ORDINANCE No. 2173.

AN ORDINANCE PROVIDING SPECIFICATIONS FOR COBBLE STONE GUTTERS.

BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

Section 1. Whenever it shall be determined by the Common Council of said City that cobble stone gutters shall be placed in any given street, the work of building such gutters and the material employed therein shall be as follows:

1. (a) grading and preparing the trench for the gutters; (b) constructing along the outer line of the curb, a cobble stone gutter, five (5) feet in width; (c) furnishing all material and labor necessary to perform said work and complete the same.

2. Grading shall include the work of removing all earth, stone and loose rock, hard-pan, and all other material that may be encountered or required in the preparing for the work of guttering, and shall include also all filling, trimming, shaping, picking down, re-filling, rolling, surfacing, and all other work that may be required to bring the space to be occupied by the gutters to the sub-grade and shape required, and of maintaining it in perfect condition until the work has been done. The cost thereof shall be included in the contract price per square foot of completed gutters, and no extra compensation shall be allowed the contractor for removing from the street the surplus material that may result from this work.

3. When mud or soft material is encountered it shall be taken out below the sub-grade, and the space shall be re-filled with good, hard material, by and at the expense of the contractor.

4. In places where cutting is necessary to bring the work to the required surface, the plow point shall not in any case penetrate below a point two (2) inches above the sub-grade. The remainder shall be carefully dressed off with picks or other hand tools.

5. In places where filling is necessary to bring the work to the required surface, it shall be done in layers of not more than six (6) inches in depth, and each layer shall be thoroughly rolled before another layer is added.

6. The work shall be brought to a sub-grade or surface of the required depth below the established grade of the street and shall be finished in the most perfect manner so as to be parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall be first brought to an approximate finish slightly above the sub-grade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface, all irregularities as indicated by these lines. The surface shall then be rolled or tamped, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

7. Such portions of the work as cannot be reached by the roller, and all places excavated below the sub-grade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

8. The gutters, for a width of five (5) feet shall be paved with cobble stone, not less than six (6) inches in height, laid edgewise with their largest dimensions perpendicular.

9. The cobble stones shall be laid by hand and firmly bedded in three (3) inches of clean, sharp sand, care being taken to break joints. Each course shall be set so that the cobbles incline slightly up hill, leaving not less than one (1) inch of sand under the cobble.

10. When laid the pavement of the gutter shall be immediately covered with decomposed granite from which all fine dust and other foreign substances shall have been previously screen-ed. This decomposed granite shall be heated and while hot shall be raked or swept in the joints until all are completely filled. The cobbles shall then be rammed with rammers weighing from seventy-five (75) to eighty (80) pounds, until all have been forced to a firm-yielding bed, and the gutter brought to a perfect surface. Every cobble that does not have a sol-
id bearing, as well as all general depressions in the surface, resulting from a thorough ramming of each block, shall be taken up and additional sand placed on the foundation and the cobble again laid and rammed until brought to a solid bearing and perfect surface. While the cobbles are being rammed the joints shall be kept well filled with gravel.

11. Immediately after ramming, the decomposed granite shall be swept or otherwise cleaned out of the joints to a depth of one (1) inch, and there shall then be poured into the joints, while the decomposed granite is hot, boiling paving cement until all joints are completely full. Additional hot decomposed gravel shall then be poured along and into the joints previously filled with the paving cement, and then be compacted by tamping with light rammers, especially made for this purpose, until all the joints are thoroughly filled and made flush with the upper surface of the gutter.

12. The said paving cement shall be composed of refined asphaltum and a flux in quantity sufficient to bring said cement to the required consistency. These ingredients shall be delivered on the work, at least one week before being used, in order that the Street Superintendent may cause the proper tests to be made before the material is admitted into the work. The cement must be mixed upon the work and then heated to a temperature of three hundred (300) degrees Fahrenheit as it is required for immediate use.

13. As soon as the joints shall have been thoroughly tamped and before the paving shall have become cold, a layer of clean, dry coarse sand, one-half (1/2) inch in thickness, shall be spread evenly over the entire surface of the gutter, which, together with the accumulation of any kind, shall be cleaned off and removed from the street by the contractor before the work has been accepted.

14. All cobbles shall be carefully inspected by the Superintendent of Streets, and he shall direct that every stone not complying with these specifications, whether it has been set or not, shall be immediately removed from the street at the expense of the contractor. The contractor shall furnish, at his own expense, such laborers as may be required to enable a thorough inspection and culling of the cobbles.

15. All cobble gutters shall be paid for at a stated price per square foot, which price per square foot shall include the furnishing of all labor and materials, the foundation, the grouting and all other work and all expenses, direct or indirect, connected with the proper execution of the work and of maintaining the same in perfect condition until it shall have been finally accepted by the Street Superintendent.

