FOR THAT WHEREAS, F. M. Lockwood, Manager of Operation of the City of San Diego, has heretofore on the 18th day of December, 1915, filed with the Common Council his verified certificate to the effect that the public improvements mentioned in paragraphs (c) and (e) of Proposition I of Ordinance No. 5334 of the ordinances of the City of San Diego, entitled, "An Ordinance calling a special election in the City of San Diego, California, and submitting to the voters thereof propositions for the incurring of a bonded indebtedness," approved November 17, 1913, have been fully completed, and no part of said public improvements, being the acquisition, construction and completion of a pipe line from the present main pipe which leads from the Otay Reservoir to the City of San Diego, from a point near Bonita to a point near the City limits of said City, and from said point near the City limits of said City to a point of connection with the main distributing system of the City of San Diego, said lines being commonly referred to as the Bonita pipe line, is incomplete, and no further work, services or expenses are necessary to complete the said pipe lines; and,

WHEREAS, H. L. Moody, City Auditor of said City, has heretofore, on the 20th day of December, 1915, filed with the Common Council his verified certificate to the effect that all public improvements mentioned in said paragraphs (c) and (e) of Proposition I of said Ordinance No. 5334 of the ordinances of the City of San Diego, are completely paid for, and that there now remains in the Water Conservation Bond Fund of said City to the credit of those specific public improvements mentioned in said paragraphs (c) and (e) above described, the sum of \$52,568.54; NOW, THEREFORE,

BE IT ORDAINED By the Common Council of the City of San Diego, as follows:

Section 1. That pursuant to the provisions of Chapter XCI of the General Laws of the State of California for the year 1899, this Common Council hereby finds and declares that those certain public improvements mentioned in paragraphs (c) and (e) of Proposition I of Ordinance No. 5334 of the ordinances of the City of San Diego, entitled, "An Ordinance calling a special election in the City of San Diego, California, and submitting to the voters thereof propositions for the incurring of a bonded indebtedness," approved November 17, 1913, having been fully completed and paid for, and that a residue remains in the said Water Conservation Bond Fund of said City to the credit of those specific public improvements mentioned in said paragraphs (c) and (e) of Proposition I of said Ordinance No. 5334, in the amount of \$52,568.54, for the disposition of which there is no provision of law.

Section 2. That said sum of \$52,568.54 now remaining in said Water Conservation Bond Fund to the credit of those specific public improvements mentioned in said paragraphs (c) and (e) of Proposition I of said Ordinance No. 5334, be, and the same is hereby transferred to the General Fund of the City of San Diego for the year 1915.

Section 3. This is an ordinance for the immediate preservation of the public peace, health and safety, and one of urgency, and shall take effect from and after its passage and approval.

The facts constituting the emergency in this case are that the moneys hereby transferred from the Water Conservation Bond Fund to the General Fund will be in turn transferred

# ORDINANCE NO. 6439.

AN ORDINANCE AUTHORIZING A MAJORITY OF THE MEMBERS OF THE COMMON COUNCIL TO CONTRACT FOR THE LIGHTING AND MAINTENANCE OF EQUIPMENT FOR THE FESTOON LIGHTING SYSTEM OF THE CITY OF SAN DIEGO, AND APPROPRIATING THE SUM OF \$4156.25 FOR PAYMENT THEREOF.

BE IT ORDAINED By the Common Council of the City of San Diego, as follows:

Section 1. That the sum of \$4156.25, or so much thereof as is necessary, be, and the same is hereby appropriated out of the General Fund of the City of San Diego, to pay for the electric current and maintenance of appliances for the lighting and operating of the festoon lighting system where it now exists, on the following streets in said City, to-wit:

On Broadway, from Atlantic Street to Twelfth Street;

On Fifth Street, from L Street to Laurel Street;

On Twelfth Street, from Broadway to Balboa Park; and

On Laurel Street, from Fifth Street to Park Avenue, otherwise known as Sixth Street; for and during the year 1916.

Section 2. That a majority of the members of the Common Council are hereby authorized and directed to enter into a contract with the San Diego Consolidated Gas & Electric Company for the furnishing of the electric current and the maintenance of the lamps, appliances and equipment for the operating and lighting of said festoon lighting system, without advertising for bids therefor, upon the following conditions, to-wit:

Said San Diego Consolidated Gas & Electric Company shall remove at its expense every alternate electric light from each of the suspension wires in said festoon lighting system, until one-half of said lights are removed. The lights so removed may be used by said company in making renewals of burned out or defective lights during the year 1916. Such lighting and maintenance shall be done according to the specifications therefor contained in Document No. 96140, on file in the office of the City Clerk of said City. In consideration of all of which the City of San Diego shall pay said Consolidated Gas & Electric Company the sum of \$332.50 to cover the period of such lighting and maintenance from January 1st to January 15th, 1916, both dates inclusive for the full number of lights burned, and \$332.50 per month thereafter from said 15th day of January, 1916, to and including December 31st, 1916.

Section 3. This is an ordinance for the immediate preservation of the public peace, health and safety, and one of urgency, and shall take effect and be in force from and after its passage and approval.

