

AAPFCO SOIL AMENDMENT / COMPOST UNIFORM PRODUCT CLAIMS

Compost and other soil amendments have been studied for hundreds of years by horticulturists, agronomists and agricultural professionals. A variety of verified product benefits (potential labeling claims) have been identified through research over this same period of time. Below is a list of compost benefits that have been verified and should be available for suppliers or manufacturers to use on their product labels. The list is supported by the attached bibliography of scientific publications and text.

We propose the following as a minimum list of allowable product claims, which may be amended by suppliers or manufacturers with additional verifiable research data. It should also in no way restrict a specific supplier or manufacturer from making additional claims that are specific to a product, if they have research to support such claims.

Verified Compost Benefits

1. Improves soil structure and porosity – creating a better plant root environment
2. Increases moisture infiltration and permeability, and reduces bulk density of heavy soils – improving moisture infiltration rates and reducing erosion and runoff
3. Improves the moisture holding capacity of light soils – reducing water loss and nutrient leaching, and improving moisture retention
4. Improves the cation exchange capacity (CEC) of soils
5. Supplies organic matter
6. Aids the proliferation of soil microbes
7. Supplies beneficial microorganisms to soils and growing media
8. Encourages vigorous root growth
9. Allows plants to more effectively utilize nutrients, while reducing nutrient loss by leaching
10. Enables soils to retain nutrients longer
11. Contains humus – assisting in soil aggregation and making nutrients more available for plant uptake
12. Buffers soil pH

References for AAPFCO **Soil Amendment / Compost Uniform Product Claims**

It should be noted that several of the following references provide documentation for many of the benefits of compost, but each reference may not have been repeated in all of the appropriate categories. It is also important to recognize that this is just a partial listing, and that hundreds of additional references could be cited to verify compost product claims.

1. Improves soil structure and porosity – creating a better plant root environment

In several instances, and in order to reduce the volume of data for AAPFCO to review, the attached back-up package of compost research/use data is in 'article' form (condensed from the actual research papers). These actual full-length research papers can be supplied if necessary, and upon request.