ORDINANCE NO. 2187.

AN ORDINANCE AMENDING SECTION 2 AND SECTION 7 OF ORDINANCE NO. 1129 OF THE ORDINANCES OF THE CITY OF SAN DIEGO, APPROVED ON THE 3rd DAY OF JUNE, 1902, AND REPEALING ORDINANCE NO. 1147, APPROVED ON THE 17th DAY OF JUNE, 1902.

BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

SECTION I.

That Section 2 of Ordinance No. 1129 of the Ordinances of the City of San Diego, entitled, "An Ordinance Prescribing Specifications for Asphalt Pavement on Asphalt Concrete Base in the City of San Diego, California," Approved on the 3rd day of June, 1902, be and the same is hereby amended to read as follows, to-wit:

Section 2. That all grading and the preparation of the roadbeds for the pavement shall be done and performed as follows:

1. Grading shall include the work of removing all earth, stone, loose rock, hardpan, and all other material that may be encountered or required in preparing the street for the work called for in the Resolution of Intention, and shall include, also, all filling, trimming, shaping, picking down, re-filling, surfacing, and disposing of the surplus earth and material from the street, as in the Resolution of Intention provided, and doing all other work that may be required in bringing the surface of the street to the subgrade and shape required, and of maintaining it in perfect condition until the work has been done; and all the cost thereof shall be included in the contract price per square yard of completed pavement. The surplus dirt and material shall be disposed of as provided in the Resolution of Intention.

2. When mud or soft material is encountered it shall be taken out below the subgrade, and the space shall be refilled with good, hard material, by and at the expense of the contractor.

3. In places where cutting is necessary to bring the street to the required surface, the plow point shall not in any case penetrate below a point two inches above the subgrade. The remainder shall be carefully dressed off with picks or other hand tools.

4. In places where filling is necessary to bring the street to the required surface, it shall be done in layers of not more than six inches in depth, and each layer shall be thoroughly rolled before another layer is added.

5. The street shall be brought to a subgrade or surface of the required depths below the established grade of the street and shall be finished in the most perfect manner so as to parallel with, and in every way made to conform in shape to the surface of the finished work. To effect this the ground shall first be brought to an approximate finish slightly above the subgrade. The City Engineer will then set grade stakes and the contractor shall then stretch lines from these several stakes, both along and across the work, and dress down to the true surface all irregularities as indicated by these lines. The surface shall then be rolled, when it shall again be dressed and re-rolled until the surface shall be true, smooth, compact, and to the required surface.

6. Such portions of the street as cannot be reached by the roller, and all places excavated below the subgrade and re-filled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solidly by and at the expense of the contractor.

7. The roller used shall be of a weight not less than two hundred and fifty pounds for each one inch width of roller.

SECTION II.

That Section 7 of the aforesaid ordinance is hereby amended to read as follows, to-wit:

Section 7. That all asphalt used in the construction of the pavement specified in this ordinance shall comply with the following specifications:
1. Upon the asphalt concrete foundation as hereinbefore described, there shall be placed an asphalt wearing surface prepared as follows:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asphaltic Cement</td>
<td>9% to 17%</td>
</tr>
<tr>
<td>Sand</td>
<td>66% to 65%</td>
</tr>
<tr>
<td>(Finely powdered)</td>
<td>5% to 18%</td>
</tr>
<tr>
<td>(Carbonate of lime)</td>
<td></td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td>100% to 100%</td>
</tr>
</tbody>
</table>

3. The asphaltic cement shall be prepared from a refined asphalt mixed with a refined liquid asphalt, as described below, and shall contain not less than eighty (80) per cent. of bitumen soluble in carbon di-sulphide. It shall be heated to a temperature of three hundred (300) degrees Fahrenheit before adding it to the other materials used in making the asphalt wearing surface. In no case shall this asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit.

4. The refined solid asphalt shall be manufactured wholly from asphaltic material, and must be free from admixture with any residues obtained by the artificial distillation of coal, coal-tar, or paraffine oil. It must contain not less than eighty (80) per cent. of bitumen soluble in carbon di-sulphide, and not more than four (4) per cent. of non-bituminous organic matter. It must be of even and uniform composition, and when heated to a temperature of three hundred (300) degrees Fahrenheit for five hours, must not lose more than four (4) per cent. in weight of vaporizable material. The bitumen contained in it must be of a permanent and cementitious character, which when mixed with the refined liquid asphalt will make a durable cement.

The refined liquid asphalt must be a highly cementitious liquid asphalt, refined so as to deprive it of all water and light oil. It must contain not less than 95 per cent. of bitumen soluble in carbon di-sulphide, and not less than 80 per cent. thereof shall be soluble in 88 degrees naptha. When heated to a temperature of 300 degrees Fahrenheit for five hours it must not lose more than 5 per cent. in weight of vaporizable oils. Material which has been cracked in the process of refining, or which contains any admixture of paraffine or coal-tar product will be rejected, and shall not be allowed to enter into the composition of the asphalt wearing surface.

