

## Franchise Compliance Review Committee

### Questions from SDGE presentation

1. Can SDGE allow training and self-certification of contractors to do some of the work that is severely backlogged?
2. EV Chargers maintenance – Was any ratepayer money used to subsidize private EV chargers that are no longer being maintained as operational?
3. What coordination is occurring with Cities to clear brush adjacent to SDGE easements?
4. Slide 18 – “SDGE is building collaboration with developers to avoid surprises....” How is this happening? SDGE is still the number one complaint on every single construction project as the single biggest delay in the process.
5. Where did the 50% or more Affordable housing number come from. It seems this really only captures the 100% AH projects. Complete Communities is 40% and other density bonus programs are 5% Very low or 10% Low. The threshold should capture at least the Complete Community projects also.
6. Slide 17 - If an income qualifying home previously rented solar panels via other programs, can they convert to ownership via your program?
7. Slide 19 – Can the training program be expanded to include contractors that can then self certify certain parts of the process? (e.g. disconnects?)
8. Slide 22 – Are there any plans to underground larger KV lines?