The facts constituting the emergency in this case are that the lighting of the streets in this ordinance referred to during the continuance of the Panama-California Exposition in 1916, is a matter of pronounced advisability to insure the safety of pedestrians on the streets to be illuminated under the provisions of this ordinance, said streets being the principal thoroughfares from the railroad depots and steamboat docks and wharves to the Exposition grounds, and these streets being the principally traveled streets of the City of San Diego, and being also traversed by double line of street car tracks, this Common Council is of the opinion that the travel upon these streets at night demands that lighting of more than ordinary intensity be provided, and that precautions be taken greater than ordinary travel demands, for the public safety.

AUDITOR'S CERTIFICATE. I HEREBY CERTIFY that the appropriation made, or indebtedness incurred, by reason of the provisions of the annexed ordinance, can be made or incurred without the violation of any of the provisions of the Charter of the City of San Diego, California.

ORDINANCE NO. 6535.

AN ORDINANCE PRESCRIBING THE MANNER OF PAVING STREETS WITH ONE COURSE CONCRETE, IN THE CITY OF SAN DIEGO, CALIFORNIA.

BE IT ORDAINED By the Common Council of the City of San Diego, California, as follows:

Section 1. That the work of paving streets in the City of San Diego, California, with one course concrete, shall be as follows:

1. PLANS, ETC. The work herein provided for is to be done in accordance with the plans, profiles and cross-sections on file in the office of the City Engineer of the City of San Diego, and all work shall during its progress and on its completion, conform to the lines and levels which may from time to time be given by said City Engineer.

2. WORK: The pavement is to consist of one course Portland cement concrete, the thickness of which shall be as shown upon the cross-sections adopted for the work.

3. SUB-GRADE: The sub-grade for that portion of the roadway which is to be paved shall be such distance below and parallel to the finished surface thereof as is shown upon said adopted cross-section.

4. GRADING: Grading shall include all filling, the removal of all earth, stone or all other material of whatever nature it may be that may be encountered in preparing the street and shall also include all trimming and shaping required to bring the surface of the street to grade and cross-section.

When mud or other soft material is encountered it shall be taken out and the space filled with good earth or gravel, which shall be rolled until the surface of the foundation ceases to sink under or creep in front of the roller. The contractor, however, will not be required to excavate the mud or other soft material to a greater depth than two feet below grade. All filling shall be done with good sound earth. The embankments shall be carried up of full width, in horizontal layers not to exceed one foot each in thickness, and the teams shall be made to travel as evenly as possible over the whole surface of each layer, both in coming and going. The formation of well defined ruts is especially prohibited. No material of a spongy nature shall be used for filling. The space over which fills are to be made shall first be cleared of all brush and timber and all other perishable material.

After a block or section has been graded as above specified, the surface shall be rolled with a steam roller weighing not less than 400 pounds to the inch width of tire until

the surface is unyielding. Whenever practicable the street shall be cross-rolled as well as rolled longitudinally. Depressions made by rolling shall be levelled up with good earth and again rolled. Such portions of the street as can not be reached by the roller, and all places excavated below sub-grade and refilled, and all pipe trenches and other places that can not be properly compacted by the roller, shall be tamped solid and in cases of wet weather or soft or muddy ground, making the use of the roller unsafe or impracticable, the rolling shall not be undertaken until the ground has become sufficiently dry.

5. CONCRETE COURSE: Upon the sub-grade prepared as above described and thoroughly dampened, there shall be laid the Portland cement concrete course of the thickness shown on the typical crosssection, composed of the following materials and proportions, to-wit:

(1). One original commercial sack of Portland cement weighing not less than ninety-four (94) pounds.

(2). Two (2) cubic feet of sand by volume.

(3). Four (4) cubic feet of broken stone or gravel by volume.

6. CONCRETE MATERIALS: All cement used shall be Portland cement and must conform to the following requirements and be subject to the following tests which will be open to the contractors. Samples for tests may be taken from every package delivered or proposed to be used upon the work, and unless they meet the requirements herein specified, such package or packages of cement will be rejected. No cement will be accepted, tested or permitted to be used unless delivered in the original, unopened packages with the manufacturer's name and the brand of cement thereon.

All samples of Portland cement required by the City Engineer or his authorized agent, shall be given him free of charge and he shall have authority at any time to take such samples as he or his agent may desire. All tests made will be made in the cement testing room provided by the City of San Diego for that purpose. A period of at least twelve (12) days shall be allowed for inspection and necessary tests. Cement failing to meet the seven (7) day requirements may be held awaiting the twenty-eight (28) day test before rejection. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified.

SPECIFIC GRAVITY: The specific gravity of cement shall be not less than 3.10. Should the test of cement as received fall below this requirement a second test may be made upon a sample ignited at a low red heat. The loss in weight of the ignited cement shall not exceed four per cent.

FINENESS: The cement must be evenly ground and when tested with the following standard sieves, must pass at least the following percentages by weight.

No. 100 sieve having 100 meshes per lineal inch, 92%.