5. The sand shall be clean, sharp, silicious sand, and shall contain not more than 3 per cent. of loam, clay or other earthy impurities; it must all pass an eight mesh to the inch screen.

7. The materials above described shall be prepared in the following manner: The sand shall be heated in dryers to a temperature between 300 and 375 degrees Fahrenheit. The hot sand and cold lime dust shall be thoroughly mixed together in a mixer. A quantity of asphaltic cement (previously heated to 300 degrees Fahrenheit) sufficient to produce a pavement containing not less than 9 per cent. of bitumen soluble in carbon di-sulphide shall then be added, and the whole mass shall be mixed until every particle of the sand and lime dust is thoroughly coated with a thin layer of asphaltic cement.

8. The material so produced must leave the mixer at a temperature between two hundred and fifty and three hundred and twenty-five degrees Fahrenheit, and must be fine grained and capable of producing a compact pavement. Sand and asphaltic cement and dust must be used in order to secure this result.

9. The mixture prepared as above shall be brought to the work in cars or dump-wagons, and shall not be colder than 250 degrees Fahrenheit or hotter than 325 degrees Fahrenheit when it reaches the work.

10. It shall at once be spread uniformly over the concrete foundation prepared for it
with hot shovels and hot rakes, to such a depth that, after receiving its ultimate compression, the finished asphalt wearing surface shall be two (2) inches in thickness. The thickness shall be constantly tested by means of gauges.

11. It shall be immediately compressed with hot hand rollers, after which a small amount of hydraulic cement shall be swept over it, and it will then immediately be thoroughly rolled with a roller weighing not less than 150 pounds per inch in width of roller. This rolling shall be continued for not less than five (5) hours for each one thousand square yards of pavement. All places that are inaccessible to the roller must be tamped with hot iron tampers. The resulting pavement must show a close-grained even and smooth surface, true to grade and cross-section, and free from all hollows and irregularities. No traffic shall be allowed on the street until the pavement is thoroughly cooled and set. No wearing surface shall be laid in rainy weather, or when the foundation is wet from rain or other cause.

12. The contract price shall be per square yard of finished pavement, and shall include all grading, foundation, and all other work and all expenses, direct or indirect, connected with the proper execution of the work, and of maintaining the same until it shall have been finally accepted by the Street Superintendent.

SECTION III.

That Ordinance No. 1147 of the ordinances of the said City, entitled, "An Ordinance Amending Section 2 of Ordinance No. 1129, of the ordinances of the said City, Approved on the 3rd day of June, 1902", be and the same is hereby repealed.

SECTION IV.

That this ordinance shall be in force and take effect thirty days from and after its passage and approval.

SECTION V.

The Board further finds and declares that the San Diego Lumber Company made and filed with this Board an application to said Commissioners in writing, signed by the applicant, setting forth a map, plat or plan of said wharf showing the location thereof, and of the lands and waters bordering thereon or near the same, and the names of the owners, occupants or claimants of such lands and water, of the use thereof. Said map, plat or plan also showed the dimensions, form and structure of said wharf, and the distance into and along said waters the same should extend, and also showed the uses and purposes to and for which the said structure is to be applied, and the convenience and necessity, public or private, of or for the same. AND PROVIDED FURTHER that this franchise and privilege is granted for the term of twenty years from this date, or until the first day of August, 1925, at which time the said privilege and franchise hereby granted shall terminate.

PROVIDED FURTHER, that the said Commissioners hereby fix the time for the commencement of work upon the new structure or proposed addition to the wharf as now constructed, and as shown and delineated upon said map or plat as aforesaid, to be on or before August 1st, 1906, and the time for the completion thereof to be within four years from August 1st, 1905.

PROVIDED FURTHER, that nothing contained in this franchise shall be construed as permitting the maintenance of said wharf in such a manner or in such location as to prevent or interfere with the erection and maintenance of a sea-wall in accordance with the plans herefore adopted by said Commissioners.

PROVIDED FURTHER, that if at any time the said Board of State Harbor Commissioners for the Bay of San Diego shall desire to terminate any franchise and purchase any wharf, pier, marine way, dry dock or ship yard erected in pursuance thereof, and the purchase price thereof
cannot be agreed upon, then the owner of said franchise shall select two disinterested persons and the said Commissioners two disinterested persons, who shall ascertain and fix the value thereof, and if three of said four persons cannot agree, then they shall appoint a fifth competent and disinterested person, and any three of said five persons may fix the value thereof;

Provided however, that in fixing such value the franchise or privilege shall not be considered as of any value; and upon the payment or tender thereof by the Commissioners, they shall be entitled to the possession thereof, and the title thereto shall vest in the state of California.

