BATLLE

Waste No Water!

Water efficiency is so important because it reduces demand for more expensive water resources.

You know that if you turn off the faucet while you brush your teeth the water that is saved is 2 gallons PER MINUTE!!

The evidence for less precipitation in the United States is that this year we had 3 inches of precipitation and usually we have 10 inches!

The average low temperature in San Diego is 57°F. the avg. high temperature is 70°F. And the avg. precipitation is 10".

Scientists predict less precipitation in the United States they say that we are in a desert!

We have to save all this water THAT is WASTED!!

3rd
Place