No. 200 sieve having 200 meshes per lineal inch, 75%.

TENSILE STRENGTH: Neat briquettes one inch square in section shall attain a minimum tensile strength as follows:

At 24 hours in moist air, 175 pounds.

At 7 days (1 day in moist air, 6 days in water) 500 pounds.

At 28 days (1 day in moist air, 27 days in water) 600 pounds.

Briquettes one inch square in section, made of one part of Portland cement to three parts of standard testing sand, shall attain a minimum tensile strength as follows:

At 7 days (1 day in moist air and 6 days in water) 175 pounds.

At 28 days (1 day in moist air and 27 days in water) 250 pounds.

Cement testing neat below 700 pounds at 28 days and showing a retrogression below the seven day tests will be rejected.

The sand test must in all cases show an increase in strength at twenty-eight days.

SOUNDNESS: Pats of neat cement about three inches in diameter, one-half inch in thickness at the center and tapering to a thin edge, shall be kept in moist air for a period of twenty-four hours. A pat will then be kept in air of normal temperature and examined at intervals for at least twenty-eight days.

Another pat will be exposed in an atmosphere of steam above boiling water in a loosely closed vessel for five (5) hours; these pats to satisfactorily pass the requirements must remain firm and hard and show no signs of distortion, checking, cracking, blotching or disintegration.

Neat briquettes shall develop initial set in not less than thirty (30) minutes and shall not develop final set in less than one (1) hour but must develop final set in less than ten (10) hours.

If so required by the City Engineer no cement will be permitted to be used in the work until after the seventh day test as above prescribed.

The cement shall not contain more than one and 75/100 (1.75) per cent. of anhydrous sulphuric acid nor more than four (4) per cent. of magnesia.

SAND: All sand must be fresh water sand, clean, hard and sharp and contain not more than two (2) per cent. of foreign matter of any kind. The sand shall pass a screen having four (4) meshes to the lineal inch. Not more than twenty-five (25) per cent. shall pass a screen having fifty (50) meshes per lineal inch and not more than five (5) per cent. shall pass a screen having 100 meshes per lineal inch.

The sand shall be of such quality that mortar composed of one part Portland cement and three parts sand, by weight, when made into briquettes, shall show a tensile strength (at 7 and 28 days) at least 70% of the strength of briquettes composed of one part of the same cement and 3 parts Standard Ottawa sand by weight. The percentage of water used in making the briquettes of cement and sand shall be such as to produce a mortar of the same consistency as that of the Ottawa sand briquettes of Standard consistency.

BROKEN STONE OR GRAVEL: Broken stone or Gravel shall be of clean, hard, durable rock, free from all deleterious matter. It shall be of such size so that it will pass a 1-1/2" round opening and be retained on a screen having 1/4 inch openings and not less than thirty (30) per cent of its volume shall be material which will pass a 3/4 inch mesh screen and shall range in size from the minimum noted above to one and one-half (1-1/2) inches in greatest dimension maximum. It being understood that the City Engineer has the right to reject any and all material which does not meet with his approval.

JOINT FILLER: Joint filler shall consist of prepared strips of fibre matrix and bitumen or similar material of approved quality 1/4 inch in thickness. The width shall be at least 1 inch greater than the thickness of the pavement at any point.

JOINTS; WIDTH AND LOCATION: Transverse joints shall be 1/4 inch in width and shall be placed across the pavement perpendicular to the center line and not more than 30 feet apart. Longitudinal joints shall be located as shown on the plans. All joints shall extend through the entire thickness of the pavement and shall be perpendicular to its surface, and the filler shall project not less than 1/2 inch above the finished surface. The concrete adjacent to these joints shall be finished with a wood float, which is divided through the center and which will permit of finishing on both sides of the filler at the same time.

7. MIXING AND PLACING CONCRETE: All proportions shall be obtained by actual measurement in boxes, and no material shall be used that has not been thus measured. All mixing shall be done in batch mixers of an approved type and mixing shall continue after all materials are in the drum for at least one minute at a minimum speed of 12 revolutions per minute.

The drum shall be completely emptied before receiving materials for successive batches.

RETEMPERING: Re-tempering of mortar or concrete which has partially hardened, that is, remixing with or with<sup>out</sup> additional materials or water, shall not be permitted.

CONSISTENCY: The materials shall be mixed with sufficient water to produce a concrete which will hold its shape when struck off with a template. The consistency shall not be such as to cause a separation of the mortar from the coarse aggregate in handling.

PLACING CONCRETE: Immediately prior to placing the concrete, the sub-grade shall be brought to an even crowned surface. The surface of the sub-grade shall be thoroughly wet, but shall show no pools of water when the concrete is placed. After mixing, the concrete shall be deposited rapidly upon the sub-grade to the required depth and for the entire width of the pavement in successive batches and in continuous operation without the use of intermediate forms or bulkheads between expansion joints. In case of a breakdown, concrete shall be mixed by hand to complete the section or an intermediate transverse joint placed as hereinbefore specified at the point of stopping work. Any concrete in excess of that needed to complete a section at the stopping of work shall not be used in the work.