And the President and Secretary are hereby directed to issue a grant of franchise in accordance herewith."

Now this Indenture witnesses, that the party of the first part, by virtue of the aforesaid proceedings, and in pursuance of the same, and the statute in such case made and provided, and for and in consideration of the terms and provisions thereof, and the money to be paid by the party of the second part, hath granted, conveyed, and confirmed, and by these presents doth grant, convey and confirm unto the said party of the second part, and to its assigns, the said franchise as set forth in said proceedings.

Section 4. It shall not be lawful for any person to carry on the business of, or labor as, a master or journeyman plumber in the City of San Diego, California, until he shall have complied with all the requirements of the laws of the State of California, authorizing the carrying on of such business and until he shall have obtained, in the manner prescribed by law, from the Board of Health of said city a license authorizing him to carry on such business, provided that before it shall be lawful for a master plumber to carry on such business in said City every master plumber shall execute to the City of San Diego a bond in the sum of Five Hundred Dollars ($500) with two good and sufficient sureties, approved by the said Board of Health, and the said bond to be conditioned for the faithful discharge of the duties of a plumber required of him by any law of the State of California or ordinance of said city. Section 6. That any licensed plumber engaged in any work provided for in this ordinance shall be held responsible for any injury to any sewer, or to any public street, or to any public or private property, and for all other damages. Each master plumber and his bondsmen...
shall be liable in damages to the city, or to any party injured, to the extent of such injury, on such bond for any violation of any provision of this ordinance, and such liability shall extend to any act of any agent, servant or employe of such licensed plumber while acting as such agent, servant or employe in the line of his employment.

Section 7. That the provisions of Ordinance No. 727 of the ordinances of said City, entitled, "An Ordinance Relating to the Opening of Trenches in Streets, and to the Moving of Houses in Public streets in the City of San Diego, California, and Requiring a Permit therefor, and Providing for the Re-filling of said Trenches and Repairing of said Streets," approved on the 17th day of July, 1900, shall apply to the digging of trenches or opening of streets in said city for the purpose of making such sewer connections.

Section 8. That every soil pipe and private drain connected with any sewer, running from the property line to the sewer, shall be at least four inches in diameter, inside measurement, and whether of cast iron or vitrified stone, must be sound and impervious in all its parts and joined in the best manner; every soil pipe and private drain inside the property line connected with the public sewer in said city, or connected with any pipe or private sewer that is connected with said public sewer, shall be of cast-iron and must be sound and impervious in all its parts, and joined in the best manner. For cast iron pipe the gaskets must be of clean tarred Oakum, twisted and rammed into place. The lead used in making the joint must be of the best quality, pure and soft, and must be caulked securely and properly into place. Before making the joint the bell and spigot must be wiped clean and dry, and the joints must be run in at one pouring of the molten lead. The caulking must be faithfully executed and the lead driven flush with the face of the work. Cement pipe must not be used. All vitrified stone pipe shall be of the best quality of salt glazed vitrified pipe, perfectly true to pattern and sound. All joints shall be completely filled with cement mortar, wiped off on the outside to a neat bevel after each joint of pipe has been laid and cemented. All pipes connecting soil pipes or other waste pipes with the public sewer must be laid on the sound and firm bottom of a trench, and in all buildings (except private residences) of three or more stories high the soil pipe must be of cast-iron and extra heavy and the fittings must be extra heavy and of the same material, and each piece of pipe and fitting must be stamped with the "extra heavy" figures or name designating the same, as marked by the manufacturer; said pipe must be four (4) inches in diameter, inside measurement, and weight at least fifteen (15) pounds per lineal foot; the four inch pipe acting as a vent above the highest fixture may be standard pipe.

That every pipe which is not connected with the public sewer or with any pipe connected with the public sewer, and which pipe is provided for conducting the sewage from any building or for conducting the discharge of a water closet, shall not be less than four (4) inches in diameter, inside measurement, and, inside the property line, shall be constructed of cast-iron pipe; outside the property line it may be constructed either of vitrified stone or of cast-iron pipe; no other material than vitrified stone pipe or cast-iron pipe shall be permitted in the construction of such sewer pipe outside the property line; nor shall any pipe be connected by any person with any pipe not constructed, or that is connected with any pipe not constructed, of the material required by the provisions of this ordinance.

The words, "outside the property line," shall be construed to mean the line separating private property from a public street, avenue, lane, alley, road or highway. No person shall connect with any public sewer, any private sewer or drain laid for surface, roof or yard drainage, nor shall exhaust from steam-engines, blow-off from steam boilers, or water above
140 degrees Fahrenheit in temperature be discharged in any public sewer, or private sewer or drain connected with the same, in said city.

