and shall include all the labor and material and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining it in perfect condition until it shall have been finally accepted by the said street superintendent.

Section 6. That all concrete foundations shall be laid as follows:

1. Concrete foundations four (4) inches in thickness shall be laid under the bituminous rock pavement. And no extra compensation shall be allowed the contractor for such foundations. The contract price for the pavement shall include the cost of the foundation upon which it rests.

2. All concrete foundations shall be made of Portland cement, sand, and broken stone, and the proportions shall be, by volume, as follows: Cement, one (1) part, sand three (3) parts, broken stone six (6) parts. The material for the concrete shall comply with the requirements enumerated in section 8 of this ordinance.

3. The concrete shall be in place and rammed within thirty (30) minutes after the cement is wet, and any concrete material, which has been wet for more than thirty (30) minutes will not under any circumstances be allowed to be used in the work.

4. The upper surface of the concrete foundation shall be finished parallel to and three (3) inches below the grade of the pavement, and shall be made to extend close up to and around all openings or projections and to fit all irregularities.

5. As soon as laid and before the top becomes dry, the entire surface of the concrete foundation shall be covered with one (1) inch in depth of clean sand to protect it from the sun and wind. The sand so spread shall be kept moist for a period of ten (10) days, and the concrete shall be protected against use during that time by means of fencing or otherwise, and any damage done by passing over it before the work has been completed shall be repaired by and at the expense of the contractor.

6. Before adding any new concrete mixture to that which has been previously laid for one hour or more, the surface of the old work shall be thoroughly cleansed, moistened, and grouted with a mixture of equal parts of cement and sand before the new concrete mixture is added.

Section 7. That all bituminous rock pavements on Portland cement concrete foundation shall comply with the following specifications:

1. The binder course is to be composed of fine broken hard rock, all passing a three-quarter (¾) inch screen, and asphaltic paving cement. Not more than ten per cent of the broken rock shall exceed one and one-quarter (1¼) inch in greatest dimension, and not more than fifteen (15) per cent shall pass a ten-mesh to the inch screen. The asphaltic cement is to be heated to a temperature of between 250 and 325 degrees Fahrenheit before the broken rock, which must previously be heated to a temperature not exceeding 300 degrees Fahrenheit, is mixed with it. These ingredients are to be thoroughly mixed in such proportions that each particle of the broken rock shall be thoroughly coated with a sufficient quantity of the asphaltic cement to bind the particles of rock firmly together when the mass has been spread upon the street and finally compressed. The binder course must contain at least five (5) per cent of bitumen soluble in carbon disulphide.

2. This mixture of rock and asphaltic cement while still hot shall be spread uniformly over the concrete with hot tools to such a depth that after compression it shall be at least one inch in thickness. It shall be immediately rolled with a roller weighing not less than 150 pounds to the inch width of roller. This rolling shall be continued while the binder course is in a hot plastic condition. Such portion of the binder course as it may be impossible to roll shall be thoroughly rammed with hot tampers.

3. The upper surface of the binder course shall be made exactly parallel with the required surface of the finished pavement, and the particles of rock in the whole course, when finished, must be firmly bound together.

4. The asphaltic cement for use in the binder course may be a natural product, or may be prepared by mixing a refined liquid asphalt or heavy petroleum oil with a solid asphalt. Its consistency must fall between the limits 40 and 80 penetration by the District of Columbia standard. It must be slightly elastic at a temperature of 32 degrees Fahrenheit. It must contain at least 60 percent of bitumen soluble in carbon disulphide.

5. Upon this binder course a layer of bituminous rock is to be spread of such thickness that when compacted it, together with the binder course, shall have a thickness of at least two and one-half (2½) inches.

6. The bituminous rock must be of good quality, suitable for use as the wearing surface of a pavement. It must yield not less than nine (9) nor more than fifteen (15) per cent of bitumen when extracted by carbon disulphide, and must not contain more than two (2) per cent of non-bituminous combustible material.

7. The consistency of the bitumen extracted by carbon disulphide must fall within the limits of 40 to 80 penetration by the District of Columbia standard. It must be adhesive and ductile. When heated to a temperature of 300 degrees Fahrenheit for eight (8) hours, it must not lose more than twelve (12) per cent in weight of vaporizable material, and must not be so changed by such heating as to be harder than of a consistency of 8 penetration.

8. The non-bituminous and non-combustible ingredients of the bituminous rock are to be sand and finely pulverized mineral matter, of a character unacted on by water. The sand must be clean, hard, moderately sharp, and must all pass an eight (8) mesh to the inch screen. At least fifteen (15) per cent of the non-bituminous and non-combustible ingredients of the bituminous rock must be fine enough to pass a 100-mesh to the inch screen, and at least 16 per cent must be coarse enough to be retained on a 50-mesh to the inch screen.

9. Should it be necessary to add stone dust to the bituminous rock to supply a deficiency of the finely pulverized mineral matter, powdered carbonate of lime shall be used.

10. The bituminous rock is to be reduced to a finely disintegrated condition by heating, but not in open kettles, nor by any other process liable to burn or impair the quality of the bituminous materials. It is to be brought upon the street in a finely disintegrated condition not colder than 250 nor hotter than 300 degrees Fahrenheit, and while still hot, the bituminous rock is to be spread uniformly and rolled with hot hand-rollers weighing not less than two hundred and fifty (250) pounds to the lineal foot until this layer is thoroughly compacted.

11. Hand-rolling is to be followed by rolling with a roller weighing not less than 150 pounds per inch in width of roller. This roller is to be used on the warm pavement for at least five (5) hours for each 1,000 square yards of surface.

12. When the surface cannot be rolled, it is to be thoroughly rammed with hot tampers and smoothed with hot smoothing irons.

13. In case the natural bituminous rock deposit, from which the contractor desires to take the bituminous rock, does not contain material complying with the above requirements, the contractor shall procure bituminous rock from some other deposit and mix the same with the bituminous rock he desires to use, to bring it to the standard specified herein. In all cases, the bituminous rock used must comply with the specifications herein contained.

14. The finished surface must be smooth and conform to the prescribed surface of the roadway.

15. The bituminous rock of the finished pavement shall be fine grained and compact, containing a sufficient amount of asphalt to fill the voids between the grains of sand or other mineral matter entering into its composition. It must be free from water and from appreciable quantities of light oils volatile at 250 degrees Fahrenheit, and must be in every way serviceable for use as a wearing surface for a street pavement.

16. The contract price shall be per square yard for finished pavement, and shall include all grading, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same until it shall have been finally accepted by the street superintendent.

Section 8. That all cement, broken stone, or gravel, or other materials not hereinbefore specified, shall comply with the following specifications:

1. No cement will be accepted, tested, or permitted to be used unless delivered in original packages with the manufacturer's name and brand of cement thereon.

2. Tests of the cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements herein specified, such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 100 meshes to the square inch and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge.

No. 30 sieve shall have 900 meshes to the square inch and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge.

No. 50 sieve shall have 2500 meshes to the square inch and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge.

No. 100 sieve shall have 10,000 meshes to the square inch and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass through a number twenty (20) sieve and be retained on a No. 30 sieve.

8. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

9. Any cement showing signs of swelling, after being mixed, will be rejected.

10. Portland cement soil be ground to such a degree of fineness that not less than 98 per cent by weight shall pass a No. 50 sieve, and not less than 90 per cent by weight shall pass a No. 100 sieve.

11. The ultimate tensile strength of briquettes, one square inch in cross section, made of neat Portland cement, shall be as follows:

One day in air and six days in water 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

12. The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 190 pounds.

13. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half inches (1½) nor the least dimension of any stone be less than one-quarter (¼) inch, and must be free from dust, dirt, or other foreign matter.

14. Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one-half inches (1½) nor the least dimension of any pebble be less than one-quarter (¼) of an inch, and must be free from dust, dirt, or other foreign matter.

15. Water shall be fresh, and free from earth, dirt or sewerage.

Section 9. That the modes and methods of performing the work shall be as follows:

1. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

2. The cement and sand for mortar in the specified proportions shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Water shall be added to the sand and cement, in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

3. The mortar, while fresh, shall be spread upon the concrete base, before the latter has set, in such quantities that, after being thoroughly manipulated and spread over the concrete, it will make a layer one inch thick conforming to the required grade and cross section, which shall be thoroughly dressed and smoothed.

4. Board or timber forms shall be provided by the contractor to mold the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

5. Re-tempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

6. All surfaces, on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

7. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than the thickness called for, and the upper surface shall be parallel with the proposed surface of the completed work.

8. Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proportions of sand and stone.

Section 10. That all work done shall be subject to the following conditions and requirements:

1. The contractor shall give twelve (12) hours' notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the progress thereof, or from any act or omission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner and replace the same, when necessary that the same should be replaced, in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 11. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 12. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 13. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the City official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

Said ordinance as adopted is as follows, viz:

### Ordinance No. 1137.

An Ordinance Prescribing Specifications for Asphalt Pavement on Portland Cement Concrete Foundation in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That the paving of all streets in the city of San Diego, California, with asphalt pavement on Portland Cement Concrete foundation shall be done in accordance with the specifications hereinafter contained.

The street pavement, guttering, and culverts provided for herein are to be constructed according to the plans and drawings and cross-section, approved by the Common Council, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed; said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Grading and preparing the roadbed; (b) Trenching for, and constructing, the culverts; (c) Constructing and laying a pavement of asphalt on Portland cement concrete foundation; (d) Constructing and laying along the exterior lines of said pavement the guttering prescribed; (e) Furnishing all material and labor necessary to perform said work and complete the same.

Section 2: That all grading and the preparation of the roadbed for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the subgrade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered it shall be taken out below the sub-grade, and the space shall be refilled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below a point two (2) inches above the sub-grade. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across, the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. All covers to sewer manholes, and valve boxes on the line of the work that are not to the established grade shall be reset to the established grade of the street, and grade stakes set therefor by the City Engineer. The contract price per square yard for the finished pavement shall include the cost of resetting the said covers, and no extra compensation shall be allowed the contractor for re-setting them.

8. The roller used shall be of a weight of not less than two hundred and fifty (250) pounds for each one (1) inch width of roller.

Section 3. That the gutters may be paved with natural stone blocks, Portland cement concrete, or with the same material as the street pavement, and laid in the same manner. The Resolution of Intention shall state the material with which the gutter is to be paved. The paving of gutters shall commence at the curb and shall conform to the cross-section of the street, and shall be of such width as shall be specified in the Resolution of Intention.

The paving of all gutters with natural stone shall be as follows:

1. The blocks shall be of porphyry or granite, as specified in the Resolution of Intention. The stone shall in all cases be free from lamination, stratification, or other defects, and shall be of uniform grade and texture throughout.

2. The stone blocks shall be neatly cut to the following dimensions: In length, not more than ten (10) nor less than seven (7) inches; in width, not more than four and one half (4½) nor less than three and one-half (3½) inches, and to a uniform depth of seven inches. All blocks shall be dressed to rectangular faces with straight edges on top, bottom and sides. The sides and ends shall be dressed so as to make three-fourths (¾) of an inch joints the full depth of the blocks. The top and bottom faces shall be parallel and there must be no knob or projections on either the top, bottom, sides or ends of the stone.

3. The blocks shall be laid by hand and firmly bedded in four (4) inches of clean, sharp sand.

4. The blocks shall be laid with their greatest length at right angles to the axis of the street and in straight courses of uniform depths and widths throughout. At the intersection of one street with another street the gutter shall be constructed to the line of the culverts. If culverts are not constructed across the intersection, the blocks will be laid to true radial lines, following the curvature of the curb. Each course shall be set perpendicular to the surface so that in alternate courses all longitudinal joints shall be broken by a lap of at least two (2) inches, and the outer edge shall be laid to form a toothing of at least four (4) inches.

5. When laid, the pavement of the gutter shall be immediately covered with screened pea gravel, which shall first be thoroughly washed and heated and while hot shall be raked or swept in the joints until all are completely filled. The blocks shall then be rammed with rammers weighing from seventy-five (75) to eighty (80) pounds, until all have been forced to a firm unyielding bed, and the gutter brought to a perfect surface. Every block that does not have a solid bearing, as well as all general depressions in the surface, resulting from a thorough ramming of each block, shall be taken up, and additional sand placed upon the foundation and the blocks again laid and rammed until brought to a solid bearing and perfect surface. While the blocks are being rammed the joints shall be kept well filled with gravel.

6. Immediately after ramming, the gravel shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the gravel is hot, boiling paving cement until all the joints are completely full. Additional hot gravel of the specified size and quality shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

7. The paving cement shall be composed of twenty (20) parts of refined asphaltum and three (3) parts of residuum oil mixed with one hundred (100) parts of tar, which shall be ob-

tained from the direct distillation of coal-tar, and shall be the residuum therefrom. These ingredients shall be delivered on the work at least one week before being used, in order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work. The cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use. Three and one-half (3½) gallons of cement shall be used for each and every square yard of gutter.

8. As soon as the joints shall have been thoroughly tamped and before the paving cement shall have become cold, a layer of clean, dry coarse sand, one-half (½) inch in thickness, shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

9. All blocks shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and culling of the blocks.

10. All natural stone block gutters shall be paid for at a stated price per square yard, which price per square yard shall include the furnishing of all labor and materials, the foundation, grouting, and all other work and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 4. That all Portland cement concrete gutters shall be constructed as follows:

1. Portland cement concrete gutters shall be of the width stated in the Resolution of Intention.

2. The thickness shall be six (6) inches at center and at the edge adjoining the curb, and shall be eight (8) inches at the edge adjoining the street pavement, and shall be laid to conform to the cross-section of the street, as shown on the plans and drawings on file in the office of the said City Engineer.

3. The Portland cement used shall conform to requirements enumerated in Section 8 of this Ordinance.

4. The Portland cement concrete shall be composed of one (1) part, by volume, of cement, two (2) parts of sand and four (4) parts of broken rock. The moulds shall be banked up solidly so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete as hereinafter specified and thoroughly tamped to within one (1) inch of the finished surface. The final layer of one (1) inch of mortar shall be one part of cement to one of sand filled in and finished with a trowel. After setting for twelve (12) hours it shall be covered with wet earth and kept so covered for ten (10) days.

Section 5. That all culverts shall be constructed as follows:

1. Culverts may be of vitrified pipe, cast-iron pipe, or of Portland cement concrete, as called for in the Resolution of Intention.