8. FINISHING: The surface of the concrete shall be struck off by means of a template or strikeboard, which shall be moved with a combined longitudinal and cross-wise motion. After being brought to the established grade with the template or strikeboard, the concrete shall be finished from a suitable bridge, no part of which shall come in contact with the concrete. The concrete shall be finished with a wood float in a manner to thoroughly compact it and produce a surface free from depressions or inequalities of any kind. The finished surface of the pavement shall not vary more than one-half inch from the true shape. The edges of the pavement shall be rounded as required by the City Engineer.

(9). CURING AND PROTECTION: Excepting as hereinafter specified, the surface of the pavement shall be sprayed with water as soon as the concrete is sufficiently hardened to prevent pitting, and shall be kept wet until an earth or other approved covering is placed. As soon as it can be done without damaging the concrete, the surface of the pavement shall be covered with not less than two inches of earth or other material approved by the engineer, which cover shall be kept wet for at least ten days. When deemed necessary or advisable by the engineer, freshly laid concrete shall be protected by canvas until such covering can be placed.

Under the most favorable conditions for hardening in hot weather, the pavement shall be closed to traffic for at least fourteen days, and in cool weather for an additional time, to be determined by the engineer. The contractor shall erect and maintain suitable barriers to protect the concrete from traffic and any part of the pavement damaged from traffic or other causes, occurring prior to its official acceptance, shall be repaired or replaced by the contractor at his expense, in a manner satisfactory to the engineer. Before the pavement is thrown open to traffic, the covering shall be removed and disposed of as directed by the engineer.

(10) CULVERTS: Culverts shall be placed wherever designated on the profiles or plans of the street on file in the office of the City Engineer. They shall be of the character and dimensions shown on the profile or plans and described in the specifications named in the ordinance or Resolution of Intention.

Cement concrete shall be of the same quality as specified above for concrete paving. Steel shall be first quality and free from cracks and flaws. Workmanship shall be first class in every respect. The contractor shall notify the City Engineer when a block or section has been brought to sub-grade, when the latter will check the elevations of the same

and if the work is found to be in accordance with the specifications and grades given, the contractor shall proceed as hereinbefore mentioned.

(11). GENERAL REQUIREMENTS: All work shall be executed in every respect in a thorough and workmanlike manner. The contractor shall preserve all stakes set for lines, levels or measurements of the work in their proper places until authorized to remove them by the City Engineer and any expense incurred in replacing said stakes which the contractor or his subordinates may have failed to preserve, shall be borne by the contractor.

Any overseer, superintendent, laborer or other person employed on the work by the contractor, who shall perform his work in a manner contrary to these specifications, shall be discharged immediately and such person shall not again be employed on the work. All loss or damage arising from any unforeseen obstruction or difficulties that may be encountered in the prosecution of the work, or from any action of the elements, or from any act or omission not authorized by these specifications on the part of the contractor or any agent or person employed by him, shall be sustained by the contractor. No work which may be defective in its construction, or deficient in any of the requirements of these specifications, will be considered as accepted in consequence of the failure of any officer of the city or any inspector connected with the work to point out said defects or deficiencies during construction and the contractor shall correct any imperfect work whenever discovered before the final acceptance of the work. The contractor assumes all risk of variance in any computation or statement of amounts or quantities necessary to complete the work required by this contract, and agrees to furnish all necessary labor and materials and to fully complete said work in accordance with the plans and specifications, and to the satisfaction of the Superintendent of Streets.

Bidders must examine and judge for themselves as to the location of the proposed work, and the nature of the excavations to be made and the work to be done.

The contractor shall give twenty-four hours notice in writing when he will require the services of the City Engineer for laying out any portion of the work. He shall dig all stake holes necessary to give lines and levels. The contractors shall not disturb any monuments or stakes found on the line of the improvements until ordered by the City Engineer, and said contractors shall bear the expense of resetting any monuments or stakes which may be disturbed without orders.

The contractor shall remove at his own expense all obstructions such as trees, stones, debris, etc., that may be in the way of making the proposed improvements.

No two consecutive cross streets shall be closed at any one time.

The contractor shall be required to observe all the ordinances of the City of San Diego, in relation to the obstruction of streets, keeping open passageways, and protecting the same where they are exposed and would be dangerous to public travel.

He shall also erect and keep erected by day and by night, a fence or proper barrier along the line of the work and across the ends of the same in order to guard the public effectively from danger of falling into trenches, or from upsetting their vehicles against the earth thrown up during the progress of the work, and he shall post all proper notices and signals to the public of the state of the street while the work is in progress,

A red light must be maintained at night at each end of the barriers from sunset to sunrise.

In case it should be necessary to move the property of any owner of a public utility or franchise, such owner will, upon application by the contractor, be notified by the Superintendent of Streets to move such property within a specified reasonable time, and the con-

tractor shall not interfere with said property until after the expiration of the time specified.

The right is reserved to the owners of public utilities and franchises to enter upon the street for the purpose of making repairs or changes on their property that may become necessary by the work. The city shall also have the privilege of entering upon the street for the purpose of repairing sewers or making house drain connections therewith, or repairing culverts or storm drains.