Section 9. That it shall be, and is hereby declared to be, unlawful for any person, company or corporation to connect any pipe on private property with any pipe in the street connected with the public sewer of said city, or construct any sewer in said city, or to connect with any private sewer, or any plumbing in said city, with any sewer, drain, or cesspool, without first obtaining a permit to do so from the Board of Health of the City of San Diego, California, as hereinafter provided.

Section 10. Applicants for the permits referred to in section 9 hereof shall file in the office of said Board of Health, for approval, plans, profiles and specifications for the sewer to be constructed and for all plumbing to be installed in any building. Said Board of Health shall not issue such permit, or approve such plans, profiles and specifications unless they comply with the provisions of this ordinance.

Section 11. Applications for permits for the laying of such pipe, and for the doing of such plumbing work, must be made in writing by the owner of the property upon which the building is to be constructed or such plumbing work to be performed, or his authorized agent, which application shall describe the property which is to be severed and upon which such plumbing work is to be performed, and give the name of the owner of the property. Such application shall also be countersigned by the licensed plumber by whom the work is to be done, provided, that no permit shall be issued under this ordinance for putting any plumbing in any building until the sum of fifty cents has been paid to the said Board of Health therefor.

Section 12. That no plumbing of any kind upon private property shall be done by any person except a plumber regularly and duly licensed by the Board of Health of said City to perform and do such work and holding a written permit from the said Board of Health authorizing such work to be done; provided that this section shall not prevent an apprentice from doing plumbing work under the direction of a licensed plumber.

Section 13. Waste pipe must not be less than one and one-half (1 1/2) inches, inside measurement, and must be lead.

All drains carrying the waste from any plumbing fixture must have a fall of at least one-quarter (1/4) of an inch to the foot, if possible, and should run along the cellar wall where practicable, or, if laid under the lower floor of the building, shall be hung with one and one-half (1 1/2) inch sheet iron straps securely fastened to the floor joists. All drains shall be laid in as straight a line as possible. All changes in direction must be made with a full Y and one-eighth (1/8) or one-sixth (1/6) bend. Sanitary tees cannot be used except on perpendicular stacks or vents. All vertical pipes must connect with horizontal pipes with full "Y's" and one-eighth (1/8) or one-sixth (1/6) bends. Vents must be connected to the main vent at an angle of forty-five (45) degrees (or sixty (60) degrees in those cases only where a forty-five degree angle is impracticable); square bends must be avoided as much as possible to prevent condensation of air or vapor therein and stoppage of rust scale of pipes. All gaskets must be of clean tarred oakum, twisted and rammed into place. The lead used in making the joints must be of the best quality, pure and soft, and must be caulked securely and properly into place. Before making the joints the bell and spigot must be wiped clean and dry, and the joint must be run at one pouring of the molten lead. The caulking must be faithfully executed, and the lead driven flush with the face of the work.

Section 14. Every waste pipe, except safe waste pipes, shall be of cast-iron or lead. All lead pipe connections must be made with a wiped joint, no solder or bolt joint will be allowed. Safe waste pipes may be of wrought iron. All cast or wrought-iron pipes and
fittings for waste, vent or soil pipes must be coated both inside and outside with coal-tar pitch, applied hot, or some equivalent substance. All connections of lead with iron pipes must be made with brass ferrules of the same size as the lead pipe and caulked into the iron pipe and connected with the lead pipe by a wiped joint. Reduced ferrules are strictly prohibited.

The opening of every vent pipe above the roof must be located at least six feet from all chimneys, water tanks, air shafts, or any other opening of any building, which would be reached by measurement on a line or lines drawn at right angles from such opening of such vent pipe to any chimney, water tank, air shaft or any other opening of any building, and at least six feet from all points of intersection, to be determined by measurement on a line or lines drawn at right angles from such opening of such vent pipe to all points which would be intersected were any chimney, water tank, air shaft or other opening of any building extended perpendicularly to the point or points of intersection with such line or lines of measurement.

Every line of vent and soil pipe must extend full bore to an elevation equal to a point four (4) inches below the highest point of the roof, as hereinafter provided, except in buildings having a flat roof and fire-walls, in which case said vent and soil-pipe shall extend two (2) feet above the fire-walls. In all new buildings (except building having a flat roof and fire-walls, and buildings built of one thickness of one-inch lumber) every line of vent and soil pipe must run to the roof and thence continue under the roof, with the same degree of elevation as the roof, to a point twelve (12) inches from the highest point of the roof and thence run through the roof perpendicularly, and terminate at an elevation equal to a point four inches above the highest point of the roof. If the roof is so flat that at least a sixth bend cannot be used, then the said vents are to run up under the roof, as near the same degree of elevation as the roof as possible, and terminate as above stated.

In all buildings (except buildings having a flat roof and fire-walls) where new plumbing is put in, every vent and soil-pipe must run perpendicularly from the sewer or fixture to an elevation equal to a point four (4) inches below the highest point of the roof.