2. All culverts shall be constructed in the line of the gutters and in the direction of the main flow of water, and as shown by the plans, and drawings of same in the office of the said City Engineer.

3. If of vitrified stone pipe, the material shall be close grained, well glazed and thoroughly pressed and burned, clear through so as to show a uniform color when broken. The inside of the bell and the outside of the spigot ends shall be wiped clean, thoroughly wet and well and closely jointed as laid. The trench for the pipe shall be two (2) feet wide, graded true with the bottom uniformly solid. The joints shall be thoroughly cemented with a mortar composed of one (1) part of Portland cement to one (1) part of sand. The pipe shall be laid upon the bottom of the trench, and the trench shall be filled in around the pipe with concrete which shall be well tamped under the lower quarters of the pipe, and the pipe covered with cement concrete to six (6) inches in thickness on both sides and top. After the concrete is finished and has

set for twelve (12) hours it shall be covered with six (6) inches of earth and kept so covered for ten (10) days. Y branches with conduit pipes shall be laid and concreted in the same manner.

4. If the culverts are constructed of cast-iron pipe, the material shall be the best quality of cast-iron pipe coated inside and out with a double coat of paraffine paint, and laid and concreted as specified above.

5. The concrete in which pipe culverts are laid shall be composed of one (1) part, by volume, of Portland cement, two (2) parts of sand, and four and one-half (4½) parts of gravel or crushed rock, mixed as hereinafter specified.

6. If the culverts are constructed of Portland cement concrete with cast-iron covers, the culverts shall be constructed so as to conform to the alignment and grade, and shall be of such dimensions as are shown on the plans and drawings on file in the office of the said City Engineer, who shall set the grade stakes for that purpose in accordance therewith. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand and four parts of broken stone. The concrete shall be placed in position against wood moulds substantially held in place so as to permit of no movement of the mass while the concrete is being rammed.

7. The cast-iron covers for the culverts shall be of good quality of cast-iron free from flaws, cracks, or other defects. They shall be perfect castings of the exact form and size as shown upon the plans and drawings in the office of the said City Engineer. Where the culvert crosses the street railway tracks, the covers shall be made of the proper length and form to fit closely between the rails. Each section of the cast-iron plates shall be set in a bed of mortar in such manner as to insure a uniform bearing upon the walls of the culvert, and any plate that is not so bedded shall be reset, and any plate that may be imperfect in form or material shall be replaced by and at the expense of the contractor before the work is accepted. All surfaces of cast-iron culvert plates shall receive one coat of paraffine paint.

8. The contract price shall be per linear foot for the culvert complete, and shall include all the labor and material and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining it in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 6. That all concrete foundation shall be laid as follows:

1. Concrete foundations four (4) inches in thickness shall be laid under the asphalt pavement. And no extra compensation shall be allowed the contractor for such foundations. The contract price for the pavement shall include the cost of the foundation upon which it rests.

2. All concrete foundations shall be made of Portland cement, sand, and broken stone, and the proportions shall be, by volume, as follows: Cement, one (1) part, sand three (3) parts, broken stone six (6) parts. The material for the concrete shall comply with the requirements enumerated in section 8 of this ordinance.

3. The concrete shall be in place and rammed within thirty (30) minutes after the cement is wet, and any concrete material which has been wet for more than thirty (30) minutes will not under any circumstances be allowed to be used in the work.

4. The upper surface of the concrete foundation shall be finished parallel to and three (3) inches below the grade of the pavement, and shall be made to extend close up to and around all openings or projections, and to fit all irregularities.

5. As soon as laid, and before the top becomes dry, the entire surface of the concrete foundation shall be covered with one (1) inch in depth of clean sand to protect it from the sun and wind. The sand so spread shall be kept moist for a period of ten (10) days, and the concrete shall be protected against use during that time by means of fencing or otherwise, and any damage done by passing over it before the work has been completed shall be repaired by and at the expense of the contractor.

6. Before adding any new concrete mixture to that which has been previ-

ously laid for one hour or more, the surface of the old work shall be thoroughly cleansed, moistened, and grouted with a mixture of equal parts of cement and sand before the new concrete mixture is added.

Section 7. That all asphalt used upon concrete foundations shall comply with the following specifications:

1. Upon the foundation previously prepared and thoroughly swept free from all rubbish, shall be laid a binder course, composed of broken stone and asphaltic cement.

2. Clean, hard, broken stone one (1) inch in its largest dimension, shall be heated in a heater to a temperature not exceeding two hundred (200) degrees Fahrenheit. Stone containing more than ten (10) per cent of particles exceeding one (1) inch in their largest dimension or more than fifteen (15) per cent of particles passing a ten (10) mesh to the inch screen will be rejected.

3. Asphaltic cement, after being heated to a temperature between 250 and 300 degrees Fahrenheit, shall be thoroughly incorporated with the heated stone in a mixer, in such proportions that each particle of stone shall be thoroughly coated with a sufficient quantity of asphaltic cement to bind the particles of stone firmly together when the mass is laid upon the street and finally compressed.

4. Not less than six (6) pounds of asphaltic cement to the cubic foot of stone shall be used, and as much more as the character of the stone may require, in order to produce the above described result after final compression.

5. The binder mixture, prepared as above, shall be hauled to the street while still hot, and carefully spread upon the foundation with hot iron rakes and shovels to such a depth that after receiving its final compression, it shall be at least one (1) inch in thickness. It shall then be immediately rolled with a roller having an effective compressive weight of not less than 250 pounds per inch in width of roller. The rolling shall be continued while the binder is in a hot plastic condition. All places that are inaccessible to the roller must be thoroughly tamped with hot iron tampers to an even and true surface.

6. The upper surface of the binder course shall be made exactly parallel with the surface of the finished pavement, and the whole course when finished must be compact and the particles bound firmly together.

7. Upon the binder course as hereinbefore described, there shall be laid an asphalt wearing surface prepared as follows:

8. The asphalt wearing surface shall be composed of the following materials:

Asphaltic 9 per cent to 17 per cent by weight.

Sand 86 per cent to 95 per cent by weight.

Finely powdered  
Carbonate 5 per cent to 18 per cent by weight of Lime

Total 100 per cent to 100 per cent by weight.

9. The asphaltic cement shall be prepared from a refined asphalt mixed with a refined liquid asphalt, as described below, and shall contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide. It shall be heated to a temperature of three hundred (300) degrees Fahrenheit before adding it to the other materials used in making the asphalt wearing surface. In no case shall this asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit.

10. The refined solid asphalt must be manufactured wholly from asphaltic material, and must be free from admixture with any residues obtained by the artificial distillation of coal, coal-tar, or paraffine oil. It must contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide, and not more than four (4) per cent of non-bituminous organic matter. It must be of even and uniform composition, and when heated to a temperature of three hundred (300) degrees Fahrenheit for five (5) hours, must not lose more than four (4) per cent in weight of vaporizable material. The bitumen contained in it must be of a permanent and cementitious character suitable in all respects to make, upon proper admixture with the refined liquid asphalt, a durable and satisfactory cement.

11. The refined liquid asphalt must be a highly cementitious liquid asphalt, refined so as to deprive it of all water and light oil. It must contain not less than 95 per cent of bitumen soluble in carbon disulphide, and not less than 90 per cent thereof shall be soluble in 88 degrees naphtha. When heated to a temperature of 300 degrees Fahrenheit for five hours, it must not lose more than five (5) per cent in weight of vaporizable oils. Material which has been cracked in the process of refining, or which contains any admixture of paraffine or coal-tar products will be rejected, and shall not be

allowed to enter into the composition of the asphalt wearing surface.

12. The sand shall be clean, sharp, siliceous sand, and shall contain not more than three (3) per cent of loam, clay or other earthy impurities; it must all pass an eight mesh to the inch screen.

13. The materials above described shall be prepared in the following manner: The sand shall be heated in dryers to a temperature between 300 and 375 degrees Fahrenheit. The hot sand and cold lime dust shall then be thoroughly mixed together in a mixer. A quantity of asphaltic cement (previously heated to 300 degrees Fahrenheit) sufficient to produce a pavement containing not less than nine (9) per cent of bitumen soluble in carbon disulphide shall then be added, and the whole mass shall be mixed until every particle of the sand and lime dust is thoroughly coated with a thin layer of asphaltic cement.

14. The material so produced must leave the mixer at a temperature between two hundred and fifty and three hundred and twenty-five degrees Fahrenheit, and must be fine grained and capable of producing a compact pavement. Sand and asphaltic cement and dust must be used in order to secure this result.

15. The mixture prepared as above shall be brought to the work in carts or dump wagons, and shall not be colder than 250 degrees Fahrenheit nor hotter than 325 degrees Fahrenheit when it reaches the work.

16. It shall at once be spread uniformly over the binder course prepared for it, with hot shovels and hot rakes, to such a depth that, after receiving its ultimate compression, the finished asphalt wearing surface shall not be thinner than two (2) inches. The thickness shall be constantly tested by means of gauges.

17. It shall be immediately compressed with hot hand rollers, after which a small amount of hydraulic cement shall be swept over it, and it will then immediately be thoroughly rolled with a roller of a weight not less than 250 pounds per inch in width of roller. This rolling shall be continued for not less than five (5) hours for each one thousand (1000) square yards of pavement. All places that are inaccessible to the roller must be tamped with hot iron tampers. The resulting pavement must show a close-grained even and smooth surface, true to grade and cross-section, and free from all hollows and irregularities. No traffic shall be allowed on the street until the pavement is thoroughly cooled and set. No wearing surface shall be laid in rainy weather, or when the foundation is wet from rain or other cause.

18. The contract price shall be per square yard of finished pavement, and shall include all grading, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same until it shall have been finally accepted by the Street Superintendent.

Section 8. That all cement, broken stone, or gravel, or other materials not hereinbefore specified, shall comply with the following specifications:

1. No cement will be accepted, tested, or permitted to be used unless delivered in original packages with the manufacturer's name and brand of cement thereon.

2. Tests of the cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements herein specified such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch, and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge. No. 30 sieve shall have 600 meshes to the square inch, and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge. No. 50 sieve shall have 2500 meshes to the square inch, and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge. No. 100 sieve shall have 10,000 meshes to the square inch, and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass through a number twenty (20) sieve and be retained on a No. 30 sieve.

8. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

9. Any cement showing signs of swelling, after being mixed, will be rejected.

10. Portland cement shall be ground to such a degree of fineness that not less than ninety-eight (98) per cent by weight shall pass a No. 50 sieve, and not less than ninety (90) per cent by weight shall pass a No. 100 sieve.

11. The ultimate tensile strength of briquettes, one square inch in cross-section, made of neat Portland cement, shall be as follows:

One day in air and six days in water 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

12. The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 190 pounds.

13. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half inches (1½) nor the least dimension of any stone be less than one quarter (¼) inch, and must be free from dust, dirt or other foreign matter.

14. Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one-half inches (1½) nor the least dimension of any pebble be less than one quarter (¼) of an inch, and must be free from dust, dirt or other foreign matter.

15. Water shall be fresh, and free from earth, dirt or sewerage.

Section 9. That the mode and methods of performing the work shall be as follows:

1. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform with shovels or hoes until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

2. The cement and sand for mortar in specified proportions shall be thoroughly mixed dry on a tight platform, with shovels or hoes until no streaks of cement are visible. Water shall be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

3. The mortar, while fresh, shall be spread upon the concrete base before the latter has set, in such quantities that after being thoroughly manipulated and spread over the concrete it will make a layer one inch thick conforming to the required grade and cross-section, which shall be thoroughly dressed and smoothed.

4. Board or timber forms shall be provided by the contractor to mould the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

5. Retempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

6. All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

7. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than the thickness called for, and the upper surface shall be parallel with the proposed surface for the completed work.

8. Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proportions of sand and stone specified.

Section 10. That all work done shall be subject to the following conditions and requirements:

1. The contractor shall give twelve (12) hours notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all grade stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes, necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to

obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the progress of the work, and before the acceptance thereof, or from any act or omission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner, and replace the same when necessary that the same should be replaced in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 11. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 12. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 13. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

An Ordinance prescribing specifications for Asphalt pavement on natural earth, is read and adopted by the following vote, to-wit:

Said ordinance as adopted is as follows, viz:

### Ordinance No. 1138.

An Ordinance Prescribing Specifications for Asphalt Pavement on Natural Earth in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That the paving of all streets in the City of San Diego, California, with asphalt pavement on the natural earth shall be done in accordance with the specifications hereinafter contained.

The street pavement, guttering, and culverts provided for herein are to be constructed according to the plans and drawings and cross-section, approved by the Common Council, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed, said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Grading and preparing the roadbed; (b) Trenching for, and constructing, the culverts; (c) Constructing and laying a pavement of asphalt; (d) Constructing and laying along the exterior lines of the said pavement the guttering prescribed; (e) Furnishing all material and labor necessary to perform said work and complete the same.

Section 2. That all grading and the preparation of the roadbed for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall also include all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the sub-grade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered, it shall be taken out below the sub-grade, and the space shall be refilled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below the established grade line of the street. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street, and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and refilled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. All covers to sewer manholes and valve boxes on the line of the work that are not to the established grade shall be reset to the established grade of the street, and grade stakes set therefor by the City Engineer. The contract price per square yard for the finished pavement shall include the cost of re-setting the said covers, and no extra compensation shall be allowed the contractor for re-setting them.

8. The roller used shall be of a weight of not less than two hundred and fifty (250) pounds for each one (1) inch width of roller.

Section 3. That the gutters may be paved with natural stone blocks, Portland cement concrete, or with the same material as the street pavement, and laid in the same manner. The Resolution of Intention shall state the material with which the gutter is to be paved. The paving of gutters shall commence at the curb and shall conform to the cross-section of the street, and shall be of such width as shall be specified in the Resolution of Intention.

The paving of all gutters with natural stone shall be as follows:

1. The blocks shall be of porphyry or granite as specified in the Resolution of Intention. The stone shall in all cases be free from lamination, stratification, or other defects, and shall be of uniform grade and texture throughout.

2. The stone blocks shall be neatly cut to the following dimensions: In length, not more than ten (10) nor less than seven (7) inches; in width, not more than four and one-half (4½) nor less than three and one-half (3½) inches, and to a uniform depth of seven inches. All blocks shall be dressed to rectangular faces with straight edges on top, bottom, and sides. The sides and ends shall be dressed so as to make three-fourths (¾) of an inch joints the full depth of the blocks. The

top and bottom faces shall be parallel, and there must be no knobs or projections on either the top, bottom, sides, or ends of the stone.