The contractor shall remove all surplus material and rubbish from the work after its completion and before he makes application for the acceptance of the work. The contractor shall notify the Superintendent of Streets when he desires a final inspection of the work, when the latter will, as soon as possible, make necessary examination, and if the work is found in compliance with the above specifications, the Superintendent of Streets will furnish the contractor with a certificate to that effect.

When in the specifications, a maximum or minimum, either in size, percentage or thickness, or relating to quality or character, or other matter, is allowed or prescribed, the work shall be accepted as in compliance therewith, if within such maximum or minimum so allowed hereby.

Whenever the word "contractor" is used in these specifications, it refers to the party or parties of the second part in the agreement for the construction of the work herein specified.

Whenever the words "Superintendent of Streets", "City Engineer", are used in these specifications, they refer, respectively, to the Superintendent of Streets and the City Engineer of the City of San Diego, California.

AN ORDINANCE PRESCRIBING THE MANNER OF PAVING STREETS WITH ASPHALT  
MACADAM PAVEMENT LAID UPON A CONCRETE BASE, IN THE CITY OF SAN  
DIEGO, CALIFORNIA.

BE IT ORDAINED By the Common Council of the City of San Diego, as follows:

Section 1. That the work of paving streets in the City of San Diego, California, with asphalt macadam pavement laid upon a concrete base, shall be as follows:

1. PLANS, ETC. The work herein provided for is to be done in accordance with the plans, profiles and cross-sections on file in the office of the City Engineer of the City of San Diego, and all work shall, during its progress and on its completion conform to the lines, and levels which may, from time to time be given by the said City Engineer.

2. WORK: The pavement is to consist of Portland cement concrete base and an asphalt macadam wearing surface, the thickness of each of which shall be shown upon the cross-section adopted for the work.

3. SUB-GRADE: The sub-grade for that portion of the roadway which is to be paved, shall be such distance below and parallel to the finished surface thereof as is shown upon said adopted cross-section.

4. GRADING: Grading shall include all filling, the removal of all earth, stone or other material of whatever nature it may be that may be encountered in preparing the street, and shall also include all trimming and shaping required to bring the surface of the street to grade and cross-section; when mud or other soft material is encountered, it shall be taken out and the space filled with good earth or gravel, which shall be rolled until the surface of the foundation ceases to sink under or creep in front of the roller. The contractor, however, will not be required in such cases to excavate the mud or other soft material to a greater depth than two feet below grade. All filling shall be done with good sound earth. The embankments shall be carried up of full width, in horizontal layers not to exceed one foot each in thickness, and the teams shall be made to travel as evenly as possible over the whole surface of each layer, both in coming and going. The formation of well defined ruts is especially prohibited. No material of a spongy nature shall be used for filling. The space over which fills are to be made shall first be cleared of all brush and timber and all other perishable material.

After a block or section has been graded as above specified, the surface shall be rolled with a steam roller weighing not less than 400 pounds to the inch width of tire until the surface is unyielding. Whenever practicable, the street shall be cross-rolled as well as rolled longitudinally. Depressions made by rolling shall be leveled up with good earth and again rolled. Such portions of the street as can not be reached by the roller, and all places excavated below sub-grade and refilled and all pipe trenches and other places that can not be properly compacted by the roller, shall be tamped solid and in cases of wet weather or soft or muddy ground, making the use of the roller unsafe or impracticable, the rolling shall not be undertaken until the ground has become sufficiently dry.

5. CONCRETE BASE: Upon the sub-grade prepared as above described and thoroughly dampened, there shall be laid a Portland cement concrete base of the thickness shown on the typical cross-section, composed of the following materials and proportions, to-wit:

(1) One original commercial sack of Portland cement weighing not less than ninety-four (94) pounds.

(2) Three (3) cubic feet of sand by volume.

(3) Six (6) cubic feet of broken stone or gravel by volume

6. CONCRETE MATERIALS: All cement used shall be Portland cement and must conform

to the following requirements and be subject to the following tests which will be open to contractors. Samples for tests may be taken from every package delivered or proposed to be used upon the work, and unless they meet the requirements herein specified, such package or packages of cement will be rejected. No cement will be accepted, tested or permitted to be used unless delivered in the original, unopened packages with the manufacturer's name and the brand of cement thereon.

All samples of Portland cement required by the City Engineer or his authorized agent, shall be given him free of charge and he shall have authority at any time to take such samples as he or his agent may desire. All tests made will be made in the cement testing room provided by the City of San Diego for that purpose. A period of at least twelve (12) days shall be allowed for inspection and the necessary tests. Cement failing to meet the seven (7) day requirements may be held awaiting the twenty-eight (28) day test before rejection. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified.

**SPECIFIC GRAVITY:** The specific gravity of cement shall not be less than 3.10. Should the test of cement as received fall below this requirement a second test may be made upon a sample ignited at a low red heat. The loss in weight of the ignited cement shall not exceed four per cent.