In case the owner of any building should prefer the vents to run up perpendicularly from the sewer to four (4) inches above the highest point of the roof they may be so constructed, upon the written request of the owner and attached to the plans of the work to be done, filed in the Health Office, and said request to have the signature of the owner, or his agent other than the plumber.

In every building having a watercloset, there shall be at least one four (4) inch cast-iron pipe running from the sewer to a point four (4) inches above the highest point of the roof. Where there is only one watercloset on a four inch stack, the stack will vent said closet. If there is more than one closet on a stack, each and every closet shall be vested, with a two (2) inch vent; in no case shall a fixture be located more than two (2) feet from the perpendicular vent. In case an adjacent building, located within twenty-five (25) feet of said pipe, extends one or more stories higher than the building in which the said soil or vent pipes are located, then the said pipes must be carried three (3) feet above all openings or gutters of the highest building located within twenty-five (25) feet of such pipe, and securely fastened, by proper guys and supports, so as to prevent them from falling.

All vents shall be galvanized wrought iron, cast-iron or lead; this applies also to running pipes under the roof where a sixth bend can be used. All branch or intersecting vents must connect with the main vent or angle vent three (3) feet six (6) inches above the floor line. All connections of traps to main, soil or waste pipes must be made by means of lead-caulked joints. Tap-tees are not prohibited. No other traps shall be used except the
ones called for in this ordinance. All soil, waste, vent or drain pipes from the property line, both inside and outside of the building, before being covered up, having such openings stopped, as may be necessary to make the test herein provided for, must be filled with water and be so constructed as to retain said water without leaking. This test must be made by the plumber or plumbers doing the plumbing work, in the presence of the plumbing inspector. In all cases where the plumbing inspector is not satisfied with the water test, he may require the plumber or plumbers doing the plumbing work, in his presence to apply the smoke or peppermint test. All house sewers shall, after being laid, be allowed to remain uncovered until inspected by the plumbing inspector. Notice must be given the plumbing inspector when the work is sufficiently advanced for inspection, and every facility must be given the plumbing inspector to make a thorough inspection, that is, if any pipes are enclosed, or covered up with flooring, siding, lath, dirt or other material, or covered in any way whatsoever, so as to tend to obstruct a thorough inspection of the plumbing, the said obstruction must be removed by the plumber or plumbers doing the plumbing work before the plumbing inspector can be required to inspect the work.

When pipes have been tested in sections, there shall be another test made when connections are ready to be made with the main sewer or soil pipe. Immediately upon the completion of the work, notice must be given the plumbing inspector to make his final inspection of the work. If the plumbing is in a new building, the plumbing inspector must be notified in ample time to make the inspection before the building is occupied.

It shall be the duty of the plumbers to report to the plumbing inspector the replacing of old closets with new closets, or old bath tubs with new bath-tubs, or old sinks with new sinks, or any old fixture with a new fixture, in order that the work or replacing the old material with the new material may be inspected by the plumbing inspector.

Where it refers to buildings built of one thickness of one inch boards, this must be taken that the main building is built of one inch boards and will not be taken for additions built of one thickness of one inch boards on stud and plaster buildings built of one inch boards.

In case of a building situated next to a higher building, if there are no openings in the wall of the higher building, the vents in the lower building need not extend more than two feet above the fire wall of the lower building.

In case of a chimney coming out of the highest ridge of the roof at the intersection of the ridge and hips and the plumbing fixtures are at the end of building in a line of the ridge, the vents in such case may come out of the roof six feet from chimney down the roof and continue up perpendicularly to the highest ridge of roof. This, however, will not apply to where the vents go up at right angles with the ridge; in this case the vents shall be angled off so as to pass the chimney and go through the roof within twelve inches from the highest point of the roof six (6) feet from chimney.

Section 15. That all waterclosets that are connected inside of buildings must be connected with the soil pipe by a brass flange and suitable gasket, or other suitable connection, securely fastened to the floor. Every watercloset, sink, slop hopper, bath, and each trap of a set of wash traps, or other vessel or vessels connected with the drain pipes, must be separately and effectively trapped with a "F" trap or pot trap, offering an obstacle to the passage of air to not less than two inches depth of water, and four inches depth for water closets. Lead traps to have clean-out screw openings and cap. All traps must be placed as near the fixture as possible. All water closets within houses must be supplied with water from a separate tank or cistern, and the closet bowl must in no case be connected directly with the water main. All water closets must be flushed from a tank of not less than four gallons.
capacity. The use of all pan and plunger closets is hereby prohibited, and the same must be removed upon ten days' notice given by the Board of Health to the owner or occupant of the property. All supply pipes for water closets must be of galvanized iron or lead, and shall not be less than one-half an inch in diameter. Every safe under a basin, bath, water closet, tank, or other fixture, except urinals, must be drained by a special pipe of lead or wrought iron not directly connected with any soil pipe, waste pipe, drain or water pipe, and shall be made to discharge outside the house. All the urinal safes shall be of the same material, and must discharge into an open trapped hopper that is supplied with water.