3. The blocks shall be laid by hand and firmly bedded in four (4) inches of clean, sharp sand.

4. The blocks shall be laid with their greatest length at right angles to the axis of the street and in straight courses of uniform depths and widths throughout. At the intersection of one street with another street the gutter shall be constructed to the line of the culverts. If culverts are not constructed across the intersection, the blocks will be laid to true radial lines, following the curvature of the curb. Each course shall be set perpendicular to the surface so that in alternate courses all longitudinal joints shall be broken by a lap of at least two (2) inches, and the outer edge shall be laid to form a toothing of at least four (4) inches.

5. When laid, the pavement of the gutter shall be immediately covered with screened pea gravel, which shall first be thoroughly washed and heated and while hot shall be raked or swept in the joints until all are completely filled. The blocks shall then be rammed with rammers weighing from seventy-five (75) to eighty (80) pounds, until all have been forced to a firm unyielding bed, and the gutter brought to a perfect surface. Every block that does not have a solid bearing, as well as all general depressions in the surface, resulting from a thorough ramming of each block, shall be taken up, and additional sand placed upon the foundation and the blocks again laid and rammed until brought to a solid bearing and perfect surface. While the blocks are being rammed the joints shall be kept well filled with gravel.

6. Immediately after ramming, the gravel shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the gravel is hot, boiling paving cement until all the joints are completely full. Additional hot gravel of the specified size and quality shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

7. The said paving cement shall be composed of twenty (20) parts of refined asphaltum and three (3) parts of residuum oil mixed with one hundred (100) parts of tar, which shall be obtained from the direct distillation of coal-tar and shall be the residuum therefrom. These ingredients shall be delivered on the work at least one week before being used, in order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work. The cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use. Three and one-half (3½) gallons of cement shall be used for each and every square yard of gutter.

8. As soon as the joints shall have been thoroughly tamped, and before the paving cement shall have become cold, a layer of clean, dry, coarse sand one-half (½) inch in thickness shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

9. All blocks shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and colling of the blocks.

10. All natural stone block gutters shall be paid for at a stated price per square yard, which price per square yard shall include the furnishing of all labor and materials, the foundation, the grouting, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

Section 4. That all Portland cement concrete gutters shall be constructed as follows:

1. Portland cement concrete gutters shall be of the width stated in the Resolution of Intention.

2. The thickness shall be six (6) inches at center and at the edge, adjoining the curb, and shall be eight (8) inches at the edge adjoining the street pavement, and shall be laid to conform to the cross-section of the street, as shown by the plans and drawings on file in the office of the said City Engineer.

3. The Portland cement used shall conform to the requirements enumerated in Section 7 of this Ordinance.

4. Portland cement concrete shall be composed of one (1) part, by volume, of cement, two (2) parts of sand, and four (4) parts of broken rock. The moulds shall be banked up solidly so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete as hereinafter specified and thoroughly tamped to within one (1) inch of the finished surface. The final layer of one (1) inch of mortar shall be one part of cement to one of sand filled in and finished with a trowel. After setting for twelve (12) hours it shall be covered with wet earth and kept so covered for ten (10) days.

Section 5. That all culverts shall be constructed as follows:

1. Culverts may be vitrified pipe, cast-iron pipe, or of Portland cement concrete, as called for in the Resolution of Intention.

2. All culverts shall be constructed in the line of the gutters and in the direction of the main flow of water, as shown by the plans and drawings for same in the office of the said City Engineer.

3. If of vitrified stone pipe, the material shall be close-grained, well glazed,

thoroughly pressed and burned clear through so as to show a uniform color when broken. The inside of the bells and the outside of the spigot ends shall be wiped clean, thoroughly wet and well and closely jointed as laid. The trench for the pipe shall be two (2) feet wide, graded true with the bottom uniformly so. The joints shall be thoroughly cemented with a mortar composed of one (1) part of Portland cement to one (1) part of sand. The pipe shall be laid upon the bottom of the trench, and thereafter the

trench shall be filled in around the pipe with concrete which shall be well tamped under the lower quarters of the pipe, and the pipe covered with cement concrete six (6) inches in thickness on both sides and top. After the concrete is finished and has set for twelve (12) hours it shall be covered with six (6) inches of earth and kept so covered for ten (10) days. Y branches with conduit pipes shall be laid and concreted in the same manner.

4. If the culverts are constructed of iron, the material shall be the best quality of cast-iron coated inside and out with a double coat of paraffine paint, and laid and concreted as specified above.

5. The concrete in which pipe culverts are laid shall be composed of one part, by volume, of Portland cement, two (2) parts of sand, and four and one-half (4½) parts of gravel or crushed rock, mixed as hereinafter specified.

6. If the culverts are constructed of Portland cement concrete with cast-iron covers, the culverts shall be constructed so as to conform to the alignment and grade, and shall be of the dimensions shown by the plans and drawings on file in the office of the said City Engineer, who shall set the grade stakes for that purpose in accordance therewith. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand, and four parts of broken stone. The concrete shall be placed in position against wood moulds substantially held in place so as to permit of no movement of the mass while the concrete is being rammed.

7. The cast-iron covers for the culverts shall be of good quality of cast-iron free from flaws, cracks, or other defects. They shall be perfect castings of the exact form and sizes shown upon the plans and drawings in the office of the said City Engineer. Where the culvert crosses the street railway tracks, the covers shall be made of the proper length and form to fit closely between the rails. Each section of the cast-iron plates shall be set in a bed of mortar in such manner as to insure a uniform bearing upon the walls of the culvert, and any plate that is not so bedded shall be reset, and any plate that may be imperfect in form or material shall be replaced by and at the expense of the contractor before the work is accepted. All surfaces of cast-iron culvert plates shall receive one coat of paraffine paint.

8. The contract price shall be per linear foot for the culvert complete, and shall include all the labor and material and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining it in perfect condition until it shall have been finally accepted by the said Superintendent of Streets.

Section 6. That all asphalt used in the construction of the pavement specified in this ordinance shall comply with the following specifications:

1. Upon the sub-grade prepared, as hereinafter described, and thoroughly freed from all rubbish, there shall be laid an asphalt wearing surface prepared as follows:

2. The asphalt wearing surface shall be composed of the following materials: Asphaltic cement, 9 per cent to 17 per cent by weight.

Sand, 86 per cent to 65 per cent by weight.

Finely powdered carbonate of lime, 6 per cent to 18 per cent by weight.

Total, 100 per cent to 100 per cent by weight.

3. The asphaltic cement shall be prepared from a refined solid asphalt mixed with a refined liquid asphalt, as described below, and shall contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide. It shall be heated to a temperature of three hundred (300) degrees Fahrenheit before adding it to the other materials used in making the asphalt wearing surface. In no case shall this asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit.

4. The refined solid asphalt must be manufactured wholly from asphaltic material, and must be free from admixture with any residues obtained by the artificial distillation of coal, coal-tar, or paraffine oil. It must contain not less than eighty (80) per cent of bitumen soluble in carbon disulphide, and not more than four (4) per cent of non-bituminous organic matter. It must be of even and uniform composition, and when heated to a temperature of three hundred (300) degrees Fahrenheit for five (5) hours, must not lose more than four (4) per cent in weight of vaporizable material. The bitumen contained in it must be of a permanent and cementitious character which, when mixed with the refined liquid asphalt, will make a durable cement.

5. The refined liquid asphalt must be a highly cementitious liquid asphalt refined so as to deprive it of all water and light oil. It must contain not less than 95 per cent of bitumen soluble in carbon disulphide, and not less than 90 per cent thereof shall be soluble in 32 degrees naphtha. When heated to a temperature of three hundred degrees Fahrenheit for five hours it must not lose more than five per cent in weight of vaporizable oils. Material which has been cracked in the process of refining, or which contains any admixture of paraffine or coal-tar product will be rejected, and shall not be allowed to enter into the composition of the asphalt wearing surface.

6. The sand shall be clean, sharp, siliceous sand, and shall contain not more than 3 per cent of loam, clay, or other earthy impurities. It must all pass an eight-mesh to the inch screen.

7. The materials above described shall be prepared in the following manner: The sand shall be heated in drivers to a temperature between 300 and 375 degrees Fahrenheit. The hot sand and cold lime dust shall then be thoroughly mixed together in a mixer. A quantity of asphalt cement (previously heated to 300 degrees Fahrenheit) sufficient to produce a pavement containing not less than 5 per cent of bitumen soluble in carbon disulphide, shall then be added, and the whole mass shall be mixed until every particle of the sand and lime dust is thoroughly coated with a thin layer of asphaltic cement.

8. The material so produced must leave the mixer at a temperature between two hundred and fifty (250) and three hundred and twenty-five (325) degrees Fahrenheit, and must be fine grained and capable of producing a compact pavement. Sand and asphaltic cement and dust must be used in order to secure this result.

9. The mixture prepared as above shall be brought to the work in carts or dump-wagons, and shall not be colder than 250 degrees Fahrenheit or hotter than 325 degrees Fahrenheit when it reaches the work.

10. It shall at once be spread uniformly over the earth foundation prepared for it, with hot shovels and hot rakes, to such a depth that, after receiving its ultimate compression, the finished asphalt wearing surface shall not be thinner than two (2) inches. The thickness shall be constantly tested by means of gauges.

11. It shall be immediately compressed with hot hand-rollers, after which a small amount of hydraulic cement shall be swept over it, and it will then immediately be thoroughly rolled by a roller weighing not less than 250 pounds per inch in width of roller. This rolling shall be continued for not less than five (5) hours for each one thousand square yards of pavement. All places that are inaccessible to the roller must be tamped with hot iron tampers. The resulting pavement must show a close-grained, even, and smooth surface, true to the grade and cross-section, and free from all hollows and irregularities. No traffic shall be allowed on the street until the pavement is thoroughly cooled and set. No wearing surface shall be laid in rainy weather, or when the foundation is wet from rain or other cause.

12. The contract price shall be per square yard of finished pavement, and shall include all grading, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining the same until it shall have been finally accepted by the Street Superintendent.

Section 7. That all cement, broken stone, or gravel, or other materials not hereinbefore specified, shall comply with the following specifications:

1. No cement will be accepted, tested, or permitted to be used unless delivered in original packages with the manufacturer's name and brand of cement thereon.

2. Tests of the cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements herein specified such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge.

No. 30 sieve shall have 600 meshes to the square inch and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge.

No. 50 sieve shall have 1500 meshes to the square inch and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge.

No. 100 sieve shall have 10,000 meshes to the square inch and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass through a number twenty (20) sieve and be retained on a No. 30 sieve.

8. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

9. Any cement showing signs of swelling, after being mixed, will be rejected.

10. Portland cement shall be ground to such a degree of fineness that not less than 98 per cent by weight shall pass a No. 50 sieve, and not less than 90 per cent by weight shall pass a No. 100 sieve.

11. The ultimate tensile strength of briquettes, one square inch in cross section, made of neat Portland cement, shall be as follows:

One day in air and six days in water, 75 pounds.

One day in air and twenty-seven days in water 50 pounds.

12. The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three (3) parts of sand shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 100 pounds.

13. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half inches (1½) nor the least dimension of any stone be less than one-quarter (¼) inch, and must be free from dust, dirt, or other foreign matter.

14. Gravel used for concrete shall be of such sizes that the greatest diameter of any pebble will not exceed one and one-half inches (1½) nor the least dimension of any pebble be less than one-quarter (¼) of an inch, and must be free from dust, dirt, or other foreign matter.

15. Water shall be fresh, and free from earth, dirt or sewerage.

Section 8. That the modes and methods of performing the work shall be as follows:

1. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3)

times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

2. The cement and sand for mortar in the specified proportions shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Water shall be added to the sand and cement, in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

3. The mortar, while fresh, shall be spread upon the concrete base, before the latter has set, in such quantities that, after being thoroughly manipulated and spread over the concrete, it will make a layer one inch thick conforming to the required grade and cross section, which shall be thoroughly dressed and smoothed.

4. Board or timber forms shall be provided by the contractor to mold the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

5. Re-tempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

6. All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

7. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than the thickness called for, and the upper surface shall be parallel with the proposed surface of the completed work.

8. The concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made of one barrel of cement with the proportions of sand and stone.

Section 9. That all work done shall be subject to the following conditions, and requirements:

1. The contractor shall give twelve (12) hours' notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the progress of the work, and before the acceptance thereof, or from any act or omission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner and replace the same, when necessary that the same should be replaced, in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 10. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 11. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 12. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the City official newspaper of said City, to wit: the San Diego Union and Daily Bee.

A Joint Resolution extending an invitation to the Christian Endeavor Association of the State to hold its next annual meeting in San Diego, is read and adopted, viz:

J O I N T R E S O L U T I O N No. 1 4 1 4.

B E I T R E S O L V E D, By the Common Council of the City of San Diego, as follows:

That an invitation be and is hereby extended to the Christian Endeavor Association of the State of California to hold its next annual meeting in the City of San Diego, California.

The following report of the Joint Street Committee in the matter of the petition of L. A. Harrison for permission to cut down 2 Eucalyptus trees in front of 543 20th street, is read and adopted, viz:

The Street Committee recommends the within petition be granted, provided the petitioner sets out other suitable trees to take the place of those to be cut down.

Thereupon said petition is granted.

The following report of the Joint Fire Committee in the matter of including a sufficient sum in the proposed Improvement bonds to provide the Fire Department with permanent quarters and additional necessary apparatus, is read and adopted, viz:

San Diego, California, May 26th, 1902.

To the Honorable, the Common Council,

San Diego, California,

Gentlemen:--

In the matter of voting Improvement bonds, the Joint Fire Committee recommends that a sufficient sum be included to provide the Fire Department with permanent quarters and the additional apparatus required; to that end this Committee recommends that an ordinance be passed providing for the publication of a notice inviting proposals to sell to the city suitable lots for Fire Department purposes, said lots to be paid for by the proceeds of bonds to be issued for that purpose. All of said lots to be at least 50 by 100 feet in size and located as follows: One lot in a district bounded by "B," "F," 2d and 4th streets; one in a district bounded by "A," "D," 6th and 9th streets; one in a district bounded by "I," "K," 6th and 9th streets; one in a district bounded by Laurel, Palm, 1st and 5th streets; one lot on University avenue, between 6th and Vermont streets, and one in a district bounded by "G," "I," 11th and 13th streets.