**FINENESS:** The cement must be evenly ground and when tested with the following standard sieves, must pass at least the following percentages by weight:

No. 100 sieve having 100 meshes per lineal inch, 92%.

No. 200 sieve having 200 meshes per lineal inch, 75%.

**TENSILE STRENGTH:** Neat briquettes one inch square in section shall attain a minimum tensile strength as follows:

At 24 hours in moist air, 175 pounds.

At 7 days (1 day in moist air, 6 days in water), 500 pounds.

At 28 days (1 day in moist air, 27 days in water), 600 pounds.

Briquettes one inch square in section, made of one part Portland cement to three parts of standard testing sand, shall attain a minimum tensile strength as follows:

At 7 days (1 day in moist air, 6 days in water), 175 pounds.

At 28 days (1 day in moist air and 27 days in water), 250 pounds.

Cement testing neat below 700 pounds at 28 days and showing a retrogression below the seven day tests, will be rejected.

The sand test must in all cases show an increase in strength at 28 days over the seven-day tests.

**SOUNDNESS:** Pats of neat cement about three (3) inches in diameter one-half ( $\frac{1}{2}$ ) inch in thickness at the center and tapering to a thin edge, shall be kept in moist air for a period of twenty-four (24) hours. A pat will then be kept in air of normal temperature and examined at intervals for at least twenty-eight (28) days.

Another pat will be exposed in an atmosphere of steam above boiling water, in a loosely closed vessel for five (5) hours. These pats to satisfactorily pass the requirements must remain firm and hard and show no signs of distortion, checking, cracking, blotching or disintegration.

Neat briquettes shall develop initial set in not less than thirty minutes but must not develop hard set in less than one (1) hour nor more than ten (10) hours.

No cement will be permitted to be used in the work until after the seventh day test as above prescribed.

**SAND:** All sand must be fresh water sand, clean, hard and sharp and contain not more than two (2) per cent of foreign matter of any kind. The sand shall pass a screen having four (4) meshes to the lineal inch. Not more than twenty-five (25) per cent shall pass a screen having fifty (50) meshes per lineal inch and not more than five (5) per cent. shall pass a screen having 100 meshes per lineal inch.

The sand shall be of such quality that mortar composed of one part Portland cement and three parts sand, by weight, when made into briquettes, shall show a tensile strength (at 7 and 28 days) at least 70% of the strength of briquettes composed of one part of the same cement and 3 parts Standard Ottawa sand by weight. The percentage of water used in making the briquettes of cement and sand shall be such as to produce a mortar of the same consistency as that of the Ottawa sand briquettes of Standard consistency.

**BROKEN STONE OR GRAVEL:** Broken stone or gravel shall be of clean, hard, durable rock, free from all deleterious matter. It shall be of such size that it will pass a one and one-half ( $1\frac{1}{2}$ ) inch round opening and be retained on a screen having  $\frac{1}{4}$  inch openings and not less than thirty (30) per cent. of its volume shall be material which will pass a  $\frac{1}{4}$  inch mesh screen and shall range in size from the minimum noted above to one and one-half ( $1\frac{1}{2}$ ) inches in greatest dimension maximum, it being understood that the City Engineer has the right to reject any and all materials which does not meet with his approval.

7. **MIXING AND PLACING CONCRETE:** All proportions shall be obtained by actual measurement in boxes, and no material shall be used that has not been thus measured. All mixing shall be done in batch mixers of an approved type and mixing shall continue after all materials are in the drum for at least one minute at a minimum speed of 12 revolutions per minute. The drum shall be completely emptied before receiving materials for successive batches.

**RETEMPERING:** Re-tempering of mortar or concrete which has partially hardened, that is, remixing with or without additional materials or water, shall not be permitted.

**CONSISTENCY:** The materials shall be mixed with sufficient water to produce a concrete which will hold its shape when struck off with a template. The consistency shall not be such as to cause a separation of the mortar from the coarse aggregate in handling.

**PLACING CONCRETE:** Immediately prior to placing the concrete, the sub-grade shall be brought to an even crowned surface. The surface of the sub-grade shall be thoroughly wet but shall show no pools of water when the concrete is placed. After mixing, the concrete shall be deposited rapidly upon the sub-grade to the required depth and for the entire width of the pavement in successive batches and in continuous operation, and tamped until it is thoroughly compacted.

The surface of the concrete shall be thoroughly watered for at least five (5) days, after which, sufficient time shall be allowed for the surface to become thoroughly dry before receiving the asphaltic layer. Under no circumstances shall any concrete be put upon the work after the initial set has taken place. At no time shall any asphalt be laid where the surface upon which it is proposed to deposit it is wet or damp.

(8). **ASPHALT MACADAM WEARING SURFACE:** Upon the concrete base prepared and laid as above described and thoroughly cleaned free from all dirt and foreign matter, shall be laid an asphalt macadam wearing surface. The asphalt macadam mixture shall be composed of broken stone or screened gravel, sand, stone dust and asphaltic cement in sufficient quantities to make the mineral aggregate conform to the following proportions by weight:

Broken stone or screened gravel passing one (1) inch screen and retained on a one-half ( $\frac{1}{2}$ ) inch screen, 40 per cent to 60 per cent.