Section 16. Vents shall conform to the following sizes:

One to four (4) water closets, or eight (8) small fixtures may be vented to a two-inch vent.

Four (4) to eight (8) water closets, or sixteen (16) small fixtures may be vented to a two and one-half (2 1/2) inch vent.

Eight (8) to twelve water closets, or twenty-four (24) small fixtures may be vented to a three (3) inch vent.

Twelve (12) or more water closets, or twenty-four (24) or more small fixtures may be vented to a four (4) inch vent.

No closet shall be vented with a smaller vent than two (2) inches.

Section 17. Two (2) small fixtures may be vented into a one and one-half (1 1/2) inch vent to the height of forty (40) feet; above forty (40) feet the vent shall be two (2) inch, to the height of eighty (80) feet.

Section 18. Two (2) inch vents may be run to a height of fifty (50) feet. When the vent is required to be longer than fifty (50) feet, then the vent shall be two and one-half (2 1/2) inches until the height of eighty (80) feet is attained.

Section 19. Two and one-half (2 1/2) inch vents may run for a height of fifty (50) feet; when required to be longer than fifty (50) feet, then the vent shall be three (3) inches to the height of eighty (80) feet.

Section 20. Three (3) inch vents may be run to the height of fifty (50) feet; when required to be longer than fifty (50) feet, the vent shall be four (4) inches until the height of eighty (80) feet is attained.

Section 21. The number of fixtures that may be connected with each soil pipe connecting any building with the public sewer shall be thirty (30) water closets, or sixty (60) small fixtures, or so many closets and so many small fixtures to make up the above quantity, calculating two (2) small fixtures, such as sinks, baths, basins, wash-trays, urinals, or hoppers, with a two (2) inch trap, to one closet.

If there are more plumbing fixtures in a building than the terms of this ordinance allow to be attached to a four (4) inch soil pipe, then a second four (4) inch soil pipe shall be used and the number of fixtures in the building shall be equally divided on both sewers if considered to be practicable by the Board of Health. The same means shall be followed if the number of fixtures shall require additional soil pipe. Each four (4) inch cast-iron run of soil pipe shall connect separately with the main sewers.

No offsets can be made around cornices or other projections. Pipes must be run up straight wherever possible.

Section 22. In a building requiring more than one four (4) inch sewer, each sewer shall be vented with a four (4) inch cast iron pipe, subject to Section 14 as regards height.

Section 23. Waste pipes shall not be less than two inches in diameter, inside measurement, and the said waste may receive the discharge of one (1) to twelve (12) small fixtures; for more than twelve (12) and up to forty (40) fixtures the waste shall be three (3) inch.
Section 24. That all traps to fixtures must be separately and effectively vented, and when two (2) fixtures are attached to one waste trap each must be independent of the other against syphonage by crown venting one trap into the main vent between the fixtures. No fixture shall have a trap of less diameter than one and one-half (1 1/2) inches. All soil pipes shall have clean-outs at the foot of each perpendicular stack or vent, and on the fixture end of all sink run and at the end of all branches either 4" or 2" or 3" and supplied with iron thimbles, and made perfectly gas tight. The arrangement of all soil, vent and waste pipes must be as direct as possible, and all work must be done in a mechanical and workman-like manner. All bath tubs above the first floor must have one and one-quarter (1 1/4) inch overflow connections, and also on the first floor if there is a basement. Wherever a water closet is placed in a lot and there is no other building within twenty-five (25) feet of said water closet, the height of the stack shall not be less than fifteen (15) feet from the floor of the closet. All horizontal or vertical lines of lead waste pipe must be securely fastened on a suitable board or timber by soldering hard lead tacks to said pipe; distance between centers not to exceed three and one-half (3 1/2) feet. Connecting the waste of a fixture to the lead bend of a water closet must be avoided, especially the waste from a wash basin or any other fixture situated in a bedroom. In all cases possible a separate fitting must be placed in the stack to receive the waste from said fixtures. The wiping of a solder nipple on a lead bend is prohibited; the lead waste must run to the top of the fixture and there be connected with the iron pipe.

Section 25. That no connection shall be made at any part of the house sewerage system with roof, gutters or any other channel for the conveyance of rainwater, save that plumbing fixtures may be supplied from tanks constructed to store rainwater for such purposes. No steam exhaust shall be allowed to connect with any drain, soil, or waste pipe.