That when bids are received, if satisfactory, contracts of purchase be entered into, subject to the voting of bonds for the payment of the same.

Respectfully,

Geo. B. Watson,

C. N. Clark,

J. P. M. Rainbow,  
Geo. B. Chapman,  
R. J. Blair,  
Ed. Gutwillig.

The following report of the Fire Committee in the matter of a Joint Resolution directing the City Attorney to prepare an ordinance to amend the Boiler Inspector ordinance, is read and adopted, viz:

The Fire Committee presents herewith an ordinance in relation to the inspection of steam boilers, as referred to in the within resolution, and recommends its adoption.

Geo. B. Watson,  
C. N. Clark,  
J. P. M. Rainbow.

May 26/02.

Thereupon an ordinance providing for the appointment of an inspector of steam boilers, and prescribing his duties, and providing for his compensation, is read and Alderman Watson moves that the same be adopted.

Whereupon said ordinance is referred back to said committee for further investigation.

The following report of the Sewer Committee in the matter of an ordinance prescribing regulations in making connections with the public sewers, and for plumbing, is read and adopted, viz:

The Sewer Committee recommends that the within ordinance be adopted.

W. W. Lewis,  
Geo. B. Chapman,  
Geo. Butler.

5/29/02.

Thereupon an ordinance prescribing regulations in making connections with the public sewers, and for plumbing, is read and on motion of Alderman Whitson adopted by the following vote, to-wit:

AYES -- ALDERMEN Clark, Whitson, Rainbow, Johnson, Jones, Hyers, Watson and Perrin.  
NOES -- NONE.  
ABSENT--ALDERMAN Landis.

Said ordinance as adopted is as follows, viz:

**Ordinance No. 1127.**  
An Ordinance Prescribing Regulations in Making Connections With the Public Sewers, and for Plumbing, in the City of San Diego, California.  
Be it ordained, by the Common Council of the City of San Diego, as follows:  
Section 1. That it shall be and is hereby declared to be unlawful for any person, company, or corporation to connect with, or open, or penetrate any public sewer or drain, or to connect with, or open, or penetrate any private sewer connected with a public sewer, in the City of San Diego, California, or to injure, break, remove, or open any portion of any manhole, flush tank, inspection pipe, or any other part of or appurtenance to the public sewers, without having first obtained a written permit so to do from the Board of Public Works of the said City of San Diego, as herein provided.  
Section 2. That application for permits to make connections with or opening in any public sewer, or any private sewer connected with any public sewer, must be made in writing by the owner of the property to be drained, or his authorized agent, which application shall describe the property that is to be drained and the place where it is desired to connect with the sewer, and give the name of the owner of such property, which application shall be countersigned by the licensed plumber by whom the work is to be done.

Section 3. That no connection with or opening in the public sewer, or in any private sewer connected with the public sewer, shall be made by any person except a plumber regularly and duly licensed to perform and to do such work, and holding a written permit from said Board of Public Works authorizing the making of such connection or opening in such sewer.  
Section 4. That any licensed plumber engaged in any work provided for in this ordinance shall be held responsible for any injury to any sewer or to any public street, or to any public or private property, and for all other damages.  
Section 5. That the provisions of Ordinance No. 787 of the ordinances of said City, entitled, "An ordinance relating to the opening of trenches in streets and to the moving of houses in public streets in the City of San Diego, California," and requiring a permit therefor, and "providing for the refilling of said trenches and repairing of said streets," approved on the 17th day of July, 1900, shall apply to the digging of trenches or opening of streets in said City for the purpose of making such sewer connections.  
Section 6. That every soil pipe and private drain connecting with any sewer, running from the property line to the sewer, shall be at least four inches in diameter, and whether of cast iron or earthenware, must be sound and impervious in all its parts, and jointed in the best manner. No other metal than cast iron, at least as heavy as soil pipe "extra heavy", will be allowed. For cast

iron pipe the gaskets must be of clean tarrad oakum, twisted and rammed into place. The lead used in making the joint must be of the best quality, pure and soft, and must be caulked securely and properly into place. Before making the joint the bell and spigot must be wiped clean and dry, and the joints must be run in at one pouring of the molten lead. The caulking must be faithfully executed and the lead driven flush with the face of the work. Cement pipe must not be used. All earthenware shall be of the best quality of salt glazed vitrified pipe, perfectly true to pattern and sound. All joints shall be completely filled with cement mortar, wiped off on the outside to a neat bevel, after each joint of pipe has been laid and cemented. All pipes connecting soil pipes or other waste pipes with the public sewer must be laid on the sound and firm bottom of a trench. No person shall connect with any public sewer, any private sewer or drain laid for surface, roof, or yard drainage, nor shall exhaust from steam engines blow off from steam boilers, or water above 140 degrees Fahrenheit in temperature be discharged in any public sewer, or private sewer or drain connected with the same, in said City.

Section 7. That it shall be and is hereby declared to be unlawful for any person, company, or corporation to connect any pipe on private property with any pipe in the street connected with the public sewer, or with any private sewer, or any plumbing with a cesspool that is connected with any public sewer, without first obtaining a permit so to do from the Board of Health of the City of San Diego, California, as hereinafter provided.

Section 8. That any person desiring to connect any pipe on private property, laid inside the property line, with the public sewer, or with any pipe or private sewer that is connected with the public sewer in said City, shall first make and prepare, or have made and prepared, plans, profiles, and specifications for all the pipe to be laid upon such private property, inside the property line, for the purpose of draining the same, and for all plumbing to be put in any building upon such property and to be connected with such private property and with the sewer system of said City, and present the same to the Board of Health of said City for approval. One copy of said plans, profiles, and specifications shall be filed in the office of the said Board of Health. Said Board of Health shall not issue such permit or approve such plans, profiles, and specifications unless they comply with the provisions of this ordinance.

Section 9. That application for permit for the laying of such pipe and for the doing of such plumbing work must be made in writing by the owner of the property upon which the building is to be constructed or such plumbing work to be performed, or his authorized agent, which application shall describe the property which is to be drained and upon which such plumbing work is to be performed, and give the names of the owner of the property. Such application shall also be countersigned by the licensed plumber by whom the work is to be done.

Section 10. That no plumbing of any kind upon private property shall be done by any person except a plumber regularly and duly licensed by the Board of Health of said City to perform and do such work, and holding a written permit from the said Board of Health authorizing such work to be done; provided, that this section shall not prohibit a plumber's helper or any other person from repairing valves, faucets, or cleaning out any sewer pipe.

Section 11. That every soil pipe and private drain, inside the property line, connected with the sewer, or connected with any pipe or private sewer that is connected with the public sewer, shall be of cast iron, and must be sound and impervious in all its parts, and jointed in the best manner, and in all buildings of three or more stories high must be of extra heavy pipe. All "extra heavy" pipe must have the maker's name cast on the pipe and must be of the following weight:

Four inch diameter, 15 lbs., per lineal foot.

Soil pipe must be four inches.

Waste pipe, when lead, must be one and one-half inches in diameter; when cast iron, it must be two inches, whether extra heavy or standard.

Two inch diameter, 12 lbs., per lineal foot.

Fittings must also be extra heavy.

The drain must have a fall of at least one quarter of an inch to the foot, and should run along the cellar wall where practicable, or if laid under the lower floor of the building should be hung with iron straps securely fastened to the floor joists, and should be laid in as straight a line as possible. All changes in direction must be made in curved pipe consisting of long one quarter bends. Sanitary tees should not be used except on perpendicular stacks or vents. All vertical pipes must connect with horizontal pipes with full "Y's" and one eighth or one sixth bends. Vents must run with as few bends as possible, and branch vents must be connected to the main vent at an angle of forty-five degrees; square bends must be avoided as much as possible to prevent condensation of air or vapor therein and stoppage of rust scale or pipes. All gaskets must be of clean tarrad oakum, twisted and rammed into place. The lead used in making the joints must be of the best quality, pure and soft, and must be caulked securely and properly into place. Before making the joints the bell and spigot must be wiped clean and dry, and the joint must be run in at one pouring of the molten lead. The caulking must be faithfully executed, and the lead driven flush with the face of the work.

Section 12. The terminals of all vents must be at least six feet from all flues, water tanks, air shafts, or any other opening. All branch vents must connect with the main vent three feet and six inches (3 ft. 6 in.) above the floor to prevent backwater entering the vent.

Section 13. That every waste pipe shall be of cast iron or lead. All lead pipe connections must be made with a wiped joint. No solder or bolt joint will be allowed. Safe wastes may be of wrought iron. All cast or wrought iron pipes and fittings for waste, vent, or soil pipe must be coated both inside and outside with coal-tar pitch, applied hot, or some equivalent substance. All connections of lead with iron pipe must be made with a brass ferrule of the same size as the lead pipe, and caulked into the iron pipe, and connected with the lead pipe by a wiped joint. Reduce ferrules are strictly prohibited. Every line of vent and soil pipe must extend full bore to six inches above the highest ridge of the roof, or in case of a building having a flat roof and fire walls, then two feet above the fire walls. In every building there shall be at least one four inch cast iron pipe running from the sewer to a point six inches above the highest ridge of the roof where a water closet is located in said building. Where there is only one water closet on four inch stack, the stack will vent said closet. If there is more than one closet on a stack, each and every closet shall be vented with a two inch vent. In no case shall a fixture be located more than two feet from its vent. In case an adjoining building, within fifty feet of said pipe,

extends one or more stories higher than the building in which the said soil or vent pipes are located, then the said pipes must be carried three feet above all openings or gutters of the highest building, and securely fastened so as to prevent them from falling, by proper guys and supports.

One inch and a half vents shall be galvanized iron. All other vents to be of cast iron.

The pipes must be enclosed within buildings. This applies also to running pipes under the roof where a sixth bend can be used. All connections of traps must be made to main, soil, waste, or vent pipes by means of lead-caulked joints. Tap-tees are prohibited. No other traps shall be used except the ones called for in this ordinance. All soil, waste, vent, or drain pipes inside and outside of the buildings, from the property line, before being covered up, must have all openings stopped up and filled with water. This test must be made in the presence of the Plumbing Inspector. In all cases when the Plumbing Inspector is not satisfied with the water test, he may use the smoke or peppermint test. All house drains shall, after being laid, be allowed to remain uncovered until inspected by the Plumbing Inspector. Notice must be given the Plumbing Inspector when the work is sufficiently advanced for inspection, and every facility must be given the Plumbing Inspector to make a thorough inspection, that is, if any pipes are covered with flooring, siding, or lath, or in any way covered that will tend to obstruct a thorough inspection of the plumbing, the said obstruction will have to be removed before the Plumbing Inspector inspects the work. When pipes have been tested in sections, there shall be another test made when connections are ready to be made with the main sewer. Immediately upon completion of the work, notice must be given the Plumbing Inspector for his final inspection. It shall be the duty of plumbers to report to the Plumbing Inspector the replacing of old closets with new closets, or old bath-tubs with new bath-tubs or old sinks with new sinks, or any other old fixture with a new fixture, in order that the work of replacing the old material with new material may be inspected by the Plumbing Inspector.

Section 14. That all water closets that are connected inside of buildings must be connected with the soil pipe by a brass flange and suitable gasket, securely fastened to the floor. Every water closet sink, slop hopper, bath, and each tray of a set of wash trays, or other vessel or vessels connected with the drain pipes, must be separately and effectively trapped with a "P" trap offering an obstacle to the passage of air to not less than two inches depth of water, and four inches depth for water closets. Lead traps to have clean-out screw openings and cap. All traps must be placed as near the fixtures as possible. All water closets within houses must be supplied with water from a separate tank or cistern, and must in no case be connected directly with the water main. All water closets must be flushed from a tank of not less than four gallons capacity. The use of all pan and plunger closets is hereby prohibited and the same must be removed upon ten days notice given by the Board of Health to the owner or occupant of the property. All supply pipes for water closets must be of galvanized iron or lead and shall not be less than one half an inch in diameter. Every safe under a basin, bath, water closet, tank or other fixture, except urinals, must be drained by a special pipe of lead or wrought iron, not directly connected with any soil pipe, waste pipe, drain or water pipe, and shall be made to discharge outside the house. All the urinal safes shall be of the same material, and must discharge into an open trapped hopper that is supplied with water.

Section 15. That all traps to fixtures must be separately and effectively vented, and when two fixtures are attached to one waste one trap must be independent of the other against siphonage by crown venting one trap into the main vent between the fixtures. No fixture shall have a trap of less diameter than one and one half inches. All soil pipes shall have clean-outs at the foot of each perpendicular stack or vent and on the fixture end of all sink runs and supplied with iron thimbles, and made perfectly gas tight. The arrangement of all soil, vent, and waste pipes must be as direct as possible and all work must be done in a mechanical and workmanlike manner. All bath tubs above the first floor must have one inch and a quarter overflow connections, and also on the first floor if there is a basement. Four water closets may be vented into a two inch branch vent. Five, six, seven and eight water closets may be vented into a three inch branch vent. Nine or more water closets may be vented into a four inch branch vent. Three wash basins, baths, or similar fixtures may be vented into a two inch branch vent. Six to twelve basins, baths or similar fixtures may be vented into a three inch branch vent. Wherever a water closet is placed in a lot and there is no exposure, the height of the stack shall not be less than fifteen feet from the floor of the closet. Said "exposure" means 50 feet from one building to another. All horizontal or vertical lines of lead waste pipe must be securely fastened on a suitable board or timber by soldering hard lead tacks to said pipe; distance between centers not to exceed three and one half feet. Connecting the waste of a fixture to the lead bend of a water closet must be avoided, especially the waste from a wash basin or any other fixture situated in a bedroom, in all cases possible a separate fitting must be placed in the stack to receive the waste from said fixture. The wiping of a solder nipple on a lead bend is prohibited; the lead waste must run to the top of the fixture and there be connected with the iron pipe.

Section 16. That no connection shall be made at any part of the house drainage system with roof, gutters, or any other channel for the conveyance of rainwater, save that plumbing fixtures may be supplied from tanks constructed to store rainwater for such purposes. No steam exhaust shall be allowed to connect with any drain, soil, or waste pipe.