Broken stone or screened gravel passing one-half ( $\frac{1}{2}$ ) inch screen and retained on

a one-fourth ( $\frac{1}{4}$ ) inch screen, 6 per cent to 20 per cent.

Broken stone or screened gravel or sand passing one-fourth ( $\frac{1}{4}$ ) inch screen and retained on ten (10) mesh screen, 5 per cent to 10 per cent.

Broken stone or screened gravel or sand passing ten (10) mesh screen, 25 per cent to 32 per cent.

Of the material passing ten mesh screen the following percentage shall pass two hundred mesh screen, 10 per cent to 15 per cent.

To the above mineral aggregate there shall be added sufficient bitumen to coat all the particles and fill all remaining voids, the percentage by weight to be five (5) per cent to six and one-half ( $6\frac{1}{2}$ ) per cent.

9. PAVEMENT MATERIALS: The asphaltic cement must be prepared from California products. It must be a mixture of refined liquid asphalt with refined solid asphalt or be an oil asphalt, and must be free from admixture with any residues obtained by the artificial distillation of coal, coal tar or paraffine oil.

The asphaltic cement must be homogeneous and its consistency at the time of its mixture with the stone, sand, etc., must fall within the limits of 50 degrees and 65 degrees penetration when tested at a temperature of seventy-seven (77) degrees Fahrenheit with the Dow penetration machine. It must be adhesive and ductile and also slightly elastic at a temperature of thirty-two (32) degrees Fahrenheit. When twenty (20) grammes are heated to a temperature of three hundred (300) degrees Fahrenheit for five (5) consecutive hours in an uncovered cylindrical dish three and one-half ( $3\frac{1}{2}$ ) centimeters high by five (5) centimeters in diameter, it must not lose more than one (1) per cent in weight and its penetration must not be reduced as a result of such heating more than fifty (50) per cent.

It must, when ready for use, contain at least ninety-nine (99) per cent of bitumen soluble in carbon bisulphide. It must be soluble in carbon tetrachloride to the extent of at least ninety-seven (97) per cent. Not less than seventy (70) per cent shall be soluble in 86 degrees naptha. It shall contain not more than fifteen (15) per cent of fixed carbon on ignition.

When the asphaltic cement is prepared by mixing a solid oil asphalt with liquid asphalt, the solid asphalt shall be prepared by distilling the crude oil until the asphaltic residuum has a penetration of not less than fifty (50) degrees when tested at a temperature of seventy-seven (77) degrees Fahrenheit with the Dow penetration machine, and shall not be prepared by mixing or fluxing a more solid asphalt with a liquid or softer asphalt.

The refined liquid asphalt used in softening a solid asphalt must be a stiff residuum of petroleum with an asphalt base. It must be free from water and from light oils volatile at less than two hundred and fifty degrees Fahrenheit. When twenty (20) grammes are heated to a temperature of three hundred (300) degrees Fahrenheit for five (5) consecutive hours in an uncovered cylindrical dish three and one-half ( $3\frac{1}{2}$ ) centimeters high by five and one-half ( $5\frac{1}{2}$ ) centimeters in diameter, it must not lose more than five (5) per cent in weight. It must contain not less than ninety-nine (99) per cent of bitumen soluble in carbon bisulphide.

SCREENED GRAVEL OR BROKEN ROCK: The screened gravel or broken rock shall be hard, durable material and shall be a graded aggregate having sizes ranging from one-quarter ( $\frac{1}{4}$ ) inch minimum to that which will pass through a one (1) inch ring maximum.

SAND: The sand shall be clean, hard grained and sharp, and shall contain not more than three (3) per cent of loam, clay or other impurities.

STONE DUST: The stone dust must be a finely powdered limestone, granite, trap rock or quartz as the contractor elects, and shall be of such fineness that all of it will

pass a fifty (50) mesh to the inch screen and at least sixty-six (66) per cent shall pass a two hundred (200) mesh to the inch screen.

SAMPLES: The contractor shall furnish to the City Engineer, for the test, whenever called for and free of charge, samples of all materials entering into the composition of the pavement, the asphalt and asphaltic cement to be furnished in boxes, and said City Engineer shall have access at all times to all branches of the work. All tests shall be open to the contractor..

(10) MIXING AND LAYING ASPHALT MACADAM SURFACE: The broken stone or screened gravel and sand in the proportion heretofore given shall be heated in such driers as will permit it to be uniformly heated, and shall be brought to a uniform temperature of not less than two hundred and eighty (280) degrees Fahrenheit. They shall then be conveyed to a rotary mixer and mixed with the stone dust. The required amount of asphaltic cement previously heated to a temperature of between two hundred and fifty (250) and three hundred (300) degrees Fahrenheit, shall then be added and the whole mass shall be mixed until every particle of stone, sand and dust is thoroughly coated with asphaltic cement.

