

Colored Wood Chips

Untreated lumber
Non-toxic dye
Red & Brown only

Product Uses & Specifications

Colored wood chips are a decorative and effective ground cover for weed suppression, water retention and landscaping. Colored wood chips are made from source-separated, untreated lumber and pallets. The dye is applied with specialized equipment that guarantees consistent and thorough coloring. Use with care if applying during wet weather as dye may transfer. Spray any color transfer with water to remove.

Description

- Colored woodchips are slowly ground to achieve size consistence.
- Standard sizing is 3 " and under.
- Chips are dyed using a water based certified non-toxic dye and dried for at least 24 hours prior to sale.