No person shall throw or deposit, or cause to be thrown or deposited, in any vessel or receptacle connected with a public sewer, any garbage, vegetable parings, ashes, cinders, rags, or any other thing, whatsoever, except feces, urine, the necessary water closet paper, and liquid house slops. No drain shall be connected with any privy vault or cesspool, or underground drain, or with any channel conveying water or filth, excepting the soil pipes and plumbing of the house or buildings, as herein provided. That no permit shall be issued under this ordinance for putting in new plumbing in any building until the sum of fifty cents has been paid to the said Board of Health; therefore, provided, that this provision shall not apply to the alteration or repair of plumbing already in place.

Section 17. That it shall be unlawful for the owner or person having the care or control of any building, any portion of which is used for any purpose during any portion of the day, to fail to have it

least one water closet connected with the public sewer, thirty days after notification from the said Board of Health or Health Officer of said City, and to fail to have such water closet suitably arranged for use as a urinal, unless a separate urinal is provided; also for the owner or person having the care or control of any building in which food is cooked or clothing is washed, to fail to have a suitable sink, slop-stone or hopper for the reception of waste water; provided, however, that if the water closet is of the kind suited to such use it may receive the waste water, and the sink, slop-stone or hopper may be dispensed with; provided, that this section shall not apply to any building located upon any lot which does not front upon a street or abut upon an alley in which there is a public sewer.

Section 18. That Ordinance No. 145, entitled, "Sewerage and Drainage of San Diego", passed and approved, October 27th, 1887, be and the same is hereby repealed; that Ordinance No. 156, entitled, "An ordinance relating to sewer connections and duties of Sewer Inspector," approved December 3rd, 1887, be and the same is hereby repealed; that Ordinance No. 252, entitled, "An ordinance in relation to the connection of sewers of the City of San Diego, California," approved May 16th, 1888, be and the same is hereby repealed; that Ordinance No. 305, entitled, "An ordinance notifying all persons having real property abutting upon that portion of Fifth street in the City of San Diego, California, between the south line of A street and the south line of Walnut street to make sewer connections, and notifying and directing the San Diego Water Company and the San Diego Gas and Electric Light Company to lay, put in, and extend such water and gas pipes and connections as are necessary and required in said street between said points", approved July 17th, 1895, be and the same is hereby repealed; that Ordinance No. 620, entitled, "An ordinance requiring owners and persons having possession and control of premises within the limits of the City of San Diego, California, to conform to certain sanitary regulations and prescribing certain regulations for the protection of sewers within said City, and prescribing a penalty for the breach of said regulations," approved April 18th, 1899, be and the same is hereby repealed.

Section 19. That every person violating any of the foregoing provisions of this ordinance shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine in any sum not exceeding two hundred dollars (\$200.00), or by imprisonment in the city jail of said City of San Diego for a period not exceeding one hundred (100) days, or by both such fine and imprisonment.

Section 20. That the Plumbing Inspector shall be in attendance at the Health Office between the hours of eight o'clock A. M. and nine o'clock A. M., and from one o'clock P. M. to two o'clock P. M. to receive plans of proposed plumbing, and to make appointments for the inspection of work in the course of construction. He shall number and file all plans and specifications which have been approved by the Board of Health and record the names of the parties by whom the work is to be performed, and the location of such work, and the name of the architect, if one, and owner. He shall examine all plans and specifications, and if in accordance with the provisions of this ordinance he shall approve the same in writing and then present the same to the Board of Health for approval. He shall present to the Board of Health any objection he may have to any plan or specification which does not conform to the provisions of this ordinance. If such plans and specifications are not approved by the said Board of Health they shall be returned to the person presenting them with a note explaining the corrections necessary in order to have them comply with the provisions of this ordinance. He shall examine the plumbing work before the same is covered up or enclosed, and if found to have been done in accordance with the plans and specifications filed he shall issue a certificate to that effect, and upon the completion of any plumbing work he shall examine the same, and if found to conform to the provisions of this ordinance and the plans and specifications filed, he shall issue a final certificate of final inspection. He must keep an account of the number of plans and specifications received, the number approved by the Board of Health, and the number rejected. He must make a monthly report to the said Board of Health of the number of first and final examinations made, and where, and by whom the provisions of this ordinance have been violated (if they have been violated), and such other matters appertaining to the plumbing of the City as may be required by the said Board of Health. He shall immediately on knowledge of any infraction of the provisions of this ordinance report the same to the said Board of Health.

Section 21. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 22. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

O R D I N A N C E No. 1 1 3 2.

An Ordinance providing for the payment of certain bills for material and supplies incurred by the Water Department of the City of San Diego, California, for the month of April, 1902.

WHEREAS, The Common Council of the City of San Diego, California, has authorized the Board of Public Works of said city to incur an indebtedness in the purchase of materials and supplies for the use of the Water Department of said city in a sum not to exceed three hundred dollars (\$300.00) in any one month; and

WHEREAS, The said Board of Public Works has purchased materials and supplies during the month of April, 1902, for the use of the said Water Department in the sum of \$1088.36 as shown by the accompanying bills numbered 2191, 2193, 2245, 2266, 2267, 2270, 2318, 2319, 2326, 2352,

2370 and 2373.

THEREFORE, BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

Section 1. That said claims be and they are hereby approved and allowed.

Section 2. That this ordinance shall take effect and be in force from and after its passage and approval.

A communication from the City Attorney advising the Council to revise the ordinances prescribing specifications for laying sidewalks and curbing, and for grading streets, and transmitting ordinances for that purpose, is read and ordered filed.

Thereupon an ordinance prescribing specifications for sidewalking and curbing in the City of San Diego, California, is read and on motion of Alderman Jones adopted by the following vote, to-wit:

AYES -- ALDERMEN Clark, Whitson, Rainbow, Johnson, Jones, Hyers, Watson and Perrin.

NOES -- NONE.

ABSENT--ALDERMAN Landis.

Said ordinance as adopted is as follows, viz:

#### Ordinance No. 1140.

An Ordinance Prescribing Specifications for Sidewalking and Curbing in the City of San Diego, California.

Be it ordained by the Common Council of the City of San Diego, as follows:

Section 1. That all sidewalking and curbing in the City of San Diego, California, shall be hereafter done in accordance with the following specifications, viz:

The sidewalks, pavements, and curbs provided for herein are to be constructed according to plans, drawings, and cross-section, approved by the Common Council of said City, on file in the office of the City Engineer of said City, and so as to conform to the lines, levels, and official grade of the street upon which said work is to be constructed; said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said City.

The work to be done shall be as follows: (a) Preparing the foundation for the sidewalk, and digging the trench for the curb; (b) Constructing and laying the curb prescribed in the Resolution of Intention; (c) Constructing and laying a Portland cement concrete pavement; (d) Furnishing all material and labor necessary to perform said work, and to complete the same; (e) Removing from the street and sidewalk adjacent to the work, all surplus material and debris.

Section 2. That all material used in sidewalking and curbing in the City of San Diego, California, shall comply with the specifications herein contained.

1. No cement will be accepted, tested, or permitted to be used unless delivered in the original packages with the manufacturer's name and brand of cement thereon.

2. Tests of cement will be made at a temperature of from sixty (60) to seventy (70) degrees Fahrenheit.

3. Samples for tests may be taken from every package delivered, and unless they meet the requirements herein specified such packages may be rejected.

4. The sieves used for testing cement for fineness and for gauging the sand to be used in making briquettes for sand tests shall be as follows:

No. 20 sieve shall have 400 meshes to the square inch and shall be made of wire cloth, No. 28 wire, Stubbs wire gauge.

No. 30 sieve shall have 600 meshes to the square inch and shall be made of wire cloth, No. 31 wire, Stubbs wire gauge.

No. 50 sieve shall have 2500 meshes to the square inch and shall be made of wire cloth, No. 35 wire, Stubbs wire gauge.

No. 100 sieve shall have 10,000 meshes to the square inch and shall be made of wire cloth, No. 40 wire, Stubbs wire gauge.

5. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified, with only enough water added to thoroughly moisten the mixture and make it coherent.

6. After being thoroughly mixed on a glass plate the mortar shall be firmly pressed into the moulds by hand, and the briquettes so formed placed upon a glass plate and kept there until put in water.

7. The sand used in preparing briquettes shall be clean and sharp and of such size that it will pass a number twenty (20) sieve and be retained on a number thirty (30) sieve.

8. Round pats of neat cement about three inches in diameter, half inch thick at the center and tapering to a feather edge, mixed in the same manner as the neat cement briquettes and placed on a glass plate, shall not show any signs of warping or cracking after seven (7) days in either air or water.

9. Any cement showing signs of swelling, after being mixed, will be rejected.

10. Portland cement shall be ground to such a degree of fineness that not less than ninety-eight (98) per cent by weight shall pass a No. 50 sieve, and not less than ninety (90) per cent by weight shall pass a No. 100 sieve.

11. The ultimate tensile strength of briquettes one square inch in cross-section, made of neat Portland cement, shall be as follows:

One day in air and six days in water 375 pounds.

One day in air and twenty-seven days in water 510 pounds.

1140

12. The ultimate tensile strength of briquettes one square inch in cross-section, made of one part by weight of Portland cement and three parts of sand, shall be as follows:

One day in air and six days in water 120 pounds.

One day in air and twenty-seven days in water 190 pounds.

13. Broken stone for concrete shall be good, hard stone that will not be affected by the weather, broken so that the longest dimension of any stone will not exceed one and one-half (1½) inches, nor the least dimension of any stone be less than one-fourth (¼) of an inch, and must be free from dust, dirt, or other foreign matter.

14. Gravel for concrete shall be of such size that the greatest diameter of any pebble will not exceed one and one-half (1½) inches, nor the least dimension of any pebble be less than one-fourth (¼) of an inch, and must be free from dust, dirt, or other foreign matter.

15. Water shall be fresh, and free from earth, dirt, or sewerage.

16. All sidewalks within that portion of the said City of San Diego which are bounded on the north by the north line of "A" street; on the west by the west line of Fourth street; on the east by the east line of Sixth street, and on the south by the north line of "L" street shall extend from the curb line to the property line.

17. Outside of the limits of the district above described, the pavement shall be five feet four inches (5 ft. 4 in.) wide, located in the center of the sidewalk; provided, however, that at the intersection of one street with another street, the entire return shall be paved to the inside line of the curb. The pavement shall cover all that portion of the said intersection bounded by the extension of the two property lines to the curb and the inside of the curb line.

18. The cement and sand in the specified proportions, by volume, shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Upon the mixture there shall be spread the proper quantity of broken stone or gravel. The mass shall then be thoroughly turned over with shovels or hoes not less than three (3) times, or until every pebble or piece of broken stone is completely coated with mortar. Water shall be added by sprinkling during the process of mixing in quantities to secure the required consistency.

19. The cement, sand, and lamp-black in the specified proportions shall be thoroughly mixed dry on a tight platform, with shovels or hoes, until no streaks of cement are visible. Water shall be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantities to produce a mortar of the desired consistency, and the whole thoroughly mixed with shovels or hoes until a homogeneous mass is produced.

20. The mortar, while fresh, shall be spread upon the concrete base, before the latter has set, in such quantities that after being thoroughly manipulated and spread over the concrete it will make a layer three-fourths (¾) of an inch thick, conforming to the required grade and cross-section. The surface shall be thoroughly dressed and smoothed and cut into slabs.

21. Board or timber forms shall be provided by the contractor to mould the concrete and mortar to the required shape, and shall be left until the concrete or mortar is set.

22. Re-tempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

23. All surfaces on or against which concrete is to be laid shall be thoroughly cleaned and dampened by sprinkling with water just previous to placing the concrete.

24. The concrete shall be evenly spread upon the foundation, as soon as mixed, in a layer of such depth that after having been thoroughly compacted with rammers it shall not be in any place less than three (3) inches thick, and the upper surface shall be parallel with the proposed surface of the completed pavement.

25. Concrete shall not be mixed in larger quantities than is required for immediate use, and no batch shall be larger than can be made from one barrel of cement with the proper proportions of sand and stone.

26. The concrete sidewalks and concrete curbing shall be plainly and legibly stamped in letters not less than two (2) inches long, with the name of the contractor constructing the same, and the month and year of such construction.

27. All returns of concrete sidewalks shall be plainly and legibly stamped in letters not less than three (3) inches long, with the names of the streets or avenues upon which the return fronts, and with arrows showing the course of the street.

28. All the stamping herein provided for shall be done by and at the expense of the contractor, and no cement sidewalk or concrete curbing will be accepted by the Superintendent of Streets unless stamped as herein provided.

Section 3. That all curbs shall be constructed of either natural stone, concrete, or wood, and shall conform to the following specifications:

1. All natural stone curbs are to be constructed of granite, free from defects or faults that impair its usefulness for the purpose for which it is intended. Each block of stone must be at least four (4) feet long and six (6) inches thick at top and bottom, and sixteen (16) inches deep.

2. The top of each stone shall be dressed to the prescribed width of six (6) inches from which it shall not vary more than one-fourth ( $\frac{1}{4}$ ) of an inch, and its face shall be dressed for a distance of not less than eight (8) inches on paved streets and twelve (12) inches on unpaved streets, down from the top.

These dressed surfaces must be true and properly squared. They must be first-class pean hammered, and no holes are to be allowed. The back of the stone for a depth of two (2) inches is to be pointed to a fair surface, free from inequalities exceeding one-half ( $\frac{1}{2}$ ) of an inch measured from a straight edge, and the joints of the stone are to show, an even edge for a depth equal to the depth of the dressing on the face. The joints below the dressed portion must not be pitched more than one-quarter ( $\frac{1}{4}$ ) of an inch under square and must not interfere with the making of close joints not exceeding one-eighth ( $\frac{1}{8}$ ) of an inch throughout the dressed portion of the ends. All edges bordering dressed surfaces shall be sharply defined.

3. The lower part of each stone is to be roughly squared and shall not fall below an average thickness of six (6) inches at the bottom, and shall have no point where its minimum thickness falls below four (4) inches.

The curb for corners shall be cut to a radius of ten (10) feet, and its joints must be on true radial lines. The joints must not exceed one-eighth ( $\frac{1}{8}$ ) of an inch and must be cut the full depth. All joints shall be filled with cement grout.

The curb shall rest on not less than four (4) inches of sand, backed up with not less than three (3) inches in width of sand to within four (4) inches of the top of the curb. All backfilling shall be thoroughly tamped, so that there will be no displacement of the curb. All curbs shall be set to true lines and grades as shown by the grade stakes to be set by the City Engineer.