In no case shall the asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit. The mixture shall be delivered on the street at a temperature of from two hundred and fifty (250) degrees to three hundred (300) degrees Fahrenheit, where it shall be laid to such depth that after receiving final compression, it shall have the thickness called for by the cross-section adopted for the work. Within thirty (30) minutes after laying it shall be rolled with a power roller having a weight of not less than two hundred and forty (240) pounds per lineal inch width of tire. Rolling must continue until the pavement fails to mark by the roller. All places that are inaccessible to the roller must be tamped with <sup>iron</sup> hot/tampers. The resulting pavement must be thoroughly compacted and must show an even surface, true to grade and cross-section and free from all hollows and irregularities. No traffic shall be allowed on the pavement until it is thoroughly cooled and set. No pavement shall be laid in rainy weather or when the sub-grade is wet.

11. SURFACE FINISH: Upon this rolled surface shall be spread by suitable spreading machines, enough hot asphalt to fill all superficial voids. Upon this flush coating, fine gravel, or stone screenings shall be spread in sufficient quantity to cover the flush coating and immediately rolled with a power roller having a weight of not less than two hundred and forty (240) pounds per lineal inch width of tire.

12. CULVERTS: Culverts shall be placed wherever designated on the profiles or plans of the street on file in the office of the City Engineer. They shall be of the character and dimensions shown on the profile or plan and described in the specifications named in the ordinance or resolution of intention. Cement concrete shall be of the same quality as specified above for concrete base. Steel shall be first quality and free from cracks and flaws. Workmanship shall be first class in every respect. The contractor shall notify the City Engineer when a block or section has been brought to sub-grade when the latter will check the elevations of the same and if the work is found to be in accordance with the specifications and grades given, the contractor shall proceed as hereinafter mentioned.

13. GENERAL REQUIREMENTS: (a) WORK: The contractor shall, for the price bid, furnish all materials and perform all the labor necessary to execute the work in every respect in a thorough and workmanlike manner in accordance with the plans and specifications.

(b) CLAIMS FOR THE USE OF PATENTS: All fees for any patented invention, article or arrangement that may be used upon or in any manner connected with the construction, erection, maintenance of the work, or any part thereof embraced in these specifications,

(e) EXAMINATION OF GROUND: Bidders must examine and judge for themselves as to the location of the proposed work, the nature of the excavation to be made and the work to be done.

(f) SETTING STAKES: The contractor shall give twenty-four (24) hours notice in writing when he will require the services of the City Engineer for laying out any part of the work. He shall dig all stake holes necessary to give lines and levels. The contractor shall preserve all stakes set for the lines, levels or measurements of the work in their proper places until authorized to remove them by the City Engineer, and any expense incurred in replacing said stakes which the contractor or his subordinates may have failed to preserve, shall be borne by the contractor.

(g) PLANS AND SPECIFICATIONS: The contractor shall keep upon the work a copy of the plans and specifications, and access thereto shall be accorded the City Engineer at all times.

(h) INSPECTORS: The contractor shall prosecute work only in the presence of an engineer or an inspector appointed by the City of San Diego, and, any work done in the absence of said engineer or inspector, will be subject to rejection. contractor, be notified by the Superintendent of Streets to move such property within a specified reasonable time, and the contractor shall not interfere with said property until after the expiration of the time specified. The right is reserved to the owners of public utilities and franchises to enter upon the street for the purpose of making repairs or changes of their property that may be made necessary by the work. The city shall also have the privilege of entering upon the streets for the purpose of repairing sewers and water pipes, or making house connections therewith, or repairing culverts or storm drains.

Section 20. Each department of the City of San Diego shall limit its expenditures to the amounts and for the purposes herein set forth under the respective departmental titles and designated by serial number.

Section 21 No transfer from one department to another, nor from one account to another within the same department, shall be made unless by specific direction of the Common Council manifested by ordinance. Every requisition issued in conformity with Ordinance No. 5051 shall contain, in addition to all other matters, the maximum amount of the charge to be made against the item drawn upon, and no expenditure shall be made, neither shall it become a valid claim against the City of San Diego, which exceeds the maximum figure con-

tained in the requisition therefor. Each requisition shall be presented to the City Auditor for his approval as to funds before any indebtedness thereon shall be incurred and before any expenditure shall become a legal charge against any item contained in this ordinance.

Section 22. That Ordinance No. 6430 of the ordinances of the City of San Diego, entitled, "An Ordinance fixing and declaring the budget allowance of the City of San Diego and the various departments thereof for the fiscal year beginning January first, 1916," approved on the 31st day of December, 1915, be, and the same is hereby repealed.

Section 23. This is an ordinance for the immediate preservation of the public peace, health and safety, and one of urgency, and shall take effect and be in force from and after its passage and approval.

The facts constituting the emergency in this case are that by reason of the charter provision providing for the fixing of the tax rate on or before the second Monday of May of each year, it has become necessary that a revision of the tentative budget, as contained in Ordinance No. 6430, of the ordinances of said City, providing the manner and amount of expenditures of the various departments in the conducting of municipal affairs, be made, so that the expenditures of the city shall conform to the amount of income derived from the tax levy as officially established for the City of San Diego.