No person shall throw or deposit, or cause to be thrown or deposited, in any vessel or receptacle connected with a public sewer, any garbage, vegetable; sparrings, ashes, cinders, rags or any other thing whatsoever, except feces, urine, the necessary water closet paper, and liquid house slops. No drain shall be connected with any privy vault or cesspool, or underground drain, or with any channel conveying water or filth, excepting the soil pipes and plumbing of the house or buildings as herein provided.

Section 26. That it shall be unlawful for the owner or person having the care or control of any building, any portion of which is used for any purpose during any portion of the day, to have at least one water closet connected with the public sewer ten (10) days after notification from the said Board of Health or Health Officer of said city, and to fail to have such water closet suitably arranged for use as a urinal, unless a separate urinal is provided; also for the owner or person having the care or control of any building in which food is cooked or clothing is washed to fail to have a suitable sink or hopper for the reception of waste water; provided, that this section shall not apply to any building located upon any lot which does not front upon a street or abut upon an alley in which there is a public sewer.

Section 27. Every store or place of business shall be provided with at least one water closet for the exclusive use of the occupants and employees of such store and persons associated with business conducted in said store. In all places where ten (10) or more men and women are employed, separate water closets shall be provided for each sex. The closets provided for the use of men shall be plainly marked "Men's Toilet" and those provided for the use of women shall be plainly marked "Women's Toilet."

Section 28. That the Plumbing Inspector shall be in attendance at the Health Office between the hours of eight A.M. and nine o'clock A.M., and from one o'clock P.M. to two o'clock P.M., to receive plans of proposed plumbing and to make appointments for the inspect-
ion of work in the course of construction. He shall number and file all plans and specifications which have been approved by the Board of Health and record the names of the parties by whom the work is to be performed, and the location of such work, and the name of the architect, if one, and owner. He shall examine all plans and specifications, and if in accordance with the provisions of this ordinance, he shall approve the same in writing and then present the same to the Board of Health for approval. He shall present to the Board of Health any objections he may have to any plan or specification which does not conform to the provisions of this ordinance. If such plans and specifications are not approved by the said Board of Health they shall be returned to the person presenting them, with a note explaining the corrections necessary in order to have them comply with the provisions of this ordinance. He shall examine the plumbing work before the same is covered up or enclosed, and if found to have been done in accordance with the plans and specifications filed, he shall issue a certificate to that effect, and upon the completion of any plumbing work he shall examine the same and if found to conform to the provisions of this ordinance and the plans and specifications filed, he shall issue a final certificate of final inspection. He must keep an account of the number of plans and specifications received, the number approved by the Board of Health, and the number rejected. He must make a monthly report to the said Board of Health of the number of first and final examinations made, and where and by whom the provisions of this ordinance have been violated (if they have been violated), and such other matters appertaining to the plumbing of the city as may be required by the said Board of Health. He shall immediately, on knowledge of any infraction of any of the provisions of this ordinance, report the same to the said Board of Health.

Section 29. Bar-room sinks, or any other sink or fixture, except a water closet situated in the body of a room, may be connected to a four (4) inch Drum Trap with screw top, and must be vented with a one and one-half (1 1/2) inch vent. Ice boxes must not be connected with the sewer, but may drain into a four (4) inch by four (4) inch galvanized iron or sheet lead hopper made to flange over floor, the said hopper to have a one (1) inch outlet which will set into a one and one-half (1 1/2) inch "P" trap, said trap connected with sewer, and the said outlet will continue up into the center of the hopper two (2) inches high and left open on top; vent the said trap with a one and one-half (1 1/2) inch vent. All split fittings or pipe must be taken out in the presence of the inspector and perfect pipe or fittings substituted.

Section 30. Urinal and water closet floor drains may be connected to and with the main waste, soil or sewer, or drain pipe, provided said floor drain is properly trapped and vented and supplied with water, all to the satisfaction of the Board of Health.

Urinals must be either of enameled iron, glass or porcelain.

Section 31. All clean-outs must be placed so as to be accessible.

Section 32. The term "soil pipe" is the name applied to any pipes that receive the discharge of one or more water closets, and said soil pipes shall not be less than four (4) inches in diameter, inside measurement.

"Waste pipe" is the term applied to any pipe receiving the discharge of any fixture except water closets, and said pipe shall not be less than two (2) inches in diameter.

Section 33. That Ordinance No. 145, approved October 27th, 1887, and Ordinance No. 156, approved December 3rd, 1887, and Ordinance No. 252, approved May 15th, 1888, and Ordinance No. 305 approved July 17th, 1895, and Ordinance No. 620, approved April 8th, 1899, and Ordinance No. 265, approved July 3rd, 1888, and Ordinance No. 1127, approved the 3rd day of June, 1902, and Ordinance No. 1375, approved on the 10th day of July, 1903, and all ordinances and parts of ordinances in
conflict herewith, be, and the same are hereby, repealed.

Section 34.