4. All artificial stone or concrete curbs shall be eight (8) inches wide by sixteen (16) inches deep. The Portland cement used to be subject to the requirements herein enumerated. The concrete shall be composed of one part, by volume, of Portland cement, two parts of sand, and four parts of broken stone. The moulds shall be banked up solidly with earth so that no movement will take place when the concrete is being tamped. The moulds shall be filled with concrete prepared as hereinafter specified and thoroughly tamped to within three-quarters ( $\frac{3}{4}$ ) of an inch of grade. The final layer of three-quarters ( $\frac{3}{4}$ ) of an inch of mortar shall be of one part of cement to one of sand filled in and smoothed with a trowel. After setting for twelve (12) hours it shall then be covered with wet earth three (3) inches deep and kept so covered for ten (10) days. The face of the curb down to the grade line of the gutter shall be finished in the same manner as the top.

5. All wooden curbs shall be of sound black-heart redwood planks three inches by twelve inches (3 in. by 12 in.) in size, free from sap, well and truly set to the official line of the gutter, and inclined one (1) inch toward the property line at the top of the curb, to the curb grade, and securely spiked with sixty (60) penny spikes to four inch by four inch (4 in. by 4 in.) redwood stakes not over eight (8) feet apart and at least three (3) feet long, securely planted, not driven, into hard ground. At corners the radius of the curve shall be ten (10) feet, and the return or curve shall not be less than three pieces of one inch by twelve inches (1 in. by 12 in.), thoroughly spiked together, the face of which shall be one continuous piece extending from property line to property line.

Section 4. All cement sidewalks shall conform to the following specifications:

1. Pavements of this class shall consist of a foundation of Portland cement concrete three (3) inches thick, and a wearing surface of Portland cement mortar three-quarters ( $\frac{3}{4}$ ) of an inch thick, making a total thickness of the completed pavement at least three and three-quarters ( $3\frac{3}{4}$ ) inches.

The earth bed on which the pavement is to rest shall be graded to the required depth below the official grade of the street. The surface of such bed shall be parallel to and conform in every respect to the cross-section of the pavement when finished; the ground, after being perfectly dressed, shall be made solid by ramming or rolling. All soft or spongy places not affording a firm foundation shall be dug out; all trench refilling shall be thoroughly drenched with water and tamped; all depressions which appear shall be refilled with good and sound material and well rammed. In all places where any filling may be necessary to bring the bed to the required height it shall be done in layers not to exceed eight (8) inches in thickness, and each layer shall be thoroughly drenched and tamped to insure a solid bed.

2. The base or foundation shall be three (3) inches in thickness, composed of one part, by volume, of Portland cement, two (2) parts of sand, and four (4) parts of broken stone or gravel, as specified in the Resolution of Intention. The Portland cement used to be subject to the requirements hereinbefore enumerated. The concrete shall be filled in and thoroughly tamped to within three-quarters ( $\frac{3}{4}$ ) of an inch of grade. The final layer of mortar three-quarters ( $\frac{3}{4}$ ) of an inch thick to be laid before the base becomes set or dry, and shall be composed of one (1) part, by volume, of Portland cement to one part of sand, colored with lampblack to a dark slate color, and smoothed with a trowel. After setting for twelve (12) hours, it shall be covered with wet earth three (3) inches deep and kept so covered for ten (10) days.

Section 5. That all work done shall be subject to the following conditions and requirements:

1. The contractor shall give twelve (12) hours' notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements of the work by the City Engineer in their proper places. Any expense in replacing said stakes which the contractor, or his agents or employees may have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake holes necessary to give lines and levels. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications; or who shall be found to be incompetent or unfaithful.

2. All loss or damage arising from the nature of the work to be done under these specifications, during the progress of the work, and before the acceptance thereof, or from any act or omission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall remove all obstructions in a careful manner and replace the same when necessary that the same should be replaced, in as good a condition as found, and to the proper grade, and all projecting stone or other walks shall be neatly cut on the inside of the curb, and such cutting and resetting of curbing and replacing of paving shall be done as shall be necessary to make proper connections with the work already done on the cross streets. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

3. All the work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, and the materials used shall comply with the specifications herein contained, and be to the satisfaction of the said Superintendent of Streets. No materials of any kind shall be used until they have been examined and approved by the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with the specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

4. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work herein specified.

5. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 6. That all ordinances or parts of ordinances in conflict herewith be and the same is hereby repealed.

Section 7. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 8. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

An ordinance providing specifications for the grading of streets in the city, is read and on motion of Alderman Johnson adopted by the following vote, to-wit:

**AYES -- ALDERMEN** Clark, Whitson, Rainbow, Johnson, Jones, Hyers, Watson and Perrin.

**NOES -- NONE.**

**ABSENT--ALDERMAN** Landis.

Said ordinance as adopted is as follows, viz:

### Ordinance No. 1141.

An Ordinance Providing Specifications for the Grading of Streets in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That all street grading in the City of San Diego, California, shall hereafter be performed in accordance with the following specifications:

1. The work of grading is to be done in accordance with the profiles approved by the Common Council on file in the office of the City Engineer of said City, and all work shall conform, during the progress of the work and on its completion, to the lines and levels which may from time to time be given by the said City Engineer in accordance therewith.

2. The City Engineer shall set stakes indicating the exact depth of cutting or filling required to bring the street to its official grade.

3. Grading shall include the removal of all earth, stone, loose rock, clay, shale, cement, hardpan, boulders, solid rock, and all other materials that may be encountered in preparing the street, and shall also include all filling, trimming, shaping, picking down, re-filling, surfacing, or other work that may be necessary to grade the roadway, gutters, and sidewalks to the official grade and in accordance with the said profiles.

4. In places where filling is necessary to bring the street to the official grade it shall be done with good, sound material. The embankments shall be carried up of full width in layers not to exceed one foot in thickness, and the teams shall be made to travel as evenly as possible over the whole surface of each layer, both going and coming.

The formation of well defined ruts is specially prohibited. No material of a spongy nature shall be used for fillings. The slopes of embankment shall be one and one-half (1½) horizontal to one vertical, and shall be trimmed as they are carried up. The space over which fills are to be made shall first be cleared of all brush, rubbish, and perishable material.

5. Upon all embankments there shall be placed a top dressing of earth of uniform quality to form a compact surface.

6. Whenever a cut exceeds one (1) foot in depth, all trees standing on the margin of the street shall be removed.

7. Before the Resolution of Intention is passed by the Common Council, the City Engineer shall make a careful estimate of the number of cubic yards of excavation and the number of cubic yards of embankment necessary to bring the street, or portion of the street, proposed to be graded, to its official grade and cross-section.

8. In case said estimate demonstrates that the number of cubic yards of embankment is in excess of the number of cubic yards of excavation, the Resolution of Intention shall designate the point or points where such earth required shall be taken from. And in case said estimate demonstrates that the number of cubic yards of excavation is in excess of the number of cubic yards of embankment, then the Resolution of Intention shall designate the point or points where such excess earth shall be deposited.

9. The estimate of the City Engineer, made as above specified, shall be kept on file in his office, and shall, during office hours, be accessible for inspection by any person who may desire to inspect the same.

10. The Resolution of Intention shall designate the location and size of all culverts to be placed on the street to be graded.

11. The culverts shall be built of two (2) inch redwood planks, and according to the plans and drawings on file in the office of the City Engineer.

12. All bids must state the price per cubic yard for excavation, the price per cubic yard for embankment, and the price per one thousand feet board measure for culverts.

13. Incidental expenses shall include the cost of the publication of notices, resolutions, orders, and other incidental expenses and matters required under the proceedings taken for the grading of the street, including the compensation of the City Engineer, all work of civil engineering done by him on the street, and such other notices as may be deemed requisite by the said Common Council.

14. The Street Superintendent shall supervise all work and shall not approve or accept the same until the street throughout is finished to the form of cross-section and to the elevations required by the official grade.

15. The contractor shall, when required to do so by the said Superintendent of Streets, remove from the work any overseer, superintendent, laborer, or other person employed on the work, who shall refuse or neglect to obey the said Superintendent of Streets in any way relating to the work, or who shall perform his work in a manner contrary to these specifications, or who shall be found to be incompetent or unfaithful.

16. Bidders must examine and judge for themselves as to the location of the proposed work, the nature of the excavation to be made, and the work to be done.

17. The contractor shall give twenty-four (24) hours' notice in writing when he shall require the services of the City Engineer for laying out any portion of the work. He shall preserve all stakes set for lines, levels, or measurements for the work by the City Engineer in their proper places. Any expense in replacing said stakes, which the contractor or his agents or employees shall have failed to preserve, shall be borne by the contractor. The contractor shall dig all stake-holes necessary to give lines and levels.

18. All curbs and cross-walks which must be removed shall be removed in a careful manner, and must be conveniently and neatly piled upon the side of the nearest intersecting street.

19. All loss or damage arising from the nature of the work to be done under these specifications, during the progress,

of the work, and before the acceptance thereof, or from any act or omission on the part of the contractor, or any agent or person employed by him, occurring in the course of the work not authorized by these specifications, shall be sustained and borne by the contractor. The contractor shall keep good and sufficient guards around said improvements, by fence or otherwise, to prevent accident, and shall hang thereon lights to burn from dusk to daylight, and the contractor shall hold the City harmless from any and all suits for damages arising from or out of and during the performance of said work, or any portion thereof, and before the same has been accepted.

20. All railroad tracks, gas, or water pipes, electrical conduits, tubing or underground structures of any character belonging to the City or others, shall be properly protected, and the contractor shall be responsible for any damage that may be caused by negligence or carelessness on the part of his employees.

21. In case it should be necessary to remove any railroad tracks, gas pipes or water pipes, electrical conduits, tubing or underground structures of any character, or any portion thereof, the owner, or owners of the same, or their agents or superintendents, will, upon application to the contractor, be notified by the Superintendent of Streets to remove the same within a specified time; and the contractor shall not interfere with said tracks, gas pipes, water pipes, or any portion thereof, until the expiration of the time specified in the said notice.

22. The right is reserved to street railroads, gas companies, or the City to enter upon the street for the purpose of making repairs or changes that have become necessary by the improvement of the street.

23. The contractor shall remove all surplus material and rubbish from the work after its completion, and before he makes application for the acceptance of the work.

24. The contractor shall notify the Superintendent of Streets when he desires a final inspection of the work, when the latter will make the necessary examination, and if the work is found to be completed in accordance with these specifications, he shall accept the same.

25. All work provided for herein must in all cases be done under the direction and to the satisfaction of the said Superintendent of Streets, who shall have full power to condemn any work or material not in accordance with these specifications, and to require the contractor to immediately remove any work or material so condemned, and the contractor shall, at his own expense, replace said work or materials to the satisfaction of the said Superintendent of Streets. The decision of the said Superintendent of Streets shall be final as to the quality of the work and materials used, unless the Common Council shall determine otherwise upon an appeal.

26. Whenever the word "Contractor" is used in these specifications, it refers to the party or parties to whom the contract has been awarded for the construction of the work.

27. Whenever the words "City Engineer" or "Street Superintendent" are used in these specifications, they refer, respectively, to the City Engineer and the Street Superintendent of the City of San Diego, State of California.

Section 2. That all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 3. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 4. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

The following report of the Joint Water Committee in the matter of the use of water at Pacific Beach and La Jolla, is read and adopted, viz:

San Diego, Cal., May 26th, 1902.

To the Common Council,

San Diego, Calif.,

Gentlemen:--

The Joint Water Committee, to whom was referred an ordinance regulating the use of water at Pacific Beach and La Jolla, herewith recommends that the Board of Public Works notify the water consumers at Pacific Beach and La Jolla to arrange between themselves for the equitable use of water at said places, and that if said water consumers cannot satisfactorily arrange this matter between themselves within a reasonable time, the Council will pass a "rotation ordinance" similar to the one now in the hands of this committee.

Respectfully,

Geo. B. Watson,

C. N. Clark,

J. P. M. Rainbow,

W. H. C. Ecker,

W. W. Lewis,

J. W. Lambert.

The following report of the Joint Finance Committee in the matter of the sale of real estate by the City Clerk, is read and adopted, viz:

San Diego, Cal., May 29th, 1902.

To the Common Council,

San Diego, Calif.,

Gentlemen:--

Your Joint Finance Committee, to whom was referred the report of the City Clerk showing the result of the sale, at public auction, of property deeded to the city for delinquent city taxes, herewith recommends that the bid for said property as a whole be rejected, and that all of the individual bids for said property be rejected except the bids for the following property, viz: Lots 7 & 8, block 45; lot 6 block 35; block 176 1/2, all in Middletown; lot 41, block 7, Crittenden's addition; and lots 47 & 48, block 5, Watkins & Biddle's addition, which bids we recommend be accepted and the sale of said property confirmed; and further that the City Clerk be instructed to return the 5% deposited by other bidders, and we present herewith an ordinance in conformity to this report and recommend its adoption.

Respectfully,

S. T. Johnson,

C. N. Clark,

F. H. Briggs,

Geo. McNeill.

Thereupon an ordinance confirming certain sales of real estate owned by the city, and rejecting certain other sales of real estate owned by the city, is read and on motion of Alderman Watson adopted by the following vote, to-wit:

Said ordinance as adopted is as follows, viz:

**Ordinance No. 1131.**

An Ordinance Confirming Certain Sales of Real Estate Owned By the City of San Diego, California, and Rejecting Certain Other Sales of Real Estate Owned By Said City.

Whereas, the Common Council of the City of San Diego, California, adopted Ordinance No. 1105 of the ordinances of said City, entitled, "An ordinance providing for the sale at public auction of certain real property owned by the City of San Diego, California," approved March 25th, 1902, and thereafter duly published as required by said ordinance; and

Whereas, pursuant to the terms of said Ordinance No. 1105 the City Clerk of said City sold at public auction, after publication of notice thereof for at least three weeks in the City official newspaper of said City, to-wit: the San Diego Union and Daily Bee, the real property described in said Ordinance belonging to and owned by the said City of San Diego, and situated in the City of San Diego, County of San Diego, State of California, which said sale took place in front of the main entrance to the City Hall of said City, situated on the southwest corner of Fifth and "G" streets in said City, at the time specified in said notice of such sale, which said date of sale was fixed by the said City Clerk in said notice, and was not more than forty days subsequent to the approval of said Ordinance No. 1105; that said notice of said sale, so published, was signed by the said City Clerk, giving the time and place of said sale and fixing the hour and day at which said sale would take place, which said hour was between nine o'clock a. m. and three o'clock p. m. on the 23rd day of April, 1902, and in accordance with the provisions of said Ordinance No. 1105; and

Whereas, at said time and place all of said property described in said Ordinance No. 1105 was sold to the highest bidders therefor by the said City Clerk; and

Whereas, at said sale John Castle was the highest bidder for lots 7 and 8, in block 45 of Middletown, in said City, the said John Castle bidding therefor the sum of \$23.00 for said lot 7, and \$27.25 for said lot 8, in said block 45; also the said John Castle was the highest bidder at said sale for lot 41, in block 7, of Crittenden's addition in said city, the said John Castle bidding therefor the sum of \$7.50; and

Whereas, at said sale Jennie W. Caldwell was the highest bidder for lot 48, in block 5, of Watkins & Biddle's addition in said City, the said Jennie W. Caldwell bidding therefor the sum of \$6.25; and

Whereas, at said sale the said Jennie W. Caldwell was the highest bidder for lot 6, in block 35, of Middletown, in said City, the said Jennie W. Caldwell bidding therefor the sum of \$20.25; and

Whereas, at said sale George Belcher was the highest bidder for block 176 1/2 of Middletown in said City, the said George Belcher bidding therefor the sum of \$15.00; and

Whereas, at said sale J. R. Dunkin was the highest bidder for lot 47 in block 5 of Watkins and Biddle's addition in said City, the said J. R. Dunkin bidding therefor the sum of \$5.05; and

Whereas, all of said bids were made in accordance with the terms and conditions specified in said Ordinance No. 1105 and in said Notice of said sale, subject to the approval of the said Common Council by ordinance, as provided in said Ordinance No. 1105; and

Whereas, the said City Clerk, after making said sales, did immediately report the same to the said Common Council, giving the names of the purchasers thereof, the amount of the highest and best bid therefor, and such other facts as were necessary to fully inform the said Common Council of the proceedings had attending such sale; and

Whereas, the said purchasers at said sale paid to the said City Clerk five (5%) per cent of the amount of their

said bids, respectively, at the time said sale was made, and took the receipt of the said City Clerk therefor; and

Whereas, it is the wish and desire of this Common Council to approve and confirm certain of said sales, to-wit: The said sales made to the said John Castle of lots 7 and 8 in block 45 of Middletown in the said City of San Diego, and lot 41 in block 7 of Crittenden's addition in said City; also said sale made to Jennie W. Caldwell of lot 48 in block 5 of Watkins and Biddles' addition in said City, and lot 6 in block 35 of Middletown in said City; also the said sale made to George Belcher of block 176½ of Middletown in said City; and also said sale made to J. R. Dunkin of lot 47 in block 5 of Watkins and Biddles' addition in said City; and

Whereas, it is the wish and desire of the said Common Council of said City to reject all the other sales made by the said City Clerk at the time herein above referred to, and under and in pursuance of said Ordinance No. 1105.

Therefore, be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That it be and is hereby determined by the Common Council of the City of San Diego, California, after fully considering said facts and the report of the said City Clerk, and everything in connection therewith, that the notice provided for by said Ordinance No. 1105, and required by law, for the sale of said real estate at public auction has been duly given and published in the manner and in all respects as provided by law and the said Ordinance No. 1105.

Section 2. That the said sales to the said John Castle, Jennie W. Caldwell, George Belcher, and J. R. Dunkin, be and the same are hereby approved and confirmed, and that the said purchasers are hereby, respectively, entitled to deeds from the said City of San Diego for and to said real property so purchased by them, and when they shall have complied with the requirements contained in Section 5 of said Ordinance No. 1105, the Mayor of said City is hereby authorized and directed to execute and deliver to the said purchasers deeds to the said property so purchased, as provided in said Section 5 of said Ordinance No. 1105.

Section 3. It is hereby further ordained by said Common Council, that all the other sales made by the said City Clerk under and in pursuance of said Ordinance No. 1105 and the Notice of said sale, be and they are hereby rejected and refused, and that the said City Clerk is hereby authorized and directed to return to the bidders for all of said sales herein rejected the said sum of five (5%) per cent on said sales received by him from such bidders, on their surrendering to him his receipt therefor.

Absent Aldermen Whitson, Landis, & Watson,

Said Ordinance as adopted is as follows, viz:

**Ordinance No. 1147.**

1147

An Ordinance Amending Section 2 of Ordinance No. 1129 of the Ordinances of said City Approved on the 3<sup>rd</sup> Day of June, 1902.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That section 2 of Ordinance No. 1129 of the Ordinances of said City entitled "An Ordinance Prescribing Specifications for Asphalt Pavement on Asphalt Concrete Base in the City of San Diego, California," approved on the 3<sup>rd</sup> day of June, 1902, be, and the same is hereby amended to read, as follows:

Section 2. That all grading and the preparation of the roadbeds for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required in bringing the surface of the street to the subgrade and shape required, and of maintaining it in perfect condition until the work has been done.

The cost thereof shall be included in the contract price per square yard of completed pavement, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from the work of grading. The surplus material, if any, shall be removed by the contractor to such point or points as may be designated by the Common Council in the Resolution of Intention.

2. When mud or soft material is encountered it shall be taken out below the sub-grade, and the space shall be re-filled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below a point two (2) inches above the sub-grade. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a sub-grade or surface of the required depths below the established grade of the street and shall be finished in the most perfect manner so as to parallel with, and in every way made to conform in shape to, the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the sub-grade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. The roller used shall be of a weight not less than two hundred and fifty pounds for each one inch width of roller.

Section 2. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 3. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

Said Ordinance as adapted is as follows, viz:

### Ordinance No. 1142.

1142

An Ordinance Providing for the Appointment of an Inspector of Steam Boilers, and Prescribing His Duties, and Providing for His Compensation, in the City of San Diego, California.

Be it ordained, by the Common Council of the City of San Diego, as follows:

Section 1. That the Board of Public Works of the City of San Diego, California, be, and said Board of Public Works is hereby authorized, directed, and empowered to appoint a man as a Boiler Inspector who has been a practical boiler maker and shall have had at least ten (10) years experience as such, and has been a resident and an elector of the said City of San Diego, California, for one year prior to his appointment.

Section 2. That the said boiler inspector shall inspect all steam boilers carrying a pressure of five (5) pounds to the square inch or upwards, in the said City of San Diego, every six (6) months; that said inspector shall keep a complete record of all steam boilers in said City, their owner's name, location, etc., also the amount of steam pressure allowed to be carried, and the date when last tested, which record shall be kept in the office of the said Board of Public Works of said City, and shall be open at all times to the inspection of the public; that said inspector shall give five (5) days' notice in writing to all owners or users of boilers of the date when an inspection or a re-inspection, or a test will be made, or for the examination of any certificate of inspection and fix in said notice the date on which said inspection, or re-inspection, or a test will be made; that the manner of the inspection shall be substantially as follows, viz: Said inspector shall have the option of making the hammer test, or hydrostatic test, or both. If the hammer test be used, the examination shall be thorough and searching upon every part of the boiler, both internally and externally, including all fittings and attachments.

If the hydrostatic test be used, each boiler shall be tested by hydraulic pressure one-fourth greater than the ordinary working pressure used, and the certificate of inspection herein provided shall state the maximum pressure at which any boiler may be worked. In case a defect shall be discovered in any boiler or attachment thereto, the boiler inspector shall report the same to the owner or user of the boiler or boilers and state the facts in writing, giving description of the particular locality in which each defect may be found, and whether of a dangerous character and necessitating immediate repairs. If the boiler inspector shall at any time find a boiler which, in his judgment, is unsafe after inspecting the same, he shall condemn its further use. All boilers to be tested by hydrostatic pressure shall be filled with water by the owners or users, and they shall furnish the necessary labor required to work and handle the pumps in applying the test, and when leaks occur which prevent a successful test, the boiler inspector shall make a second test, upon receiving notice that all leaks have been repaired. If, upon making the second test, the boilers are defective, he shall for each subsequent test collect an additional inspection fee, but in no case shall he give a certificate until fully satisfied of the safety of the boiler or boilers. If after making an inspection or test of any boiler, the boiler inspector shall find the boiler in good condition, he shall issue a certificate to that effect, showing the condition and capacity of such boiler, and the date of such inspection, but no certificate of inspection shall be issued for a longer period than six months.

Section 3. That any person or persons intending to put a boiler or boilers into an establishment or building in said City, must apply to the said Board of Public Works for a permit before setting up any boiler or boilers; that any person failing or refusing to comply with this provision, or who shall set up a boiler without such a permit, or who shall fail, neglect, or refuse to allow or permit any boiler, being operated or used by such person, or by any person in his employment, to be inspected by said Boiler Inspector, after notice shall have been given as provided in Section 2 hereof, shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be fined in a sum not exceeding two hundred dollars (\$200.00), or shall be imprisoned in the City jail of said City for a term not exceeding one hundred (100) days, or shall suffer both such fine and imprisonment; and that each failure or refusal to so allow such boiler to be inspected shall be and constitute a separate offense.

Section 4. That all owners or users of steam boilers shall permit the Boiler Inspector to visit the premises upon which said boiler is located, from eight o'clock A. M. to five o'clock P. M. of any day other than holidays, for the purpose of ascertaining whether such boiler is being operated contrary to the provisions of this ordinance, or contrary to or in conflict with any certificate issued by the said Boiler Inspector.

That all steam boilers, whether used continually or not, if used at all, shall be inspected as herein provided at least once every six months. That no person shall use, operate, or run a steam boiler without having the same inspected every six months. No person shall use any boiler which has been condemned as unsafe by the Boiler Inspector. Every owner or user of steam boilers or steam generating apparatus carrying not above five (5) pounds pressure shall have the safety valve of such boiler set by the Boiler Inspector, who shall place an apparatus over such safety valve, securely sealed, and the owner or user of said boiler must provide the apparatus necessary to securely seal such safety valve. No owner or user of a steam boiler shall have a greater pressure than is allowed in the certificate of inspection made by the Boiler Inspector.

That any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be fined in a sum not exceeding two hundred dollars (\$200.00), or be imprisoned in the City jail of said City for a term not exceeding one

hundred (100) days, or shall suffer both such fine and imprisonment.

Section 5. That the Boiler Inspector shall collect in advance of the inspection, and before the inspection is made from all owners and users of steam boilers, and all owners and users of steam boilers shall pay in advance of the inspection and before the inspection is made, the following inspection fees, and no more: For every boiler five dollars (\$5.00) per annum, payable semi-annually, to commence with the first inspection in each year, whether set single or in sets. Where sets of boilers are built one above another, only those immediately over fired shall be counted. The Boiler Inspector, upon receipt of inspection fee, shall deliver to the owners of boilers a certificate of inspection as herein provided and signed as Boiler Inspector. Said certificate of inspection shall be displayed in some conspicuous place near the boilers used.

Section 6. The Boiler Inspector shall make a semi-annual report to the said Board of Public Works, reporting the full number of boilers in the said City, the number in use, the number inspected, and the number condemned as unsafe. He shall report the date, the name of the owner, and the cause of every boiler accident, whether it be from a rupture, collapse of flue, or explosion of the shell of the boiler, or otherwise, stating his belief of the cause thereof.

Section 7. That the said Boiler Inspector shall give a bond to the City of San Diego in the penal sum of two hundred dollars (\$200.00) with two or more sureties to be approved by the Auditing Committee of said City, conditioned for the faithful and impartial performance of the duties of his office as are now or may hereafter be prescribed.

Section 8. That if the said Boiler Inspector shall neglect to discharge his duty in any way or to use his office for a selfish or dishonest purpose he shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be fined in a sum not exceeding one hundred dollars (\$100.00) and forfeit his office.

Section 9. That all railroad locomotive boilers, and marine boilers, and boilers insured by insurance companies, be and they are hereby exempted from the provisions of this ordinance; provided, however, that no boiler insured in any insurance company or companies shall be exempt from the provisions of this ordinance unless the person, company, or corporation owning the same shall present to the said Boiler Inspector if required by him so to do, the policy of insurance issued by the company insuring said boiler or boilers, or a receipt given by the agent or agents of any insurance company for money received in consideration of a policy to be issued by the insurance company or companies represented by said agent.

Section 10. That Ordinance No. 636, of the Ordinances of said City, approved January 6th, 1900, Ordinance No. 711, approved February 6th, 1900, and Ordinance No. 860, approved January 14th, 1901, and all ordinances or parts of ordinances in conflict herewith be and the same are hereby repealed.

Section 11. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 12. That this ordinance shall not rescind or otherwise affect the appointment of the present Boiler Inspector of said City.

Section 13. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said City, to-wit: the San Diego Union and Daily Bee.

PRESENT--ALDERMEN Clark, Whitson, Johnson, Hyers, Watson, Perrin and Clerk Goldman.

ABSENT---ALDERMEN Rainbow, Jones and Landis.

The minutes of Regular Meeting held July 7th, 1902, were read and approved.

The following report of the Joint Water Committee recommending that the Southern California Mountain Water Company be granted an extension of time in which to commence furnishing water to the city, is read and adopted, viz:

San Diego, Cal., July 21st, 1902.

To the Common Council,

City,

Gentlemen:--

A meeting of the Joint Water Committee was held July 18th, 1902, at which time Hon.H. L. Titus, attorney for the Southern California Mountain Water Company, appeared before the Committee and stated that having seen in the public press that the Council had directed the City Attorney to furnish an opinion as to whether the contract between the Southern California Mountain Water Company and the city will be null and void after August 1st, 1902, if said company fails to complete its pipe line to the University Heights Reservoir at that time, the Water Company, being anxious to avoid any possible litigation in said matter, desired the Committee to recommend to the Council that the company be granted an extension of time in which to commence furnishing water to the city.

After carefully considering the matter the City Attorney was directed to prepare and furnish to the Committee a supplemental contract extending the time of the Southern California Mountain Water Company one year, viz., until August 1st, 1903, in which to commence furnishing water to the city, provided there is sufficient rainfall prior to said time to enable said company to furnish water to the city; and if there is not sufficient rainfall, then said company is to have an extension of 18 months' time, viz., until February 1st, 1904, in which to commence furnishing water to the city.

A meeting of the Committee was held to-day, at which time the City Attorney delivered to the Committee a copy of a contract in accordance with the instructions given; and also providing that the 10 years' time which the contract has to run shall commence when said company shall commence to deliver water to the city.

We recommend that the contract be entered into, and therefore recommend the adoption of the accompanying ordinance.

Respectfully,

Geo. B. Watson.

Chas. N. Clark,

J. P. M. Rainbow,

W. W. Lewis,

A. H. Kayser,

W. H. C. Ecker,

Joint Water Committee.

Thereupon an ordinance providing for the execution of a contract extending the time to the Southern California Mountain Water Company within which to complete its pipe line and commence furnishing water to the city, is read and adopted by the following vote, to-wit:

AYES -- ALDERMEN Clark, Whitson, Johnson, Hyers, Watson and Perrin.

NOES @- NONE.

ABSENT--ALDERMEN Rainbow, Jones and Landis.

Said ordinance as adopted is as follows, viz:

O R D I N A N C E No. 1 1 6 6.

An Ordinance providing for the execution of a contract extending the time to the Southern California Mountain Water Company within which to complete its pipe line and commence the furnishing of water to the City of San Diego, California.

WHEREAS, A contract has been formulated and agreed upon between the City of San Diego, California, and the Southern California Mountain Water Company, wherein and whereby an extension of time is granted by the said City of San Diego to the said Southern California Mountain Water Company for the completion of the pipe line from the Lower Otay Dam in the County of San Diego, State of California, to the University Heights Reservoir located on block numbered one hundred and twenty-two (122) of University Heights in said city, which contract is endorsed, "Agreement between the Southern California Mountain Water Company and the City of San Diego, for an extension of time for the completion of pipe line and the commencement of furnishing "water to the City of San Diego, California," now in the possession of the City Clerk of said city; and

WHEREAS, The said City of San Diego is desirous of entering into and executing said contract,

NOW, THEREFORE, BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

Section 1. That the City of San Diego, California, hereby gives and grants to the Southern California Mountain Water Company one years' additional time from and after the first day of August, 1902, viz., to the first day of August, 1903, within which to complete the construction of said pipe line from the said Lower Otay Dam to the said University Heights Reservoir, and within which to commence selling, furnishing, and delivering water to the said City of San Diego according to the provisions of said contract dated March 12th, 1901; provided, that the rainfall between the first day of August, 1902, and the first day of August, 1903, shall be such as will cause sufficient water to flow into the said Lower Otay Reservoir to supply the said City of San Diego and the inhabitants thereof with water, as specified in said contract, and that in the event that said rainfall is not sufficient to cause sufficient water to flow into the said Lower Otay Reservoir for the use of the said City of San Diego and its inhabitants, as specified in said contract, that the said Southern California Mountain Water Company

shall have and it is hereby given and granted eighteen (18) months' additional time from the first day of August, 1902, viz., to the first day of February, 1904, within which to complete the said pipe line from the said Lower Otay Dam to the said University Heights Reservoir, and commence furnishing water to the said City of San Diego from the said Lower Otay Reservoir or any other source of supply owned by the said Southern California Mountain Water Company, as specified in said contract dated March 12th, 1901, through and by means of said pipe line; and that the term of ten (10) years, as specified in said contract dated March 12th, 1901, shall commence on the completion of said pipe line and the first delivery of water through and by means thereof, and that said contract shall be and remain in force for ten (10) years thereafter; and that the said City of San Diego enter into said contract with the said Southern California Mountain Water Company extending said time as aforesaid; said contract being endorsed, "Agreement between the Southern California Mountain Water Company and the City of San Diego for an extension of time for the completion of pipe line and the commencement of furnishing water to the City of San Diego, California," now in the possession of the City Clerk of said city, and that the Mayor of said city of San Diego be and he is hereby authorized and directed for and on behalf, in the name, and as the act and deed of the said City of San Diego to execute and acknowledge the execution of said contract in duplicate, and that the City Clerk of the said City of San Diego be and he is hereby authorized and directed to attest the execution of said contract by affixing thereto his name and the official seal of the said City of San Diego, and to acknowledge thereof; and that thereafter one copy of said contract shall be delivered to the said Southern California Mountain Water Company, and the other copy shall be recorded in the office of the County Recorder of the County of San Diego, State of California, and thereafter filed in the office of the said City Clerk of the said City of San Diego.

Section 2. That this ordinance shall take effect and be in force from and after its passage and approval.

Section 3. That the City Clerk of the said City of San Diego, be, and he is hereby authorized and directed, immediately after the approval of this ordinance, to publish or cause the same to be published once in the city official newspaper of said city, to-wit, the San Diego Union and Daily Bee.

The following report of the Joint Water Committee in the matter of investigating the character of the soil in lot 35, Rancho Mission, is read and on motion of Alderman Hyers adopted, viz:

San Diego, Cal., July 21st, 1902.

To the Common Council,

City,

Gentlemen:--

In accordance with the provisions of Joint Resolution No. 1426 the Joint Water Committee requested the Board of Public Works to furnish the City Engineer and the Superintendent of the Water System with men, material and teams to thoroughly investigate the character of the soil of lot 35, Rancho Mission, by sinking not less than six wells in different parts of said land.

The Board of Public Works has informed us that it will cost \$155.00 to properly do this work, and therefore this Committee recommends that the Board of Public Works be authorized to expend said amount for that purpose.

We present an ordinance in accordance with this report and recommend that it be adopted.

the same is not on the Official grade. Mr. Rogers claims that said work was  
done according to stakes set by the City Engineer, although there is no record  
in the Office of the City Engineer of stakes ever having been set for the con-  
struction of said sidewalks and curb; but even though Mr. Rogers' statement  
is correct, the City should not be required to make the change. If we should  
attempt to correct all errors of grade throughout the City it would soon ban-  
krupt the treasury. City Officials give bond for the faithful performance  
of their duties, which bond is given to protect the City Treasury in in-  
stances of this kind. Mr. Rogers' remedy was to have brought suit

against the City Engineer and his bond for damage in this matter, as he  
never must have known several years ago that his sidewalk and curb was  
not to grade. If he failed to apply the remedy himself, the City Engineer  
used not have he called upon to pay for his failure to do so.  
Therefore the recommendation of the minority of the joint about one  
mile is that the Ordinance providing that said work be done by the city  
about force do not pass.

Respectfully  
W. L. Hyatt

Therefore the Ordinance providing for the grading of a portion of  
"H" street is read and adopted by the following vote, to-wit:

Ordinance No. 1195.  
And Ordinance as amended is as follows, viz:  
Robert Alderman, Clerk.  
The Ordinance authorizing and directing the Mayor of the City of San Diego, California, to execute, and the City Clerk of said

City to attest the Execution of Quit-claim Deeds in the Name, For and on Behalf, and as the act and Deed of the City of San Diego, California, to the Owners of lots in Gardner's Addition to the said City of San Diego, and directing the said City Clerk to Deliver such Deeds to the County Recorder of the County of San Diego, State of California, for Recordation.

Whereas, It appears from the records and proceedings of the Board of Trustees of the City of San Diego, County of San Diego, State of California, that the President and Trustees of said City, by the vote of the duly Qualified Electors of the said City of San Diego at an Election for that special Purpose held in said City on the 20<sup>th</sup> day of May, A.D. 1868, in Pursuance of the provisions of an act of the Legislature of the State of California, entitled, "An act to repeal the Charter of the City of San Diego, and to create a Board of Trustees," approved January 30<sup>th</sup>, 1857, were directed, Authorized, and empowered to sell Pueblo or City Lands, the property of said City; and

Whereas, on the 5<sup>th</sup> day of February, A.D. 1869, the said President and Trustees in Compliance with said vote and the said act of the Legislature sold to William X Gardner the Northwest Corner of Pueblo lot 1148 of the Pueblo Lands of the said City of San Diego, Containing Forty (40) Acres according to the Official Map of said City made by Charles H. Poole, A. D. 1856, and on file in the Office of the Secretary of said Board; that said land was sold to the said William X Gardner at and for the sum of Fifty dollars (\$50.00), and that said sum was paid to and received by said City therefor, and that by mistake of said Trustees the Deed Conveying said Property was inadvertently and incorrectly Executed to William H. Gardner as the Grantee therein, instead of to William X. Gardner, which is the true and correct name of the purchaser of said property, and the Deed which was Executed by the said City of San Diego, by its said Trustees should have been Executed to William X. Gardner; and

Whereas, said 40-acre tract has since said sale and the Execution of said deed been subdivided into lots and blocks and is known as "Gardner's Addition" and

Whereas, lots and Blocks in said Gardner's Addition have been sold according to the Map of said Addition on file in the Office of the County Recorder of said County of San Diego; and

Whereas, it appears that the said City of San Diego has no right, title, or interest in or to said property, or any Portion thereof, except for delinquent taxes, or where said City has acquired title to the said lot or lots in said Gardner's Addition since said 40-acre tract was so subdivided; and

Whereas, the Common Council of said City is desirous of correcting any and all errors in the Execution of said Deed

Now therefore, Be it Ordained, By the Common Council of the City of San Diego, as Follows:

Section 1. That the Mayor of the City of San Diego, California, be and he is hereby authorized, empowered and instructed to execute and acknowledge

quit claim deed for and on behalf, in the name, and as the act and deed of the said City of San Diego, and the City Clerk of said City is hereby authorized and directed to attest the execution of such deed by the Mayor of said City by endorsing the name thereof and affixing the corporate seal of the said City of San Diego thereto, to be returned into the hands of any of the City or County of San Diego thereat in the said City of San Diego, now known and designated as "Harrison Addition", or any part or portion thereof, or any interest therein (not including, however, the said City of San Diego as the owner of said property), and that the said City Clerk of said City be and he is hereby authorized and directed to return said deed to the owner of said property by delivering said deed to the County Recorder of the said County of San Diego, State of California, for the, return of said property, and in attesting him to record the same.

Section 2. That said deed shall contain a recital that they are

made pursuant to this Ordinance to correct a defect in the execution of said deed made by the said City of San Diego by and through its Board of Trustees William H. Gardner instead of to William X. Gardner, said deed bearing date of the 5th day of February, 1869, and recorded on the 5th day of February, 1869, in Book Record Town of Page 177 in the Office of the County Recorder of the said County of San Diego, State of California, which said deed shall also recite that the said City of San Diego does not own any interest which said City has acquired in said property for delinquent taxes, or otherwise, since said 40-acre tract of said property subdivided. At fixing the intention of said Common Council that the said deed to be executed by the said Mayor and City Clerk shall correct the error in the name of the grantee of said deed so executed in the year 1869, and that said deed to be executed by said Mayor and City Clerk shall not come any further question that the said City of San Diego did not by the said deed so executed in the year 1869 by the said Board of Trustees of said City convey all the right, title, interest, and estate of every name and nature whatsoever that the said City had in said 40-acre tract of land at the time said deed was executed in the said year 1869.

Section 3. That this Ordinance shall take effect and be in force from and after its passage and approval.

Section 4. That the City Clerk of the said City of San Diego, be and he is hereby authorized and directed, immediately after the approval of this Ordinance, to publish or cause the same to be published once in the City Official Newspaper of said City, to-wit: the San Diego Union and Daily Free.

The Following Report of the Joint Street Committee in the matter of Procuring an outfit for sprinkling the streets with oil is read and on motion adopted, viz:

San Diego, Cal., Oct. 29<sup>th</sup>, 1907.

To the Common Council,  
City.

Gentlemen:-

The Joint Street Committee recommends that the Board of Public Works and the Street Superintendent be authorized to expend a sum not to exceed \$250.00 in procuring an outfit for sprinkling the streets with oil. The Committee believes that with the expenditure of this amount of money, the feasibility of using oil for street sprinkling in certain parts of the City can be practically demonstrated.

We present herewith an Ordinance to carry this recommendation into effect and recommend that the same be adopted.

Respectfully

J. L. Myers,  
D. L. Jones,  
W. L. Ludington,  
J. H. Briggs,

An Ordinance prescribing a procedure for making improvements upon the system of water works  
in the City of San Diego, California.

B E I T O R D A I N E D, By the Common Council of the City of San Diego, as follows:

Section 1. That hereafter, in all cases where and extension of the water system of  
water works in the City of San Diego, California, or the placing of new pipe in the place of  
old pipe, or the placing of fire hydrants, or the making of any other improvement in said  
system of water works, is requested by any person, written application therefor shall be  
first made to the Board of Public Works of the said City of San Diego, which application  
shall describe and set forth the character of the improvement desired, where the improvement  
is to be made and of what it shall consist, and be signed by the applicant. Upon such appli-  
cation being made, it shall be and is hereby made the duty of the said Board of Public Works  
to immediately thereafter investigate the advisability of making such improvement, and if  
the said Board of Public Works shall, after making such investigation, find and determine  
that it is advisable for the said City of San Diego to make such improvement, and desires to  
recommend that the same be made, the said Board of Public Works shall refer the matter to  
this Common Council with such recommendation, together with all data necessary to completely  
and fully carry the same into effect, together with an estimate of the cost thereof.

Section 2. That this ordinance shall take effect and be in force from and after its passage and approval.

The following report of the Joint Street Committee in the matter of the removal of the unused street car rails on Sixth, "C" and Fourth streets, is read and on motion of Alderman Landis adopted, viz:

San Diego, Cal., Nov. 20th, 1902.

To the Common Council,

City,

Gentlemen:--

The Joint Street Committee, to whom was referred the petition of citizens and a communication from the Team Drivers' Unions of this city asking the Council to take the necessary steps to have the unused street car rails on Sixth, "C" and Fourth streets, removed, herewith reports that we have corresponded with the officials of the San Diego Street Railway Company, and have been informed that the Company intends to remove all the unused rails on the streets mentioned, and that the work of removal will commence very shortly after the 1st of next January.

We therefore recommend that the Council take no further action in this matter.

Respectfully,

F. C. Hyers,

F. H. Briggs,

Barker Burnell,

D. F. Jones,

R. P. Guinan.

A communication from Bessie Bender et al., owners of 900 feet of the property on "G" street from the west line of Second street to a point 58 feet east of the east line of Arctic street, proposed to be sidewalked and curbed, in which said petitioners represent that they are the owners of more than three-fourths of the property affected by said proposed work, and elect to do the proposed work themselves, and asking the Council to take whatever action may be required by law to authorize them to do said work, is read and on motion of Alderman Landis the request is granted.

Thereupon a Joint Resolution directing the Street Superintendent to enter into a contract with Bessie Bender et al., to sidewalk and curb "G" street from the west line of Second street to a point 58 feet east of the east line of Arctic street, is read and adopted by the following vote, to-wit:
